INTRODUCTION

As a Contracting Party to the Convention on the Harmonized Commodity Description and Coding System (Harmonized System or HS), Canada is obliged to conform its statistical nomenclature with the Harmonized System. Article 3 of the Convention states in part that "it shall use all the headings and subheadings of the Harmonized System without addition or modification, together with their related numerical codes". Article 3 goes on to state that a Contracting Party may establish statistical nomenclature subdivisions beyond the level of the Harmonized System, provided that any such subdivision is coded at a level beyond that of the six-digit HS numerical code and additive to it.

This document presents the Canadian Export Classification, prepared by Statistics Canada, which will allow Canada to meet its obligations, under the HS Convention, with respect to export trade statistics.

Commencing on January 1, 1988, Canadian exporters or their agents, will be required to assign an Export HS number on all export transactions. This manual lists all the possible export HS numbers and their accompanying description. (Instructions for the completion of export declarations are to be found in Revenue Canada, Customs and Excise D-Memorandum 20-1-1 and 20-1-2.)

The Structure of the Canadian Export Classification

The Canadian Export Classification is a structured, hierarchical classification system based on the Harmonized Description and Coding System. The HS nomenclature is divided into 21 Sections, which in general, group goods produced in the same sector of the economy. For example: Section IV, 'Prepared Foodstuffs; Beverages, Spirits and Vinegar; Tobacco and Manufactured Tobacco Substitutes' (i.e. agricultural products) and Section VI 'Products of the Chemical or Allied Industries' etc. (i.e. chemical products, etc.).

Each Section is comprised of one or more Chapters with the entire nomenclature being composed of 97 Chapters (Chapter 77 is reserved for possible future use). The Chapters of Sections I to XV (except Section XII) are grouped by Biological Genus (Section I, Chapters 1-5 Live Animals, Animal Products, Fish, Dairy Produce etc.) or by the Raw Material from which articles are wholly or mainly made (e.g. Section VIII contains Chapter 41 - Raw Hides and Skins; Chapter 42 Articles of Leather, etc.).

In Sections I to XV (except Section XII) the groups of products formed according to their basic material are structured or divided in two ways:

Horizontal - For the groups of products formed according to their basic material there is no apparent hierarchical order (e.g. Chapter 39 - 'Plastics and Articles Thereof'; Chapter 44 - 'Wood and Articles of Wood'; i.e. there is no discernable reason that Plastic should precede Wood.

Vertical - For those chapters in which goods are grouped by raw material there is, however, a vertical structure in which articles are often classified according to their degree of processing. For example, Chapter 44 contains items such as rough wood, wood roughly squared, and some wooden finished products such as wooden tableware.

Articles may also be classified according to their use or function. This mainly occurs in Section XII and Sections XVI-XXI. For example, Section XVII contains:

- Chapter 86 - Railway Locomotives, etc.
- Chapter 87 - Vehicles Other than Railways, etc.
- Chapter 88 - Aircraft, etc.
- Chapter 89 - Ships, etc.

The Canadian Export HS Number is based on the international six digit 'root' with an additional 2 digits added for Canadian domestic purposes. For example, Export HS Number 0101.19.10 is divided, with each 'component' named as follows:

<u>0101.19.10</u>	
01	Chapter
01.01	Heading
0101.19	Subheading
0101.19.10	Export HS Number

There are three points which should be noted with respect to the Export HS Number:

- i) Although the majority of the subheadings in the Canadian Export Classification have no further breakdown for domestic purposes, it is necessary to include '00' in the 7th and 8th digits for consistency purposes.
- ii) The proper way of writing the Export HS number is to insert a period between the 4th and 5th digits (separating the heading and subheading) and between the 6th and 7th digits (separating the subheading and the statistical suffix) as in the following example:

0101.19.10
- iii) There is a correlation between the numbering scheme and the 'dashes' which appear before the text. If there is no detail beyond the fifth digit (e.g. the sixth digit is a zero) there is one 'dash'. Detail at the sixth digit is shown by two 'dashes'. Similarly, detail at the seventh and eighth digits are shown by three and four dashes respectively. This logic of the numbering and dashes facilitates the interpretation of the classification system.

Example:

08.02 Other nuts, fresh or dried, whether or not shelled or peeled
 -Almonds

0802.11 --in shell

0802.12 --Shelled

In this example it should be noted that subheading 0802.11 (--in shell) relates to almonds, in shell.

Chapter 98: Special Transactions - Trade, Non-Trade

Chapter 98 has been reserved for the classification of certain commercial transactions which are not, for various reasons, classified by commodity in trade statistics as well as certain transactions which do not have an international financial implication or which, for various reasons are better considered separately from merchandise trade in economic analysis. Some examples of such transactions might be contractors' outfits, small value shipments (see D20-1-1), settlers' effects and tourist purchases.

Abbreviations and Symbols

A list of abbreviations and symbols which may appear in the text of Export HS numbers is provided, for your convenience, on page xi.

Units of Measure

The Harmonized System is an international classification and, as such, utilizes the metric system to collect quantity information. The actual codes, which are listed on page x, are extracted from a list developed by the International Standards Organization (ISO). Each option is represented by a three character alphabetic abbreviation. When completing an export declaration, one must take care to ensure that the quantity information placed in the quantity field corresponds to the unit of measure code required.

In some instances (e.g. Sections XVI and XVII) the treatment of parts and accessories may affect the interpretation of units of number. Whenever finished parts and accessories of a commodity are included with the commodity in a single Export HS Number, the value of the class covers the total value of all shipments of the commodity including parts and accessories, but the unit of number refers only to the number of complete units exported. For example, should the shipment consist only of bona fide 'parts' classifiable within a heading having no parts provision, the quantity field should be left blank.

Notes

The Harmonized System is international. In order to promote consistency, this system utilizes an extensive series of 'Notes' which serve to define the scope, or intent of a particular area of the HS. There are several types of Notes:

- i) **LEGAL NOTES** - These are internationally developed notes which are embodied in the text of the Canadian Export Classification. There are two broad types of Legal Notes - Section Notes, when present, are found at the beginning of certain sections; and Chapter Notes may be found at the beginning of a Chapter. Both Section and Chapter Notes function to define the scope of their respective areas. For example, a Section or Chapter Note may begin with "This Section (Chapter) does not cover ...", which acts as an Exclude note. As well, definitions of terms may be provided. Section and Chapter Notes may also include references to the subheading level (Subheading Legal Notes).

In reading the Legal Notes the phrase 'Throughout the Nomenclature' (TTN) will be encountered. In general, Legal Notes refer only to a

specific Section, Chapter, Heading or Subheading and cannot be extended beyond these bounds. An exception to this restriction is those notes which are preceded by the phrase 'Throughout the Nomenclature'. These references appear only once in the nomenclature and are not repeated even though they may apply in another Section or Chapter. A list of these references is provided on page xii.

- ii) EXPLANATORY NOTES - These notes represent the opinions of the Customs Co-operation Council on the interpretation and application of the Harmonized System. They are published in four separate volumes and provide a reprint of the Section and Chapter Legal Notes plus general Explanatory Notes to Section, Chapter, Heading and certain Subheadings.

General Interpretative Rules

The Harmonized System is based on six rules which are used to unequivocally classify products to one number or code. For example, situations may arise in which more than one heading, subheading, etc. may appear equally applicable for a given item. The Interpretative Rules serve to resolve such dilemmas. There are six rules for the interpretation of the HS and two Canadian Rules for the interpretation of the statistical suffixes plus an additional Rule concerning the terminology used in the Canadian Export Classification. These rules are reprinted on page xx.

Classification of Goods

There are seven steps to follow in order to choose the correct Export HS number under the Canadian Export Classification.

- 1 Determine the Section and Chapter
- 2 Compare all Headings while reading the applicable Legal Notes
- 3 Read heading explanatory notes
- 4 Select the proper heading
- 5 Compare equivalent level subheadings while reading subheading notes (legal and explanatory)
- 6 Choose subheading
- 7 Repeat for the statistical suffix

It is important to remember that, in order to avoid classification errors, all applicable notes should be taken into consideration.

To illustrate the search steps involved we might use as an example an exportation of dairy calves which are not pure-bred breeding animals.

