### NOTICE

It has been the practice of the Bureau of Statistics, since 1920, to issue an annual printed report on the Mineral Production of Canada. This report was comprised to a large extent of the data which had already been issued in bulletin form as statistics for each industry were completed. The final report was necessarily late in being issued, and its main use was for library purposes and for historical research. It also had the advantage of having complete statistics of the Canadian Mining Industry for a year in one volume.

Such a procedure necessitated the preparation of new manuscript, duplication of proof-reading, and extra costs in type-setting and printing. In order to avoid this extra cost, a system has been devised whereby libraries and other similar organizations may file the separate reports in a ring binder as issued, and if they so desire, may have them bound in a volume when the series for the year is complete.

The reports have been paged in such a manner that when bound they will correspond to the chapters of the annual printed report hitherto issued, but which will now be discontinued.

The following reports will constitute the complete volume on Mineral Statistics of Canada:

- A General Review of the Mining Industry
- B The Gold Mining Industry
- C The Silver-Lead-Zinc Mining Industry
- D The Nickel-Copper Mining, Smelting and Refining Industry
- E The Miscellaneous Metal Mining Industry
- F The Non-ferrous Smelting and Refining Industry
- G The Coal Mining Industry
- H The Natural Gas and Crude Petroleum Industry
- I The Asbestos Mining Industry
- J The Feldspar and Quartz Mining Industry
- K The Gypsum Industry
- L The Peat Industry
- M The Salt Industry
- N The Talc and Soapstone Industry
- O The Miscellaneous Industrial or Non-metallic Minerals Mining Industry
- P The Cement Manufacturing Industry
- Q The Clay and Clay Products Industry
- R The Lime Industry
- S The Sand and Gravel Industry
- T The Stone Industry
- U Contract Diamond Drilling in the Mining Industry
- V Appendix — Explanatory notes on the method of computing the quantities and values of the Mineral Production of Canada

# THE LIME INDUSTRY

1949

Production of lime during 1949 amounted to 1,018,823 tons valued at \$11,309,820 compared with 1,053,584 tons valued at \$10,655,062 in the preceding year.

Of the 798,187 tons of quicklime produced, 722,222 tons were used for chemical and industrial purposes and 75,965 tons for building and other uses. Hydrated lime used in chemical and industrial plants amounted to 100,601 tons and the building and agricultural trades purchased 120,035 tons.

Stone used in the production of lime in Canada includes calcium, high calcium and dolomitic varie-

ties of limestone. It is estimated that 1,737,508 tons of limestone were burned in 1949. Lime is also recovered as a by-product from chemical plants.

Wages and salaries paid to 1,060 persons amounted to \$2,485,601. Fuel cost \$2,755,514 and 14,642,858 k.w.h. of electricity cost \$98,323. The value of process supplies and containers totalled \$3,572,730.

The data in this report refer to lime produced from Canadian limestone. There was an additional production of 12,189 tons of lime valued at \$87,691 from imported limestone.
