## PREFACE

This is a report of Volume IV of the 1971 Census of Canada. It presents results of the 1971 Agriculture-Population Linkage Programme.

The Introduction includes the definitions of terms used in the report. The tables display socio-economic data for farm operators for Canada and the provinces in 1971.

Material for this report was prepared in the Census of Agriculture Division, Census Field.

PETER G. KIRKHAM,  
*Chief Statistician of Canada.*

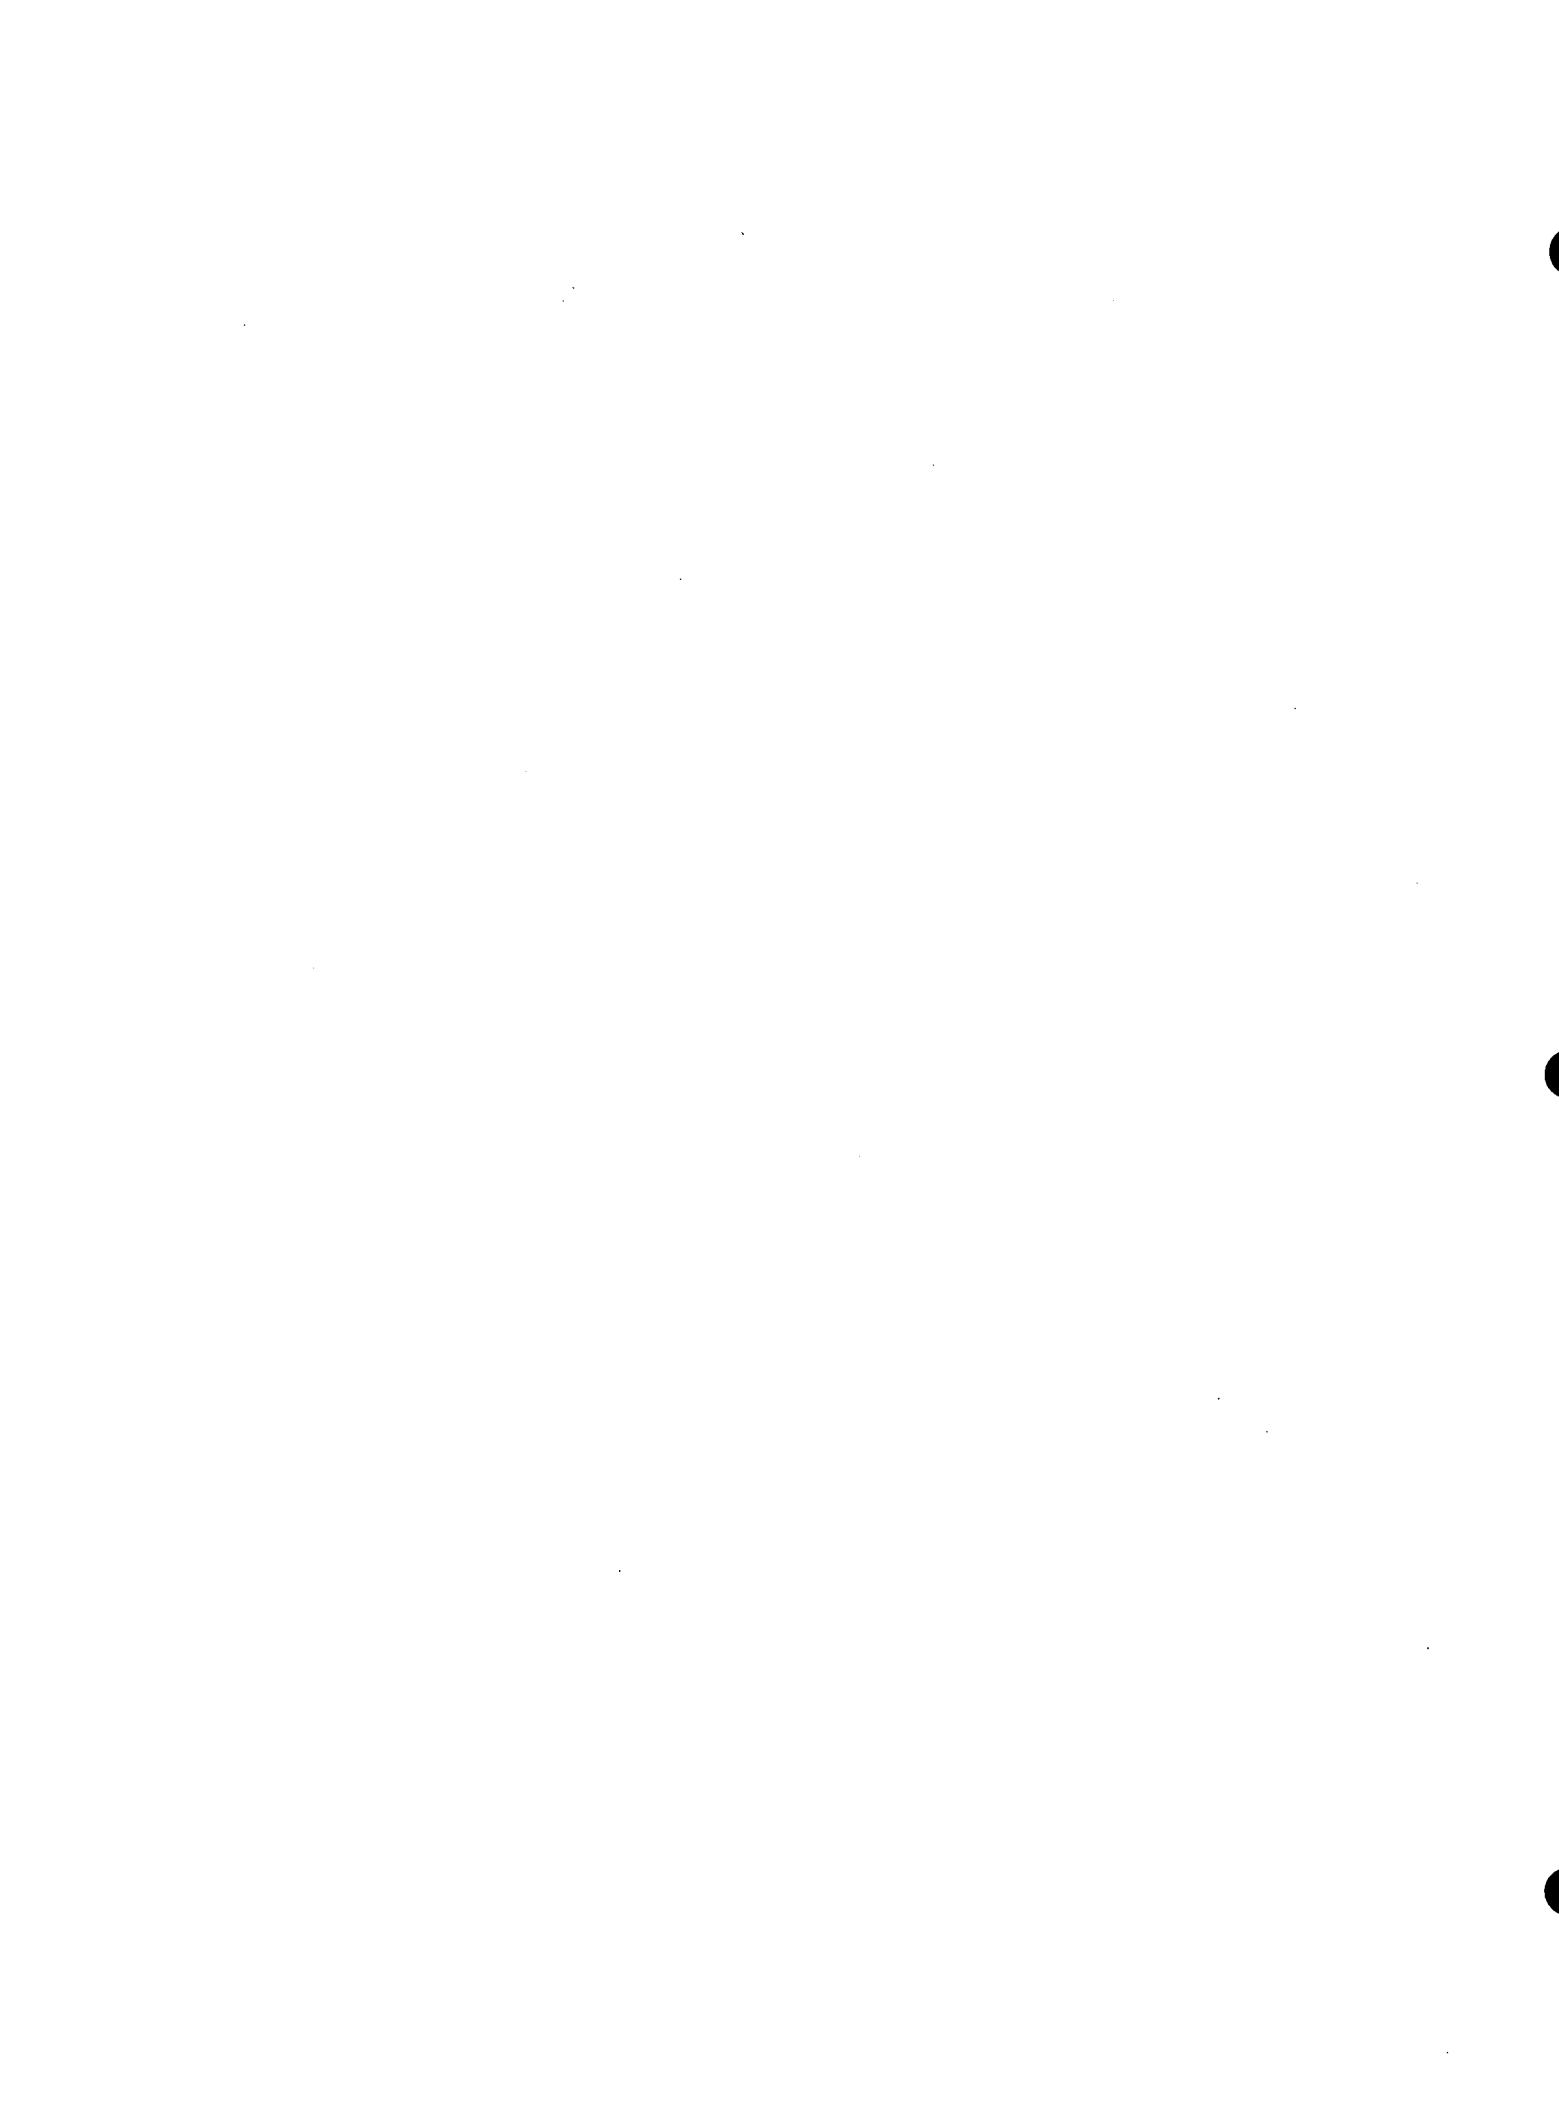

## PRÉFACE

Ce bulletin fait partie du volume IV du recensement du Canada de 1971. Il présente les résultats du programme de couplage agriculture-population de 1971.

L'introduction comprend la définition des termes employés dans le bulletin. Les tableaux présentent les données socio-économiques des exploitants agricoles pour le Canada et les provinces en 1971.

Le contenu du présent bulletin a été préparé à la Division du recensement de l'agriculture, Secteur du recensement.

*Le statisticien en chef du Canada,*  
PETER G. KIRKHAM.

## **Appendice**

## INTRODUCTION

This report contains some of the basic data from the 1971 Agriculture-Population Linkage Programme. The tables display a representative selection of socio-economic characteristics for farm operators by type of farm and economic class of farm for Canada and the provinces. It is the first of three reports of Volume IV (Part 4).

