PREFACE

Hospital statistics in Canada are published in a series of eight annual reports, each of which is concerned with a specific topic. These statistics are provided so that the reader may assess the facilities and services available, the labour force involved and the financial situation in the Canadian hospitals.

Statistics on hospitals have been collected by the Dominion Bureau of Statistics since 1931 and have been published since then in varying degrees of detail. Until 1951, one volume contained the entire hospital statistical data. From 1952 to 1958 there were two, 1959-1960 there were six, and since 1961, eight volumes have been required to portray data of the hospital scene. These volumes are as follows:

| | |
|-------------------------------|---------------------------|
| Vol. I—Hospital Beds | |
| Vol. II—Hospital Services | |
| Vol. III—Hospital Personnel | |
| Vol. IV—Balance Sheets | |
| Vol. V—Hospital Revenues | |
| Vol. VI—Hospital Expenditures | |
| Vol. VII—Hospital Indicators | |
| | Preliminary Annual Report |

The Dominion Bureau of Statistics is indebted to the individual hospitals across the nation which have prepared their data for inclusion in a national statistical program; to the provincial hospital plan authorities for the collection of the data; to the provincial hospital associations and the Canadian Hospital Association for their promotion of uniform accounting and recording.

The report was prepared in the Institutions Section of the Health and Welfare Division of the Dominion Bureau of Statistics. Any inquiries with respect to data contained in this report or to unpublished data should be forwarded to this Section.

WALTER E. DUFFETT,
Dominion Statistician.

PRÉFACE

La statistique des hôpitaux du Canada est publiée dans une série de huit rapports annuels dont chacun traite d'un sujet déterminé. Ces publications permettront au lecteur d'apprécier les installations et services disponibles, la main-d'œuvre employée et la situation financière des hôpitaux canadiens.

Depuis 1931, le Bureau fédéral de la statistique recueille la statistique sur les hôpitaux et la présente en publications plus ou moins détaillées. Jusqu'en 1951, toutes les données statistiques afférentes aux hôpitaux tenaient en un seul volume. De 1952 à 1958, il est paru deux volumes, en 1959-1960 six, et depuis 1961, huit volumes sont nécessaires pour tracer un tableau complet de l'activité hospitalière.

En voici les titres:

| Catalogue No. | — |
|-------------------------------|--------|
| N° de catalogue | |
| — Lits hospitaliers | 83-210 |
| — Services hospitaliers | 83-211 |
| — Personnel hospitalier | 83-212 |
| — Bilans hospitaliers | 83-213 |
| — Revenus hospitaliers | 83-214 |
| — Dépenses hospitalières | 83-215 |
| — Indicateurs hospitaliers | 83-216 |
| — Rapport annuel préliminaire | 83-217 |

Le Bureau fédéral de la statistique doit sa reconnaissance aux hôpitaux du pays qui ont préparé les données en vue de leur incorporation au programme national de statistique; aux administrateurs provinciaux de l'assurance-hospitalisation pour la collecte des données; aux associations hospitalières provinciales et à l'Association canadienne des hôpitaux pour leurs efforts en faveur de l'uniformité dans la comptabilité et la tenue des registres.

La Section des institutions (Division de la santé et du bien-être) du Bureau fédéral de la statistique a rédigé le présent rapport. On doit adresser à cette section les demandes de renseignements à l'égard des données contenues dans le présent rapport ou de données inédites.

WALTER E. DUFFETT,
Statisticien du Dominion.

HOSPITAL CLASSIFICATION CHART⁽¹⁾
GRAPHIQUE DE LA CLASSIFICATION DES HÔPITAUX⁽¹⁾

⁽¹⁾ 1963 DATA FOR OPERATING HOSPITALS - LES DONNÉES DE 1963 DES HÔPITAUX EN ACTIVITÉ

GLOSSARY

TERMINOLOGIE

Hospital

An institution which is operated for the medical, surgical and/or obstetrical care of inpatients, and which is licensed or approved as a hospital by the federal and/or a provincial government, or by a municipality duly authorized under the laws of the province. Specifically excluded are institutions primarily for tuberculosis, mental disease and mental defect.

Public Hospital

Recognized by the province as a "public hospital", which is not operated for profit and accepts all patients regardless of ability to pay.

Private Hospital

Recognized by the province as a "private hospital", which generally restricts its admissions to patients paying for the care provided at rates determined by the management.

Federal Hospital

Applies to a hospital owned and operated by the Government of Canada; operation will usually be by the Department of National Health and Welfare, the Department of National Defence, or the Department of Veterans Affairs.

General Hospital

A hospital which provides for the treatment and care of all types of diseases or at least a wide range of conditions.

Chronic, Convalescent, Rehabilitation Hospitals

Hospitals which primarily provide for the treatment of conditions requiring long-term care or for treatment of patients who are considered to be in the recovery stage of an illness, especially where this is a long-term process, and for those patients who are being rehabilitated.

Maternity Hospital

A hospital which primarily provides for the treatment and care of obstetrical patients and newborn infants.

Other Hospital

A hospital which primarily provides for the treatment of a particular type of disease, condition or case; example, geriatric, communicable disease, orthopaedic, neurological, and cancer; or a hospital which provides a combination of various types of service which cannot be classified into chronic, convalescent, rehabilitation or maternity.

Allied Special Hospitals

Includes chronic, convalescent, rehabilitation, maternity and "other" hospitals.

