INTRODUCTION

This report is concerned with the distribution by single years of age and sex of Canada's population, 1976. As such, the report supplements the 1976 data by five-year age groups published in Catalogue No. 92-823 of the Volume 2 Series. The two subsequent tables refer to the national and the provincial levels (Table 1) and to census metropolitan areas and census agglomerations of 25,000 population and over (Table 2).

Where applicable, relevant parts of the Census questionnaire and instructions are reproduced in the Introduction to Volume 2 (Catalogue No. 92-820).

DEFINITIONS

Age: Age refers to the number of completed years of age at last birthday, and is computed on the basis of the census questionnaire item on date of birth.

Census Metropolitan Area (CMA): The main labour market area of an urbanized core (or continuous built-up area) having 100,000 or more population. CMAs are created by Statistics Canada and are usually known by the name of their largest city. They contain whole municipalities (or census subdivisions). CMAs are comprised of (1) municipalities completely or partly inside the urbanized core, and (2) other municipalities, if (a) at least 40% of the employed labour force living in the municipality works in the urbanized core, or (b) at least 25% of the employed labour force working in the municipality lives in the urbanized core.

Census Agglomeration (CA): A geostatistical area created by Statistics Canada comprised of at least two adjacent municipal entities. These entities must be at least partly urban and belong to an urbanized core having a population of 2,000 or more. The urbanized core includes a largest city and remainder, each with a population of 1,000 or more, and has a population density of at least 1,000 per square mile (386 per square kilometre). CAs with an urbanized core of 100,000 or more (based on previous census figures) are called census metropolitan areas.

SAMPLING AND WEIGHTING

The information in this report was collected on a 100% basis and as such represents the official census counts. All table headings are noted accordingly.

CONFIDENTIALITY AND RANDOM ROUNDING

The figures shown in this report have been subjected to a confidentiality procedure known as "random rounding" to prevent the possibility of associating small figures with any identifiable individual. Under this method, all figures including totals are randomly rounded (either up or down) to a multiple of "5". This technique provides strong protection against direct, residual or negative disclosures without adding significant error to the census data. However, since totals are independently rounded they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census reports. Similarly, percentages, which are calculated on rounded figures, do not necessarily add to the total. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. Users are advised that each table is noted accordingly. Additional details on the random rounding technique may be obtained by writing Census Information Services (see back cover).

Ce bulletin présente la répartition de la population du Canada en 1976 par année d'âge et par sexe. Il complète ainsi les données de 1976 présentées par groupe d'âge quinquennal dans la série du volume 2 (n° 92-823 au catalogue). On trouvera, dans les deux tableaux suivants, des données à l'échelle nationale et provinciale (tableau 1) et pour les régions métropolitaines de recensement et les agglomérations de recensement de 25,000 habitants et plus (tableau 2).

Au besoin, certaines parties du questionnaire du recensement et des instructions ont été insérées dans l'Introduction au volume 2 (n° 92-820 au catalogue).

DÉFINITIONS

Âge: L'âge représente le nombre d'années révolues au dernier anniversaire et il est calculé à partir de la date de naissance indiquée sur le questionnaire du recensement.

Région métropolitaine de recensement (RMR): Principal marché du travail d'un noyau urbanisé (ou d'une zone bâtie en continu) comptant 100,000 habitants ou plus. Les RMR sont créées par Statistique Canada et sont ordinairement désignées par le nom de la ville principale. Elles renferment des municipalités (ou des subdivisions) entières. Une RMR comprend (1) les municipalités qui se trouvent en totalité ou en partie à l'intérieur du noyau urbanisé et (2) d'autres municipalités, a) si au moins 40 % de la population active occupée demeurant dans la municipalité travaille dans le noyau urbanisé ou b) si au moins 25 % de la population active occupée travaillant dans la municipalité demeure dans le noyau urbanisé.

Agglomération de recensement (AR): Unité géostatistique créée par Statistique Canada et composée d'au moins deux municipalités voisines. Ces municipalités doivent être au moins partiellement urbaines et faire partie d'un noyau urbanisé dont la population est de 2,000 habitants ou plus. Le noyau urbanisé comprend la ville principale et le reste du noyau urbanisé ayant chacun une population de 1,000 habitants ou plus, et dont la densité est d'au moins 1,000 habitants au mille carré (386 au kilomètre carré). Les AR dont le noyau urbanisé comprend 100,000 habitants ou plus (selon les chiffres du recensement précédent) s'appellent des régions métropolitaines de recensement.

