 Chief - Mining, Metallurgical and Chemical Branch: W. H. Losee, B.Sc.
 Mining Statistician: R. J. McDowall, B.Sc.

LIME INDUSTRY, 1937.

Production of quick and hydrated lime during 1937 by Canadian producers totalled 549,353 shorts tons valued at \$3,824,917 compared with 468,401 tons at \$3,335,970 in the preceding year. The tonnage as recorded represents both sales and consumption of lime by producers and the output in 1937 as thus defined, was the largest since the all time high record of 674,087 tons in 1929. Of the total 1937 lime production 466,538 short tons valued at \$3,252,383 represented quicklime and 82,815 short tons at \$572,534, hydrated lime. Ontario and Quebec are Canada's largest lime producing provinces, the output in these provinces during 1937 being respectively, 294,467 short tons worth \$2,152,644 and 156,313 tons at \$909,116.

The consumption of lime as a chemical in industrial plants and processes has been increasing rapidly during recent years. In 1937 statistical returns made by the Canadian lime industry revealed that 466,796 short tons of lime valued at \$5,112,147 were shipped as chemical to smelters, steel mills, calcium carbide plants, gold mines, pulp and paper mills, glass works and various other consumers. Of the quantity used in such plants during 1937, the pulp and paper mills absorbed 132,045 short tons, iron and steel mills 43,790 tons, gold mines 37,209 tons and sugar refineries 11,625 tons.

The prices per ton for quick and hydrated lime in 1937 were respectively \$6.97 and \$6.45 as compared with \$8.25 and \$11.81 in 1927.

The number of Canadian lime firms reported as active in 1937 totalled 52, of which 21 were located in the province of Quebec and 16 in Ontario. The remainder of the firms comprising the industry conducted lime burning operations in Nova Scotia, New Brunswick, Manitoba, Alberta and British Columbia. Capital employed by the entire industry in 1937 was reported at \$4,931,831; employees totalled 872, salaries and wages distributed aggregated \$781,274; \$871,131 were expended for fuel and electricity and the cost of explosives and various other process supplies was recorded at \$167,827.

Imports of lime into Canada during 1937 totalled 10,033,100 pounds valued at \$32,379 as compared with 1,876,300 pounds at \$12,036 in 1936. Exports of lime during 1937 amounted to 20,746,700 pounds appraised at \$85,489 compared with 23,322,800 at \$97,574 in the preceding year.

Hydrated or specially prepared slake lime is marketed in the form of fine powder usually in 50 pound multi-wall paper bags. Quick lime is sold in the lump, pebble, crushed and pulverized forms. Lump lime and pebble lime are sold in bulk or packed in barrels; crushed lime (1 inch and under) and pulverized lime (ground to minus 20 mesh and in some plants to minus 50 mesh) are sold in airtight, multi-wall paper bags.

According to a report (No. 791) issued by the Bureau of Mines, Ottawa, the outlook for the lime industry is promising because of the increasing number of uses for lime, and because of the increase in lime-using industries in Canada. The feasibility of recovering the carbon dioxide gas resulting from the calcination of lime, now allowed to go to waste in most commercial lime plants, is engaging the attention of lime manufacturers. It has been reported that a lime company in Australia is now producing both liquid and solid carbon dioxide as by-products.