- i) An examination of the 'Titles of Sections and Chapters' (page xxv) shows Section I, Chapter 1 to be the most probable section and chapter: (Section I - Live Animals; Animal Products; Chapter I - Live Animals).
- ii) A reading of the Section Notes tells us: "Any reference in this section to a particular genus or species of an animal, except where the context otherwise requires, includes a reference to the young of that genus or species" (Section Note 1). Therefore, young bovines (e.g. calves) will be included in the heading which provides for bovines (e.g. cows etc.). Similarly, a reading of the Chapter Notes (Chapter Note 3) to Chapter I

excludes "Animals of heading no. 95.08 (e.g. animals of "circus, menagerie, or travelling animal shows").

- iii) An examination of the headings of this Chapter reveals heading number 01.02 - 'Live Bovine Animals' as the most likely.
- iv,v) The heading number 01.02 explanatory notes ("This heading covers all animals of the sub-family 'Bovinae', whether or not domestic and irrespective of their intended use ...") provide further information on the animals included in the heading.
- vi) There is a subheading note for 0102.10 - 'Pure-bred breeding animals'. There are no subheading notes for 0102.90 - 'Other'.
- vii) Thus, the correct subheading is 0102.90.
- viii) A repetition of these steps leads us to the Export HS number 0102.90.10 - 'Dairy' as the correct code for the exportation of dairy calves which are not pure-bred breeding animals.

Parts

In general, parts are classified in the same manner as complete articles. The same seven steps are followed using, of course, all the General Interpretative Rules, Canadian Rules, Legal Notes and Explanatory Notes.

In a similar fashion to complete articles, the classification of parts is determined by the terms of the Headings, Legal Notes and General Interpretative Rules, and consequently will vary from section to section and chapter to chapter. As well there is an important 'Throughout the Nomenclature' note contained in the Section XV Note 2 which refers to 'Parts of General Use'. Consequently, when classifying parts in the HS one must distinguish between a "part" and "parts of general use". When a heading (or any other level) states "parts" it never includes "parts of general use". "Parts of general use" are always classified elsewhere.

Section XVI Note 2 contains three rules for the classification of parts of machines which are not "parts of general use" or provided for in headings of other chapters. In general, "parts of machines" are classified in the same heading as the machine if not named or provided for in other headings.

Relation to Other Classifications

Since the Canadian Export Classification is based on the international 6-digit HS, it is possible to directly relate export statistics, at this level, to import statistics, and, commencing with the annual 1988 data year, domestic production statistics.

There is an especially close relationship between the classifications for exports and domestic production. Both classifications are identical at the 6-digit level. Whenever the same detail (7th and 8th digits) is used in both classifications, it indicates exact comparability between the two, except in the case of some "Other" classes where exact comparability may require consideration of other classification numbers within the subheading to which the "Other" relates.

GENERAL RULES FOR THE INTERPRETATION OF THE HARMONIZED SYSTEM

Classification of goods in the Nomenclature shall be governed by the following principles:

1. The titles of Sections, Chapters and sub-Chapters are provided for ease of reference only; for legal purposes, classification shall be determined according to the terms of the headings and any relative Section or Chapter Notes and, provided such headings or Notes do not otherwise require, according to the following provisions:
2. a) Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), presented unassembled or disassembled.

b) Any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of such material or substance. The classification of goods consisting of more than one material or substance shall be according to the principles of Rule 3.
3. When by application of Rule 2 b) or for any other reason, goods are, *prima facie*, classifiable under two or more headings, classification shall be effected as follows:
 - a) The heading which provides the most specific description shall be preferred to headings providing a more general description. However, when two or more headings each refer to part only of the materials or substances contained in mixed or composite goods or to part only of the items in a set put up for retail sale, those headings are to be regarded as equally specific in relation to those goods, even if one of them gives a more complete or precise description of the goods.
 - b) Mixtures, composite goods consisting of different materials or made up of different components, and goods put up in sets for retail sale, which cannot be classified by reference to 3 a), shall be classified as if they consisted of the material or component which gives them their essential character, insofar as this criterion is applicable.
 - c) When goods cannot be classified by reference to 3 a) or 3 b), they shall be classified under the headings which occurs last in numerical order among those which equally merit consideration.

4. Goods which cannot be classified in accordance with the above Rules shall be classified under the heading appropriate to the goods to which they are most akin.
5. In addition to the foregoing provisions, the following Rules shall apply in respect of the goods referred to therein:
 - a) Camera cases, musical instrument cases, gun cases, drawing instrument cases, necklace cases and similar containers, specially shaped or fitted to contain a specific article or set of articles, suitable for long-term use and presented with the articles for which they are intended, shall be classified with such articles when of a kind normally sold therewith. This Rule does not, however, apply to containers which give the whole its essential character;
 - b) Subject to the provisions of Rule 5 a) above, packing materials and packing containers presented with the goods therein shall be classified with the goods if they are of a kind normally used for packing such goods. However, this provision does not apply when such packing materials or packing containers are clearly suitable for repetitive use.
6. For legal purposes, the classification of goods in the subheadings of a heading shall be determined according to the terms of those subheadings and any related subheading Notes and, *mutatis mutandis*, to the above Rules, on the understanding that only subheadings at the same level are comparable. For the purposes of the Rule the relative Section and Chapter Notes also apply, unless the context otherwise requires.

Canadian Rules

1. Unless the context otherwise requires, the provisions of Rule 6 of the General Rules for the Interpretation of the Harmonized System shall apply, *mutatis mutandis*, to the classification numbers within any six digit code.
2. Where both a Canadian term and an international term are presented in this nomenclature, the commonly accepted meaning and scope of the international term shall take precedence.

Section IV

PREPARED FOODSTUFFS; BEVERAGES, SPIRITS AND VINEGAR;

Chapter 16

PREPARATIONS OF MEAT, OF FISH OR OF CRUSTACEANS,
MOLLUSCS OR OTHER AQUATIC INVERTEBRATES

Notes.

1. This Chapter does not cover meat, meat offal, fish, crustaceans, molluscs or other aquatic invertebrates, prepared or preserved by the processes specified in Chapter 2 or 3.
2. Food preparations fall in this Chapter provided that they contain more than 20% by weight of sausage, meat, meat offal, blood, fish or crustaceans, molluscs or other aquatic invertebrates, or any combination thereof. In cases where the preparation contains two or more of the products mentioned above, it is classified in the heading of Chapter 16 corresponding to the component or components which predominate by weight. These provisions do not apply to the stuffed products of heading No. 19.02 or to the preparations of heading No. 21.03 or 21.04.

Subheading Notes.

1. For the purpose of subheading No. 1602.10, the expression "homogenised preparations" means preparations of meat, meat offal or blood, finely homogenised, put up for retail sale as infant food or for dietetic purposes, in containers of a net weight content not exceeding 250 grams. For the application of this definition no account is to be taken of small quantities of any ingredients which may have been added to the preparation for seasoning, preservation or other purposes. These preparations may contain a small quantity of visible pieces of meat or meat offal. This subheading takes precedence over all other subheadings of heading No. 16.02.
2. The fish and crustaceans specified in the subheadings of heading No. 16.04 or 16.05 under their common names only, are of the same species as those mentioned in Chapter 3 under the same name.

Except where their context or Note 4 to this Chapter otherwise requires, the headings of this Chapter cover only products which are in the crude state or which have been washed (even with chemical substances eliminating the impurities without changing the structure of the product), crushed, ground, powdered, levigated, sifted, screened, concentrated by flotation, magnetic separation or other mechanical or physical processes (except crystallisation), but not products which have been roasted, calcined, obtained by mixing or subjected to processing beyond that mentioned in each heading.

The products of this Chapter may contain an added anti-dusting agent, provided that such addition does not render the product particularly suitable for a specific use rather than for general use.

2. This Chapter does not cover:

- (a) Sublimed sulphur, precipitated sulphur or colloidal sulphur (heading No. 28.02);

Chapter 27

MINERAL FUELS, MINERAL OILS AND PRODUCTS
OF THEIR DISTILLATION; BITUMINOUS SUBSTANCES;
MINERAL WAXES

Notes.

1. This Chapter does not cover:

- (a) Separate chemically defined organic compounds, other than pure methane and propane which are to be classified in heading No. 27.11;
- (b) Medicaments of heading No. 30.03 or 30.04; or
- (c) Mixed unsaturated hydrocarbons of heading No. 33.01, 33.02 or 38.05.

