Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

The 1993 General Social Survey Tables in Victimization

The tables contained in this document are results from the criminal victimization portion of the 1993 General Social Survey on Personal Risk (GSS - Cycle 8). This survey marks the first repeat of the 1988 GSS core subject on Personal Risk. Early in 1988 and throughout 1993, the GSS conducted telephone interviews with approximately 10,000 Canadian adults aged 15 years and over. The sample in both cases targeted the non-institutionalized population in the ten provinces, excluding households without telephones (2% of the population). Response rates in both surveys were 82%.

The purpose of these tables is two-fold. Firstly, they provide results from the 1993 survey; and secondly since the 1993 survey was essentially a replication of the 1988 GSS, they provide a means of exploring the changes which have or have not occurred over the five-year period.

The 1988 version of each table is published in Patterns of Criminal Victimization in Canada (Statistics Canada Catalogue No. 11-612E, No.2¹). Before comparisons of results from the surveys are made, Working paper #7 entitled Overview of the 1993 General Social Survey on Personal Risk (GSS-8) should be consulted (see Appendix I). This document provides a summary of question changes from the 1988 GSS (Cycle 3) questionnaire and the reasons for these changes, information essential for proper comparability.

Other reference material can be found in the two reports which first released data from the 1993 GSS. They are:

- (i) the **Juristat** Trends in Criminal Victimization: 1988-1993 (STC Catalogue 85-002, June 1994, Vol.14, No. 13) ²; and
- (ii) the Daily (STC Catalogue 11-001, June 13, 1994; see Appendix II).

¹ To order, see For More Information

² For more information on the **Juristat** and **Daily** releases, contact (613) 951-9023 or toll-free 1-800-387-2231.

For More Information

More information about this survey can be obtained from the individuals listed below. Data from the survey are available through published reports, special request tabulations, and a microdata file. The microdata file is available from the Housing, Family and Social Statistics Division of Statistics Canada at a cost of \$1500. Tabulations can be obtained at a cost that will reflect the resources required to produce the tabulation. To order publications, call Marketing Division, Publication Sales, Statistics Canada 1-800-267-6677. Outside Canada and the U.S. call (613) 951-7277

List of Tables

The following table titles are contained in this document. The table numbers match those of the corresponding 1988 version appearing in **Patterns of Criminal Victimization in Canada**. Four of the tables (Tables 16, 20, 21 and 36) could not be replicated since the required variables do not exist in 1993.

Table

- 1. Population 15 years and over by victimization, urban/rural residence, sex and age group, Canada, 1993
- 2. Number of criminal victimizations and victimization rates per 1,000 population for personal victimizations and per 1,000 households for household victimizations by type of incident, urban/rural residence and region, Canada, 1993
- 3. Number of personal victimizations and victimization rates per 1,000 population by type of incident, urban/rural residence, sex and age group, Canada, 1993
- 4. Number of personal victimizations and victimization rates per 1,000 population by type of incident, sex and education, Canada, 1993
- 5. Number of personal victimizations and victimization rates per 1,000 population by type of incident, sex and marital status, Canada, 1993
- 6. Number of personal victimizations and victimization rates per 1,000 population by type of incident, sex and main activity, Canada, 1993
- 7. Number of personal victimizations and victimization rates per 1,000 population by type of incident, sex, age group and number of evening activities, Canada, 1993
- 8. Number of personal victimizations and victimization rates per 1,000 population by type of incident, sex and type of drinker, Canada, 1993
- 9. Number of personal victimizations and victimization rates per 1,000 population by type of incident, age group and type of drinker, Canada, 1993
- 10. Number of household victimizations and victimization rates per 1,000 households by type of incident, urban/rural residence and household income, Canada, 1993
- 11. Number of household victimizations and victimization rates per 1,000 households by type of incident by household size, then dwelling type then ownership, Canada, 1993
- 12. Population 15 years and over by perceived level of crime in neighbourhood compared to other areas by urban/rural residence and age group, Canada,1993

