CENSUS OF MERCHANDISIMG AND SERVICE ESTABLISHMENTS

## A DECADE OF RETAIL TRADE

$1923-1933$

Pubtished by Authority of the HON. R. B. HANSON, K.C., M. . Minister of Trade and Commerce.

## Probici

The growing importance of problems of distribution, and the increasing demands made upon the Dominion Burean of Statistios for information on retall and wholesale trade, has made the lack of historical data on merchandising more apparent. The first comprehensive survey of retail and wholesale trade in Canada was made for the year. 1930 through the Census of Merchandising and Service Establishmentssu The annual census which is now taken provides curnent statistics and enables comparisons to be made with the base year 1930. In 1924 a partial census of trading, establishments was taken which provided a good deal of information for the year 1923. For the period between 1923 and. 1930 no complete census was taken and only scanty information on the development of retail trade: could be faund by searching through vapious publications. It was with a view to bringing such information together and throwing more light on the probable trends in retail trade during the past. decade that this study was undertaken.

Evidence collected for the Price Spreads Inquiry has been used wherever possible and a careful search has bean made of any other avallable sources of information on retail trade or the supply of consumers? goods. While the results obtained cannot approach the accuracy or comprehensiveness of the census figures, it is believed that they are sufficiently reliable to be used as indicators of the trend in retall merchandise trade during the period which has been survejed.

This study was made by MroA.S. Whiteley, M. Aa, of the Internal Trade Branch of the Dominion Bureau of Statistics under the direction of Mr Herbert Dinritizll, BoA., F.S.So., Chief。

## A DECADE OF RETAIL TRADE: 1923-1933

Prior to the Census of Merchandising and Service Establishments taken in 1931, the available information on retail and wholesale trade in Canada was extremely sketchy and it was: impossible to build up any comprehensive picture of th retail distribution of commodities or to estimate the value of retail and wholes le sales in any period. It is true that a Census of Trading Establishments was taken for the year 1923, but, as it was not possible to make a complete. survey of all tradin establishments at: that time, the actual extent of retail and wholesale trade was never definitely determined.

Final figures for the Census of Merchandising and Service Establ shments, however, establishedwa basis on which it is possible to make estimates of the amount of trade tne earlien years. For such estimates, of course, the accuracy of th ensus sesults cannot be claimed, but., when every effort is made to check them with oth $r$ statistical series, it is believed that a fair degree of reliability is a tai ed.. As the figures of the partial census of trading establishments were available fo the year 1923, it was decided to attempt to carry back to this year calculat ons of the value of retail trade in each year during the period 1923 to 1930. The annual Census of Merchandising and Service Estahlishments which is now taken by the Domilion Bureau of Statistics provides the data for trade in the period 1930 to 1933. As there have been such marked changes in the wholesale distribution during the past decande and the develoment of new agencies:lying autsicie the regular wholesale fields, no attempt has been made to calculate the sales of wholesale establishments in the earlier years.

## Bconomic Background

Before entering on-a discussion of the volume of retail trade, it may be of value to examine the general economic conditions which have prevailed in the period under review.

The year 1923 witnessed the-first stage of revival after the severe deflation during 1921 and 1922. Wholesale prices had touched low point in 2922 but advanced towards the close of the year and during the first quarter of 1323, to remain relatively stable for the balance of the year. Confidence was restored and a reneral recovery took place in manufacturing ans construction. The prices of agricultural products, howevar; continued to fall during 1923 and agricultural revenue was lower than in 1922: The number of commercial failures in 1923 was less than in the $p$ eceding year and. the increase in employment throughout the country gave expectations of a coming period of prosperity.

Developments in 1924 failed to live up to the early expectations and after an upward trend. during the first quarter of the year business slackened considerably
and the index of employment registered a sharp decline in the latter half of the year. Dur ing the autumn and winter of 1924 prices of farm products made sharp advances and this factor, combined with improvements in the international situation, played a part in checking the dommard trend in business. In spite of the contraction in trade, the number of commercial fallures in 1324 was less tian in 1323. Interest rates also fell during the yoar and a larger suphly of oafital was offorert for investment.

Unsetisfactory businmas conditions waich parailec in 2924 continued auring the first half of 1925 , but the continued rise in the prices of agricultural products and the promise of good crops gave a marked stimulus to business during the second half of the year. Employment, which was below the 1923 or 1324 levels at the commencement of the year, passed the 1924 level in July and the average for the year was s.lightly higher than in 1924. Payrolls of manufacturing plants were $\$ 596$ millions in 1925 compared with $\$ 560$ millions in 1924 and $₹ 571$ millions in 1923. Salaries and wages in the mining industry also increased in 1925.

Revival in 1325 advancer into a general movement of recovery in 1926 and the country experienced the largest measure of prosperity since the year 1920. Gross agricultural revenue was higher than in 1925 and activity in mining and forestry industries was at a higher level. Employment. generally increased considerably and there was a renewed influx of immigrants and of Canadians returning from the United States. The s.tock exchanges reacter to the increase in prosperity and the highest level of prices in the history of the exchanges was reached by the end of the year.

Although the rate of recovery which was maintained during 1926 was not carried on during 1927, this year was still one of general prosperity. The value of field crops was the largest on record, except for the war period, and mining and forestry industries again advanced. Construction was maintainer at a high level and there were some gains in employment.

The year 1928 witnessed a definite quickening in the: tide of prosperity. The largest wheat crop in the history of the Dominion was harvested and gross agricultural revenue was only slightly lower than in 1927. The mining industry showed remarkable activity and among the forest industries the pulp and paper plants had a banner year. There was great progress in the development of hydro-electric pover and general manufactures were more active than in any period since the war; the same conditions prevailed in. the construction industries.

Culmination of the period of expansion which began in 1924 was reached in 1929. The first three quarters of the year were characterized by general business optimism which was-reflected in the wave of speculation which swept over the country. Employment was higher in every month, than in 1328 and there was a considerable boom in the construction industry: These accelerating movements in business affairs received an abrupt. set-back in. October and November with the collapse of the security markets. But the decline in agricultural income which was already taking place and the cumulative effects of international difficulties meant that the slackening in industrial activity was more than a passing phenomenon. The period of prosperity was at an end and a definite period of contraction in business enterprise had commencer.

The period from 1930 to 1933 is still so close at hand that only the general movements between 1930. and 1933 need be.mentioned. One of the most serious features of the depression from the viewpoint of the Canadian economy was the drastic decline in the prices of primary products. While there was a tendency for the prices of farm products to decline from 1926 onwards, the movement was gradual and
engendered none of the disturbances which followed the prectpltate fall in irices which began in 1930 and extended through 1931 and 1932. While the largest dicies took place in the prices of agricultural producta, the indexes of prices for art cles of marine, forest and mineral origin also declined greatly in the same period, and the result was a general reduction in the incomes of the Canadian prople. The decline in the national income was eldent in all phases of economic aotivity - amployment was greatly curtailed, the constmiction incuatry was brought to a standstill, and the production of capltal goods and durahle consumers' goods reached an extremely low level.

During 1933 there was some evidence that deflation had run its course and the rise in the prices of primary products tended to alleviate somewhat the position of producers and to restore a measure of confidence to buainess. The advance made in 1933 was extended, during 1934 when manufacturing, and particularly mining, registeced consider b e gains. Retail trade also showed some improvement in this year. While the general level of economic activity was far below that of 1928 or 1929, definite indications of a revival in trade could be found.

