PREFACE

Hospital statistics have been collected by the Dominion Bureau of Statistics since 1932. Annual reports were published in a single volume from 1932 to 1952. From 1953 to 1958 the compiled data were presented in two volumes with Volume I containing information on accommodation, facilities, utilization and personnel and Volume II information on finances. In 1959 with the advent of the federal provincial hospital insurance program, six volumes were required to present the increased amount of collected data necessary for the administration and evaluation of this program.

With the acquisition of an electronic computer by the Bureau it has been possible to produce a seventh volume for the 1961 reporting year, entitled "Hospital Indicators". This volume portrays a number of rates and ratios which previously had not been available or possible to obtain. These rates and ratios represent a comprehensive set of measures of workload utilization, staffing, quality of care costs and other aspects of hospital activity.

It is hoped that the reader will send any comments to the Chief, Institutions Section, Dominion Bureau of Statistics, Ottawa, thereby enabling the Bureau to use its facilities in the most efficient way to produce a product which will be of the greatest value to the user.

The Dominion Bureau of Statistics is grateful for the cooperation received from the hospitals in making their 1961 statistics available for publication in this report; to the provincial departments of health and/or the hospital insurance commissions of the province through whose facilities the returns were collected; the Canadian Hospital Association and the provincial hospital associations for promoting uniformity of records for the collecting of hospital statistics; and to the Department of National Health and Welfare.

The report was prepared in the Institutions Section of the Health and Welfare Division of the Dominion Bureau of Statistics..

WALTER E. DUFFETT,
Dominion Statistician.

PRÉFACE

Le Bureau fédéral de la statistique recueille depuis 1932 des statistiques hospitalières que, de 1932 à 1952, il a publiées annuellement en un seul volume. De 1953 à 1958, ces données ont paru en deux volumes, le premier contenant des renseignements sur le logement, les services, l'utilisation et le personnel et le second, des renseignements sur les finances. En 1959, l'avènement d'un régime fédéral-provincial d'assurance-hospitalisation a requis sept volumes pour présenter la somme accrue des données recueillies qui sont nécessaires pour l'administration et l'évaluation du nouveau régime.

Grâce à l'achat d'une calculatrice électronique, le Bureau a pu rédiger un septième volume pour l'année de déclaration 1961, volume intitulé "Indicateurs hospitaliers". Ce volume décrit un certain nombre de taux et de rapports qui, auparavant, n'étaient pas disponibles. Ces taux et rapports constituent un ensemble sommaire de mesures du travail fait, du personnel, du coût des soins et d'autres aspects de l'activité hospitalière.

Il faut espérer que le lecteur communiquera ses commentaires au chef de la Section des institutions du B.F.S. (Ottawa), afin de permettre au Bureau d'utiliser ses services à plein rendement et de produire ainsi un travail qui soit des plus utile à l'usager.

Le Bureau remercie les hôpitaux dont la collaboration a rendu possible la publication de leurs statistiques de 1961, les ministères provinciaux de la Santé et les commissions provinciales d'assurance-hospitalisation par l'entremise desquels les données ont été recueillies, l'Association canadienne des hôpitaux et les associations provinciales d'hôpitaux qui ont encouragé l'uniformité des formules servant à la collecte des statistiques hospitalières, ainsi que le ministère de la Santé nationale et du Bien-être social.

C'est la Section des institutions (Division de la santé et du bien-être) du Bureau fédéral de la statistique qui a rédigé le présent rapport.

WALTER E. DUFFETT,
Le statisticien du Dominion.

PART I—TEXT AND CHARTS

PARTIE I—TEXTE ET GRAPHIQUES

INTRODUCTION

With the acquisition of electronic data processing equipment by the Dominion Bureau of Statistics in 1961 it became feasible for the first time to produce a comprehensive set of indicators (rates and ratios) representing measurements of hospital activity in Canada. It had not been possible to produce indicators on a large scale prior to the 1961 tabulation year due to the tabulation methods employed during that time. The 1961 publication program of Hospital Statistics includes six volumes of aggregates and analytical material (DBS Catalogue Nos. 83-210 to 83-215) as has been the case since 1959 as well as this new report.

