EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

Labour Income, 1962

In 1962, annual labour income rose above \$20 billion for the first time. The estimated total of \$20,359 million was 6.8 per cent higher than the figure for 1961. The percentage gain was the largest since that which occurred from 1956 to 1957. The wages and salaries component of labour income accounted for 95.7 per cent of the total in 1962 and the rise in this component paralleled that in overall labour income. Increases in volume of labour inputs and increases in labour prices both contributed substantially to the rise in the wage and salary figure.

Wages and salaries rose more rapidly in the early months of 1962 than in the latter part of the year. The estimated rise in the seasonally-adjusted figure between the fourth quarter of 1961 and the first quarter of 1962 was 2.1 per cent. From the third to fourth quarter, wages and salaries increased by 1.1 per cent (i.e. at an annual rate of 4.4 per cent). Labour price increases were probably the main factor in the third-to-fourth quarter rise.

In 1962, 42.2 per cent of total wages and salaries originated in goods-producing industries and the remaining 57.8 per cent in service-producing industries. At the beginning of the post-war period, the contribution of the two segments to the total was about the same. The change reflects a long-term tendency for wage and salary totals to rise more rapidly in the service-producing than in the goods-producing segment of the economy. The relationship between size of quarter-to-quarter increase in the two segments has varied considerably over the short run, largely owing to cyclical factors. In general, the goods-producing industries are more responsive to cyclical influences than are the service-producing industries. In consequence, the goods-producing total has tended to rise more rapidly than the service-producing total during the most rapid stage of expansion during business-cycle upswings. The Canadian economy entered such a stage towards the end of 1961, and the goods-producing total moved ahead more rapidly than the service-producing total for several quarters. As the upswing became less vigorous, the increases in the goods-producing industries dropped off sharply, while those for service-producing industries subsided only moderately. The following table shows quarter-to-quarter changes in wage and salary totals over the last two years.

SEASONALLY-ADJUSTED ESTIMATES OF WAGES AND SALARIES, CANADA, 1961-62

Government non-military	1.3	1.6	1.5	1.1	2.5	1.0	0.5	0.9	9.5

In the early part of 1962, wages and salaries were rising faster in construction than in any other groups of industries for which data are given in the table, and the rate of increase for primary industries was amongst the highest. In contrast, from the third to fourth quarter the rise in construction was the smallest for any of the industries showing increases, while wages and salaries in the primary industries declined substantially. These two industry groupings together account for less than one-third the total of wages and salaries originating in goods-producing industries. The greater part of the total originates in manufacturing, where the rate of increase showed relatively little decline during the year.

Wages and salaries in the finance and service group have risen at a steady and rapid rate in recent years, and this has been a major factor in the rapid increases in wages and salaries for the service-producing segment as a whole. With scattered exceptions, the quarter-to-quarter gains for finance and service recorded in the last decade have exceeded 2 per cent. This pattern of steady and substantial increase continued through 1962. Increases in the remaining industry groups in the service-producing segment were smaller than those in the finance and service group throughout the year.

PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
r Includes minor revisions.