The Agriculture-Population Linkage Programme consists of a computerized record linkage of the 1971 Census of Agriculture and the 1971 Census of Population. The resulting linkage data base enabled the cross-classification of agricultural characteristics of farming operations with the socio-economic characteristics of farm operators and their households. A number of important stages of the programme are summarized under the following headings: Background; Match and Link; Weighting; and Data Base.

**Background** — Work on the Agriculture-Population Linkage Programme commenced some years prior to the 1971 Census. Plans were made to undertake the computer linkage because a large volume of useful and unique data could be generated. The socio-economic statistics available at the time on Canada's farming population were not adequate to meet user needs. This early planning involved changes to the established collection, editing and data capture procedures, for both censuses. New tabulation and publication formats were developed. Consultation with potential users was an important element in this development. Instruction manuals were written. Computer systems were designed, programmes were written and testing was done.

The foundation of the Agriculture-Population Linkage Programme was relatively simple. The operator, or some member of the household of each census-farm completed two census questionnaires in 1971 — the Agriculture and the Population Questionnaire. The Agriculture Questionnaire solicited information on the farming operation, such as gross agricultural sales, capital value, etc., for each census-farm. The Population Questionnaire solicited socio-economic information on the operator and his household.

**Match and Link** — The Agriculture Questionnaire for each census-farm was matched via the computer to its corresponding Population Questionnaire. The existence of unique identifying criteria (Province, Electoral District, Enumeration Area, and Household number) for each farm operator household made this match possible. These criteria had been transcribed (during

Ce bulletin contient certaines des données de base du programme de couplage agriculture-population de 1971. Les tableaux donnent un éventail représentatif des caractéristiques socio-économiques des exploitants agricoles selon le genre de ferme et la catégorie économique de la ferme, pour le Canada et les provinces. C'est le premier bulletin du volume IV (partie 4) qui en comportera trois.

Le programme de couplage agriculture-population consiste en un appariement informatique des documents du recensement de l'agriculture de 1971 et du recensement de la population de 1971. La base des données de couplage ainsi obtenue a permis le recouplement des caractéristiques agricoles des exploitations avec les caractéristiques socio-économiques des exploitants agricoles et de leurs ménages. Un certain nombre des principales étapes du programme sont résumées sous les rubriques suivantes: historique; appariement et couplage; pondération; et base de données.

**Historique** — Le travail relatif au programme de couplage agriculture-population remonte à quelques années avant le recensement de 1971. Le couplage informatique avait été envisagé en raison de la masse de données utiles qu'il ne serait pas possible d'établir par d'autres moyens. Les statistiques socio-économiques disponibles à l'époque sur la population agricole du Canada n'étaient pas suffisantes pour répondre aux besoins des utilisateurs. Cette planification préliminaire nécessitait des changements aux procédures établies de collecte, de contrôle et de saisie des données, pour les deux recensements. Il a fallu définir de nouveaux modes de totalisation et de publication. Les idées échangées au cours de discussions avec des utilisateurs possibles ont aidé à l'élaboration de ce programme. Des manuels d'instruction ont été rédigés, des systèmes informatiques conçus, des programmes établis et des essais effectués.

Le fondement du programme de couplage agriculture-population est relativement simple. L'exploitant ou un membre du ménage de chaque ferme de recensement remplissait deux questionnaires de recensement en 1971, à savoir le questionnaire agricole et le questionnaire du recensement de la population. Sur le questionnaire agricole, il devait donner des renseignements sur l'exploitation agricole, comme les ventes brutes de produits agricoles, la valeur du capital, etc., pour la ferme de recensement. Le questionnaire du recensement de la population demandait des données socio-économiques sur l'exploitant et son ménage.

**Appariement et couplage** — Le questionnaire agricole de chaque ferme de recensement a été apparié par ordinateur au questionnaire correspondant sur la population. L'existence de critères d'identification propres (province, circonscription électorale, secteur de dénombrement, et numéro de ménage) à chaque ménage d'exploitant agricole a rendu possible cet appariement. Ces critères avaient été

field collection and manual processing operations) to both questionnaires. The initial computer-run successfully matched 358,872 census-farms (98%). Clean-up matches substituted the operator's age (operator's age appeared on both questionnaires in 1971) for his Household number. A further 7,187 census-farms were matched to their households. Finally, an imputation scheme matched the remaining 69 census-farms.

