## PREFACE

The Dominion Bureau of Statistics has published statistics on hospital accommodation, services, personnel and finances in a series of annual reports since 1932. Up to and including the year 1952 each annual report consisted of a single volume. From 1953 to 1958 inclusive the more extensive range of data produced required that the annual report be published in two volumes.

With the introduction of new reporting forms in 1959 to accommodate in one return the information requirements of the provinces and the Department of National Health and Welfare, associated with the introduction of the federal-provincial hospital insurance program, further expansion of the annual report has become necessary. The present publication accordingly represents one volume of a set of seven which make up the Annual Report of Hospitals for the year 1959 and each subsequent year. The titles of these volumes, which appear on the cover of the Annual Report as sub-titles, are as follows:

Volume I	- Hospital Beds
Volume II	- Hospital Services
Volume III	- Hospital Personnel
Volume IV	- Hospital Balance Sheet Statistics
Volume V	- Hospital Revenues
Volume VI	- Hospital Expenditures
Volume VII	- Summary of Hospital Statistics

The Dominion Bureau of Statistics acknowledges with gratitude the cooperation of hospitals, provincial hospital authorities, the Department of National Health and Welfare, hospital associations, and individuals who have contributed to the publication of the Annual Report.

The Report is prepared in the Institutions Section of the Health and Welfare Division of the Dominion Bureau of Statistics. Comments on the contents or inquiries about additional information should be directed to the Institutions Section.

WALTER E. DUFFETT,  
*Dominion Statistician.*

## PRÉFACE

Le Bureau fédéral de la statistique publie depuis 1932 une série statistique de rapports annuels touchant le logement, les services, le personnel et les finances des hôpitaux. Jusqu'à 1952, inclusivement, chaque Rapport annuel formait un volume, mais de 1953 à 1958, inclusivement, une plus grande quantité de données en ont exigé deux.

Depuis l'introduction de nouvelles formules de déclaration, en 1959, pour grouper dans une seule formule tous les renseignements exigés par les provinces et le ministère de la Santé nationale et du Bien-être social et vu l'introduction du régime fédéral-provincial d'assurance-hospitalisation, il a fallu élargir encore les cadres du Rapport annuel. En conséquence, la présente publication n'est que le premier volume d'une série de sept, série qui constitue le Rapport annuel sur les hôpitaux pour 1959 et les années à suivre. Voici les titres de chacun des volumes qui paraissent sur la couverture du Rapport annuel comme sous-titres:

Catalogue number
- Lits hospitaliers 83-210
- Services hospitaliers 83-211
- Personnel hospitalier 83-212
- Statistique des bilans hospitaliers 83-213
- Recettes hospitalières 83-214
- Dépenses hospitalières 83-215
- Résumé de la statistique hospitalière 83-216

Le Bureau fédéral de la statistique remercie les hôpitaux, les autorités hospitalières provinciales, le ministère de la Santé nationale et du Bien-être social, les associations hospitalières et les particuliers dont la collaboration a permis la publication du Rapport annuel.

C'est la Section des institutions (Division de la santé et du bien-être) du Bureau fédéral de la statistique qui rédige ce rapport. Tout commentaire ou toute demande de renseignements additionnels doivent donc être adressés à cette Section.

WALTER E. DUFFETT,  
*Statisticien du Dominion.*

PART I — TEXT AND CHARTS

—  
PARTIE I — TEXTE ET GRAPHIQUES

## ALL HOSPITALS

### Introduction

Hospital statistics in Canada are primarily classified into three main categories of operation, i.e. public, private and federal. *Public* hospitals depend in part on public funds for support and are obligated to accept all patients regardless of their ability to pay. They are all recognized as "public hospitals" by the provinces in which they are located. *Private* hospitals are established as profit making enterprises and restrict the admission of patients to only those who are able to pay for the care they receive. Some are owned by religious or other bodies (industrial companies). *Federal* hospitals are administered by certain departments, namely, the Department of National Health and Welfare, Department of Veterans Affairs and the Department of National Defence, for persons whose hospital care is the responsibility of the federal government, i.e. Indians, Eskimos, veterans, servicemen, sick mariners.

The secondary classification of hospitals in Canada is the type of service offered by the hospital, i.e. general, chronic, convalescent, maternity and other (including orthopaedic, children's and isolation). If an institution provides more than one type of service, the predominant type of service governs its secondary classification.

This publication in the main (except for limited data on all hospitals in Canada) excludes the institutions which are primarily concerned with the treatment of tuberculosis, mental disease and mental defects. These types of health institutions are reported separately and presented in other publications.<sup>1</sup> Excluded entirely from any statistics contained in this report are those institutions which provide solely custodial and/or domiciliary care.

The statistics found in this report have been obtained from the "Annual Return of Hospitals — Part I" — required to be submitted by all the hospitals in Canada (except tuberculosis and mental institutions). The Returns from the hospitals are routed through the Province for scrutiny at that level before being sent to the Dominion Bureau of Statistics. Of the 1,360 hospitals required to submit returns 1,219 or 89.6 per cent did so. The greatest proportion of delinquent reports occurred among the private hospitals — where the Provincial authority has little control.

### Hospital Beds

The total rated bed capacity (excluding bassinets) for all hospitals in Canada in 1959 rose to 190 thousand from nearly 183 thousand in 1958, an increase of 3.7 per cent, while the population

<sup>1</sup> "Tuberculosis Statistics" and "Mental Health Statistics" published annually and may be obtained from the Information Services Division of the Dominion Bureau of Statistics.

## ENSEMBLE DES HÔPITAUX

### Introduction

Les statistiques des hôpitaux du Canada sont d'abord classées suivant les trois principaux modes de gestion des institutions, d'où les hôpitaux publics, privés et fédéraux. Les hôpitaux *publics*, soutenus partiellement par les fonds publics, sont obligés de soigner les malades sans égard à leur capacité de payer et sont tous reconnus comme "hôpitaux publics" par les provinces où ils sont situés. Les hôpitaux *privés*, établis dans un but lucratif, restreignent l'admission des malades à ceux qui peuvent payer pour les soins qu'ils reçoivent; certains sont la propriété d'instituts religieux ou d'autres sociétés (sociétés industrielles). Les hôpitaux *fédéraux* sont administrés par divers ministères (Santé nationale et Bien-être social, Anciens combattants et Défense nationale) à l'avantage des personnes dont les soins hospitaliers relèvent du gouvernement fédéral, comme Indiens, Esquimaux, anciens combattants, soldats et marins.

La classification secondaire des hôpitaux se fait suivant l'affectation; c'est ainsi que l'on a les hôpitaux généraux, pour maladies chroniques, de convalescence, de maternité, etc., (y compris d'orthopédie, pour enfants et pour maladies contagieuses). Si une institution a plus d'une affectation, l'affectation prédominante détermine son classement.

Dans l'ensemble, la présente publication, — sauf pour quelques données concernant tous les hôpitaux du Canada, — n'a pas pour objet les institutions qui s'occupent surtout du traitement de la tuberculose, des maladies mentales et de la déficience mentale. Ces divers genres d'institution font séparément leur propre déclaration et d'autres publications en font rapport<sup>1</sup>. Le présent rapport ne touche nullement les statistiques des institutions qui ne procurent que la garde des malades ou leurs soins à domicile.

Les statistiques de la présente publication proviennent du "Rapport annuel des hôpitaux, 1<sup>re</sup> partie" que doivent soumettre tous les hôpitaux du Canada, sauf les institutions pour tuberculose et maladies mentales. Les rapports envoyés par les hôpitaux passent par la province qui les contrôle et envoie ensuite au Bureau fédéral de la statistique. Des 1,360 hôpitaux qui doivent faire un rapport, 1,219 (89.6 p. 100) l'ont présenté. La plupart de ces derniers se constituent d'hôpitaux privés où les autorités provinciales ne jouissent guère d'autorité.

### Lits hospitaliers

La capacité théorique (en lits, — à l'exclusion des berceaux) de tous les hôpitaux du Canada s'est élevée à 190,000 en 1959, au regard de près de 183,000 en 1958; c'était là une hausse de 3.7 p. 100

<sup>1</sup> "La statistique de la tuberculose" et "La statistique des maladies mentales" sont publiées chaque année et peuvent s'obtenir de la Division des services d'information du Bureau fédéral de la statistique.

of the nation increased by 2.3 per cent. The ratio of total bed capacity to the population was one bed for every 92 Canadians in 1959, as compared to one bed for every 93 citizens in 1958 and one for every 94 in 1957.

Public, general and allied special hospitals accounted for 52.4 per cent of the total rated bed capacity of all hospitals, a slight rise from 51.9 per cent in 1958 and 50.9 per cent in 1957. The proportion of the bed capacity of public mental hospitals remained exactly the same in 1959 as in 1958 at 31.2 per cent—slightly higher than the 30.9 per cent in 1957. Tuberculosis sanatoria rated bed capacity continued its decline to 5.9 per cent of the total, from 6.6 per cent in 1958 and 7.5 per cent in 1957. Federal hospital bed capacity represented only 6.5 per cent in 1959. This was a small decrease from the previous two years.

Chart 1 denotes the marked variation in the size of types of hospitals in Canada. The most striking are the public mental hospitals which make up only 4.7 per cent of all hospitals but have almost one-third of all the beds. Private hospitals show the exact opposite situation with 22.6 per cent of the hospitals and only 4.0 per cent of the beds.

alors que la population canadienne ne s'accroissait que de 2.3 p. 100. En 1959, le rapport de la capacité théorique à la population, pour tout le Canada, s'est établi à un lit pour 92 habitants, comparativement à 1 pour 93 en 1958 et à 1 pour 94 en 1957.