Social Factors. --The development of retall trading eitablishments is closely related to the growth of urban communities. Retail trade is concentrated in cities and towns primarily because of two factors. One is the necessity of havine distributing centres to serve outlying communities which are an sparesly settled that they could not support mercantile establishments, and the ancond is the enlarged dependence of urban dwellers on purchased commodities in contras to rural dwellers who can raise or make exchanges for a considerable part of the gooda they need. Another fea ure of the life of urban communities is the increased demand for services. While this is most easily seen in the devaloment of automotive shops of various kinds, there has been an enlargement of the services provided in practically all branches of retail trade. The rapid urbanization of the Canadian population in the decade under review has undoub.tedly been one of the chief causes for the movements in retail trade. From 1921 to 1931 the total popalation of Canada increased 18 per cent, but the urban population grew 28 per cent and the popul tion of the four metropolitan areas (Montreal, Toronto, Winnipeg and Vancouver) was 38 per cent greater in 19.51 ti:an in 1921. A close correspondence is found between the changes in the urban population in each_province and the number of gainfully employed persons in trade. The following table will serve to illustrate this point. The trade groups, as used for census purposes, include auctioneers, advertising agents, merchants and dealens wholesale and retail, salesmen and saleswomen, deliverymen and, generally, persons amployed in and about stores.

Table 1.--Changes in the Number of Gainfully Employed Persons in Trade
and in Urban and Pural Populations, by Provinces, 1921 and 1931

| Province | Number of Gainfully Employed in Trade |  |  | Percentage Increase or Decreace in Population, 1921-1931 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $1921$ | 1931 | Per cent change |  |  |  |
|  |  |  |  | Urban | Pural | Total |
| CANADA | 310,439 | 387,315 | +24.8 | +26.7 | + 9.5 | +19.1 |
| Prince Edward Island . | 1,995 | 2,138 | + 7.2 | + 6.8 | - 2.7 | - . 7 |
| Nova Scotia ........ | 15,462 | 15,202 | - 1.7 | + 2.0 | - 5.3 | -2.1 |
| New Brunswick | 11,668 | 12,034 | + 3.1 | + 3.6 | +6.0 | +5.2 |
| Quebec | 77,410 | 93,401 | +28.4 | +37.1 | +8.2 +8.2 | +21.7 |
| Ontario | 120,475 | 148,883 | +23.6 +20.6 | +22.8 +20.3 | +8.9 +10.2 | +17.0 |
| Mandtoba | 25,892 | 21,812 | +27.6 | +32.9 | +17.1 | +21.7 |
| Alberta. | 16,559 | 21,824 | +31.8 | $+25 . ?$ | +24.0 | +24.3 |
| Qritich Columbis | 23.887 | 34.805 | +45.7 | $+34.5$ | +29.7 | +32.4 |

While the increase in the number of persons engaged in trade follows the same trend as the growth of urban population, it is not possible to find such a direct relationship between the trend in dollar value of retail sales and the growth of population.. The actual amount of retail business must have a direct relationship to the amount of purchasing power available which, in turn, is dependent upon the general level of economic activity. The relative level of retail prices is, of course, an important factor affecting the dollar volume of retail sales. While the combined index of retail prices cemained fairly steady from 1323 to 1930, there was a slight tendency for food prices to increase and for the prices of fuel and clothing to decline. After 1930 prices in practically all lines of consumers goods dropped considerably, but, of course, the decrease was much greater for some products than for others. In the absence of price indexes which can be directiy relat ed to sales of retail stores, it is not possible to determine the quantities of goods which are sold each year.

Increased urbanization of the Canadian population was accompanied by rapid improvements in the means of transportation and communication. The most marked developments: were in the field of motor transportation. During the period from 1923 to 1930 the mileage af. gravel highways in Canada more than doubled, increasing from some 35,000 miles at the beginning of 1924 to more than $71,000 \mathrm{miles}$ at the end of 1930. The mileage of ather types of surfaced highways was: also greatly increased and more than 2,000 miles of concrete highway were constructed. The improvement in roads and the increased use of motor vehicles greatly affected the location of retail establishments and the development of new types of merchandising units. Further reference will be made to this gubject in the discussion of the development of retail trade.

## Changes: in Methods of Distribution

From 1923 to 1933 there was a rapid acceleration of many changes in the distributive field. The-long-established system of merchandising--manafacturer wholesaler - retailer-was breaking down even before. 1923 as manufacturers established direct trade relationships with retailers and as the larger retailers attempted to purchase directly from manufacturer or producer. Accompanying theser changes was the development of branded packages and nationally advertised articles by large manufacturers, and this direct appeal to the consumer relieved both the wholesaler and retailer of part of their function of forecasting demand and arranging for supply. Some indication of the graming use of advertising as a means for securing patronage is given by the statistics for the amount of advertising revenue secured by printing and. publishing. plants in the period under review. The figures for the printing trades relate only to the direct sale of advertising by publishing plants and do not include the value of advertising revenue secured by firms which have their printing done by outside firms. The greater part of the revenue from advertising given in the annual reports is reported by publishers of newspapers: It is probable, therefore, that the statistics secured in this fashion minimize the development of advertising in the period.

Table 2.--Revenue from Advertising Reported by Firms in the Printing Trades,
1923-1933

| Year |  | Amounts Reported |
| :---: | :---: | :---: |
| 1923 | $\ldots \ldots \ldots$ | $28,219,344$ |
| 1924 | $\ldots \ldots \ldots$ | $32,330,520$ |
| 1925 | $\ldots \ldots \ldots$ | $32,177,509$ |
| 1926 | $\ldots \ldots \ldots$ | $34,853,587$ |
| 1927 | $\ldots \ldots \ldots$ | $38,696,548$ |
| 1928 | $\ldots \ldots \ldots$ | $43,023,560$ |
| 1929 | $\ldots \ldots \ldots$ | $48,236,937$ |
| 1930 | $\ldots \ldots \ldots$ | $44,597,708$ |
| 1931 | $\ldots \ldots \ldots$ | $39,544,157$ |
| 1932 | $\ldots \ldots \ldots$ | $32,059,245$ |
| 1933 | $\ldots \ldots$ | $28,638,061$ |

Changes in the established system of distribution were undoubtedly hastened by the collapse of the inflationary movements. engendered by the war. The rapid fall in prices in 1921 and 1922, and the curtailment in economic activity, undermined the position of many retail and wholesale firms... Dun's record of business failures gives some indication of the difficulties experienced by trading firms in this period.

## Table 3.-Number of Failures Among Trading Concerns: in Canada and Newfoundland (From Dun's Review) . 1918-1924

| Year |  | Number of <br> Failures |
| :--- | :--- | ---: |
| 1918 | $\ldots \ldots \ldots$ | 590 |
| 1919 | $\ldots \ldots \ldots$ | 494 |
| 1920 | $\ldots \ldots \ldots$ | 771 |
| 1921 | $\ldots \ldots \ldots$ | 1,739 |
| 1322 | $\ldots \ldots \ldots$ | 2,717 |
| 1923 | $\ldots \ldots \ldots$ | 2,319 |
| 1924 | $\ldots \ldots \ldots$ | 1,720 |

Mercantile concerns whice carried heavy inventories or had a considerable amount of credit outstanding found that the decline in prices and the contraction in business rendered their financial position most insecure. The record of business failures reveals that a great many went under, but, in addition, there must have been a great many reorganizations and amalgamations during this period which forecast new developments in the field of merchandising.

Businesses which passessed large resources; or which were not burdened by commitments made in the period of: high prices, were given a: strong competitive advantage. The two most outstanding developments in the retail field during this period were the growth of large departnental organizations and the phenomenal advance of chain stores in certain flelds of retail trade.