Hôpital

Institution s'occupant des soins médicaux, chirurgicaux ou obstétriques des hospitalisés et détenant un permis ou une approbation du gouvernement fédéral ou provincial ou d'une municipalité autorisée à le faire par les lois de la province. Sont exclues, les institutions destinées avant tout à la tuberculose, aux maladies mentales et à la déficience mentale.

Hôpital public

Hôpital reconnu comme tel par la province et établi dans un but non lucratif; il accepte tous les malades sans égard à leur capacité de payer.

Hôpital privé

Hôpital reconnu comme tel par la province et réservant d'ordinaire l'admission des malades à ceux qui paient pour les soins fournis suivant les taux déterminés par la direction.

Hôpital fédéral

Hôpital que possède et dirige le gouvernement du Canada; d'ordinaire, l'administration relève du ministère de la Santé nationale et du Bien-être social, du ministère de la Défense nationale ou du ministère des Anciens combattants.

Hôpital général

Hôpital qui fournit traitement et soin pour toutes sortes de maladies ou, au moins, pour un grand nombre d'états pathologiques.

Établissements de maladies chroniques, de convalescence et de réadaptation

Hôpitaux qui traitent, avant tout des états nécessitant des soins de longue durée ou des malades qui relèvent d'une maladie, surtout de longue durée, ou qui ont besoin de réadaptation.

Maternité

Hôpital destiné avant tout aux soins obstétriques ainsi qu'à ceux des nouveau-nés.

Hôpitaux divers

Hôpitaux destinés surtout au traitement d'états pathologiques particuliers ou de cas particuliers de maladie, comme gériatrie, maladie contagieuse, orthopédie, neurologie et cancer; c'est encore un hôpital qui a plusieurs affectations diverses ne pouvant être classés à maladies chroniques, convalescence, réadaptation ou maternité.

Hôpitaux spéciaux divers

Ces hôpitaux comprennent les établissements de maladies chroniques, de convalescence, de réadaptation, les maternités et les hôpitaux divers.

Size of Hospital

The size of a hospital in this report is determined by the rated bed capacity on December 31 of the reporting year.

In-patients

Patients who are duly admitted to the hospital and to whom a bed or bassinet has been allocated. This category excludes stillbirths as well as patients attending a day or night centre attached to the hospital).

Adults and Children.—All in-patients except newborn.

Newborn.—An infant in-patient born alive in the hospital, or postnatal newborn admitted with mother for maternal care.

Admission.—The formal acceptance and reception of a person as an in-patient (including newborn).

Discharge.—The official release by the hospital of a live in-patient.

Death.—The cessation of life of an in-patient after admission and before discharge (excludes stillbirths).

Separation.—The discharge or death of an in-patient.

Patient-day.—The period of service to an in-patient between the census-taking hours on two successive days; the day of admission is counted as a patient-day but the day of separation is not.

Out-patients

Patients who receive services of the hospital in attendance at the hospital, under the direction of the professional personnel of the hospital, but who are not admitted as in-patients. This category includes patients attending a day or night centre.

Laboratory Standard Unit

A measure of the workload of the laboratory—basically ten minutes of time, comprising seven minutes for technical procedures and three for other preparatory services (e.g., stenographic, glass washing, etc.).

Radiology

Examination.—The procedure involving one completed film or series of films, or one or more exposures for fluoroscopy, directed at one anatomical site or region of the body during one attendance of the patient at the X-ray department.

Fluoroscopy.—Examination by means of a fluoroscope.

Standard Films.—Films taken on standard X-ray equipment.

Miniature Films.—Fluorographic (photo fluoroscopic) films.

Taille de l'hôpital

Dans le présent rapport, la capacité théorique en lits, au 31 décembre de l'année de rapport, détermine l'importance d'un hôpital.

Hospitalisés

Malades dûment admis à l'hôpital et auxquels on y a réservé lits ou berceaux. N'entrent pas dans cette catégorie, les mort-nés, ni les malades qui visitent un centre (la nuit ou le jour) de l'hôpital.

Adultes et enfants.—Tous les hospitalisés, sauf les nouveau-nés.

Nouveau-né.—Bébé né vivant à l'hôpital, ou nouveau-nés admis après la naissance avec sa mère pour soins maternels.

Admission.—Acceptation formelle et réception d'une personne comme hospitalisée (y compris les bébés nés vivants à l'hôpital).

Sortie.—Congé officiel accordé à un hospitalisé vivant par l'hôpital.

Décès.—Cessation de la vie chez un hospitalisé après l'admission et avant sa sortie (exclure les mortinassances).

Départ.—Sortie ou décès d'un hospitalisé.

Journée d'hospitalisation.—Période de soins à un hospitalisé entre les heures de vérification du rôle de deux jours successifs; le jour d'admission compte comme une journée d'hospitalisation, mais non le jour de départ.

Malades externes

Malades qui, sous la direction d'un personnel professionnel, reçoivent des soins dans un hôpital où ils se présentent sans y être hospitalisés. Cette catégorie comprend les malades qui se rendent à un service de nuit ou de jour.

Unité normalisée de laboratoire

Mesure du travail fait en laboratoire; la base est dix minutes, dont sept pour la technique et trois pour le travail préparatoire (ex.: sténographie, lavage des lamelles, etc.).

Radiologie

Examen.—Procédé comportant un film ou une série de films complétés, ou une ou plusieurs expositions à la fluoroscopie, relatifs à un siège anatomique du malade durant une présence au service de radiologie.

