MONTHLY REPORT
ON
COAL AND COKE STATISTICS
FOR CANADA

September, 1925

Published by Authority of the Hon. J. A. Robb, M.P.,
Acting Minister of Trade and Commerce

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1925

LIST OF PUBLICATIONS

PREPARED IN THE

MINING, METALLURGICAL AND CHEMICAL BRANCH DOMINION BUREAU OF STATISTICS

MINERAL PRODUCTION (Mining and Metallurgy).

General Reports—

Preliminary Reports (semi-annual) of the Mineral Production of Canada.

Annual Report of the Mineral Production of Canada. (In one volume).

PART ONE—PRODUCTION STATISTICS—General Statistical Review of the Mineral Production of Canada.

Metals.—Aluminium—Antimony—Arsenic—Chromite—Cobalt—Copper—Gold—Iron Ore—Iron, Pig—Lead—Mercury—Molybdenum—Nickel—Platinum and Palladium—Silver—Tin—Zinc.

Non-Metals.—Abrasives—Actinolite—Asbestos—Barytes—Coal—Coke—Feldspar—Fluorspar—Graphite—Gypsum—Iron Oxides—Magnesite—Magnesium Sulphate—Mica—Mineral Water—Natrol-Alunite—Natural Gas—Peat—Petroleum—Phosphate—Pyrites—Quartz—Salt—Sodium Carbonate—Sodium Sulphate—Talc.

Structural Materials and Clay Products.—Cement—Clay and Clay Products—Lime—Sand and Gravel—Sand-Lime Brick—Slate—Stone.

PART TWO—GENERAL STATISTICS.—Text and tables presenting general reviews of the mineral industry in Canada (a) by provinces; (b) by industries.

PART THREE—DIRECTORY.—List showing the names, head office and mine or plant addresses of all concerns operating in the mineral industry in Canada, arranged in alphabetical order by industrial groups.

Coal—

Monthly Report of Coal and Coke Statistics for Canada.

General review for the month with tables showing comparative data for the month and year to date, output by coal-mining districts and by provinces, imports and exports by ports and by kinds of coal. In this report there is also a section showing statistics on production, imports and exports of coke for the month and year to date by provinces.

Annual Report of Coal Statistics for Canada.

Text and tables showing, for Canada, and for each of the coal-producing provinces, historical and current data on output, tonnage lost, disposition of coal from the mines, domestic and foreign shipments, exports and imports by ports, consumption of coal, prices, employment, salaries and wages paid, power equipment, capital investment, etc.

Bulletins—

(a) PRODUCTION—

Metals.—Arsenic—Cobalt—Copper—Gold—Iron Ore—Lead—Nickel—Metals of the Platinum Group—Silver—Zinc—Miscellaneous Non-Ferrous Metals including Aluminium, Antimony, Chromite, Manganese, Mercury, Molybdenum, Tin, Tungsten.

Non-Metals.—Asbestos—Coal—Feldspar—Gypsum—Iron Oxides—Mica—Natural Gas—Petroleum—Quartz—Salt—Talc and Soapstone—Miscellaneous Non-Metallic Minerals including Actinolite, Barytes, Corundum, Fluorspar, Graphite, Grindstones, Magnesite, Magnesium, Sulphate, Mineral Waters, Natrol-alunite, Peat, Phosphate, Pyrites, Sodium Carbonate, Sodium Sulphate, Tripolite.

Structural Materials.—Cement—Clay and Clay Products—Lime—Sand and Gravel—Stone and Slate.

(b) ANNUAL INDUSTRIAL REVIEWS—

The Gold Industry—Copper-Gold-Silver Industry—Nickel-Copper Industry—Silver-Cobalt Industry—Silver-Lead-Zinc Industry.

(c) ANNUAL PROVINCIAL REVIEWS OF THE MINERAL INDUSTRY—

Nova Scotia—New Brunswick—Quebec—Ontario—Manitoba—Saskatchewan—Alberta—British Columbia—Yukon.

