CLAIMS AND BENEFIT PAYMENTS

DECEMBER 1967

Claimants at month-end

On December 29 there were 501,500 claimants for unemployment insurance benefit. This was 78,000 (18 per cent) more than the 423,400 recorded at the end of December 1966. Males accounted for two-thirds of this increase. The year-over-year increase this year was significantly larger than that experienced a year ago when the end of December 1966 count exceeded by 5,500 the number recorded on December 31, 1965. While the rate of increase from the end of December 1966 to 1967 was 17 per cent for males and 22 per cent for females, it was only 1 per cent for males and 3 per cent for females for the same dates in 1966 over 1965.

The November-to-December month-end increase of 165,000 claimants is associated with the commencement of the seasonal benefit period in December. Males accounted for over 80 per cent of the increase.

The December 29 claimant count includes some 3,400 persons classified as agricultural claimants, 1,800 regular and 1,600 seasonal benefit. Since the coverage was extended to certain employees in agriculture, effective April 1, 1967, the number of claimants classified as agricultural has been negligible.

Initial and renewal claims

A total of 270,600 initial and renewal claims for benefit were received in local offices across Canada during December. The increase over the volume filed in November was 77,000; eighty per cent of these were initial claims. Relatively large increases in the number of claims filed occur at this time each year. This phenomenon can be attributed to the operation of the seasonal benefit period and to lay-offs in industry resulting from cut-backs in employment coinciding with the advent of winter. One year ago the November-to-December increase in the volume of claims filed amounted to 100,000.

Beneficiaries and benefit payments

The average weekly number of beneficiaries was estimated at 254,700 for December, 174,300 for November and 226,000 for December 1966. Benefit payments were \$26.6 million in December, versus \$19.9 million in November and \$22.4 million in December 1966. The average weekly benefit payment was \$26.09 in December, \$25.36 in November and \$24.81 in December 1966.

Provincial data

Increases over last month in the month-end claimant count occurred in all regions. A relatively large increase was recorded in the Atlantic region. This is associated with the greater severity of seasonal unemployment as well as a heavy concentration of seasonal benefit claimants in that region. The two central provinces, which accounted for over one half of the increase showed the lowest increase rate.

It is interesting to note that the 18 per cent year-over-year increase in the overall claimant count was not reflected in the Atlantic provinces. Newfoundland, Prince Edward Island and Nova Scotia each showed a decrease which was accounted for by males. Although a slight increase occurred in New Brunswick, the number of female claimants was lower this year.

Percentage Changes in Month-end Claimant Count

Saskatchewan	+	74	+	97	+	18	+	16	+	18	+	11	+	85	+	111	+	26
Alberta	+	51	+	71	+	10	+	18	+	16	+	25	+	44	+	66	-	1
British Columbia	+	42	+	51	+	22	+	11	+	9	+	14	+	50	+	61	+	24

As was reflected in the month-end claimant count, month-over-month and year-over-year comparisons in the number of claims filed reveal similar situations in the Atlantic region. When compared with December 1966 the volume of claims filed was lower in Newfoundland, Prince Edward Island and Nova Scotia where the number of initial claims decreased. In New Brunswick there were fewer renewal claims filed this month. In British Columbia the number of initial and renewal claims was slightly less this year.

Seasonal Benefit, 1967-68 period

Provisions governing the operation of seasonal benefit are unchanged from last year. Effective November 19, 1967 to mid-May 1968, claims failing the regular contribution requirements are considered for seasonal benefit. Benefit is not payable under these terms for unemployment occurring before December 3(1). Only one seasonal benefit period may be established by a claimant during this period. The minimum duration is for 12 weeks, (2) hence exhaustion of seasonal benefit will not occur before February 17.

In testing for seasonal benefit, claims failing the regular requirements are considered first under class A, for which the minimum requirement is 15 contribution weeks subsequent to the most recent Saturday preceding the 31 of March immediately before the claim. Total entitlement for claimants qualifying in this class is based entirely on contributions since that date. The benefit formula provides 5 full weeks of benefit for every 6 weeks of contribution(2).

Cases failing the contribution requirements for class A are then examined for possible qualification under class B which represents an extension of benefit for those for whom a regular benefit period terminated during the interval since May 20, 1967. The authorization will be that shown on the preceding regular benefit period, or the number of weeks which remain in the seasonal benefit period, whichever is the lesser. The weekly rate(3) will be that of the preceding claim, adjusted, if necessary, for any change in dependency status. Claims established subsequent to April 1, 1968 are exclusively class B.

Claimants for seasonal benefit (except fishermen)(4) must comply with all the provisions of the Act and Regulations, except where mentioned above.

