## RETAIL TRADE IN URBAN AND RURAL AREAS, 1930

### Introduction

This report on retail trade in urban and rural areas is one of a series of special reports on retail distribution based on the results of the Census of Merchandising and Service Establishments, 1931. While in the provincial reports on retail trade data were given for each of the larger cities, for combined cities having a population of 10,000 to 30,000, for combined towns and villages having a population of 1,000 to 10,000, and for combined rural areas - i.e., places having a population of less than 1,000 - in this report the data have been brought together, and additional information included, and so arranged as to show a comparison of retail merchandising in the different size-of-locality groups. The information presented in this way should be of assistance to manufacturers and distributors in their analysis of market outlets in cities and towns.

Thirty-seven per cent of the potential retail consumers in Canada live in cities and towns having a population of 10,000 and over, or in what might be regarded as the urban market area. In this area were 44 per cent of the retail establishments doing 67 per cent of the total retail business of Canada. Sixty-three per cent of the people of Canada live in the small city, town and rural market area - places with a population of less than 10,000. Fifty-six per cent of the retail establishments in Canada was in this area and their business was 33 per cent of the total retail business of Canada.

### Method of Classification

Population Area.--In this report all retail merchandise establishments have been grouped according to the population of the locality in which they are situated. Five size-of-locality groups have been used, namely, cities having a population of over 100,000, cities of 30,000 to 100,000 population, cities of 10,000 to 30,000 towns and villages of 1,000 to 10,000, and all places with a population of less than 1,000. Included in this last group are all unincorporated places irrespective of size of population.

Kinds of Business.--For the purposes of this Census, the retail merchandise trade has been divided into nine broad groups: Food, General Merchandise, Automotive, Apparel, Building Materials, Furniture and Household, Restaurants, Other Retail Stores, and Secondhand Stores. Data are given for these nine groups and, in addition, for selected kinds of business. The kind-of-business classification is based on the popular designation given the establishment or the principal line of merchandise carried. Few stores restrict their sales to any one product, some stores - such as department stores and general stores - carrying a wide variety of goods, while, on the other hand, the same commodity is handled by more than one kind of store. The classification, therefore, is not identical with commodities handled.

Geographic Divisions.--Data are given for the Dominion as a whole, and for each province with the exception of Prince Edward Island, Nova Scotia and New Brunswick, which are grouped together in order to avoid disclosing individual operations. Figures for the Yukon and Northwest Territories are not shown separately but are included in the totals for the Dominion.

Comparative Data on Retail Distribution in Canada by Urban and Rural Areas

Population.--Out of the total population of 10,376,786, the number of people living in cities with a population of over 100,000 is 2,328,175, or 22.4 per cent, as shown in the table below; 6.7 per cent live in cities having a population of 30,000 to 100,000; 8.2 per cent in the smaller cities - those with a population of 10,000 to 30,000; 12.4 per cent in places of 1,000 to 10,000 population; while 5,215,885, or 50.3 per cent, live in places having a population of less than 1,000.

Canada - Retail Distribution by Size of Locality, 1930

Yukon and Northwest Territories .....	13,953	.1	130	-	3,216,100	-

Number of Stores.--In 1930 there were 125,003 retail stores in Canada, an average of one store to 83 people; 32,399, or 26 per cent of these stores were located in cities of over 100,000 population, where the average number of persons to each store was 72. Cities of 30,000 to 100,000 population contained 8 per cent of the number of stores, and there was an average of 72 persons per store. The proportion of stores in cities with a population of 10,000 to 30,000 was 10 per cent and the average number of persons per store 71. In towns and villages having a population of 1,000 to 10,000 the percentage of stores was 19 and the average number of persons per store 53. Places with a population of less than 1,000 had 46,642 stores, or 37 per cent of the total, and the number of persons per store was 112.

Retail Sales.--The total sales of the 125,003 retail stores operating in Canada amounted to \$2,755,569,900. While the average sales per store were \$22,044, this amount is not representative of any one particular size-of-locality group, there being a wide variation between the larger cities and rural groups. Similarly, with the sales per capita the average for all places, irrespective of size, is shown as \$266, but, again, there is considerable variation between the urban and rural areas. As is to be expected, sales are highest in the large city group, i.e., cities having a population of over 100,000. The combined sales of

