LABOUR INCOME ESTIMATES

JULY 1970

The advance unadjusted estimate of labour income for July was \$3,958.4 million, a decrease of \$34.1 million from the preliminary estimate for June. Seasonally-adjusted, total labour income declined from \$3,897.1 million in June, to \$3,875.7 million in July, a decrease of \$21.4 million or 0.6 per cent.

The seasonally-adjusted preliminary estimate of labour income for June showed an increase of 1.4 per cent (\$54.4 million) over the revised figure for May. Construction, which was seriously affected by labour disputes in May, recorded an increase in wages and salaries of 7.0 per cent (\$17.7 million). Other notable changes were increases of 1.8 per cent (\$17.3 million) in manufacturing; 1.2 per cent (\$2.5 million) in finance, insurance and real estate, 1.1 per cent (\$9.2 million) in service; and 2.7 per cent (\$7.3 million) in public administration and defence.

(1) Excludes Military Pay and Allowances.

(2) Includes Fishing and Trapping.

(3) Includes Yukon, North West Territories and Canadian residents abroad.

(4) The difference between the sum of the provinces and these totals, which include Yukon, North West Territories and Canadian residents abroad, contains a residual error resulting from seasonally adjusting by province and by industry.

Note: Estimates may not add to totals, owing to rounding.

Concepts and Methods

Labour income is the compensation paid to employees for services rendered either as wages and salaries or as supplementary labour income. Wages and salaries include directors' fees, bonuses, commissions, taxable allowance and benefits, some imputed earnings (e.g. those for persons in religious orders) and living allowances considered to be an additional benefit to the employee. Supplementary labour income, which consists of payments made by employers for the future benefit of employees, is composed of employers' contributions to employee welfare and pension funds, to the Workmen's Compensation Fund and to the Unemployment Insurance Fund.

Money payments or payments in kind made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the wages and salaries component. Contributions to armed forces pension funds are included in the supplementary labour income component in the estimates based on the 1948 Standard Industrial Classification. These contributions are totally excluded from the revised estimates for 1951 to date, based on the 1960 Standard Industrial Classification.

The annual estimates are based in most cases on data derived from sample and full coverage surveys conducted within the Dominion Bureau of Statistics, the decennial population censuses, and the public accounts of the federal and provincial governments.

The main indicators used to interpolate between censuses, project from benchmarks and allocate annual figures by month have been: a) the payroll index derived from the Employment, Payrolls and Man-Hours survey of large firms, b) total employees as published in Estimates of Employees by Province and Industry combined with average weekly earnings of large firms and c) monthly payroll derived from the surveys of employment and payroll in the federal, provincial and municipal governments.

The monthly figures are not affected by the number of pay days per month because a constant number of working days is assumed for each month. Retroactive wage payments reported for 1951-1968 were distributed over the year but since 1969 these payments have been included in the months in which they were made.

A complete explanation of the sources and methods used as well as definitions and other related information will be published at a later date.

Statistical Presentation

The latest monthly figures are advance estimates based on early returns of employment reports. They have a lesser degree of reliability than the estimates for the immediately preceding month and the previous month which are based on more complete information. Estimates for other months and those for recent years are revised as new annual data become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million. It should not be assumed that the estimates are necessarily accurate to the nearest tenth of a million.

Estimates of labour income based on the 1948 Standard Industrial Classification have been published for 1926 to 1969. Those based on the 1960 Standard Industrial Classification are now available from 1951 to date. A complete historical record of the statistics published is obtainable as follows:
