D.B.S. REFERENCE PAPER

Dominion Bureau of Statistics, Ottawa, Canada

ISSUED BY AUTHORITY OF THE RT. HON. C. D. HOWE, MINISTER OF TRADE AND COMMERCE

B. Mayes

D.B.S. Reference Papers were first issued in 1949, when they were numbered 1 to 8. In 1950 they were numbered 1 to 12. The first in 1951 is numbered 21, as if 1950 Papers had been 9 to 20.

P R E F A C E

This reference paper introduces a new series of wholesale price index numbers related to the base period 1935-1939. The period 1935-1939 was selected some years ago as a standard reference level for Dominion Bureau of Statistics index number series. Unusual demands upon the Prices Section during the war and post-war periods have meant repeated interruptions in the project, so that 1935-1939 is already rather a remote base period. However, for reasons outlined in the introductory section, it seemed worthwhile to continue with the original idea of changing to the 1935-1939 base, even at this time when post-war base periods are being considered.

I wish to express our appreciation of the valuable assistance given by several industries, trade associations and other government departments in the compilation of base period weights. I should also like to thank the business firms whose monthly price reports are used in the calculation of these indexes.

This project has been carried out in consultation with various members of the Bureau staff, particularly H. F. Greenway and F. H. Leacy. It has been done under the direction of L. E. Rowbottom, Chief, Prices Section, by E.E. Bunting assisted by Miss L.E. Murphy.

Herbert Marshall

Herbert Marshall,
Dominion Statistician.

CHARTS:

CHART 1 - Index Numbers of Wholesale Prices, Component Classification, 1913-1950 (1935-1939 = 100) 9

CHART 2 - Index Numbers of Wholesale Prices, Degree of Manufacture Classification, 1913-1950 (1935-1939 = 100) 15

TABLES:

TABLE 1 - Index Numbers of Wholesale Prices, Component Classification, Annually, 1913-1949; Monthly, 1948-1950 (1935-1939 = 100) 10-37

TABLE 2 - Index Numbers of Wholesale Prices, Component Classification, Monthly, 1935-1950 (1935-1939 = 100) 38-43

TABLE 3 - Index Numbers of Wholesale Prices, Degree of Manufacture Classification, Annually, 1913-1949; Monthly, 1948-1950 (1935-1939 = 100) 44

TABLE 4 - Index Numbers of Wholesale Prices of Specified Commodities, Annually, 1913-1949; Monthly, 1948-1950 (1935-1939 = 100) 46-67

APPENDICES:

APPENDIX I - List of Commodities and Percentage Weights, Expressed in Terms of Imputed Values, Used in Calculating Index Numbers of Wholesale Prices; Component Classification 68-86

APPENDIX II - List of Items Used in Calculating Index Numbers of Wholesale Prices Classified According to Degree of Manufacture 87-95

APPENDIX III - Changes in the List of Items Included in the Wholesale Price Index between 1935-1939 and December, 1950 96-97

* Indexes shown in this bulletin for 1950 are preliminary.

INTRODUCTION

This publication introduces the fourth Canadian series of general wholesale price index numbers and the third to be published by the Dominion Bureau of Statistics. The first wholesale indexes for Canada were published by the Department of Labour in 1910 on the base 1890-1899 equals 100. The Dominion Bureau of Statistics first published wholesale indexes in 1923, on the base 1913 equals 100. Following World War I and the severe price declines of the early 1920's, a 1913 base ceased to be appropriate and the wholesale index was reweighted and transferred to a 1926 base.

The Bureau's general reference period is now 1935-1939 and wholesale price index numbers accordingly have been re-worked with new weights representative of marketing data for those years. The new indexes being introduced in this document will be published each month in "Prices & Price Indexes" commencing with the January 1951 issue.

