Faculty Characteristics ..... 16
Finance ..... 19
CHARTS AND TABLES ..... 21
APPENDICES:
Appendix A - Technical Notes ..... 69
Appendix B - Publications on Postsecondary Education from Statistics Canada ..... 71

In its mid-seventies Review of National Policies for Education - Canada, the Organization for Economic Co-operation and Development noted the immense investment Canadian society had made in education in the sixties and early seventies, regarding it as a "great pioneering achievement." Expansion at the postsecondary level in that period was indeed spectacular, as universities were "split" to form separate institutions, new universities were created and networks of community colleges and technical institutes were established. Those boom days have now passed and enrolment is apt to decline later in this decade as a smaller birth cohort moves through the education system. Colleges and universities are thus entering a period of some uncertainty - uncertainty about their funding, about the role society expects (or demands) of them, about the effects of economic conditions on the supply of students and the employment of graduates.

While this publication does not address the issues facing postsecondary education, it does present a statistical review of the past which could help put the current environment in clearer perspective and lead to reasonable judgments about the future.

No attempt is made to analyse the relationships between the variables examined in separate tables. Rather, the purpose is to provide the statistical base from which such analyses could be drawn. The report focusses on major trends in postsecondary education at the national level, with occasional references to regional and provincial variations. A section of Statistical Highlights identifies some of the significant features shown in the tables. Two appendices are also provided. The first contains technical notes which should be consulted when interpreting the data; the second consists of an annotated bibliography of current Statistics Canada publications on postsecondary education and information on how to obtain more detailed tabulations.

