INTRODUCTION

This publication presents a consolidation of the revenue and expenditure statistics of the federal, provincial, territorial and local governments in Canada for the fiscal year ended nearest December 31, 1968. In addition, as a basis for meaningful interprovincial comparisons, a similar consolidation is presented for provincial-local governments. The main object of these consolidations is to reflect the relationship between government and the public in respect of revenues raised and services provided.

The consolidated revenue and expenditure statistics in this report are based on the data as published by DBS in Catalogue Nos. 68-211 "Federal Government Finance, 1968"; 68-207 "Provincial Government Finance, 1968"; and 68-204 "Local Government Finance, 1968". In these publications the term "general" embraces current (ordinary) and capital budgetary transactions as well as certain non-budgetary transactions. Those in the latter category relate to the federal and provincial special funds, for example: the Old Age Security Fund, National Capital Commission, the Saskatchewan Crop Insurance Board, the Ontario Hospital Services Commission, etc. which are excluded from government budgetary provisions but which are, for these statistical series, included as an integral part of government. Remittances of profit by government enterprises are included in revenue, and reimbursements by government of government enterprise losses are included in expenditure. Revenue and expenditure of government enterprises are excluded as are those of municipal hospitals, libraries and other special activities of local government.

The above-mentioned basic source documents set out for each level of government the "Gross general revenue", "Net general revenue", "Gross general expenditure" and "Cost of services provided". The term "gross" as used in these Financial Management Series of statistics means that certain items of revenue and expenditure, which were netted in the published Public Accounts documents, are added back to the relevant classifications. This is done in order to achieve a degree of inter-governmental comparability which would otherwise be lacking.

"Net general revenue" is established by deducting from the Gross general revenue, (1) revenue from the sale of goods and services produced by government institutions (e.g. sale of produce of experimental farms), which revenue is deemed to be applied to the cost of the function or service from which it arises, (2) interest, premium, discount and exchange revenue, which is deemed to be applied against debt charges, and (3) all conditional transfers received from other levels of government.

Further, in these individual basic source documents, the caption "Cost of services provided" is intended to give a measure of the cost of services provided by each level of government. It includes the cost of services which are partly financed from conditional and unconditional grants received and to the extent that this is so, the cost of services provided by each government differs from the cost to the particular level of government of services provided. The "Cost of services provided" is arrived at by deducting from "Gross general expenditure" the same internally-generated revenue as described in (1) and (2) above under "Net general revenue".

Through the process of consolidation, intergovernment transfers are eliminated. Intergovernment conditional transfers are functionalized and eliminated from the relevant revenue and expenditure of the receiving government. Intergovernment unconditional transfers are eliminated from the revenue of the receiving government and from the expenditure of the paying government. The consolidated revenue (after the elimination of intergovernment transfers) represents the total revenue raised by all levels of government together, and the consolidated expenditure (after the elimination of intergovernment transfers) represents the cost to all levels of government together, of services provided. (Because of the difference in accounting methods and fiscal year-ends, the amounts of intergovernment transfers made by one level of government do not necessarily coincide with amounts shown as having been received by another level of government).

It is emphasized that in the consolidation process only true intergovernment transfer payments are eliminated, to obviate double counting. No adjustment is made to revenue or expenditure which arises from intergovernment sale and purchase of goods or services which are regarded as "normal" business transactions. The absence of adjustment in the case of the latter results in some duplication of costs and overstatement of revenue in the consolidation statements. This double counting, however, is not considered to be of major statistical consequence. (See further comments under the latter rables 1 and 2).

⁽¹⁾ At press time final data on local governments was not available. Thus, data which will be published in Local Government Finance, actual (Catalogue No. 68-204) might differ somewhat from corresponding data used in this publication; such differences are not significant.

Tables on consolidated direct and indirect debt are not included in this report. Increasing incidence and extent of intergovernment financing has caused the whole area of what consitutes government debt to be evaluated and studied. Pending completion of this review, consolidated government debt statistics have been deferred. Debt statistics however, are available, as in the past, in Catalogue Nos. 68-211, 68-209 and 68-204 for federal, provincial and local governments respectively.

EXPLANATORY COMMENTS

Tables 1 and 2. Consolidated Government Revenue and Expenditure

As mentioned in the introduction no adjustment has been made for intergovernment purchase and sale of goods and services. These are generally not identifiable, with two relatively significant exceptions, namely:

The sale by the federal government of R.C.M.P. services to several of the provinces amounting to \$31,157,000 which is included in federal revenue "Sales and services" and in provincial expenditure "Protection of persons and property." Also, the purchase by the federal government of manpower training services from the provinces amounting to \$73,942,000 is included in provincial revenue "Sales and services" and in federal expenditure "Education". For certain types of analysis the reader might wish to make the appropriate deductions from the consolidated revenue and expenditure items.

The expenditure item "Transportation and Communications" includes "Public Works" as shown in the local data source document "Local Government Finance" (Catalogue No. 68-204).

Table 5. Analysis of Intergovernment Transfers

This table summarizes in general classifications the amounts of intergovernment transfer payments that have been eliminated from gross general revenue and expenditure in arriving at consolidated revenue and expenditure.

Unconditional transfer payments received by provincial and local governments are detailed in Part I and unconditional transfer payments made by federal and provincial governments are specified in Part II.

Part III of Table is a tabulation of the amounts of grants-in-aid and shared-cost contributions which were eliminated from the gross general aggregations in order to arrive at consolidated revenue and expenditure.

Tables & and V. Consolidated Provincial-Local Revenue and Expenditure

These tables show the components of provincial-local consolidated revenue and expenditure after the elimination of conditional and unconditional provincial-local transfers. Federal government conditional and unconditional transfers paid to the provinces and local governments remain in these statistics and are identified under items 40 and 41 in Table 6.

Table &. Reconciliation of Consolidated Government Revenue and Expenditure

This table presents a reconciliation between net general revenue of and cost of services provided by federal, provincial and local governments (as published by the Dominion Bureau of Statistics for each level of government) and the total consolidated government revenue and expenditure (after the elimination of intergovernment transfers) as shown in Tables 1 and 2. Detail on the items of elimination is summarized in Table \$\sqrt{