As 1935-1939 is already a rather remote base period, and production patterns have changed appreciably since then, this series should be considered as an interim wholesale index. For many purposes price comparisons are now concerned with reference levels more recent than pre-war, e.g., the de-central period or pre-Korea. In spite of this, the present step has been taken because of the obsolete character of the 1926 weights, and the impossibility of yet selecting a post-war base with any assurance that it would have long run value. In addition, transfer to a post-war base must take into consideration work now being done, but still in formative stages, on commodity classification and wholesale index concepts.

The most important difference between the 1926 and 1935-1939 series is, of course, the weight revision from 1926 marketings plus imports to the 1935-1939 average of marketings plus imports. For both series, marketings include domestic and export sales. The new weights represent full value in exchange at all levels of the marketing process covered by the index, whereas in the former index that portion of the value of materials which received further processing was deducted from group and sub-group weights. The number of price series included has been increased from 589 to 604, and specifications have been improved for many commodities.

Chief component material has been the basis of the Bureau's classification of wholesale price index numbers since 1913, and this classification has been retained. There are eight major group indexes which are combined to give the total index, i.e. vegetable, animal, fibres, wood, iron, non-ferrous, non-metallic and chemical products. The Bureau is presently working on a new commodity classification and this will be the last revision to adhere closely to the principle of component material. This classification is unsatisfactory for application to manufactured commodities combining several kinds of material.

In addition to the eight component material indexes, indexes of raw and partly, and fully and chiefly manufactured items are available. Sub-group indexes within this classification such as farm origin and forest

origin, are being discontinued as they are not in general demand. The series of Canadian Farm Products at wholesale was previously reworked and is currently being published on the 1935-1939 base.

Index Numbers of consumer goods and producer goods have not been revised to the new base period. The problem of measuring price change of the highly manufactured commodities which should be included in such indexes was the determining factor in ceasing publication at this time. However, as time permits work will continue on these indexes.

The index entitled "General Building Materials", which formed a section of the purpose classification, has been arithmetically converted to a 1935-1939 base and will continue to appear in "Prices & Price Indexes" until the completion of a new building material index now under construction. This new index will be weighted according to materials entering into construction of factories, offices, theatres and similar buildings, i.e., domestic consumption, instead of total marketings of construction materials. Weights of the 1926 base index included lumber exports, and as lumber has increased in price more than most building materials, it is probable that this index is now higher than would be an index based on materials entering into Canadian construction. A series of price indexes of residential building materials was developed in 1948 and is being published monthly on a 1935-1939 base.

LIMITATIONS AND USES

While general wholesale price indexes have been calculated by most countries for many years, the question, "What does a general wholesale price index measure", cannot be given a precise answer. A retail price index can be identified with consumer expenditure, but a general wholesale index covers a much wider range. Yet it is not a measure of the purchasing power of money since it does not include prices of land, labour, securities, services, etc., except insofar as prices of these things enter into commodity prices. For related reasons it cannot be considered as the price component of national income. In spite of these limitations general wholesale price index numbers have a number of uses. The fact that they are available for many years in most countries gives them a value as an approximate measure of the comparative extent of major price changes in times of war and peace. Such comparisons are useful for international as well as national analysis. Further, a composite "all commodity" index provides a useful reference level against which to observe the behaviour of particular price groups, e.g., farm products, raw materials, residential dwelling materials, etc. however, special wholesale groupings and commodity price relatives are now considered to be of greater importance than the general index itself.

Component indexes and individual price series find numerous uses in both government and business. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses are: studies of replacement and construction cost in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analyses; valuation for tax purposes and inventory analyses; and studies in changes of physical volume. Business firms abroad use them in connection with sales and purchases in Canada.