2. References in heading No. 27.10 to "petroleum oils and oils obtained from bituminous minerals" include not only petroleum oils and oils obtained from bituminous minerals but also similar oils, as well as those consisting mainly of mixed unsaturated hydrocarbons, obtained by any process, provided that the weight of the non-aromatic constituents exceeds that of the aromatic constituents.

However, the references do not include liquid synthetic polyolefins of which less than 60% by volume distils at 300°C, after conversion to 1,013 millibars when a reduced-pressure distillation method is used (Chapter 39).

Subheading Notes.

- 1. For the purpose of subheading No. 2701.11, "anthracite" means coal having a volatile matter limit (on a dry, mineral-matter-free basis) not exceeding 14%.
- 2. For the purpose of subheading No. 2701.12, "bituminous coal" means coal having a volatile matter limit (on a dry, mineral-matter-free basis) exceeding 14% and a calorific value limit (on a moist, mineral-matter-free basis) equal to or greater than 5,833kcal/kg.
- 3. For the purpose of subheading Nos. 2707.10, 2707.20, 2707.30, 2707.40 and 2707.60, the terms "benzole", "toluole", "xylole", "naphthalene" and "phenols" apply to products which contain more than 50% by weight of benzene, toluene, xylene, naphthalene or phenols, respectively.

 - (e) The products mentioned in (a), (b), (c) or (d) above with an added anti-dusting agent or a colouring substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for a specific use rather than for general use.
2. In addition to dithionites and sulfoxylates, stabilised with organic substances (heading No. 28.31), carbonates and peroxocarbonates of inorganic bases (heading No. 28.36), cyanides, cyanide oxides and complex cyanides of inorganic bases (heading No. 28.37), fulminates, cyanates and thiocyanates, of inorganic bases (heading No. 28.38), organic products included in heading Nos. 28.43 to 28.46 and carbides (heading No. 28.49), only the following compounds of carbon are to be classified in this Chapter:

Chapter 29

ORGANIC CHEMICALS

Notes.

1. Except where the context otherwise requires, the headings of this Chapter apply only to:
 - (a) Separate chemically defined organic compounds, whether or not containing impurities;
 - (b) Mixtures of two or more isomers of the same organic compound (whether or not containing impurities), except mixtures of acyclic hydrocarbon isomers (other than stereoisomers), whether or not saturated (Chapter 27);
 - (c) The products of heading Nos. 29.36 to 29.39 or the sugar ethers and sugar esters, and their salts, of heading No. 29.40, or the products of heading No. 29.41, whether or not chemically defined;
 - (d) The Products mentioned in (a), (b) or (c) above dissolved in water;
 - (e) The Products mentioned in (a), (b) or (c) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for specific use rather than for general use;
 - (f) The products mentioned in (a), (b), (c), (d) or (e) above with an added stabiliser necessary for their preservation or transport;
 - (g) The products mentioned in (a), (b), (c), (d), (e) or (f) above with an added anti-dusting agent or a colouring or odoriferous substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for specific use rather than for general use;
 - (h) The following products, diluted to standard strengths, for the production of azo dyes: diazonium salts, couplers used for these salts and diazotisable amines and their salts.
2. This Chapter does not cover:
 - (a) Goods of heading No. 15.04 or glycerol (heading No. 15.20);
 - (b) Ethyl alcohol (heading No. 22.07 or 22.08);
 - (c) Methane and propane (heading No. 27.11);
 - (d) The compounds of carbon mentioned in Note 2 to Chapter 28;
 - (e) Urea (heading No. 31.02 or 31.05);
 - (f) Colouring matter of vegetable or animal origin (heading No. 32.03), synthetic organic colouring matter, synthetic organic products of a kind

CANADIAN EXPORT CLASSIFICATION

January 1, 1988

used as fluorescent brightening agents or as luminophores (heading No. 32.04) or dyes or other colouring matter put up in forms or packings for retail sale (heading No. 32.12);

- (g) Enzymes (heading No. 35.07);
 - (h) Metaldehyde, hexamethylenetetramine and similar substances, put up in forms (for example, tablets, sticks or similar forms) for use as fuels, or liquid or liquefied-gas fuels in containers, of a kind used for filling or refilling cigarette or similar lighters, and of a capacity not exceeding 300cm³ (heading No. 36.06);
 - (ij) Products put up as charges for fire-extinguishers or put up in fire-extinguishing grenades, of heading No. 38.13; ink removers put up in packings for retail sale, of heading No. 38.23; or
 - (k) Optical elements, for example, of ethylenediamine tartrate (heading No. 90.01).
3. Goods which could be included in two or more of the headings of this Chapter are to be classified in that one of those headings which occurs last in numerical order latest.
4. In heading Nos. 29.04 to 29.06, 29.08 to 29.11 and 29.13 to 29.20, any reference to halogenated, sulphonated, nitrated or nitrosated derivatives includes a reference to compound derivatives, such as sulphohalogenated, nitrohalogenated, nitrosulphonated or nitrosulphohalogenated derivatives.

Nitro or nitroso groups are not to be taken as "nitrogen-functions" for the purpose of heading No. 29.29.

For the purpose of heading Nos. 29.11, 29.12, 29.14, 29.18 and 29.22, "oxygen-function" is to be restricted to the functions (the characteristic organic oxygen-containing groups) referred to in heading Nos. 29.05 to 29.20.

5. (a) The esters of acid-function organic compounds of sub-Chapters I to VII with organic compounds of these sub-Chapters are to be classified with that compound which is classified in the heading which occurs in numerical order in these sub-Chapters.
- (b) Esters of ethyl alcohol or glycerol with acid-function organic compounds of sub-Chapters I to VII are to be classified in the same heading as the corresponding acid-function compounds.
- (c) Subject to Note 1 to Section VI and Note 2 to Chapter 28:
- (1) Inorganic salts of organic compounds such as acid-, phenol- or enol-function compounds or organic bases, of sub-Chapters I to X or heading No. 29.42, are to be classified in the heading appropriate to the organic compound; and
 - (2) Salts formed between organic compounds of sub-Chapters I to X or headings No. 29.42 are to be classified in the heading appropriate to the base or to the acid (including phenol- or enol-function compounds) from which they are formed, whichever occurs last in numerical order in the Chapter.

- (d) Metal alcoholates are to be classified in the same heading as the corresponding alcohols except the case of ethanol and glycerol (heading No. 29.05).
 - (e) Halides of carboxylic acids are to be classified in the same heading as the corresponding acids.
6. The compounds of heading Nos. 29.30 and 29.31 are organic compounds the molecules of which contain, in addition to atoms of hydrogen, oxygen or nitrogen, atoms of other non-metals or of metals (such as sulphur, arsenic, mercury or lead) directly linked to carbon atoms.

Heading No. 29.30 (organo-sulphur compounds) and heading No. 29.31 (other organo-inorganic compounds) do not include sulphonated or halogenated derivatives (including compound derivatives) which, apart from hydrogen, oxygen and nitrogen, only have directly linked to carbon the atoms of sulphur or of a halogen which give them their nature of sulphonated or halogenated derivatives (or compound derivatives).

7. Heading Nos. 29.32, 29.33 and 29.34 do not include epoxides with a three-membered ring, ketone peroxides, cyclic polymers of aldehydes or of thioaldehydes, anhydrides of polybasic carboxylic acids, cyclic esters of polyhydric alcohols or phenols with polybasic acids and imides of polybasic acids.

These provisions apply only when the ring-position hetero-atoms are those resulting solely from the cyclising function or functions here listed.

Subheading Note.

1. Within any one heading of this Chapter, derivatives of a chemical compound (or group of chemical compounds) are to be classified in the same subheading as that compound (or group of compounds) provided that they are not more specifically covered by any other subheading and that there is no residual subheading named "Other" in the series of subheadings concerned.

Section VII

PLASTICS AND ARTICLES THEREOF;
RUBBER AND ARTICLES THEREOF

Notes.

1. Goods put up in sets consisting of two or more separate constituents, some or all of which fall in this Section and are intended to be mixed together to obtain a product of Section VI or VII, are to be classified in the heading appropriate to that product, provided that the constituents are:
 - (a) having regard to the manner in which they are put up, clearly identifiable as being intended to be used together without first being repacked;
 - (b) presented together; and
 - (c) identifiable, whether by their nature or by the relative proportions in which they are present, as being complementary one to another.
2. Except for the goods of heading No. 39.18 or 39.19, plastics, rubber, and articles thereof, printed with motifs, characters or pictorial representations, which are not merely incidental to the primary use of the goods, fall in Chapter 49.