Department stores and mail order houses long ante-date the year 1923 with which this survey begins, but since 1923 departmental organizations have become more markedly-a significant feature of retail trade. Chain stores, likewise, were by no means unknow before 1923, but the scale on which multiple organizations in Canada were then operating was relatively small. Exceptions to this statement may
be found in the 5-and-10 cent chains and, perhaps, one or two other organizations. No reliable information is available to show the growth in number of chain store companies or in number of chain units in the period prior to the year 1930, when the Census of Merchandising Establishments was taken(1). Some indication of the development of chain store systems is gained from the age of units which were operated during the year 1930. There were 8,534 establishments classified as chain stores for census purposes and of these 4,601 , or more than half the number, had been opened after 1925. The number of units established in each year since 1925 is as follows:

| 1926 | $\ldots .$. | 395 |
| :--- | :--- | ---: |
| 1927 | $\ldots .$. | 682 |
| 1928 | $\ldots .$. | 944 |
| 1929 | $\ldots .$. | 1,080 |
| 1930 | $\ldots .$. | 984 |
| Not known ... | 516 |  |

The relative age of chain units varies, of course, with different kinds of business. In the following table, chain stores have been grouped according to opening before or after 1925 for certain kinds of business:
$\frac{\text { Table 4. }- \text { Number of Chain Store Units Operated in Canada in } 1930}{\text { and Number Established Later than } 1925}$

| Kind of Business | Total <br> Units | Date of Opening |  |
| :---: | :---: | :---: | :---: |
|  |  | Later <br> than <br> 1925 | Per cent later than 1925 |
| General merchandise group | 611 | 334 | 54.67 |
| Apparel group ........... | 660 | 399 | 60.46 |
| Turniture and household group | 481 | 239 | 49.69 |
| Food group | 2,669 | 1,806 | 67.67 |
| Lumber and building group | 1,122 | 317 | 28.25 |
| Restaurant group ......... | 290 | 130 | 44.83 |
| Automotive group . | 841 | 583 | 70.04 |
| Office appliance group | 173 | 27 | 15.61 |
| Drug stores | 292 | 130 | 44.52 |
| All others | 1,335 | 630 | 45.16 |

As the largest number of chain stores is in the food group, and as a relatively high proportion of stores in this group were opened after 1925, an examination of the growth of a group of food chains may serve to illustrate the rapid develoument which has taken plice in this field. From the evidence presented to the Royol Comnission on Price Spreads, it is possible to assemble figures for four food chains, three of which operated throughout the period 1923 to 1933, while the fourth commenced operations after 1927. The combined figures for these four organizations are as folloms:
(1) For further particulars of chain stores, see Appendix, Page 28.

Table 5.--Development of Four Food Chains, 1923-1933

| Year |  | Number of Stores | $\begin{gathered} \text { Per Cent } \\ \text { of } \\ 1930 \\ \hline \end{gathered}$ | Amount of Sales | $\begin{gathered} \text { Per Cent } \\ \text { of } \\ 1930 \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | \$ |  |
| 1923 | 3 | 298 | 31.1 | 14,330,038 | 22.1 |
| 1924 | 3 | 400 | 41.7 | 18,751,544 | 28.9 |
| 1925 | 3 | 462 | 48.2 | 22,602,921 | 34.8 |
| 1926 | 3 | 512 | 53.4 | 28,365,147 | 43.7 |
| 1927 | 3 | 596 | 62.2 | 36,092,048 | 55.6 |
| 1928 |  | 837 | 87.3 | 50,563,871 | 77.9 |
| 1929 | 4 | 834 | 92.2 | 63,507,596 | 97.8 |
| 1930 | 4 | 959 | 100.0 | 64,945,379 | 100.0 |
| 1931 | 4 | 1,034 | 107.8 | 64,447,061 | 99.2 |
| 1932 | 4 | 1,049 | 109.4 | 57,083,253 | 87.9 |
| 1933 | 4 | 1,002 | 104.5 | 52,273,386 | 80.5 |

These four chains, it may be said in passing, had slightly less than half the total number of grocery and combination chain stores in Canada in 1930 and accounted for more than half of the total sales for chain stores in this field.

Since 1930, the number of chains has fallen and the number of chain stores dropped after 1931. The following table gives figures for all chains in Canada except department store chains in the perioc 1930 to 1933.

Table 6.-Significant Figures for Chain Stores in Canada, 1930-1933

|  | Number | Number of Chain |  |
| :---: | :---: | :---: | :---: |
| Year | of Chains | Stores (average for the year) | $\begin{aligned} & \text { Amount of } \\ & \text { Sales } \\ & \hline \end{aligned}$ |
| 1930 | 518 | 8,097 | 487,336,000 |
| 1931 | 506 | 8,188 | 434,015,200 |
| 1932 | 486 | 8,066 | 360,630,100 |
| 1933 | 461 | 7,900 | 328,736,700 |

Another development in the retail field which gained a goud deal of impetus in the period under review was the growth of voluntary or co-operative associations of independent merchants, comonly called voluntary chains. Again, no definite information is available for the earlier years, but in 1930 there were 24 such associations. reported for the census comprising almost 4,500 members. Since 1930, as the following table shows, the movement has continued to expand.

Table 7.--Significant Figures for Voluntary Chains in Canada, 1930-1933

| Year |  | Number of <br> Associations |  | Number of <br> Members |  |
| :--- | :--- | :---: | :---: | :---: | :---: | | Amount of |
| :---: |

More than 90 per cent of the voluntary chain movement lies in the grocery field and, in spite of the considerable fall in the prices of groceries, the value of purchases through such associations has continued to increase.

## Calculation of Retail Sales

The estimation of the walue of retail merchancise trade in the period prior to the census for 1930 had, of necessity, to be based on information derived from a variety of sources. A description of the methods followed in calculating the value of retail sales in the period from 1923 to 1930 will be given in the discussion of the trend of salas for each trade group. The retail sales were first calculated from the year 1930 as the complete census figures were avilloble for this year. After the dollar value of sales was secured an index was mide uilig ifgures for 1926 as a base in order to permit ready comparison with other statistical series published by the: Bureau. The value of retail merchanaise trade, it is estimated, was slightly in excess of $\$ 2$ billions in 1923 and a little more than $\$ 3$ billions in 1929, when a peak was reached. By 1933 sales had.follen to approximately $\$ 1 \frac{3}{4}$ billions. A comparison of the trend of retail sales, as calculated for this study, and other statistical series published by the Bureau yields interesting results. It will be seen from the table below that there is a close correspondence between the movements in retail sales and in the physical volume of business from 1923 to 1930 (See also Chart 2). Thereafter, the index of retail sales falls lower than the index of physical volume of business. The divergence between the two series is not large until 1933. when opposing trends are shown. This difference is probably due to the greater influence of prices on the level of retail sales and the production of producers' goods on the index of the physical volume of business.

Table 8.-Comparison of Retail Sales and Other Economic Factors, 1923-1933

| Year |  |  | Value of Retail Sales (000) | Indexes ( $1926=100$ ) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Retail Sales | Retail <br> Prices | Physical Volume of Business | Manufactures (Gross Value of Production) | Employment | Bank Debits |
|  |  |  | \% |  |  |  |  |  |  |
|  | 1923 |  | 2,173,398 | 84.9 | 100.0 | 85.5 | 87.4 | 95.8 | 93.4 |
|  | 1924 |  | 2,138,977 | 83.3 | 98.0 | 84.6 | 85.0 | 93.4 | 89.5 |
| 8316 | 1925 |  | 2,303,598 | 89.7 | 99.3 | 90.9 | 91.5 | 936 | 92.6 |
| $9 \% 2$ | 1.926 |  | 2,568,185 | 100.0 | 100.0 | 100.0 | 100.0 | 99.6 | 100.0 |
| 102.9 | 1927 |  | 2,783,189 | 108.4 | 98.4 | 106.1 | 105.4 | 104.6 | 118.9 |
| 116.2 | 1928 |  | 3,035,878 | 118.2 | 98.9 | 117.3 | 116.1 | 111.6 | 143.2 |
| 114.6 | 1929 |  | 3,157,927 | 123.0 | 99.9 | 125.5 | 125.1 | 119.0 | 153.7 |
| 00.1 | 1930 |  | 2,755,577 | 107.3 | 93.2 | 109.5 | 106.5 | 113.4 | 123.5 |
| 84.4 | 1931 |  | 2,325,732 | 90.6 | 89,6 | 93.5 | 83.8 | 102.5 | 104.0 |
|  | 1932 |  | 1,917,219 | 74.7 | 81.4 | 78.7 | 66.0 | 87.5 | 85.1 |
| 645 | 1.933 |  | 1,776,884 | 69.2 | 77.7 | 79.7 | 64.8 | 83.4 | 98.8 |

Changes in the value of retail sales, as has already been mentioned, reflect both changes in quantities of goods purchased and also movements in retail prices. The decline in retcil sales from $\$ 3,157,927,000$ in 1929 to $\$ 1,776,8: 1,000$ in 1933 is thus a resultant of a reduction in the physical volume of goods sold and a fall in retall prices. The actual reduction in physical volume of goods distributed cannot be accrately determined, but against the decline of 44 per cent in value of sales between 1929 and 1933 may be noted the decline of 22 per cent in the index of retail prices.

