### INCIDENCE OF TUBERCULOSIS - INCIDENCE DE LA TUBERCULOSE

December, 1961

The number of new active and reactivated cases of tuberculosis reported in December was 529. Of the cases for which information was available, 81.4 per cent were new active cases while 18.6 per cent were reactivated.

The total cumulative number of cases reported for the year 1961 was 6,488. Breakdown into new active and reactivated cases was available for 4,246 cases, 81.6 per cent of which were reported new active.

Of all new active cases of pulmonary tuberculosis during December, minimal tuberculosis accounted for 43.7 per cent of the cases, moderately advanced 34.7 per cent and far advanced 21.6 per cent.

Among the reactivated cases of pulmonary tuberculosis a slightly different pattern existed. Minimal tuberculosis dropped to 31.0 per cent of the reactivated cases. Moderately advanced and far advanced cases increased to 44.8 and 24.2 per cent respectively.

According to the diagnosis, 83.5 per cent of new active cases and 84.7 per cent of reactivated cases were respiratory, all others being non-respiratory.

Definition: A new active case of tuberculosis is one which has been diagnosed as such and never before been reported as active. A reactivated case of tuberculosis is one which has been currently found to be active and which has had a history of previous activity.

Note: It should be noted, that the number of cases of tuberculosis reported in a month are not necessarily diagnosed in that particular month.

\*\*Note: Information on the breakdown of total cases (Table 1) is not available for Quebec. Therefore, this Province is excluded from Tables 2 and 3.

Décembre, 1961

Le nombre de nouveaux cas de tuberculose évolutive et ré-évolutive s'est établi à 529 en décembre. Des cas à l'égard desquels on a obtenu des renseignements, 81.4 p. 100 relevaient de la tuberculose évolutive et 18.6 de la ré-évolutive.

Le nombre de cas signalés en 1961 s'est chiffré par 6,488. On a pu répartir les nouveaux cas en tuberculose évolutive et ré-évolutive pour 4,246 maladies, dont 81.6 p. 100 étaient de nouveaux cas évolutifs.

De tous les nouveaux cas de tuberculose pulmonaire évolutive, en décembre, la tuberculose minime en a compté 43.7 p. 100, la tuberculose assez avancée 34.7, et la très avancée 21.6.

La situation se modifie légèrement quant à la tuberculose pulmonaire. Les cas de maladie minime tombent à 31 p. 100 des cas ré-évolutifs, tandis que les cas de tuberculose assez avancée et très avancée s'élèvent respectivement à 44.8 et à 24.2 p. 100.

Suivant le diagnostic, 83.5 p. 100 des nouveaux cas évolutifs et 84.7 p. 100 des cas ré-évolutifs touchaient l'appareil respiratoire, le reste relevant d'autres formes de tuberculose.

Définition: Un nouveau cas de tuberculose évolutive est celui qui a été diagnostiqué comme tel et qui n'a jamais été signalé comme évolutif. Un cas de tuberculose ré-évolutive (dite récidivante dans les tableaux) est celui qui a été diagnostiqué comme évolutif et qui accuse une évolution antérieure.

\*Nota: A noter que les cas déclarés dans le mois n'ont pas nécessairement été diagnostiqués durant ce mois.

\*\*Nota: Les renseignements sur la répartition des cas (tableau 1) étant indisponibles pour le Québec les chiffres de cette province sont exclus des tableaux 2 et 3.