- 13. Population 15 years and over by perceived change in level of crime in neighbourhood during the past 5 years by urban/rural residence and age group, Canada
- 14. Population 15 years and over by perceived change in level of crime in neighbourhood during the past 5 years by urban/rural residence and household income, Canada, 1993
- 15. Population 15 years and over by feelings of safety walking alone in neighbourhood after dark by urban/rural residence, sex and age group, Canada, 1993
- 17. Population 15 years and over by perception of local police doing a "Good" job by sex and region, Canada, 1993
- 18. Population 15 years and over by perception of local police doing a "Good" job by contact with police, Canada, 1993
- 19. Population 15 years and over by perception of the criminal courts doing a "Good" job by sex and age group, Canada, 1993
- 22. Population 15 years and over who adopted specified defensive behaviours in the last 12 months by sex and marital status, Canada, 1993
- 23. Population 15 years and over who adopted specified defensive behaviours in the last 12 months by urban/rural residence and age group, Canada, 1993
- 24. Population 15 years and over who adopted specified defensive behaviours in the last 12 months by age group and household Income, Canada, 1993
- 25. Number of criminal victimizations by season of occurrence and type of incident, Canada, 1993
- 26. Number of criminal victimizations by location and type of incident, Canada, 1993
- 27. Number of criminal victimizations by recovery status of stolen property and type of incident, Canada, 1993
- 28. Number of criminal victimizations by economic costs and type of incident, Canada, 1993
- 29. Number of criminal victimizations by difficulty carrying out main activity, sex and age group, Canada, 1993
- 30. Number of criminal victimizations by difficulty carrying out main activity and type of incident, Canada, 1993
- 31. Number of criminal victimizations reported to the police by age group and type of incident, Canada, 1993

- 32. Number of criminal victimizations reported by the victim by reasons for reporting to the police, sex and type of incident, Canada, 1993
- 33. Number of criminal victimizations not reported to the police by reasons for not reporting, sex and type of incident, Canada, 1993
- 34. Number of criminal victimizations by efforts to achieve compensation through insurance company and type of incident, Canada, 1993
- 35. Number of criminal victimizations by efforts to achieve compensation through insurance company and household income, Canada, 1993

APPENDIX I

Overview of the 1993 General Social Survey on Personal Risk (GSS-8)

PREFACE

This report provides a history of the development of the 1993 General Social Survey (Cycle 8) from questionnaire design to data collection. Specifically, it examines changes and omissions from the 1988 GSS (Cycle 3) questionnaire and the reasons for these changes. In addition, it provides a summary of question comparability with Cycle 3, the 1993 Violence Against Women Survey (Statistics Canada), and the 1989 National Alcohol and Other Drugs Survey (Health and Welfare).

Figure 3 GSS Cycle 3 Personal Risk Flow Chart

BACKGROUND

The General Social Survey (GSS), conducted annually, provides policy makers and analysts with national statistical information on the living conditions and well being of Canadians. The GSS has two main objectives: first, to monitor changes in Canadian society over time, and second, to provide information on specific policy issues of a current or emerging nature.

The GSS operates on a five year repeating cycle, each year examining one of five subject areas which form the core content of the survey. Health, time use, personal risk, education and work, and the family are the five core content subjects which are rotated during each five year cycle. Core sections (see Figure 1) provide a data source for monitoring trends in Canadian society.

Focus content of the survey obtains statistical information on specific areas which are of particular interest to federal or provincial departments or other user groups. For example, focus content for Cycles 1, 2 and 3 examined social support, language and victim's services, respectively (see Figure 1).

A third and final component of each General Social Survey consists of classification which provides the means of delineating population groups and is used in the analysis of the core and focus data. Examples of classification variables include age, education and income (see Section E of 1993 questionnaire).

While resources for classification and core are included as part of the standard GSS budget, costs associated with focus content are recovered from sponsors.

The sample size targeted for each General Social Survey is 10,000. However, interested users can purchase additional sample size for specific target groups or provinces to meet special policy information needs. The sample size was increased in Cycles 1, 2, 5 and 6.

Figure 1

Cycle	End of Collection	Core Content	Focus Issue	Additional Sample	Target of Over - sample

^{**} Flu shots, job benefits, sources of pension/disability income, health status indicators and emotional well-being.

B. Personal Risk Survey Rationale

The eighth cycle of the GSS marks the first repeat of the GSS core subject on Personal Risk related to criminal victimization and accidents (see GSS 1988 - Cycle 3). One important application of data on personal risk is to measure the incidence of accidents and criminal victimization in order to complement the officially reported data for these incidents as derived from administrative sources.

