WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

WAGES AND SALARIES IN MANUFACTURING

ESTIMATES OF LABOUR INCOME

APRIL 1966

Wages, salaries, and supplementary labour income was estimated at \$2,347.3 million in April and was \$46.4 million or 2.0 per cent greater than the revised March total.

The seasonally-adjusted total of labour income of \$2,404.3 million was \$25.1 million or 1.1 per cent higher than the previous month. Government non-military wages and salaries rose \$7.0 million in April with more than one-half of this rise accounted for by retroactive wage payments to a group of federal government employees. Forestry, which had declined slightly in March, was up \$4.9 million and manufacturing wages and salaries gained \$4.3 million. Increases of about \$3.0 million were recorded in service, in transportation, storage and communication and in trade. Finance, insurance and real estate advanced \$0.8 million and public utilities wages and salaries were up \$0.6 million from March to April. Declines of \$0.3 million in wages and salaries occurred in agriculture, fishing and trapping and in mining. Construction wages and salaries were \$1.4 million lower over the same period.

Seasonally-adjusted wages and salaries in Ontario advanced \$10.2 million from March to April. Gains larger than \$1.0 million were also recorded in British Columbia (\$6.5 million), Quebec (\$4.3 million), New Brunswick (\$2.7 million) and Nova Scotia (\$1.6 million). Somewhat smaller increases occurred in Alberta (\$0.8 million), Saskatchewan (\$0.4 million), Prince Edward Island (\$0.2 million) and Newfoundland (\$0.1 million). Wages and salaries in Manitoba remained unchanged in April.

Percentage Changes in Monthly Estimates

	Unadjusted		Seasonally adjusted			
	March/66 to April/66	April/65 to April/66	December/65 to January/66	January/66 to February/66	February/66 to March/66	March/66 to April/66

EXPLANATORY NOTESCONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1964 to November 1965) for the year 1961; (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for the year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.
