CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS, 1931

Sales by Commodities. Tholesale Trade, Canada, 1980

This bulletin is the third in a series presenting detailed information on wholesale trade in Canada. The figures for sales by commodities were secured from the schedules returned for the Census of Merchandising and Service Establishments, 1931. Each wholesale firm was asked to fumish a breakdown of the sales during the year by major commodity lines and, further, by items under each major commodity. While every firm was not able to give a detailed record of sales by commodities, in most trades a very large proportion of the sales was reported by the major commodity groupings. The information in this bulletin relates only to these major commodity lines.

As the sales shown for each commodity cover both wholesalers proper and other wholesale establishments, there will be a duplication of sales wherever wholesale establishments resell to other wholesale firms. Such sales are made commonly by brokers and agents, but manufacturers' sales branches also deal with wholesale firms.

On the other hand, the sales by commodities do not necessarily show the total sales of commodities distributed in the country. First, a considerable part of the production moves directly from manufacturer to retailer or consumer and, secondly, there is a considerable amount of direct importations not handled by wholesale firms. As the sales by commodities given in this bulletin include export sales made by wholesale firms, another factor is introduced to prevent a direct measurement of goods distributed within Canada.

The first table in this report gives the extent of commodity coverage for the wholesale trade and wholesalers proper by each of the major kind-of-business classifications. As every wholesale establishment was not able to report the value of their sales by commodities, the total commodity sales for each kind of business are generally less than the total net, sales. The commodity coverage indicates the extent to which net sales have been broken down by commodities. For some kind-of-business classifications the commodity coverage is 100 per cent. This means that the total sales have been reported by commodities. In other cases the commodjty coverage is less than 100 per cent as some firms did not report sales by commodities. In making use of the commodity sales figures, it is well to note beforehand the extent of the commodity coverage in those trades through which the particular commodity is largely distributed.

The second table in this bulletin presents the value of sales reported for each of the 92 major commodity classifications. At the beginning of the table are shom the total net sales for all wholesale establishments in Canada and the amount of sales which is broken down by commodities. Then the sales reported by wholesalers proper and other wholesale establishments are given. The detailed commodity figures are then given with the total sales of the commodity reported first, and then the amounts for wholesalers proper and other wholesale establishments. Under each commodity heading are given the trade groups by which such commodity is sold and the amount reported.

(1) Not all establishments were able to furnish information regarding sales by comodities. This table shows, for each of the major kind-of-business classifications, the amount and percentage of the total net sales that have been broken down by commodities. The breakdown of sales by commodities was in some cases reported on the basis of gross sales rather than net sales. For this reason the commodity sales may in some instances exceed the total net sales by the amount of returned goods and allowances.
