Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-out, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Client Services Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 1-819-951-9606) or to the Statistics Canada Reference Centre in:

Halifax	(1-902-426-5331)	Regina	(1-306-780-5405)
Montréal	(1-514-283-5725)	Edmonton	(1-403-495-3027)
Ottawa	(1-613-951-8116)	Calgary	(1-403-292-6717)
Toronto	(1-416-973-6586)	Vancouver	(1-604-666-3691)
Winnipeg	(1-204-983-4020)		

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the Regional Reference Centres.

Standards of Service to the Public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and services to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de cette publication ou de statistiques et services connexes doit être adressée à la:

Sous-section du service à la clientèle,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 1-819-951-9606) ou au Centre de consultation de Statistique Canada à:

Halifax	(1-902-426-5331)	Regina	(1-306-780-5405)
Montréal	(1-514-283-5725)	Edmonton	(1-403-495-3027)

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- ' revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613)951-8200.

® Registered Trade Mark of Statistics Canada.

Revisions

The indexes are subject to a two-stage revision. Quarterly, the indexes are revised for the preceding quarter. Annual revision takes place in the first quarter and is applicable to the indexes for the past two years.

This publication was prepared under the direction of:

- **Louis Marc Ducharme**, Director, Prices Division.
- **François Bordé**, Chief, Goods & Services Producing Industries Section.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- ' nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division du marketing, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613)951-8200.

® Marque déposée de Statistique Canada.

Révisions

Les indices font l'objet d'une révision en deux temps. D'abord, l'indice d'un trimestre donné est révisé le trimestre suivant. Ensuite, une révision annuelle portant sur les deux années précédentes a lieu au premier trimestre.

Cette publication a été rédigée sous la direction de:

- **Louis Marc Ducharme**, Directeur, Division des prix.
- **François Bordé**, Chef, Section des Industries de biens et de services.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

Highlights

Third quarter 1995

Farm Input Price Index (FIPPI)

Interest costs and the price of fertilizer and pesticides boosted the annual increase in the cost of farming in the third quarter of 1995 to its highest level in over a year.

It cost farmers 4.2% more to do business in the third quarter of 1995 than it did during the same period a year earlier. That was the highest annual rate of increase since the second quarter 1994 (+4.4%). In Eastern Canada, prices were up 3.7%, while the hike in the West was 4.6%.

Farmers paid 21.8% more in interest costs in the third quarter of 1995 compared to a year earlier, but the annual change was down from +29% in the previous quarter. Interest costs fell between quarters (-0.7%) for the first time since the beginning of 1994, on the heels of a decline in both mortgage and non-mortgage loans.

Fertilizer, pesticide costs dogging farmers

Farmers paid more for inputs in seven of nine categories on a year-over-year basis, particularly for interest and crop production inputs, such as seed, fertilizer and pesticides (+12.3%).

Farm wages at the national level climbed 3.0%, while the cost of machinery and motor vehicles went up 4.7%. Lower feeder cattle prices contributed most to a 3.1% drop in animal prices since the third quarter of 1994.

On the other hand, farm input prices tended to be stable in the third quarter compared to the second, rising only 0.3%, the lowest quarterly rate of increase this year. Farmers paid more to hire farm labour (+3.8%). That was offset by the lower interest costs and a 1.9% decrease in the prices of building and fencing. Other input groups showed little or no change.

Third-quarter costs up in the East, steady in the West

Third-quarter costs rose 0.9% in Eastern Canada on the strength of higher farm labour costs, while they remained unchanged in the West.

Eastern farmers paid significantly higher wages on cattle, fruit and vegetable farms, following a quarterly drop of 5.1% in farm wages in the East in the second quarter. Farmers in Eastern Canada also enjoyed lower prices for building and fencing, and interest.

In the West, farmers paid slightly more for animal production, machinery and motor vehicles, and supplies and services. But costs dropped for building and fencing, interest, hired farm labour and crop production.

Faits Saillants

Troisième trimestre de 1995

Indice des prix des entrées dans l'agriculture (IPEA)

Les coûts d'intérêt et le prix des engrains et des pesticides ont porté à son plus haut niveau en plus d'un an l'augmentation annuelle du coût de l'exploitation agricole au troisième trimestre de 1995.

Au troisième trimestre de 1995, les agriculteurs ont eu des coûts d'exploitation de 4,2% supérieurs à ceux de la même période un an auparavant. C'est le plus fort taux annuel d'augmentation depuis le deuxième trimestre de 1994 (+4,4%). La hausse a été de 3,7% dans l'Est canadien, et de 4,6% dans l'Ouest.

