BONDED INDEBTEDNESS OF URBAN AND RURAL MUNICIPALITIES

1931

The subject of governmental bonded debt is one or growing interest to parliamentarians, economists and students of public finance. The Bureau issues reports dealing with Dominion and Provincial Government Public Finance, and it now presents its annual bulletin dealing with Bonded Indebtedness of Municipal Governments throughout Canada for the year 1931. These statistics are compiled from the various reports by municipalities to provincial governments and represent the latest available information.

There were 4,280 municiplities in Canada in 1931 divided into urban and rural classes. The urban class consists of cities, towns and villages to which have been added some five suburban municipalities in the province of Manitoba while the rural classes consist of rural municipalities, districts and counties.

While the borrowing powers of municipal governments are more or less under restriction of their respective provincial governments, such powers have been somewhat freely used, with the result that there has been a steady annual increase in municipal debt since the Bureau first instituted this report in 1919. The demand for improvements of public services, such as, highways, educational, charitable, and social institutions, is largely responsible for the increase in debt. Ordinary revenues of municipalities, as is the case in other forms of government, have snown a distinct falling off and in order to meet the settlement of old obligations as well as provide funds to carry out improved services, debenture issues have been generally resorted to. Within the last year or two, an unusually heavy expenditure by municipal governments has taken place, due to the adoption of emergent measures to meet the cost of unemployment.

The Bulletin is made up of six tables, the first giving the number by classes of municipalities in each province; the second dealing with the debt of all municipalities reported in each province; the third showing the debt of all urban and rural municipalities in Canada; the fourth showing the debt of the various classes of municipalities by provinces; the fifth, a summary of the total and per capita urban as well as rural municipal deot for each povince and the sixth showing the total bonded indebtedness of all municipalities by provinces for the years 1919-1931 inclusive.

There are no municipal estimates of population computed by the provinces of Nova Scotia, New Brunswick and Manitoba for the year 1931, consequently populations for these provinces as shown by the Dominion census returns for 1931 have been used in tables 2 and 5 of the report and the per capita debts are based on the census populations. In the case of the provinces of Ontario, Quebec, Saskatchewan, Alberta and British Columbia the estimated municipal populations as given in the provincial reports for 1931 have been employed in working out the per capita debt as shown in tables 2 and 5.

The municipal system of erection and incorporation of the different classes of municipalities varies considerably as between provinces, as for instance seven of the thirty-three cities of British Columbia have a population of under 1,000 while town municipalities do not exist. There is no rural municipal system in Prince Edward Island and all public loans and borrowings other than those contracted by eight incorporated urban municipalities, are administered by the provincial government.

The sixth summary table is particularly interesting as it shows comparatively the total municipal bonded debt by provinces for the years 1919 to 1931. In the case of the province of Quebec revised figures have been compiled including school debts which were not shown in previous reports.

Number of Municipalities in Canada and in each Province by Classes, 1931.

Provinces	Cities	Towns	Villages	Counties	Rural Munici- palities		Subur- ban munici- palities	Total Number of munici- palities
Prince Edward Island	1	7	***	- 124		_	mpha	8