COMPARISON OF INDEXES OF RETAIL SALES, RETAIL PRICES, PHYSICAL VOLUME OF BUSINESS AND GROSS VALUE OF MANUFACTURES CHART 2 1923-1933

Sales by Provinces. --The estimates of retail sales in each province are, of course, subject to a greater margin of error than the figures for the Dominion as a whole, as for several groups the same index of sales had to be employed in each province for the period 1923 to 1930. However, it has been considered worthwhile to give the estimates of the total annual sales in each province as a contribution to the study of retail trade in different sections of Canada. The indexes of retail sales by economic divisions probably represent more accurately the general movements in trade in each area than do the provincial figures for the Maritime and Prairie Provinces.

Table 9.--Indexes of Retail Sales by Economic Divisions, 1923-1933
(1326-100)

| Year |  | CaNADA | Maritime <br> Provinces | quebec | Ontario | Prairie <br> Provinces | British <br> Columbia |

| 1926 | $\ldots \ldots \ldots$ | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| 1927 | $\ldots \ldots \ldots$ | 108.4 | 105.9 | 108.6 | 108.3 | 109.1 | 108.0 |
| 1928 | $\ldots \ldots \ldots$ | 118.2 | 113.8 | 117.2 | 118.9 | 120.0 | 116.6 |
| 1929 | $\ldots \ldots \ldots$ | 123.0 | 123.1 | 125.4 | 125.3 | 116.2 | 124.1 |
| 1930 | $\ldots \ldots \ldots$ | 90.6 | 113.1 | 113.1 | 110.3 | 93.9 | 110.1 |
| 1931 | $\ldots \ldots \ldots$ | 74.7 | 99.2 | 97.7 | 95.4 | 72.6 | 91.6 |
| 1932 | $\ldots \ldots \ldots$ | 69.2 | 74.7 | 80.8 | 78.9 | 60.3 | 71.8 |
| 1933 | $\ldots \ldots \ldots .2$ | 73.9 | 56.3 | 68.1 |  |  |  |

Retail sales for Canada as a whole showed a slight recession in 1924 compared with 1923 and this decline is shown in different degrees for each economic division. From 1924 to 1929 there is a fairly uniform rate of growth which is shown more clearly in the ratio chart(1) than in the index of sales. The sales in the Mailime Provinces, which were relatively higher in 1923 compared to: 1926 than the volume of business in other divisions, did not increase as rapidly from 1924 to 1927. Sales in the Prairie Provinces were relatively low in 1923 and declined further in 1924 as agricultural income fell off. A rapid rise in sales is shown for this area from 1924 to 1928 , but thereafter sales declined considerably more than in other provinces. The trend of sales for British Columbia, Ontario and Quebec are shom as roughly parallel for the period 1923 to 1930 , but the value of retail sales in British Columbia fell to a greater extent during the depression than did the business in either Ontario or Quebec.

Sales by Groups. --As the combined index of retail merchandise trade has been built up on the basis of estinates of the trend of sales for each broad kind-ofbusiness group, the description of the methods employed may proceed in the same fashion. The general picture of the movements in sales by business groups is given by Chart 4.

Food Group.-Sales of the stores in the food group, according to the results of the census, formed the largest single part of retail merchandise trade, constituting. 22 per cent of the total for the Dominion. The distribution of the sales of food stores by provinces conformed somewhat to the distribution of urban population as the following table shows.
(1) Chart 1.
INDEX NUMBERS OF RETAIL MERCHANDISE SALES
BY ECONOMIC DIVISIONS

Table 10.--Distribution of Sales of Food Stores, 1930, and Urban Population, 1931, by Provinces

| Sales of Food Stores 1930 | Urban Poprulation $\qquad$ |
| :---: | :---: |
| . 4 | - 4 |
| 4.0 | 4.2 |
| 2.4 | 2.3 |
| 30.3 | 32.5 |
| 41.6 | 37.6 |
| 4.5 | 5.7 |
| 4.2 | 5.2 |
| 4.7 | 5.0 |
| 7.9 | 7.1 |
| 100.0 | 100.0 |

This relationship displayed in the above table is not surprising in view of the concentration of the business of food stores in urban communities. In 1930, 41 per cent of the sales of food stores was made in cities of over 100,000 population and only 13 per cent in places of less than 1,000. The distribution of food products by department stores in certain citias affects, of course, the relative amount of business handled by food stores.

Calculation of the total sales of food stores for the period 1923 to 1930 was based on the apparent consumption of food products in the period as determined from the value of food products manufactured in Canada and imports and exports of food as shown in the foreign trade figures for commodities classified by purpose. The index derived in this manner. was then applied to the flgures of sales of food stores in 1930 and carried: back to 1923. The sales for each year were then distributed between the pravinces on the basis of the proportion of urben population. The sales figures for food stores in years subsequent to 1930 were taken from the census report for 1933. The dollar value of sales and the index on the 1930 base are shown below. The index of retail food prices is derived from the Prices Report of the Bureau.

It should be noted, however, that while figures for the value of production and imports cover a large part of the food sold in Canada, they do not include the value of domestic produce sold without being processed. As it wes not possible to make any reasonable estimates of the year-to-year changes in the value of such sales, they have necessarily been omitted in the calculation of the index.

Table 11.--Sales of Food Group and Index of Retail Prices of Food, 1923-1933

| Year | $\frac{\text { Sales }}{\$}$ | Index of Sales $\qquad$ | Index of Retail Prices of Food 6-100) |
| :---: | :---: | :---: | :---: |
| 1923 | 500,160,000 | 89.2 | 92.1 |
| 1924 | 491,549,000 | 87.7 | 90.7 |
| 1925 | 514,364,000 | 91.8 | 94.7 |
| 1926 | 560,451,000 | 100.0 | 100.0 |
| 1927 | 603,114,000 | 108.7 | 98.2 |
| 1928 | 640,428,000 | 114.3 | 38.6 |
| 1929 | 668,248,000 | 119.2 | 101.0 |
| 1930 | 615,478,000 | 109.8 | 98.6 |
| 1931 | 534,423,000 | 95.4 | 77.3 |
| 1932 | 460,570,000 | 82.1 | 64.3 |
| 1933 | 431,165,000 | 76.9 | 63.7 |

Consumption of food products appears to be affected chiefly by the growth of population and the changes in the diet of the public. The general level of the income of consumers affects, of course, the trend of expenditures for food, but the record of the past four years tends to show that curtailment of food purchases is not made on any large scale even when incomes are seriously reduced. The tendency for public assistance to be given largely for food orders has, of course, a bearing on this point. While the growth of population and changes in diet affect the quantities and types of food products consumed, it will be seen from the table above that the level of prices influences, in large masire, the dollar value of retail sales of food stores. While sales of food stores dropped from $668,248,000$ in 1929 to $431,165,000$ in 1933 , or 35 per cent, the index of retail prices, in the same period, declined 37 per cent.