A matched record pair, containing the identification criteria for the household, now existed for each census-farm. The next step was the identity of the operator from among other persons in each household. A computer search, utilizing coding on the Population Questionnaire and the answers to specific questions from both questionnaires, identified each operator.

The matched record pair, containing only the identification criteria for the household and operator, for each census-farm was "linked" into one record. These linked records were used to produce index files on which the remaining stages of the programme were dependent. All characteristics from both questionnaires were now accessible from the separate Agriculture and Population data bases by using these index files in conjunction with a retrieval programme.

**Weighting** – However, a complexity was introduced into this otherwise simple start. There were two kinds of Population Questionnaires – a long form and a short form. Each household completed only one of these. The short form questionnaire was completed by approximately two-thirds of all households. The long form, which included the questions on the short form as well as questions related to such important characteristics as income, occupation stated, level of schooling, etc., was completed by approximately one-third of the farm operator households.

Thus, in addition to a computer linkage of the Agriculture and Population Questionnaires, there was the added complexity of having to calculate weights for census-farms that linked to the long form (sample) Population Questionnaires. The characteristics of this sample would thus be "blown up" to represent all census-farms. The method used is known as the "Raking Ratio Estimation Procedure". A selection of characteristics common to all linked records was retrieved – agricultural sales and capital value from Agriculture, and age and marital status from Population. These characteristics were used to cross-classify the population into groups by Weighting Areas (a

transcrits (pendant les opérations de collecte sur le terrain et de traitement manuel) sur les deux questionnaires. Le traitement informatique initial a permis l'appariement de 358,872 fermes de recensement (98 %). Pour les fermes non appariées, l'âge de l'exploitant (l'âge de l'exploitant figurait sur les deux questionnaires en 1971) a été substitué à son numéro de ménage. Cette substitution a permis l'appariement de 7,187 autres fermes de recensement. Enfin, un programme d'imputation a permis l'appariement des 69 autres fermes de recensement.

Il existait donc désormais, pour chaque ferme de recensement, une paire de documents appariés contenant les critères d'identification pour le ménage. L'étape suivante consistait à isoler l'exploitant agricole des autres personnes membres de chaque ménage. Un tri informatique, utilisant les codes des questionnaires sur la population et les réponses à certaines questions sur les deux questionnaires, a permis d'isoler tous les exploitants.

Les paires de documents appariés, contenant seulement les critères d'identification pour le ménage et l'exploitant, pour chaque ferme de recensement ont été "couplées" en un même document. Ces documents couplés ont servi à produire des fichiers dont dépendaient les autres étapes du programme. Toutes les caractéristiques des deux questionnaires étaient désormais accessibles à partir des deux bases de données distinctes de l'agriculture et de la population, grâce à ces fichiers et à un programme d'extraction.

**Pondération** – Toutefois, certains facteurs sont venus rendre complexe cette opération qui était au départ très simple. En effet, il y avait deux genres de questionnaires sur la population, un questionnaire complet et un questionnaire abrégé. Chaque ménage remplissait seulement un de ces questionnaires. Le questionnaire abrégé s'adressait à environ les deux tiers de tous les ménages. Le questionnaire complet, qui renfermait les questions échantillon en plus de celles de la formule abrégée, était rempli par un tiers de tous les ménages. Ces questions échantillon avaient trait à des caractéristiques importantes telles le revenu, la profession, le niveau de scolarité, etc., et seulement environ un tiers des ménages comptant un exploitant agricole avaient répondu à ces questions.