WEIGHT CONCEPTS

As already mentioned, there is an important difference in the weighting concepts of the 1926 and 1935-1939 based wholesale indexes. In the former series each commodity included was weighted according to its total value-in-exchange, but at the sub-group and group levels the weight assigned was gross value minus the value of that portion of the products that received further processing. In other words, duplication was avoided wherever possible by deducting the value of that portion of a commodity which was included in the index in another form, e.g. wheat and flour. In the new series, the principle of full value in exchange has been used throughout at the commodity, sub-group and group levels. Both practical and theoretical considerations have led to this change. Weight reductions for raw materials which are further fabricated are extremely difficult to make where a variety of raw materials enters into one product, or where a basic material has numerous uses. In addition, the construction of special purpose indexes is greatly facilitated by the use of full value weights. Full value weights are more realistic in relation to the economics of exchange and the mechanics of the price system. The significance of the price of flour is determined not by the quantity of flour exported and consumed domestically as flour, but rather by the total sales of flour including quantities purchased by bakeries. It is the total value of trade at the wholesale level which can thus be related to the wholesale index when the weighting concept of full value in exchange is used.

In the above context the term "wholesale" is not an exact description when considered in relation to the generally accepted meaning of the word. Weights are closely allied to production and the price series are at various points in distributive channels. However, the title of wholesale index has been retained because of its wide usage to identify a loosely defined cross-section of prices below the retail level.

FORMULA AND CONSTRUCTION

The Bureau's wholesale price index is based on the formula of Laspeyres which may be written:

$$\text{Index for } r_1 = \frac{\sum q_0 p_1}{\sum q_0} \times 100$$

where the (q_0) 's are the weights for items in the base period. The (p_0) 's are the price averages for these items in the base period and the (p_1) 's the prices in the period r_1 .

The index is calculated as a base weighted aggregate with average values for the years 1935-1939 as 100. Weights are derived from values of quantities marketed (sales, - domestic and exports, plus imports) in the same period. To obtain the actual weight numbers a special technique was adopted. The five year average values of marketings, corresponding to each price series, were first computed and the average five year base period price averages were then divided into the value figures to obtain "factor" weights. These factor weight numbers may differ from physical quantities depending.

upon the difference between the level of the specified index price series and the corresponding average unit values represented in values of total marketings. When multiplied by base period price averages they give more precise weighting than would be achieved by the use of actual quantities. Further, they obviate the necessity of translating actual prices into price relatives where value figures only are available as weights.

Computation of the indexes is in two stages - sub-group and group. Monthly prices obtained for each item are first weighted by the appropriate "factor" weight to give a value product for the commodity. Item values in the sub-group are totalled for each month, and divided by the corresponding sub-group value aggregate at 1935-1939 prices. The result of this division, (multiplied by 100) is a sub-group index. This index number is then multiplied by a percentage weight to obtain its true importance in relation to the group total. Finally the group index is weighted by its percentage relation to the total of all groups to obtain the composite wholesale index.

Because of changes in specification, trade practices, etc., individual price series have to be changed from time to time. When this happens, the following procedure is adopted in order to preserve continuity in the price relatives and in the composite indexes. First, a new price series must be obtained for a similar specification at month r_1 . The price relative for the old series at r_1 is then divided into the new price for r_1 to obtain a new base price which will maintain continuity of price relatives. A similar procedure is used to compute a new base aggregate at the time a new price series is substituted for an old one. This new r_1 aggregate is divided by the sub-group index for r_1 to obtain a new base aggregate. This total is used as the divisor for aggregates subsequent to r_1 until another base has to be spliced within the sub-group. The following examples illustrate the procedure:

Basic material - related to examples 1 and 2:

	Base Weight	Base Price	Weight	Old Price at r_1	Price x Weight at r_1	New Price at r_1	Price x Weight at r_1
			x Base Price	\$	\$	\$	\$
Commodity A	16.5	3.395	56.018	6.642	109.593		109.593
Commodity B	1.8	16.916	30.449	35.100	63.180		63.180
Commodity C	1.4	3.029	4.241	7.452	10.433	7.360	10.304
Sub-group aggregate			90.708		183.206		183.077