Fluoroscopie.—Examen au fluoroscope.

Film ordinaire.—Film pris par appareil ordinaire de rayon-X.

Film petit format.—Film fluorographique (photo-fluoroscopique).

Surgical

Operation.—Any major or minor surgical or other operative procedures performed on one or more anatomical sites or regions of a patient, or cystoscopy procedures carried out, or fractures set, during one attendance in an operating room or emergency unit of the hospital.

Obstetrical

Delivery.—A patient delivered of a single live birth or stillbirth, or multiple live births or stillbirths, or a combination of these, resulting from one pregnancy.

Live Births.—Infants (including immatures) born alive in the hospital during the year or as defined in the legislation governing the vital statistics of the province for the year.

Stillbirths.—Foetal deaths of 28 or more weeks' gestation or as defined in the legislation governing the vital statistics of the province for the year.

Immature Births.—Infants born alive in the hospital during the year and who weighed five and one-half ($5\frac{1}{2}$) lbs. (2500 grams) or less at birth.

Neonatal Deaths.—Deaths of newborn (mature and immature) under 28 days of age.

Organized Out-patient Department

A unit set up, equipped and staffed as a separate department of the hospital, under appropriate administrative direction, to receive and to provide care for patients who are not admitted as in-patients to the hospital.

Emergency Unit

A unit set up to provide emergency care to persons suffering from injury, shock, or other acute conditions requiring emergency treatment.

Chirurgie

Opération.—Toute intervention chirurgicale, grave ou légère, pratiquée sur un ou plusieurs sièges anatomiques d'un malade, ou tout examen à l'endoscope ou toute réduction de fractures au cours d'une présence dans une salle d'opération ou une salle d'urgence de l'hôpital.

Obstétrique

Accouchement.—Délivrance d'une grossesse donnant naissance à un ou plusieurs enfants, vivants ou morts, ou comportant une combinaison de ces cas.

Naissance vivante.—Naissance de bébé vivant (prématuré ou non) à l'hôpital durant l'année, ou telle que définie par la législation provinciale régissant la statistique de l'état civil pour l'année courante.

Mortinaissance.—Expulsion d'un fœtus mort après 28 semaines de gestation ou plus, ou telle que définie par la législation provinciale régissant la statistique de l'état civil pour l'année courante.

Naissance prématurée.—Naissance de bébé vivant à l'hôpital durant l'année qui pesait cinq livres et demie ($5\frac{1}{2}$ livres—2,500 grammes) ou moins à la naissance.

Mortalité néonatale.—Décès de bébés (à terme ou prématurés) en moins de 28 jours depuis leur naissance.

Service des malades externes (organisé)

Service établi, équipé et doté d'un personnel, à titre de service distinct de l'hôpital et sous une administration appropriée, aux fins de recevoir des malades non hospitalisés et de leur procurer des soins.

Service d'urgence

Service établi pour donner des soins aux personnes souffrant de blessures de choc ou d'autres états aigus nécessitant un traitement urgent.

SYMBOLS

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications du Bureau fédéral de la statistique.

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.

INTRODUCTION

"Hospital Services" provides a summary of the volume and type of work carried out for patients by the special service departments of Canadian general and allied special hospitals. This includes such departments as laboratory, radiology, surgery, obstetrics and the many clinical services (arthritic, cancer, dental, mental health, etc.). Data for the Volume were taken from the "Annual Return of Hospitals - Part I", which were completed by public, private and federal hospitals and received at the Dominion Bureau of Statistics through the provincial authorities.

PUBLIC GENERAL AND ALLIED SPECIAL HOSPITAL

Laboratory

In 1963, some 706 Canadian public general and allied special hospitals reported 89.2 million units of laboratory work done in their own laboratories. Of this amount, between 84 and 85 per cent were done for in-patients, a decrease from the comparable 1962 percentage of just over 89 per cent. Laboratory units referred in to the hospitals accounted for 5.3 per cent of the work done, compared with 4.9 per cent in 1962. The proportion of work referred in varied significantly according to the size of hospital, rising from 0.4 per cent in 25-49 bed general hospitals to 9.5 per cent in hospitals with 1,000 or more beds (see Table 2).

In 1963, laboratory units of work done (including work referred out) per patient-day amounted to 3.5. In general hospitals the ratio was slightly higher, amounting to 3.9, and ranging from 1.1 in 1-9 bed hospitals to 5.5 in the 1,000 or more bed institutions. Laboratory units for in-patients only per patient-day were 3.0, and in general hospitals amounted to 3.3. As shown in Chart 1 the values for this ratio varied between 0.8 and 4.4, according to hospital size.

In general hospitals, 31.4 per cent of the units done in laboratory for in-patients were classified as biochemistry, 22.6 per cent were haematology, 13.3 per cent bacteriology, 10.9 per cent autopsy, surgical pathology and cytology, and 9.3 per cent blood bank. In comparison with the 1962 distribution, the most significant changes were decreases of 2 percentage points in the proportion of haematology units and 0.7 points in autopsy, surgical pathology and cytology.

The type of procedures referred out of the hospital differed significantly from those done in the hospital (Chart 2). Bacteriology accounted for the largest proportion with 31.4 per cent, followed by biochemistry at 23.8 per cent, autopsy, surgical pathology and cytology 21.0 per cent, haematology 10.5 per cent and blood bank 7.3 per cent. The latter was down 3.1 points from 1962, while biochemistry increased some 2.2 points. Other changes involved declines of 0.9 points in bacteriology and 0.5 points in haematology as well as a gain of 1 point in autopsy, surgical pathology and cytology.

