TOTAL LABOUR INCOME

MANUFACTURING WAGES AND SALARIES

ESTIMATES OF LABOUR INCOME

FEBRUARY 1965

Wages, salaries, and supplementary labour income was estimated at \$1,993.9 million for the month of February. This figure was \$3.5 million or 0.2 p.c. larger than the revised January total.

Seasonally-adjusted wages, salaries, and supplementary labour income increased in February to a total of \$2,073.2 million. This estimate was \$11.0 million or 0.5 p.c. greater than the previous month. All industries, with the exception of manufacturing, contributed to this gain. Wages and salaries in the primary industries of agriculture, fishing, trapping, forestry and mining increased \$3.6 million from January to February. Substantial gains were also recorded in trade (\$3.3 million); construction (\$2.7 million); service (\$2.5 million) and government non-military (\$1.4 million). Lesser gains occurred in transportation, storage and communication (\$0.7 million); finance, insurance and real estate (\$0.6 million) and public utility operation (\$0.1 million). A decline of \$4.0 million was recorded in manufacturing wages and salaries from January to February.

Total labour income, seasonally adjusted, rose \$6.2 million in Quebec. Gains of about \$1.0 million occurred in Newfoundland and Alberta. Increases in total labour income from January to February of \$0.5 million or less were recorded in Prince Edward Island; Nova Scotia; New Brunswick; Manitoba; Saskatchewan and British Columbia. Labour income in Ontario declined by \$2.3 million during this same period.

PRESENTATION OF LABOUR INCOME STATISTICS

1010739986

This issue of Estimates of Labour Income includes all labour income statistics that are currently published by the Dominion Bureau of Statistics except for a few special tables that may be found in National Accounts, Income and Expenditure (D.B.S. Cat. No. 13-201). Revised monthly data for the period 1957-60 are located in the specified issues of Estimates of Labour Income: 1957 (December 1960 to August 1961); 1958 (December 1961 to November 1962); 1959 (December 1962 to November 1963) and 1960 (December 1963 to November 1964). The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Monthly data of total labour income for the period 1947-58 for the individual Atlantic and Prairie provinces are located in a supplement to the August 1962 issue of Estimates of Labour Income.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1966.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.