Example 1 - Calculation of new base price for Commodity C:

$$\begin{array}{ll} \text{Old Price at } r_1 & \$7.452 \\ \text{Old Base Price} & \$3.029 \\ \text{Index at } r_1 & \frac{7.452}{3.029} \times 100 = 246.0 \end{array}$$

$$\begin{array}{ll} \text{New Price at } r_1 & \$7.360 \\ \text{New Base Price} & \frac{7.360}{246.0} \times 100 = \$2.992 \end{array}$$

Example 2- Calculation of new base aggregate:

Old Aggregate at r_1	183.206
Old Base Aggregate	90.708
Sub-Group Index at r_1	$\frac{183.206}{90.708} \times 100 = 202.0$

New Base Aggregate $\frac{183.077}{202.0} \times 100 = 90.632$

In splicing together the 1926 and 1935-1939 based series, the following procedure was adopted. First, the total, group and sub-group indexes were arithmetically converted to a 1935-1939 base from 1913 to December 1934. Second, for each index a ratio was obtained as of December 1934 by dividing the 1935-1939 weighted indexes by the arithmetically converted 1926 weighted indexes. Finally, all indexes preceding December 1934, were multiplied by the correction ratios thus obtained. The resultant historical record of wholesale index numbers incorporates three weighting patterns: 1913 weights are implicit in the indexes up to 1925; 1926 weights in those from 1926 to November 1934; and 1935-1939 weights from December 1934 forward. Before this method was adopted these indexes were compared with indexes calculated from 1913 to November 1934, by weighting with 1935-1939 weights from the sub-group level. No significant differences were observed.

Appendix I lists all items included in the 1935-1939 base aggregates. The value of each item is shown first as a percentage of the main component group in which it is classified, and secondly as a percentage of the composite total. Appendix II lists all items in the base aggregate which were included in the indexes of raw and partly, and fully and chiefly manufactured items. Appendix III shows item additions and deletions made between the base period and December 1950. The list of price series has been modified as important production and consumption changes have occurred and as price coverage has been extended. For example, synthetic fibres have replaced natural silk, and a marked improvement in the representation of fishery product series has been possible. Similar changes will be made in the future as conditions warrant them.

The principal sources of basic price material are industrial firms and government agencies with direct market contacts. In only two instances are trade journals utilized. The majority of prices are collected by mail and in most cases the price of each grade of a commodity and commodity market included in the index, is represented by a single quotation. The pricing date specified on most reporting forms is the 15th of the month. Seasonal items such as potatoes, are represented by monthly averages of quotations on one day of each week, while monthly averages of daily prices, are computed for a few items, e.g., grains.

In order that the index be as closely as possible a record of pure price change, uninfluenced by quality change, size of shipments, etc., detailed specifications for price quotes are provided on the schedules. Examples of such specifications are:

Passenger balloon tires, first line, 600/16 - 4 ply,
dealers' prices, freight paid on shipments of 100 lbs.
or more. Sales tax and excise tax included.

Wrapping Paper, No. 1. Kraft, basis 40 pounds and up, in rolls, f.o.b. destination (Eastern Canada) in carloads, price per 100 pounds, sales tax extra.

Coal, imported American bituminous slack, price to industrial consumers' per net ton, ex dock in Canadian funds, all taxes included. Size of shipments: carlots, 50 - 75 tons, truck, 1 - 7 tons. Wholesalers' selling price, net: cash 30 days.

By this method, price movements which would result from a changed basis of quotation, such as f.o.b. to c.i.f., or "slack" coal to "run-of-mine", are eliminated.

COMPARISON OF PRICE SERIES

The general index of wholesale prices on the base 1935-1939 = 100, records fluctuations very similar to those measured by the series on the 1926 base.

If the 1926 based series be arithmetically converted to a 1935-1939 base, the following table compares the two series at various points in time.

