## SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

This publication was prepared under the direction of:

- . David F. Bray, Director, Health Division
- . John Silins, Chief, Vital Statistics and Disease Registries Section
- . Anna Brancker, Senior Analyst

## SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Cette publication a été rédigée sous la direction de:

- . David F. Bray, directeur, Division de la santé
- . John Silins, chef, Statistiques de l'état civil et des registres des maladies
- . Anna Brancker, analyste principale

## INTRODUCTION

The official mortality statistics for Canada are published, at different levels of detail, in three annual reports: Births and Deaths, Vital Statistics Volume I, Mortality: Summary List of Causes, Vital Statistics Volume III and the present report, Causes of Death. Two precursors of this report, Causes of Death, Canada, 1950-1960 (Catalogue 84-514) and Causes of Death, Canada, 1958-1964 (Catalogue 84-519) provided national totals on the numbers of deaths according to the (detailed) three-digit categories and four-digit sub-categories of the 6th and 7th Revisions of the International Classification of Diseases.

To meet the demand for more current and still further detailed data on causes of death, these publications were converted to a regular annual report beginning with the 1965 data year and the report was expanded to include information on detailed causes of death by sex and province of residence of the decedent and by sex and five-year age groups for Canada. The present report is the 23rd such report in this expanded series.

This report is based on the 9th Revision of the International Classification of Diseases (ICD-9) which was put into effect in Canada in 1979. Restructuring of the Classification and some changes in the international underlying cause selection rules have resulted in some break in continuity with previous revisions. Therefore, comparisons of data coded by more than one revision are difficult. Any direct comparisons of ICD-9 categories with previous revisions, either by category number or disease title, should be made with reference to both the ICD-9 and the previous classification(s). In this respect, particular care should be taken with certain categories or sections of the ICD-9, these include; category 558 which contains conditions previously classified to the infectious disease chapter; category 579 which includes some conditions previously found in the chapter on endocrine disorders; categories 390-398 and 424 where assumptions of rheumatic origin are no longer made for certain conditions; categories 401-402, 414 and 429 where changes in the assignment of terms and in the linkage rules have caused a change in the case distribution; the categories for asthma, bronchitis, and emphysema (490-493) where linkage is no longer possible; the section entitled "Pregnancy with Abortive Outcome" (630-639) which now includes ectopic pregnancies; the chapter on perinatal conditions where the age restriction has been changed; and the symptoms chapter where certain symptoms have been removed and placed in other chapters relating to specific systems.

Les statistiques officielles concernant la mortalité sont présentées, à divers niveaux d'agrégation, dans trois rapports annuels: Naissances et décès: La statistique de l'état civil, volume I, Mortalité: Liste sommaire des causes: La statistique de l'état civil, volume III et le présent rapport, Causes de décès. Avant la publication du présent ouvrage, deux rapports, Causes de décès, Canada 1950-1960 (no 84-514 au catalogue) et Causes de décès, Canada 1958-1964 (no 84-519 au catalogue), qui fournissaient des totaux nationaux concernant le nombre de décès, selon les catégories détaillées à trois chiffres et les sous-catégories à quatre chiffres des 6e et 7e Révisions de la Classification internationale des maladies.

Afin de satisfaire à la demande de données plus récentes et encore plus détaillées sur les causes de mortalité, ces publications furent converties, à partir de 1965, en un rapport annuel régulier qui fut élargi pour inclure des renseignements sur les causes détaillées des décès, selon le sexe et la province de résidence de la personne décédée, et selon le sexe et les tranches d'âge de cinq ans pour le Canada. Le présent rapport est le 23e de cette série.

Il s'agit en outre du rapport basé sur la 9e Révision de la Classification internationale des maladies (CIM-9), qui a été publiée au Canada en 1979. La restructuration de la Classification et quelques changements dans les critères internationaux de sélection des causes ont amené une rupture de continuité avec les révisions précédentes. Par conséquent, des comparaisons entre les données sont difficiles. Toute comparaison directe des catégories de la CIM-9 avec celles des autres révisions, que ce soit selon le numéro de la catégorie ou selon le nom de la maladie, devrait être faite en référence à la fois à la CIM-9 et aux classifications précédentes. A cet égard, une attention particulière devrait être portée à certaines catégories ou sections de la CIM-9, notamment la catégorie 558, qui contient des maladies précédemment classées dans le chapitre des maladies infectieuses; la catégorie 579, qui contient certaines maladies que l'on trouvait précédemment dans le chapitre des troubles endocriniens; les catégories 390-398 et 424, où l'on ne suppose plus que certaines maladies sont d'origine rhumatismale; les catégories 401, 402, 414 et 429, où des changements dans l'attribution des noms des maladies et dans les critères de regroupement sont à l'origine d'une redistribution des cas; les catégories de l'asthme, de la bronchite et de l'emphysème (490-493), qui sont dorénavant distinctes; la section intitulée "Grossesse aboutissant à l'avortement" (630-639), qui comprend maintenant les grossesses ectopiques; le chapitre sur les affections périnatales, où les groupes d'âge ont été modifiés; et le chapitre sur les symptômes, dont certains ont été placé dans d'autres chapitres relatifs à des syndromes précis.

