THE GYPSUM INDUSTRY, 1942

PART I - PRIMARY PRODUCTION - THE GYPSUM MINING AND QUARRYING INDUSTRY

Production (producers' sales and consumption) of gypsum in Canada during 1942 totalled 566,166 short tons valued at \$1,254,122 compared with 1,503,406 short tons at \$2,248,423 in 1941. The tonnage in both years represents various grades of crude gypsum and anhydrite shipped from quarries or mines together with the tonnage of calcined gypsum used in or shipped from quarries or "primary" plants. The quantity of the mineral produced in 1942 was 64.5 per cent less than in the preceding year due chiefly to a shortage of shipping on the Atlantic coast.

Of the 1942 output, Nova Scotia properties contributed 324,216 tons valued at \$512,762; Ontario, 82,799 tons at \$304,170; New Brunswick, 36,622 tons at \$111,316; Manitoba, 29,218 tons at \$179,780, and British Columbia, 23,313 tons worth \$146,154.

The quantity of crude gypsum mined in 1942 totalled 794,836 tons while the tonnage of anhydrite mined (all in Nova Scotia) amounted to 2,240 tons. Crude gypsum calcined in primary or quarry plants totalled 183,896 tons.

The following are the average prices per short ton for mine shipments made during 1942: Crude Lump, \$1.69; crushed crude, \$2.30; ground crude, \$7.52, and calcined, \$13.95.

In 1942 the number of firms reporting production was 7 and the gypsum quarries and mines in operation totalled 13. Some of the Canadian gypsum mining companies confine their operations in the Dominion to the production and sale of crude gypsum or anhydrite, while others, in addition to marketing various grades of crude gypsum, produce a calcine for sale or for consumption in their own gypsum products plants. Gypsum is exported from Canada almost entirely in the crude form.

Capital employed by Canadian gypsum mining companies totalled \$4,398,531 in 1942; employees aggregated 510; salaries and wages paid amounted to \$657,620 and the total value of fuel, purchased electricity and process supplies used was computed at \$244,139.

Gypsum mining operations in Nova Scotia during 1942 are summarized as follows: Victoria Gypsum Company Limited operated its property at Little Narrows, Victoria County, from May 4 until October 31; shipments were confined to the mineral in the crude lump form. No mining operations were conducted in Nova Scotia during 1942 by Gypsum, Lime & Alabastine, Canada, Limited. At Windsor, the manufacturing plant of the Windsor Plaster Company Limited was in continuous operation throughout the year; gypsum for this plant came from the Mesher quarry which was active for nine months in the year. Both the quarry and mill of the Canadian Gypsum Company Limited, located at Wentworth, were operated during the entire year. Production at this property included both anhydrite and gypsum and the minerals were shipped in the crushed state. The National Gypsum (Canada) Ltd. made shipments in 1942 from quarries located at Walton and Dingwall, but only milling operations were conducted at its Belle Marche property in Inverness County. Shipments of crude lump gypsum, for export, were made by the Connecticut Plaster Company; the quarry of this company

Gypsum

- 2 -

is located at Cheverie.

Gypsum production in New Brunswick in 1942 came entirely from Millborough where the quarry and manufacturing plant of the Canadian Gypsum Company were in steady production throughout the year. Both surface and underground mining operations are carried on at this property and various gypsum products are manufactured by the company.

In Ontario, gypsum mining during 1942 was confined to Haltonand county. Two companies operated in this area, Gypsum, Lime & Alabastine, Canada, Limited, at Caledonia, and the Canadian Gypsum Company Limited at Hagersville. These companies, in addition to conducting both surface and underground mining, produced an extensive variety of gypsum products. Operations by these firms were continuous throughout the year.

Gypsum was mined in Manitoba during 1942 at Gypsumville by Gypsum, Lime & Alabastine, Canada, Limited, and at Amaranth by Western Gypsum Products Limited. These companies also operated manufacturing plants in the city of Winnipeg.

The production of gypsum in British Columbia in 1942 came entirely from the Falkland deposits where the property of Gypsum, Lime & Alabastine, Canada, Limited was operated from January to December. The manufacturing plant of the company, located at New Westminster, was in steady production during the year under review.

The following information is from a report on gypsum prepared by the Bureau of Mines, Ottawa:

"Gypsum is marketed in the crude lump form, ground as "land plaster" and "Terra alba", or ground and calcined, as plaster of Paris or wall plaster. Each year an increasing portion of the calcined material enters into the manufacture of wallboard, gypsum blocks, insulating material, acoustic plaster, etc. Anhydrite is used mainly as a fertilizer for the peanut crop in the Atlantic seaboard states of the southern United States.