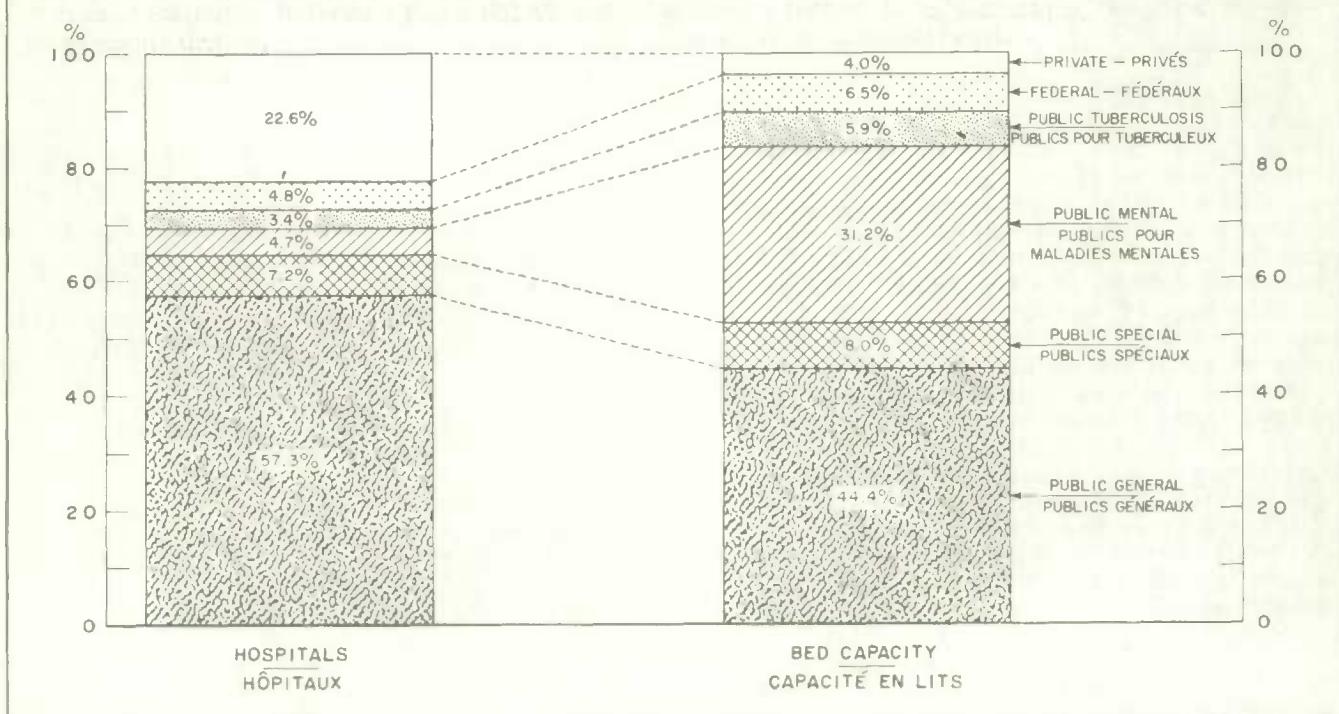

Les hôpitaux généraux publics et spéciaux divers ont figuré pour 52.4 p. 100 de la capacité théorique de tous les hôpitaux, soit une légère avance sur les 51.9 p. 100 de 1958 et les 50.9 de 1957. Le pourcentage de la capacité théorique des hôpitaux pour maladies mentales n'a pas changé par rapport à 1958 (31.2 p. 100), mais a légèrement monté au regard de 1957 (30.9). La capacité théorique des sanatoriums pour tuberculeux a continué de diminuer et a baissé de 7.5 en 1957 et de 6.6 en 1958 à 5.9 en 1959. La capacité théorique des hôpitaux fédéraux n'accusait que 6.5 p. 100 en 1959, ce qui constituait un léger recul sur les deux années antérieures.

Le premier graphique indique la grande variété de la taille des divers genres d'hôpitaux au Canada. Le cas le plus frappant, est celui des hôpitaux pour maladies mentales qui ne constituent que 4.7 p. 100 de tous les hôpitaux, mais détiennent presque le tiers de tous les lits. C'est tout à fait le contraire pour les hôpitaux privés, puisque ces derniers figurent pour 22.6 p. 100 des hôpitaux, alors qu'ils ne détiennent que 4 p. 100 de tous les lits.

CHART — I

GRAPHIQUE — I

### PERCENTAGE DISTRIBUTION OF ALL OPERATING HOSPITALS, 1959 RÉPARTITION PROCENTUELLE DE TOUS LES HÔPITAUX EN ACTIVITÉ, 1959

## PUBLIC HOSPITALS

Public hospitals<sup>2</sup> operating in Canada in 1959 numbered 963, an increase of 11 over 1958. Of these hospitals, 940 reported statistical data to the Dominion Bureau of Statistics. This represents a coverage of 97.6 per cent of the hospitals with 98.3 per cent of the total rated bed capacity. (Table 4)

Public hospitals comprised 64.5 per cent of all operating hospitals in Canada in 1959 and they in turn accounted for 52.4 per cent of the total rated bed capacity (Chart 1).

The rated bed capacity per 1,000 population rose from 5.5 in 1958 to 5.7 in 1959, the largest year-to-year increase in the past decade. Saskatchewan had the highest ratio at 7.4, with Newfoundland 4.0 and Nova Scotia 4.7 the lowest (Chart 2). Prince Edward Island showed the greatest percentage of growth in beds per population — 38.8 per cent higher than in 1949. Quebec ranked second in this respect — 30.4 per cent higher than in 1949. The ratio of beds per population in Nova Scotia dropped by 6.0 per cent since 1949. Manitoba, British Columbia and Newfoundland also showed decreases in ratios by 3.5, 3.6 and 4.3 per cent respectively.

It should be noted that capacity standards are applied provincially and it is possible that variations may occur in the application of the standards to the actual hospital structures. Therefore comparisons may not be altogether valid.

### Beds Set Up

In many cases the number of beds set up in a hospital differs from the rated bed capacity of the hospital. *Rated bed capacity* is that number of beds which a hospital can accommodate on the basis of provincial or federal standards of floor area per bed, while *beds set up* is the actual number of beds available for accommodation of patients at a certain date. These beds may or may not be occupied at the time but they must be ready for occupancy. The ratio of beds set up to the rated bed capacity is a crude measure of the degree of pressure on hospital services. Ratios of over 1.00 indicate relatively high pressure.

The national ratio for general hospitals (beds, cribs and bassinets) in 1959 was 1.01. This represented a distinct drop from the 1955-58 period when the ratio remained constant at 1.03. Variations among the provinces were quite wide, ranging from .96 in Prince Edward Island and .98 in Quebec to 1.06 in Nova Scotia and Alberta, and 1.10 in Saskatchewan.

<sup>2</sup> The term *public* throughout should be understood to include general and allied special hospitals but to exclude mental and tuberculosis hospitals.

## HÔPITAUX PUBLICS

Les hôpitaux publics<sup>2</sup> en activité au Canada, en 1959, se chiffraient par 963, augmentation de 11 sur 1958. De ces hôpitaux, 940 ont représenté des données au Bureau fédéral de la statistique; cela représente 97.6 p. 100 des hôpitaux et 98.3 p. 100 de la capacité théorique d'ensemble (tableau 4).

Les hôpitaux publics comprenaient 64.5 p. 100 de tous les hôpitaux en activité et figuraient pour 52.4 p. 100 de toute la capacité théorique (graphique 1).

La capacité théorique pour 1,000 s'est élevée de 5.5 en 1958 à 5.7 en 1959; c'était, d'une année à l'autre, la plus forte hausse de la dernière décennie. Le rapport le plus haut était détenu par la Saskatchewan (7.4), alors que le plus bas revenait à Terre-Neuve (4) et à la Nouvelle-Écosse (4.7) (graphique 2). Proportionnellement à la population, c'est l'Île-du-Prince-Édouard qui comptait le plus fort pourcentage d'augmentation des lits, soit 38.8 p. 100 de plus qu'en 1959, suivie du Québec avec 30.4 p. 100 de plus. Le même rapport a baissé en Nouvelle-Écosse (de 6 p. 100 depuis 1949), tandis que le Manitoba, la Colombie-Britannique et Terre-Neuve ont également accusé une baisse (respectivement de 3.5, de 3.6 et de 4.3 p. 100).

A noter que les normes de la capacité sont appliquées par les provinces; aussi, peut-il arriver que des différences se soient fait jour dans l'application des normes aux structures actuelles des hôpitaux. C'est pourquoi, les comparaisons ne peuvent toutes être justes.

### Lits dressés

Dans plusieurs cas, le nombre de lits dressés diffère de la capacité théorique. La *capacité théorique* est le nombre de lits qu'un hôpital peut avoir suivant les normes (provinciales ou fédérales) d'aire par lit, tandis que les *lits dressés* représentent le nombre de lits qui, en fait, sont à la disposition des malades à un moment donné. A ce moment-là, ces lits peuvent être ou n'être pas occupés, mais doivent être prêts à l'être. Le rapport des lits dressés à la capacité théorique est une simple mesure du degré de demande des services hospitaliers. Un rapport de plus de 1 indique une demande relativement forte.

En 1959, le rapport canadien pour les hôpitaux généraux (lits et berceaux) s'établissait à 1.01 pour tout le Canada, soit une baisse marquée au regard de la période 1955-1958 où le rapport s'est constamment maintenu à 1.03. La variété du rapport, suivant les provinces, est vaste, puisqu'il s'échelonne de .96 en Île-du-Prince-Édouard et de .98 au Québec à 1.06 en Nouvelle-Écosse et en Alberta et à 1.10 en Saskatchewan.

<sup>2</sup> Le terme *public*, partout, comprend l'hôpital général et spécial divers, mais non l'hôpital pour tuberculose ou maladies mentales.

CHART - 3

GRAPHIQUE - 3

#### Hospital Size Distribution

The average size of public hospitals in 1959 was 119 beds (including bassinets), 3 higher than the previous year and 7 higher than in 1957. General hospitals increased in size by 5, to 115 from the previous year. The average number of bassinets in public hospitals was 17, compared with 16 in both 1958 and 1957. Hospitals providing care mainly to the chronic patient, revealed a substantial drop in size, to 161 beds from 172 in 1958 and 188 in 1957. Maternity hospitals averaged 97 beds and 43 bassinets — bassinets making up 30.7 per cent of the total.

Half of the public *general* hospitals in Canada had 48 beds or less, while the modal group (that group containing the greatest frequency) was only 10-24 beds. Of all the reporting public hospitals, the Province of Saskatchewan with just over 5 per cent of the population in Canada, possessed practically the same number of hospitals as the Province of Quebec where almost 29 per cent of all Canadians live. The prevalence of a large proportion of small hospitals in Canada is due to the sparse population in the vast land areas of the nation. Some 59 per cent of all the operating hospitals were under 50 beds. However, these hospitals contained only 13 per cent of the rated bed capacity (Chart 4). At the opposite end of the distribution, 3.7 per cent of the hospitals had 500 beds or more, which in turn had 27.4 per cent of the total rated bed capacity. The small hospitals (under 50 beds) averaged 28 beds while the large hospitals (over 500 beds) averaged 826 beds.