## POPULATION AND ENROLMENT TRENDS

-A11 levels of enrolment are being affected by demographic factors. One of the most significant of these is live births which have fluctuated considerably in the last few decades (Chart 1).
-The effect of these trends in live births has been the creation of population waves (Chart 2) and subsequent enrolment patterns.
-In the 1960 s , a combination of demographic, social, economic and political factors culminated in unprecedented postsecondary growth. Full-time enrolment quadrupled between 1960 and 1982 from 163,000 to 725,000 (Table 1 and Chart 3). The average annual increase in the sixties was a remarkable $11 \%-12 \%$, but it fell to around $4.5 \%$ in the early seventies. Between 1976 and 1978 full-time university enrolment declined, but it has since grown. College enrolment rose steadily from 166,000 in 1970 to the present 296,000 .
-Between 1961 and 1982 there was a $298 \%$ enrolment gain in all postsecondary education. This was the result of a $98 \%$ increase in the size of the $18-24$ age group, and more importantly, the rising enrolment rate. The enrolment rate - full-time postsecondary enrolment as a proportion of the 18-24 age group - went from $10 \%$ in 1960 to a high of $20 \%$ in 1975 , declined slightly until 1979 and increased thereafter (Table 2 and Chart 4). The rate for men peaked in 1971, fell to $20 \%$ in 1979, and since then grew again. On the other hand, the rate for women continued to climb almost without interruption.
-The mix of postsecondary students shifted from $38 \%$ women in 1960 to $48 \%$ in 1981. At the university level, the female component increased dramatically from $24 \%$ to $46 \%$. Expressed in absolute numbers, 27,600 women were university students in 1960; twenty-two years later there were 183,000 , almost a sevenfold increase.
-The increase in total university enrolment during the seventies was mainly attributable to increased female participation, and the growth in the number of foreign students.
-Traditionally, $80 \%$ of full-time postsecondary students were between 18 and 24 years of age, and this proportion changed only for the college enrolment, declining to $72 \%$ by 1981 (Table 3 ).
-University transfer students in the colleges are mainly in Quebec's CEGEPs, and in colleges of Alberta and British Columbia. In 1982, there were 88,000 in this category, compared with 48,200 in 1970 (Table 4). The number of full-time students in career/technical programs has almost doubled since 1970, especially in community/social services, natural resources and business programs (Table 5).
-Ful1- and part-time university enrolment increased from 466,000 in 1970 to 687,000 in 1982, a $50 \%$ increase (Table 7). Full-time enrolment grew by $38 \%$ while part-time enrolment increased more substantially (64\%).
-Full-time university enrolment patterns varied considerably by province and university. In Ontario, enrolment went up until 1976 to 164,000 and reached that level again only in 1981, whereas Quebec's universities expanded uninterrupted to 93,600 (Table 8). In most Western universities, enrolment had remained at the 1970 level until 1980, but have experienced growth since then. The pattern for Atlantic universities was more or less the same as for Ontario.
-University undergraduate enrolment by field of study shows a trend towards career-oriented programs such as commerce and business administration which more than doubled its share between 1970 and 1981 (Tables 9 and 10).
-At the g'raduate leve1, full-time students have increased from 6,500 in 1960 to 33,200 in 1970 , and 49,000 in 1982 (Table 7). Part-time graduate students were almost as numerous, many of them in professional programs like education and business administration. In 1982 part-time graduate enrolments were more than four times what they were in 1965.
-During the seventies, there were some conflicting trends in graduate enrolment by field of study (Tables 11 and 12). While full-time enrolment at the master's level increased modestly, it actually declined in engineering and physical sciences. At the same time, part-time master's enrolments more than doubled. Increases were particularly strong in the social sciences especially in education and business administration. In 1981, over $80 \%$ of part-time students were in the human sciences (education, fine and applied arts, humanities and social sciences).
-Similar patterns prevailed at the doctoral level. For example, the number of full-time doctoral students in engineering declined from a high of 1,250 in 1970 to 966 in 1981. The same applied for mathematics and the physical sciences which had 2,526 doctoral students in 1970 , and 1,646 twelve years later. By contrast, during the same period full-time doctoral enrolment in the social sciences rose from 2,005 to 2,750 . The shift to the human sciences was a marked one over this twelve-year period going from 45\% to 57\% for full-time doctoral students.
-The number of ful1- and part-time foreign university students has increased substantially from less than 20,000 in 1974 to 35,500 eight years later. More than half of these students were in Ontario universities (Table 13).
-Foreign students made up $6 \%$ of full-time undergraduates, and nearly double this percentage in the physical sciences (Table 14). At the master's level, $38 \%$ of engineering students were foreign, compared with $11 \%$ in education (Table 15). At the doctoral level, $27 \%$ were foreign students, ranging from a high of over $50 \%$ in engineering to a low of $13 \%$ in fine and applied arts (Table 16).
-The college system has increased its number of diplomas from 33,200 in 1970 to 47,600 in 1980 (Table 17). There has also been a distributional shift by field of study; for example, business diplomas increased their share from $15 \%$ to almost $30 \%$.
-From 1965 to 1978 the annual number of bachelor's and first professional degree recipients rose from 33,000 to close to 90,000 , but declined to 85,000 in 1981 (Table 18). At the master's level, growth was even more pronounced: from 3,600 to 19,900 in 1981. The increase of doctorates was from 560 to 1,840 in 1975 and has stabilized around this number.
-While the overall increase of degrees at every level is impressive, the rise in the number of women has been spectacular. In 1965 , less than 1 out of 3 bachelor's degrees was awarded to a woman. By 1981, 1 out of 2 was awarded to a woman. Among master's degree recipients, the proportion of women grew from less than $20 \%$ during the sixties to twice that by 1981 . In 1965 only 54 women graduated at the doctoral level. In 1981, the total was 439, a jump of nearly 8 times. The rise in the number of women earning degrees continued nearly uninterrupted for 20 years. For men, however, the numbers had peaked and levelled off by the early seventies. At the same time, there was a shift to professional programs such as commerce and business administration which increased its share from less than $5 \%$ in 1970 to $11 \%$ in 1981 (Table 19).
-At the master's level in the seventies there was a shift of graduates from the sciences to the human sciences (Table 20). The number of master's degrees awarded in the human sciences went from 5,800 in 1970 to 10,000 in 1981. Science graduates decreased from 2,700 in 1970 to 2,600 in 1975 , but in recent years has risen again to about 3,000 .
-The doctoral level, like the master's, also saw a shift toward the human sciences from about $30 \%$ of graduates in the early seventies to $51 \%$ in 1981 (Table 21). The decline in the four science fields was particularly marked in mathematics and the physical sciences which dropped from $39 \%$ in 1965 to less than $20 \%$ of the total in 1981.
-Since foreign students make up a growing proportion of the master's and doctoral graduates in some science disciplines, the number of Canadian citizens and permanent residents earning science graduate degrees from Canadian universities has declined even more than aggregate figures seem to indicate.

