Population, superficie et densité de la population des divisions et subdivisions de recensement, 1976.....	1

INTRODUCTION

This report provides land area and population density data for census divisions and census subdivisions from the 1976 Census.

All land area measurements apply to June 1, 1976 and are shown in square miles and square kilometres. Wherever feasible, bodies of water were excluded during the measurement process, in order to ensure the accuracy of the land area figures. The map scales used for these measurements were generally 1:50,000 in the Eastern Provinces and 1:250,000 in the Western Provinces. In sparsely populated areas, smaller scale maps were used. The Census of Canada provides unofficial land area measurements only, which are necessary in the calculation of densities.

In Newfoundland, census subdivision limits were amended after the 1966 Census. Certain 1966 census subdivisions were absorbed by neighbouring census subdivisions, accounting for the present irregularities in the lettering system used in conjunction with the names for these census subdivisions.

In Manitoba, census divisions were redelineated on January 1, 1976. The new system of 23 census divisions replaces the previous system of 20 census divisions which existed at the time of the 1971 Census. Similarly, in the Northwest Territories, a new system of four regions has replaced the previous system of three districts which existed at the time of the 1971 Census.

Similar information to that found in this report is provided for census metropolitan area and census agglomeration parts in Bulletin 92-806, for census tracts in Bulletins 95-800 to 95-831, and for provincial census tracts in Bulletins 95-850, 95-852, 95-854 and 95-856.

DEFINITIONS

Province: Major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified. There are ten provinces which are divided into federal electoral districts, census divisions, census subdivisions, etc. In census publications, provincial tables include the Yukon and Northwest Territories.

Census Division (CD): General term applying to counties, regional districts, regional municipalities, etc. In Newfoundland, Manitoba, Saskatchewan and Alberta, the term describes geostatistical areas that have been created by Statistics Canada in co-operation with the province as an equivalent for counties.

Census Subdivision (CSD): General term applying to municipalities, Indian Reserves, unorganized territories and subdivisions. In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in co-operation with the province as an equivalent for municipalities. It should be noted that the parts of Flin Flon falling in Manitoba and Saskatchewan, and the parts of Lloydminster falling in Saskatchewan and Alberta are treated as separate CSDs.

Ce bulletin présente les données sur la superficie et la densité de la population pour les divisions et subdivisions de recensement, au recensement de 1976.

Toutes les données sur la superficie ont été établies au 1^{er} juin 1976 et sont indiquées en milles carrés et en kilomètres carrés. Autant que possible, les étendues d'eau n'ont pas été prises en compte dans les mesures afin d'assurer la précision des chiffres de la superficie des terres. En général, on a utilisé pour ces mesures, une échelle de 1:50,000 dans les provinces de l'Est et de 1:250,000 dans les provinces de l'Ouest. Dans les régions peu peuplées, on a tracé des cartes à une échelle plus petite. Le recensement du Canada ne fournit que des mesures de superficie officieuses pour calculer les densités.

À Terre-Neuve, les limites des subdivisions de recensement ont été modifiées après le recensement de 1966. Certaines subdivisions de recensement de 1966 ont été annexées à des subdivisions de recensement avoisinantes, ce qui explique les irrégularités actuelles dans le système alphabétique utilisé conjointement avec les noms pour ces subdivisions de recensement.

Au Manitoba, les divisions de recensement ont été redélimitées le 1^{er} janvier 1976. Le nouveau système qui comprend 23 divisions de recensement remplace celui de 20 divisions qui existait lors du recensement de 1971. De même, dans les Territoires du Nord-Ouest, un nouveau système comprenant quatre régions a remplacé l'ancien de trois districts utilisé lors du recensement de 1971.

Des renseignements semblables sont donnés pour les parties des régions métropolitaines de recensement et des agglomérations de recensement dans le bulletin 92-806, pour les secteurs de recensement dans les bulletins 95-800 à 95-831 et pour les secteurs de recensement provinciaux dans les bulletins 95-850, 95-852, 95-854 et 95-856.

DÉFINITIONS

Province: Principale division politique du Canada. Du point de vue statistique, c'est une unité de base pour laquelle toutes les données sont totalisées et recoupées. Il y a dix provinces, divisées en circonscriptions électorales fédérales, en divisions de recensement, en subdivisions de recensement, etc. Dans les publications du recensement, les tableaux relatifs aux provinces comprennent le Yukon et les Territoires du Nord-Ouest.

Division de recensement (DR): Terme générique qui désigne les comtés, les districts régionaux, les municipalités régionales, etc. À Terre-Neuve, au Manitoba, en Saskatchewan et en Alberta, l'expression désigne les unités géostatistiques créées comme équivalent des comtés et délimitées par Statistique Canada en collaboration avec les provinces.

