### THE GYPSUM INDUSTRY, 1943

#### PART I - PRIMARY PRODUCTION - THE GYPSUM MINING AND QUARRYING INDUSTRY

Production (producers' sales and producers' consumption) of gypsum in Canada during 1943 totalled 446,848 short tons valued at \$1,581,468 compared with 566,166 short tons worth \$1,254,182 in 1942. The tonnage in both years represents various grades of crude gypsum or anhydrite shipped from quarries or mines together with the tonnage of calcined gypsum used in or shipped from quarries or "primary" plants. The quantity of crude gypsum shipped in 1943 was the lowest since 1933, reflecting largely the increasing man-power shortage, wartime restrictions in building materials, and the decrease in coastal shipping available at Nova Scotia ports.

Of the 1943 output, Nova Scotia properties contributed 255,736 tons valued at \$368,639; New Brunswick 36,263 tons at \$148,315; Ontario 92,448 tons at \$335,637; Manitoba 37,989 tons at \$380,520, and British Columbia 24,412 tons worth \$148,348.

The quantity of crude gypsum mined in 1943 totalled 430,822 short tons; no adhydrite was reported as being produced during the year. Crude gypsum calcined in primary or quarry plants totalled 201,168 short tons in 1943.

In 1943 the number of firms reporting production was 6. Some of the Canadian gypsum mining companies confine their operations in the Dominion to the production and sale of crude gypsum or anhydrite while others, in addition to marketing various grades of crude gypsum, produce a calcine for sale or for consumption in their own gypsum products plants. Gypsum is exported from Canada almost entirely in the crude form.

Capital employed by Canadian gypsum mining companies totalled \$5,147,424 in 1943; employees numbered 458; salaries and wages paid amounted to \$617,780, and the total value of fuel, purchased electricity and process supplies used was computed at \$248,043.

The following information is from a report—Gypsum in 1943—as prepared by the Bureau of Mines, Ottawa.

"Gypsum is marketed in the crude lump form; ground, as "land plaster" and "Terra alba"; or ground and calcined, as plaster of Paris or wall plaster. Each year an increasing portion of the calcined material is used in the manufacture of wallboard, gypsum blocks, insulating material, acoustic plaster, etc.

"The use of gypsum products in the building trades has made rapid progress because of their lightness, durability, fire-resisting, insulating, and acoustic properties; and tiles, wallboards, blocks, and special insulating and acoustic plasters have been developed. It is probable that the production of gypsum for domestic use will continue to decline during 1944. As most of the crude gypsum is shipped to the United States for the manufacture of gypsum products, industrial conditions in that country will continue to have an important bearing on the industry.

"The use of anhydrite for the manufacture of sulphuric acid, ammonium sulphate, cement and special plasters is increasing, and, normally, there is a good opportunity for the Canadian material in this market. Canada has extensive deposits favourably situated for commercial development, the material from which has been proved by tests carried out by the Department of Mines and Resources to be of excellent grade. Prior to 1937 the small Canadian production was exported principally for use as a fertilizer for the peanut crop, but it is possible that an industry will eventually be started in this country in which the anhydrite may be used for the manufacture of sulphur or sulphur compounds and of special plasters, similar to those being marketed in England.

"The manufacture of gypsum boards, for which there has been a large demand in recent years, has partly compensated for the decrease in use for residential building purposes.

"Crude gypsum is a low-priced commodity, and its selling price f.o.b. quarry is dependent largely upon the quantity produced and the production facilities available. For export, contracts are generally made with the producer for the year's requirements of the purchaser and these contracts are generally made early in each year. The price of crude gypsum as quoted by the Canadian Chemistry and Process Industries remained at \$2.50 to \$3.50 per ton f.o.b. mine throughout 1943."

PART II - SECONDARY PRODUCTION - THE GYPSUM PRODUCTS INDUSTRY, 1943

Nine Canadian factories, operated by 4 companies, manufactured gypsum products having a factory selling value of \$5,417,045 during 1943. This output was 12 per cent over the 1942 total of \$4,829,962. The main products were gypsum wall-board, gypsum hardwall plaster, gypsum tile and gypsum blocks.

Capital employed in these 9 manufacturing plants amounted to \$4,092,304 in 1943, including \$1,482,430 as the value of buildings and equipment, \$536,959 as the value of inventories at the year-end, and \$2,072,915 as cash, bills receivable, etc. The average number of employees in 1943 was 436, to whom \$632,212 were paid in salaries and wages. Expenditures for fuel and electricity amounted to \$307,748 while materials used in manufacturing processes cost \$2,707,124.
