Chief - Mining, Metallurgical and Chemical Branch: W. H. Losee, B.Sc.

LIME INDUSTRY, 1938

Production of quick and hydrated lime in Canada during 1938 totalled 486,922 short tons valued at \$3,542,652 compared with 549,353 short tons at \$3,824,917 in 1937. The 1938 output comprised 415,761 short tons of quick lime valued at \$2,953,091 and 71,161 short tons of hydrated lime worth \$589,561. During the year under review, 373,278 tons of quick lime and 30,547 tons of hydrated lime were sold or used by lime producers for chemical purposes while the balance of Canadian lime production, total-ling 83,097 tons and consisting of both quick and hydrated was sold or used for build- ing, agricultural and other purposes.

Stone used in the production of lime in Canada included calcium, high calcium and dolomitic varieties of limestone. It is estimated that nearly 900,000 tons of limestone was used in the production of lime in 1938. Lime was produced in all Canadian provinces in 1938 with the exception of Prince Edward Island and Saskat- chewan; no commercial production was reported in the Territories. Of the total Canadian output of lime in 1938, Ontario plants produced 270,478 tons or 55.5 per cent and Quebec 137,314 tons or 28.2 per cent. Imports of lime into Canada in 1938 came entirely from the United States and totalled 6,652 short tons valued at \$36,248; exports of lime during the same period amounted to 6,381 tons at \$51,346.

During 1938 the industry reported 53 plants as active, capital employed totalled \$4,881,214 and \$795,068 in salaries and wages were distributed to 867 em- ployees. The cost of fuels and purchased electricity used amounted to \$826,230 and the value of explosives, chemicals and other process supplies consumed aggregated \$113,759.

The following information relating to Canadian lime production is from a report issued recently by the Department of Mines and Resources, Ottawa:

"During 1938 natural gas was made available in the Beachville, Ontario, area and both of the large plants producing chemical lime at Beachville are now using it for fuel instead of coal.

"A large new market for white, high-calcium lime has been opened up by the use of calcium carbonate filler in place of imported clay in newsprint and magazine paper. Its manufacture in Canada was begun in 1937. At present the paper companies using it purchase the quicklime and make the carbonate filler at their own plants. This filler also has other uses, and preparations to manufacture it in 1939 to supply these other uses have been made by a newly incorporated company.

"Aged lime putty and lime mortar for use in building construction are now available in a number of Canadian cities. Lime mortar is coming back into favour as a binder in masonry, and sales of lime for construction may be expected to increase.

808-44

"There are many prospective lime-producing localities in Canada owing to the abundance of suitable limestone throughout the country, and considerable interest has been taken recently in deposits of high-calcium limestone in northern Ontario because of their proximity to mines and pulp mills.

"Lime is marketed in the form of quicklime and in the hydrated state, the latter being a specially prepared slaked lime in the form of fine powder and marketed in 50-pound, multi-wall paper bags. Quicklime, which comprises about 80 per cent of the total sales, is marketed in the lump, pebble, crushed, and pulverized forms; lump lime and pebble lime are sold either in bulk or packed in barrels; crushed lime (1-inch and under) and pulverized lime (ground to minus 20 mesh, and in some plants to minus 50 mesh) are sold in airtight, multi-wall paper bags. In these various forms lime finds a multitude of uses in chemical and metallurgical processes and in construction, agriculture, and other industries. Lime is one of the great basic raw materials for the chemical industry, and of the current production about 85 per cent is used in chemical processes, thus the old conception of lime as being primarily a structural material is no longer true.

"Prices of the various lime products vary over a wide range depending on the geographical location of the plants and on differences in quality of the lime. There were no significant changes in prices of lime during 1938."

Table 1 - PRINCIPAL STATISTICS OF THE LIME INDUSTRY IN CANADA, 1937 and 1938

	1937	1938