Le rapport "Services hospitaliers" expose sommairement le volume et la nature du travail exécuté pour les malades dans les services spéciaux des hôpitaux généraux et spéciaux divers du Canada. Les services comprennent les suivants: laboratoire, radiologie, chirurgie, obstétrique et plusieurs services cliniques (arthrite, cancer, hygiène dentaire, mentale etc.). Les données du présent volume sont tirées du rapport annuel (Partie I) que les hôpitaux privés et fédéraux publics rédigent et envoient au Bureau fédéral de la statistique par l'intermédiaire des autorités provinciales.

HÔPITAUX GÉNÉRAUX ET SPÉCIAUX DIVERS PUBLIC

Laboratoire

En 1963, quelque 706 hôpitaux publics généraux et spéciaux divers du Canada ont déclaré 89,200,000 unités de travail effectuées dans leurs laboratoires, dont 84 à 85 p. 100 pour les hospitalisés, diminution sur le pourcentage (89 p. 100) correspondant de 1962. Les unités de laboratoire confiées d'ailleurs à l'hôpital ont répondu pour 5.3 p. 100 du travail effectué, au regard de 4.9 p. 100 en 1962. La proportion de travail confié d'ailleurs a varié sensiblement selon la taille de l'hôpital, s'élevant de 0.4 p. 100 dans les établissements de 25-49 lits à 9.5 p. 100 dans ceux de 1,000 lits ou plus (voir tableau 2).

En 1963, 3.5 unités de laboratoire (y compris le travail confié ailleurs) ont été effectuées par journée d'hospitalisation. Le quotient était légèrement supérieur dans les hôpitaux généraux (3.9) et variait entre 1.1 dans les hôpitaux de 1-9 lits à 5.5 dans ceux de 1,000 lits ou plus. Le nombre d'unités de laboratoire relatives aux hospitalisés seulement par journée d'hospitalisation était de 3.0 et dans les hôpitaux généraux, de 3.3. Comme l'indique le graphique 1, les valeurs de cette proportion ont oscillé selon la taille de l'hôpital, entre 0.8 et 4.4.

Voici la répartition des unités effectuées pour des hospitalisés dans les laboratoires des hôpitaux généraux: biochimie, 31.4 p. 100; hématologie, 22.6 p. 100; bactériologie, 13.3 p. 100; autopsie, pathologie chirurgicale et cytologie, 10.9 p. 100; et banque de sang, 9.3 p. 100. En comparaison avec la répartition de 1962, les changements les plus marqués ont été des reculs de 2 p. 100 dans la proportion des unités d'hématologie et de 0.7 p. 100 en unités d'autopsie, de pathologie chirurgicale et de cytologie.

La répartition, suivant le genre, des examens confiés en dehors de l'hôpital différait beaucoup de celle des examens faits à l'hôpital même (graphique 2). Ils relevaient de la bactériologie surtout (31.4 p. 100), puis de la biochimie (23.8), de l'autopsie, pathologie chirurgicale et cytologie (21), de l'hématologie (10.5) et de la banque de sang (7.3). Cette dernière catégorie a baissé de 3.1 points sur 1962, tandis que la biochimie a augmenté de 2.2 points. Les autres changements ont été les reculs de 0.9 point en bactériologie et 0.5 point en hématologie, et le gain d'un point en autopsie, pathologie chirurgicale et cytologie.

 SUIVANT LA NATURE DU TRAVAIL, 1963

Radiology

In 1963, some 847 public general and allied special hospitals reported 6.2 million radiology examinations for in-patients and out-patients. In-patients accounted for 58.4 per cent of the total, compared with 59.5 per cent in 1962. The proportion of examinations for in-patients in general hospitals was 58.3 per cent (59.3 per cent) and varied by type (routine chest 72.6 per cent, fluoroscopic 71.5 per cent, other radiographic 53.4 per cent) as well as bed-size of hospital (Chart 3). In the case of routine chest X-rays, the proportion for in-patients ranged from 58.3 in the 1-9 bed group to 82.1 in the 300-499 bed hospitals. Fluoroscopic exams for in-patients were lowest in the 25-49 bed classification (48.2 per cent) and highest in the 1,000 and over bed hospitals (80.3 per cent). In-patient other radiographic examinations rose from 35.8 per cent in the smallest bed grouping to 59.8 per cent in the largest.

In-patient radiology examinations per 100 adult and child admissions in general hospitals comprised 88.5 other radiographic, 32.3 routine chest and 17.7 fluoroscopic. Comparable 1962 ratio values were 83.8, 32.7 and 16.1, respectively. On the whole, there were more other radiographic and fluoroscopic exams carried out per admission as the size of hospital became larger (Chart 4), while the incidence of routine chest X-rays did not vary too widely from the general average.