The reader is cautioned that because of space limitations the titles of disease categories and sub-categories have been arbitrarily condensed, where necessary, from those appearing in the ICD-9 manual; as in previous editions, the three and four-digit categories for which there were no deaths in the current year have been excluded.

Rappelons que, faute d'espace, les titres des catégories et des sous-catégories de maladies ont été condensés arbitrairement au besoin; en outre, comme dans les éditions antérieures, les catégories auxquelles aucun décès n'a été attribuable durant l'année visée sont exclues. Par ailleurs, comme il y a eu restructuration considérable de la CIM, une comparaison directe de la 9e Révision avec les autres, que ce soit selon les catégories ou les titres de maladie, ne peut en aucun cas être faite sans référence aux classifications précédentes.

## METHODOLOGICAL NOTE

### Data Compilation

Under a federal-provincial agreement the registration of births, stillbirths, marriages and deaths is the responsibility of the provinces and territories under the appropriate Vital Statistics and other related acts. These acts require not only that the event themselves be reported within a prescribed time but also that certain uniform items of statistical information be recorded. Under this agreement microfilm copies of the registration are supplied to Statistics Canada for compilation of national vital statistics. Subsequent changes to registration due to errors or omissions are transmitted to Statistics Canada by means of an appropriate document.

In addition, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia supply machine readable statistical abstracts of the events registered.

### Data Processing

Statistics Canada converts to machine readable form data for the Atlantic provinces and the Territories. In addition Statistics Canada codes the cause of death, and other data for Newfoundland and the Territories.

Prior to tabulation all machine readable vital statistics data are subjected to a computer edit. The computer edit identifies all records where the coded information does not match predetermined values or ranges of values and where certain correlations among coded data items do not meet specified rules. All records so identified are compared to corresponding registrations.

### Quality and Coverage

The most recent study of completeness of coverage was done in 1939 at which time it was estimated that in excess of 90% of all events were registered. Because of subsequent administrative and legal developments it is assumed that coverage is nearly 100%. Reports(1,2) have been prepared for 1976 and 1979 which present quality measurements with

## NOTE MÉTHODOLOGIQUE

### Compilation des données

À la suite d'un accord fédéral-provincial, c'est aux provinces et aux territoires qu'il incombe d'enregistrer les naissances, les mortinaissances, les mariages et les décès, conformément aux lois concernant la statistique de l'état civil et aux autres lois connexes. En vertu de ces lois, il faut non seulement que ces faits soient déclarés dans un délai prescrit mais aussi que certains éléments d'information statistique soient enregistrés. Aux termes de l'accord, les microfilms des enregistrements sont remis à Statistique Canada qui compile la statistique de l'état civil à l'échelle nationale. Les changements ultérieurs apportés aux enregistrements à la suite d'erreurs ou d'omissions sont communiqués à Statistique Canada au moyen d'un document approprié.

De plus, le Québec, l'Ontario, le Manitoba, la Saskatchewan, l'Alberta et la Colombie-Britannique fournissent des analyses statistiques des renseignements enregistrés qui sont lisibles par une machine.

### Traitement des données

Statistique Canada convertit dans une forme lisible par une machine les données qui proviennent des provinces de l'Atlantique et des Territoires et code en outre les causes des décès et d'autres données provenant de Terre-Neuve et des Territoires.

Avant la totalisation, toutes les données de la statistique de l'état civil lisibles par une machine sont soumises à une vérification mécano-graphique qui repère tous les enregistrements où les renseignements codés ne correspondent pas aux valeurs ou aux gammes de valeurs prédéterminées et où certaines corrélations entre les éléments des données codées ne satisfont pas aux règles prescrites. Toutes les données ainsi identifiées sont comparées aux bulletins correspondants.

### Qualité et champ d'observation

La dernière évaluation de la couverture de l'enquête remonte à 1939 et, à cette époque, il a été estimé que plus de 90 % de tous les cas avaient été relevés. Par suite de modifications administratives et législatives qui ont été apportées de 100 %. Il existe deux rapports(1,2) sur les données de 1976 et 1979 qui présentent une évaluation de la qualité des principales

- (1) Content Analysis and Quality Assessment of Vital Statistics Data (A Pilot Study), a working paper, Health Division, Statistics Canada, 1981.
- (2) Quality Assessment of Causes of Death and Stillbirths - data year 1979.

- (1) Évaluation de la qualité des statistiques de l'état civil - (étude-pilote), document de travail, Division de la santé, Statistique Canada, 1981.
- (2) Évaluation de la qualité des données sur les causes de décès et de mortinaissances - année 1979.

respect to major demographic and medical characteristics of vital data. The 1976 report is available upon request and the 1979 report will be available when finalized.

Because of operational considerations "cut-off" dates have been established. Records received after the "cut-off" date are not statistically tabulated. The impact of this practice is being assessed.

caractéristiques démographiques et médicales de l'état civil. On peut se procurer sur demande le rapport de 1976 et le rapport de 1979 sera disponible dès qu'on disposera de la version finale.

Vu les impératifs de l'exploitation, des dates limites d'inclusion ont été fixées. Les renseignements reçus après ces dates ne sont pas totalisés statistiquement. L'incidence de cette façon d'agir fait actuellement l'objet d'une évaluation.