Hospital morbidity data, workers' compensation data, workers' accident and injury data and vital statistics are all potential sources of data relating to accidents in Canada. However, many accidents are not reported by these programs and information can only be obtained directly from accident victims as reported in a general population survey. The data from Cycle 8 of the GSS complement existing statistics and provide insight into the social and demographic characteristics of Canadians who have experienced an accident in the home, at work, during recreation, or on the road during the past 12 months. Periodic collection of information concerning personal risk of accidents provides important information for policy makers, legislators, academics and other persons involved with prevention programs.

Similarly, official crime statistics have long been available from such sources as the police, courts and prisons. However, population surveys like GSS Cycle 8, which focus on the victimization experience, provide an important complement to officially recorded crime rates as they measure both those offenses which are reported to the police and those which are not. This survey also taps the victim's experience of crime, revealing the consequences of crime for victims, the reason victims decide to report offenses to the police, as well as Canadian's perceptions of the level of crime around them. Periodic collection of information concerning personal risk of criminal victimization provides important information for criminal justice planners, policy makers, legislators and medical practitioners.

C. 1993 GENERAL SOCIAL SURVEY

1. GENERAL

The core content for the 1993 GSS, personal risk, is based primarily on the core variables used in the 1988 GSS Cycle 3. The following subjects are common to both:

- perception of crime
- perception of police
- perception of courts

- crime prevention precautions
- frequency of evening activities
- accident screening section
- criminal victimization screening section
- accident report
- crime incident report

As well, measures of fear of crime and childhood injuries were identified as appropriate additions to the core content.

Focus content for Cycle 8 covers alcohol and drug use. In addition to being related to some of the core content, these data will provide an update to information first collected in the 1989 National Alcohol and Other Drugs Survey. This focus content is being sponsored by the Health Promotion Directorate of Health and Welfare Canada. It should be noted that focus content for the 1988 survey, knowledge and perceptions of various criminal justice services (police, courts, assistance programs), is not part of the 1993 survey.

The target population of the 1993 General Social Survey consists of all persons aged 15 and over living in the 10 provinces of Canada, with the exception of full-time residents of institutions. The population will be sampled by random digit dialling (RDD) techniques.

Data for this Cycle will be collected monthly, over the period February 1993 to December 1993 inclusive. Collection will take place from four regional offices - Halifax, Montreal, Winnipeg, and Vancouver. The target sample size for Cycle 8 is 10,000, with an expected response rate of approximately 80%.

The comparable 1988 survey collected data from 9,870 persons during the period January 22nd to February 27th, 1988. Collection took place from Statistics Canada's eight regional offices. A response rate of 82.4% was achieved.

2. COMPUTER ASSISTED TELEPHONE INTERVIEWING (CATI)

Cycle 8 is the first time GSS will collect data using Computer Assisted Telephone Interviewing (CATI). With CATI, the survey questions appear on a computer monitor. The interviewer asks the respondent the questions, then enters the responses into the computer as the interview progresses. Built-in edits and fewer processing steps result in more timely and better quality data. CATI methodology also eliminates the need for paper and pencil questionnaires, as in previous GSS cycles. These forms were produced, however, as reference documents (see Appendix C). In Cycle 8, the CATI system provides the interviewer with four main "components" which can be imagined to represent four paper questionnaires.

QUESTIONNAIRE	AGE GROUP	TITLE
GSS 8-1	All age groups	Survey Control Form
GSS 8-2	Age 15 and over	Personal Risk Questionnaire
GSS 8-2F	Age 15 and over	Accident Report
GSS 8-2G	Age 15 and over	Crime Incident Report

It should be noted that there are slight differences between the appended forms and the CATI version of the survey. Specifically, random selection of the respondent is now done by the computer rather than taken from a pre-printed Selection Grid Label. Furthermore, the CATI version asks the respondent for information regarding the relationship of each household member to the selected respondent, while in previous cycles and in the version appended, relationship to a designated reference person for each household economic family was collected (reference Z9 of GSS 8-1). Other differences involve items which appear on the forms but do not appear on the CATI version. For example, interviewer check items are visible on the questionnaire but exist only as internal edits on the CATI system. Similarly, skip patterns are visible on the questionnaire but exist internally on the CATI system. Lastly, a few questions, such as date of birth and language first spoken in childhood, are asked in a different manner using CATI (e.g. instead of asking date of birth, CATI asks three separate questions - year of birth, month of birth and day of birth).