Radiologie

En 1963, quelque 847 hôpitaux généraux et spéciaux divers publics ont déclaré 6,200,000 examens radiologiques d'hospitalisés et de malades externes. Les examens d'hospitalisés ont compté pour 58.4 p. 100 du total comparativement à 59.5 en 1962. La proportion d'examens des malades hospitalisés dans les hôpitaux généraux était de 58.3 p. 100 (59.3 en 1962) et a varié selon le genre (radiographies pulmonaires courantes 72.6 p. 100, examens fluoroscopiques 71.5, autres radiographies 53.4) autant que selon la taille des hôpitaux (graphique 3). La proportion de radiographies pulmonaires courantes d'hospitalisés a varié entre 58.3 dans les hôpitaux de 1-9 lits et 82.1 dans ceux de 300-499. Il y a eu le moins d'examens fluoroscopiques d'hospitalisés dans la catégorie 25-49 lits (48.2 p. 100) et le plus dans les hôpitaux de 1,000 lits ou plus (80.3). Le pourcentage des "autres" radiographies d'hospitalisés s'est échelonné de 35.8 dans le groupe d'hôpitaux qui avaient le moins de lits à 59.8 dans ceux qui en avaient le plus.

Les examens radiologiques d'hospitalisés pour 100 admissions d'adultes et d'enfants dans les hôpitaux généraux comprenaient 88.5 "autres" radiographies, 32.3 radiographies pulmonaires courantes et 17.7 examens fluoroscopiques. Les valeurs correspondantes de ces proportions en 1962 étaient respectivement 83.8, 32.7 et 16.1. Dans l'ensemble, les "autres" radiographies et examens fluoroscopiques par admission augmentaient avec la taille de l'hôpital (graphique 4), tandis que l'incidence de radiographies pulmonaires courantes ne présentait pas beaucoup d'écart au regard de la moyenne générale.

CHART-3

GRAPHIQUE-3

The radiology examinations conducted in 1963 gave rise to 14.9 million films taken. Of this number, 60.1 per cent were for in-patients (60.3 in 1962). In general hospitals, the proportion of films for in-patients was 59.9 per cent (60.2) ranging from 46.3 in 1-9 bed hospitals to 65.4 in 1,000 or more bed institutions. Moreover, the percentage of in-patient films varied by type, amounting to 59.5 per cent of standard films (other radiographic and routine chest exams) and 75.5 percent of miniature films (fluoroscopic exams). Standard films accounted for 96.2 per cent of all films taken in general hospitals (95.6 in 1962). Other radiographic examinations, which represented 74.1 per cent of the radiology examinations accounted for 93.0 per cent of the total films (Chart 5). At the same time, the 15.8 per cent of exams classified as routine chest X-rays resulted in only 3.2 per cent of total films, and the 10.1 per cent fluoroscopic exams required just 3.8 per cent of the film used.

Standard films per in-patient radiographic examination in general hospitals increased to 3.5 from 3.1 in the year previous. The range by bed-size of hospital was from 1.5 in the 1-9 bed group to 3.8 in 1,000 or more bed hospitals (Chart 6).

Of the 14.1 million films interpreted in reporting hospitals, 97.3 per cent were done by the hospital's radiologist (97.4 per cent in 1962). Films referred in represented 0.7 per cent of the total and 85.1 per cent of these were interpreted by the hospital radiologist (89.5 per cent in 1962).

Pour les examens radiologiques, il a été pris en 1963, 14,900,000 films dont 60.1 p. 100 pour les hospitalisés (60.3 en 1962). Dans les hôpitaux généraux, la proportion de films pour les hospitalisés était de 59.9 p. 100 (60.2), variant de 46.3 dans les hôpitaux de 1-9 lits à 65.4 dans ceux de 1,000 lits et plus. Par ailleurs, 59.5 p. 100 des films pris étaient des films ordinaires ("autres" radiographies et radiographies pulmonaires courantes) et 75.5 p. 100 des films de petit format (examens fluoroscopiques). Les films ordinaires ont répondu pour 96.2 p. 100 de tous les films pris dans les hôpitaux généraux (95.6 en 1962). Les "autres" radiographies, qui formaient 74.1 p. 100 de tous les examens radiologiques, ont compté pour 93 p. 100 de tous les films (graphique 5). Cependant, pour les examens classé radiographies pulmonaires courantes (15.8 p. 100) seulement 3.2 p. 100 de tous les films ont été pris et pour les examens fluoroscopiques (10.1 p. 100), 3.8 p. 100.

Dans les hôpitaux généraux, les films ordinaires par examen radiographique d'hospitalisé ont augmenté au regard de l'année précédente, soit de 3.1 à 3.5. Suivant la taille de l'hôpital, l'écart allait de 1.5 dans le groupe de 1-9 lits à 3.8 dans celui de 1,000 lits et plus (graphique 6).

Sur les 14,100,000 films interprétés dans les hôpitaux répondants, 97.3 p. 100 l'ont été par le radiologue attaché à l'hôpital (97.4 p. 100 en 1962). Les films confiés d'ailleurs ont représenté 0.7 p. 100 du total et 85.1 p. 100 d'entre eux ont été interprétés par le radiologue de l'hôpital (89.5).

STANDARD FILMS PER IN-PATIENT RADIOPHOTOGRAPHIC EXAMINATION⁽¹⁾
GENERAL HOSPITALS, 1963

FILMS ORDINAIRES PAR EXAMEN RADIOPHOTOGRAPHIQUE⁽¹⁾ D'HOSPITALISÉ
HÔPITAUX GÉNÉRAUX, 1963

The total of all X-ray machines reported by public general and allied special hospitals in 1963 was 3,204. Diagnostic X-ray machines accounted for 93.8 per cent of the total. Some 54.1 per cent of the diagnostic X-ray machines were stationary. Most of the attachments for diagnostic X-ray machines were fluoroscopic (83.7 per cent). Therapeutic X-ray machines were reported to be 199, of which the majority were either superficial (43.2 per cent) or deep X-ray (42.7 per cent).