Au troisième trimestre de 1995, les coûts d'intérêt pour les agriculteurs ont été supérieurs de 21,8% à ce qu'ils étaient un an plus tôt, mais cette variation annuelle était moindre qu'au trimestre précédent (+29%). Les coûts d'intérêt ont chuté d'un trimestre à l'autre (-0,7%) pour la première fois depuis le début de 1994, dans le sillage d'un recul des prêts hypothécaires et non hypothécaires.

Les coûts d'engrais et de pesticides: bête noire des agriculteurs

D'une année à l'autre, les agriculteurs ont subi des hausses de prix de leurs entrées dans sept des neuf catégories et particulièrement pour l'intérêt et les entrées dans les cultures agricoles, comme les semences, les engrains et les pesticides (+12,3%).

Les salaires agricoles au niveau national ont progressé de 3,0%, pendant que le coût des machines agricoles et des véhicules automobiles avançait de 4,7%. La diminution du prix des bovins d'engraissement a été le principal facteur d'un repli de 3,1% du prix des animaux depuis le troisième trimestre de 1994.

Par ailleurs, les prix des entrées dans l'agriculture ont eu tendance à être stables au troisième trimestre par rapport au deuxième, n'avancant que de 0,3%, ce qui constitue le taux trimestriel d'augmentation le plus faible cette année. Les agriculteurs ont dû débourser davantage pour embaucher de la main-d'œuvre agricole (+3,8%). Cette augmentation a été neutralisée par la diminution des coûts d'intérêt et un repli de 1,9% du prix des bâtiments et des clôtures. La variation dans les autres groupes d'entrées a été faible ou nulle.

Les coûts au troisième trimestre: augmentation dans l'Est, stabilité dans l'Ouest

Les coûts au troisième trimestre ont progressé de 0,9% dans l'Est canadien sous l'effet d'une hausse des coûts de la main-d'œuvre agricole, pendant qu'ils demeuraient inchangés dans l'Ouest.

Les agriculteurs de l'Est ont payé des salaires sensiblement supérieurs dans les fermes bovines, fruitières et maraîchères, après un recul trimestriel de 5,1% des salaires agricoles dans l'Est au deuxième trimestre. Les agriculteurs de l'Est canadien ont aussi profité d'une diminution de prix pour les bâtiments et les clôtures et l'intérêt.

Dans l'Ouest, les agriculteurs ont payé un peu plus cher pour l'élevage d'animaux, les machines agricoles et les véhicules automobiles, ainsi que les fournitures et les services, mais les coûts ont chuté pour les bâtiments et les clôtures, l'intérêt, la main-d'œuvre agricole salariée et les cultures agricoles.

(1) The indexes are subject to a two-stage revision. Quarterly, the indexes are revised for the preceding quarter. Annual revision takes place in the first quarter and is applicable to the indexes for the past two years.

(1) Les indices font l'objet d'une révision en deux temps. d'abord, l'indice d'un trimestre donné est révisé le trimestre suivant. Ensuite, une révision annuelle portant sur les deux années précédentes a lieu au premier trimestre.

(1) The indexes are subject to a two-stage revision. Quarterly, the indexes are revised for the preceding quarter. Annual revision takes place in the first quarter and is applicable to the indexes for the past two years. (2) Selected items. (3) Groups and sub-groups of commodities are identified by the type of print and by the spacing. For further detail, see appendix I and II. (4) In cases where a commodity has two Dnumbers, the top number is the old Dnumber which is terminated as of first quarter 1994, and the bottom number is the newly assigned number to be used from now on.

(1) The indexes are subject to a two-stage revision. Annual revision takes place in the first quarter and is applicable to the indexes for the past two years.

(1) Les indices font l'objet d'une révision en deux temps. Une révision annuelle portant sur les deux années précédentes a lieu au premier trimestre.

(2) The average rate for all outstanding loans of the corresponding type.

(2) Le taux moyen pour tous les prêts non remboursés du type correspondant.

TECHNICAL NOTES

FARM INPUT PRICE INDEX (1986 = 100)

1. Concepts, Data Description and Methods

The Farm Input Price Index (FIFI), 1986 = 100, measures the price changes of a basket of goods and services purchased by Canadian farmers for use in agricultural production. The basket is made up of the inputs bought by farmers in 1986. The index is calculated by comparing current prices for those inputs to the average of their prices in 1986.

The Farm Input Price Index is useful in transforming current dollar farm expenditures into constant dollars, which are an important component of analytical studies and econometric modelling. The FIFI and its details are also used to monitor price changes which are considered in the operations of marketing boards and in price stabilisation programmes.