<u>YEAR</u>	1926 = 100 <u>Arithmetically converted to 1935-1939 = 100</u>	1935-1939 = 100
1913	83.0	83.4
1920	202.2	203.2
1926	129.7	130.3
1933	87.0	87.4
1940	107.5	108.2
1949	203.6	198.9
1950 (December)	227.9	226.4

These and similar differences for other years may be explained in relation to weight changes, as previously discussed, or to commodity differences. The principle commodity change has been the inclusion of gold. Because of its peculiar position in relation to monetary systems, and the fact that gold production is comparatively unimportant in many countries, this metal does not appear in most national wholesale price indexes. However, its importance as a commodity in Canadian production has been considered sufficient to warrant a departure from earlier practice.

APPENDIX II - LIST OF ITEMS USED IN CALCULATING INDEX NUMBERS OF WHOLE-
SALE PRICES CLASSIFIED ACCORDING TO DEGREE OF MANUFACTURE

RAW AND PARTLY MANUFACTURED

Fruits, Fresh:

Bananas, West Indies, Toronto
Bananas, 7 hands, Montreal
Lemons
Oranges

Grains:

Barley, No.1 Feed
Barley, No.2 Feed
Flax, No.1 C.W.
Oats, No.2 C.W.
Oats, No.3 C.W.
Oats, No.1 Feed
Rye, No.2 C.W.
Rye, No.3 C.W.
Wheat, No.1 Manitoba Northern
Wheat, No.2 Manitoba Northern
Wheat, No.3 Manitoba Northern
Barley, Ontario, good malting
Corn, Ontario, Yellow
Oats, Ontario, good, sound, heavy
Peas, No.2 Ontario
Rye, No.2 Ontario
Wheat, No.2 Ontario

Rubber, Raw:

Plantation Ceylon, ribbed,
smoked sheets
Standard, thick latex crepe

Sugar, Raw:

B.W. Indies, c.i.f. Montreal,
Vancouver

Cocoa and Cocoa Products:

Cocoa Beans, Trinidad
Cocoa Beans, Grenada
Cocoa Beans, Jamaica
Cocoa Beans, ~~Aceara~~
Chocolate Liquor, unsweetened,
cheapest
Chocolate Liquor, unsweetened, best
Cocoa Butter

Coffee Beans, Green:

Santos, good
Jamaica, good
Bogota
Kenya, best
African, medium

RAW AND PARTLY MANUFACTURED- Cont'd

Tea, Black:

Pekoe, average Ceylon and India

Onions:

No.1 Toronto
No.1 Vancouver

Potatoes:

Halifax
Charlottetown
Saint John
Montreal
Toronto
Winnipeg
Vancouver

Hay:

No.2 Timothy, Toronto
No.2 Timothy, Montreal
Alfalfa, Toronto
Fairie, Edmonton

Tobacco, Raw Leaf:

Flue Cured
Burley
Cigar Leaf

Furs, Raw:

Beaver
Weasel
Red Fox
Silver Fox
White Fox
Marten
Mink
Lynx
Muskrat, Spring

Hides and Skins:

Beef Hides
Packer Hides, Native
Steers
Packer Hides, Native
Cows
Calf Skins
Sheep Skins, city cured
Sheep Skins, country cured

APPENDIX II . LIST OF ITEMS USED IN CALCULATING INDEX NUMBERS OF WHOLE-
SALE PRICES CLASSIFIED ACCORDING TO DEGREE OF MANUFACTURE-Cont'd

RAW AND PARTLY MANUFACTURED-Cont'd

Livestock:

Steers, Toronto
Steers, Winnipeg
Calves, Toronto
Calves, Winnipeg
Hogs, Montreal
Hogs, Toronto
Hogs, Winnipeg
Lambs, Montreal
Lambs, Toronto
Lambs, Winnipeg

Milk, Fluid:

Charlottetown
Halifax
Saint John
Montreal
Quebec
Ottawa
Toronto
Hamilton
Winnipeg
Saskatoon
Regina
Calgary
Edmonton
Vancouver
Victoria

Eggs, Grade "A" Large:

Halifax
Saint John
Montreal
Toronto
Winnipeg
Saskatoon
Calgary
Vancouver

Eggs, Grade "B":