4. SURVEY CONTROL FORM

The GSS 8-1 is completed for each telephone number generated in the sample. When a private household is contacted, all members of the household are enumerated and basic demographic information (age, sex, and marital status) is collected for each household member. A respondent, aged 15 years of age or older, is then randomly selected by a CATI algorithm. The relationship of each household member to the selected respondent is determined and the main questionnaire (GSS 8-2) is completed for the respondent. Proxy interviews are not accepted.

5. PERSONAL RISK QUESTIONNAIRE

The main component of the survey (GSS 8-2) collects information on the following topics: the respondent's attitudes towards various components of the judicial system, satisfaction with various aspects of the judicial system, perception of risk with regard to accidents and crime incidents (Section A); information on the kind and number of times the respondent

had been involved in an accident (Section B)¹ or a crime incident (Section C) during the past 12 months, information on alcohol and drug use (Section D) and basic background information on the respondent (Section E). Based on pilot test data, the sequence in which the questions were asked for GSS 8 (1993) was altered. The sequence of questions for GSS 8 follows the pattern outlined in Figure 2 (Section A, B, C, F, G, D, E and H) not that outlined by the questionnaire presented in Appendix C.

The 1993 survey content (see Appendix C) was designed to be comparable, where possible, with the 1988 GSS (see Appendix B) and to a lesser extent with other GSS cycles. Appendix A presents a question by question summary of comparability.

The following sections describe the contents of the personal risk questionnaire and indicate changes that have been made in comparison to the 1988 GSS. Figures 2 and 3 illustrate the flow pattern of both questionnaires.

A. PERCEPTIONS, HISTORY AND RISK

This section collects information on a variety of issues dealing with perception of crime and accidents, contact and satisfaction with various aspects of the criminal justice system, crime prevention measures and frequency of evening activities, all of which were repeated from the 1988 GSS. A new set of questions on "fear of crime" has been incorporated into the 1993 survey. This was accomplished by transferring a subset of questions (A9 -A14) on "fear of crime" from the Violence Against Women Survey also scheduled to be conducted in 1993. As well, questions concerning contact with police (A19a - A19e), precautions taken by the respondent to avoid being a victim of crime(s) (A20A, A22a-e) or involved in an accident(s) (A24a-d, A26) were included. Furthermore, questions regarding the most serious crime the respondent has been a victim of (A21) and satisfaction level with personal safety (A23) were incorporated.

B. ACCIDENT SCREENING

This section collects information on the kind and number of times the respondent has been involved in an accident over the past 12 months. Each time an accident is reported in this section an Accident Report (Section F) is completed. Questions in this section are, for the most part, a repeat of the 1988 GSS questions however, a few changes were made. Instead of referring to the past year (e.g. 1987), the 1993 GSS asks respondents to refer to the previous 12 months. This change was made to simplify the reference period concept for respondents now that data is collected monthly throughout the year.

Section B also collects information regarding accidents involving one of the respondent's randomly selected children, aged less than 15 years, and living in the same household.

"d" CRIMINAL VICTIMIZATION SCREENING SECTION

-Identifies respondents who were victims of crime

* "a" denotes section A of the questionnaire in Appendix B

Furthermore, the definition of "accident" has been broadened from the narrower focus of Cycle 3 to include "required medical attention from a doctor or nurse" as another criteria which will screen a respondent into Section F (Accident Report) of the questionnaire. The definition was broadened as a safety measure to ensure that accidents, which are of significance to the health care system, are not somehow being missed by the Cycle 8 screening criteria. Additionally, extending the definition of what constitutes an accident may act as a trigger for memory and prompt respondents to remember an accident previously forgotten. Respondents having children less then 15 years of age and living in the same household were also asked a module of questions (B11-B25) regarding accidents/injuries suffered by one of their (randomly chosen) children. This was added to compensate for the current information deficiency on childhood injuries.

C. CRIMINAL VICTIMIZATION SCREENING

This section collects information on the type and number of times the respondent has been a victim of crime over the past 12 months. Each time a crime is reported in this section a Crime Incident Report (Section G) is completed. Questions in this section are, for the most part, a repeat of the 1988 GSS questions, however, a few changes have been made. Instead of referring to the past year (e.g. 1987), the 1993 GSS asks respondents to refer to the previous 12 months, again because of monthly data collection. Additionally, two questions (C9 and C10) regarding sexual assault have been taken from the Violence Against Women survey. The intent of these questions is to allow comparison with the Violence Against Women Survey, to provide a baseline for future trend analysis of change over time, and to collect information on men's experience with sexual assault.