The total FIFI represents the aggregate price change for all inputs into all kinds of farming operations. For a particular application, it may be more appropriate to select specific inputs and calculate a weighted average of them using the particular patterns of cost or expenditure that are more appropriate. Whatever basket is used, one should remember that the basket is fixed over time. For this reason, the index cannot measure changes in production costs due to changes in the mix of inputs used, or changes in productivity. Furthermore, comparisons of indexes between different regions for the same item or group of items only indicate differences in price movements over time, they cannot compare price levels in different parts of the country.

This FIFI series succeeds the previous series, 1981 = 100, covering the period 1981-1985, also the series 1971 = 100, covering the period 1971 to 1983, and the series 1961 = 100, covering the period 1961 to 1977. The earlier FIFI series have been converted to a 1986 time-base so that continuous indexes are available, wherever possible. In many cases this is from 1961. For looking at price movements before 1961, in some cases FIFI indexes follow some of the items found in the Price Index Numbers of Commodities and Services Used by Farmers 1935-1939 = 100 for the years 1913 to 1971.

Index formula

A general formula for an index made up of several items for the current period ($I_{t/o}$) is:

$$I_{t/o} = \frac{\sum p_t q_o}{\sum p_o q_o} \times 100$$

NOTES TECHNIQUES

INDICE DES PRIX DES ENTRÉES DANS L'AGRICULTURE (1986 = 100)

1. Concepts, description des données et méthodes

L'indice des prix des entrées dans l'agriculture (IPEA), établi sur la base de 1986 = 100, mesure la variation des prix des biens et des services qu'achètent les agriculteurs du Canada pour la production agricole. Le panier se compose des biens et des services achetés par les agriculteurs en 1986. Le calcul de l'indice est fondé sur la comparaison des prix courants de ces biens et services et de leurs prix moyens en 1986.

L'indice des prix des entrées dans l'agriculture permet de transformer les dépenses agricoles exprimées en dollars courants en dollars constants, qui sont un élément important des études analytiques et des modèles économétriques. L'IPEA et les détails qu'il renferme servent en outre à suivre l'évolution de ces prix qui sont utilisés par les offices de commercialisation et dans les programmes de stabilisation des prix.

Globalement, l'IPEA représente la variation d'ensemble des prix pour toutes les entrées dans tous les types de travaux agricoles. Cependant, dans certains cas particuliers, il pourrait être préférable de sélectionner des entrées spécifiques et de calculer une moyenne pondérée en se servant des schémas particuliers des coûts et des dépenses qui sont les plus pertinents. De plus, quel que soit le panier utilisé, il ne faut pas oublier que ce dernier est fixe dans le temps. L'indice ne saurait donc mesurer que les variations des coûts de production, attribuables à des changements de la composition des entrées, et non pas celles de la productivité. En outre, les comparaisons des indices de diverses régions pour un même article ou groupe d'articles ne révèlent que les divergences des mouvements de prix dans le temps et ne peuvent servir à rapprocher les niveaux de prix dans les diverses régions du pays.

Cette série fait suite à l'IPEA précédent établi sur la base de 1981 = 100 pour la période allant de 1981 à 1985, sur la base 1971 = 100, pour la période allant de 1971 à 1983, et à l'IPEA établi sur la base de 1961 = 100 pour la période allant de 1961 à 1977. Les séries antérieures ont été converties sur la base de 1986 afin d'assurer, dans la mesure du possible, l'uniformité des indices. Dans certains cas, la conversion est effectuée à partir de la base de 1961. En ce qui a trait aux mouvements de prix antérieurs à 1961, les indices de l'IPEA suivent quelquefois, certains des articles que l'on trouve dans les nombres-indices des prix des produits et services utilisés par les agriculteurs sur la base de 1935-1939 = 100, pour les années 1913 à 1971.

Formule de l'indice

La formule générale de l'indice de la période courante, composée de plusieurs articles, ($I_{t/o}$) est la suivante:

where p_t is the price of an item in the current period, and p_o , q_o and $p_o q_o$ are the price, quantity and value of expenditure of the item in the base (1986) period. This formula can be transformed to:

$$I_{t/o} = \sum (p_t / p_o) w$$

where

où

$$w = 100 \times \frac{p_o q_o}{\sum p_o q_o}$$

Expressed this way, the "w" is the percentage weight of an item - its percentage share in the total expenditure in the base period for all items in the index of which it is part.