## FACULTY CHARACTERISTICS

-There have been increases in the numbers of full-time teachers in both colleges and universities. In colleges there was a fourfold rise from 5,300 teachers in 1965 to over 20,000 by the early 1980s (Table 22). At the same time, university teachers more than doubled from 14,400 in 1965 to 33,300 in 1980. The increase in full-time teachers came about as existing institutions were expanded and new ones created.
-The development of the provincial college systems demonstrates Quebec's predominance in the college sector (Table 23). Almost every second college teacher is employed in Quebec. Since the late seventies, the number of full-time university teachers changed little in most provinces. For example, Ontario universities had 12,657 full-time teachers in 1976 and 12,865 five years later (Table 24).
-While there have been some shifts in the composition of full-time university teachers by teaching field since the sixties, these changes have been slight in recent years (Table 26). In $1960,68 \%$ of full-time teachers were in the humanities, agriculture and biological sciences, engineering and applied sciences, and mathematics and physical sciences. By 1975, this figure had fallen to $47 \%$. In the social and health sciences, however, there were some significant increases, from $15 \%$ and $9 \%$ in 1960 to $24 \%$ and $14 \%$ in 1975, respectively. There were also some significant declines in such traditional disciplines as the classics, agriculture and chemistry, while there were increases in fine and applied arts and business administration.
-At the college level, in 1981, about $33 \%$ of full-time teachers were women, while in the medical-dental services they represented about 80\% (Table 27). However, the overall proportion of women has not changed substantially since 1976 when it was $31 \%$.
-University teaching has long been a male preserve. In 1960, only $11 \%$ were women, a proportion that increased to $14 \%$ in 1975 and to $16 \%$ in 1980 (Table 28). In education and fine and applied arts, the percentage of women has
risen above $20 \%$, while the proportion in the humanities is close to this level. Over the years, the percentage of women teaching engineering and mathematics/physical sciences has remained small ( $1.3 \%$ and $4.7 \%$, respectively, in 1980).
-The median age of university teachers varied by teaching field from over 44 in the humanities and engineering and applied sciences to 40 in the social sciences in 1980 (Table 29). For all university faculty, the median age in 1980 was 42 years, an increase from 37 in 1970.
-The median age of community college teachers generally did not change so dramatically, indicating perhaps higher turnovers and an influx of younger teachers. The exception was between 1980 and 1981 when the median age increased from 40 to 41 (Table 30).
-In 1960, half the full-time university teachers were at the senior ranks (full and associated professors) (Table 31). This percentage fell during the expansionary sixties, but rose gradually to $71 \%$ by 1980 . During these 21 years, the proportion at the two junior ranks (assistant professor and instructor/lecturer) declined from $51 \%$ to $29 \%$. Of particular note is the decrease of the instructor/lecturer group from $17 \%$ in 1965 to $5 \%$ in 1980 .
-While nearly $16 \%$ of all university faculty in 1980 were women, there was considerable variation by academic rank. For example, $5 \%$ of full professors were female but they represented nearly $40 \%$ of the instructor/lecturer category. The pattern of female representation in the academic ranks does $\notin$ not show significant change over the last 20 years.
-From 1970 to 1980 , university teachers' salaries rose faster than the rate of inflation. The median salary more than doubled from $\$ 14,200$ to $\$ 35,200$ (Table 33). If this is expressed as an index, using 1970-71 as a base of 100, the salary index increased to 248 , compared with an index of 217 in the Consumer Price Index for the same period. The median salary for full professors went from $\$ 21,600$ to $\$ 45,300$, and for assistant professors from $\$ 12,700$ to $\$ 27,500$.
-In 1980, the median salary of college teachers was considerably lower than that of their university counterparts: $\$ 29,200$ versus $\$ 35,200$ with substantial variations among the provinces (Table 34).
-In 1980, $59 \%$ of university teachers had obtained their first degree in Canada (Table 35). The second largest group, $17 \%$, had graduated in the United States and $10 \%$, had done so in the United Kingdom. In absolute numbers, 13,500 of the 32,700 full-time faculty had obtained their first degree abroad. However, variations among the teaching fields were substantial, ranging from $30 \%$ in education who had graduated outside Canada to $54 \%$ in fine and applied arts. American degrees outnumbered Canadian degrees in some social sciences such as archaeology and anthropology. This contrasts with most of the applied disciplines, where better than two-thirds of the teachers had received their first degrees from Canadian universities.