Fishing Claimants

Table 3b, Fishing Claimants, includes those claimants whose claim documents carry the identification F, for fishing. This indicates that the person is eligible for benefit by virtue of fishing contributions.

- (1) A claimant eligible to have the waiting period waived could draw seasonal benefit for the week commencing November 26.
- (2) While the minimum entitlement on SBA claims is 13 weeks (SBB, 12 weeks), claims established subsequent to the week ending February 24, 1968 provide entitlement only for the number of weeks remaining between the date of establishment and the end of the seasonal benefit period.
- (3) Section 47 (2a) of the Act is not applicable to seasonal benefit claims. This section was added in September 1959 in order to minimize the impact of short-term employment on the weekly rate for subsequent regular claims filed within a two-year period.
- (4) During the seasonal benefit period, claimants classed as fishermen will be considered available and unemployed in respect to any activity in commercial fishing or in the repair of fishing gear, equipment or boat. However, income from fishing or any other activity during a week is taken into consideration in determining the amount of benefit payable.

⁽¹⁾ Includes persons classified as regular benefit fishing claimants. The number of such cases is, however, negligible. (2) Includes 1,607 agricultural claimants.

Glossary of Terms

Insured population: For purposes of this report, the insured population is defined as the number of persons estimated as currently in contact with the Unemployment Insurance Commission either as contributors or as claimants. The estimates are revised once a year when data from the book renewal are available.

Employed population: The number of persons estimated as currently contributing under the scheme. Estimates are based on a 10 per cent sample and hence are subject to sampling variability.

Claimant population: The count of persons currently reporting to the local offices as at the end of the month. An exception occurs in the month which serves as a benchmark, i.e., May or June, when the claimant count represents the number of persons reporting to local offices as claimants during the first two weeks of book renewal.

Initial claim: An application for benefit from a person for whom there is no benefit period in existence. This category includes both regular and seasonal claims, since it is impossible to determine, at the time of filing a claim, the type of benefit for which the claimant will subsequently qualify. On an initial claim the contribution history for the two years preceding the claim is examined. This is required in order to test attachment to insured employment and thus determine the type of benefit for which the claimant is eligible, if at all. In cases of eligibility, the record of the qualifying period is used to calculate the weekly rate of benefit and maximum entitlement for the benefit period. Only one initial claim is required for each benefit period.

Benefit period: A period commencing with the week in which the initial claim is made, provided the qualifying conditions are fulfilled. The maximum length of the benefit period is 52 weeks, in the case of claimants qualifying under the regular terms of the Act. Seasonal benefit periods may be established only from December 1 to mid-May, with a maximum length of 24 weeks. In either case, however, the benefit period terminates with exhaustion of benefit.

Renewal claim: An application for benefit from an insured person during the currency of a benefit period. As in the case of initial claims, this category includes renewal claims from all classes of claimants, i.e., regular, seasonal and fishing.

Initial and renewal claims filed: An approximation of the number of new cases of recorded unemployment among insured persons during a period. However, an initial claim representing a request for re-establishment of a benefit period with no actual interruption in the period on claim would not constitute a new case of unemployment. To the extent that such claims are filed in any month, the total overstates the number of new cases.

Revised claims: Those, other than initial or renewal, which must be considered by an insurance officer, e.g., involving dependency, extension of qualifying period, etc. A revised claim is thus an administrative device to initiate action for reconsideration of an existing initial or renewal claim.

Claimants currently reporting to local offices: All persons currently reporting to local offices to claim unemployment insurance benefit, either regular, seasonal or fishing. Under the Unemployment Insurance Act a person may claim benefit for any week during which he did not work a full working week.

Number of weeks on claim: The cumulative number of weeks during which a claimant has reported to prove unemployment during the current period on claim. The count commences with the week in which the initial (or renewal) claim is filed and continues unbroken so long as the claimant continues to report as directed. Cases occur in which a spell of unemployment extends beyond the termination of a benefit period and a new benefit period is immediately established with no actual interruption of the period on claim. In such cases the cumulative number of weeks is transferred from the previous claim document to that covering the subsequent benefit period and the count continued. This procedure applies also for contiguous periods on regular and seasonal benefit. Excluded from the count are any weeks for which a claimant reported "non-availability" during a complete week.

Entitled to benefit: For purposes of this report, this category comprises those adjudications arising from initial claims on which a benefit period(regular, seasonal or fishing) is shown as established and no disqualification imposed and adjudications indicating "approval" on renewal claims, either regular, seasonal or fishing.