Among the more important changes in the diet of the Canadian people during the past decade has been the decline in the per capita consumption of meats and the iacreasing consumption of fruits and vegetables both fresh and canned. In 1923, according to estimates of the Bureau, the per capita consumption of meats in Canada was $161 \mathrm{lbs.;}$ by 1930 it had dropped to 146 lbs . O:: the other hand, we find that the production of the Fruit and Vegetable Preparations Industry rose from \$21 millions in 1923 to $\$ 43$ millions in 1930. During this period there were also increased purchases of fresh products and, while it is imposible to estimate the per capita consumption of domestic products, there is some indication of the increasing emphasis in this direction in the imports of fresh fruits and vegetables. The value of imports of fresh vegetables, which is affected by the prevailing prices, rose from approximately \$4 millions in the fiscal year 1923-1924 to almost \$7 millions in 19301931. In a few instances it is possible to secure figures for actual quantities imported. Thus we find that the number of bunches or stems of bananas increased from 2 million bunches in 1923-1924 to. almost 4 million in 1930-1931. Imports of grapefruit rose from 19 million pounds in the earlier year to 28 million pounds in 19301931. The quantity of tomatoes imported was 314,000 bushels in 1923-1924 and 632,000 in the fiscal year 1929-1930. These changes in the purchasing of foods have affected greatly the types of outlets which are used to distribute the commodities. The emphasis on pre-packaged and canned foods has revolutionized the grocery store during the past decade. The development of self-service stores, both chains and independents, and the increasing number of combination stores selling groceries, fruits, vegetables and meats may be largely traced to the changes in the buying habits of the housewife.

Country General Stores.--This classification, for census purposes, is restricted to comunities of less than 10,000 population. The sales of co intry general siores are largely. sales to rural dwellers and, consequentl, tend to be influenced by the level of agricultural income. The gener:l trend in agricul ur lincome in each piovince was given by the estimates of gross agricultural revenue prepare y the Bureau. These figures were used to check against the 1 dexes of saies cal inted for country general stores. Considerable as:istance was derived from the results of the Census of Trading Establishments, 1923. In spite of the fact that the coverage for this census was not complete, a fuller return for country general stor appears to have been secured than for some other kinds of business. It was a no thught that the trend of mail order sales, which are also largely to rural dwellers, would conform generally to the trend for country general stores. It was found that, in several provinces, the trend of mail order sales closely followed the trend in amount of money orders paid. The latter series was therefore employed as a check on the calculation of sales of country general stores. The use of these methods gave the following results for 1923:

Table 12.-Sales of Country General Stores in 1923 and 1930. by Provinces and Changes in Rural Population

|  | $\begin{aligned} & \text { Sales } \\ & \frac{1923}{\$} \end{aligned}$ | $\begin{gathered} \text { Sales } \\ \frac{1930}{\$} \end{gathered}$ | $\begin{aligned} & \text { in Rural } \\ & \text { Population, } \\ & 1921-1931 \\ & \hline \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| CANADA | 204,879,000 | 228,805,000 | + 9.5 |
| Prince Edward Island | 3,087,000 | 3,253,000 | -2.7 |
| Nova Scotia | 13,309,000 | 14,514,000 | - 5.3 |
| New Brunswick | 11,441,000 | 12,236,000 | + 6.0 |
| Quebec | 44,545,000 | 50,390,000 | + 2.2 |
| Ontario | 42,394,000 | 48,066,000 | + 8.9 |
| Manitoba | 14,983,000 | 15,543,000 | $+10.2$ |
| Saskatchewan | 38,879,000 | 37,710,000 | +17.1 |
| Alberta | 20,590,000 | 28,757,000 | +24.0 |
| British Columbia | 15,041,000 | 17,654,000 | +29.7 |
| Yukon and Northwest |  |  |  |
| Territories | 610,000 | 682,000 | +16.2 |

The sum of the annual sales calculated for each province gives the results indicated below for each year:

Table 13.--Sales of Country General Storese 1923-1953
Index
Year

| 1923 |  | 204,379,000 | 84.5 |
| :---: | :---: | :---: | :---: |
| 1924 | ........ | 209,689,000 | 86.5 |
| 1925 | .......... | 229,053,000 | 94.5 |
| 1926 | .......... | 242,409,000 | 100.0 |

| 1930 |  | 228,805,000 | 94.4 |
| 1931 |  | 185,400,000 | 76.5 |
| 1932 |  | 158,635,000 | 65.4 |
| 19 x 3 |  | 157 983 3 กก | 92. 4 |

The nunker of country general stores has probably not changed much during the past dec de. According to figures published in Heaton's Annual, which are not based on the same c'issifications as used in the Census, there were 14,175 general stores in Canada 1923 and 14,610 in 1930. Whatever increases there have bern in nu ber of ot res he probally taken place in the newer farming and mining districts.

General Merchandise Group.--This groun of stores embudies three major sub-

Table 14.--Sales of Department Stores and Mail Order Houses, 1923 - 1933

| Year |  | Value of <br> Sales | Index <br> $(1926=100)$ |
| :---: | :---: | :---: | :---: |
| 1923 | $\ldots \ldots \ldots \ldots$ | $275,681,000$ | 84.1 |
| 1924 | $\ldots \ldots \ldots$ | $284,562,000$ | 86.8 |
| 1925 | $\ldots \ldots \ldots$ | $305,167,000$ | 93.1 |
| 1926 | $\ldots \ldots \ldots$ | $327,904,000$ | 100.0 |
| 1927 | $\ldots \ldots \ldots$ | $353,838,000$ | 107.3 |
| 1928 | $\ldots \ldots \ldots$ | $381,903,000$ | 116.5 |
| 1929 | $\ldots \ldots \ldots$ | $387,943,000$ | 118.3 |
| 1930 | $\ldots \ldots \ldots$ | $355,259,000$ | 108.3 |
| 1931 | $\ldots \ldots \ldots$ | $312,739,000$ | 95.4 |
| 1932 | $\ldots \ldots \ldots$ | $253,832,000$ | 77.4 |
| 1933 | $\ldots \ldots \ldots$ | $241,665,000$ | 73.7 |

The use of combined sales figures for department stores and mail order houses tends to reduce, to some extent, the rise in department store sales during the period 1923 to 1930. In a census report on mail order business an index of sales is shown for the period 1924 to 1933. Converted to a l926 base, the following trend is shown:

Table 15,-Index of Mail Order Sales, 1924 - 1933
(1926-100)

| 1924 | $0 \sim 0$. | 90.9 |
| :---: | :---: | :---: |
| 1925 | ...... | 98.2 |
| 1926 | ...... | 100.0 |
| 1927 |  | 99.1 |
| 1928 |  | 96.4 |
| 1929 |  | 83.6 |
| 1930 |  | 68.2 |
| 1931 |  | 59.1 |
| 1932 |  | 50.0 |
| 1933 |  | 50.9 |

It will be seen that in the post-war period mail order sales reached a peak i 1926 and thereafter declined. Some of the forces which were at work $t$ in ase the trade of the department stores adversely affected the mail order busi ess The greater use of the automobile and the expan ing netrork of highways nablr rural dwellers to sh p at firs hand rather than $b$ mail. The extension of the system of branch stores into smal er towns has probably speeded up the change in buying habib. which was already under w.

Among the facto $s$ which ha: contributed to the growth of department stores are the increased range of services and merchandise which are offered by such establishments and the im:ovement in transportation facilities during the past decade. The grouping of a rge number of departments with consicerable buying volume under the ne roof has abled the department store to offer its patrons a very large selaction of goods cor wisch a wide appeal could be made through the advertising columns of the press. Te result as been a onsiderable expansion of this form of retailing in the first part of the period under review. The sales of general merchandise stores, which am unted to some $\$ 20$ million: in 1930 , have been calculated from the index for department stores, while the sales of variety and 5 -and-10 cent stores have been worked out on the basis of the figures for the variety chains given in the evidence of the Prace Sareads Commission. The sales of dry goods stores were derived in the same manner as the sales for the clothing group, to which reference is made below.