Chapter 39

PLASTICS AND ARTICLES THEREOF

Notes.

1. Throughout the Nomenclature the expression "plastics" means those materials of heading Nos. 39.01 to 39.14 which are or have been capable, either at the moment of polymerisation or at some subsequent stage, of being formed under external influence (usually heat and pressure, if necessary with a solvent or plasticiser) by moulding, casting, extruding, rolling or other process into shapes which are retained on the removal of the external influence.

Throughout the Nomenclature any reference to "plastics" also includes vulcanised fibre. The expression, however, does not apply to materials regarded as textile materials of Section XI.

2. This Chapter does not cover:

- (a) Waxes of heading No. 27.12 or 34.04;
- (b) Separate chemically defined organic compounds (Chapter 29);

- (a) Liquid synthetic polyolefins of which less than 60% by volume distils at 300°C, after conversion to 1,013 millibars when a reduced-pressure distillation method is used (heading Nos. 39.01 and 39.02);
 - (b) Resins, not highly polymerised, of the coumarone-indene type (heading No. 39.11);
 - (c) Other synthetic polymers with an average of at least 5 monomer units;
 - (d) Silicones (heading No. 39.10);
 - (e) Resols (heading No. 39.09) and other prepolymers.
4. For the purpose of this Chapter, except where the context otherwise requires, copolymers (including co-polycondensates, co-polyaddition products, block copolymers and graft copolymers) and polymer blends are to be classified in the heading covering polymers of that comonomer which predominates by weight over every other single comonomer, comonomers whose polymers fall in the same heading being regarded as constituting a single comonomer.
- If no single comonomer predominates, copolymers or polymer blends, as the case may be, are to be classified in the heading which occurs last in numerical order among those which equally merit consideration.
- The expression "copolymers" covers all polymers in which no single monomer contributes 95% or more by weight to the total polymer content.
5. Chemically modified polymers, that is those in which only appendages to the main polymer chain have been changed by chemical reaction, are to be classified in the heading appropriate to the unmodified polymer. This provision does not apply to graft copolymers.
6. In heading Nos. 39.01 to 39.14, the expression "primary forms" applies only to the following forms:
- (a) Liquids and pastes, including dispersions (emulsions and suspensions) and solutions;
 - (b) Blocks of irregular shape, lumps, powders (including moulding powders),

granules, flakes and similar bulk forms.

7. Heading No. 39.15 does not apply to waste, parings and scrap of a single thermoplastic material, transformed into primary forms (heading Nos. 39.01 to 39.14).
8. For the purpose of heading No. 39.17, the expression "tubes, pipes and hoses" means hollow products, whether semi-manufactures or finished products, of a kind generally used for conveying, conducting or distributing gases or liquids (for example, ribbed garden hose, perforated tubes). This expression also includes sausage casings and other lay-flat tubing. However, except for the last-mentioned, those having an internal cross-section other than round, oval, rectangular (in which the length does not exceed 1.5 times the width) or in the shape of a regular polygon are not to be regarded as tubes, pipes and hoses but as profile shapes.
9. For the purpose of heading No. 39.18, the expression "wall or ceiling coverings of plastics" applies to products in rolls, of a width not less than 45cm, suitable for wall or ceiling decoration, consisting of plastics fixed permanently on a backing of any material other than paper, the plastic layer (on the face side) being grained, embossed, coloured, design-printed or otherwise decorated.
10. In heading Nos. 39.20 and 39.21, the expression "plates, sheets, film, foil and strip" applies only to plates, sheets, film, foil and strip (other than those of Chapter 54) and to blocks of regular geometric shape, whether or not printed or otherwise surface-worked, uncut or cut into rectangles (including squares) but not further worked (even if when so cut, they become articles ready for use).
11. Heading No. 39.25 applies only to the following articles, not being products covered by any of the earlier headings of sub-Chapter II:
 - (a) Reservoirs, tanks (including septic tanks), vats and similar containers, of a capacity exceeding 300 litre;
 - (b) Structural elements used, for example, in floors, walls or partitions, ceilings or roofs;
 - (c) Gutters and fittings therefor;
 - (d) Doors, windows and their frames and thresholds for doors;
 - (e) Balconies, balustrades, fencing, gates and similar barriers;
 - (f) Shutters, blinds (including Venetian blinds) and similar articles and parts and fittings thereof;
 - (g) Large-scale shelving for assembly and permanent installation, for example, in shops, workshops, warehouses;
 - (h) Ornamental architectural features, for example, flutings, cupolas, dovecotes; and
 - (ij) Fittings and mountings intended for permanent installation in or on doors, windows, staircases, walls or other parts of buildings, for

example, knobs, handles, hooks, brackets, towel rails, switch-plates and other protective plates.

Subheading Note.

1. Within any one heading of this Chapter, copolymers (including co-polycondensates, co-polyaddition products, block copolymers and graft copolymers) are to be classified in the same subheading as homopolymers of the predominant comonomer and chemically modified polymers of the kind specified in Chapter Note 5 are to be classified in the same subheading as the unmodified polymer, provided that such copolymers or chemically modified polymers are not more specifically covered by any other subheading and that there is no residual subheading named "Other" in the series of subheadings concerned. Polymer blends are to be classified in the same subheading as copolymers (or homopolymers, as the case may be) of the same monomers in the same proportions.

Canadian Note.

1. Classification no. 3926.90.00 includes 'parts of general use' of plastics.

Chapter 40

RUBBER AND ARTICLES THEREOF

Notes.

1. Except where the context otherwise requires, throughout the Nomenclature the expression "rubber" means the following products, whether or not vulcanised or hard: natural rubber, balata, gutta-percha, guayule, chicle and similar natural gums, synthetic rubber, factice derived from oils, and such substances reclaimed.
2. This Chapter does not cover:
 - (a) Goods of Section XI (textiles and textile articles);
 - (b) Footwear or parts thereof of Chapter 64;
 - (c) Headgear or parts thereof (including bathing caps) of Chapter 65;
 - (d) Mechanical or electrical appliances or parts thereof of Section XVI (including electrical goods of all kinds), of hard rubber;
 - (e) Articles of Chapter 90, 92, 94, or 96; or
 - (f) Articles of Chapter 95 (other than sports gloves and articles of heading Nos. 40.11 to 40.13).
3. In heading Nos. 40.01 to 40.03 and 40.05, the expression "primary forms" applies only to the following forms:
 - (a) Liquids and pastes (including latex, whether or not prevulcanised, and other dispersions and solutions);
 - (b) Blocks of irregular shape, lumps, bales, powders, granules, crumbs and similar bulk forms.
4. In Note 1 to this Chapter and in heading No. 40.02, the expression "synthetic rubber" applies to:
 - (a) Unsaturated synthetic substances which can be irreversibly transformed by vulcanisation with sulphur into non-thermoplastic substances which, at a temperature between 18°C and 29°C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length. For the purposes of this test, substances necessary for the cross-linking, such as vulcanising activators or accelerators, may be added; the presence of substances as provided for by Note 5 (b) (ii) and (iii) is also permitted. However, the presence of any substances not necessary for the cross-linking, such as extenders, plasticisers and fillers, is not permitted;
 - (b) Thioplasts (TM); and
 - (c) Natural rubber modified by grafting or mixing with plastics,

CANADIAN EXPORT CLASSIFICATION

depolymerised natural rubber, mixtures of unsaturated synthetic substances with saturated synthetic high polymers provided that all the above-mentioned products comply with the requirements concerning vulcanisation, elongation and recovery in (a) above.

5. (a) Heading Nos. 40.01 and 40.02 do not apply to any rubber or mixture of rubbers which has been compounded, before or after coagulation, with:

(i) vulcanising agents, accelerators, retarders or activators (other than those added for the preparation of pre-vulcanised rubber latex);

(ii) pigments or other colouring matter, other than those added solely for the purpose of identification;

(iii) Plasticisers or extenders (except mineral oil in the case of oil-extended rubber), fillers, reinforcing agents, organic solvents or any other substances, except those permitted under (b);

(b) The presence of the following substances in any rubber or mixture of rubbers shall not affect its classification in heading No. 40.01 or 40.02, as the case may be, provided that such rubber or mixture of rubbers retains its essential character as raw material:

(i) emulsifiers or anti-tack agents;

(ii) small amounts of breakdown products of emulsifiers

(iii) very small amounts of the following: heat-sensitive agents (generally for obtaining thermosensitive rubber latexes), cationic surface-active agents (generally for obtaining electro-positive rubber latexes), antioxidants, coagulants, crumbling agents, freeze-resisting agents, peptisers, preservatives, stabilisers, viscosity-control agents, or similar special-purpose additives.