#### Répartition des hôpitaux suivant leur taille

En 1959, la taille moyenne des hôpitaux publics se traduisait par 119 lits (berceaux compris), soit 3 de plus que l'année précédente et 7 de plus qu'en 1957. Dans les hôpitaux généraux, l'accroissement a été de 5 sur l'année précédente pour obtenir 115. Le nombre moyen de berceaux dans les hôpitaux publics s'est établi à 17, comparativement à 16 en 1958 et en 1957. Les hôpitaux traitant les maladies chroniques a accusé une baisse substantielle dans la taille (en lits), soit 161 lits au regard de 172 en 1958 et de 188 en 1957. Les hôpitaux pour maternité ont obtenu une moyenne de 97 lits et de 43 berceaux, ces derniers comptant pour 30.7 p. 100 du total.

La moitié des hôpitaux *généraux* publics du Canada avaient 48 lits ou moins, alors que le groupe modal (il marquait la plus grande fréquence) ne possédait que 10-24 lits. De tous les hôpitaux publics répondants, la Saskatchewan, avec tout juste un peu plus de 5 p. 100 de la population canadienne, en possédait pratiquement le même nombre que le Québec qui comptait près de 29 p. 100 des Canadiens. La prépondérance d'un grand nombre de petits hôpitaux au Canada provient d'une population clairsemée dans les vastes terres du pays. Environ 59 p. 100 de tous les hôpitaux en activité possédaient moins de 50 lits. Néanmoins, ces hôpitaux ne comprenaient que 13 p. 100 de la capacité théorique (graphique 4). A l'opposé de la répartition, 3.7 p. 100 des hôpitaux avaient 500 lits ou plus pour 27.4 p. 100 de toute la capacité théorique. Les petits hôpitaux (moins de 50 lits) obtenaient une moyenne de 28 lits et les grands (plus de 500 lits), 826.

CHART-4

GRAPHIQUE-4

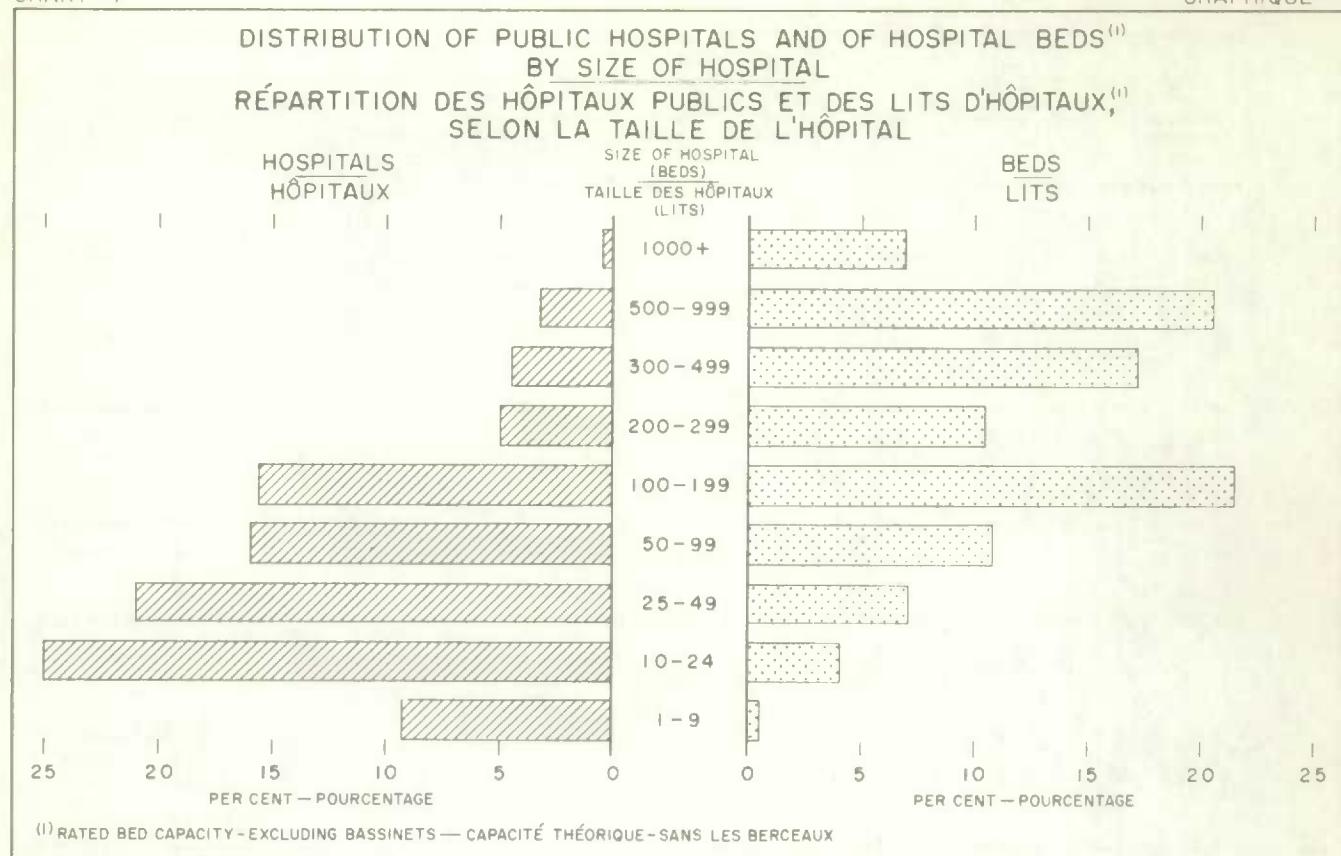

Chart 4 denotes the very uneven distribution of both hospitals and the rated bed capacity, with the preponderance of hospitals at the lower end, whereas the bed capacities are concentrated at the upper end.

#### Type of Beds Set Up

The total number of beds set up are allocated to nine distinct categories as shown in Table 31. The years represented in Chart 5 (1955, 1957, 1959) reveal a proportionate decrease of medicine and surgery beds and a proportionate increase in paediatric beds. Beds allocated to tuberculosis have shown a steady decrease to 0.5 per cent from 0.8 per cent in 1957 and 1.3 per cent in 1955. Bassinets, while increasing numerically over the years, have shown a gradual decrease in proportionate terms. There did not occur any real marked shift in any of the categories listed on a national basis.

In comparing the allocation of beds set up in the provinces (excluding bassinets), the medical and surgical beds range from 45.5 per cent in Quebec to 63.8 per cent in Nova Scotia, (Canada 54.3). The limits in the range of beds allocated to long-term patients were 0.4 per cent in Nova Scotia to 18.4 per cent in Quebec, (Canada 10.8). Other categories showed quite a narrow range, e.g. obstetrics, Newfoundland 8.1, to 15.3 in Nova Scotia; paediatrics, Newfoundland 10.0, to 17.1 in New Brunswick.

Le graphique 4 démontre l'inégalité de la répartition des hôpitaux et de leur capacité théorique, la prépondérance des premiers se fixant au haut et la capacité théorique au bas.

#### Affectation des lits dressés

Le total des lits dressés est réparti suivant neuf catégories distinctes d'affectation, comme l'indique le tableau 31. Les années dont s'occupe le graphique 5 (1955, 1957, 1959) révèlent, en chiffres proportionnels, une diminution des lits affectés à la médecine et à la chirurgie et une augmentation des lits pour pédiatrie. Les lits affectés à la tuberculose ont marqué une baisse constante, soit 0.5 p. 100 en 1959 au regard de 0.8 en 1957 et de 1.3 en 1955. Les berceaux, même s'ils ont numériquement augmenté au cours des années, ont proportionnellement diminué sans cesse. A cet égard, on n'a enregistré aucun changement radical réel pour aucune des catégories d'affectation pour ce qui est de la situation canadienne.

Si l'on compare l'affectation des lits dressés (berceaux exclus) suivant les provinces, les lits requis pour la médecine et la chirurgie s'échelonnent de 45.5 au Québec à 63.8 en Nouvelle-Écosse (Canada, 54.3). Les limites pour les lits affectés aux maladies à long terme se situent entre .4 p. 100 en Nouvelle-Écosse et à 18.4 au Québec (Canada, 10.8). La marge est plutôt mince pour les autres catégories; c'est ainsi que, pour l'obstétrique, elle varie de 8.1 à Terre-Neuve à 15.3 en Nouvelle-Écosse et, pour la pédiatrie, de 10 à Terre-Neuve à 17.1 au Nouveau-Brunswick.