The indicators (for groups of hospitals) which are found in the main part of this report are classified as to public, private, or federal hospitals, and by province. The public hospitals are further classified as to type and size. These classifications are similar to those found in the previous six volumes of the Annual Report. The tabular presentation shows the actual ratio in the upper portion of the table and the item count or number of hospitals involved in the make-up of the ratio in the lower part. In order for a hospital to be included in the group ratios presented here it must have had both factors present on its return, i.e., the numerator and denominator of the ratio concerned. For example, in the ratio—paid hours per adult and child patient-day, a hospital must report paid hours of work and the number of patient-days, for it to be included with other hospitals in the calculation of the group ratio. This is an important point and must be considered when the evaluation of the indicator takes place. In some instances a ratio calculated in this manner can be misleading while the ratio derived from the summary tables of Volumes I to VI may be more valid. For example, the death rate per 1,000 separations would be more valid calculated from summary statistics as found in Volume I rather than that which would be produced by the indicator method described above, since it is legitimate in many hospitals that no deaths would occur during the reporting period. Therefore, the numerator and denominator of any ratio produced in this report must have an entry of one or more. This report does not show any indicators which are calculated from summary data, however some indicators are shown here as well as in the previous volumes.

Data for this report have been extracted from the Annual Return of Hospitals—Part I and II. All hospitals in Canada except mental institutions and tuberculosis sanatoria were required to submit Part I (Facilities and Services). Only public general and allied special hospitals submitted Part II (Finances).

Grâce à l'acquisition d'un matériel électronique de dépouillement des données, en 1961, le Bureau fédéral de la statistique peut, pour la première fois, produire une série sommaire des indicateurs (taux et rapports) qui mesurent l'activité hospitalière au Canada. Avant 1961, vu la méthode de dépouillement employée, il n'était pas possible de produire au maximum des indicateurs. Le projet de publication de la statistique hospitalière de 1961 comprenait six volumes de données générales et analytiques (B.F.S., numéros de catalogue 83-210—83-215), tout comme c'était le cas depuis 1959 et comme c'est encore le cas dans la présente publication.

Les indicateurs (relatifs aux classes d'hôpitaux) qui se rencontrent dans la principale partie du présent rapport sont classés suivant la province et selon qu'ils concernent les hôpitaux publics, privés ou fédéraux. Quant aux hôpitaux publics, ils se divisent eux-mêmes suivant l'affectation et la taille. Ces classes sont semblables à celles que l'on trouve dans les six volumes précédents du Rapport annuel. La tabulation indique le rapport réel dans la partie supérieure du tableau et, dans la partie inférieure, le nombre des hôpitaux qui ont servi à établir ce rapport. Pour qu'un hôpital puisse figurer au rapport collectif paraissant ici, il doit avoir inscrit les deux facteurs dans sa déclaration, à savoir le dénominateur et le numérateur du rapport concerne. Par exemple, pour le rapport heures rémunérées par journée d'hospitalisation d'adulte ou d'enfant, un hôpital doit avoir déclaré les heures ouvrées rémunérées et le nombre de journées d'hospitalisation, s'il veut que ses données entrent dans le calcul du rapport. C'est un point important à ne pas oublier quand on fait l'évaluation d'un indicateur. Parfois, un rapport calculé de cette façon peut induire en erreur, alors que le rapport découlant des tableaux récapitulatifs des volumes I-VI peut être plus juste. Par exemple, le taux de mortalité pour 1,000 radiations serait plus juste, si on le calculait à partir des statistiques sommaires du volume I au lieu de le faire par la méthode de l'indicateur décrite plus haut, puisqu'on peut à bon droit penser que, dans plusieurs hôpitaux, aucun décès n'est survenu dans une période donnée. En conséquence, le dénominateur et le numérateur de tout rapport établi dans la présente publication doivent correspondre à une ou plusieurs entrées. Le présent volume ne fournit pas d'indicateur qui soit tiré de données sommaires, bien que certains soient indiqués ici aussi bien que dans les volumes précédents.

Les rapports annuels des hôpitaux (HS1 et HS2) ont fourni les matières du présent volume. Tous les hôpitaux du Canada, sauf les institutions psychiatriques et les sanatoriums de tuberculose, doivent répondre à la première partie du questionnaire (installations et services). Seuls, les hôpitaux généraux et spéciaux divers doivent répondre à la seconde (finances).

In many instances qualifications re inclusion and exclusion are noted at the bottom of the indicators. Extreme values are apparent in a number of indicators (mainly in the 1-9 bed group of general hospitals) but these generally have little influence on the group data. The table at the beginning of the report shows the number of hospitals operating in Canada to which the item counts of the individual ratios may be compared.