Ainsi, en plus du couplage informatique des questionnaires, il fallait compter avec la difficulté de calculer des poids pour toutes les fermes de recensement rattachées aux questionnaires complets (échantillon) sur la population. Cette pondération permettrait d'extrapoler à partir des caractéristiques de l'échantillon, les données représentatives de l'ensemble des fermes de recensement. La méthode utilisée s'appelle la "procédure d'estimation de l'échantillon en formation" (Raking Ratio Estimation Procedure). On a extrait certaines caractéristiques communes à tous les documents couplés: ventes de produits agricoles et valeur du capital, sur le questionnaire agricole, et âge et état matrimonial, sur le questionnaire de la

census division or group of census divisions consisting of approximately 4,000 persons) for:

- (1) all persons in the total (linked) population, and
- (2) all persons in the sample.

A ratio of the count in the total population to the count in the sample was calculated for each group. This ratio (weight) for each group would be used to "blow up" all the characteristics of the persons in the sample.

Similarly, a selection of household characteristics common to the linked records was retrieved from the Population data base — number of families in household, household head status, age of household head, number of persons in household, number of rooms in dwelling and tenure of dwelling. These characteristics were used to cross-classify the households into groups by Weighting Areas (one weighting area per province) for:

- (1) all farm operator households in the total (linked) population, and
- (2) all farm operator households in the sample.

A ratio of the count of households in the total population to the count in the sample was calculated for each group. This ratio (weight) for each group would be used to "blow up" all the characteristics of the households in the sample.

Two files were produced:

- a) the household weight file, containing one record for each household, and
- b) the population weight file, containing one record for each person. The operators were identified on this file.

The required elements to produce the Agriculture-Population Linkage data base now existed.

**Data Base** — A selection of agricultural variables was retrieved for those records on the Agriculture data base that had linked to the long form Population Questionnaires. These were stored on the Agriculture-Population Linkage data base. Similarly a selection of population variables was retrieved for the long form Population records from the Population data base that had been linked to census-farm. These were stored on this newly created data base.

population. Ces caractéristiques ont servi à regrouper en catégories pour chaque secteur de pondération (une division de recensement ou un groupe de divisions de recensement comprenant environ 4,000 personnes):

- 1) toutes les personnes faisant partie de la population totale "couplée", et
- 2) toutes les personnes de l'échantillon.

On a calculé pour chaque catégorie un rapport du chiffre de la population totale sur le chiffre de la population échantillon. Ce rapport (poids) allait servir à extraire toutes les caractéristiques des personnes.

De même, on a extrait de la base de données sur la population un certain nombre de caractéristiques du ménage communes aux documents couplés: nombre de familles dans le ménage, statut du chef de ménage, âge du chef de ménage, nombre de personnes dans le ménage, nombre de pièces dans le logement et mode d'occupation du logement. Ces caractéristiques ont permis de regrouper par catégories pour chaque secteur de pondération (un secteur de pondération par province):

- 1) tous les ménages d'exploitant agricole compris dans la population totale "couplée", et
- 2) tous les ménages d'exploitant agricole compris dans l'échantillon.

On a calculé pour chaque catégorie un rapport du chiffre des ménages compris dans la population totale sur le chiffre des ménages compris dans l'échantillon. Ce rapport (poids) devait servir à extraire toutes les caractéristiques des ménages.

Deux fichiers ont été produits:

- a) le fichier du poids des ménages, contenant un document pour chaque ménage de l'échantillon, et
- b) le fichier du poids de la population, contenant un document pour chaque personne de l'échantillon. Les exploitants sont identifiés sur ce fichier.

Les éléments requis pour produire la base des données de couplage agriculture-population étaient désormais créés.

**Base de données** — Un certain nombre de variables agricoles a été extrait pour les documents de la base des données agricoles qui avaient été couplés avec les questionnaires complets sur la population. Ces données ont été stockées dans la base des données de couplage agriculture-population. De même, on a extrait un choix de variables sur la population pour les documents complets sur la population dans la base des données sur la population qui avaient été couplés avec les fermes de recensement. Ces dernières ont été stockées dans cette nouvelle base de données.

Finally, the two files created in the "Weight" stage containing the household and person weights were transferred to the data base.

The Agriculture-Population Linkage data base consists of 130,410 linked records or 36% of the 1971 census-farms. All relevant variables that existed on the Agriculture and Population Questionnaires were selected for inclusion. All records are weighted such that the counts of farm operators, total persons, etc. will closely resemble the actual counts. The retrieval of data from the base is accomplished by "Tarela - Statpak".