The total sales of the general merchandise group as calculated by the above methods are as follow:

Table 16:--Sales of General Merchandise Group, 1923 - 1933

| Year | Value of $\frac{\text { Sales }}{\$}$ | Index $(1926=100)$ |
| :---: | :---: | :---: |
| 1923 | 344,063,000 | 83.8 |
| 1924 | 354,411,000 | 86.4 |
| $1: 25$ | 379,663,000 | 92.5 |
| 1926 | 410,363,000 | 100.0 |
| 1.227 | 444,268,000 | 108.2 |
| 1928 | 482,278,000 | 117.5 |
| 1929 | 495,182,000 | 120.7 |
| 19,30 | 451,543,000 | 110.0 |
| 1931 | 400,947,000 | 97.7 |
| 1932 | 330,599,000 | 80.5 |
| 1.33 | 313,259,000 | 76.3 |

Automotive Group - Sales of the establishments in the automotive group show the largest increase for any group from 1923 to 1929. The trade for stores in this group may be divided soughly into twc parics Firs is the trade in new and used motor vehicles and, secondly, there is the busiucw of providing the supplies and services for the ojeration of the motor vehicles. After a large number of motor vehicles are in operation, the business of providing supplies, equipment and services tends to be more stable than the selling of new motor vehicles as the purchase of automobiles and trucks is subject to much wider fluctuations. It was first thought that the apparent consumption of new motor vehicles as dertved from production, import and export figures, would serve as a guide to the sales of new motor vehicles in each year. This series was discarded in favoux of available data on registrations of new motor vehicles when it was found that there was a tendency for stocks to accumulate in the hands of manufacturers and dealers when sales fell off As an indication of the supply business of the artomotive grnin the avallahle fiompa for annoment
consumption of gasoline were used. The supply business amounts to 30 to 40 per cent of the total sales of the automotive group, and it wa thought that sales of gasoline would conform to the general movement for this clas. An index was tien constmacted for the automotive group and applied o the sales fi res for 1930, giving the value of sales for the period from 1323 to 1930. The apport onment of sal es of the automotive group between the provinces was made on the basis of automoble registrations in each province. The significant movements in registratio of motor vehicles and apparent consumption of gasoline are shown in the foll wing figure . The last column gives the number of inspections of gasoline pumps made ach fiscal year by the Weights and Measures Inspection Service. While this is not an en irely a curate measure of the increase in number of outlets for gasoline, it serves as a good gulde to the growth in number of filling stations and other retail establishments selling gasoline.

Table 17. - Number of Motor Vehicles Registered, Apparent Consumption of Gasoline and Number of Inspeciions of Gasoline Pumps, Canada, 1923 - 1933

| Year |  | Number of Registrations | Apparent Consumption of Gasol ne (1) (Thousanis of gallons) | Number of Inspections of Gasoline Pumps(2) |
| :---: | :---: | :---: | :---: | :---: |
| 1923 | . . . . . . . | 586,850 | 172,890 | 22,450 |
| 1924 | .......... | 652,121 | 232,324 | 23,924 |
| 1925 | ........... | 728,005 | 246,986 | 29,189 |
| 1926 | ........... | 836,734 | 300,9 9.9 | 30,937 |
| 1927 |  | 945,672 | 363,927 | 34,662 |
| 1928 | -.......... | 1,070,664 | 483,709 | 38,849 |
| 1929 |  | 1,188,929 | 605,935 | 45,706 |
| 1930 |  | 1,232,486 | 601,737 | 52,920 |
| 1931 | . . . . . . - | 1,200,907 | 565,266 | 54,138 |
| 1932 |  | 1,114,503 | 505,232 | 50,377 |
| 1933 |  | 1,082,957 | 463,176 | 50,847 |

(1) Production plus imports less exports.
(2) Fiscal years, 1923-1924 $=1923$.

Between 1923 and 1929 the number of motor vehicles registered in Canada more than doubled and the apparent consumption of gasoline in 1929 was more than 3 times as large as in 1923 and more than twice as large as in 1924. The number of outlets for the sale of gasoline also increased freath curing fisis yectod as the figures for inspections of pumps indicate.
 583,000 in 1924 to a peak of $\$ 487,765,000$ in 1929 and a decrease to $\$ 218,484,000$ by 1933.

Apparel Group. -This grou of res emoraces all specialty stores selling men's and women's clothing and furn shi $\rho$ including s.oe stores. Clothing, however, is not sl entirely through pecialty stores Country general stores and esta lishments in the peneral mre andi e gro o handle a considerable part of the clothing trade. During the perich der $r$ ew, the trend toward factory-made clothing and furn shings and the use 1 gh er fabrics and articles was greatly accentuated. The rap incr ase in omen's re dy-to-wear stores and the relative decline in dry goods stores handl $g$ y rdage goods were reflections of the changing buying habits of the prblic. Thr ugi out speriod clothing prices tended to decline probably as a result of the use $f$ chea er textiles and the greater eflictency of factory methods of production.

As no dat were availab e to show the trend in sales of apparel stores, it wa necessary to rely again on figures for apparent consumption derived from the figures for value of production i Canada an $f r$ imports and exports. An index derived in this manner was applied the total for 1930 and the resulting igures were then transfered to the 1926 case.

Table 19.--Sales of Apparel Group and Index of Retail Prices of Clothinge
1923 - 1933

| Year | Value of Sales. $-\frac{\text { Sales }}{5}$ | $\begin{aligned} & \text { Index } \\ & \text { of Sale } \end{aligned}$ | ndex of ail Prices 0) |
| :---: | :---: | :---: | :---: |
| 1983 | 202,503,000 | 88.9 | 104.4 |
| 1924 | 195,543, 00 | 85.7 | 101.9 |
| 1925 | 205,441,000 | 90.1 | 101.9 |
| 1926 | 228,097,000 | 100.0 | 100.0 |
| 1927 | 244,156,000 | 107.0 | 97.5 |

| 1930 | 21,96,000 | 96.4 | 93.9 |
| 1931 | 189 230,000 | 83.0 | 82.2 |
| 1932 | 1.5,929,000 | 68.4 | 72.8 |
| 1933 | $14,085,000$ | 64.5 | 67.9 |

Builing Materials Group. --The two main classes of stores in this group are the hardware stores and establishments selling lumber and building materials. Sales of the former amounted to $\$ 70,891,700$ in 1930 out of a total of $\$ 162,237,100$ for the Building Materials Group. while sales of lumber and buflding material dealers totalled \$75736 300. Minor classifications in this group are electrical and plumbing shops and paint and glass stores. Such information as was available tended to show that the sales of establishments in the building materials group in 1923 were approximately the same as in 1930. The trend of sales between 1923 and 1930 was calculated sepurately for hardware stores and for the remainder of the building materials group. For the former, available indexes of sales of hardware stores in trade journals were employed and, for the latter, figures for revenue freight of lumber unloaded in each province were used. The sales of establishments in the building materials group do not represent the entire sales of hardware and builders! supplies to ultimate consumersio Similar products are sold by other retailers and, in addition, large sales of building materials are made to contractors, etc., by wholesale firms and by manufacturers or producers. In those provinces where local supplies of building materials are available, sales are made to consumers directly from sawmills and planing mills. For this reason the sales of the building materials group in the Prairie Provinces form a considerable part of the total sales for this group as the large part of the lumber sold in the Prairie Provinces is brought into the area and distributed through retail lumber yards The value of retail sales for the building materials group, as calculated, and the trend in wholesale prices of Building and Construction Materials are given below。

## Table 20.-Sales of Building Materials Group and Index of Wholesale Prices of Building Materials, $1923-1933$

| Year | $\begin{gathered} \text { Value of } \\ \text { Sales } \\ \hline \end{gathered}$ | $\begin{aligned} & \begin{array}{l} \text { Index of } \\ \text { Sales } \end{array} \\ & -1926 \end{aligned}$ | Index of Wholesale $=\frac{\text { Prices }}{100)}$ |
| :---: | :---: | :---: | :---: |
| 1923 | 167,881,000 | 87.4 | 111.9 |
| 1924 | 158,280,000 | 82.4 | 106.6 |
| 1925 | 176,933,000 | 92.1 | 102.9 |
| 1926 | 192,117,000 | 100.0 | 100.0 |
| 1927 | 207,182,000 | 107.8 | 96.1 |
| 1928 | 219,843,000 | 114.4 | 97.4 |
| 1929 | 206,512,000 | 107.5 | 99.0 |
| 1930 | 162,238,000 | 84.4 | 90.8 |
| 1931 | 128,391,000 | 67.1 | 81.9 |
| 1932 | 95,855,000 | 49.9 | 77.2 |
| 1933 | 82,797,000 | 43.1 | 78.3 |

Furniture and Household Group. There are three main types of stores in this group. First are establishments dealing in furniture and house furnishings; secondly, there are household appliance stores; and, thirdly, there are radio and music stores. The household appliance stores and radio stores have had a very rapld growth in the first half of the period under review. The radio was just beginning to meet with popular demand in 1923, but from then on sales were made on n increasing scale until the depression set in. The demand for household appliances, particularly electric goods of various kinds, grem considerably in the period from 1923 to 1929. Some indication of this is given by the figures for number of domestic customers for electricity which has continued to increase even during the depression years.