CHART-5

GRAPHIQUE - 5

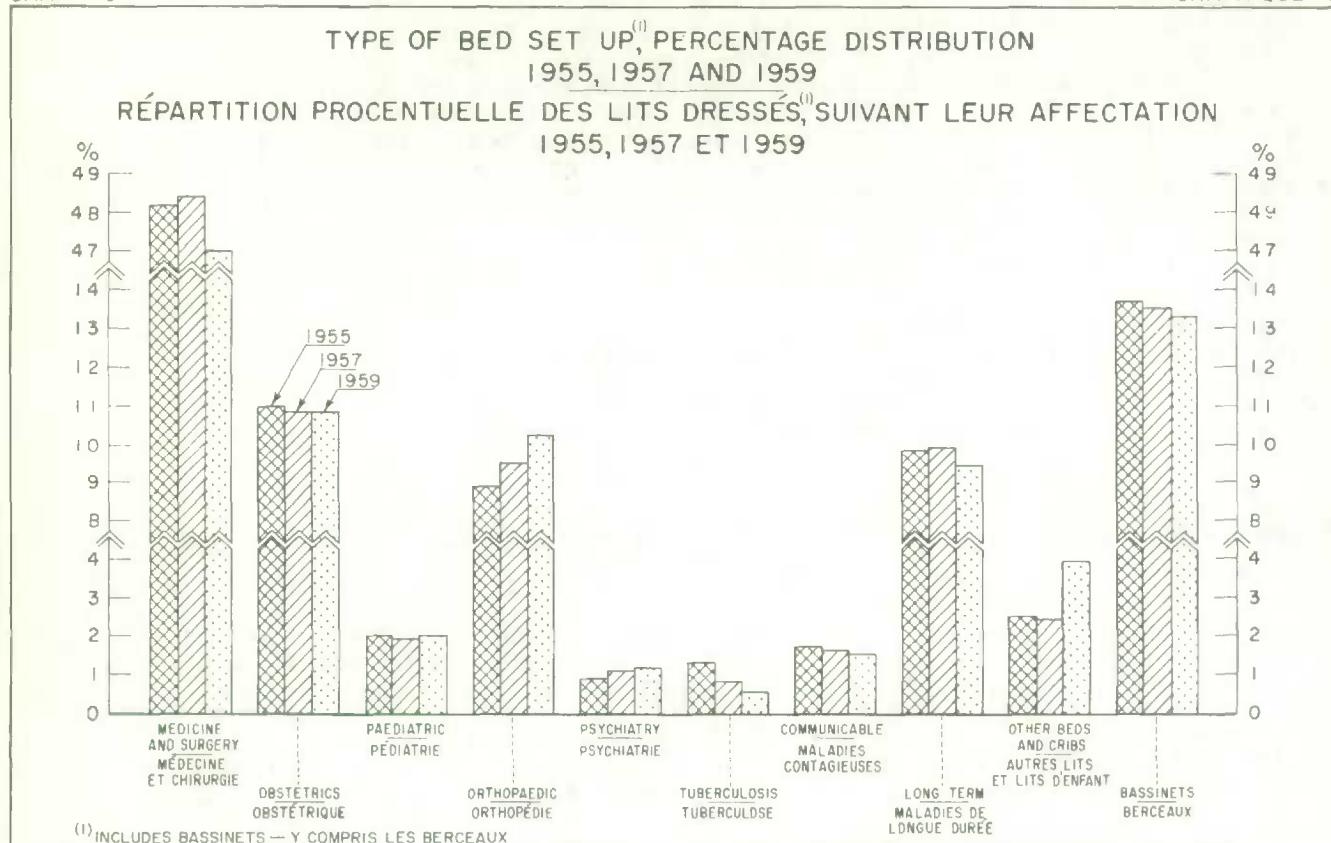

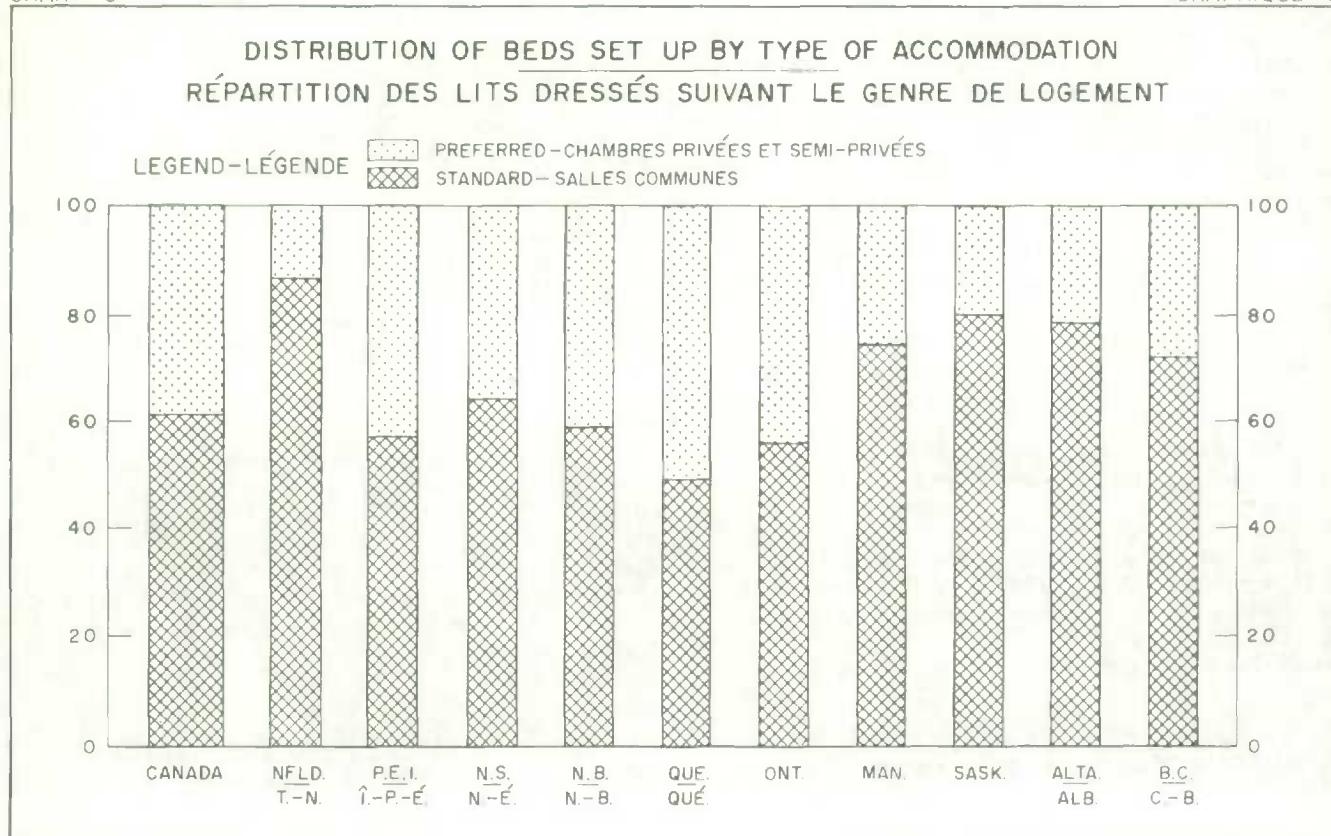

CHART-6

GRAPHIQUE - 6

Of the total number of beds set up in public hospitals in 1959, 38.7 per cent were allotted to patients who obtained preferred accommodation (semi-private or private patients), while the remainder (61.3 per cent) were for patients receiving standard ward care (Chart 6). The Province of Quebec had the highest percentage of preferred accommodation beds (51.0 per cent), while Newfoundland and Saskatchewan had the lowest at 13.2 and 20.0 per cent respectively. Hospitals in the 100-199 bed size group had the highest percentage of beds set up for preferred accommodation. This was true in each of the Atlantic Provinces and Ontario. Quebec had the highest proportion of "preferred" beds in the 10-24 bed group, while Saskatchewan's highest proportion was in the 200-299 group, Manitoba and Alberta in the 300-499 group and British Columbia in the 500-999 bed group.

#### Movement of Patients

The number of adults, children and newborn patients admitted to, and separated from public hospitals in 1959 was 3.8 per cent higher in both cases than in 1958. The previous period (1957 to 1958) showed a 3.3 per cent increase. During 1959 however the number of deaths of patients in hospital increased by 6.7 per cent, to 68,800. The average daily in-patient population was 85,974.4, some 5.2 per cent higher than in 1958.

All provinces reported increases in admissions, separations and deaths. New Brunswick had the highest increase of admissions and separations at 7.8 and 7.4 per cent respectively, while Saskatchewan had the lowest increase at 0.9 and 1.1. While all provinces had more in-patient hospital deaths, the range was much wider than that for admissions and separations. British Columbia had only 2.0 per cent more deaths in 1959 than 1958, while Alberta had 23.9 per cent more. The average number of patients<sup>3</sup> in hospital was higher in all provinces except Saskatchewan and British Columbia, which revealed decreases of 4.0 and 3.2 per cent. On the other hand, Alberta and New Brunswick had the greatest increases of 14.7 and 12.4 per cent.

#### Admission Rates

The number of admissions to a hospital is one of the major factors in determining the degree of hospital utilization and the planning of future hospital services. Admissions to public hospitals (general and allied special) of adults and children in 1959 numbered 2,493,973. The rate of admissions per 1,000 population increased from 140.9 in 1958 to 143.0 in 1959. The rate of admissions in 1949 was 113.6 or 79.4 per cent of that in 1959 (Chart 7).

<sup>3</sup> Includes adults, children and newborn and is calculated by dividing the total number of patient days by 365.

Du total des lits dressés dans les hôpitaux publics en 1959, 38.7 p. 100 étaient affectés aux malades des chambres privées et semi-privées et le reste (61.3), aux malades des salles communes (graphique 6). Le Québec détenait le plus haut pourcentage des lits de chambre (51 p. 100) et Terre-Neuve et la Saskatchewan le plus bas, soit 13.2 et 20 respectivement. Les hôpitaux de 100-199 lits accusaient le plus fort pourcentage de lits dressés dans les chambres. La même situation se présentait dans chacune des provinces atlantiques et en Ontario, alors que le plus haut pourcentage revenait aux hôpitaux de 10-24 lits au Québec, à ceux de 200-299 en Saskatchewan, à ceux de 300-499 au Manitoba et en Alberta et à ceux de 500-999 en Colombie-Britannique.

#### Mouvement hospitalier

Le nombre d'adultes, d'enfants et de nouveau-nés admis dans les hôpitaux publics ou qui en sont sortis en 1959 était supérieur, dans les deux cas, à celui de 1958. La période précédente (de 1957 à 1958) marquait un accroissement de 3.3 p. 100. Toutefois, en 1959, le nombre de décès d'hospitalisés s'est accru de 6.7 p. 100 et a totalisé 68,800. La population moyenne des hospitalisés s'établissait à 85,974.4, quelque 5.2 p. 100 de plus qu'en 1958.

Toutes les provinces ont signalé des accroissements des admissions, des radiations et des décès. Le Nouveau-Brunswick a détenu la plus forte augmentation des admissions et des radiations (7.8 et 7.4 respectivement) et la Saskatchewan, la plus faible (0.9 et 1.1). Toutes les provinces ont vu augmenter le nombre de décès d'hospitalisés, mais la marge de différence a été beaucoup plus grande que dans le cas des admissions et radiations. En 1959, au regard de 1958, la Colombie-Britannique n'a compté qu'un accroissement de 2 p. 100 des décès et l'Alberta, 23.9 p. 100. Le nombre moyen d'hospitalisés<sup>3</sup> s'est élevé dans toutes les provinces, sauf en Saskatchewan et en Colombie-Britannique qui ont accusé des baisses respectives de 4 et de 3.2 p. 100. D'autre part, l'Alberta et le Nouveau-Brunswick comptaient les plus fortes augmentations soit 14.7 et 12.4 p. 100.

