

## PETROLEUM AND COAL PRODUCTS INDUSTRIES

 1960General Review

Formerly Products of Petroleum and Coal

## ANNUAL CENSUS OF MANUFACTURES

Published by Authority of
The Honourable George Hees, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS
Industry and Merchandising Division

## SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:
.. figures not available.
... figures not appropriate or not applicable.

- nil or zero.

## EXPLANATORY NOTES

This report is one in a series of about 140 puhlications which present the results of the 1960 Census of Manufactures. Most reports in this serles refer to specific industries, but there are summary reports for Canada and the provinces and for major industry groups. Adoption of the revised Standard Industrial Classification for 1960 compilations has necessitated changes in titles of many reports in this annual seties. The content of many industries has also been affected (see following note on Industrial Classification).

Industry statistics given in these reports refer to number of establishments, employees, salaries and wages, cost of materials. supplies, fuel and electricity, gioss value of shipments, inventories and value added by manufacturing. Details of materials used and products shipped are also given. Descriptions of the principal industry statistios, with :special reference to 1960 are as follows:

## Period Covered

Firms are asked to submit figures for the calendar year, if at all possible, and most reports are on this basis. Financial year reports for periods differing from the calendar year are accepted in instances where the firms find it impossible to suppl! calendar yeat data from accounting records. However the data on employees, salaries and wages are requested on a calendar year basis in all cases.

## Establishment

Data for the annual census is collected on an establishment basis. A firm with more than one plant is required to file a report for each plant. In most cases an establishment is a complete factory; sometimes, however, a plant is divided into two or more establishments when it carries out operations classifiable to different industries and when separate accounting records are available. Usually the statistics for an establishment relate only to the manufacturing activities. Other activities such as construction at the plant by its own employees, wholesale or retail activities carried on at the plant location, etc., are not included. Plants engaged solely in renair work (except in the case of furniture. shipbuilding, boat building, aircraft and railway rolling stock industries) are not included but plants occupied in assembling parts into complete units are included.

## Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level, and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, ware-
housing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc. are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

## Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provider, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtine are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

## Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

## Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers fom other plants of the reporting company. Amounts paid to other manufacturets for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants or reporting companies for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

## Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant of by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, of for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers
and resold without further processing are not included. Values are computed on f.o.b. plant or plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are includer. Amounts received in payment for work done on materials owned by others are included.

In a few industries such as shipbuilding, aircraft, etc., where work on principal products extend over a relatively long period, the value of production is recorded tather than the value of shipments. For those industries production is computed from the value of deliveries of complete units during the year plus the value of work done during the year on unfinished units less the value of work done in previous years on finished units delivered in the year under review.

## Inventories

Values represent the book values of manufacturing inventories owned and held at the reporting plant. Figures include inventories held in warehouses or selling outlets which have been included with plant operations for purposes of reporting shipments.

## Value added by Manufacturing

Figures are computed from value of shipments plus or ininus changes in inventories of finished goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production. ${ }^{1}$

## Standard Industrial Classification

The revised Standard Industrial Classification which has been introduced with the 1960 Census of Manufactures provides for a breakdown of the universe into 140 industries arranged in 20 major groups compared with 135 industries in 17 major groups in the old classification which was used in the compilations for the years 1949 to 1959 in clusive. It incorporates changes considered desirable on the basis of experience in using the earlier classification as well as those which take account of changes in the structure of Canadian industries associated with the rapid developments of the past decade. Full details are contained in the Standard Industrial Classification Manual, Catalogue No. 12-501, which is avallable from either the Queen's Printer or the Dominion Bureau of Statistics. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

Many industries renain unchanged in the new classification but in many instances there have been substantial changes in content because of the shifting of establishments from one industry to another or in re-grouping of establishments. Where

[^0]changes have occurred the principal statistics 5 1957. 1958 and 1959 have been re-compiled to provide data on a basis comparable with those for 1960.

## Short Forms

Between 1949 and 1957, in an effort to ease the reporting burden for sinaller firms, a short form was used asking for the total value of shipments only or, in a few cases where losses of detail were significant, for quantities and values of principal products. For purposes of publication, missing data were estimated on the basis of appropriate ratios. In general the cut-off point for these short forms was set at $\$ 50,000$ value of shipments. About $40 \%$ of the total number of establishments reported on the short form and accounted for less than 3 per cent of the total value of shipments.

In 1958, in order to establish a new base year, the small firms were asked to report all items of principal statistics together with some detail on materials and products.

For the 1959 Census, the short form was used again, but further steps were taken to ease the respondents' burden. First, the general limit for short forms was raised to $\$ 100,000$ value of shipments. In addition, a new intermediate form was developed. This form is a shortened version of the long form in that most of the general questions were pared down and the detalled lists of materials and products were limited to the more important items. The general limits for firms in this category were set at between $\$ 100,000-\$ 500,000$ value of shipments, but in the case of both the short and intermediate forms there were lower cut-offs for a number of industries in which the smaller firms accounted for a larger share of total shipments. On the other hand, limits were raised where this could be done without a significant loss of coverage. On most of the short forms for 1959, in addition to total value of shipments, data on principal products were requested. In a few industries, where loss of employment and earnings data were considered too large because of higher cut-offs, a question on total payroll was placed on the short form. This practice was followed again in 1960.