6. For the purpose of heading No. 40.04, the expression "waste, parings and scrap" means rubber waste, parings and scrap from the manufacture or working of rubber and rubber goods definitely not usable as such because of cutting-up, wear or other reasons.

7. Thread wholly of vulcanised rubber, of which any cross-sectional dimension exceeds 5mm, is to be classified as strip, rods or profile shapes, of heading No. 40.08.

8. Heading No. 40.10 includes conveyor or transmission belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated, coated, covered or sheathed with rubber.

9. In heading Nos. 40.01, 40.02, 40.03, 40.05 and 40.08, the expressions "plates", "sheets" and "strip" apply only to plates, sheets and strip and to blocks of regular geometric shape, uncut or simply cut to rectangular (including square) shape, whether or not having the character of articles and whether or not printed or otherwise surface-worked, but not otherwise cut to shape or further worked.

In heading No. 40.08 the expressions "rods" and "profile shapes" apply only to such products, whether or not cut to length or surface-worked but not otherwise worked.

- (b) having a brightness of 60% or more (*), and
 - 1. a caliper of 225 micrometres (microns) or less, or
 - 2. a caliper more than 225 micrometres (microns) but not more than 508 micrometres (microns) and ash content more than 3%
- (c) having a brightness of less than 60% (*), a caliper of 254 micrometres (microns) or less and an ash content more than 8%.

Heading No. 48.02 does not, however, cover filter paper or paperboard (including tea-bag paper) or felt paper and paperboard.

(*) Brightness is to be measured by the Elrepho, GE or any equivalent internationally recognized brightness testing method.

- (ii) Single yarn of wool of fine animal hair, bleached, dyed or printed, measuring more than 5,000 decitex;
 - (b) Multiple (folded) or cabled yarn, unbleached:
 - (i) Of silk or waste silk, however put up; or

 - (d) Single, multiple (folded) or cabled yarn of any textile material:
 - (i) In cross-reeled hanks or skeins; or
 - (ii) Put up on supports or in some other manner indicating its use in the textile industry (for example, on cops, twisting mill tubes, pirns, conical bobbins or spindles, or reeled in the form of cocoons for embroidery looms).
5. For the purpose of heading Nos. 52.04, 54.01 and 55.08 the expression "sewing thread" means multiple (folded) or cabled yarn:
- (a) Put up on supports (for example, reels, tubes) of a weight (including support) not exceeding 1,000g;
 - (b) Dressed; and
 - (c) With a final "Z" twist.
6. For the purpose of this Section, the expression "high tenacity yarn" means yarn having a tenacity, expressed in cN/tex (centinewtons per tex), greater than the following:
- | | |
|---|-----------|
| Single yarn of nylon or other polyamides,
or of polyesters..... | 60cN/tex |
| Multiple (folded) or cabled yarn of nylon
or other polyamides, or of polyesters..... | 53cN/tex |

7. For the purpose of this Section, the expression "made up" means:
- (a) Cut otherwise than into squares or rectangles;
 - (b) Produced in the finished state, ready for use (or merely needing separation by cutting dividing threads) without sewing or other working (for example, certain dusters, towels, table cloths, scarf squares, blankets);
 - (c) Hemmed or with rolled edges, or with a knotted fringe at any of the edges, but excluding fabrics, the cut edges of which have been prevented

- from unravelling by whipping or by other simple means;
- (d) Cut to size and having undergone a process of drawn thread work;
 - (e) Assembled by sewing, gumming or otherwise (other than piece goods consisting of two or more lengths of identical material joined end to end and piece goods composed of two or more textiles assembled in layers, whether or not padded);
 - (f) Knitted or crocheted to shape, presented in the form of a number of items in the length.
8. Chapters 50 to 55 and, except where the context otherwise requires, Chapters 56 to 60, do not apply to goods made up within the meaning of Note 7 above. Chapters 50 to 55 do not apply to goods of Chapters 56 to 59.
9. The woven fabrics of Chapters 50 to 55 include fabrics consisting of layers of parallel textile yarns superimposed on each other at acute or right angles. These layers are bonded at the intersections of the yarns by an adhesive or by thermal bonding.
10. Elastic products consisting of textile materials combined with rubber threads are classified in this Section.
11. For the purpose of this Section, the expression "impregnated" includes "dipped".
12. For the purpose of this Section, the expression "polyamides" includes "aramids".
13. Unless the context otherwise requires, textile garments of different headings are to be classified in their own headings even if put up in sets for retail sale.

Subheading Notes.

1. In this Section and, where applicable, throughout the Nomenclature, the following expressions have the meanings hereby assigned to them:

(a) Elastomeric yarn

Filament yarn, including monofilament, of synthetic textile material, other than textured yarn, which does not break on being extended to three times its original length and which returns, after being extended to twice its original length, within a period of five minutes, to a length not greater than one and a half times its original length.

(b) Unbleached yarn

Yarn which:

- (i) has the natural colour of its constituent fibres and has not been bleached, dyed (whether or not in the mass) or printed; or

- (ii) is of indeterminate colour ("grey yarn"), manufactured from

garnetted stock.

Such yarn may have been treated with a colourless dressing or fugitive dye (which disappears after simple washing with soap) and, in the case of man-made fibres, treated in the mass with delustring agents (for example, titanium dioxide).

(c) Bleached yarn

Yarn which:

- (i) has undergone a bleaching process, is made of bleached fibres or, unless the context otherwise requires, has been dyed white (whether or not in the mass) or treated with a white dressing;
- (ii) consists of a mixture of unbleached and bleached fibres; or
- (iii) is multiple (folded) or cabled and consists of unbleached and bleached yarns.

(d) Coloured (dyed or printed) yarn

Yarn which:

- (i) is dyed (whether or not in the mass) other than white or in a fugitive colour or printed, or made from dyed or printed fibres;
- (ii) consists of a mixture of dyed fibres of different colours or of a mixture of unbleached or bleached fibres with coloured fibres (marl or mixture yarns), or is printed in one or more colours at intervals to give the impression of dots;
- (iii) is obtained from slivers or rovings which have been printed; or
- (iv) is multiple (folded) or cabled and consists of unbleached or bleached yarn and coloured yarn.

The above definitions also apply, *mutatis mutandis*, to monofilament and to strip or the like of Chapter 54.

(e) Unbleached woven fabric

Woven fabric made from unbleached yarn and which has not been bleached, dyed or printed. Such fabric may have been treated with a colourless dressing or a fugitive dye.

(f) Bleached woven fabric

Woven fabric which:

- (i) has been bleached or, unless the context otherwise requires, dyed white or treated with a white dressing, in

the piece;

(ii) consists of bleached yarn; or

(iii) consists of unbleached and bleached yarn.

(g) Dyed woven fabric

Woven fabric which:

(i) is dyed a single uniform colour other than white (unless the context otherwise requires) or has been treated with a coloured finish other than white (unless the context otherwise requires), in the piece; or

(ii) consists of coloured yarn of a single uniform colour.

(h) Woven fabrics of yarns of different colours

Woven fabric (other than printed woven fabric) which:

(i) consists of yarns of different colours or yarns of different shades of the same colour (other than the natural colour of the constituent fibres);

(ii) consists of unbleached or bleached yarn and coloured yarn; or

(iii) consists of marl or mixture yarns.

(In all cases, the yarn used in selvages and piece ends is not taken into consideration.)

(ij) Printed woven fabric

Woven fabric which has been printed in the piece, whether or not made from yarns of different colours.

(The following are also regarded as printed woven fabrics: woven fabrics bearing designs made, for example, with a brush or spray gun, by means of transfer paper, by flocking or by the batik process.)

The process of mercerisation does not affect the classification of yarns or fabrics within the above categories.