Halifax
Saint John
Montreal
Toronto
Winnipeg
Saskatoon
Calgary
Vancouver

RAW AND PARTLY MANUFACTURED-Cont'd

Eggs, Grade "C"

Halifax
Saint John
Montreal
Toronto
Winnipeg
Saskatoon
Calgary
Vancouver

Fish:

Cod, fresh steak
Haddock, fresh, heads on
Sole, fresh
Halibut, West Coast
Whitefish, fresh and frozen

Cotton, Raw:

Raw Cotton, Hamilton
Raw Cotton, New York (Canadian funds)

Silk, Raw:

Special Grand
Grand
Special Crack
Crack
Double Extra Crack
White, Special Grand
White, Grand
White, Special Crack
White, Crack

Wool, Raw:

Eastern, $\frac{1}{2}$ Blood
Western Domestic, 3/8 Blood
Western Range, $\frac{1}{2}$ Blood

Jute, Raw

Hemp, Manila

Sisal, African

Wood Pulp:

Sulphite, unbleached
Sulphite, bleached
Groundwood

APPENDIX II - LIST OF ITEMS USED IN CALCULATING INDEX NUMBERS OF WHOLE-SALE PRICES CLASSIFIED ACCORDING TO DEGREE OF MANUFACTURE-Cont'd

RAW AND PARTLY MANUFACTURED-Cont'd

Pig Iron:

Foundry Silicon
Malleable, Standard, Silicon

Cast Iron and Steel Scrap:

Scrap, heavy melting steel, charging box size
Scrap, heavy melting steel, over-charging box size
Scrap, turnings and borings
Scrap, No.1, machinery, cast iron

Antimony

Metallic Nickel

Silver

Tin Ingots:

Tin Ingots, straits
Tin Ingots, 99.25 p.c.

Aluminium Ingots

Copper, Electrolytic

Zinc, Electrolytic, Domestic

Lead, Domestic

Gold

Coal, Domestic & Imported:

American Anthracite
American Bituminous
American Slack
Welsh Anthracite
Welsh Harada Cobbles
Bituminous Run of Mine, N. S.
Bituminous Lump, N. S.
Standard, Screened, Lump
Western Domestic
4" Lump
Run of Mine, B.C.
House Lump, B.C.

Sand and Gravel:

Sand, Water Washed, Toronto
Sand, Concrete, Montreal

RAW AND PARTLY MANUFACTURED-Cont'd

Sand and Gravel-Cont'd

Sand, Water Washed, Winnipeg
Sand, Water Washed, Vancouver
Gravel, Pit Run, Montreal
Gravel, Pit Run, Toronto
Gravel, Pit Run, Winnipeg
Gravel, Pit Run, Vancouver

Petroleum, Crude

Asbestos:

Asbestos, Crude No.1
Asbestos, Crude No.2
Asbestos, Spinning Stocks
Asbestos, Shingle Stocks
Asbestos, Millboard and Paper Stocks
Asbestos, Fillers, Floats and
Other Short Fibres

Sulphur

FULLY AND CHIEFLY MANUFACTURED

Fruits, Canned:

Peaches
Cherries
Raspberries
Orange Marmalade
Strawberry Jam

Milled Cereal Foods:

Flour, No.1 Patent, Montreal and Toronto
Flour, No.1 Patent, Winnipeg
Flour, No.2 Patent, Montreal and Toronto
Flour, No.2 Patent, Winnipeg
Flour, Ontario Winter Wheat
Rolled Oats
Corn Meal
Malt

Livestock and Poultry Feeds:

Gluten
Bran
Shorts

Bakery Products:

Bread, Plain White, Halifax
Bread, Plain White, Saint John
Bread, Plain White, Montreal

APPENDIX II - LIST OF ITEMS USED IN CALCULATING INDEX NUMBERS OF WHOLE-
SALE PRICES CLASSIFIED ACCORDING TO DEGREE OF MANUFACTURE-Cont'd