ÉCHANTILLONNAGE ET PONDÉRATION

Les renseignements de la présente publication ont été recueillis à 100 % et représentent les chiffres officiels de recensement. Les titres des tableaux sont annotés en conséquence.

CONFIDENTIALITÉ ET ARRONDISSEMENT ALÉATOIRE

Par souci de confidentialité, les chiffres présentés ici ont été soumis à une formule appelée "arrondissement aléatoire" qui interdit la possibilité d'associer des chiffres de faible importance à une personne reconnaissable. Grâce à cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) à un multiple de "5". Cette technique assure une bonne protection contre la divulgation directe, négative ou par recoupements, sans ajouter d'erreur significative aux données. Toutefois, puisque les totaux sont arrondis séparément, ils ne sont pas nécessairement égaux à la somme des chiffres individuels arrondis dans les distributions. De plus, il faut s'attendre que les totaux et les autres chiffres correspondants dans divers bulletins du recensement présentent quelques légères différences. De même, la somme des pourcentages qui sont calculés à partir des chiffres arrondis ne correspond pas forcément au total. La plupart des répartitions en pourcentage et des taux sont basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont fondées sur des données non arrondies. Les utilisateurs sont priés de remarquer que chaque tableau est annoté en conséquence. On peut obtenir plus de détails sur l'arrondissement aléatoire en s'adressant à Information recensement (voir la couverture arrière).

BASIC MEASURES OF DATA QUALITY

Coverage Error

A coverage error occurs in the census whenever a person or a household is missed completely or counted more than once. Since overcoverage is fairly rare in relation to undercoverage, the net effect of such errors is to introduce a downward bias in census figures, so that the published census estimates tend to underestimate the actual population.

A special study was undertaken in relation to the 1976 Census to measure the extent of the bias due to undercoverage. This study estimated the over-all undercoverage rate to be of the order of 2% of the total population.

Evidence from studies of coverage errors in earlier censuses indicates that undercoverage is not evenly distributed throughout the population but tends to be higher in certain segments of the population, e.g., young male adults, recent immigrants.

Further details on this study may be obtained by contacting Census Information Services (see back cover).

Response Rates

The table below presents the response rates obtained in the 1976 Census for the stated characteristics. A response rate is defined as the number of times the value of the characteristic was obtained divided by the number of times it should have been obtained.

These response rates are published in order to give an indication, for each characteristic, of the proportion of cases which required imputation for non-response.

RESPONSE RATES FOR SELECTED CENSUS CHARACTERISTICS, 1976
TAUX DE RÉPONSE POUR CERTAINES CARACTÉRISTIQUES DU RECENSEMENT, 1976

Characteristics Caractéristiques	Response rate (%) Taux de réponse (%)
Age - Âge.....	98.4
Sex - Sexe.....	98.6

Total Standard Error

The measures of reliability given in the table below are estimates of the total standard error (TSE) of the published 1976 Census figures. These include the effects of sampling (where applicable) as well as the random or non-systematic components of response and processing errors. The total standard errors, however, do not include allowances for systematic errors such as coverage errors, biases due to similar misinterpretations of concepts by many respondents, or systematic processing errors. These estimates of reliability are published to give an indication of the level of error only and are not meant for use in hypothesis testing or detailed analysis.

Users wishing to obtain TSE estimates for a given cell of data in any table in the Volume Series should follow these procedures:

- I. Determine if the table is based on the complete census or on the one-third sample.

MESURES DE BASE DE LA QUALITÉ DES DONNÉES

Erreur de couverture

Une erreur de couverture se glisse chaque fois qu'une personne ou un ménage sont omis ou comptés plus d'une fois. Étant donné que le surdénombrement est assez rare par rapport au sous-dénombrement, les erreurs de couverture introduisent un biais vers le bas dans les estimations du recensement de sorte que ces dernières ont tendance à sous-représenter la population réelle.

On a mené une étude spéciale concernant le recensement de 1976 afin de mesurer l'importance des biais attribuables au sous-dénombrement. On a estimé que le taux global du sous-dénombrement représentait 2 % de la population totale.

Des études d'erreurs de couverture effectuées à l'occasion de recensements antérieurs ont révélé que le taux de sous-dénombrement n'était pas également réparti dans toute la population, mais qu'il avait tendance à être plus élevé pour certains segments de la population, par exemple, chez les jeunes adultes de sexe masculin et les nouveaux immigrants.