(k) Plain weave

A fabric construction in which each yarn of the weft passes alternately over and under successive yarns of the warp and each yarn of the warp passes alternately over and under successive yarns of the weft.

2. (A) Products of Chapters 56 to 63 containing two or more textile materials are to be regarded as consisting wholly of that textile material which would be selected under Note 2 to this Section for the classification of a product of Chapters 50 to 55 consisting of the same textile materials.

CANADIAN EXPORT CLASSIFICATION

January 1, 1988

(B) For the application of this rule:

- (a) where appropriate, only the part which determines the classification under Interpretative Rule 3 shall be taken into account;
- (b) in the case of textile products consisting of a ground fabric and a pile or looped surface no account shall be taken of the ground fabric;
- (c) in the case of embroidery of heading No. 58.10 only the ground fabric shall be taken into account. However, embroidery without visible ground shall be classified with reference to the embroidering threads alone.

Chapter 54

MAN-MADE FILAMENTS

Notes.

1. Throughout the Nomenclature, the term "man-made fibres" means staple fibres and filaments of organic polymers produced by manufacturing processes, either:

- (a) By polymerisation of organic monomers, such as polyamides, polyesters, polyurethanes or polyvinyl derivatives; or
- (b) By chemical transformation of natural organic polymers (for example, cellulose, casein, proteins or algae), such as viscose rayon, cellulose acetate, cupro or alginates.

The terms "synthetic" and "artificial", used in relation to fibres, mean: synthetic: fibres as defined at (a); artificial: fibres as defined at (b).

The terms "man-made", "synthetic" and "artificial" shall have the same meanings when used in relation to "textile materials".

2. Heading Nos. 54.02 and 54.03 do not apply to synthetic or artificial filament tow of Chapter 55.

MAN-MADE STAPLE FIBRES

Note.

1. Heading Nos. 55.01 and 55.02 apply only to man-made filament tow, consisting of parallel filaments of a uniform length equal to the length of the tow, meeting the following specifications:

- (a) Length of tow exceeding 2m;
- (b) Twist less than 5 turns per metre;
- (c) Measuring per filament less than 67 decitex;
- (d) Synthetic filament tow only: the tow must be drawn, that is to say, be incapable of being stretched by more than 100% of its length;
- (e) Total measurement of tow more than 20,000 decitex.

Chapter 61

ARTICLES OF APPAREL AND CLOTHING ACCESSORIES,
KNITTED OR CROCHETED

Notes.

1. This Chapter applies only to made up knitted or crocheted articles.
2. This Chapter does not cover:
 - (a) Goods of heading No. 62.12;
 - (b) Worn clothing or other worn articles of heading No. 63.09; or
 - (c) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.21).
3. For the purpose of heading Nos. 61.03 and 61.04:
 - (a) The term "suit" means a set of garments composed of two or three pieces made up in identical fabric and comprising:
 - one garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs, and
 - one suit coat or jacket the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition.

All of the components of a suit must be of the same fabric construction, style, colour and composition; they must also be of corresponding or compatible size. If several separate components to cover the lower part of the body are presented together (for example, trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be the trousers, or, in the case of women's or girls' suits, the skirt or divided skirt, the other garments being considered separately.

The term "suit" includes the following sets of garments, whether or not they fulfil all the above conditions:

- morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;
- evening dress (tailcoat), generally made of black fabric, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;
- dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.

- (b) The term "ensemble" means a set of garments (other than suits and

articles of heading No. 61.07, 61.08 or 61.09), composed of several pieces made up in identical fabric, put up for retail sale, and comprising:

- one garment designed to cover the upper part of the body, with the exception of pullovers which may form a second upper garment in the sole context of twin sets, and of waistcoats which may also form a second upper garment, and
- one or two different garments, designed to cover the lower part of the body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt.

All of the components of an ensemble must be of the same fabric construction, style, colour and composition; they also must be of corresponding or compatible size. The term "ensemble" does not apply to track suits or ski suits, of heading No. 61.12.

4. Heading Nos. 61.05 and 61.06 do not cover garments with pockets below the waist, with a ribbed waistband or other means of tightening at the bottom of the garment, or garments having an average of less than 10 stitches per linear centimetre in each direction counted on an area measuring at least 10cm x 10cm. Heading No. 61.05 does not cover sleeveless garments.

5. For the purpose of heading No. 61.11:

- (a) The expression "babies' garments and clothing accessories" means articles for young children of a body height not exceeding 86cm; it also covers babies' napkins;
- (b) Articles which are, *prima facie*, classifiable both in heading No. 61.11 and in other headings of this Chapter are to be classified in heading No. 61.11.

6. For the purpose of heading No. 61.12, "ski suits" means garments or sets of garments which, by their general appearance and texture, are identifiable as intended to be worn principally for skiing (cross-country or alpine). They consist either of:

- (a) a "ski overall", that is, a one-piece garment designed to cover the upper and the lower parts of the body; in addition to sleeves and a collar the ski overall may have pockets or footstraps; or
- (b) a "ski ensemble", that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
 - one garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
 - one pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.

The "ski ensemble" may also consist of an overall similar to the one mentioned in paragraph (a) above and a type of padded, sleeveless jacket

worn over the overall.

All the components of a "ski ensemble" must be made up in a fabric of the same texture, style and composition whether or not of the same colour; they also must be of corresponding or compatible size.

7. Garments which are, prima facie, classifiable both in heading No. 61.13 and in other headings of this Chapter, excluding heading No. 61.11, are to be classified in heading No. 61.13.
8. Articles of this Chapter which cannot be identified as either men's or boys' garments or as women's or girls' garments are to be classified in the headings concerning women's or girls' garments.

Chapter 62

ARTICLES OF APPAREL AND CLOTHING ACCESSORIES,
NOT KNITTED OR CROCHETED

Notes.

1. This Chapter applies only to made up articles of any textile fabric other than wadding, excluding knitted or crocheted articles (other than those of heading No. 62.12.)
2. This Chapter does not cover:
 - (a) Worn clothing or other worn articles of heading No. 63.09; or
 - (b) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.21).
3. For the purpose of heading Nos. 62.03 and 62.04:
 - (a) The term "suit" means a set of garments composed of two or three pieces made up in identical fabric and comprising:
 - one garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs, and
 - one suit coat or jacket, the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition.

All of the components of a suit must be of the same fabric construction, style, colour and composition; they must also be of corresponding or compatible size. If several separate components to cover the lower part of the body are presented together (for example, trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be the trousers, or, in the case of women's or girls' suits, the skirt or divided skirt, the other garments being considered separately.

The term "suit" includes the following sets of garments, whether or not they fulfil all the above conditions:

- morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;
- evening dress (tailcoat), generally made of black cloth, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;
- dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.

- (b) The term "ensemble" means a set of garments (other than suits and articles of heading No. 62.07 or 62.08) composed of several pieces made up in identical fabric, put up for retail sale, and comprising:

- one garment designed to cover the upper part of the body, with the exception of waistcoats which may also form a second upper garment, and
- one or two different garments, designed to cover the lower part of the body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt.

All of the components of an ensemble must be of the same fabric construction, style, colour and composition; they also must be of corresponding or compatible size. The term "ensemble" does not apply to track suits or ski suits, of heading No. 62.11.

4. For the purpose of heading No. 62.09:

- (a) The expression "babies' garments and clothing accessories" means articles for young children of a body height not exceeding 86cm; it also covers babies' napkins;

- (a) a "ski overall", that is, a one-piece garment designed to cover the upper and the lower parts of the body; in addition to sleeves and a collar the ski overall may have pockets or footstraps; or
- (b) a "ski ensemble", that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
- one garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
 - one pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.

The "ski ensemble" may also consist of an overall similar to the one mentioned in paragraph (a) above and a type of padded, sleeveless jacket worn over the overall.

semi-precious stones (natural, synthetic or reconstructed); machinery, mechanical appliances or electrical goods, or parts thereof, of Section XVI. However, articles and parts thereof, wholly of precious or semi-precious stones (natural, synthetic or reconstructed) remain classified in this Chapter, except unmounted worked sapphires and diamonds for styli (heading No. 85.22);

5. For the purpose of this Chapter, any alloy (including a sintered mixture and an inter-metallic compound) containing precious metal is to be treated as an alloy of precious metal if any one precious metal constitutes as much as 2%, by weight, of the alloy. Alloys of precious metal are to be classified according to the following rules:

(a) An alloy containing 2% or more, by weight, of platinum is to be treated as an alloy of platinum;

(b) An alloy containing 2% or more, by weight, of gold but no platinum, or less than 2%, by weight, of platinum, is to be treated as an alloy of gold;

CANADIAN EXPORT CLASSIFICATION

January 1, 1988

Subject to the preceding paragraph and to Note 1 to Chapter 83, the articles of Chapter 82 or 83 are excluded from Chapters 72 to 76 and 78 to 81.