The following abbreviations are employed throughout the charts of this report:

General hospital	Bed groups
1	1 - 9
2	10 - 24
3	25 - 49
4	50 - 99
5	100 - 199
6	200 - 299
7	300 - 499
8	500 - 999
9	1,000 +
A & C	Adults and Children
NB	Newborn

Dans plusieurs cas, les raisons de l'inclusion ou de l'exclusion sont notés au bas des tableaux. Cela revêt évidemment une très grande importance pour nombre d'indicateurs (surtout dans le cas des hôpitaux généraux de 1-9 lits), mais en général cela n'influe guère sur les données collectives. Le tableau du début de la publication donne le nombre d'hôpitaux canadiens en activité dont les rapports individuels peuvent être comparés.

Voici les abréviations utilisées aux graphiques du présent volume:

Hôpitaux généraux	Groupes de lits
1	1 - 9
2	10 - 24
3	25 - 49
4	50 - 99
5	100 - 199
6	200 - 299
7	300 - 499
8	500 - 999
9	1,000 +
A & E	Adultes et enfants
NN	Nouveau-nés

Note: Ratio of beds set up to rated bed capacity:

This ratio follows closely the pattern of previous years. The low ratio in the largest general hospitals may be due to large areas under renovation in these institutions, or a tighter control of beds.

Note: Rapport des lits dressés à la capacité théorique:

Ce rapport suit de près la courbe des années passées. Le bas niveau dans les grands hôpitaux généraux peut provenir, soit de vastes rénovations, soit d'une utilisation plus étroite des lits.

Note: Percentage of occupancy (based on rated bed capacity):

The low ratio for the largest general hospitals may be partly due to a substantial number of beds in these institutions out of use due to renovations. The very low values in the 1-9 bed group in some of the provinces are due to the minute volume of patient-days of care in nursing stations and outpost hospitals. See Chart 1.

Note: Pourcentage d'occupation (à partir de la capacité théorique):

Le rapport peu élevé dans les grands hôpitaux généraux origine peut-être d'un nombre considérable de lits que les rénovations n'ont pas permis d'utiliser. Pour certaines provinces, le très bas niveau dans le groupe 1-9 lits provient du volume léger de soins aux malades dans les postes infirmiers et les hôpitaux éloignés. Voir graphique 1.

Note: Ratio of newborn bassinets per obstetric bed set up:

In the smaller general hospitals (under 50 beds) ratios are substantially higher than for other hospitals. This is partly due to beds not being assigned specifically to obstetrics in the smaller hospitals. See Chart 2. Smaller hospitals normally have a higher proportion of obstetric beds than larger hospitals.

Note: Berceaux, par lit d'obstétrique dressé:

Dans les petits hôpitaux généraux (moins de 50 lits), les rapports sont fortement plus élevés que dans les autres hôpitaux. Ce phénomène est dû en partie aux lits qui ne sont pas spécifiquement destinés à l'obstétrique dans les petits hôpitaux. Voir graphique 2. D'ordinaire, les petits hôpitaux ont proportionnellement plus de lits d'obstétrique que les grands hôpitaux.

Note: Average number of adult and child in-patients per hospital:
Comparable data on the size of hospital may be calculated from
Table 1.

Nota: Moyenne d'adultes ou d'enfants hospitalisés, par hôpital:
On peut calculer les données correspondantes, suivant la taille de
l'hôpital, en se basant sur le tableau 1.

Note: Number of adult and child admissions per bed set up:
 This ratio should be considered in conjunction with average length of stay (Table 10) and percentage occupancy (Tables 3 and 4).

Note: Admissions d'adultes ou d'enfants, par lit dressé:
 Ce rapport doit être considéré en même temps que l'hospitalisation moyenne (tableau 10) et le pourcentage d'occupation (tableaux 3 et 4).

Note: Average length of stay (adults and children):

This ratio continues to show a similar trend to that of previous years, i.e., a lengthier stay as the size of the hospitals becomes larger. The role of the larger hospitals as major reference centres is significant as shown here. See Chart 3.

Note: Hospitalisation moyenne des adultes ou enfants:

Ce rapport continue de suivre la courbe des années antérieures, c.-à-d. que l'hospitalisation grandit avec la taille de l'hôpital. Comme il appert ici, les grands hôpitaux jouent un rôle important comme centre de recours. Voir le graphique 3.

