ESTIMATES OF LABOUR INCOME

JULY, 1966

Total labour income in July declined seasonally to \$2,471.8 million and was \$24.5 million lower than the June figure. Seasonally-adjusted labour income advanced \$12.0 million and was estimated at \$2,436.9 million.

Manufacturing wages and salaries, seasonally-adjusted, rose \$8.1 million from June to July. Forestry wages and salaries were up \$4.8 million mostly because the June total included the effect of industrial disputes. Gains of about \$3.0 million occurred in the transportation, storage and communication group and also in trade. Government non-military wages and salaries increased \$1.2 million and gains of about \$0.5 million were recorded in the finance, insurance and real estate group and in the agriculture, fishing and trapping group. These increases were partially offset by declines in wages and salaries of construction (\$4.2 million), mining (\$4.1 million) and service (\$0.9 million).

Seasonally-adjusted wages and salaries advanced \$10.7 million in British Columbia with part of this increase attributed to the cessation of industrial disputes in June. Ontario wages and salaries were up \$5.7 million from June to July and gains of about \$1.0 million occurred in Saskatchewan and Alberta. The decline of \$4.6 million in Quebec was due to various industrial disputes especially in the service industry which includes hospital employees. A drop of \$1.0 million was recorded in total wages and salaries in Newfoundland from June to July.

Percentage Changes in Monthly Estimates

	Unadjusted		Seasonally adjusted			
	June/66 to July/66	July/65 to July/66	March/66 to April/66	April/66 to May/66	May/66 to June/66	June/66 to July/66

EXPLANATORY NOTESCONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1964 to November 1965) for the year 1961; (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for the year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.