Composition of the basket

The definition of what should be included in the basket was last done in 1981. The main source of information for the weights of major groups and groups of items was Farm Operating Expenses and Depreciation Charges for 1986. More detailed weights, applying to the detailed composition of items in each group were estimated in 1981 from various additional sources, such as production statistics for both agriculture and manufacturing, and subsequently revalued to 1986 prices. With the publication of the expanded list of item indexes in 1992, many detailed weights in the expanded areas were re-estimated from the most recent available data on production and use. Tables of percentage weights are Appendixes 1 and 2 in this book.

Sources of price information

Until 1992 the price information was derived from a variety of sources: direct farm suppliers (e.g. for farm machinery and seed); other price indexes such as the Industry Product Price Index (e.g. for fertilizer) and the Consumer Price Index (e.g. for car insurance); information collected by other divisions of Statistics Canada and other federal departments (e.g. for labour, feed, property taxes). In some cases, notably for custom work and farm rents, direct pricing is not available, so these indexes are imputed from other series.

Since the beginning of 1992, the sources of price information have been improved and extended, through a programme funded by Agriculture Canada. To provide more geographic detail, and to get more relevant prices, direct surveys of farm suppliers have been set up in the following areas: fertilizers, pesticides and fuels; building supplies, small tools and machinery and vehicle parts and repair. In almost all cases this pricing replaces poorer secondary sources. In addition the surveys of farm machinery and seed have been enlarged.

où p_t est le prix de l'article au cours de la période courante, p_o , q_o et $p_o q_o$ représentent respectivement le prix, la quantité et la valeur de l'article figurant dans l'indice de la période de base (1986). Cette formule est ensuite convertie comme suit:

$$I_{t/o} = \sum (p_t / p_o) w$$

où

$$w = 100 \times \frac{p_o q_o}{\sum p_o q_o}$$

Exprimé de cette façon, "w" est le poids en pourcentage d'un article - soit sa part en pourcentage des dépenses globales de la période de base pour tous les articles de l'indice dont il fait partie.

Composition du panier

C'est en 1981 qu'on a procédé pour la dernière fois à la définition des articles qui composent le panier. Les dépenses d'exploitation agricole et d'amortissement de 1986 constituent la principale source d'information qui permet d'estimer les pondérations pour les groupes principaux et les groupes d'entrées. Les pondérations plus détaillées, qui servent à établir la composition exhaustive des articles de chaque groupe, ont été estimées en 1981 à partir de diverses sources additionnelles, notamment les statistiques sur la production agricole et manufacturière, et réévaluées par la suite en fonction des prix de 1986. La diffusion, en 1992, de la liste élargie d'articles a coïncidé avec la réévaluation de nombreuses pondérations détaillées dans les secteurs élargis à partir des données les plus récentes sur la production et l'utilisation. Les tableaux des pondérations en pourcentage figurent aux annexes 1 et 2 du présent ouvrage.

Sources de renseignements sur les prix

Jusqu'en 1992, les renseignements sur les prix provenaient de diverses sources: les fournisseurs des agriculteurs (par exemple, les fournisseurs de machines agricoles et de semences), les autres indices de prix, notamment l'indice des prix des produits industriels (ex. engrais) et l'indice des prix à la consommation (ex. assurance des véhicules) et les renseignements recueillis par d'autres divisions de Statistique Canada et des ministères fédéraux (par exemple, les données relatives à la main d'oeuvre, aux aliments pour animaux, aux impôts fonciers). Dans certains cas, notamment celui du travail sur commande et des loyers agricoles, on impute ces indices à partir d'autres séries, le relevé direct des prix n'étant pas effectué.

Depuis le début de 1992, on a amélioré et élargi les sources de données sur les prix dans le contexte d'un programme financé par Agriculture Canada. En vue d'accroître le nombre de détails géographiques et la pertinence des prix, on mène maintenant des enquêtes auprès des fournisseurs agricoles dans les domaines suivants: engrais, pesticides et carburants; fournitures de construction, petits outils et machinerie; pièces et réparations de véhicules. Dans presque tous les cas, ces relevés de prix remplacent des sources secondaires de moindre qualité. En outre, on a élargi les enquêtes sur la machinerie agricole et les semences.

Where possible, the prices used in the FIPI are transaction prices which correspond to those effectively paid by farmers, including the effect of all applicable taxes and subsidies. Because of the changes in sources, the FIPI from 1992 onward reflect more closely the movement of actual transaction prices.

Sample design

The samples of prices collected for the FIPI are designed to provide an index reliable at the level of detail shown in this publication. For this purpose, the samples are stratified to ensure that no important type of price change is omitted from the index. In this process, pricing categories are identified and split into sub-groups as needed to represent the commodity group. Samples are chosen to represent the price movement of each sub-group. As the number of price observations at this fine level of detail is more limited the reliability of the price movement is less than in the higher-level indexes shown here. Nevertheless, in most cases these detailed indexes are available to interested users.