Total radiation treatments provided to patients of reporting hospitals in 1963 were almost 324,000. In general hospitals, treatments numbered 258,000 and comprised deep X-rays 44.0 per cent, gamma ray beam therapy 36.1 per cent, superficial X-ray 18.6 per cent and other 1.3 per cent (Chart 7). Compared with the 1962 distribution, the proportion of deep X-ray treatments was up by 1.9 per cent, while gamma ray beam therapy and superficial X-ray experienced declines of 1.7 per cent and 1.0 per cent, respectively.

Not included in the radiology data presented in this report are the examinations and films taken and interpreted by provincial diagnostic units located in 24 hospitals in Manitoba. Similarly, treatments provided by provincial cancer foundations (*British Columbia Cancer Institute, Saskatchewan Cancer Commission, Manitoba Cancer*

Le total des appareils et accessoires de rayon-X dans les hôpitaux généraux et spéciaux divers publics en 1963 était de 3,204 dont 93.8 p. 100 étaient des appareils de radiodiagnostic. Environ 54.1 p. 100 de ces derniers étaient fixes. Les accessoires des appareils de radiodiagnostic servaient surtout à la fluoroscopie (83.7 p. 100). Il a été déclaré 199 appareils de radiothérapie qui étaient surtout destinés à la roëntgenthérápie superficielle (43.2 p. 100) ou à la roëntgenthérápie pénétrante (42.7 p. 100).

Les traitements radiologiques donnés aux malades des hôpitaux répondants en 1963 ont totalisé près de 324,000. Dans les hôpitaux généraux, les traitements se sont chiffrés par 258,000 répartis de la façon suivante: roëntgenthérápie pénétrante, 44 p. 100; thérapie aux rayons gamma à faisceau dirigé, 36.1 p. 100; roëntgenthérápie superficielle, 18.6 p. 100; et autre, 1.3 p. 100 (graphique 7). Comparativement à la répartition de 1962, la proportion de traitements de roëntgenthérápie pénétrante a augmenté de 1.9 p. 100, celle de thérapie aux rayons gamma à faisceau dirigé et de roëntgenthérápie superficielle ont diminué respectivement de 1.7 p. 100 et 1 p. 100.

Les données du présent rapport sur la radiologie ne comprennent pas les examens et les films pris et interprétés par les services de diagnostic de 24 hôpitaux du Manitoba, ni les traitements donnés par les fondations provinciales du cancer (*British Columbia Cancer Institute, Saskatchewan Cancer Commission, Manitoba Cancer Treatment and Research Foundation*).

Treatment and Research Foundation and the Ontario Cancer Treatment and Research Foundation) are not included as hospital data. Ontario's 7 public cancer clinics located in general hospitals in 1963 gave 56,600 treatments to some 4,800 patients.

et Ontario Cancer Treatment and Research Foundation). En Ontario, les 7 dispensaires anti-cancéreux situés dans les hôpitaux généraux en 1963, ont donné 56,600 traitements à environ 4,800 malades.

CHART-8

Surgical Services

In 1963, operations reported by 840 public general and allied special hospitals numbered 2,103,800. In-patient operations accounted for 61.4 per cent of the total, a decline from 64.6 per cent in 1962. The 1963 rate of in-patient operations in operating rooms per 100 admissions to general hospitals was 44.2, a slight drop from 44.6 in 1962. The ratio climbed steadily from 15.0 in 1-9 bed hospitals to 57.0 in hospitals with 1,000 or more beds (Chart 8).

Operation deaths occurring in reporting hospitals amounted to 5,300, of which 9.0 per cent took place during the operation and the remainder within 10 full days. In 1962, some 9.1 per cent occurred during the operation. The rate of operation deaths per 1,000 in-patient operations in general hospitals amounted to 4.1, a modest drop from 4.2 in 1962. However, since 1959, the rate has dropped by 0.5 (Chart 9). Hospitals of 500 or more beds experienced the highest operation death rate (6.2) while those with 10-24 beds were lowest (0.9).

Chirurgie

Les interventions chirurgicales déclarées par les 840 hôpitaux généraux et spéciaux divers publics en 1963 se sont chiffrées par 2,103,800. Les opérations d'hospitalisés ont compté pour 61.4 p. 100 du total, recul au regard de 1962 (64.6). Le taux, pour 100 admissions aux hôpitaux généraux, des opérations d'hospitalisés dans les salles d'opération était de 44.2 en 1963, légère diminution sur 1962 (44.6). La proportion s'élevait de façon constante, soit de 15.0 dans les hôpitaux de 1-9 lits à 57.0 dans ceux de 1,000 lits ou plus (graphique 8).

Les décès d'opérés survenus dans les hôpitaux répondants se sont élevés à 5,300 dont 9 p. 100 au cours de l'opération et le reste dans les dix jours qui ont suivi. En 1962, la proportion de décès d'opérés survenus au cours de l'opération était d'environ 9.1 p. 100. Le taux de décès d'opérés pour 1,000 opérations d'hospitalisés dans les hôpitaux généraux a été de 4.1, recul minime au regard de 4.2 en 1962. Toutefois, depuis 1959, cette proportion a fléchi de 0.5 (graphique 9). Les hôpitaux de 500 lits et plus ont accusé le taux le plus élevé de décès d'opérés (6.2), et ceux de 10-24 lits, le moins élevé (0.9).