## Table 21.-Number of Radio Licenses Issued and Number of Domestic Customers for Electricity, 1923 - 1929

| Year | Number of Radio Licenses Issued (1) | Number of Domestic Customers for Electricity |
| :---: | :---: | :---: |
| 1923 | 9,954 | 920,223 |
| 1924 | 31,609 | 389,510 |
| 1925 | 91,996 | 1,063,530 |
| 1926 | 134,486 | 1,110,637 |
| 1927 | 215,650 | 1,142,512 |
| 1928 | 268,420 | 1,207,457 |
| 1929 | 297,398 | 1,292,481 |

(1) Figures for fiscal years, $1923-1924=1923$.

While the number of radio licenses issued probably does not cover all sets in operation in each year, it does give an indication of the increase in number of radios in use. The series shows a rise from approximately 10,000 licenses in 1923 to almost 300,000 in 1929. It should be noted, however, that the increasing sales of radios was probably accompanied by a falling off in the sales of musical instruments and supplies.

The sales of furniture and house furnishings stores did not show the same rapid growth from 1923 to 1929 as has been indicated for household appliance stores and radio dealers. According to Heaton's Annual, the number of furniture and house fumishings stores remained relatively constant during the period under review. The tendency during the period was probably toward cheaper and lighter lines of fumiture. While there was a considarable increase in the quantity of furniture and household goods purchased, the growth in sales was shared between furniture stores and department stores.

Again, in constructing an index of sales for the furniture group, reliance had to be placed principally upon figures for apparent consumption. Separate indexes were calculated for the fumiture and house furnishings stores and for household appliance and radio and music stores. As it was impossible to secure any basis on which to allocate the sales between the provinces, the index derived was used for all provinces for the period 1923 to 1930 . As the increase in saies for household appliance stores and radio stores was large in the period from 1926 to 1929 , the use of the base year 1926 tends to accentuate the rise in the index of sales in a similar manner to that already shown for the automotive group.

Table 22,-Sales of Furmiture snd Household Group, 1923 - 1933

Year $\quad \begin{gathered}\text { Value of } \\ \frac{\text { Sales }}{\$}\end{gathered}$

| 1923 | $\ldots$ | $70,8,7,000$ | 85.1 |
| ---: | :---: | ---: | ---: |
| 1924 | $\cdots$ | $68,830,000$ | 82.6 |
| 1925 | $\ldots$ | $73,096,000$ | 87.7 |
| 1926 | $\ldots$ | $83,30,000$ | 100.0 |
| 1927 | $\ldots$ | $92,150,000$ | 110.5 |
| 1928 | $\ldots$ | $105,420,000$ | 126.5 |
| 1929 | $\ldots$ | $120,365,000$ | 144.4 |
| 1930 | $\ldots$ | $101,667,00$ | 122.0 |
| 1931 | $\ldots$ | $82,247,000$ | 98.7 |
| 1932 | $\ldots$ | $58,856,000$ | 70.6 |
| 1933 | $\ldots$ | $50,634,000$ | 60.8 |

Restaurant Group. --This group includes not only regular restaurants and cafete:ias but also other eating places, such as lunch rom, tea rooms, sandwich shops, ctc. Restaurants and other eating places were not included in the census of 1924 and little information is available for this group rom other sources. There is considerable overl pping between confectionery stores and those establishments selling li ht lunches. The provision of meal: is also underta orn by the dining rooms in hotels and the restaurants and lunch counters maintained b; department stores so that i is diff:cult to estimate the actual trend of sales for establishments in the restaurant group. In tie absence of any data or inf rmation for the restaurant, it was de id d t use th ( index calculaled for the food groul. This was applied to the 1930 tot-l for the siles of the restaurant groun in each provincr and values secured for the ye: r; 1923 to 1930. From 1930 to 1333 the figures derivce for the annual Census of Mer chandising and Service Establishments were used. Tee resulting figures are as follow:

Table 23.--Sales of Restaurant Group, 1923-1933

| Iear | Value of <br> Sales | Index <br> 19.5 100) |  |
| :---: | :---: | :---: | :---: |
| 1923 | $\ldots$. | $61,771,000$ | 89.2 |
| 1924 | $\ldots$. | $60,706,000$ | 87.7 |
| 1925 | $\ldots$. | $63,517,000$ | 91.8 |
| 1926 | $\ldots$ | $69,215,000$ | 100.0 |
| 1927 | $\ldots$. | $75,217,000$ | 108.7 |
| 1928 | $\ldots$. | $79,092,000$ | 114.3 |
| 1929 | $\ldots$ | $82,511,000$ | 119.2 |
| 1930 | $\ldots$. | $75,977,000$ | 109.8 |
| 1931 | $\ldots$ | $62,040,000$ | 89.6 |
| 1932 | $\ldots$ | $47,673,000$ | 68.9 |
| 1933 | $\ldots$. | $41,666,000$ | 60.2 |

Other Retail Stores.--This group contains all stores which cannot be classified in any of the preceding groups. Among the more important kinds of business included in this miscellaneous group are farm implement and farm supply dealers, coal and wood yards, drug stores, jewellery stores, news dealers and tobacco stands, office appliance dealers, Government liquor stores and other liquor stones. As figures were avallable for the sales of liquor stores and sales of farm implements, separate
calculations were made for the sales of stores handling these products in each province. For part of the period and for sume provinces figures for the quantity of coal used for domestic purpuses were available; a separate calculation was made, therefne, for the value of sales by coal and wod yards. Apparent consumption figures were obtained for toba: 0 , jewellery, and books and stationery, and an index derived from these figures was apllied to the $!930$ total for the sales of the group less the sales of farm implement jealers, liquor stores and coal and wood yards, to which reference has already been aade. The gross sales of Liquor Control Boards, as shom in the report by the Dominion Burea: of Statistics entitled "The Control and Sale of Liquor in Canadan, are given below. In only three provinces were Liquor Control Boards operating in each year of the period under review.

Table 24.-Gross Sales of Liquor Control Boards (1), 1923 = 1930
(Thousands of dollars)

| 1929 |  | 4,511 | 27,540 | 55,361 | 7,620 | 12, 81 | 6,284 | 16,499 |
| 1930 | $622^{(2)}$ | 4,810 | 22,712 | 52,283 | 6,507 | 9,158 | 4,678 | 14,735 |

(1) The figures for the fiscal year most closely conforming to the calendar year have been used.
(2) Part year.

The results used by employing the composite index of sales for the group "Other Retail Stores" are given below. While it is possible that there may be inaccuracies in the component parts of the index, it is thought that the composite figure may give a fairly good indication of the trend in sales for this group.

