EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

ESTIMATES OF LABOUR INCOME

Total labour income for 1964 was estimated at \$23,416 million. This figure is 8.7 per cent larger than the 1963 total and is the largest year-to-year gain recorded since 1956. The totals for both the goods-producing and the service-producing industries rose at a rate similar to the national gain of 8.7 per cent.

Total wages and salaries for the goods-producing industries advanced 9.0 per cent from 1963 to 1964. The largest increase in this group occurred in construction (11.6 per cent) although substantial gains were also made in manufacturing (8.7 per cent).

The service-producing industries aggregate of wages and salaries, for 1964, was up 8.8 per cent over 1963. Finance and service recorded a gain of 11.4 per cent and trade advanced 8.7 per cent. Wages and salaries for government non-military and also for the transportation, communication and other utilities industries rose by 6.0 per cent from 1963 to 1964.

Total wages and salaries, seasonally adjusted, increased 1.8 per cent from the third to fourth quarter of 1964. This increase is somewhat lower than the gain of 2.7 per cent recorded in the second to third quarter comparison. However, the third quarter includes substantial retroactive wage payments while the fourth quarter was affected by industrial disputes.

The seasonally adjusted total of wages and salaries for the goods-producing industries was 2.0 per cent higher in the fourth quarter than in the previous quarter. Wages and salaries in construction had a sharp rise of 8.9 per cent in the fourth quarter following a decline in the second quarter and a moderate increase in the third. Manufacturing wages and salaries, seasonally adjusted, increased 0.8 per cent in the fourth quarter. This increase would have been considerably larger except for the effect of industrial disputes in the fourth quarter.

Seasonally adjusted wages and salaries for the service-producing industries advanced 1.7 per cent from the third to fourth quarter of 1964. Finance and service wages and salaries showed a gain of 2.6 per cent in the fourth quarter; a quarter-to-quarter increase similar to those recorded in the previous six quarters. Total wages and salaries in trade increased 1.8 per cent in the third to fourth quarter comparison. Transportation, communication and other utilities wages and salaries, seasonally adjusted, were 1.5 per cent higher in this same period. Retroactive wage payments were partly responsible for the sharp increase between the second and third quarters. The total of government non-military wages and salaries declined from the third to fourth quarter, however, this was entirely due to retroactive wage payments received in the third quarter.

PRESENTATION OF LABOUR INCOME STATISTICS

1010739984

This issue of Estimates of Labour Income includes all labour income statistics that are currently published by the Dominion Bureau of Statistics except for a few special tables that may be found in National Accounts, Income and Expenditure (D.B.S. Cat. No. 13-201). Revised monthly data for the period 1957-60 are located in the specified issues of Estimates of Labour Income: 1957 (December 1960 to August 1961); 1958 (December 1961 to November 1962); 1959 (December 1962 to November 1963) and 1960 (December 1963 to November 1964). The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Monthly data for the period 1947-58 for the individual Atlantic and Prairie provinces are located in a supplement to the August 1962 issue of Estimates of Labour Income.

The latest monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1966.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
r Includes minor revisions.