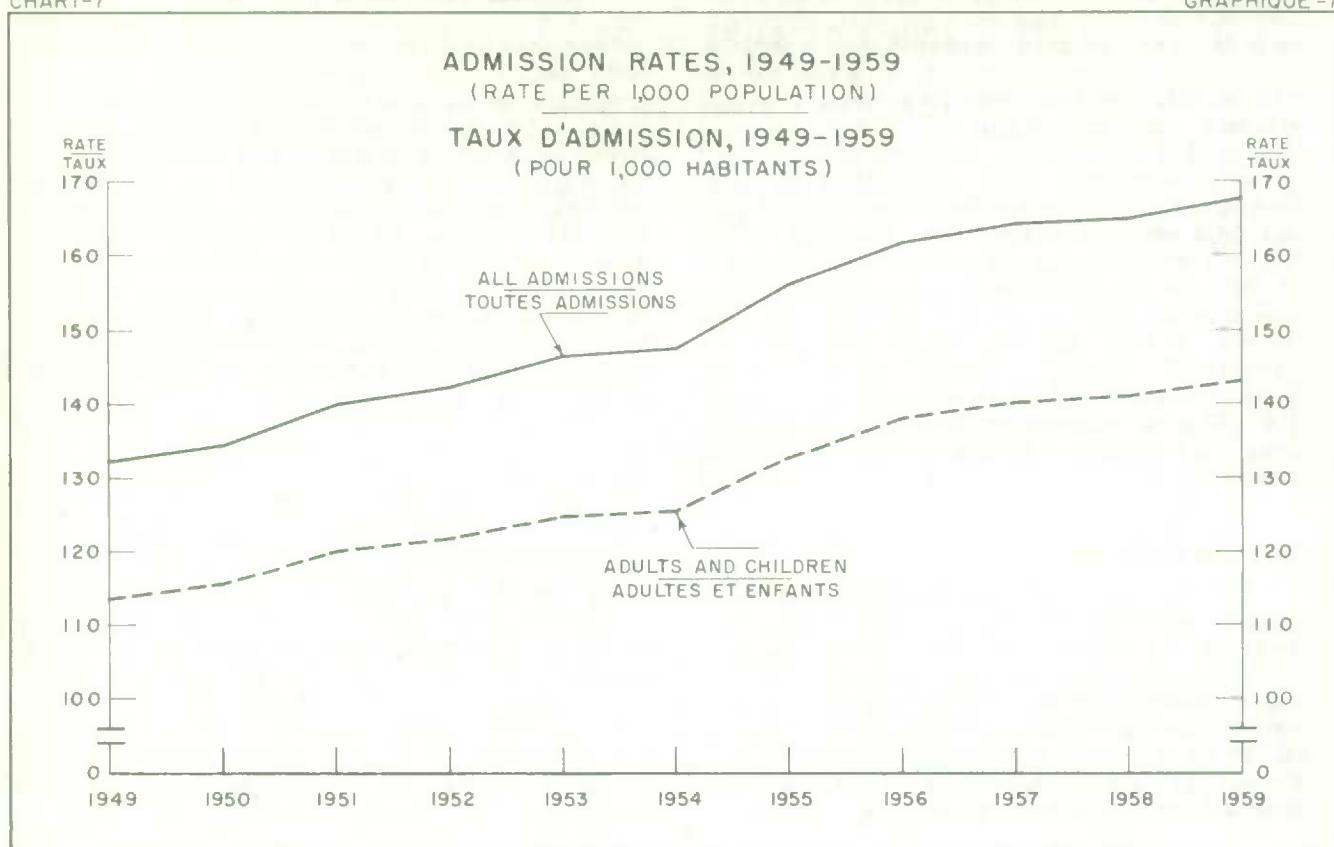

#### Taux d'admission

Le nombre d'admissions dans un hôpital est l'un des principaux facteurs qui déterminent le degré d'utilisation de l'institution et les projets de futurs services hospitaliers. Les admissions dans les hôpitaux publics (généraux et spéciaux divers) d'adultes et d'enfants totalisaient 2,493,973 en 1959. Le taux d'admission en 1949 était de 113.6, soit 79.4 p. 100 de celui de 1959 (graphique 7).

<sup>3</sup> Adultes, enfants et nouveau-nés. Le nombre est calculé en divisant le total des jours-malades par 365.

CHART-7

GRAPHIQUE-7

There was a wide variation of admission rates in the provinces (Chart 8). They ranged from a low of 100.3 in Newfoundland to 210.9 in Saskatchewan. Admission rates in New Brunswick increased by 8.5 per cent over the previous year. The national increase was 1.5 per cent. Saskatchewan, which had the highest admission rate, had the smallest proportional increase of 0.8 per cent from 1958.

The newborn admission rate (Chart 8) reveals an interesting situation with very little variation in the provinces except for Quebec (20.5) which was 16.0 per cent below the Canadian rate (24.4) and Alberta (29.4) which was 20.5 per cent above.

#### Patient Population

On a typical day in 1959 one in every 198 Canadian residents was in a public hospital, as opposed to one in every 209 persons the previous year. Excluding newborn from these ratios, the proportion was one in every 222 persons. Put another way, every Canadian spent an average of 1.8 days in hospital — a slight increase from 1.7 days in 1958.

On constate une large marge entre les divers taux d'admission des provinces (graphique 8), puisqu'ils s'échelonnent de 100.3 à Terre-Neuve à 210.9 en Saskatchewan. Au Nouveau-Brunswick, le taux a monté de 8.5 p. 100 au regard de l'année précédente. L'accroissement canadien était de 1.5 p. 100. La Saskatchewan, qui détenait le plus haut taux d'admission, n'a pourtant accusé que la plus basse avance proportionnelle, soit 0.8 p. 100.

Le taux d'admission des nouveau-nés (graphique 8) révèle un état intéressant puisque les provinces n'ont accusé que peu de changement, sauf le Québec (20.5) dont le taux était inférieur de 16 p. 100 à celui du Canada et l'Alberta dont le taux était supérieur de 20.5 p. 100.

#### Population hospitalière

A un jour donné de 1959, un ressortissant canadien sur 198 était dans un hôpital public, comparativement à un sur 209 l'année précédente. Si l'on exclut les nouveau-nés, le rapport revient alors à 1 sur 222. En d'autres mots, chaque Canadien a séjourné une moyenne de 1.8 jour à l'hôpital, en légère augmentation sur le 1.7 jour de 1958.