3. Classification of alloys (other than ferro-alloys and master alloys as defined in Chapters 72 and 74):

- (a) An alloy of base metals is to be classified as an alloy of the metal which predominates by weight over each of the other metals;
- (b) An alloy composed of base metals of this Section and of elements not falling within this Section is to be treated as an alloy of base metals of this Section if the total weight of such metals equals or exceeds the total weight of the other elements present;
- (c) In this Section the term "alloys" includes sintered mixtures of metal powders, heterogeneous intimate mixtures obtained by melting (other than cermets) and intermetallic compounds.

4. Unless the context otherwise requires, any reference in the Nomenclature to a base metal includes a reference to alloys which, by virtue of Note 3 above, are to be classified as alloys of that metal.

5. Classification of composite articles:

Except where the headings otherwise require, articles of base metal (including articles of mixed materials treated as articles of base metal under the Interpretative Rules) containing two or more base metals are to be treated as articles of the base metal predominating by weight over each of the other metals. For this purpose:

- (a) Iron and steel, or different kinds of iron or steel, are regarded as one and the same metal;
- (b) An alloy is regarded as being entirely composed of that metal as an alloy of which, by virtue of Note 3, it is classified; and

(ij) Semi-finished products

Continuous cast products of solid section, whether or not subjected to primary hot-rolling; and

Other products of solid section, which have not been further worked than subjected to primary hot-rolling or roughly shaped by forging, including blanks for angles, shapes or sections.

These products are not presented in coils.

(k) Flat-rolled products

Rolled products of solid rectangular (other than square) cross-section, which do not conform to the definition at (ij) above in the form of:

- coils of successively superimposed layers, or
- straight lengths, which if of a thickness less than 4.75mm are of a width measuring at least ten times the thickness or if of a thickness of 4.75mm or more are of a width which exceeds 150mm and measures at least twice the thickness.

Flat-rolled products include those with patterns in relief derived directly from rolling (for example, grooves, ribs, chequers, tears, buttons, lozenges) and those which have been perforated, corrugated or polished, provided that they do not thereby assume the character of articles or products of other headings.

Flat-rolled products of a shape other than rectangular or square, of any size are to be classified as products of a width of 600mm or more, provided that they do not assume the character of articles or products of other headings.

(l) Bars and rods, hot-rolled, in irregularly wound coils

Hot-rolled products in irregularly wound coils, which have a solid cross-section in the shape of circles, segments of circles, ovals, rectangles (including squares), triangles or other convex polygons. These products may have indentations, ribs, grooves or other deformations produced during the rolling process (reinforcing bars and rods).

(m) Other bars and rods

Products which do not conform to any of the definitions at (ij), (k) or (l) above or to the definition of wire, which have a uniform solid cross-section along their whole length in the shape of circles, segments of circles, ovals, rectangles (including squares), triangles or other convex polygons. These products may:

CANADIAN EXPORT CLASSIFICATION

January 1, 1988

- have indentations, ribs, grooves or other deformations produced during the rolling process (reinforcing bars and rods);
- be twisted after rolling.

(n) Angles, shapes and sections

Products having a uniform solid cross-section along their whole length which do not conform to any of the definitions at (ij), (k), (l) or (m) above or to the definition of wire.

Chapter 72 does not include products of heading No. 73.01 or 73.02.

Hollow bars and rods of iron or steel not conforming to this definition are to be classified in heading No. 73.04.

2. Ferrous metals clad with another ferrous metal are to be classified as products of the ferrous metal predominating by weight.
3. Iron or steel products obtained by electrolytic deposition, by pressure casting or by sintering are to be classified, according to their form, their composition and their appearance, in the headings of this Chapter appropriate to similar hot-rolled products.

Subheading Notes.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

(a) Alloy pig iron

Pig iron containing, by weight, separately or together:

- more than 0.2% of chromium

- 0.5% or more but not more than 1.2% of manganese, and
- 0.6% or more but not more than 2.3% of silicon, but not containing any other element in a proportion that would give the steel the characteristics of another alloy steel.

2. For the classification of ferro-alloys in the subheadings of heading No. 72.02 the following rule should be observed:

A ferro-alloy is considered as binary and classified under the relevant subheading (if it exists) if only one of the alloy elements exceeds the minimum percentage laid down in Chapter Note 1 (c); by analogy, it is considered respectively as ternary or quaternary if two or three alloy elements exceed the minimum percentage.

For the application of this rule the unspecified "other elements" referred to in Chapter Note 1 (c) must each exceed 10% by weight.

Chapter 73

ARTICLES OF IRON OR STEEL

Notes.

1. In this Chapter the expression "cast iron" applies to products obtained by casting in which iron predominates by weight over each of the other elements and which do not comply with the chemical composition of steel as defined in Note 1 (d) to Chapter 72.
2. In this Chapter the word "wire" means hot or cold-formed products of any cross-sectional shape, of which no cross-sectional dimension exceeds 16mm.

Chapter 74

COPPER AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

(a) Refined copper

Metal containing at least 99.85% by weight of copper; or

Metal containing at least 97.5% by weight of copper, provided that the content by weight of any other element does not exceed the limit specified in the following table:

TABLE - Other elements

Element		Limiting content % by weight
Ag	Silver	0.25
As	Arsenic	0.5
Cd	Cadmium	1.3
Cr	Chromium	1.4
Mg	Magnesium	0.8
Pb	Lead	1.5
S	Sulphur	0.7
Sn	Tin	0.8
Te	Tellurium	0.8
Zn	Zinc	1
Zr	Zirconium	0.3
Other elements *, each		0.3

* Other elements are, for example, Al, Be, Co, Fe, Mn, Ni, Si.

(b) Copper alloys

Metallic substances other than unrefined copper in which copper predominates by weight over each of the other elements, provided that:

- (i) the content by weight of at least one of the other elements shall be greater than the limit specified in the foregoing table; or
- (ii) the total content by weight of such other elements exceeds 2.5%.

(c) Master alloys

Alloys containing with other elements more than 10% by weight of copper, not usefully malleable and commonly used as an additive in the manufacture of other alloys or as de-oxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals. However, copper phosphide (phosphor copper) containing more than 15% by weight of phosphorus falls in heading No. 28.48.

January 1, 1988

(d) Bars and rods

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

Wire-bars and billets with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, drawing stock (wire-rod) or tubes, are however to be taken to be unwrought copper of heading No. 74.03.

(e) Profiles

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

(f) Wire

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

In the case of heading No. 74.14, however, the term "wire" applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6mm.

(g) Plates, sheets, strip and foil

Flat-surfaced products (other than the unwrought products of heading No. 74.03), coiled or not, of solid rectangular (other than square)

cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size provided that they do not assume the character of articles of products of other headings.

Heading Nos. 74.09 and 74.10 apply, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

(h) Tubes and pipes

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be taken to be tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

(a) Copper-zinc base alloys (brasses)

Alloys of copper and zinc, with or without other elements. When other elements are present:

- zinc predominates by weight over each of such other elements;
- any nickel content by weight is less than 5% (see copper-nickel-zinc alloys (nickel silvers)); and
- any tin content by weight is less than 3% (see copper-tin alloys (bronzes)).

(b) Copper-tin base alloys (bronzes)

Alloys of copper and tin, with or without other elements. When other elements are present, tin predominates by weight over each of such other elements, except that when the tin content is 3% or more the zinc content by weight may exceed that of tin but must be less than 10%.

CANADIAN EXPORT CLASSIFICATION

January 1, 1988

(c) Copper-nickel-zinc base alloys (nickel silvers)

Alloys of copper, nickel and zinc, with or without other elements. The nickel content is 5% or more by weight (see copper-zinc alloys (brasses)).

(d) Copper-nickel base alloys

Alloys of copper and nickel, with or without other elements but in any case containing by weight not more than 1% of zinc. When other elements are present, nickel predominates by weight over each of such other elements.