Not entitled to benefit: Claimants disqualified on initial and renewal claims, and those for whom the adjudication on an initial claim was to the effect that the claimant was ineligible to establish either a regular, seasonal or fishing benefit period.

Benefit period not established: The minimum contribution requirements for any type of benefit have not been met. This figure thus represents the net total of persons with insufficient contributions to establish a benefit period under either the regular, seasonal or fishing benefit provisions, based on decisions arising from initial claims only. Subsequent decisions arising from a revised claim and constituting a reversal of the initial adjudication are not taken into account, but such decisions would reduce the number of benefit periods not established.

Disqualification: A disqualification is imposed because of circumstances surrounding the claim which render the claimant ineligible for the receipt of benefit either for a stated period or so long as the condition causing the disqualification continues.

Where it is established that loss of employment was voluntary and without just cause on the part of the claimant, i.e., he left employment of his own volition or was dismissed because of misconduct. the maximum disqualification is six weeks, claimants participating in a labour dispute in which they are directly interested are disqualified for the duration of the work stoppage. In assessing the number of cases of disqualification, no distinction is made as to the type of claim, hence disqualifications arising from revised claims are included. The cases mentioned here serve as examples only and do not constitute a complete summary of conditions under which a disqualification may be imposed. Sections 59-66 of the Act contain a description of these conditions.

Weeks compensated: Calendar weeks in respect of which some benefit, either regular, seasonal or fishing, was paid. A compensated week is counted in the month in which the copy of the payment voucher is received in the District Treasury Office, which is not necessarily the month in which the week of unemployment occurred.

Amount of benefit: The sum of all benefit payments made during the month. This comprises regular, seasonal or fishing benefit.

Complete week: A week in respect of which a claimant received the full weekly rate of benefit authorized on that benefit period.

Partial week: A week for which a claimant received less than the full weekly rate authorized. A partial week may be due to excess earnings resulting in a reduced payment in direct proportion to the amount of such earnings. If a claimant was "not available for work" on any day or days during a week, a reduction will be made in the weekly rate proportionate to the number of days of "non-availability". A reduction will occur also if a portion of a week was designated as part of the prescribed waiting period.

Excess earnings: Earnings during a week in excess of the allowable earnings for a claimant's weekly benefit rate. As an example, a claimant whose weekly rate is \$30.00 may earn up to \$15.00 in a week without suffering a reduction in benefit; however, in a week where he earns \$17.00 his benefit will be reduced to \$28.00.

Beneficiaries: Persons who received one or more benefit payments. The estimate, based on the total number of payment documents for the month, represents the average weekly number of beneficiaries.

Seasonal benefit: Benefit payable during the period commencing with the Sunday prior to December 1 and ending with the Saturday after May 15, to

certain classes of claimants unable to fulfil the requirements under the regular benefit provisions of the Act. Claimants in Class A must prove 15 contributions since the Saturday preceding the 31st day of March immediately prior to the date of claim, while qualification under class B is contingent upon a regular benefit period having terminated since the Saturday following the 15th day of May immediately prior to the claim.

Fishermen: For purposes of regular benefit, a fisherman is a claimant showing five or more fishing contribution weeks during the last 52 weeks. For purposes of seasonal benefit, however, any claimant whose qualifying contributions include even one fishing contribution week is classed as a fishing claimant.

Fishing contribution week: Any week for which a fishing contribution is recorded, whether or not a contribution was also made in respect of other insured employment. Specially designed stamps are used to record insured employment in fishing and employers using the bulk pay method must report employee's fishing contributions separately from those relating to other insurable employment.

Industrial Classification of persons filing new claims for Unemployment Insurance: This information is based on a sample of documents in respect of initial claims filed in local offices during a month. To ensure that all such claims have an equal chance of being included in the study, the documents are accumulated until the end of the third week following the month in which the claim was filed.

The sampling ratio varies from one hundred per cent in the Atlantic provinces (during the period of low claim) to five per cent in Ontario. The sample embraces all new initial claims without regard to benefit status, i.e. failures as well as disqualifications are included. However, it excludes initial claims classed as transitional, i.e., those taken on behalf of persons terminating one benefit period and seeking re-establishment of credits, since such claims are not new cases of separation from employment.

At the present time only the new separations requiring an initial claim are included in this study, as these are the only documents forwarded to the Bureau for analysis. The ratio of initial to renewal claims fluctuates with the claim load, so that during the months of heavy claim, it is approximately 3:1.

Geographical classification: The provinces as defined in this bulletin are administrative entities. Hence, Ontario excludes Sioux Lookout for which data are included with Manitoba; British Columbia includes Whitehorse; Quebec excludes Magdalen Islands for which data are included in New Brunswick.