The same design considerations apply geographically. Part of the expansion in 1992 was to put provincial indexes on as sound a base as the Eastern and Western Canada indexes were previously and to allow calculation of provincial FIPI totals. This has been done for each of the provinces from Quebec west. For the Atlantic Provinces as a whole the indexes are based on the same depth of coverage, but the individual provincial indexes in that region are based on thinner samples.

Timeliness and revisions

The indexes are published quarterly, about five weeks after the end of the reference quarter. Notice and summary figures are given in the Statistics Canada Daily Bulletin (Catalogue No. 11-001) and the data are available on CANSIM on that date. This publication is distributed about three weeks later.

In each quarter, indexes for the preceding quarter are subject to revision. Also, with the publication of the first quarter figure for each year, indexes for the preceding two years are subject to revision. These revisions mainly affect those indexes which are estimated in whole or part on annual data (property taxes, farm rent and interest).

Data availability

All publishable indexes are on CANSIM. Matrices 2050 to 2063 include more than 100 provincial or regional indexes covering more detail than is included in this publication. Matrices 550 to 582 include sub-provincial indexes for some items. A table showing which CANSIM matrices apply to which provinces is in Appendix 3.

Dans la mesure du possible, les prix utilisés dans l'IPEA sont les prix des transactions qui correspondent à ceux effectivement payés par les agriculteurs et tiennent compte notamment de toutes les taxes et subventions applicables. En raison des changements de sources, l'IPEA de 1992 et ceux des années subséquentes sont plus représentatifs du mouvement des prix réels des transactions.

Conception de l'échantillon

Les échantillons de prix relevés pour l'IPEA doivent permettre le calcul d'un indice fiable au niveau d'agrégation de la présente publication. À cette fin, les échantillons sont stratifiés pour faire en sorte qu'aucun type important de variation de prix ne soit omis de l'indice. À ce stade, on détermine les catégories de prix et on les répartit en sous-groupes au besoin pour représenter le groupe de produits. On sélectionne des échantillons pour illustrer les mouvements de prix dans chaque sous-groupe. Les observations de prix à ce niveau d'agrégation étant plus limitées, la fiabilité du mouvement des prix est donc inférieure à celle des indices de haut niveau. Néanmoins, dans la plupart des cas, les utilisateurs intéressés peuvent se procurer ces indices détaillés.

Les mêmes considérations relatives à la conception s'appliquent au niveau géographique. L'élargissement de 1992 consistait notamment à établir les indices provinciaux sur une base aussi solide que ne l'était antérieurement celle des indices de l'Est et de l'Ouest du Canada et à permettre le calcul des totaux provinciaux de l'IPEA. Ce qui a été fait pour chacune des provinces à l'ouest du Québec. Pour ce qui est des indices d'ensemble des provinces de l'Atlantique, la couverture est tout aussi étendue mais les indices provinciaux individuels de cette région sont fondés sur des échantillons moins grands.

Actualité des données et révisions

Les indices sont diffusés sur une base trimestrielle, environ cinq semaines après la fin du trimestre de référence. L'avis et le résumé paraissent dans Le Quotidien de Statistique Canada (n° 11-001 au catalogue) et les données sont versées dans CANSIM le même jour. La présente publication est diffusée environ trois semaines plus tard.

À chaque trimestre, les indices du trimestre précédent font l'objet d'une révision. En outre, la révision des indices des deux années précédentes coïncide avec la diffusion des chiffres du premier trimestre de chaque année. Les révisions s'appliquent surtout aux indices estimés, intégralement ou partiellement, à partir des données annuelles (impôts fonciers, loyer agricole et intérêt).

Disponibilité des données

Tous les indices qui peuvent être diffusés sont stockés dans CANSIM. Les matrices 2050 à 2063 contiennent plus de 100 indices provinciaux ou régionaux plus détaillés que la présente publication. Les matrices 550 à 582 comprennent les indices infra-provinciaux de certains articles. Vous trouverez à l'annexe 3 un tableau qui indique à quelle province correspondent les matrices de CANSIM.

Alternatively, users may get the additional detail from Prices Division.

In addition to index numbers the surveys of prices of fertilizers, pesticides and fuels, begun in 1992, provide estimates of average prices in different parts of the country, at different times of the year. These data may serve other needs than those satisfied by the time index series. Interested users should contact Prices Division. The average prices are also on Matrices 550 to 582.

For further information

For data only, please contact the information unit at 613-951-9606 or any regional office. For further information on concepts and methods, contact Vaclav Krabicka at 613-951-3342. The addresses are on the inside front cover of this book.

Comme alternative, les utilisateurs peuvent obtenir des détails additionnels en s'adressant à la Division des prix.

Outre les chiffres des indices, les enquêtes sur les prix des engrains, des pesticides et des carburants, qui ont été mises en oeuvre en 1992, fournissent des estimations des prix moyens dans les différentes régions du pays, à diverses époques de l'année. Ces données peuvent répondre à des besoins autres que ceux qui sont comblés par la série des indices chronologiques. Les intéressés doivent communiquer avec la Division des prix. Les prix moyens sont également indiqués dans les matrices 550 à 582.

Renseignements additionnels

Pour obtenir des données, veuillez communiquer avec la Sous-section de l'information et de l'analyse courante (613-951-3350) ou avec n'importe quel bureau régional. Pour avoir plus de renseignements sur les concepts et les méthodes, vous êtes priés de vous adresser à Vaclav Krabicka au 613-951-3342. Les adresses figurent dans la couverture avant intérieure de la présente publication.

(1) As of August 1992, current initial prices are used for wheat and barley in Western Canada.

(1) À partir du mois d'août 1992, les prix initiaux courants sont utilisés pour le blé et l'orge de l'ouest canadien.

TECHNICAL NOTES

FARM PRODUCT PRICE INDEX (1986 = 100)

1. Concepts, Data Description and Methods

Definition and Coverage

The Farm Product Price Index (FPPI), formerly called Index Numbers of Farm Prices of Agricultural Products, measures the change through time in the prices received for agricultural commodities at the first transaction point.

The commodities included in the index are, for the most part, the same commodities that are estimated in the farm cash receipts series published in Agriculture Economic Statistics, Catalogue 21-603. From 1957 to date, the index is based upon products which account for about 95% of total farm cash receipts from farming operations for both the 1960-62 and 1971 weight base period. For years prior to 1957, the index was based upon products which accounted for about 90% of total cash receipts.

Users should note that Newfoundland was not included in the index prior to 1981. As a result, a break in the Canada series occurs in 1981. Nevertheless, Newfoundland's agricultural production is relatively small and the break is not significant.

Data Description and Sources

Much of the price information used in compiling the index is obtained from a monthly survey of farm respondents throughout Canada. Where possible, administrative data are used as price sources in order to reduce response burden. The prices used in computing the index are, as closely as can be determined, the transaction prices received by farmers when ownership first changes hands. These prices include any bonuses and premiums which can be attributed to specific commodities, but they exclude any storage, transportation, processing and handling charges which are deducted before the farmer is paid.

In reporting prices each month, survey respondents are asked to report the average prices prevailing in their neighbourhood, taking into account the various grades of each commodity marketed. Thus, average prices reported by these respondents may differ from month to month as a result of changes in price, changes in quality, or a combination of both. In effect, this index is not a measure of pure price change but a measure of the change in the return to farmers per unit of product marketed.

No adjustment for seasonal variation of prices has been made in the index. Also, the series is subject to revision as more complete and up-to-date data become available. This accounts for any changes between the indexes published in earlier reports and those appearing in the current publication.

NOTES TECHNIQUES

INDICE DES PRIX DES PRODUITS AGRICOLES (1986 = 100)

1. Concepts, description des données et méthodes

Définition et champ d'observation

L'indice des prix des produits agricoles (IPPA), qui était auparavant appelé les nombres-indices des prix à la ferme des produits agricoles, mesure la variation des prix reçus pour les produits agricoles au premier point de transaction.

Les produits figurant dans l'indice sont, à quelques exceptions près, les mêmes que ceux qui figurent dans la série sur les recettes monétaires agricoles publiée dans le bulletin Statistique économiques agricoles, n° 21-603 au catalogue. Pour la période de 1957 à date, l'indice est basé sur les produits qui représentent environ 95% des recettes globales en espèces touchées au cours de la période de base pondérée 1960-62 et 1971. Avant 1957 inclusivement, l'indice était basé sur les prix des produits représentant environ 90% des recettes globales en espèces des cultivateurs.

Comme les chiffres de Terre-Neuve ont été pris en compte dans l'indice en 1981, il se produit une solution de continuité dans la série du Canada à ce moment-là. Cependant, comme la production agricole de cette province n'est pas considérable, cette solution de continuité n'est pas importante.