NICKEL AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

(a) Bars and rods

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. 4. Heading No. 84.57 applies only to machine-tools for working metal (other than lathes) which can carry out different types of machining operations either:
 - (a) by automatic tool change from a magazine or the like in conformity with a machining programme (machining centres),
 - (b) by the automatic use, simultaneously or sequentially, of different unit heads working on a fixed position workpiece (unit construction machines, single station), or
 - (c) by the automatic transfer of the workpiece to different unit heads (multi-station transfer machines).
5. (A) For the purpose of heading No. 84.71, the expression "automatic data processing machines" means:
 - (a) Digital machines, capable of (1) storing the processing program or programs and at least the data immediately necessary for the execution of the program; (2) being freely programmed in accordance with the requirements of the user; (3) performing arithmetical computations specified by the user; and, (4) executing, without human intervention, a processing program which requires them to modify their execution, by logical decision during the processing run;
 - (b) Analog machines capable of simulating mathematical models and comprising at least: analog elements, control elements and programming elements;
 - (c) Hybrid machines consisting of either a digital machine with analog elements or an analog machine with digital elements.
- (B) Automatic data processing machines may be in the form of systems consisting of a variable number of separately-housed units. A unit is to be regarded as being a part of the complete system if it meets all the following conditions:
 - (a) it is connectable to the central processing unit either directly or through one or more other units;
 - (b) it is specifically designed as part of such a system (it must, in particular, unless it is a power supply unit, be able to accept or deliver data in a form (code or signals) which can be used by the system).

Such units presented separately are also to be classified in heading No. 84.71.

Heading No. 84.71 does not cover machines incorporating or working in conjunction with an automatic data processing machine and performing a specific function. Such machines are classified in the headings appropriate to their respective functions or, failing that, in residual headings.

6. Heading No. 84.82 applies, inter alia, to polished steel balls, the maximum and minimum diameters of which do not differ from the nominal diameter by more than 1% or by more than 0.05mm, whichever is less. Other steel balls are to be classified in heading No. 73.26.
7. A machine which is used for more than one purpose is, for the purpose of classification, to be treated as if its principal purpose were its sole purpose.

Subject to Note 2 to this Chapter and Note 3 to Section XVI, a machine the principal purpose of which is not described in any heading or for which no one purpose is the principal purpose is, unless the context otherwise requires, to be classified in heading No. 84.79. Heading No. 84.79 also covers machines for making rope or cable (for example, stranding, twisting or cabling machines) from metal wire, textile yarn or any other material or from a combination of such materials.

Subheading Note.

1. Subheading No. 8482.40 applies only to bearings with cylindrical rollers of a uniform diameter not exceeding 5mm and having a length which is at least three times the diameter. The ends of the rollers may be rounded.

Chapter 85

ELECTRICAL MACHINERY AND EQUIPMENT AND PARTS THEREOF;
SOUND RECORDERS AND REPRODUCERS,
TELEVISION IMAGE AND SOUND RECORDERS AND REPRODUCERS, AND
PARTS AND ACCESSORIES OF SUCH ARTICLES

Notes.

1. This Chapter does not cover:

- (a) Electrically warmed blankets, bed pads, foot-muffs or the like; electrically warmed clothing, footwear or ear pads or other electrically warmed articles worn on or about the person;
- (b) Articles of glass of heading No. 70.11; or
- (c) Electrically heated furniture of Chapter 94.

2. Heading Nos. 85.01 to 85.04 do not apply to goods described in heading No. 85.11, 85.12, 85.40, 85.41 or 85.42.

However, metal tank mercury arc rectifiers remain classified in heading No. 85.04.

3. Heading No. 85.09 covers only the following electro-mechanical machines of the kind commonly used for domestic purposes:

- (a) Vacuum cleaners, floor polishers, food grinders and mixers, and fruit or vegetable juice extractors, of any weight;
- (b) Other machines provided the weight of such machines does not exceed 20kg.

The heading does not, however, apply to fans or ventilating or recycling hoods incorporating a fan, whether or not fitted with filters (heading No. 84.14), centrifugal clothes-dryers, (heading No. 84.21), dish washing machines (heading No. 84.22), household washing machines (heading No. 84.50), roller or other ironing machines (heading No. 84.20 or 84.51), sewing machines (heading No. 84.52), electric scissors (heading No. 85.08) or to electro-thermic appliances (heading No. 85.16).

4. For the purpose of heading No. 85.34 "printed circuits" are circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the "film circuit" technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semiconductor elements).

The term "printed circuits" does not cover circuits combined with elements other than those obtained during the printing process. Printed circuits may, however, be fitted with non-printed connecting elements.

Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in heading No. 85.42.

CANADIAN EXPORT CLASSIFICATION

January 1, 1988

5. For the purpose of heading Nos. 85.41 and 85.42:

- (A) "Diodes, transistors and similar semiconductor devices" are semiconductor devices the operation of which depends on variations in resistivity on the application of an electric field;
- (B) "Electronic integrated circuits and microassemblies" are:
 - (a) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, interconnections, etc.) are created in the mass (essentially) and on the surface of a semiconductor material (doped silicon, for example) and are inseparably associated;
 - (b) Hybrid integrated circuits in which passive elements (resistors, capacitors, interconnections, etc.), obtained by thin- or thick-film technology, and active elements (diodes, transistors, monolithic integrated circuits, etc.) obtained by semiconductor technology, are combined to all intents and purposes indivisibly, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include discrete components;
 - (c) Microassemblies of the moulded module, micromodule or similar types, consisting of discrete, active or both active and passive components which are combined and interconnected.

For the classification of the articles defined in this Note, heading Nos. 85.41 and 85.42 shall take precedence over any other heading in the Nomenclature which might cover them by reference to, in particular, their function.

6. Records, tapes and other media of heading No. 85.23 or 85.24 remain classified in those headings, whether or not they are presented with the apparatus for which they are intended.

VEHICLES OTHER THAN RAILWAY
OR TRAMWAY ROLLING-STOCK,
AND PARTS AND ACCESSORIES THEREOF

Notes.

1. This Chapter does not cover railway or tramway rolling-stock designed solely for running on rails.
2. For the purpose of this Chapter, "tractors" means vehicles constructed essentially for hauling or pushing another vehicle, appliance or load, whether or not they contain subsidiary provision for the transport, in connection with the main use of the tractor, of tools, seeds, fertilizers or other goods.
3. For the purpose of heading No. 87.02, the expression "public-transport type passenger motor vehicles" means vehicles designed for the transport of ten persons or more (including the driver).
4. Motor chassis fitted with cabs fall in heading Nos. 87.02 to 87.04, and not in heading No. 87.06.
5. Heading No. 87.12 includes all children's bicycles. Other children's cycles fall in heading No. 95.01.

Notes.

1. This Chapter does not cover:
 - (a) Clock or watch glasses or weights (classified according to their constituent material);
 - (b) Watch chains (heading No. 71.13 or 71.17, as the case may be);
 - (c) Parts of general use defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of plastics (Chapter 39) or of precious metal or metal clad with precious metal (generally heading No. 71.15); clock or watch springs are, however, to be classified as clock or watch parts (heading No. 91.14);
 - (d) Bearing balls (heading No. 73.26 or 84.82, as the case may be);
 - (e) Articles of heading No. 84.12 constructed to work without an escapement;
 - (f) Ball bearings (heading No. 84.82); or
 - (g) Articles of Chapter 85, not yet assembled together or with other components into watch or clock movements or into articles suitable for use solely or principally as parts of such movements (Chapter 85).
2. Heading No. 91.01 covers only watches with case wholly of precious metal or of metal clad with precious metal, or of the same materials combined with natural or cultured pearls, or precious or semi-precious stones (natural, synthetic or reconstructed) of heading Nos. 71.01 to 71.04. Watches with case of base metal inlaid with precious metal fall in heading No. 91.02.
3. For the purpose of this Chapter, the expression "watch movements" means devices regulated by a balance-wheel and hairspring, quartz crystal or any other system capable of determining intervals of time, with a display or a system to which a mechanical display can be incorporated. Such watch movements shall not exceed 12mm in thickness and 50mm in width, length or diameter.
4. Except as provided in Note 1, movements and other parts suitable for use both in clocks or watches and in other articles (for example, precision instruments) are to be classified in this Chapter.