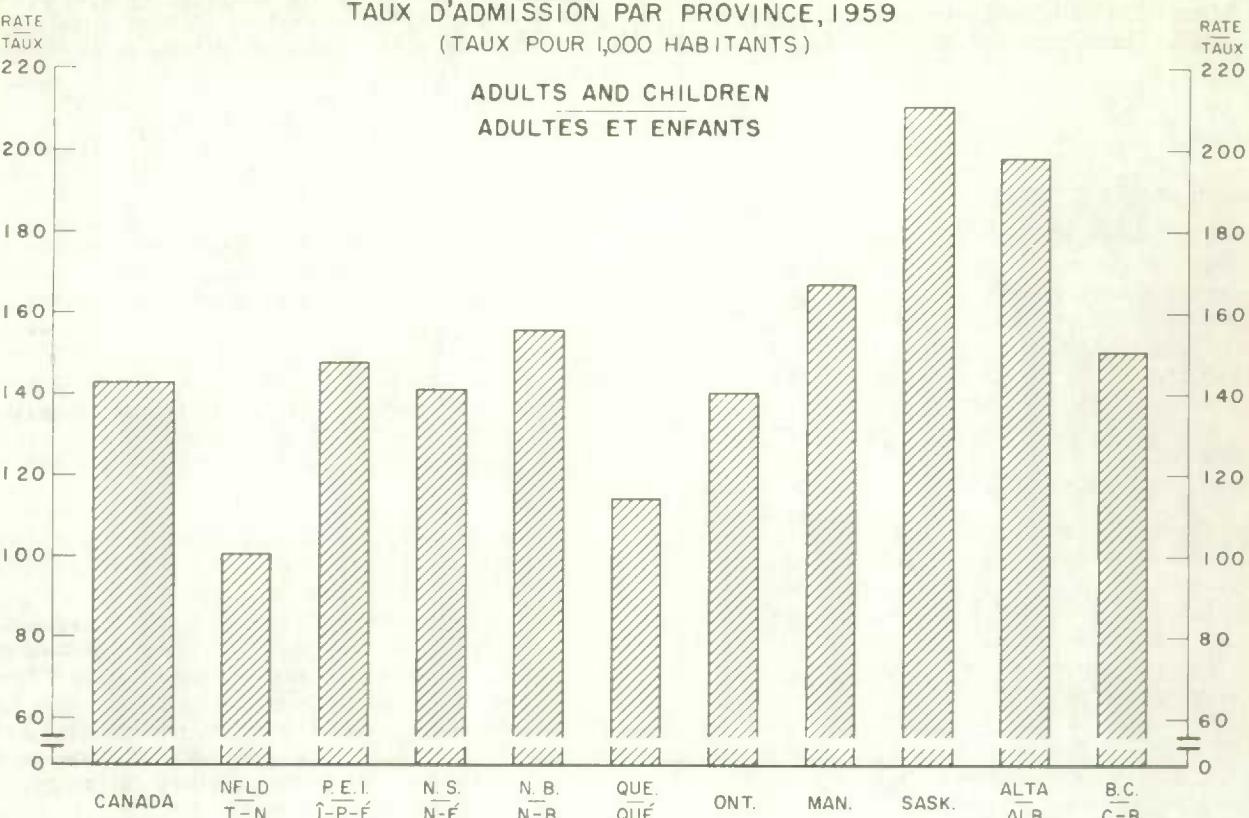

CHART - 8

GRAPHIQUE - 8

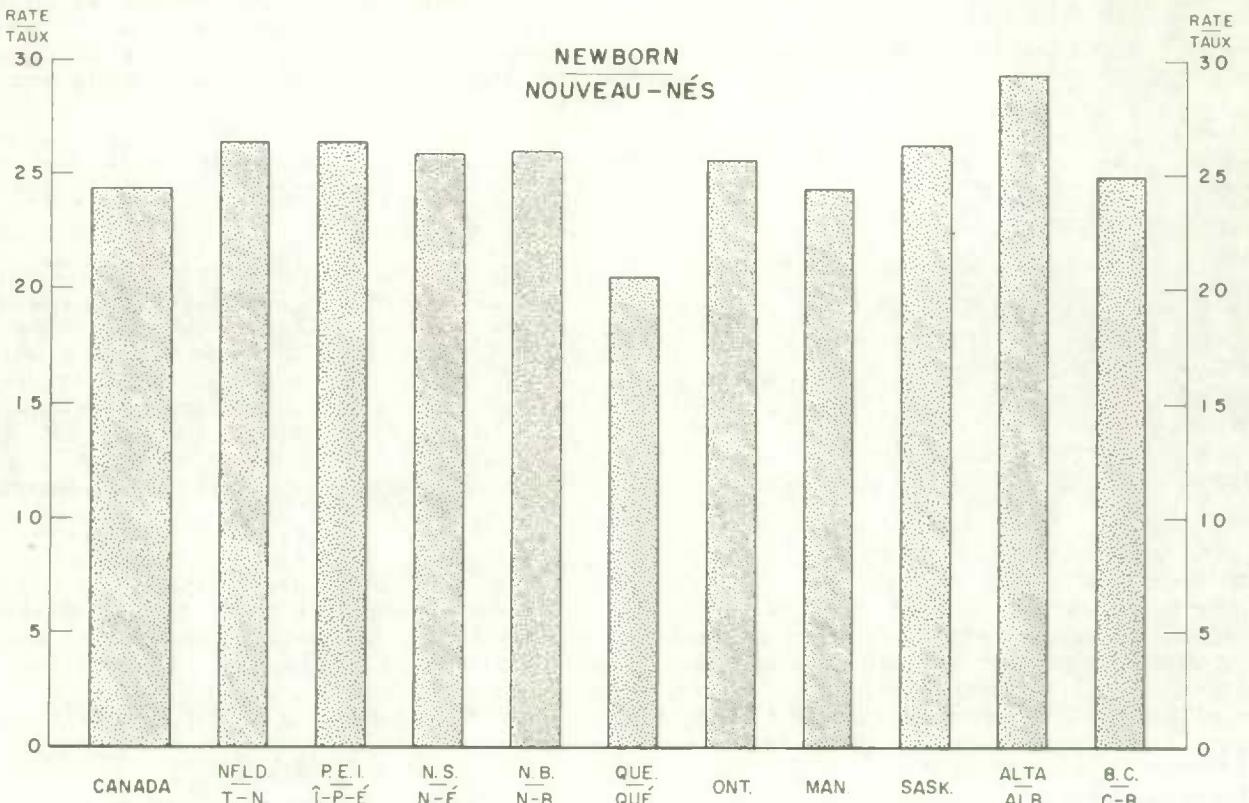

**ADMISSION RATES BY PROVINCE, 1959**  
 (RATE PER 1,000 POPULATION)

**TAUX D'ADMISSION PAR PROVINCE, 1959**  
 (TAUX POUR 1,000 HABITANTS)

**ADULTS AND CHILDREN**  
**ADULTES ET ENFANTS**

**NEWBORN**  
**NOUVEAU-NÉS**

The average daily census\* of in-patients per 10,000 population was 49.3 (45.0) as compared with 47.9 (43.8) in 1958. Corresponding rates in the provinces ranged from 37.8 (34.4) and 41.6 (38.0) in Newfoundland and Nova Scotia to 60.7 (54.8) and 64.7 (59.8) in Alberta and Saskatchewan.

La moyenne quotidienne\* des hospitalisés pour 10,000 habitants s'établissait à 49.3 (45), comparativement à 47.9 (43.8) en 1958. Dans les provinces, les chiffres correspondants variaient de 37.8 (34.4) et de 41.6 (38) à Terre-Neuve et en Nouvelle-Écosse à 60.7 (54.8) et à 64.7 (59.8) en Alberta et en Saskatchewan.

### Length of Stay

The average length of stay for adults and children in general hospitals remained at 9.8 days – unchanged since 1957. Only two of the provinces experienced a decrease – New Brunswick (0.3) days, Quebec (0.4 days), and both the Territories – Yukon (1.1 days), Northwest Territories (4.5 days). Increases in the remaining provinces ranged from 0.1 days in British Columbia to 2.9 days in Newfoundland.

The length of stay for newborn increased by one-tenth of a day – from 6.3 to 6.4 days in the 1958-1959 period. Nova Scotia revealed the shortest length of stay for newborn of 4.9 days, while Newfoundland was 5.1 days. Saskatchewan and Alberta had the longest hospitalization period for newborn of 6.9 and 7.3 days respectively. The median length of stay of all patients (that point where half the patients remained in hospital for a shorter period and half remained in the hospital for a longer term) was 5.4 days. In each province the median length of stay for patients in general hospitals was only about one-half to two-thirds as long as the average – the average being influenced by long-term patients, while the median is not.

### Durée du séjour

La durée moyenne du séjour des adultes et enfants dans les hôpitaux généraux s'est maintenue à 9.8 jours depuis 1957. Deux provinces, seulement, ont accusé une diminution soit le Nouveau-Brunswick (0.3) jour et le Québec (0.4), ainsi que les deux territoires, le Yukon (1.1 jour) et les Territoires du Nord-Ouest (4.5 jours). Les augmentations dans les autres provinces se sont échelonnées de 0.1 jour en Colombie-Britannique à 2.9 jours à Terre-Neuve.

La durée du séjour des nouveau-nés s'est prolongée d'un dixième de jour, soit de 6.3 à 6.4 jours dans la période 1958-1959. La Nouvelle-Écosse a enregistré la plus courte moyenne (4.9 jours), pendant que Terre-Neuve en accusait 5.1. La Saskatchewan et l'Alberta ont compté la plus longue période d'hospitalisation des nouveau-nés (6.9 et 7.3 jours). La durée médiane du séjour de tous les malades (au moment où la moitié des malades demeuraient à l'hôpital pour une plus courte période et la moitié, pour une plus longue période) a été de 5.4 jours. Dans chaque province, la durée médiane du séjour des malades dans les hôpitaux généraux n'a varié que de la moitié aux deux tiers de la moyenne, celle-ci ayant subi l'influence des maladies à long terme contrairement à la médiane.

### Percentage Occupancy

The percentage occupancy in hospitals is an effective measurement of the utilization of beds and services (calculated by dividing patient-days of adults, children and newborn during the year by the product of the number of beds set up beds, cribs and bassinets and the (number of days in the year). Low occupancy is an indication of underuse or over-building while high occupancy is an indication of over-crowding.

The percentage occupancy (excluding bassinets) of all public hospitals was 79.4 (including bassinets – 75.4). A figure of approximately 80 per cent occupancy has been considered in the past to be most desirable in a hospital for efficient operation. Chronic hospitals showed an occupancy rate of 93.3 while maternity hospitals was 42.6

### Pourcentage d'occupation

Le pourcentage d'occupation est une mesure valide de l'utilisation des lits et services. (On le calcule en divisant les jours-malades des adultes, enfants et nouveau-nés durant l'année par le produit du nombre de lits dressés, – lits d'adultes, lits d'enfants et berceaux, – et du nombre de jours durant l'année.) Une faible occupation est un indice de sous-utilisation ou de trop grande expansion, alors qu'une forte occupation est un indice d'encombrement.

Le pourcentage d'occupation (à l'exclusion des berceaux) de tous les hôpitaux publics s'est établi à 79.4 (berceaux compris, 75.4). Dans le passé, environ 80 p. 100 d'occupation étaient considérés comme très souhaitables pour une activité efficace. Les hôpitaux pour maladies chroniques ont signalé un taux d'occupation de 93.3 et les hôpitaux de

\* Figures in brackets exclude newborn.

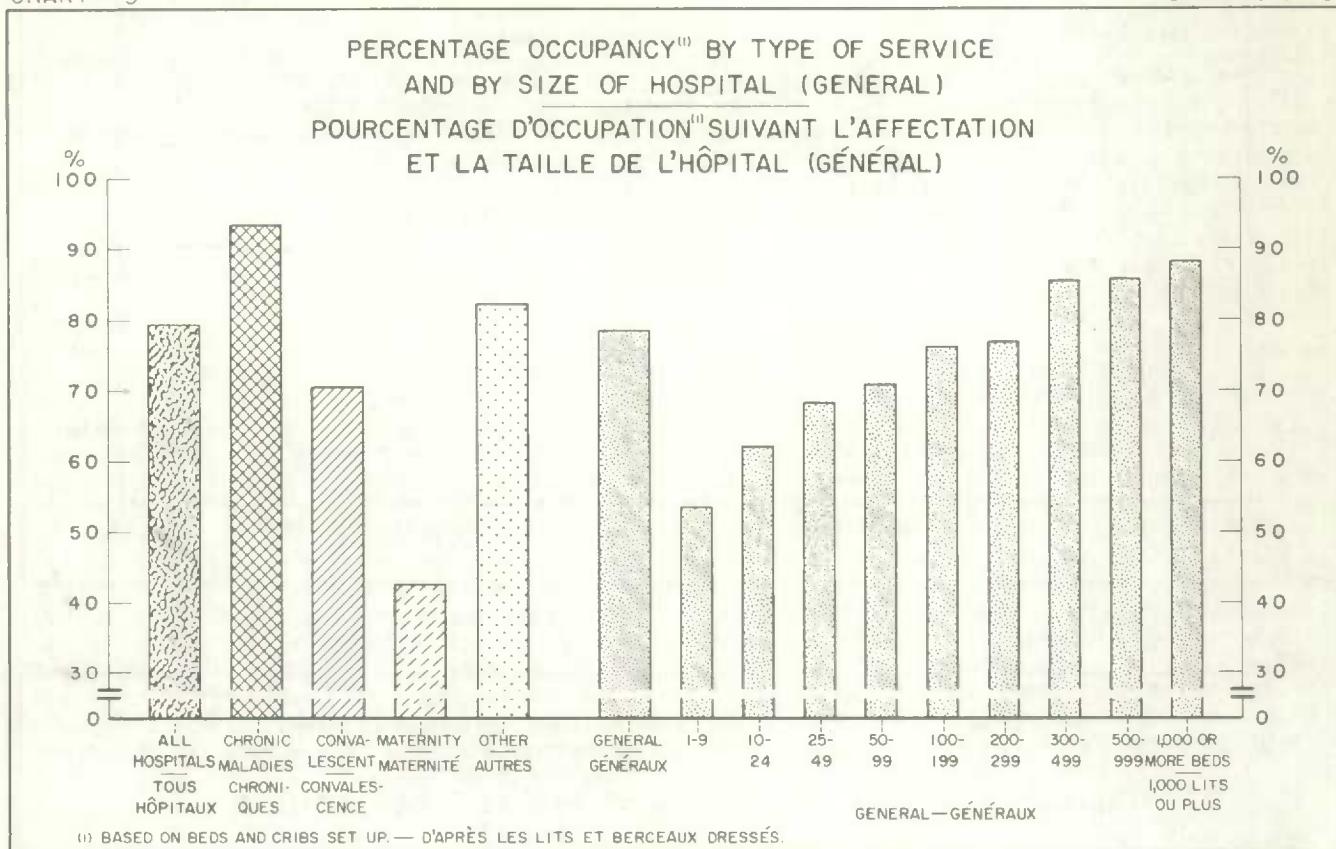

\* Les chiffres entre parenthèse excluent ceux des nouveau-nés.