stores in these cities were \$1,172,852,400, or 43 per cent of the total for Canada. The average sales per store of \$36,200 were also highest, as were the sales per capita, which averaged \$504. Sales of stores in cities of 30,000 to 100,000 were 12 per cent of the total, the average sales per store \$34,420, and the sales per capita \$480. In the smaller cities of a population of 10,000 to 30,000, the stores did 12 per cent of the total business, the sales per store averaging \$28,754 and the sales per capita \$403. Stores in the towns and villages with a population of 1,000 to 10,000 accounted for 17 per cent of the total, with an average per store of \$18,779. Sales per capita in this group were \$355. Sales by stores in places with a population of less than 1,000 formed 16 per cent of the total business of the country, and the average sales per store were \$9,634. The sales per capita in these rural places were only \$86. The reason for so low a per capita sales figure might be attributable to such causes as the residents in these rural areas producing a considerable amount of their food requirements, purchasing through the mail from large urban centres, or going to nearby trading centres to do their buying. Per capita sales figures for any particular population group must not be assumed to represent the per capita purchases or consumption of goods by residents in that group as sales figures include sales to both residents and non-residents of the locality.

#### Trade in Rural and Urban Areas by Kind-of-Business Groups

Table 1 shows the distribution of population, stores and sales by size of locality for Canada and the provinces. In the Maritime Provinces, Saskatchewan and Alberta there are no cities of 100,000 population or more, while in Manitoba there is no locality in the 30,000 to 100,000 population group.

The proportion of the population in places 100,000 and over ranges from 35.5 per cent in British Columbia to 26.6 per cent in Ontario. In both Quebec and British Columbia 40 per cent of the stores are in this size of locality, while the proportion is 36 per cent for Manitoba and 29 per cent for Ontario. On the other hand, the percentages for total sales are 69 per cent for Manitoba, 64 per cent for Quebec, 50 per cent for British Columbia, and 46 per cent for Ontario. The high proportion for Manitoba is influenced by the mail order business in Winnipeg.

The proportion of business handled by stores in places from 30,000 to 100,000 ranges from 46 per cent in Alberta to 4 per cent in Quebec. For places from 10,000 to 30,000 the percentages are 20 per cent in the Maritime Provinces and 4 per cent in British Columbia. The range for towns and villages from 1,000 to 10,000 is somewhat greater, the percentage being 33 per cent in the Maritime Provinces and 7 per cent in Manitoba.

For Canada as a whole, 50.3 per cent of the population resides in places of less than 1,000 population, but this proportion varies from 41.3 per cent in Ontario to 79.7 per cent in Saskatchewan. The proportion of stores in this size of locality likewise ranges from 27 per cent in Ontario to 73 per cent in Saskatchewan. The latter province also has the largest proportion of sales in places under 1,000 as the percentage is 44, while in Quebec it is only 10 per cent.

Food Group.--This is the most important group of retail stores with sales of \$615,476,100. The number of food stores in places of over 100,000 population forms 32 per cent of all food stores in Canada, as is shown in Table 2, while 29 per cent of the stores is in places of less than 1,000 population. In Manitoba and British Columbia, 47 per cent of the stores is in places of 100,000 population and over. Food stores in the largest cities in Canada had 41 per cent of the sales for this group, while those in rural areas had only 13 per cent.

Table 3 gives the proportions for kind-of-business groups in relation to all stores in each size of locality. Forty-four per cent of all stores in places of 100,000 and over in Canada are food stores and these have 21 per cent of the trade in this size of locality. In places under 1,000 food stores form 28 per cent of the total number, but 23 per cent of the stores in this size of locality are country general stores which do 41 per cent of the business.

Country General Stores.--Sales of country general stores amounted to \$228,803,800. This kind of business in the Census classifications is restricted to places of less than 10,000 population. Ten per cent of these stores is in places of 1,000 to 10,000 population and 90 per cent in places under 1,000. The 10 per cent, however, does 19 per cent of the business of country general stores as is shown in Table 2.

Country general stores are important outlets for food products in rural districts but also handle other staple commodities. As has already been mentioned, these stores have 41 per cent of the trade in places of under 1,000 population. Table 3 shows that in Saskatchewan country general stores have 20 per cent of the total trade in that province compared with 8 per cent for the country as a whole.

General Merchandise Group.--This group consists of department stores, dry goods stores, general merchandise stores and variety stores, for which the aggregate sales were \$451,542,500. From Table 2 it will be seen that 33 per cent of the stores in this group is located in places of over 100,000 population and that 66 per cent of the sales of the general merchandise group is made by such stores.

Sales of the general merchandise group constitute 16 per cent of the total trade in all localities, but 25 per cent of the business in places of over 100,000 and 19 per cent in places from 30,000 to 100,000 as shown by Table 3.