D. ALCOHOL AND DRUG USE

The questions in this section were sponsored by Health and Welfare Canada and are designed to monitor changing patterns of alcohol and drug use. The majority of questions dealing with alcohol and drug use are comparable to the National Alcohol and Other Drugs Survey (NADS) conducted by Statistics Canada on behalf of Health and Welfare Canada in 1989. This section examines patterns of alcohol use (e.g. frequency, quantity), places people drink (e.g. bars, weddings), alcohol-related problems (e.g. problems with one's own alcohol use or with other people's alcohol use), and illicit and licit drug use.

E. CLASSIFICATION

Section E provides background characteristics of respondents regardless of whether they have been a victim of crime(s) or involved in an accident(s). Most classification questions have evolved with each cycle of the GSS. For Cycle 8, response lists were enlarged to

reduce manual coding of "other specify" responses for questions with response options which were not read to the respondent (e.g. ethnic origin, language first spoken). A question was also added to determine "handedness" (E23) of the respondent, as some literature has implied some association between handedness and accident history. As well, a question concerning activity limitation of the respondent (E24) was included. Furthermore, questions dealing specifically with hours worked per week (E30) and hours usually worked (E34) were added to this section. Finally, questions concerning a spouse's main activity (E40 -E45) were also incorporated.

F. CONTACTS FOR FOLLOW-UP

Beginning with the 1990 GSS on Family and Friends, each GSS cycle includes a final section asking respondents for detailed contact information that would facilitate a follow-up of some respect in the future. Currently, the GSS is considering re-interviewing respondents to link data from other cycles or re-interviewing respondents on the same topic five years later.

A pilot follow-up test was conducted in September 1990 using data from the 1990 Cycle 5 survey on Family and Friends and the 1991 Cycle 6 survey on Health. This test was successful and indicated longitudinal follow-up studies are feasible. Any longitudinal component for the main survey is contingent on funding support.

6. ACCIDENT REPORT

An Accident Report is completed for every accident reported in Section B of the Personal Risk Questionnaire. The Accident Report collects information on characteristics of accidents (e.g. date, time, place), consequences of accidents (e.g. injuries, disability days), causes of accidents and perceptions of preventability. For the most part, the 1993 Accident Report is similar to the 1988 Accident Report with the exception of the following changes: a module of questions dealing with accidents which occurred while participating in sports, exercise or recreational activity has been added (F14-F18); and questions concerning the relationship between accidents and alcohol or drug use have also been incorporated.

7. CRIME INCIDENT REPORT

A Crime Incident Report is completed for every crime reported in Section C of the Personal Risk Questionnaire. The Crime Incident Report collects information on characteristics of victimization incidents (e.g. date, time, place), consequences of victimization, both physical and financial, and perception of criminal justice services. A large part of the 1993 Crime Incident Report is similar to the 1988 Crime Incident Report. However a few changes have been made. Questions concerning threats made to the

respondent (G17 and G18) have been included. Inquiries as to whether the incident was related to the use of alcohol or drugs by the perpetrator or the victim (excluding victims of sexual assault) have also been added (G24a - G24c). Furthermore, the nature of police action (G57) as well as any other agencies contacted for help (G63) have been incorporated into the Crime Incident Report.

8. OPERATIONAL CHANGES

The 1985 and 1986 GSS cycles collected data in the fall starting in September. In subsequent cycles, (1988, 1989, 1990) collection started mid-January and ended mid-March. However, since some topics in the GSS are subject to seasonality (e.g. evening activities, alcohol use), the 1991, 1992 and 1993 surveys have used a monthly data collection procedure with a fraction of the interviews (approximately 960) being conducted each month. Due to the introduction of CATI, there was a one month delay in the start-up of the 1993 GSS, mandating a collapsing of data collection into an 11 month period.

In preceding cycles, two methods of random digit dialling were used: Elimination of Non-Working Banks (ENWB) and Waksberg. Since 1991, only ENWB has been employed. Waksberg was eliminated, as ENWB is more operationally efficient and telephone companies are now able to provide lists of working banks for essentially all areas in the ten provinces.