Note: Percentage of patient-days (adults and children) charged to Provincial Plan:

Provincial plan patient-days are lower in Prince Edward Island due to (i) province employing a premium payment plan (ii) predominantly rural therefore requiring most inhabitants to initiate insurance coverage on their own. During this reporting year only 82 per cent of population of Prince Edward Island were eligible to receive hospital insurance benefits.

Note: Pourcentage de journées d'hospitalisation d'adultes ou d'enfants débitées au régime provincial:

Les journées d'hospitalisation débitées au régime provincial sont moindres en île-du-Prince-Édouard pour deux raisons: (i) la province possède un régime contributoire, (ii) l'île étant surtout rurale, la plupart de ses ressortissants doivent se protéger par une assurance qui leur soit propre. Au cours de la présente année de déclaration, seulement 82 p. 100 de la population avait droit aux avantages de l'assurance-hospitalisation.

Note: Total paid hours in general nursing services per patient-day (adults and children, and newborn):

Includes hours of work in the nursing units (adults and children and the newborn nursery) and in the administration and general management of the nursing department. The very high ratio in the small general hospitals (especially British Columbia) is due of course to the low number of patient-days for these hospitals.

Note: Heures rémunérées dans les services infirmiers généraux, par journée d'hospitalisation d'adulte ou d'enfant ou de nouveau-né:

Sont comprises, les heures ouvrées dans les services de soins directs aux adultes, enfants et nouveau-nés, ainsi que dans l'administration et la direction générale des services infirmiers. Le rapport très haut dans les petits hôpitaux généraux (particulièrement en Colombie-Britannique) tient évidemment au petit nombre de journées d'hospitalisation dans ces hôpitaux.

TABLE 14. Graduate Nurse Paid Hours in General Nursing Services per Patient-day (Adults and Children, and Newborn), 1961

TABLEAU 14. Heures rémunérées des infirmières diplômées dans les services infirmiers généraux, par journée d'hospitalisation d'adulte ou d'enfant ou de nouveau-né, 1961

Note: Graduate nurse paid hours in general nursing services per patient-day (adults and children, and newborn):

The same is true here as for Table 13. It is interesting to note that graduate nurse hours are the same as total paid hours in the smallest general hospitals in British Columbia and the Yukon.

Nota: Heures rémunérées des infirmières diplômées dans les services infirmiers généraux, par journée d'hospitalisation d'adulte ou d'enfant ou de nouveau-né:

L'observation du tableau 13 s'impose également ici. A noter que, dans les petits hôpitaux de la Colombie-Britannique et du Yukon, les heures des infirmières diplômées sont les mêmes que les heures rémunérées.

Note: Total paid hours in laboratory per patient-day (adults and children)
The low value in the province of New Brunswick is due to much
of the laboratory work being referred-out to the Provincial Laboratories.

Note: Heures rémunérées dans les laboratoires, par journée d'hospitalisation d'adulte ou d'enfant:
Le bas niveau au Nouveau-Brunswick vient de ce qu'une grande
partie du travail de laboratoire est confié aux laboratoires de la province.

Note: In-patient laboratory units per patient-day (adults and children):
The federal schedule of unit values is used in all provinces except Prince Edward Island, Nova Scotia and New Brunswick. Therefore values shown are not strictly comparable with the remainder of the provinces.

Note: Unités de laboratoire relatives aux hospitalisés, par journée d'hospitalisation d'adulte ou d'enfant:
Toutes les provinces, sauf l'Île-du-Prince-Édouard, la Nouvelle-Ecosse et le Nouveau-Brunswick, utilisent la liste fédérale des valeurs unitaires. C'est pourquoi les valeurs de ces trois provinces ne sont pas strictement comparables à celles des autres.

Note: In-patient laboratory units per adult and child admission:
Includes laboratory units done in the hospital and those referred out to another laboratory. The effect of the different schedule of unit values in use is clearly demonstrated for the maritime provinces.

Note: Unités de laboratoire relatives aux hospitalisés, par admission d'adulte ou d'enfant:
Sont comprises, les unités de travail fait à l'hôpital ou confié à d'autres laboratoires. Ici se reflète de toute évidence la liste différente de valeurs qu'ont adoptée les Maritimes.

Note: Percentage of hospital's laboratory units done for in-patients:
 This reflects the situation where large hospitals have a higher proportion of work done for out-patients than in small hospitals.
 Work done in the hospital's laboratory includes that done for in-patients and out-patients and work referred-in to the laboratory from outside the hospital.