(including bassinets — 49.5). The percentage occupancy varies directly with hospital (general) size. In 1959 the occupancy rate ranged from 53.4 for the 1-9 bed group to 88.1 for hospitals with 1,000 beds or more (Chart 9). Geographically, Prince Edward Island had the lowest rate at 68.2 per cent (Saskatchewan 76.2) while Ontario was highest at 83.1.

maternité, 42.6 (berceaux compris, 49.5). Le pourcentage d'occupation varie directement avec la taille de l'hôpital (général). En 1959, le taux d'occupation variait de 53.4 pour les hôpitaux de 1-9 lits à 88.1 pour ceux de 1,000 lits et plus (graphique 9). Géographiquement, l'Île-du-Prince-Édouard détenait le plus bas taux (68.2 p. 100), — la Saskatchewan, 76.2, — et l'Ontario, le plus haut (83.1).

CHART — 9

GRAPHIQUE — 9

(ii) BASED ON BEDS AND CRIBS SET UP.— D'APRÈS LES LITS ET BERCEAUX DRESSÉS.

#### Death Rates

Hospital death rates for adults and children and for newborn have dropped appreciably since 1939 (Chart 10). However, the 1959 rate of deaths of adults and children (per 100 separations) was 2.49, a significant increase from 2.39 in 1958, and the highest rate since 1953 (2.55). The newborn death rate in hospitals on the other hand, was recorded at 1.63 — the lowest on record, and 43.2 per cent less than 1939 (2.87). Death rates in the provinces varied very little — the range for adults and children among the provinces being 0.95 per 100 separations. For newborn, it was much less at 0.47. The percentage of deaths among all separations was 2.36 in 1959, compared to 2.30 in 1958 (Chart 11).

#### Taux de mortalité

Dans les hôpitaux, le taux de mortalité des adultes, enfants et nouveau-nés a tombé sensiblement depuis 1939 (graphique 10). Toutefois, la mortalité, pour 100 séparations des adultes et enfants se chiffrait par 2.49 en 1959; c'était là une hausse importante sur 1958 (2.39) et le plus haut taux depuis 1953 (2.55). D'autre part, la mortalité des nouveau-nés dans les hôpitaux s'est établie à 1.63; c'était le plus bas taux jamais enregistré et une baisse de 43.2 au regard de 1939 (2.87). Dans les provinces, la mortalité n'a guère varié, puisque la marge, pour adultes et enfants, n'a été que de 0.95 pour 100 séparations; pour les nouveau-nés, elle a été encore plus réduite (0.47). Quant à l'ensemble des séparations, le pourcentage de mortalité a été de 2.36 en 1959, comparativement à 2.30 en 1958 (graphique 11).

