PREFACE

This publication is the first formal listing of respondents who contribute data to the Annual Census of Manufactures for the Dairy Products Industries. The present volume is based primarily on names of those who participated in the 1960 annual census survey.

The coverage of this edition does not purport to include partial or "cottage activity", nor does it include operators who are basically importers, e.g. cheese. Doubtless, this directory will provide a useful reference for operators, importers, consumers and associations connected with the dairy industries.

Detailed statistics on commodity shipments, employment, wages and related data are subjects which are covered in a separate report issued by the Bureau. Information on distribution of the Dairy Products Industries annual report can be obtained on application to the Dominion Bureau of Statistics.

Walter E. Duffett,
Dominion Statistician.

INTRODUCTION

The term "dairy products industries" as applied to this publication covers three main activities:

1. Dairy Factories, which include:
 - (a) Butter and cheese factories
 - (b) Pasteurizing plants, and
 - (c) Condenseries
2. Ice Cream Manufacturers
3. Process Cheese Manufacturers

An historical table of principal statistics, beginning 1957, for the respective operations is presented on page 8. A significant time lag has occurred since the initial date of this work project. In the interim new firms have commenced operations; other firms may have changed title, curtailed operations, expanded operations, produced new items or effected other changes which would show as an inconsistency in this report. The list contains approximately 1,800 names and the collection of essential details from all operators presents a difficult task; to avoid grave inaccuracies the presentation of products by establishment has been limited to major line commodities of the industry.

Comprehensive and locational details on statistics pertaining to the Dairy Products Industries are published annually in DBS catalogue 32-209. Information on distribution of this report can be obtained on application to the Dominion Bureau of Statistics.

LEGEND

Name of product	Code number
Butter	1
Cheese, cheddar (including process cheddar)	2
Cheese, other (including process cheeses)	3
Ice cream and ice cream mix	4
Yogurt	5
Condensed milk	6
Evaporated milk	7
Milk powder, whole	8
Milk powder, skim	9
Other concentrated milk products	10
Casein	11
Milk and cream sold fresh	12
Other dairy products sold fresh (buttermilk, etc.)	13
All other products (lactose, chocolate drink, etc.)	14

EXPLANATORY NOTES

Industry statistics given in this publication refer to establishments, employees, salaries and wages, cost of fuel and electricity, cost of materials, value added by manufacture and selling value of factory shipments. Description of the principal industry statistics are as follows.

Establishment

Data for the annual census are collected on an establishment basis. A firm with more than one plant is required to file a report on each plant. In most instances an establishment is a complete factory and in general the statistics relate only to the manufacturing activities.

Employees

Administrative and office employees include all executives and supervisory officials such as presidents, vice-presidents, secretaries, treasurers, etc., together with managers, professional and technical employees, superintendents and factory supervisors above the working foremen level, and clerical employees. Working owners and partners are also included in this category.

Production and related workers include all other factory workmen whether paid on a monthly, weekly, hourly or piece-work basis. Working foremen doing work similar to that of the employees they supervise are included, as are maintenance, warehousing and delivery staffs. Employees on new construction work, in retail or wholesale operations, on outside piece work etc. are not included.

Production workers are reported by months, an average for the year being obtained by summing the monthly figures and dividing by twelve. This procedure is followed even though the plant did not operate in all months. Figures on employment refer to calendar years whether or not some establishments reported other data on a financial year basis.

Salaries and Wages

Salaries and wages refer to gross earnings of the employees described above, including salaries, wages, commissions, bonuses, the value of room and board where provided, deductions for income tax and social services such as sickness and unemployment insurance, pensions, etc., as well as any other allowances forming part of the employees' wages. Payments for overtime are included.

Salaries refer to amounts paid to administrative and office employees. Withdrawals by working owners or partners for normal living expenses for self and family are included but not their withdrawals for income tax. Wages refer to the amounts paid to production and related workers as defined above. Data on earnings refer to the calendar year whether or not some establishments reported other data on a financial year basis.