CHART - 9

GRAPHIQUE - 9

CHART - 10

GRAPHIQUE - 10

CHART - II

GRAPHIQUE - II

Obstetrical Services

Obstetric patients delivered in 867 reporting public hospitals in 1963 numbered 440,200. This was equivalent to 32.9 per rated obstetric bed. In maternity hospitals the ratio was 30.4 per rated obstetrical bed and in general hospitals the ratio amounted to 32.7. Hospitals of 300-499 beds experienced the greatest number of deliveries per obstetric bed (37.8) and the lowest value occurred in 1-9 bed hospitals (19.9) (Chart 10). General hospitals averaged 15.7 deliveries per 100 adult and child admissions, ranging from 12.3 in the 1-9 bed group to 17.7 in the 100-199 bed group (Chart 11). Maternity hospitals, as expected, had a very high value for this ratio, amounting to 61.6. Caesarean sections per 1,000 deliveries in 1963 numbered 36.9 in the case of general hospitals, being slightly higher in maternity hospitals (39.3). Large hospitals of 1,000 beds or more experienced the highest ratio in this case (53.5), while 1-9 bed hospitals had only 3.5 caesareans per 1,000 deliveries (Chart 12). Since 1959, the rate of caesarean sections per 1,000 deliveries in general hospitals has risen by 5.3.

Total births were reported to be 444,800, including 6,800 stillbirths. Immature births per 1,000 live births in general hospitals during 1963 amounted to 58.5, a gain of 1.0 over the 1962 rate and an increase of 2.0 since 1959. In maternity hospitals, the ratio has fallen from 63.6 in 1959

Obstétrique

Les femmes ayant accouché en 1963 dans les 867 hôpitaux publics répondants se sont chiffrées par 440,200, soit un rapport de 32.9 à la capacité théorique des lits. Le quotient était de 30.4 par lit d'obstétrique (capacité théorique) dans les maternités et de 32.7 dans les hôpitaux généraux. Les hôpitaux de 300-499 lits ont eu le plus grand nombre d'accouchements par lit d'obstétrique (37.8) et ceux de 1-9 lits ont eu le moindre (19.9) (graphique 10). Les hôpitaux généraux ont eu une moyenne de 15.7 accouchements pour 100 admissions d'adultes et d'enfants qui a varié de 12.3 dans le groupe de 1-9 lits à 17.7 dans celui de 100-199 (graphique 11). Comme il faut s'y attendre, les maternités offrent une valeur très élevée pour ce quotient, soit 61.6. Pour 1,000 accouchements, il a été pratiqué 36.9 césariennes dans les hôpitaux généraux en 1963, et un peu plus dans les maternités (39.3). Les grands hôpitaux de 1,000 lits ou plus ont accusé le plus fort quotient dans ce cas (53.5), tandis que les établissements de 1-9 lits n'ont eu que 3.5 césariennes pour 1,000 accouchements (graphique 12). Depuis 1959, le taux de césariennes pour 1,000 accouchements s'est élevé de 5.3 dans les hôpitaux généraux.

Selon les rapports, les naissances ont totalisé 444,800 dont 6,800 mortinaissances. Les naissances prématurées pour 1,000 naissances vivantes dans les hôpitaux généraux se sont élevées à 58.5 en 1963, gain de 1.0 sur le taux de 1962 et hausse de 2.0 depuis 1959. Dans les maternités, le quotient a

GRAPHIQUE-15

to 56.5 in 1963. Immature births per 1,000 live births increased with the size of hospital, from 24.2 in 1-9 bed hospitals to 65.8 in the 500-999 bed group, at which point a decrease was noticed as the value dropped to 56.4 in 1,000 or more bed hospitals (Chart 13).

In 1963, stillbirths in general hospitals per 1,000 births came to 15.3, neonatal deaths per 1,000 live births were 15.1, immature deaths per 1,000 immature births numbered 175.6 and there were just 0.3 maternal deaths per 1,000 deliveries. Compared with 1962 data the first two ratios experienced increases of 0.4 and 1.6, respectively, while the third decreased by 3.1 and the last ratio experienced no change.

Deaths and Autopsies

Deaths reported by 946 public hospitals in 1963 numbered 78,100. Of this amount, 28.9 per cent occurred less than 48 hours after admission (29.4 in 1962). In public general hospitals the percentage was 30.5 (30.9). Autopsies reported by 544 hospitals were 33,100, with 80.4 per cent, being performed on hospital deaths and the remainder on other deaths. In 1962, 82.4 per cent of the autopsies were on hospital deaths.

For 1963, the rate of autopsies per 100 hospital deaths was 34.1 (35.1 in 1962) and in general hospitals amounted to 35.5 (36.2). Hospi-

fléchi, soit de 63.6 en 1959 à 56.5 en 1963. Les naissances prématurées pour 1,000 naissances vivantes ont augmenté avec la taille de l'hôpital, soit de 24.2 dans les hôpitaux de 1-9 à 65.8 dans ceux de 500-999, pour diminuer ensuite à 56.4 dans les établissements de 1,000 lits et plus (graphique 13).