On peut obtenir de plus amples renseignements sur cette étude en communiquant avec Information recensement (voir la couverture arrière).

Taux de réponse

Le tableau ci-dessous présente les taux de réponse obtenus lors du recensement de 1976 relativement aux caractéristiques citées. Le taux de réponse est égal au quotient du nombre de fois que la valeur de la caractéristique a été obtenue par le nombre de fois qu'on aurait dû l'obtenir.

Ces taux de réponse sont publiés afin d'indiquer, pour chaque caractéristique, le pourcentage de cas qui ont dû être imputés en raison de la non-réponse.

Erreur type totale

Les mesures de fiabilité du tableau ci-dessous constituent des estimations de l'erreur type totale (ETT) des chiffres publiés du recensement de 1976. L'erreur type totale englobe les effets de l'échantillonnage (s'il y a lieu) ainsi que les composantes aléatoires et non systématiques des erreurs de réponse et de dépouillement. Cependant, l'erreur type totale ne comprend pas les erreurs systématiques telles que les erreurs de couverture, les biais découlant d'une mauvaise compréhension des concepts par plusieurs recensés et les erreurs systématiques de dépouillement. Ces estimations de fiabilité sont présentées uniquement pour donner une indication du niveau d'erreur dans les chiffres du recensement et ne doivent pas être utilisées pour faire des tests d'hypothèses ou effectuer une analyse détaillée.

Les lecteurs qui veulent calculer des estimations de l'ETT pour une case donnée d'un tableau quelconque de cette série devront procéder de la façon suivante:

- I. Déterminer si le tableau est fondé sur le recensement exhaustif ou sur l'échantillon partiel (un tiers).

BASIC MEASURES OF DATA QUALITY – Concluded

2. Determine the categories defining the cell. In some cases, this may be just a single category (e.g., age 25-29), while for a cell in a cross-classification involving several variables, there may be several categories (e.g., married males aged 25-29).
3. Referring to the TSE table locate the cell-defining category which presents the highest value. Any column can be used for this comparison. For those categories where both 100% and sample TSE values are shown, use only the 100% rows for tables based on the complete census and only the sample rows for tables based on the one-third sample (see step 1).
4. Choose the column in the TSE table whose heading is closest to the value of the given cell in the census table. Approximations for intermediate values may be achieved by linear interpolation.
5. Read off the figure from the row (determined in step 3) and column (determined in step 4) of the TSE table.

When using these figures, the user can be reasonably certain that, for the enumerated population, the true value (discounting systematic and coverage errors) lies within plus or minus twice the total standard error (e.g., for a figure of 100 with a hypothetical TSE of 3, the range would be 100 ± 6) and virtually certain that it lies within plus or minus three times the total standard error (e.g., for the same figure of 100 with a hypothetical TSE of 3, the range would be 100 ± 9).

MESURES DE BASE DE LA QUALITÉ DES DONNÉES – fin

2. Déterminer les catégories qui définissent la case. Dans certains cas, il peut n'y avoir qu'une seule catégorie (par exemple, les 25-29 ans), tandis que dans le cas des classements recoupés mettant en jeu plusieurs variables, il peut y en avoir plusieurs (par exemple, les hommes mariés âgés de 25 à 29 ans).
3. En consultant le tableau des ETT, situer la catégorie qui a la valeur la plus élevée. N'importe quelle colonne peut servir à cette comparaison. Dans le cas des catégories pour lesquelles sont indiquées les valeurs de l'ETT à la fois pour le recensement exhaustif et pour l'échantillon, utiliser uniquement les lignes du recensement pour les tableaux fondés sur le recensement exhaustif, et uniquement les lignes de l'échantillon pour les tableaux fondés sur l'échantillon d'un tiers des ménages (voir l'étape 1).
4. Dans le tableau des ETT, choisir la colonne dont l'en-tête se rapproche le plus de celle de la case donnée dans le tableau du recensement. Les approximations des valeurs intermédiaires peuvent être effectuées par interpolation linéaire.
5. Lire la valeur correspondant à la ligne (déterminée à l'étape 3) et à la colonne (déterminée à l'étape 4) du tableau des ETT.