CHART-I

GRAPHIQUE-I

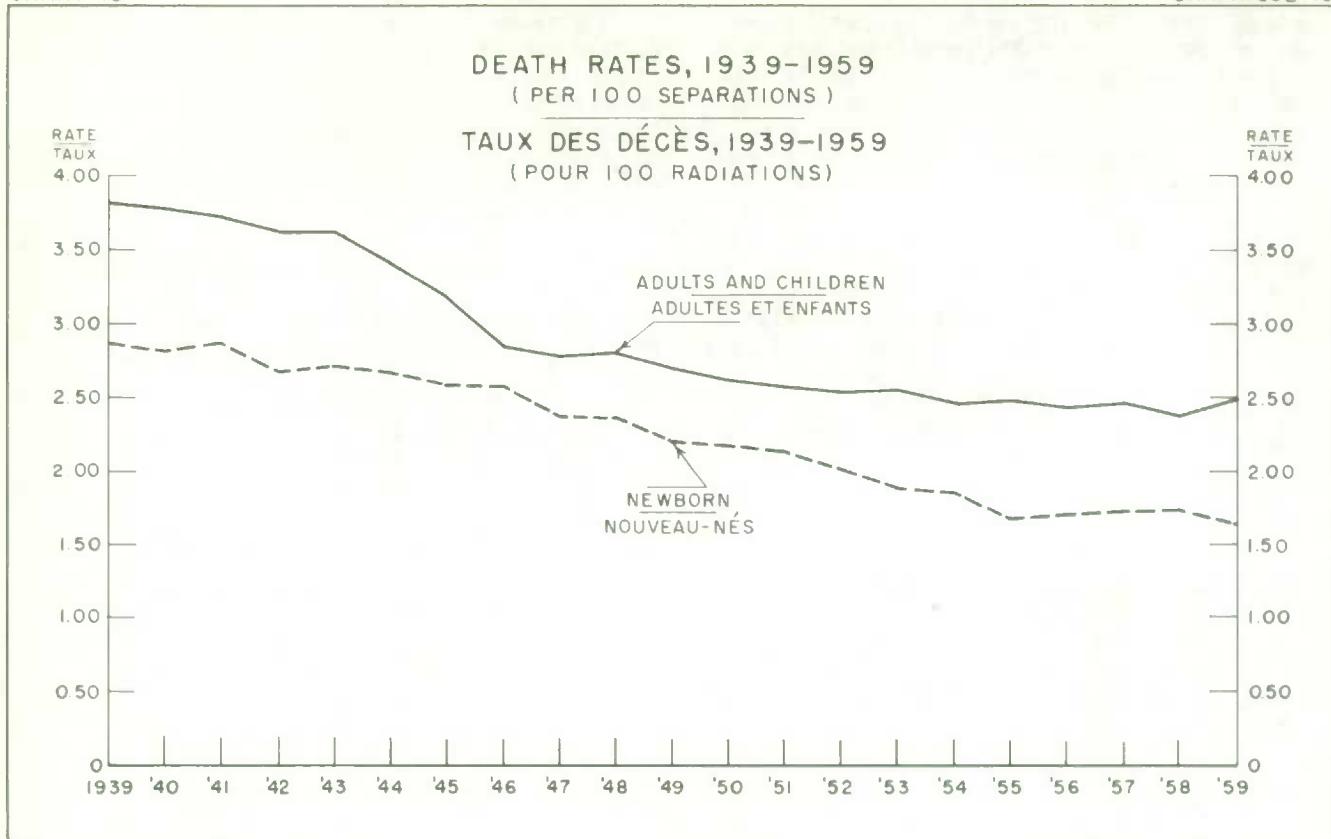

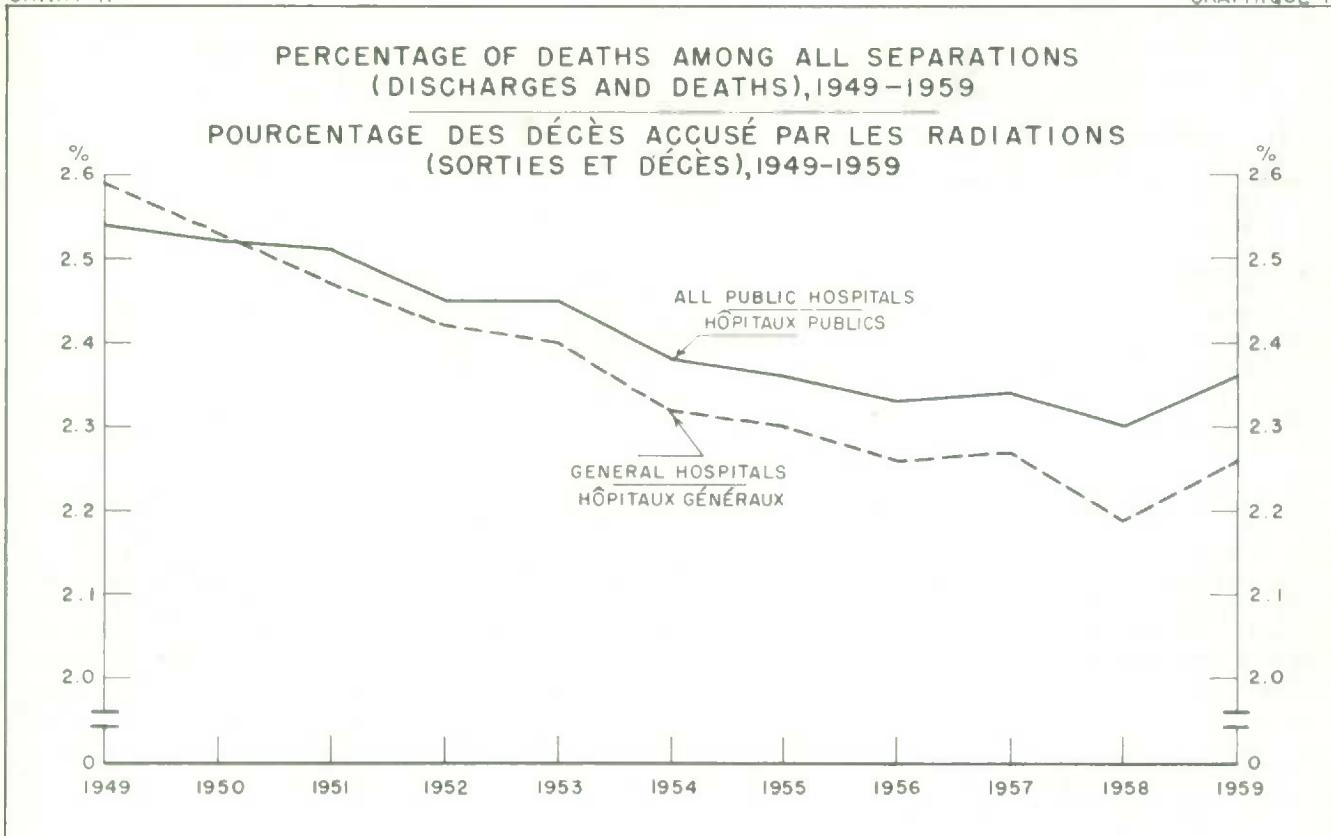

CHART-II

GRAPHIQUE-II

**Type of Accommodation**

The number of patient-days of care for adults and children provided by the hospital have been classified as days spent in private, semi-private, and standard or public wards. The term "preferred accommodation" applies to those days spent in private or semi-private rooms. In 1959, 37.3 per cent of adults and children patient-days in general hospitals was charged to preferred accommodation. This is 7.2 per cent lower than the proportion charged to preferred accommodation in 1958. The proportion of charges to preferred accommodation has varied very little since 1952 when these statistics became available. At that time 37.7 per cent of patient-days of care was allotted to preferred accommodation. When all general and allied special hospitals are considered, preferred accommodation was charged to 35.2 per cent, as opposed to 37.7 for general hospitals only. Observing the amount of preferred accommodation bought in the provinces, Quebec, Ontario, New Brunswick and Prince Edward Island had higher than the national proportion at 55.3, 44.2, 43.3, and 38.2 per cent respectively. The western provinces were much lower — Manitoba (27.3), British Columbia (19.8), Saskatchewan (16.5), Alberta (16.3). Newfoundland, however, had the lowest proportion of all the provinces at 10.7 per cent.

**Genre de logement**

Le nombre de jours de soins procurés aux malades (adultes et enfants) par l'hôpital ont été classés comme jours passés dans des chambres privées ou semi-privées ou dans des salles communes. Le terme "chambre" s'applique aux chambres privées ou semi-privées. En 1959, 37.3 p. 100 des jours-malades d'adultes et enfants dans les hôpitaux généraux se sont passés dans une chambre, soit 7.2 p. 100 de moins qu'en 1958. La proportion des frais de chambre ont peu varié depuis 1952 alors qu'on a commencé de publier ce genre de statistiques. Cette année-là, 37.7 p. 100 des jours de soins aux malades étaient procurés dans les chambres. Si l'on considère tous les hôpitaux généraux et spéciaux divers, les chambres accusent 35.2 p. 100, au regard de 37.7 pour les seuls hôpitaux généraux. Du point de vue provincial, on observe que le Québec, l'Ontario, le Nouveau-Brunswick et l'Île-du-Prince-Édouard ont obtenu un pourcentage supérieur à celui du Canada, soit respectivement 55.3, 44.2, 43.3 et 38.2. Les provinces de l'Ouest ont accusé un pourcentage beaucoup plus bas, soit 27.3 pour le Manitoba, 19.8 pour la Colombie-Britannique, 16.5 pour la Saskatchewan et 16.3 pour l'Alberta. Néanmoins, Terre-Neuve a obtenu le plus bas de tous (10.7).

## PRIVATE HOSPITALS

There were 331 private hospitals operating in Canada in 1959 — 37 more than in 1958, or an increase of 11.8 per cent. Almost half (47.7 per cent) of the private hospitals are located in Quebec. Of the 331 private hospitals, 232 or 70.1 per cent furnished statistical information to the Dominion Bureau of Statistics. Some 60.6 per cent of the delinquent hospitals were in Quebec, while 30.3 per cent were in Ontario.

While most public hospitals are general hospitals, most private hospitals were classified as chronic (56.5 per cent) — providing care to chronic or convalescent patients.

The percentage occupancy in private hospitals in 1959 was 80.9 per cent — up from 80.5 in 1958 and 74.8 in 1957. The occupancy rates were highest in Ontario (85.9) and British Columbia (83.2). The percentage occupancy of private hospitals reporting in Quebec was 76.1 per cent.

## HÔPITAUX PRIVÉS

En 1959, le Canada comptait 331 hôpitaux privés en activité, soit 37 de plus qu'en 1958 ou 11.8 p. 100 de plus. Environ la moitié (47.7 p. 100) des hôpitaux privés se situent au Québec. Des 331 hôpitaux privés, 232 (70.1 p. 100) ont rapporté des renseignements statistiques au Bureau fédéral de la statistique. Environ 60.6 p. 100 de ceux qui s'en sont abstenus étaient du Québec et 30.3, de l'Ontario.

Alors que la plupart des hôpitaux publics sont des hôpitaux généraux, la plupart des hôpitaux privés sont affectés aux maladies chroniques (56.5 p. 100) c.-à-d., maladies chroniques ou convalescence.

Le pourcentage d'occupation dans les hôpitaux privés était de 80.9 p. 100 en 1959, en comparaison de 80.5 en 1958 et de 74.8 en 1957. C'est en Ontario et en Colombie-Britannique que les taux d'occupation ont été les plus élevés (85.9 et 83.2). Le pourcentage d'occupation des hôpitaux privés répondants du Québec s'est établi à 76.1 p. 100.

## FEDERAL HOSPITALS

The number of federal hospitals in operation in Canada in 1959 remained unchanged from 1958 at 47.

Hospitals according to the British North America Act are, along with all health matters, the responsibility of the provincial government. However the health care of certain groups of the population is under the jurisdiction of the federal government. Three federal departments operate hospitals — Department of National Defence for members of the armed forces; Department of National Health and Welfare — for Indians, Eskimos, sick mariners and immigrants, and the Department of Veteran's Affairs for veterans.

Medicine and surgery accounted for 60.7 per cent of the 9,803 beds and cribs compared with 53.3 per cent in 1958. The proportion of long-term, psychiatric, and tuberculosis beds dropped to 11.1, 5.9 and 6.3 per cent from 20.2, 13.9 and 11.9 per cent respectively, in 1958.

Admissions to federal hospitals rose to 80,451 in 1959 — an increase of 3.6 per cent. Deaths on the other hand decreased by 6.9 per cent from a year earlier to 2,637. The average number of patients in federal hospitals was 7,109.7, down 25.9 per cent from 1958.

## HÔPITAUX FÉDÉRAUX

Le Canada, en 1959, comptait 47 hôpitaux fédéraux en activité, le même nombre qu'en 1958.

Suivant l'Acte de l'Amérique du Nord britannique, les hôpitaux et le domaine de la santé relèvent des provinces. Toutefois, les soins de santé à certains groupes de la population tombent sous la juridiction fédérale. Trois ministères fédéraux dirigent des hôpitaux, soit le ministère de la Santé nationale et le Bien-être social pour les Indiens, les Esquimaux, les soldats et immigrants malades, le ministère de la Défense nationale pour les membres des forces armées, et le ministère des Affaires des anciens combattants.

La médecine et la chirurgie ont obtenu 60.7 p. 100 des 9,803 lits et berceaux, comparativement à 53.3 p. 100 en 1958. La proportion de lits pour maladies à long terme, tuberculose et psychiatrie a tombé respectivement à 11.1, 5.9 et 6.3 p. 100, au regard de 20.2, 13.9 et 11.9 en 1958.

Les admissions dans les hôpitaux fédéraux se sont élevées à 80,451 en 1959, augmentation de 3.6 p. 100. D'autre part, les décès ont augmenté de 6.9 p. 100 sur un an plus tôt pour atteindre 2,637. La moyenne des malades dans les hôpitaux fédéraux s'est chiffrée par 7,109.7, diminution de 25.9 p. 100 sur 1958.

PART II — TABLES

—  
PARTIE II — TABLEAUX

### **SYMBOLS**

The interpretation of the symbols used in the tables throughout this publication is as follows:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- \* revised figures.

### **POPULATION**

Population figures are taken from Population Estimates (Age and Sex) 1921-1952, Dominion Bureau of Statistics, Reference Paper No. 40, and Supplements thereto.

### **SIGNES CONVENTIONNELS**

Voici le sens des signes conventionnels utilisés dans les tableaux de la présente publication:

- .. inconnu.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- infime.
- \* rectifié.

### **POPULATION**

Les données sur la population sont tirées des Estimations de la population(âge et sexe), 1921-1952, Bureau fédéral de la statistique, Document de référence n° 40 et Suppléments.

<sup>1</sup> In many cases, information is not available for the Yukon separately from the Northwest Territories prior to 1955. Throughout this table, where the symbol "..." appears instead of figures for the Yukon, the data shown for the Northwest Territories include information for the Yukon. — Souvent, pour les années précédant 1955, on ne dispose pas d'une statistique du Yukon distincte de celle des Territoires du Nord-Ouest; le signe conventionnel "..." remplace alors les chiffres dans le présent tableau.

## PUBLIC HOSPITALS

TABLE 13. Historical Summary, Hospitals Reporting by Province, 1932, 1939-1959

TABLEAU 13. Sommaire chronologique des hôpitaux répondants, par province, 1932, 1939-1959

Note: 1933-1938 figures will be found at p. 13, Hospital Statistics, Vol. I, 1954. — Nota: Voir à la page 13 de La Statistique des Hôpitaux, vol. 1, 1954, les données pour 1933-1938.

<sup>1</sup> In many cases, information is not available for the Yukon separately from the Northwest Territories prior to 1955. Throughout this table, where the symbol "..." appears instead of figures for the Yukon, the data shown for the Northwest Territories include information for the Yukon. — Souvent, pour les années précédant 1955, on ne dispose pas d'une statistique du Yukon distincte de celle des Territoires du Nord-Ouest; le signe conventionnel "..." remplace alors les chiffres dans le présent tableau.

<sup>1</sup> This figure does not agree with data reported on Tables 38 and 39 since one hospital reported all days of patient care as free. — Ce chiffre ne concorde pas avec ceux des tableaux 38 et 39 parce qu'un hôpital a déclaré tous les jour-nées d'hospitalisation comme étant gratuits.

**TABLE 39. Patient-days of Adults and Children During Year, by Responsibility for Payment, by Type of Service (General and Allied Special Hospitals) and by Hospital Size (General Hospitals) — Concluded**

**TABLEAU 39. Jours-malades des adultes et enfants durant l'année, selon la responsabilité du paiement et suivant l'affectation (hôpitaux généraux et spéciaux divers) et la taille (hôpitaux généraux) de l'hôpital — fin**