The majority of edits which normally would have been conducted during the editing phase, after the completion of data collection, are now programmed into CATI data collection. Errors and inconsistencies are now detected at the source and are resolved immediately with the respondent's co-operation. For example, the interviewer was told at the beginning of the interview that the respondent is 25 years of age. In section E, question E1, the respondent tells the interviewer her date of birth is 13/08/1966. The CATI system at this point will send an error message indicating that previously the respondent said she was 25 years of age, but the date of birth given is 1966. The CATI system will than ask which answer requires correction, thus allowing the interviewer to immediately clarify the situation with the respondent.

In the past, errors of this nature may have gone unnoticed until the data were transmitted to head office, at which point the edits would have rejected the case because of the inconsistency. The record would then be retrieved manually and the correction made. While manual edits will continue to be performed as part of second stage editing, CATI dramatically reduces the number of manual edits which have to be performed. This is expected to result in improved data quality and increased speed in data processing.

APPENDIX A QUESTION COMPARABILITY

Appendix A provides a comparison of the 1993 Cycle 8 and 1988 Cycle 3 questionnaires. Minor changes are distinguished by an "*". For example, the change in reference period from Cycle 3 to Cycle 8 was classified as a minor change. In Cycle 3 the reference period was "1987", in Cycle 8 the reference period is "the past 12 months". This change is relatively minor, in so far as the meaning of the question is not altered by this change in reference period (See, for example, question B1).

Changes classified as major are distinguished by an "X". For example, the definition of what constitutes an accident was broadened from Cycle 3 to Cycle 8 and now includes "required medical attention from a doctor or nurse". This change has been classified as major because the meaning of what constitutes an accident has been changed somewhat. Furthermore, the changes which have occurred to the question regarding education (E16 in Cycle 8) have been classified as major (and marked with an "X"). Changes to this question include adding the qualifier "excluding kindergarten", as well as changing elementary or high school to elementary and high school. In general, any alteration which changes the meaning of the question is considered major and marked with an "X".

MAJOR RELEASES

- Trends in criminal victimization, 1988-1993 The 1993 general social survey (GSS) shows that overall victimization rates either remained the same or decreased since 1988. About one-quarter of the over 10,000 respondents to the GSS in 1993 indicated that they had been victims of at least one crime in the previous year; in 1988, when the victimization survey was first conducted, the proportion was the same.
- New housing price index, April 1994 In April, the 12-month rate of change for the index decreased to -0.2%, its first negative rate of change since May 1992.

MAJOR RELEASES

Trends in criminal victimization 1988-1993

Canadians were no more at risk of becoming victims of crime in 1993 than they were five years earlier, according to the 1993 general social survey (GSS). The survey's results show that overall rates of victimization have either remained the same or decreased since 1988.

One in four Canadians is a victim of crime

About one-quarter of the 10,385 Canadians aged 15 and over who responded to the survey in 1993 indicated that they had been victims of at least one crime in the preceding year. That was the same proportion as in 1988, when the victimization survey was first conducted.

Judging from these results, in 1993 Canadians were at no more risk of being victims of any of the crimes examined in the survey than they were in 1988.

The likelihood of an individual being the victim of an assault, robbery or personal theft either decreased or remained unchanged from 1988 to 1993. The same was true for the chances of a household being victimized through incidents such as breaking and entering, motor vehicle theft, theft of property, or vandalism.

Although the overall levels of victimization recorded by the GSS changed little, perceptions of personal safety changed somewhat. For example, fewer Canadians in 1993 indicated that they felt "very safe" walking alone in their neighbourhood after dark. The percentage dropped to 32% in 1993, from 40% in 1988.

Canadians were also divided on whether crime had increased in their neighbourhood. Nearly one in two (46%) believed that crime had increased. But about the same proportion believed that it had either stayed the same (43%) or decreased (4%) over the five-year period. The remaining 8% expressed no opinion.

Generally, it appears that Canadians believe that their own neighbourhood has the same amount or less crime than other areas of Canada. Crime may be perceived as a problem, but, for the most part, Canadians see it as being located elsewhere.

Note to users

This report uses information from the 1993 and the 1988 general social surveys (GSS) on personal risk. For the 1993 survey, telephone interviews were conducted from February to December 1993 with 10,385 Canadian adults aged 15 and over. Respondents were asked about their experiences with crime and with the criminal justice system in the 12 months preceding the interview. Although this reference period includes part of both 1992 and 1993, the results are, for clarity, cited as 1993. The reference period for victimizations surveyed in 1988 was the previous calendar year (1987). However, for questions related to "feelings of safety" and "perceptions of crime" the reference period was the time when the respondent was surveyed (early 1988). Again, for clarity, the results are simply cited as 1988.