Dans les hôpitaux généraux, il y a eu en 1963, 15.3 mortnaissances pour 1,000 naissances, 15.1 décès de nouveau-nés pour 1,000 naissances vivantes, 175.6 décès de prématurés pour 1,000 naissances prématurées, mais seulement 0.3 décès maternels pour 1,000 accouchements. Comparativement aux données de 1962, les deux premiers quotients ont augmenté respectivement de 0.4 et 1.6, le troisième a diminué de 3.1 et le dernier n'a pas varié.

Décès et autopsies

Les décès qu'ont déclarés 946 hôpitaux publics en 1963 se sont chiffrés par 78,100 dont 28.9 p. 100 sont survenus moins de 48 heures après l'admission (29.4 en 1962). Dans les hôpitaux généraux publics, ce pourcentage était de 30.5 (30.9). Des 33,100 autopsies déclarées par 544 hôpitaux, 80.4 p. 100 ont été faites sur des décédés à l'hôpital et le reste sur d'autres décédés. Cette proportion était de 82.4 p. 100 en 1962.

En 1963, le nombre d'autopsies pour 100 décès à l'hôpital était de 34.1 (35.1 en 1962) et de 35.5 (36.2) dans les hôpitaux généraux. Les hôpitaux de

tals with 1-9 beds averaged only 2.2 autopsies per 100 hospital deaths, compared with 50.7 in 500-999 bed hospitals (Chart 15). Autopsies of hospital stillbirths were conducted at the rate of 26.8 per 100 in general hospitals (26.0 in 1962) and ranged from 3.8 in the 1-9 bed classification to 62.1 in the group of hospitals with 1,000 or more beds. In maternity hospitals, the rate of autopsies per 100 stillbirths dropped to 32.5 from 56.6 in the previous year.

Other Special Services

In addition to the areas of laboratory, radiology, obstetrics, etc., already covered in this report, other special services were available in reporting hospitals. Chief among these was electrocardiography, occurring in 79.6 per cent, followed closely by emergency service with 74.7 per cent. The third most frequently specified service was physiotherapy, occurring in 40.9 per cent of the public hospitals. The incidence of these particular services and others are shown for general hospitals in Chart 16.

The percentage of special services for in-patients varied according to the type of service provided. In general hospitals 87.6 per cent of electrocardiography examinations were for in-patients, while in speech therapy the proportion was 42.1 per cent (Chart 17).

1-9 lits n'ont fait que 2.2 autopsies pour 100 décès à l'hôpital, au regard de 50.7 dans les établissements de 500-999 lits (graphique 15). Il s'est pratiqué 26.8 (26.0) autopsies de mort-nés pour 100 mortinassances dans les hôpitaux généraux, et ce nombre a varié de 3.8 dans la catégorie de 1-9 lits à 62.1 dans le groupe d'hôpitaux de 1,000 lits ou plus. Dans les maternités, le taux d'autopsies pour 100 mortinassances est tombé de 56.6 en 1962 à 32.5 en 1963.

Services spéciaux divers

Outre les services de laboratoire, radiologie, obstétrique et autre, dont il est déjà question dans le présent rapport, les hôpitaux répondants disposent de services spéciaux divers. Le plus important d'entre eux est l'électrocardiographie qui intervient pour 79.6 p. 100, suivi de près par le service d'urgence qui répond pour 74.7 p. 100. Le troisième service mentionné le plus souvent est la physiothérapie qui compte pour 40.9 p. 100 dans les hôpitaux publics. Le graphique 16 donne l'incidence de ces services particuliers et d'autres.

Le pourcentage de soins spéciaux donnés aux hospitalisés a varié suivant le genre de service. Dans les hôpitaux généraux, 87.6 p. 100 des électrocardiogrammes ont été faits pour des hospitalisés, tandis qu'en logothérapie, la proportion était de 42.1 p. 100 (graphique 17).

CHART - 16

GRAPHIQUE - 16

CHART - 17

CHART - 18

GRAPHIQUE - 18

Organized Out-patient Department and Emergency Unit

Hospitals indicating organized out-patient departments for the reporting year 1963 numbered 52. Over one-half of these departments were located in hospitals of 500-999 beds. Total patients attending amounted to 628,100, giving rise to 1,908,000 attendances or 2.9 per patient registered (3.1 in 1962). In general hospitals (excluding those with less than 50 beds) the ratio was 3.0 (same in 1962), ranging from 1.7 in 50-99 bed hospitals to 4.5 in the largest grouping (Chart 18).

Public hospitals reporting emergency out-patient work were 722. In 1963 visits amounted to 2,561,000 of which 98.7 per cent were attributed to general hospitals.

Service externe organisé et service d'urgence

Les hôpitaux qui ont déclaré des services externes organisés pour 1963 se sont chiffrés par 52 et plus de la moitié d'entre eux étaient dans la catégorie de 500-999 lits. Le nombre de malades s'est élevé à 628,100 et celui des visites à 1,908,000, soit 2.9 visite par malade inscrit (3.1 en 1962). Dans les hôpitaux généraux (sauf ceux qui n'avaient pas 50 lits), la proportion était 3.0 comme en 1962 et variait de 1.7 dans les hôpitaux de 50-99 lits à 4.5 dans ceux qui avaient le plus de lits (graphique 18).

Parmi les hôpitaux publics, 722 ont déclaré avoir un service d'urgence pour les malades externes. En 1963, les visites ont totalisé 2,561.000 dont les hôpitaux généraux ont répondu pour 98.7 p. 100.