For any information on the field collection, editing, data capture procedures or for more detailed description of the methodology presented herein, please contact the Census of Agriculture Division.

The following gives the user specific information on the use of the tables presented in this bulletin. Please read carefully.

**Differences** – As the brief description on methodology suggests, the information in this report is based on a sample. As a result, most subtotals and distributions of farm operator counts will differ from comparable counts of census-farms shown in other Census of Agriculture reports containing data collected on the 100% basis. The latter figures, of course, represent the official counts (see Catalogue Nos. 96-701 to 96-711).

**Adjusted counts** – Totals for farm operators for Canada and the provinces (and for the totals of each type of farm and economic class of farm) have been adjusted to correspond to these official counts of census-farms. Thus, the subtotals and distributions will not add to these adjusted total counts. For those users interested in the unadjusted counts, refer to "Counts of Operators from the Agriculture-Population Linkage Programme" in the Appendix.

**Random rounding** – The 1971 Census figures in this report have been subjected to a confidentiality procedure to prevent the possibility of associating small figures with any identifiable individual. The particular technique used is known as "random rounding". Under this method all last or "unit" digits in a table (including all totals) are randomly rounded (either up or down) to "0" or "5". This technique provides the strongest possible protection against direct, residual, or negative disclosures without adding any significant error to the census data. However, since totals are independently rounded they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corre-

Enfin, les deux fichiers créés à l'étape de la "Pondération" et contenant les poids des ménages et des personnes ont été transférés dans la base de données.

La base de données de couplage agriculture-population est formée de 130,410 documents couplés, ce qui représente 36 % des fermes de recensement de 1971. Toutes les variables pertinentes qui existaient sur les questionnaires agricoles et les questionnaires sur la population y ont été transférées. Tous les documents sont pondérés de manière que le chiffre des exploitants agricoles, le nombre total de personnes, etc., soient très voisins des chiffres réels. L'extraction des données de la base se fait par le programme "Tarela - Statpak".

Pour tout renseignement sur les procédures de collecte sur le terrain, de contrôle ou de saisie des données, sur les autres éléments essentiels du programme ou pour une description plus détaillée de la méthodologie exposée ici, le lecteur est prié de communiquer avec la Division du recensement de l'agriculture.

L'utilisateur trouvera ci-après des renseignements particuliers sur l'utilisation des tableaux présentés ici. On est prié de les lire attentivement.

**Différences** – Comme l'a révélé le bref exposé méthodologique, les renseignements publiés ici sont fondés sur un échantillon. Il s'ensuit que la plupart des totaux partiels et des répartitions concernant les exploitants agricoles différeront des chiffres comparables des fermes de recensement publiés dans d'autres bulletins du recensement de l'agriculture qui renferment des données intégrales. Bien entendu, ce sont ces dernières données qui représentent les chiffres officiels (voir nos 96-701 à 96-711 au catalogue).

**Chiffres rectifiés** – Les chiffres des exploitants agricoles pour le Canada et les provinces (et les chiffres concernant chaque genre de ferme et catégorie économique de ferme) ont été rectifiés en fonction de ces chiffres officiels. Ainsi, les totaux partiels et les répartitions ne correspondront pas à ces totaux rectifiés. Les utilisateurs qu'intéressent les chiffres non rectifiés peuvent consulter les chiffres des exploitants tirés du programme de couplage agriculture-population, en appendice.

**Arrondissement aléatoire** – Par souci de confidentialité, les chiffres du recensement de 1971 publiés ici ont été soumis à une formule qui interdit la possibilité d'associer des chiffres de faible importance à une personne reconnaissable. Cette technique particulière s'appelle l'"arrondissement aléatoire". Grâce à cette méthode, tous les derniers chiffres, c'est-à-dire les chiffres des unités (y compris tous les totaux) des tableaux sont arrondis de façon aléatoire (vers le haut ou vers le bas) à "0" ou à "5". Cette technique assure la protection maximale contre la divulgation directe, négative ou par recoupements, sans ajouter d'erreur significative aux données. Toutefois, puisque les totaux sont arrondis séparément, ils ne sont pas nécessairement égaux à la somme des chiffres indivi-

sponding totals and cell values in various census reports.