L'utilisateur de ces chiffres peut être raisonnablement certain que, pour la population recensée, la vraie valeur (en faisant abstraction des erreurs systématiques et de couverture) se situe dans un intervalle de plus ou moins deux fois l'erreur type totale (par exemple, pour le chiffre 100 et une ETT hypothétique de 3, l'intervalle serait de 100 ± 6). L'utilisateur peut être presque certain que cette valeur se situe dans un intervalle de plus ou moins trois fois l'erreur type totale (par exemple, pour le chiffre 100 et une ETT hypothétique de 3, l'intervalle serait de 100 ± 9).

c.3

Publications of the 1976 Census of Canada

This bulletin is one of a series of volume reports of the 1976 Censuses of Population, Housing and Agriculture.

Most of the bulletins in the regular Volume Series are data-oriented. Other reports containing more methodological, interpretative and evaluative content, are also issued. These are as follows:¹

- (a) 1976 Census Administrative Report
- (b) 1976 Census Quality of Data Series
- (c) 1976 Census Research Series
- (d) Introductory Reports to each of the regular Volume Series.

Also available on request is a series of Reference Lists developed largely for internal verification of basic geographical and population hierarchies, which could provide useful information to the outside user.

Users will note that the majority of census publications are colour-coded to identify with the four themes central to the presentation and to maintain comparability with the 1971 series, e.g., blue for Geographical and Demographic content, brown for Housing, Household and Family data, red for Economic Characteristics and gold for the series based on Agriculture.

These reports are listed in the *1976 Census Catalogue* which can be obtained free of charge from:

Publications Distribution,
Room 1200, Statistics Canada,
Ottawa, Ontario.
K1A 0T6

To order census publications, send a cheque or money order made payable to the Receiver General for Canada, to the above address.

In addition to published documents, the Census of Canada can provide other products and services about census: data on microform (film or fiche), computer tapes, computer print-outs, user-specified tables, maps, geographic files, geographic lists, etc.

For information write:

Census Information Services,
Statistics Canada,
Ottawa, Ontario.
K1A 0T7

or call (613) 996-5254.

Inquiries about census and other Statistics Canada information can also be directed to Statistics Canada Regional Offices located in: St. John's (Nfld.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton and Vancouver.

¹ It should be noted that these publications are generally released somewhat later than the data reports.

Publications du recensement du Canada de 1976

Ce bulletin fait partie de la série des publications des recensements de 1976 de la population, du logement et de l'agriculture.

La plupart des bulletins de la série ordinaire des volumes présentent des données. On publie également d'autres bulletins dont le contenu vise plutôt la méthodologie, l'interprétation et l'évaluation. Ces bulletins sont les suivants¹:

- a) Rapport administratif du recensement de 1976
- b) Série relative à la qualité des données du recensement de 1976
- c) Série du recensement de 1976 relative à la recherche
- d) Introductions à chacune des séries ordinaires des volumes.

Vous pouvez aussi vous procurer sur demande une série de Listes de référence, servant surtout à la vérification interne des catégories géographiques et démographiques de base, qui pourraient fournir des renseignements utiles aux utilisateurs à l'extérieur de Statistique Canada.

Les utilisateurs constateront que la plupart des publications du recensement sont classées par couleur, chaque couleur correspondant à l'un des quatre thèmes du recensement; cela permet d'assurer la comparabilité avec les séries de 1971; ainsi, le bleu est réservé aux publications de nature géographique et démographique, le brun, aux bulletins sur le logement, les ménages et les familles, le rouge, aux publications de nature économique et la couleur or, à la série relative à l'agriculture.

Ces bulletins figurent au *Catalogue du recensement de 1976* que vous pouvez obtenir gratuitement auprès de:

Distribution des publications
Pièce 1200, Statistique Canada
Ottawa (Ontario)
K1A 0T6

Envoyez vos commandes de publications du recensement à cette même adresse en y joignant un chèque ou un mandat postal à l'ordre du Receveur général du Canada.

Outre les publications, le Recensement du Canada offre divers autres produits et services: données en microcopie (film ou fiche), bandes pour ordinateurs, états mécanographiés, totalisations spéciales, cartes, fichiers et listes géographiques, etc.

Pour obtenir des renseignements, écrivez à:

Information recensement
Statistique Canada
Ottawa (Ontario)
K1A 0T7

ou téléphonez au numéro (613) 996-5254.

Toute demande de renseignement sur le recensement et les autres données de Statistique Canada peut également être transmise aux bureaux régionaux de Statistique Canada situés à St. John's (T.-N.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton et Vancouver.

¹ Il convient de remarquer que ces bulletins sont généralement publiés quelque temps après les bulletins présentant des données.