Description et sources des données

La plupart des renseignements sur les prix utilisés pour la confection de l'indice proviennent des rapports mensuels produits par des correspondants agricoles dans tout le Canada. Les prix utilisés pour calculer l'indice se rapprochent, dans la mesure du possible, des prix obtenus par les agriculteurs au moment de la transaction, lorsque le titre de propriété change de mains pour la première fois. Ces prix comprennent les suppléments et les primes qu'il est possible de rattacher à des produits particuliers, mais non les frais d'entreposage, de transport, de traitement et de manutention qui sont défaillés avant que l'agriculteur ne soit payé.

Au moment du rapport mensuel sur les prix, on demande aux correspondants d'indiquer la moyenne des prix en vigueur dans leur voisinage, en tenant compte des diverses qualités de chacun des produits sur le marché. Ainsi, les prix moyens déclarés par ces correspondants peuvent varier d'un mois à l'autre en raison des modifications de prix, des variations de la qualité offerte, ou d'une combinaison de ces deux éléments. En réalité, cet indice ne constitue pas une mesure de la simple variation de prix mais une mesure des variations des recettes des cultivateurs par unité de produit mis en vente.

Aucune rectification de prix n'a été faite pour tenir compte des variations saisonnières. Les séries peuvent subir des modifications à mesure que des données plus détaillées et plus à jour nous parviennent. Ces modifications expliquent les variations existant entre les indices publiés dans les bulletins précédents et les indices figurant dans le présent bulletin.

Weights and Linking

As of March 1990, the index was rebased to $1986 = 100$. The weighting period of 1981-1984 has been maintained, and the commodities included in the index remain unchanged from those included in the $1981 = 100$ index.

When the index was rebased to $1981 = 100$ in December 1986, certain new commodities were added and several old commodities were disaggregated so that more narrowly defined price movements could be followed. Also, with this rebasing, Newfoundland was included in the index beginning in January 1981.

The present index has four weighting periods for approximately 40 years of data. The index has been completely rebased in terms of time, weight, and coverage about every ten years. This ensures that the quantity weights reflect current production patterns. The multi-year weighting period used in the current index provides more representative weights than a single year weighting period. As noted above, the most recent rebasing was in terms of base time period only, as the weighting period and coverage are considered to still be representative of current production patterns.

This index was first published in August 1946 with a time and weight base of $1935-1939 = 100$. In September 1969, the weight base was changed to $1960-1962 = 100$ and the time base to $1961 = 100$. In August 1978, the index was rebased with the time and weight base for the index of $1971 = 100$. In December 1986, the index was rebased with a time base of $1981 = 100$, and a weight base of 1981-1984. In March 1990, the index was again rebased with a time base of $1986 = 100$, and the weight base was unchanged at $1981-1984 = 100$. In each case, a Laspeyres' type (base-weighted) formula was used in calculating the index. Thus, The index expresses current farm prices as a percentage of prices prevailing in the base period.

To provide a measure of continuity, an annual series of linked index numbers on a $1986 = 100$ base is available from 1950 to date. The monthly index has been recalculated using a 1986 time base as far back as January 1981. Annual indexes from 1950 to 1980 are linked to the current time base at January 1981.

Data Availability

Data in this publication are also available on CANSIM Matrix 176. Additional indexes and weighting diagrams are available by contacting the Farm Income and Prices Section, as are the prices used in the calculation of the index.

Pondérations et enchaînement

Depuis mars 1990, la base de l'indice a changé et est maintenant $1986 = 100$. La période de pondération de 1981 à 1984 a été maintenue et les produits compris dans l'indice demeurent les mêmes que ceux de l'indice $1981 = 100$.

Lorsque la base de l'indice est passé à $1981 = 100$ en décembre 1986, quelques nouveaux produits ont été ajoutés et un certain nombre d'anciens produits ont été désagrégés pour permettre de suivre de façon plus précise la variation des prix. De plus, ce changement de base a permis d'inclure Terre-Neuve à partir de janvier 1981.

Le présent indice a quatre périodes de pondération et des données s'échelonnant sur 40 ans. Un changement complet de la base de l'indice (période, pondération et champ) a été effectué tous les 10 ans. Les coefficients de pondération des quantités reflètent bien ainsi les tendances de la production. La période de pondération comptant plusieurs années qui est utilisée pour l'indice actuel donne des coefficients de pondération plus représentatifs qu'une période de pondération ne comptant qu'une seule année. Comme il a été indiqué ci-dessus, le changement de base le plus récent concerne la période de base seulement car il est considéré que la période de pondération et le champ demeurent représentatifs des tendances actuelles de production.