Automotive Group.--Total sales of the automotive group are \$381,959,300, of which 35 per cent is made in places of over 100,000, which contained 17 per cent of the automotive establishments. Places of 1,000 to 10,000 have 20 per cent of the establishments and 21 per cent of the sales.

The sales of the automotive group formed a larger proportion of the total trade in places of 1,000 to 10,000 than in any other locality although the proportions of stores and sales are almost the same for places 10,000 to 30,000. For all localities the automotive group formed 11 per cent of the number of establishments and had 14 per cent of the sales.

Apparel Group.--Of the total sales of \$219,968,600 for the apparel group, 48 per cent is accounted for by the 40 per cent of the stores located in places of over 100,000. Only 11 per cent of the apparel stores are found in places of less than 1,000 population and the sales of these stores formed only 3 per cent of the total.

The proportion of retail trade handled by apparel stores increases from 9 per cent in places over 100,000 to 11 per cent in places 30,000 to 100,000, and a like proportion in places 10,000 to 30,000. In the larger cities apparel stores are in more direct competition with department stores.

Building Materials Group.--While 29 per cent of the total sales of \$162,-237,100 for the building materials group is made in places of over 100,000, the proportions are 23 per cent for places from 1,000 to 10,000 and 24 per cent for

places under 1,000. These rural localities contain 45 per cent of the establishments, while the places from 1,000 to 10,000 have 23 per cent.

The sales of the building materials group form an increasing proportion of the total retail trade in each size of locality from the largest to the smallest. For Canada as a whole, the sales of this group form 4 per cent of the total business in places of over 100,000 and advances to 9 per cent in places of less than 1,000. This consistency, however, is affected to a considerable extent by the business done by lumber and building material dealers in the Prairie Provinces. In this territory the lumber products distributed are chiefly brought in from other provinces. Outside of the Prairie Provinces, a good deal of the lumber sales is made directly from lumber or planing mills and thus is not included in the Census figures.

Furniture and Household Group.--Half of the total sales of \$101,665,900 made by stores in the furniture and household group is made by the 30 per cent of the stores located in places of over 100,000. Only 2 per cent of the sales and 13 per cent of the stores are attributed to places under 1,000.

For Canada as a whole, the furniture and household group forms 3 per cent of the total number of stores and handles 4 per cent of the total retail trade. The proportion of trade handled is highest in cities of 30,000 to 100,000, where the percentage for the furniture and household group is 6 per cent.

Restaurant Group.--Of the total sales of \$75,977,100 for the restaurant group, 56 per cent is made in the largest cities, while 34 per cent of the establishments is located in such centres. On the other hand, the 27 per cent of the establishments situated in rural places has only 9 per cent of the trade of eating places.

The restaurant group has the highest proportion of the total retail trade in the largest cities, where its percentage is 4 per cent; this decreased to 1 per cent in rural localities. The trade handled by the restaurant group is affected by the competition offered by eating places in hotels and retail stores.

Other Retail Stores.--This is a miscellaneous group with sales of \$506,126,-900, of which 46 per cent is made in cities of over 100,000, while 24 per cent of the establishments in this group is located in such centres. Among the more important kinds of business in this group are farmers' supply stores, coal and wood yards, drug stores, tobacco stores and Government liquor stores.

The proportion of total retail trade handled by the other retail group is fairly consistent, ranging from 20 per cent in the largest cities to 14 per cent in rural localities.

Secondhand Group.--This is a relatively small group of stores with sales of \$11,812,600. Sixty-two per cent of the sales and 48 per cent of the stores are attributed to places of over 100,000.

#### Selected Kinds of Business

Tables 4 and 5 present the same analysis for selected kinds of business as is given in the preceding tables for the major groups. While the kinds of business tend, on the whole, to follow the same pattern as has already been given for the groups of which they form a part, there are interesting deviations from the group figures. Tables 4 and 5 also give separate particulars for feed and farmers' supply stores, drug stores, and coal and wood yards, which were included in the "Other Retail Stores

Group".

Forty-three per cent of the sales of drug stores is made in cities of over 100,000, while 32 per cent of the stores is located in such places. When a comparison is made of drug stores and total retail trade, it is found that in all localities except the rural districts sales of drug stores form 3 per cent of the total retail trade. The proportion of the total number of retail establishments is also quite uniform, the only departures from the average of 3 per cent being the 4 per cent in places of 30,000 to 100,000 and 2 per cent in rural districts. While this relationship is not maintained in all provinces, there is considerable similarity in the provincial figures for drug stores.