Subdivision de recensement (SDR): Terme générique désignant les municipalités, les réserves indiennes, les territoires non municipalisés et les subdivisions de recensement. À Terre-Neuve, en Nouvelle-Écosse et en Colombie-Britannique, l'expression désigne également des unités géostatistiques créées comme équivalent des municipalités et délimitées par Statistique Canada en collaboration avec la province. Il est à noter que les parties de Flin Flon qui se trouvent au Manitoba et en Saskatchewan, et celles de Lloydminster qui se trouvent en Saskatchewan et en Alberta sont considérées comme des subdivisions de recensement distinctes.

DEFINITIONS – Continued

Census Subdivision Type: Census subdivisions (CSDs) are classified into various types, according to official designations adopted by provincial or federal authorities. With the exception of unorganized territories and Indian Reserves, the type indicates the municipal status of the CSD. The following list indicates the abbreviations used for the most common CSD types:

BOR	Borough
C	City – Cité
DM	District Municipality – Municipalité de district
HAM	Hamlet – Hameau
ID	Improvement District – District d'amélioration
IR	Indian Reserve – Réserve indienne
LGC	Local Government Community – Centre d'administration locale
LGD	Local Government District – District d'administration locale
LID	Local Improvement District – District d'amélioration locale
MD	Municipal District – District municipal
MUN	Municipality – Municipalité
PAR	Parish – Paroisse
RD	Rural District – District rural
RM	Rural Municipality – Municipalité rurale
SV	Summer Village – Village d'été
TM	Township Municipality – Municipalité de township
T-V	Town – Ville
V/C	Ville/Cité
VL	Village

Indian Reserve: Territory, mostly rural and varying in size, that belongs to an Indian tribe according to treaties between the Federal Government and the Indians. It is excluded from local jurisdiction and administered by the Federal Department of Indian and Northern Affairs.

Unorganized Territory: An area without municipal organization, directly administered by the province or, when applicable, by the county. Such areas are generally characterized by large tracts of land with low population density.

SAMPLING AND WEIGHTING

The information in this report was collected on a 100% basis and as such represents the official census counts. All table headings are noted accordingly.

COVERAGE ERROR

A coverage error occurs in the census whenever a person or a household is missed completely or counted more than once. Since overcoverage is fairly rare in relation to undercoverage, the net effect of such errors is to introduce a downward bias in census figures, so that the published census estimates tend to underestimate the actual population.

A special study was undertaken in relation to the 1976 Census to measure the extent of the bias due to undercoverage. This study estimated the over-all undercoverage rate to be of the order of 2% of the total population.

DÉFINITIONS – suite

Catégorie de subdivision de recensement: Les subdivisions de recensement sont classées en diverses catégories selon les appellations adoptées par les autorités provinciales ou fédérales. À l'exception des territoires non municipalisés et des réserves indiennes, la catégorie indique le statut d'une subdivision de recensement. Voici la liste des abréviations des catégories de subdivision de recensement les plus courantes:

Réserve indienne: Territoire, le plus souvent rural et de taille variable, qui appartient à une tribu indienne en vertu de traités conclus entre le gouvernement fédéral et les Indiens. Il échappe à la compétence des autorités locales et est administré par le ministère des Affaires indiennes et du Nord canadien.

Territoire non municipalisé: Région sans organisation municipale, administrée directement par la province ou, le cas échéant, par le comté. Ces régions sont généralement caractérisées par leur vaste étendue et par la faible densité de leur population.

ÉCHANTILLONNAGE ET PONDÉRATION

Les renseignements de la présente publication ont été recueillis à 100 % et représentent les chiffres officiels de recensement. Les titres des tableaux sont annotés en conséquence.

ERREUR DE COUVERTURE

Une erreur de couverture se glisse chaque fois qu'une personne ou un ménage sont omis ou comptés plus d'une fois. Étant donné que le surdénombrement est assez rare par rapport au sous-dénombrement, les erreurs de couverture introduisent un biais vers le bas dans les estimations du recensement de sorte que ces dernières ont tendance à sous-représenter la population réelle.

On a mené une étude spéciale concernant le recensement de 1976 afin de mesurer l'importance des biais attribuables au sous-dénombrement. On a estimé que le taux global du sous-dénombrement représentait 2 % de la population totale.

DEFINITIONS – Concluded

Evidence from studies of coverage errors in earlier censuses indicates that undercoverage is not evenly distributed throughout the population but tends to be higher in certain segments of the population, e.g., young male adults, recent immigrants.

Further details on this study may be obtained by contacting Census Information Services (see back cover).

SYMBOLS

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

--- amount too small to be expressed.