L'indice a été publié pour la première fois en août 1946 sur la base temporelle et pondérée de $1935-1939 = 100$. En septembre 1969, une nouvelle base pondérée a été établie, $1960-1962 = 100$, la base temporelle étant $1961 = 100$. En août 1978, la base de l'indice a été changée, la base temporelle et la base pondérée étant fixées à $1971 = 100$. En décembre 1986, la base temporelle devient $1981 = 100$ et la base pondérée 1981-1984. En mars 1990, la base de l'indice est changée, la base temporelle devenant $1986 = 100$ et la base pondérée demeurant inchangée à $1981-1984 = 100$. Dans chaque cas, la formule de Laspeyres a été utilisée pour le calcul de l'indice. L'indice ainsi produit représente les prix agricoles en cours, en termes de pourcentage des prix en vigueur pendant la période de référence.

Pour assurer une certaine continuité, une série annuelle d'indices raccordés à la base de $1986 = 100$ est disponible pour la période allant de 1950 à ce jour. L'indice mensuel a été calculé de nouveau sur la base de 1986 jusqu'en janvier 1981. Les indices annuels de 1950 à 1980 sont raccordés à la base temporelle actuelle de janvier 1981.

Données disponibles

Les données de la présente publication sont aussi disponibles sur CANSIM dans la matrice 176. Les indices additionnels, les diagrammes de pondération et les prix utilisés dans le calcul de l'indice sont disponibles en s'adressant à la Section du revenu agricole et des prix à la production.

Appendix 3**Farm Input Price Index - CANSIM Matrix and Series Numbers**

Average prices and indexes of Selected Farm Inputs are now available on CANSIM by geographic regions as follows:

Matrix	Geographic Regions	Series Number
Matrice	Région géographique	n° de série
550	Newfoundland - Terre-Neuve	607000
551	Prince Edward Island - Île-du-Prince-Édouard	607100
552	Nova Scotia - Nouvelle-Écosse	607200
553	New Brunswick - Nouveau-Brunswick	607300
554	Quebec - East - Québec - Est	607400
555	Quebec - South - Québec - Sud	607500
556	Quebec - West-Central - Québec - Ouest-Centre	607600
557	Quebec - East-Central - Québec - Est-Centre	607700
558	Quebec - West - Québec - Ouest	607800
559	Ontario - South - Ontario - Sud	607900
560	Ontario - North - Ontario - Nord	608000
561	Ontario - Central - Ontario - Centre	608100
562	Ontario - East - Ontario - Est	608200
563	Ontario - West - Ontario - Ouest	608300
564	Manitoba - South-West - Manitoba - Sud-Ouest	608400
565	Manitoba - North-West - Manitoba - Nord-Ouest	608500
566	Manitoba - Central - Manitoba - Centre	608600
567	Manitoba - East - Manitoba - Est	608700
568	Saskatchewan - South-East - Saskatchewan - Sud-Est	608800
569	Saskatchewan - South-West - Saskatchewan - Sud-Ouest	608900
570	Saskatchewan - West-Central - Saskatchewan - Ouest-Centre	609000
571	Saskatchewan - East-Central - Saskatchewan - Est-Centre	609100
572	Saskatchewan - North - Saskatchewan - Nord	609200
573	Alberta - South-East - Alberta - Sud-Est	609300
574	Alberta - South-Central - Alberta - Sud-Centre	609400
575	Alberta - South-West - Alberta - Sud-Ouest	609500
576	Alberta - East-Central - Alberta - Est-Centre	609600
577	Alberta - West-Central - Alberta - Ouest-Centre	609700
578	Alberta - North-East - Alberta - Nord-Est	609800
579	Alberta - North-West - Alberta - Nord-Ouest	609900
580	British Columbia - West - Colombie-Britannique - Ouest	610000
581	British Columbia - East - Colombie-Britannique - Est	610100
582	British Columbia - North - Colombie-Britannique - Nord	610200

New Matrix and Series Numbers for Farm Input Price Index starting second quarter 1992 are available on CANSIM as follows:

Les nouveaux numéros de matrice et de série de l'indice des prix des entrées dans l'agriculture, à partir du deuxième trimestre de 1992, sont stockés dans CANSIM comme suit:

Matrix number	Province	Series number
n° de matrice	Province	n° de série
2050	CANADA	640000
2051	EAST CANADA - EST CANADA	640200
2052	ATLANTIC - ATLANTIQUE	640400
2053	NFLD - T.N.	640600
2054	PEI - I.P.-É.	640800
2055	NS - N.-É.	641000
2056	NB - N.-B.	641200
2057	QUEBEC - QUÉBEC	641400
2058	ONTARIO	641600
2059	WEST CANADA - OUEST DU CANADA	641800
2060	MANITOBA	642000
2061	SASKATCHEWAN	642200
2062	ALBERTA	642400
2063	BC - C.-B.	642600