SEE INSIDE BACK COVER FOR PUBLICATIONS ON MANUFACTURES BASED CHIEFLY ON MINERALS

DOMINION BUREAU OF STATISTICS

R. H. COATS, B.A., F.S.S., (Hon.) F.R.S.C., Dominion Statistician.

S. J. COOK, B.A., A.I.C., F.C.I.C., Chief of the Mining, Metallurgical and Chemical Branch.

COAL STATISTICS FOR CANADA

SEPTEMBER, 1925

The output of coal from Canadian mines during September was 20 per cent greater than the production for the preceding month, but was 10 per cent below the average for September in the past five years. The figures were 1,191,081 tons in September as against 988,824 tons in August, and an average for the month during the five preceding years of 1,312,448 tons.

Production in September showed a considerable gain over August in Nova Scotia and Saskatchewan, but slightly lower figures for Alberta, British Columbia and New Brunswick than in the preceding month. Of the five coal-producing provinces, Saskatchewan and Nova Scotia were the only provinces which reported a greater output in September than the average tonnage for the month in the five preceding years.

Comparison of September and August figures covering the total importation of coal from the United States and Great Britain showed a decrease of 14 per cent. Imports in September amounted to 1,872,417 tons as compared with 2,177,270 tons in August and the five-year average of 1,660,712 tons. September tonnage was therefore 13 per cent higher than the five-year average for the month. Receipts of coal from Great Britain during the month amounted to 63,361 tons. For the first nine months of 1925 the total amount of coal imported into Canada was 12,439,337 tons, or 3 per cent below the preceding five-year average for the period.

Imports of anthracite totalled 313,167 tons in September. This was 309,362 tons below the tonnage imported in August and about 10 per cent above the five-year average for the month. Anthracite imported from the United States amounted to 268,502 tons while 44,665 tons came from Great Britain. The imported coal included 289,870 tons of egg, grate and stove sizes, and 23,297 tons of buckwheat and rice sizes. Of the total anthracite imported during September, entries through the ports of Ontario accounted for 191,561 tons; Manitoba cleared 3,195 tons; British Columbia, 187 tons; and Saskatchewan, 397 tons; the balance came in through the ports of eastern Canada. The total amount of anthracite imported during the nine months ending September, 1925, was 3,529,659 tons, an increase of 14 per cent above the five-year average for the period.

Exports of Canadian coal for the month of September were 50 per cent higher than in August. The quantities were: September, 93,955 tons; August, 59,080 tons. Comparison of the September exports with the preceding five-year average showed a decrease of 37 per cent. Exports from the eastern provinces totalled only 46,055 tons; those from the western provinces amounted to 47,900 tons; there was thus an increase of 34,875 tons above the total for August. Total exports for the year to date amounted to 486,533 tons, or 64 per cent less than the five-year average.

Computed from figures on output, imports and exports, the quantity of coal made available for consumption decreased 5 per cent below the figures for the previous month. During September the total was 2,969,543 tons, as against 3,107,014 tons made available during the month of August, but in comparison with the five-year average for the month, the September available tonnage was higher by 4 per cent. The total coal made available for use in the first nine months of 1925 amounted to 20,270,765 tons. For the twelve months ending September 30, the total coal made available for consumption this year was 29,125,813 tons, as compared with a total of 29,972,007 tons a year ago.

The total number of men employed in the coal mines of Canada during September was 26,174, of whom 19,886 worked underground and 6,288 on surface, as compared with a total of 22,651 in August, of whom 16,841 worked underground and 5,810 on surface. Production per man was 45.5 tons in September as against 43.5 tons per man in August. During September, the production per man-day was 2.3 tons, as compared with 2.2 tons in August. The tonnage lost (Table No. 5) was largely due to "lack of orders" and "other causes."