-The overall proportion of university teachers with doctorates increased from $44 \%$ in 1960 to $51 \%$ in 1970 , and to $62 \%$ in 1980 (Table 36 ). The proportions varied substantially among disciplines, reflecting the distinction between theoretical and applied fields, since in some of the latter a doctorate is not a teaching prerequisite. In 1980, an average of $85 \%$ of the teachers in the physical sciences had doctorates, ranging from $81 \%$ in mathematics to $90 \%$ in chemistry. Proportions were low in applied disciplines like nursing, architecture, fine and applied arts, law, and dentistry. The percentage of teachers with doctorates increased considerably in some disciplines. For example, in $1960,13 \%$ in commerce and business administration held doctoral qualifications but by 1980 this proportion had risen to $43 \%$.
-In 1965, $19 \%$ of all federal, provincial and municipal expenditures went to education. By 1970, this had grown to $22 \%$, only to drop to $16 \%$ by 1980 (Table 37).
-In current dollars, total expenditures on education have increased more than fifteen times, from $\$ 1.7$ billion to $\$ 26$ billion between 1960 and 1981 (Table 38). The percentage of expenditures allotted to elementary and secondary education declined from $75 \%$ during the early sixties to $66 \%$ during the seventies and this proportion has remained stable in recent years. Relative spending shifted to the postsecondary level, where the percentge of expenditures grew from $19 \%$ in 1960 to $29 \%$ in 1970 , but fell to $27 \%$ in recent years. In current dollars, expenditures on university education grew from about $\$ 1.8$ billion in 1970 to almost $\$ 5.0$ billion in 1981 . Vocational training more than doubled its share, which amounts to $\$ 1.4$ billion by 1981.
-Funds for education come from federal, provincial and municipal governments, as well as from student fees and other sources (Table 39). In 1960, the federal contribution accounted for $20 \%$, but declined to less than half that in the 1970s, partly because federal transfer payments were included in the provincial government contribution. Otherwise, the federal contribution would have stood at 50 to $60 \%$, depending on the year for which the figures were examined.
-The proportion of postsecondary income derived from student fees fell from about $15 \%$ in 1960 to $8 \%$ for 1982. Other funds from endowments and donations also declined during the sixties and early seventies, but have increased slightly in 1980. However, this pattern differed between colleges and universities (Tables 40 and 41). For the colleges, the proportion of government contributions was in the neighbourhood of $88 \%$ as compared with $82 \%$ for the universities, while the proportion of fees as a source of funds was about $7 \%$ for colleges as compared to $9 \%$ for universities in recent years.
-Expenditures on college and university education grew from $\$ 2.2$ billion in 1970 to $\$ 7.8$ billion in 1982. However, the growth was very uneven between college and university expenditures. Using 1970-71 as an index of 100 , by 1982 the college index had grown to 573, while the university index grew to 307 (Table 42 and 43).
-Total expenditures on college education increased in current dollars from $\$ 430$ million in 1970 to $\$ 2.1$ billion in 1981. Operating expenditures account for over $80 \%$ of total expenditures and student support programs (e.g., scholarships and student aid) for $7 \%$.
-Total expenditures on university education increased in current dollars from $\$ 1.8$ billion in 1970 to $\$ 5$ billion in 1981. During the rapid expansion of the universities during the mid-sixties, capital expenditures, primarily for buildings and equipment, accounted for about $33 \%$, but dropped dramatically to about $6 \%$ or $7 \%$ in recent years.
-On the average, tuition fees accounted for about $13 \%$ to $14 \%$ of universities' operating income in recent years, with a tendency to increase (Table 44). But this percentage varied among the provinces with a low of less than $10 \%$ in Quebec (1981) and almost twice that percentage in Ontario (18.4\%).
-Tuition fees for arts and science undergraduates changed moderately between 1970 and 1980 (Table 45) but have increased substantially since then, with the exception of Quebec universities, where fees have not changed for the last three years. Fees have generally been highest in the Atlantic provinces, and lowest in the West.