Bakery Products-Cont'd

Bread, Plain White, Toronto
Bread, Plain White, Winnipeg
Bread, Plain White, Regina
Bread, Plain White, Calgary
Bread, Plain White, Vancouver
Soda Biscuits

Vegetable Oils:

Cottonseed Oil
Linseed Oil
Cocoanut Oil
Olive Oil
Peanut Oil
Chinawood Oil
Soya Bean Oil
Palm Oil

Men's Rubbers No.1

Women's Rubbers

Automobile Tires and Tubes:

Tires, Balloon 600/16 4-ply
Tires, Balloon 550/17 4-ply
Tubes, 600/16
Tubes, 550/17

Refined Sugar Products:

Sugar, Granulated, Standard, Montreal
Sugar, Granulated, Standard, Vancouver
Sugar, Yellow No.1
Sugar, Yellow No.3
Glucose 44° Baume
Molasses
Corn Syrup

Rosin

Turpentine

Starch

Vinegar

Rice, Cleaned

Tapioca

FULLY AND CHIEFLY MANUFACTURED-Cont'd

Dried Fruit:

Currants, Australian, 2 Crown 56's
Raisins, Uncleaned Sultanas
Raisins, Thompson's Seedless
Prunes, 50's to 60's, California

Canned Vegetables:

Corn
Peas
Tomatoes
Baked Beans

Leather:

Packer Bends No. I & II
Packer Bends No. III
Shoulders
Bellies
Box Sides D
Harness Leather
Gun Metal Calf

Boots and Shoes:

Men's Shoes
Women's Shoes

Meats, Fresh:

Beef Carcass, Steer, Montreal
Beef Carcass, Steer, Toronto
Beef Carcass, Steer, Winnipeg
Beef Carcass, Steer, Vancouver
Beef Carcass, Cow, Montreal
Beef Carcass, Cow, Toronto
Beef Carcass, Cow, Winnipeg
Beef Carcass, Cow, Vancouver

Inorganic Chemicals-Cont'd

Alum Lump
Borax Commercial Powder
Copper Sulphate, Blue Vitriol
Magnesium Sulphate, Epsom Salts
Sulphuric Acid
Chlorine Liquid
Sodium Cyanide
Sodium Bichromate
Ammonium Chloride (sal ammoniac)
Calcium Chloride
Aluminium Sulphate

Organic Chemicals:

Acetic Acid
Alcohol Wood
Alcohol Denatured, Cologne Spirits
Cream of Tartar
Formaldehyde
Glycerine, Refined

Coal Tar Products:

Creosote Oil, Crude
Benzol, Pure

Dyeing and Tanning Materials:

Dyeing - Direct Black
Sulphur Black
Nigrosine, Water Soluble
Methylene Blue, Basic
Indigo, Synthetic
Alkali Blue No.4
Auromine O, Yellow
Tanning- Quebracho Extract
Logwood Extract

Explosives:

Gunpowder
Dynamite

Paint Materials:

Shellac
White Lead
Zinc Oxide
Red Lead

FULLY AND CHIEFLY MANUFACTURED-Cont'd

Paint Materials-Cont'd

Lithopone
Litharge
Lampblack
Carbon Black
Putty, Pure Linseed Oil

Prepared Paints:

White Paint
Coloured Paint

Drugs and Pharmaceuticals:

Citric Acid
Tartaric Acid
Chloroform
Ether, Commercial
Hydrogen Peroxide
Camphor Gum
Quinine Sulphate
Castor Oil
Iodine Crude

Fertilizers:

Muriate of Potash
Dried Blood
Superphosphate
Basic Slag
Sulphate of Potash
Tankage
Cyanamid
Bonemeal
Sulphate of Ammonia
Nitrate of Soda

Industrial Gases:

Acetylene
Oxygen

Miscellaneous:

Soap, Laundry
Soap, Toilet