EXPLANATORY NOTES ON THE TABLES

Output—

The output of coal from each district or county is shown for the current month, and the average output from each district for the same month in the five years 1920-1924 has been computed as a basis for comparison. The total output during the calendar year to date and the average output during the corresponding period of the five years, 1920-1924, are also tabulated. The percentage relations between the corresponding items are shown.

Imports—

Imports of anthracite and bituminous coal are given separately for each Customs port of entry and for each province, the data showing the quantity imported during the current month, and for comparison the average quantity imported during the same month of the five years 1920-1924. The total importations of each kind of coal during the calendar year to date, and during the corresponding period of the five years 1920-1924, are also given; the percentage relations between these data have been computed. With regard to the table of imports it is to be noted that the data given are not comparable with the imports statistics published in the "*Monthly Reports of the Trade of Canada*". The quantity of coal shown as imported represents the total amount of coal from the United States arriving at each port during the month. There is thus included some coal which has not been cleared from Customs while the "*Monthly Reports of the Trade of Canada*" show only the quantity of coal actually cleared from Customs for consumption in Canada. It often happens that large quantities of bituminous coal are brought into Canada but are not cleared from Customs until required for use owing to the fact that there is a duty of 50 cents a ton collected on all bituminous coal imported.

Exports—

Exports of Canadian coal by ports of exit are shown. These data do not show the province of origin but only the port of exit. Coal mined in one province is sometimes shown as exported from another province, a notable instance being that the bulk of coal exported from the province of Alberta is shipped through the Customs ports of Fernie and Cranbrook in British Columbia.

Coal Made Available for Consumption in Canada—

In Table No. 2 the total quantities of coal mined in each month have been added to the total quantities imported. From this aggregate there has been deducted the quantity of Canadian coal exported during the month. The amount remaining is the tonnage of coal made available for consumption during each of the months reported.

Tonnage Lost—

A plan has been worked out by the Bureau which is now being applied in every coal-producing province, and the following outline of the procedure is given, in order that the reader may clearly understand how the data in Table 5 were obtained.

For each month the actual output and the actual number of days' work done by all employees on the colliery pay-rolls are determined and from these two figures the output per man-day is deduced. The number of individual shifts lost by the men whose names are on the colliery pay-roll for the month is recorded, and the total number of shifts so lost is multiplied by the actual tonnage produced per man-day during the month. This lost tonnage plus the actual output of the mine during the month is regarded as the possible output and the percentages given in Table 5 showing the proportions produced and lost, are computed from these figures. The tonnage lost is thus analyzed according to the cause of loss and the percentage figures are included in the tables.

Table 1.—Summary of the Principal Coal Statistics for Canada

(Short Tons)

	(1) Month of September 1925	(2) Month of August, 1925	(3) 5-year average for month 1920-24	(4) Calendar year to date 1925	(5) 5-year average for period 1920-24	Per cent of (1) to (2)	Per cent of (1) to (3)	Per cent of (4) to (5)
Output.....	1,191,081	988,824	1,312,448	8,317,961	10,869,598	120	90	77

COKE STATISTICS FOR CANADA.

SEPTEMBER, 1925

Production of coke in Canada during the month of September amounted to 102,882 tons an increase of 7 per cent over the output of 95,397 tons in the preceding month. The gain was largely due to the increased production in Nova Scotia and it marked a further recovery from the strike of the coal miners in that province. Ontario ovens produced 53,533 tons or 52 per cent of the total production in Canada.

Corresponding with the gain in production there was an increase in the amount of coal used for coke-making. Imported bituminous coal used for this purposes dropped to 109,015 tons from 115,683 tons in August, but this reduction was more than offset by the amount of Canadian coal used, which rose from 26,379 tons in August to 48,468 tons in September, bringing the total coal consumption for coke-making in Canada up to 157,483 tons during the month. Each short ton of coal charged to the ovens returned 1,307 pounds of coke or an average yield of 60.35 per cent.