"The use of anhydrite for the manufacture of sulphuric acid, ammonium sulphate, cement and special plasters is increasing, and, normally, there is a good opportunity for the Canadian material in this market. Canada has extensive deposits, favourably situated for commercial development, the material from which has been proved by tests carried out by the Department of Mines and Resources to be of excellent grade. Prior to 1937 the small Canadian production was exported principally for use as a fertilizer for the peanut crop, but it is possible that an industry will eventually be started in this country in which the anhydrite may be used for the manufacture of sulphur or sulphur compounds and of special plasters, similar to those being marketed in England.

"The use of gypsum products in the building trades has made rapid progress because of their lightness, durability, fire-resisting, insulating, and acoustic properties; and tiles, wallboards, blocks, and special insulating and acoustic plasters have been developed. It is probable that production of gypsum for domestic use will continue to decline during the war. As most of the crude gypsum is shipped to the United States for the manufacture of gypsum products, industrial conditions in that country will continue to have an important bearing on the industry.

"Crude gypsum is a low-priced commodity, and its selling price f.o.b. quarry is dependent largely upon the quantity produced and the production facilities

available. For export, contracts are generally made with the producer for the year's requirements of the purchaser and these contracts are generally made early in each year. The price of crude gypsum as quoted by the Canadian Chemistry and Process Industries remained at \$2.50 to \$3.50 per ton f.o.b. mine throughout 1942.

"A large tonnage of by-product gypsum is obtained from the production of phosphate fertilizers at the plant of Consolidated Mining & Smelting Company, at Tadoussac, British Columbia, and efforts to find an outlet for this material are being continued."

PART II - SECONDARY PRODUCTION - THE GYPSUM PRODUCTS INDUSTRY, 1942

Nine Canadian factories, operated by four companies, manufactured gypsum products having a factory selling value of \$4,822,262 during 1942. This output was 4.9 per cent over the 1941 total of \$4,601,093 and 17.4 per cent over the 1940 value of \$4,110,735. The main products were gypsum wallboard, gypsum hardwall plaster, gypsum tile and gypsum blocks.

Capital employed in these nine manufacturing plants amounted to \$3,414,258 in 1942, including \$1,578,655 as the value of buildings and equipment, \$614,502 as the value of inventories at the year-end, and \$1,221,101 as cash, bills receivable, etc. The average number of employees in 1942 was 412, to whom \$554,665 was paid in salaries and wages. Expenditures for fuel and electricity amounted to \$217,007 while materials used in manufacturing processes cost \$2,251,434.

Diesel engines	2	30
Gasoline, gas and oil engines	1	40
Total primary equipment	3	100	4	155
Electric motors run by purchased power	256	4,037	20	303
TOTAL	259	4,137	24	458
Electric motors run by power generated by above primary units	27	250	1	10
Stationary boilers	3	622	3	250
Motor generator sets	1	3

Table 15 - MATERIALS USED IN THE GYPSUM PRODUCTS INDUSTRY, 1941 and 1942

Material	Unit of measure	1941		1942	
		Quantity	Cost at works	Quantity	Cost at works
Gypsum, crude	ton	20,378	112,158	20,742	78,490
Gypsum, calcined (plaster of Paris)	ton	157,483	628,325	149,835	705,541
Paper	ton	13,106	718,914	14,240	363,457
Starch or paste	ton	487	42,310	499	31,436
Hair	ton	122	23,293	73	18,036
Retarder	ton	236	23,330	203	13,043
Sawdust or shavings	ton	751	5,481	165	2,259
Containers, etc.	124,660	...	108,537
All other materials	262,581	...	420,561
TOTAL	1,941,052	...	2,251,484

Table 16 - OUTPUT OF THE GYPSUM PRODUCTS INDUSTRY, 1941 and 1942

Products	Unit of measure	1941		1942	
		Quantity	Selling value at works	Quantity	Selling value at works
Gypsum wallboard	sq. ft.	154,760,145	3,255,613	164,410,695	3,843,253
Gypsum hard wall plasters	ton	20,216	1,043,264	51,475	692,533
All other products (x)	301,611	...	228,181
TOTAL	4,600,488	...	4,763,967

(x) Includes gypsum tile and blocks, etc.

LIST OF FIRMS IN THE GYPSUM PRODUCTS INDUSTRY, 1942

Name of Firm	Head Office Address	Plant Location
Windsor Plaster Co. Ltd.	Windsor, N.S.	Windsor, N.S.
Canadian Gypsum Co. Ltd.	1321 Bay Street, Toronto, Ont.	Hillsborough, N.S. Hagersville, Ont.
Gypsum, Lime and Alabastine, Canada, Limited	Paris, Ont.	Montreal, Que. Caledonia, Ont. Winnipeg, Man. Calgary, Alta. New Westminster, B.C.
Western Gypsum Products Ltd.	505 McArthur Bldg., Winnipeg, Man.	Winnipeg, Man.
