Chief - Mining, Metallurgical and Chemical Branch: W. H. Losee, B.Sc.

LIME, 1935

According to finally revised statistics issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, Ottawa, sales of lime in 1935 by Canadian producers, including both quick and hydrated, and inclusive of lime used by producers, amounted to 405,419 short tons valued at \$2,925,791 as compared with 368,113 short tons worth \$2,745,797 in 1934. The 1935 output represents an increase of 10.1 per cent in quantity and 6.5 per cent in value over that of the preceding year. Lime production in Canada has shown an upward trend in both tonnage and value since 1932 and the output in 1935 was the greatest since 1930 in which year 490,802 tons worth \$4,038,698 was recorded.

Lime was produced during 1935 in every province with the exception of Prince Edward Island and Saskatchewan; Ontario and Quebec are the two largest producers, the tonnage of their shipments being 54.3 per cent and 28.7 per cent, respectively, of the Dominion total in 1935.

Industries consuming lime as a chemical absorbed 260,885 tons valued at \$1,775,657 in 1935 while a tonnage of 144,534 worth \$1,150,134 was utilized for building and other non-chemical purposes; of the latter tonnage 80,250 tons valued at \$595,730 was recorded for agricultural purposes.

Of the total lime produced in 1935 quicklime comprised 342,047 short tons and hydrated, 63,372 short tons. A comparison of production with that of the preceding year reveals a 10.0 per cent increase in the tonnage of quicklime and a 5.6 per cent increase in that for the hydrated variety. The combined tonnage of both kinds of lime shipped for chemical purposes comprised 64.3 per cent of the total 1935 lime output; increased consumption as a chemical was particularly pronounced in the shipments to gold mines and pulp and paper plants and the increases recorded for these and various other lime consuming industries reflects the almost general improvement in industrial conditions throughout the country.

Canadian producers received an average of \$7.09 per ton for quicklime and \$7.90 for hydrated lime in 1935 as compared with \$7.26 and \$8.46, respectively, in the preceding year.

During 1935 the 49 firms comprising the Canadian lime industry provided employment for 756 persons and distributed \$556,049 in salaries and wages. The industry consumed \$810,437 in fuel, electricity and process supplies and of this total \$431,541 represented expenditures for coal; \$69,224 for coke and \$120,236 for wood.

A report recently issued by the Mines Branch, Department of Mines, Ottawa, contains the following information: "The placing of pulverized quicklime on the market by a number of Canadian lime companies is a development worthy of note. This product finds a market in the chemical and metallurgical industries and it also competes with hydrated lime for plastering purposes on account of the fact that on being slaked it yields a

highly plastic putty that does not require more ageing than does putty made from hydrated lime. Sales have increased rapidly, particularly in Western Canada where highly plastic hydrated lime is not cheaply available. Producers report that pulverized lime packed in air-tight bags will keep for 4 to 6 months without air-slaking, as against 2 to 3 weeks for lump lime; during 1935 a Canadian company began the manufacture of waterproof lime, which is a pulverized quicklime to which certain waterproofing ingredients have been added. Localities where lime may be produced in the future are numerous because of the abundance of suitable limestone in most parts of Canada."

Imports of lime into Canada during 1935 totalled 12,706 cwt. valued \$9,181 as compared with 6,543 cwt. worth \$5,118 in 1934. Exports of lime in 1935 amounted to 104,598 cwt. valued at \$50,296 as against 213,491 cwt. at \$151,983 in the preceding year.