Imports of coke in September totalled 78,731 tons as compared with 70,000 tons in August, while exports rose to 4,268 tons from 2,007 tons in the preceding month. Adding the tonnage of coke imported to the Canadian production and deducting the exports, the apparent consumption in September was 177,345 tons or 8 per cent greater than in August, when 163,390 tons were made available for use. Ontario was the principal user accounting for 122,316 tons or 69 per cent of all the coke used in Canada. During the month Canadian coke makers used 21,226 tons of coke in their coking plants, delivered 42,489 tons to their associated metallurgical works, and sold 41,833 tons making a total disposition of 84,322 tons.

During the nine months ending September, 400,317 tons of Canadian coal, and 1,125,277 tons of imported coal were converted into 1,001,347 tons of coke. In the same period imports of coke into Canada amounted to 545,329 tons, making a total supply of 1,546,676 tons and as exports totalled 34,010 tons, there remained 1,512,666 tons available for consumption in Canada.

Coke charged to iron blast furnace in the nine months ending September, totalled 413,797 tons.

LIST OF PUBLICATIONS

PREPARED IN THE

MINING, METALLURGICAL AND CHEMICAL BRANCH DOMINION BUREAU OF STATISTICS

STATISTICS OF MANUFACTURES—based chiefly on minerals.

General reports on the sections of manufactures covered by the Mining, Metallurgical and Chemical Branch are issued as follows:—

Annual Printed Reports—

Iron and Steel and Their Products: Pig iron and Ferro-Alloys—Steel and Rolled Products—Castings and Forgings—Boilers and Engines—Agricultural Implements—Machinery—Automobiles—Auto Accessories—Bicycles—Railway Rolling Stock—Wire and Wire Goods—Sheet Metal Products—Hardware and Tools—Miscellaneous Iron and Steel Products.

Manufactures of Non-ferrous Metals: Aluminium Ware—Brass and Copper Products—Lead, Tin and Zinc Products—Manufactures of the Precious Metals—Electrical Apparatus and Supplies—Miscellaneous Non-Ferrous Metal Products.

Manufactures of Non-Metallic Minerals: Aerated Waters—Asbestos and Allied Products—Cement Products and Sand-Lime Brick—Coke and By-Products—Glass (blown, cut, ornamental, etc.)—Illuminating and Fuel Gas—Monumental and Ornamental Stone—Petroleum Products—Miscellaneous Non-metallic Mineral Products, including (a) Artificial Abrasives, (b) Abrasive Products, (c) Artificial Graphite and Electrodes, (d) Fuel Briquettes, (e) Gypsum Products, (f) Mica Products.

Chemicals and Allied Products: Coal Tar and its Products—Acids, Alkalies, Salts and Compressed Gases—Explosives, Ammunition, Fireworks and Matches—Fertilizers—Medicinal and Pharmaceutical Preparations—Paints, Pigments and Varnishes—Soaps, Washing Compounds and Toilet Preparations—Inks, Dyes and Colours—Wood Distillates and Extracts—Miscellaneous Chemical Products, including (a) Adhesives, (b) Baking Powder, (c) Boiler Compounds, (d) Celluloid Products, (e) Flavouring Extracts, (f) Insecticides, (g) Polishes and Dressings, (h) Sweeping Compounds, (i) Chemical Products, n.e.s.

Annual Bulletins.—In addition to the foregoing printed reports, a series of bulletins is issued annually, each of which presents the principal statistics relative to production: (a) in a particular industry, e.g. Automobiles—Petroleum Products, etc., (b) in each of the four main groups of industries. These are published in mimeograph form from time to time during the year as the necessary material becomes available.

Monthly—

Production of Iron and Steel in Canada.

Coke Statistics for Canada.

SPECIAL REPORTS.—

Report on the Consumption of Prepared Non-Metallic Minerals in Canada.

Report on the Consumption of Mine and Mill Materials in Canada.

Annual Summary Report on the Mineral Industry and the Manufacturing Industries Related Thereto.
