WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

WAGES AND SALARIES IN MANUFACTURING

ESTIMATES OF LABOUR INCOME

SEPTEMBER 1968

Labour income for September was estimated at \$3,079.7 million, about \$54.2 million or 1.8 per cent more than the revised estimate for August.

Seasonally-adjusted, total income increased from \$2,950.3 million in August to \$2,987.9 million in September. Wages and salaries were greater in all industrial divisions except Forestry and Finance. The largest increases were gains of \$16.4 million (2.1 per cent) in Manufacturing, \$7.9 million (3.1 per cent) in Transportation, storage and communication, \$4.1 million (1.9 per cent) in Construction and \$3.3 million (0.6 per cent) in Service.

During the third quarter, labour income seasonally-adjusted advanced by less than 2 per cent. This represents about the average gain recorded during the last four quarters although it is about 1 per cent less than the increase recorded in the second quarter which was somewhat inflated by a return to work following labour disputes and lay-offs in the motor vehicle industry.

Wages and salaries in the goods-producing industries increased by about 1 per cent which is well short of the 3 per cent increase recorded in the second quarter. All components contributed to the small increase by recording lower gains or decreases. Manufacturing increased by about 1-1/2 per cent mainly because of a rise in average hourly earnings as employment increased only slightly and average hours worked declined. In construction there was an increase of only 1/2 per cent following a rise in average hourly earnings offset by a decline in employment while average hours worked remained about the same. A slight decline was recorded in the primary industries.

In the service-producing industries, wages and salaries advanced by just over 2 per cent which is slightly less than the average gain recorded in this group during the last four quarters. Contributing to the lower rate of increase, was a decline of about 1/2 per cent in Government following increases of over 3 per cent in the first and second quarters and a slight decrease in utilities. The Transportation, storage and communication group, which was affected by labour disputes to a greater degree in the third quarter than in the second quarter, advanced by about 1 per cent. There were rises of about 2-1/2 per cent in Trade and over 3 per cent in Finance and Service where employment and average weekly earnings advanced at about the same rate as in the second quarter.

EXPLANATORY NOTESCONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1966 to November 1967) for the year 1963; (December 1965 to November 1966) for the year 1962; (December 1964 to November 1965) for the year 1961; (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for the year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1963 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.