Table 25.-Sales of Other Retail Stores, 1923 - 1933.

| Year |  | Value of <br> Sales | Index <br> (1926 =100) |
| :---: | :---: | :---: | :---: |
| 1923 | $\ldots \ldots \ldots \ldots$ | $405,412,000$ | 90.2 |
| 1924 | $\ldots \ldots \ldots$ | $395,386,000$ | 88.0 |
| 1925 | $\ldots \ldots \ldots$ | $420,865,000$ | 93.7 |
| 1926 | $\ldots \ldots \ldots$ | $449,370,000$ | 100.0 |
| 1927 | $\ldots \ldots \ldots$ | $590,311,000$ | 109.1 |
| 1928 | $\ldots \ldots \ldots$ | $570,124,000$ | 124.9 |
| 1929 | $\ldots \ldots \ldots$ | $517,939,000$ | 126.9 |
| 1930 | $\ldots \ldots \ldots$ | $444,414,000$ | 115.3 |
| 1931 | $\ldots \ldots \ldots$ | $373,850,000$ | 98.9 |
| 1932 | $\ldots \ldots \ldots$ | $340,561,000$ | 83.2 |
| 1933 | $\ldots \ldots \ldots$ | 75.8 |  |

In view of the lack of detailed information on the trend of sales for many rinds of business included in the group "Other Retail Stores", no attempt has been made to estimate the value of sales for particular kinds of business in each year. However, it is possible to make an estimate of the value of sales in 1923 for a few kinds of business by using the figures or the census in that year after providing for the stores which were not included. On this basis the estimates given below for five kinds of business were prepared.

Table 26.-Estimated Value of Sales in 1923 for Selected Kinds of Business Compared with Census Figures for 1930

|  | Sales |  | $\begin{gathered} \text { Per Cent } \\ \text { of } \\ 1930 \\ \hline \end{gathered}$ |

|  | $\begin{gathered} 1923 \\ \text { (Estimated) } \end{gathered}$ | $\begin{gathered} 19: 30 \\ \text { (Actual) } \end{gathered}$ |  |
|  | \% | \$ |  |
| Coal and wood yards | 75,721,000 | 86,047,000 | 88 |
| Drug stores ....... | 59,942,000 | 76,849,000 | 78 |
| Flour and feed stores (including farmers' supply stores and grain elevators) | 37,675,000 | 43,808,000 | 86 |
| Farm implement agents and dealers | 16,825,000 | 21,571,000 | 78 |
| Jewellery stures................. | 22,664,000 | 26,663,000 | 85 |

The tobacco stores and stands are an important group of stores but, as the very small establishment is characteristic of this groip, it is difficult to trace the develoments from year to year. Durirg the decade under review, the quantities of tobacco and cigars urchased by the public remained fairly constant, but the purchases of cigarettes increased considerably. The record of tobacco taken out of bond shows the follnw. trends in consumption.

Table 27.--Quantities of Tobacco Taken Out of Bond for Consumption in the Fiscal Years ended 1924-1934

| $1933-34$ | $\ldots \ldots$ |  |  |  |

## Conclusion

The decade which has been surveyed in this study of retail trades embraces a complete cycle of economic activity as exhibited in the general phases of revival, prosperity and depression. During the periods of revival and prosperity the sales of staple products, such as food and clothing, maintained a falrly uniform rate of growth. The trade in semi-durable goods - such as automobiles, furniture, radios, etc. - increased much more rapidly as the purchasing power of consumers was enlarged both through rising incomes and the extension of instalment credit. During the depression the movements in retail sales show similar differences in rates of ohange. Sales of automobiles, furniture, radios and building materials declined to the greatest extent, while the value of food sales dropped, roughly, to the same extent as retail prices declined.

The development of largeascale retail organizations, particularly food chains, was one of the outstanding features of retail trade during the period This development was checked by the depression, and it remains to be seen whether it will be re-established on the same scale with the revival of business.

The reduction in volume of trade from 1930 to 1933 resulted in a considerable increase in the number of failures among trading concerns but the proportion appears to have been smaller than in the immediate post-war depression. Figures have been given earlier for the number of failures among trading concerns in Canada and Newfoundland as published in Drn's Review. The maximum number of failures reported was 2,717 in 1922. During the recent depression the number of failures among trading concerns, according to Dun's Review, rose from 1,888 in 1930 to 2,038 in 1932. The liabilities of concerns failing were also lower than in 1922, when $\$ 33,000,000$ were reported as against $\$ 23,700,000$ in 1932 . While the exact reasons for the differences in the rates of failure during the two depressions cannot be accurately determined, it is probably true that hand-to-mouth buying and the increase in large-scale retail enterprises were partially responsible.

Table 28.--Retail Merchandise Trade, 1923-1933
(Sales are sl:own in thousands of dollars)

## APPENDIX

## Some Comparative Figures for Chain Stores

While a complete coverage of all merchandising concerns in Canada was not secured for the Census of Trading Establishments, 1924, reports were obtained from most of the large trading concerns. Some attempt was made in connection with this early census to classify the retail firms according to number of stores operated jut, as the returns were believed to be incomplete, the results of the analysis were never published. However, by checking the reports for multiple concerns, secured for 1923 ; with current directories and also with figures for ages of chain stores operating in 1930, it has been possible to estimate the amount of chain store business in certain lines for the year 1923,

For comparative purposes the same definition of a chain was used for 1923 as for 1930 , 1.e. a concern with four or more retall stores. One of the interesting aspects of a study of the development of chain stores is the growth and declune of individual concerns. In comparing 1923 with 1930, it was found, in a number of instances, that firms with one, two or three stores in 1923 were operating four or more stores in 1930. Such concerns would be classed as chains in the latter year but not as such in 1923. On the other hand, a good many firms which were operating four or more branches in 1923 had either ceased operations by 1930 or reduced the number of their stores to less than four. The selection of a particular limit, such as four stores, as the minimum number of units to constitute a chain naturally affects the number of firms classified as chain organizations in any year.

The records of the census of 1923 reveal that there were approximately 1,000 retail firms operating two stores in that year and 200 firms operating three stores each. In 1930 there were about 1,200 firms operating two stores and 400 which ran th ee stores. It is likely, of course, that not all multiple concerns were listed for the Census of Trading Establishments, 1924.

While the exact number of chain organizations, those operating four or more stores, cannot be determined for 1923, Table 30 presents the results of a careful check of available records. No figures are given for the restaurant group as such estrblishments were not included in the earl er census Certain other kinds of business have been omitted from the table because of incomplete records for 1923. The totals that are given, therefore, do not cover all chain store organizations.

Betwein 1923 and 1930 the number of chain store companies in the trades covered by Trble 30 increased from 192 to 377 and the number of chain units from 2,940 to 6.056 It will be noted that in 1923 the larges number of multiple organizations and the largest number of branches are sho: 1 for the lumber and building materials group. Such companies are fould in the Prairie Provinces, where they serve ruisal communities. They are a more or less $d$ stinct form of merchandising organization and differ in a great many respect fr $m$ chain stores in other fields. If the lumber companies are excl:ded from the to al, it is found that the number of chain units increased from l, 928 in 19 n to 5,038 in 1930 and reached 5,175 in 1933.

Among the kinds of business showing a large increase in chain stores are filling stations with 177 units in 1923 and 646 in $193 u$ and omen's apparel and
eccessories stores with 37 chain stores in the earlier year and 183 in 1930.

| TOTAL | 192 | 2,940 | 377 | 6,056 | 345 | 6,043 |

It has not been possible to calculate the amount of business handled by all chain store companies in 1923, but for seven kinds of business the value of sales in 1923 has been estimated.

The business of radio and music stores changed considerably between 1923 and 1930. In the earlier year, sales of radio sets and parts were a relatively minor item, but by 1930 the radio business formed the main part of the trade of radio and music chains. Of the kinds of chain stores included in the above tab the business of the food chains shows the greatest increase, both relative and actual, between 1923 and 1930. The dollar value of sales advanced from $\$ 37,000,000$ to more than $\$ 127,000,000$, or more than 300 per cent, while the number of units increased from 794 in 1923 to 2,301 in 1930.