For both surveys, the sample targeted the non-institutionalized population in the 10 provinces, excluding households without telephones (2% of the population). The survey's results are representative of the Canadian population aged 15 years and over.

Since 1985, the GSS has collected data on the living conditions and well-being of Canadians. Its objectives are to monitor changes in society over time and to produce information on specific policy issues of current or emergent interest. The five-year repeating cycle examines one of the five core content subjects: health, time use, personal risk, education and work, and family.

Future releases will concentrate on the remaining two main content areas of cycle 8: accidents, and alcohol and drug use.

Definitions of victimization

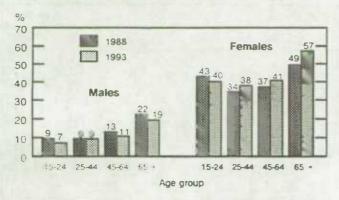

Personal victimization includes crimes of: theft/attempt of personal property, sexual assault, robbery/attempt, and assault. (Overall personal victimization rates in 1988 and 1993 are not strictly comparable because of a change in the measurement of the incidence of sexual assault in 1993.)

Violent victimization includes crimes of: sexual assault, robbery/attempt, and assault.

Household victimization includes crimes of: break and enter/attempt, motor vehicle theft/attempt, theft of household property/attempt, and vandalism.

Crime reported to the GSS by respondents may or may not have been reported to the police. Consequently, differences exist between GSS data and crime statistics reported by police departments.

Females felt less safe walking alone in their neighbourhood after dark in 1993¹

Includes the categories "very unsafe" and "somewhat unsafe".

Source: general social survey, 1988 and 1993

Women and young people face higher risks

In the 1993 survey, the total personal victimization rate for young Canadians aged 15 to 24 was three times that for those over the age of 24, and was 11% higher for women than for men (largely because sexual assaults are rarely perpetrated against males).

For personal theft and assault, women's rates were similar to men's rates in the 1993 survey, while the robbery rate for men was double that for women (12 incidents per 1,000 population for men vs 6 incidents per 1,000 population for women).

Marital status also seemed to influence victimization rates in 1993. Separated or divorced women had the highest rate of personal victimization. The rate for separated and divorced women was twice as high as the rate for separated and divorced men (374 incidents per 1,000 population for women vs 187 incidents per 1,000 population for men).

As well, the single women's rate was 27% higher than the single men's rate. Married women and married men had the same total victimization rate (85 incidents per 1,000 population).

Strangers are committing higher proportions of offenses

Although most violent offenses were committed by offenders known to the victim in both survey years, a higher proportion of violent victimizations were committed by strangers in 1993 than in 1988.

The proportion of assaults committed by strangers increased to 38%, from 27%. The proportion of robberies committed by strangers increased to 67%, from 45%. In fact, robbery was the only offence category in which strangers comprised the majority of offenders in 1993. As for sexual assaults, only 22% were committed by strangers in 1993.

A substantial number of crimes are never reported

The 1993 victimization survey showed, as did the 1988 survey, that a substantial number of victimizations are never reported to the police.

Most notably, 90% of sexual assaults and 68% of non-sexual assaults were never brought to the attention of the police. Robbery was the only crime that showed evidence of an increase in reporting from 1988 (32% reported) to 1993 (47% reported).

Individuals apparently reported crimes when they perceived it to be useful. The most common reasons given in 1993 for not reporting an incident were: the crime was best dealt with in another way, the crime was too minor, and the police could not do anything about it.

However, for about 3 of 10 sexual assaults and for about 1 of 5 assaults, respondents listed "fear of revenge" as a reason for not reporting the crime.

The vol. 14, no. 13 issue of *Juristat: trends in criminal victimization*, 1988-1993 (85-002, \$5/\$60) is now available. See "How to order publications".

For further information on this release, contact Christine Wright (613-951-6643) or Gord MacKay (613-951-6659), Canadian Centre for Justice Statistics.

For further information on the general Social Survey, contact Ed Praught (613-951-9180), Housing Family and Social Statistics Division.

Personal victimization rates per 1,000 population

Victim		Type of incident