Note: Pourcentage d'unités de laboratoire hospitalières pour hospitalisés:
 Ce tableau reflète bien le fait que les grands hôpitaux, ont, beaucoup plus que les petits, une proportion forte de travail fait pour les malades externes.
 Le travail fait en laboratoire concerne les hospitalisés et les malades externes, aussi bien que le travail confié d'ailleurs.

Note: Radiology direct cost per patient-day (adults and children):

Includes all expense of the department, e.g., salaries and wages, medical and surgical supplies and expenses, drugs, film costs and all other supplies and expenses. The effects of provincial diagnostic centres in Manitoba, the high proportion of out-patient radiology and radiotherapy workload in the provinces east of Manitoba, and the regional council arrangements in Saskatchewan, are all reflected in these values.

Note: Frais directs en radiologie, par journée d'hospitalisation d'adulte ou d'enfant:

Sont comprises, toutes les dépenses de ce service relativement à la rémunération, aux fournitures médicales et chirurgicales, aux médicaments et aux films, ainsi que les frais en fournitures diverses et les dépenses diverses. Les effets de centres provinciaux de diagnostic au Manitoba, la forte proportion de travail fait pour les malades externes en radiothérapie dans les provinces à l'est du Manitoba et les dispositions prises par les conseils régionaux de la Saskatchewan, voilà autant de facteurs qui se reflètent dans les valeurs.

Note: Standard films per in-patient radiographic examination:
 The number of standard films taken per radiographic examination (other than routine chest x-ray) shows a consistent pattern with a definite concentration around 3.

Nota: Films ordinaires, par examen radiographique d'hospitalisé:
 Le nombre de films ordinaires pris par examen radiographique (à l'exception de l'examen pulmonaire courant au rayon-X) accuse une situation constante et s'établit définitivement à environ 3.

Note: Average cost of film per examination:

This cost refers to all films (standard and miniature) and to all examinations (routine admission, other radiographic and fluoroscopic).

Nota: Coût moyen du film par examen:

Ce coût se rapporte à tous les films (ordinaires et petit format) et à tous les examens (courants, radiographiques divers et fluoroscopiques).

Note: Total paid hours in delivery room per patient delivered:

This ratio shows that in smaller general hospitals patients usually receive less support and stand-by time during delivery than in larger hospitals. It should also be noted that personnel are sometimes drawn from nursing units in the small hospitals and their hours not recorded for delivery room. The low frequency of small hospitals reporting delivery room hours also reveals the difficulty that these hospitals have in accounting for hours of work in specific departments.

Nota: Heures rémunérées dans la salle d'accouchement, par accouchement:

Ce rapport révèle que, dans les petits hôpitaux généraux, les malades reçoivent d'ordinaire moins d'assistance et de temps de secours au cours de l'accouchement que dans les grands hôpitaux. A noter également que, dans les petits hôpitaux, le personnel vient parfois des services infirmiers de soins directs et que leurs heures dans la salle d'accouchement ne sont pas comptées comme telles. Comme les petits hôpitaux ne déclarent que peu d'heures dans les salles d'accouchement, on peut en déduire qu'il est difficile à ces hôpitaux de répartir les heures entre les services particuliers.

Note: Graduate nurse paid hours in delivery room per patient delivered:

Chart 6 reveals that as the size of the general hospital increases the gap between total hours per delivery and graduate nurse hours per delivery widens.

Nota: Heures rémunérées des infirmières diplômées dans les salles d'accouchement, par accouchement:

S'élargit le graphique 6, plus la taille de l'hôpital grandit, plus s'élargit la différence entre les heures par accouchement et les heures des infirmières diplômées par accouchement.

Note: Number of patients delivered per rated obstetric bed:

In some instances this ratio is very high due to difficulty of assigning obstetric beds in small hospitals; e.g., patients delivered in small hospitals are sometimes in medicine and surgery beds rather than obstetric beds.

Nota: Nombre d'accouchées par lit d'obstétrique (capacité théorique):

Parfois, ce rapport est très haut, vu qu'il est difficile aux petits hôpitaux de réserver des lits à l'obstétrique; c'est ainsi que, dans ces institutions, les malades de l'obstétrique sont parfois dans des lits de médecine ou de chirurgie.

Note: Total paid hours in operating room per operation:

In some hospitals (usually less than 50 beds) hours for central supply room are included with those of the operating room. However, the trend is not unduly altered showing in most cases more hours per operation as the general hospital becomes larger in size. It is noted that in these indicators some values are definitely out of line, however they have little effect upon group averages.