The intermediate and long forms provide complete data for the compilation of all elements of principal industry statistics and the details of materials and products. The one-page short form, although containing data on principal products and total value of shipments, does not request information on other elements of principal statistics such as value of inventories, materials, fuel and electricity and, in most cases, employment and salaries and wages, nor does it contain detailed data on volume and value of materials used. For purposes of compiling aggregates of principal statistics by industry and by geogtaphic location, the missing data for each establishment were estimated for 1959 by using, in general, ratios based on the change in the value of shipments between 1958 and 1959. The proportion of the estimated data was generally less than 5 per cent of the total in each category of principal statistics.

# PETROLEUM AND COAL PRODUCTS INDUSTRIES 1960 

Data presented in this report for the Petroleum and Coal Products Industries group reflect implementation of the revised Standard Industrial Classification (SIC) which is being used by the Dominion Bureau of Statistics in its compilations of 1960 industry statistics - see item "Standard Industrial Classification" in the Explanatory Notes section of this report. This major division or group includes two industries, namely, Petroleum Refineries and Other Petroleum and Coal Products Industries. For statistical purposes the industry titled Petroleum Refineries in the revised Standard Industrial Classification covers establishments primarily engaged in refining crude petroleum and in producing gasoline, fuel oils, lubricating oils, illuminating oils and other petroleum products. The industry also includes establishments primarily engaged in blending lubricating oils and greases which they have purchased. The industry titled "Other Petroleum and Coal Products Industries" in the revised Standard Industrial Classification covers establishments primarily engaged in manufacturing petroleum and (i)al products not elsewhere classified such as fuel briquettes, road emulsions and roofing compounds. This industry also includes coking plants operated as separate establishments and not as a subsidiary activity in iron and steel or chemical plants. It might be noted that for purposes of presentation of statistics in this report recognition is being given to Petroleum Refining and to Manufacturers of Lubricating Oils and Greases as sub-classifications within the Petroleum Refineries industry.

In many instances, adoption of the new Standard Industrial Classification effected a radical shifting of manufacturing establishments as between industry groupings. Significant elements in the shift in the case of the major group reviewed in this report were the transfer of the firms previously classified in the Absorption Gasoline Plants grouping to the new Standard Industrial Classification industry, Natural Gas Processing Plants and the abolition of the Coke and Gas Industry as a separate industry. In accordance with the new Standard Industrial Classification,
manufacturing plants comprising the latter were disposed of as follows; coking plants operated as subsidiary activities in iron or steel or chemical plants to the new SIC industries, Iron and Steel Mills and Manufacturers of Industrial Chemicals respectively; coking plants operated as separate establishments to the new SIC industry "Other Petroleum and Coal Products Industries' (one of the industries in the major group reviewed in this report). The remainder of the plants in the old Coke and Gas Industry, namely, those establishments primarily engaged in the distribution of natural or manufactured gas through a system of mains were transferred to Gas Distribution, one of the industries in Division 7. Transportation, Communication and Other Utilities. In order to provide a statistical link, data for this major group for 1959 have been recompiled in accordance with the new SIC and are presented along with those for 1960 in Tables 1 and 2.

Value of factory shipments by the industries in this group was $\$ 1,197,967,758$ in 1960, an increase of about 2.9 per cent over the $\$ 1,164,297,008$ reported in 1959. Employment decreased to 14,513 in 1960 from the 14,661 reported in 1959; however, payments in salaries and wages advanced from $\$ 82,995,439$, in 1959 to $\$ 85,446,911$ in 1960. Materials for manufacturing cost \$873,633,610 in 1960 while fuel and electricity cost $\$ 50,071,703$; in 1959 , the corresponding amounts were $\$ 870,753,290$ and $\$ 52.443,321$.

Note: Prior to 1959 the method for valuing products in the Petroleum Refining Industry used as a basis the value of production as against value of factory shipments in the other industries in this new SIC Group. In 1959 the gross value of production for the Petroleum Refining Industry was replaced by value of factory shipments; accordingly, the "Value added" calculations for 1959 and subsequent years take into account changes in the value of inventories as well as the usual deductions for cost of materials and fuel and electricity.

TABLE 1. Principal Statistics: Petroleum and Coal Products Industries Group. by Industriee and by Provinces, 1959 and 1960
Basis: Standard Industrial Classification revised 1960.

TABLE 8. Capital and Repair Expenditures: Petroleum and Coal Products Industries, 1960-62

[^4]

[^0]:    "To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. publication 61-202. Survey of Production.

[^1]:    ${ }^{1}$ See note to text.
    "The changeover to the new classification has delayed the recompilation of "Value added" figures for 1959 and same will not be available until the next issue of thls report.

[^2]:    See footnote at end of table.

[^3]:    ${ }^{1}$ Grease at 10 lbs to a gallon.

[^4]:    ${ }^{1} 1960$ actusl, 1961 preliminary estimate, 1962 intentions.
