## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

LABOUR INCOME ESTIMATE

SEPTEMBER 1969

Labour income was estimated at \$3,407.4 million in July, \$3,417.3 million in August and \$3,441.5 million in September.

During the third quarter, labour income seasonally-adjusted increased by 2.7 per cent. This was slightly less than the gains recorded during the last two quarters. Wages and salaries in the service-producing industries advanced by 3.6 per cent while those in the goods-producing industries, which were seriously affected by labour disputes, increased by 1.2 per cent.

Among the goods-producing industries, Construction increased by 4.8 per cent mainly because second quarter estimates were seriously affected by labour disputes. Manufacturing increased by 0.9 per cent despite major strikes in August and September. Mining, which was also seriously affected by strikes, declined by 4.8 per cent.

Among the service-producing industries, wages and salaries advanced by 8.3 per cent in Government this quarter, largely as a result of retroactive payments to federal government employees. There were increases of 3.8 per cent in Service, 3.4 per cent in Transportation, storage and communication, 2.0 per cent in Finance, insurance and real estate, and 1.5 per cent in Trade.

Percentage Changes in Monthly Estimates

	Unadjusted		Seasonally adjusted			
	August/69 to September/69	September/68 to September/69	May/69 to June/69	June/69 to July/69	July/69 to August/69	August/69 to September/69

(1) Includes post office.

(2) The difference between the sum of the provinces and these totals, which include Yukon, Northwest Territories and Canadian residents abroad, contains a residual error resulting from seasonally adjusting by province and by industry.

Note: Estimates may not add to totals due to rounding.

EXPLANATORY NOTESCONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of firms normally employing twenty or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1967 to November 1968) for the year 1964; (December 1966 to November 1967) for the year 1963; (December 1965 to November 1966) for the year 1962; (December 1964 to November 1965) for the year 1961; (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for the year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1963 are available upon request.

The latest monthly figures are advance estimates based on early returns of employment reports. They have a lesser degree of reliability than the estimates for the immediately preceding month and the previous month which are based on more complete information. Estimates for other months and those for recent years are revised as new annual data become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.