Note: Heures rémunérées dans les salles d'opération, par intervention chirurgicale:

Dans certains hôpitaux (d'ordinaire ceux de moins de 50 lits), les heures du service central de distribution sont comprises dans celles des salles d'opération. Néanmoins, la courbe n'en est pas indûment altérée, puisque, dans la plupart des cas, les heures par opération augmentent avec la taille des hôpitaux généraux. A noter que, dans ces indicateurs, certaines valeurs sont définitivement désalignées, mais n'ont effectivement que peu d'effet sur les moyennes des classes.

Note: Total paid hours in organized out-patient department per visit:
The organized out-patient department is a unit set up, equipped and staffed as a separate department of the hospital, to receive and to provide care to patients who are not admitted as in-patients.

Note: Heures rémunérées, par visite, dans les services organisés des malades externes:
Le service organisé des malades externes, établi comme service distinct dans l'hôpital, est équipé et doté d'un personnel en vue de recevoir et de traiter les hospitalisés.

Note: Total paid hours in medical records and library per admission (adults and children);

More activity is apparent in medical records and library as the hospital becomes larger. See also the following indicators on costs reflecting a similar pattern.

Nota: Heures rémunérées dans la bibliothèque et les archives médicales, par admission d'adulte ou d'enfant;

Plus l'hôpital est grand, plus grande est l'activité dans la bibliothèque et les archives médicales. Voir aussi les indicateurs du coût qui reflètent une courbe identique.

Note: Administration direct cost per patient-day (adults and children).

Expenses included here are those relating to the sub-departments as listed for Table 44. Included also are the following expense items for the whole hospital such as employment benefits, purchased services (e.g. postage, telephone, bank charges, advertising), service fees and expenses (e.g. auditing, legal, collection, indemnity to board members), insurance and taxes, travel, memberships and subscriptions.

Note: Frais directs d'administration, par journée d'hospitalisation d'adulte ou d'enfant:

Les dépenses, ici, sont celles de tous les sous-services mentionnés au tableau 44. Sont comprises également, les dépenses de l'ensemble hospitalier, comme avantages sociaux, frais de services (ex. poste, téléphone, frais bancaires, publicité), honoraires et frais semblables (ex.: vérification, contentieux, perception, indemnités des membres du Conseil), assurances et taxes, déplacements, sociétariat et abonnements.

Note: Total paid hours in dietary department per meal-day:
 Meal-day is defined as the full amount of food provided to a person during one day; includes meals for adult and child in-patients, staff, visitors, etc., and is obtained by dividing by three the number of meals served to these persons during the year.

Note: Heures rémunérées dans le service alimentaire, par journée d'alimentation:
 La journée d'alimentation c'est le volume d'aliments fournis à un malade durant une journée; cela inclut les repas des adultes et des enfants hospitalisés, du personnel, des visiteurs, etc. Le calcul se fait en divisant par trois le nombre de repas servis à ces personnes durant l'année.

Note: Laundry, linen, and housekeeping direct cost per patient-day (adults and children):

Cost includes purchased service by outside agencies as well as salaries, supplies and other expense incurred by these departments.

Nota: Frais directs en blanchissage, linge et entretien ménager, par journée d'hospitalisation d'adulte ou d'enfant:

Ces frais comprennent les services rémunérés des organismes extérieurs, aussi bien que les salaires, le coût des fournitures et les autres dépenses de ces services.

Note: Total paid hours (all departments) per patient-day (adults and children):

Includes the hours of part-time and full-time employees for whom salaries were recorded. This includes hours of student nurses, nursing assistants trainees, casual employees.

The very high ratios in some of the provinces, 1-9 bed groups, is due to the low number of patient-days, mainly the outposts hospitals. With this exception the trend generally increases with the increase in size of hospital. See Chart 4.

Note: Heures rémunérées dans tous les services, par journée d'hospitalisation d'adulte ou d'enfant:

Sont comprises, les heures des employés à temps plein ou partiel dont sont inscrites les salaires. Elles incluent les heures des élèves-infirmières, des assistantes-infirmières élèves et des employés intermittents.

Le rapport très élevé des hôpitaux de 1-9 lits dans certaines provinces vient du nombre restreint de journées d'hospitalisation, surtout dans les hôpitaux éloignés. Sauf cette exception, la courbe monte généralement avec la taille de l'hôpital. Voir graphique 4.