#### Stores and Sales by Size of Business

Table 9 makes a comparison of the number of stores and net sales in each locality by amount of sales for selected kinds of business.

Thirty-nine per cent of all country general stores in Canada have a turnover of less than \$10,000 per annum, but such stores account for only 10 per cent of the sales of country general stores. The proportion of small stores is highest for rural districts in the Maritime Provinces and in Quebec, where they form 52 per cent of the number of country general stores in such localities. In Saskatchewan, on the other hand, stores with sales of less than \$10,000 formed only 26 per cent of the number of country general stores in places of less than 1,000.

Twenty per cent of the sales of men's clothing and furnishings stores is made by stores with an annual turnover of \$100,000 or more, although such stores formed only 3 per cent of the number. The proportion is thirty per cent in places of over 100,000 population. Stores with sales of less than \$10,000 constituted 29 per cent of the number of stores in all localities but 65 per cent of the stores in places of less than 1,000.

The following kinds of business are analyzed by turnover and size of locality in Table 9:

- Confectionery stores
- Grocery stores
- Combination stores
- Meat markets
- Country general stores
- Men's clothing and furnishings stores
- Family clothing stores
- Women's ready-to-wear stores
- Shoe stores
- Automobile and used car dealers
- Filling stations
- Furniture stores
- Hardware stores
- Coal and wood yards
- Drug stores

#### Persons Per Store and Sales Per Capita

Table 7 enables a comparison to be made of sales per capita and number of persons per store in rural and urban areas. The average sales per capita are shown as \$265.55 for Canada as a whole, but the average is \$503.76 for the largest cities

and only \$86.15 for the places under 1,000. It may be repeated, however, that sales of retail stores are not restricted to the residents of the locality in which the stores are situated.

Sales per capita for stores in the food group are higher than those of any other group for Canada as a whole, but in several provinces the sales per capita of general merchandise stores are higher in the largest cities. It should be borne in mind, however, that the per capita sales shown in Table 7 are sales by kind of business and not by commodities.

The number of persons per store for Canada is 83 for all stores but 3,489 for stores in the general merchandise group and 2,916 for drug stores. In places over 100,000 the number of persons per store is 72 for all stores and 2,335 for the general merchandise group, 2,474 for the furniture and household group and 2,066 for drug stores.

Wide variations in the per capita sales by provinces are revealed by Table 7. The sales for drug stores in the Maritime Provinces are only \$5.65, while they are \$10.26 per capita in Ontario. In all provinces, except Quebec, in which there are both cities of over 100,000 and cities from 30,000 to 100,000, the per capita sales of the furniture and household group are higher in the smaller cities than in the larger.

Table 8 presents the sales per capita by provinces and size of locality, including the sales of manufacturing bakeries and dairies. This table also gives estimated figures for food sales per capita based on the commodity breakdown figures. In general, per capita food sales tend to be highest in those provinces with the largest urban population.

#### Types of Operation by Size of Locality

Tables 9 and 10 carry the analysis of retail merchandise trade one step further by showing the proportions of stores and sales for each type of operation by size of locality. Single stores form 85 per cent of the number and do 71 per cent of the business in all localities, but they form 88 per cent of the number and have 82 per cent of the business in places under 1,000. Chain stores, on the other hand, form only 4 per cent of the number and have 9 per cent of the sales in rural localities, but in places from 30,000 to 100,000 they form 11 per cent of the stores and have 30 per cent of the trade.

In Table 10 the distribution for each type of operation is shown for each size of locality. Twenty-five per cent of the single stores is in places over 100,000 and 39 per cent in places under 1,000. Forty-one per cent of the sales of independent stores is made in the largest cities and only 19 per cent in rural localities. Chain stores have 37 per cent of their number and 48 per cent of their sales in the largest cities and 24 per cent of their number and 7 per cent of the sales in rural localities.

#### Chain Stores by Size of Locality

In Table 11 the figures for chain stores alone are presented. While 48 per cent of the sales of all chain stores is made in the largest cities, this proportion ranges from 42 per cent for grocery chains to 67 per cent for drug chains.

Table 1---CANADA AND THE PROVINCES - Proportion of Population, Stores and Sales, by Size of Locality

Size of Locality	CANADA(1)			Maritime Provinces			Quebec			Ontario		
	Pop.	Stores	Sales	Pop.	Stores	Sales	Pop.	Stores	Sales	Pop.	Stores	Sales