Cost of Fuel and Electricity

Figures for fuel refer to amounts actually used, (including fuel used in cars and trucks), not to purchases unless the quantities are the same. Values refer to the laid-down cost at the works, including freight, duty, etc.

Materials and Supplies Used

Figures represent quantities and laid-down cost values, at the works, of materials and supplies actually used during the year whether purchased from others or received as transfers from other plants of the reporting company. Amounts paid to other manufacturers for work done on materials owned by the reporting company are included. Returnable containers or any other items charged to capital account are not included. Fuels are not included. Goods bought from others or received as transfers from other plants or reporting companies for resale without further processing are not included. Maintenance and repair supplies not chargeable to capital account are included.

Factory Shipments

Factory shipments refer to shipments of goods made from own materials either in the reporting plant or by other manufacturers on the basis of a charge to the reporting plant for work done. All products and by-products shipped from the establishment are included whether for domestic use, export, or for government departments. Transfer shipments to sales outlets, distributing warehouses or to other manufacturing units of the reporting firm are included. Goods bought or received as transfers and resold without further processing are not included. Values are computed on f.o.b. plant or plant warehouse basis, and do not include sales tax or excise duties. Values of containers not returnable are included. Amounts received in payment for work done on materials owned by others are included.

Value Added by Manufacturing

Figures are computed from value of shipments plus or minus changes in inventories of finished goods and goods in process less cost of materials, fuel and electricity. This figure is sometimes referred to as net production(1).

In 1953 and previous years, the Baking Industry was on a production basis and "Value added by manufacture" was computed by subtracting the total of the cost of raw materials and cost of fuel and electricity from the value of production. In 1954 a change was made to "Value of factory shipments" instead of "Value of production" and in computing the value added, the shipments figures were used in exactly the same manner as were the production figures in the earlier annual periods. In 1954, a question was added to ask for data on opening and closing inventories of raw materials, goods in process and finished goods. In 1954 and 1955, only the change in opening and closing inventories of finished goods was taken into account in calculating the value added. In 1956 and later years, the change in goods in process inventories was added to the change in finished goods inventories and the total applied to the "Value of factory shipments" to arrive at the "Value of production". When the "Value of production" was determined in this manner, the total of the cost of raw materials and fuel and electricity was subtracted to arrive at the "Value added by manufacture". The annual change in opening and closing inventories is not significant. This condition indicates that the introduction of the "shipments" concept in 1954 did not seriously disturb comparability with "Value of production" which existed in previous years.

Standard Industrial Classification

The revised Standard Industrial Classification which has been introduced with the 1960 Census of Manufactures provided for a breakdown of the universe into 140 industries arranged in 20 major groups compared with 135 industries in 17 major groups in the old classification which was used in the compilations for the years 1949 to 1959 inclusive. It incorporates changes considered desirable on the basis of experience in using the earlier classification as well as those which take account of changes in the structure of Canadian industries associated with the rapid developments of the past decade. Full details are contained in the Standard Industrial Classification Manual, Catalogue No. 12-501, which is available from either the Queen's Printer or the Dominion Bureau of Statistics. Reporting establishments are classified or allotted to specific industries on the basis of the value of principal products made or shipped.

Many industries remain unchanged in the new classification but in many instances there have been substantial changes in content because of the shifting of establishments from one industry to another or in re-grouping of establishments. Where changes have occurred the principal statistics for 1957, 1958 and 1959 have been re-compiled to provide data on a basis comparable with those for 1960.

(1) To arrive at the National Accounts concept of "gross domestic product at factor cost", it would be necessary to subtract also the cost of office supplies used, advertising, insurance and other goods and services obtained from other businesses. Data on these inputs are not collected on the annual Census of Manufactures. Value added figures for "The primary industries and construction" are published in D.B.S. publication 61-202, Survey of Production.

Principal Statistics of the Dairy Products Industries by sub-groups 1957-60

Basis: Standard Industrial Classification in use prior to 1960