DÉFINITIONS – fin

Des études d'erreurs de couverture effectuées à l'occasion de recensements antérieurs ont révélé que le taux de sous-dénombrement n'était pas également réparti dans toute la population, mais qu'il avait tendance à être plus élevé pour certains segments de la population, par exemple, chez les jeunes adultes de sexe masculin et les nouveaux immigrants.

On peut obtenir de plus amples renseignements sur cette étude en communiquant avec Information recensement (voir la couverture arrière).

SIGNES CONVENTIONNELS

.. non disponible.

... n'ayant pas lieu de figurer.

- néant ou zéro.

--- infimes.

Ca OOS

DATE DUE

Publications of the 1976 Census of Canada

This bulletin is one of a series of volume reports of the 1976 Censuses of Population, Housing and Agriculture.

Most of the bulletins in the regular Volume Series are data-oriented. Other reports containing more methodological, interpretative and evaluative content, are also issued. These are as follows:¹

- (a) 1976 Census Administrative Report
- (b) 1976 Census Quality of Data Series
- (c) 1976 Census Research Series
- (d) Introductory Reports to each of the regular Volume Series.

Also available on request is a series of Reference Lists developed largely for internal verification of basic geographical and population hierarchies, which could provide useful information to the outside user.

Users will note that the majority of census publications are colour-coded to identify with the four themes central to the presentation and to maintain comparability with the 1971 series, e.g., blue for Geographical and Demographic content, brown for Housing, Household and Family data, red for Economic Characteristics and gold for the series based on Agriculture.

These reports are listed in the *1976 Census Catalogue* which can be obtained free of charge from:

Publications Distribution,
Room 1200, Statistics Canada,
Ottawa, Ontario.
K1A 0T6

To order census publications, send a cheque or money order made payable to the Receiver General for Canada, to the above address.

In addition to published documents, the Census of Canada can provide other products and services about census: data on microform (film or fiche), computer tapes, computer print-outs, user-specified tables, maps, geographic files, geographic lists, etc.

For information write:

Census Information Services,
Statistics Canada,
Ottawa, Ontario.
K1A 0T7

or call (613) 996-5254.

Inquiries about census and other Statistics Canada information can also be directed to Statistics Canada Regional Offices located in: St. John's (Nfld.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton and Vancouver.

¹ It should be noted that these publications are generally released somewhat later than the data reports.

Publications du recensement du Canada de 1976

Ce bulletin fait partie de la série des publications des recensements de 1976 de la population, du logement et de l'agriculture.

La plupart des bulletins de la série ordinaire des volumes présentent des données. On publie également d'autres bulletins dont le contenu vise plutôt la méthodologie, l'interprétation et l'évaluation. Ces bulletins sont les suivants¹:

- a) Rapport administratif du recensement de 1976
- b) Série relative à la qualité des données du recensement de 1976
- c) Série du recensement de 1976 relative à la recherche
- d) Introductions à chacune des séries ordinaires des volumes.

Vous pouvez aussi vous procurer sur demande une série de Listes de référence, servant surtout à la vérification interne des catégories géographiques et démographiques de base, qui pourraient fournir des renseignements utiles aux utilisateurs à l'extérieur de Statistique Canada.

Les utilisateurs constateront que la plupart des publications du recensement sont classées par couleur, chaque couleur correspondant à l'un des quatre thèmes du recensement; cela permet d'assurer la comparabilité avec les séries de 1971; ainsi, le bleu est réservé aux publications de nature géographique et démographique, le brun, aux bulletins sur le logement, les ménages et les familles, le rouge, aux publications de nature économique et la couleur or, à la série relative à l'agriculture.

Ces bulletins figurent au *Catalogue du recensement de 1976* que vous pouvez obtenir gratuitement auprès de:

Distribution des publications
Pièce 1200, Statistique Canada
Ottawa (Ontario)
K1A 0T6

Envoyez vos commandes de publications du recensement à cette même adresse en y joignant un chèque ou un mandat postal à l'ordre du Receveur général du Canada.

Outre les publications, le Recensement du Canada offre divers autres produits et services: données en microcopie (film ou fiche), bandes pour ordinateurs, états mécanographiés, totalisations spéciales, cartes, fichiers et listes géographiques, etc.

Pour obtenir des renseignements, écrivez à:

Information recensement
Statistique Canada
Ottawa (Ontario)
K1A 0T7

ou téléphonez au numéro (613) 996-5254.

Toute demande de renseignement sur le recensement et les autres données de Statistique Canada peut également être transmise aux bureaux régionaux de Statistique Canada situés à St. John's (T.-N.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton et Vancouver.

¹ Il convient de remarquer que ces bulletins sont généralement publiés quelque temps après les bulletins présentant des données.