## APPENDIX A

## TECHNICAL NOTES

For the purpose of this publication, higher education is defined to include postsecondary education provided by colleges and universities. The term "colleges" refers to non-degree-granting institutions such as community colleges and related institutions (collè ges générales et professionnel CEGEPs, colleges of applied arts and technology, agriculture colleges, schools of art and other specialized institutions) teachers' colleges and hospital schools of nursing. These colleges offer career/technical programs of up to four years duration and generally accept students with high school graduation. Some colleges also provide academic programs after which a student may transfer to a university. Trade/vocational programs of colleges which normally do not require high school completion for admission are not included. Universities are degree-granting institutions including their affiliated, federated and constituent colleges.

Admission to postsecondary institutions in most provinces is contingent upon high school graduation. Depending on the province, one could obtain high school graduation after grade 11,12 or 13 . In Quebec, students must first complete the two-year academic program in a CEGEP before being admitted to university. Undergraduate degree programs (bachelor's) last from three to five years, depending on the entrant's qualifications and the nature of the degree sought (pass or honours). An honours degree normally requires one additional year of study. Professional schools have programs of different lengths, usually three to five years.

A bachelor's degree is normally necessary for acceptance into a two-year master's program. With an honours degree, most master's degrees entail one year of study. Doctoral studies usually require a minimum of one year residence, but the normal length of registration is three to five years, depending on the discipline.

## 81-222 - Enrolment in Community Colleges

Statistics of full-time enrolment in postsecondary credit programs of colleges. Included in the tabulations are colleges of Applied Arts and Technology (CAATs) in Ontario, general and vocational colleges (CEGEP) of Quebec, institutes of technology, hospital schools of nursing and other institutions providing instruction in specialized fields such as agriculture, technology, marine engineering, medical technology. Historical enrolment data are displayed by province. For the year under review, detailed tabulations classify enrolment by type of program, field of study, year of program, activity prior to registration, age and sex. Data also presented on number of graduates by field of study and province.

## 81-241 - Teachers in Universities

Classifies full-time teaching staff of universities by rank, field of principal subject taught, years since appointment to level and to institutions, years since receipt of highest degree, age and sex. Information also on qualifications, citizenship and visa status, and salaries.

81-258 - Salaries and Salary Scales of Full-time Teaching Staff at Canadian Universities

Provides average and median salaries by rank, by sex and by institution. Separate classification for staff with administrative responsibilities. Presents minimum and maximum salary scale figures for each rank at each institution.

## 81-254 - Educational Staff of Community Colleges and Vocational Schools

Defining community college as for catalogue 81-222 but including also teachers in trade schools, classifies staff by province, program level, position, field of principal subject taught, age, sex, and province. Data also provided on salaries, qualifications and experience, and occupational activity prior to appointment.

## 81-219 - Tuition and Living Accommodation Costs at Canadian Universities

For each institution, lists the annual tuition fees for different fields of study. Undergraduate and graduate fees displayed separately, as are fees for foreign students. Additional information on accommodation costs for uniersity operated residences and housing, and on athletic, health and students' society fees.

## Special Tabulations

The aggregated statistical tabulations presented in the regular publications of Statistics Canada can usually be supplemented by special tabulations from the extensive data files on education maintained by the Education, Science and

Culture Division. Of particular use are three individual-based data systems university students, university teachers and community college teachers which permit the selection of sub-populations for analysis and the cross-classification of file variables.

For more information on user-oriented data systems on higher education, please contact:
