### LIME INDUSTRY, 1943

Production of quick and hydrated lime in Canada during 1943 totalled 907,768 short tons valued at \$6,832,992 compared with 884,830 short tons worth \$6,530,839 in 1942. The 1943 output was the greatest ever recorded in the history of the Canadian lime industry and comprised 766,147 tons of quicklime valued at \$5,990,088 and 141,621 tons of hydrated lime at \$842,904. During the year under review, 730,499 short tons of quicklime valued at \$5,642,420 and 94,224 short tons of hydrated lime worth \$381,250 were sold or used, by producers, for chemical manufacture, while the balance of Canadian lime production was sold or used for building, agricultural and other purposes.

Stone used in the production of lime in Canada includes calcium, high calcium and dolomitic varieties of limestone. Included in the total figures of Canadian lime production is a considerable tonnage of lime recovered as a by-product in the manufacture of chemicals or allied products. It is estimated that approximately 1,614,481 tons of limestone were consumed in the production of lime in 1943. Lime was produced during 1943 in all Canadian provinces with the exception of Prince Edward Island and Saskatchewan. Commercial production of lime in the Northwest Territories has ever been officially reported. Of the total Canadian output of lime in 1943, Ontario plants produced 411,921 short tons or 45.5 per cent and Quebec 382,432 short tons or 42 per cent.

Imports of lime into Canada during 1943 totalled 9,077 short tons appraised at \$64,303 compared with 6,231 short tons at \$43,854 in 1942. Exports of lime from Canada in 1943 amounted to 15,391 short tons valued at \$133,320 as against 8,431 short tons worth \$74,517 in the preceding year.

During 1943 the lime industry, comprising 41 firms, reported 45 plants as active; capital employed totalled \$4,607,651, and \$1,408,393 were distributed to 898 employees. The cost of fuel and purchased electricity used amounted to \$1,747,012 and the value of explosives, chemicals, drill steel and other process supplies consumed aggregated \$177,470.

A report on lime for 1943, as prepared by the Bureau of Mines, Ottawa, states:

"The steadily increasing demand for lime by the war industries has raised production above all previous records. Most of the forty-five plants throughout the country operated at capacity during 1943, and in the early part of the year there was a serious shortage of high-calcium chemical lime in Eastern Canada. At Beachville, Ontario, which is one of the most important centres of chemical lime production in Canada, the diversion of the Thames River in the quarry area was begun in 1943, to make available much more rock for quarrying and to lessen the danger from floods.

"There are many prospective lime-producing localities in Canada because of the abundance of limestone throughout the country, but in the more industrialized areas, particularly in Ontario and Quebec, large unworked deposits of pure high-calcium limestone that will yield a white lime suitable for chemical purposes are becoming scarce. With the northward development of the mining industry considerable interest is being manifested in making lime from limestone deposits in the more northerly parts of the country.

"Lime is marketed in the form of quicklime and in the hydrated state, the latter being specially prepared slaked lime in the form of fine powder that is marketed in 50-pound, multi-wall paper bags. Quicklime is marketed in the lump, pebble, crushed, and pulverized forms, lump lime and pebble lime are sold either in bulk or packed in barrels; crushed lime (1-inch and under) and pulverized lime (ground to minus 20 mesh, and in some plants to minus 50 mesh) are sold in airtight, multi-wall paper bags. In these various forms lime finds a multitude of uses in chemical and metallurgical processes, in agriculture, in construction, and for various other purposes. It is one of the great basic raw materials of the chemical industry and well over 90 per cent of the present production is used in chemical processes.

"Prices of the various lime products vary over a wide range, depending on the geographical position of the plants and on difference in quality of the lime. No significant change occurred in prices of lime during 1943."