**Definitions** – Most terms used in this report are similar to those in other published reports of the Censuses of Agriculture and Population. Some terms are briefly defined below. The user is referred to Catalogue Nos. 96-701 to 96-711 of the Census of Agriculture and the Dictionary of Terms (Catalogue No. 12-540) for the Census of Population for the detailed definitions.

**Census-farm** – An agricultural holding of at least one acre and sales of agricultural products during the preceding 12 months of \$50 or more.

**Economic class of farm** – The grouping of all census-farms, except institutional farms and community pastures, on the basis of their gross value of agricultural products sold in 1970. (See Catalogue Nos. 96-701 to 96-711 for counts of institutional farms and community pastures.)

**Operator** – Person responsible for the day-to-day decisions made in running a census-farm, whether as an owner, tenant or hired manager. As only one operator was listed for each holding, the number of operators is the same as the number of census-farms. Where the holding was operated by more than one person, as in the case of a partnership, only one of them was regarded as the operator.

**Type of farm** – With the exception of institutional farms and community pastures, all census-farms in 1971 with \$2,500 or more of agricultural sales were classified on the basis of product type. In order for a farm to be included in a particular product type, it must have derived 51% or more of its total agricultural sales in 1970 from that product. The determination of product types was done in the following order of priority: dairy; cattle, hogs and sheep; poultry; wheat; small grains; field crops, other than small grains; fruits and vegetables; forestry; miscellaneous specialty; live-stock combination; field crops combination; and other combinations. (See Catalogue Nos. 96-701 to 96-711 for the complete definition.)

**Class of worker** – Classification of respondents by their participation in the labour force according to their main form of employment. The period of refer-

duels arrondis dans les distributions. De plus, il faut s'attendre que les totaux et les autres chiffres correspondants dans divers bulletins du recensement présentent quelques légères différences.

**Définitions** – La plupart des termes employés ici sont semblables à ceux des autres publications des recensements de l'agriculture et de la population. On trouvera ci-après une brève définition de certains de ces termes. Le lecteur pourra trouver les définitions détaillées dans les publications nos 96-701 à 96-711 du recensement de l'agriculture et le Dictionnaire des termes du recensement (n° 12-540 au catalogue).

**Ferme de recensement** – Exploitation agricole d'au moins une acre dont les ventes de produits agricoles au cours des 12 mois précédents ont été de \$50 ou plus.

**Catégorie économique de la ferme** – Toutes les fermes de recensement, à l'exception des fermes d'institution et des pâtures communautaires, sont classées en fonction de la valeur brute de leurs ventes de produits agricoles en 1970. (Voir les nos 96-701 à 96-711 au catalogue pour les chiffres concernant les fermes d'institution et les pâtures communautaires.)

**Exploitant** – Personne responsable des décisions au jour le jour que nécessite l'exploitation d'une ferme de recensement, à titre de propriétaire, de locataire ou de gérant. Comme il fallait inscrire un seul exploitant par exploitation, le nombre d'exploitants est égal au nombre de fermes de recensement. Lorsque l'exploitation était exploitée par plus d'une personne, par ex., par des associés, une seule d'entre elles était considérée comme exploitant.

**Genre de ferme** – Toutes les fermes de recensement en 1971 (sauf les fermes d'institution et les pâtures communautaires) dont les ventes de produits agricoles ont été de \$2,500 et plus sont classées en fonction des produits vendus. Pour qu'une ferme soit classée suivant un genre de produit particulier, ce produit doit représenter 51 % ou plus de ses ventes de produits agricoles en 1970. Les genres de produits ont été déterminés selon l'ordre de priorité suivant: produits laitiers; bovins, porcs et moutons; volaille; blé; menus grains; grandes cultures, autres que menus grains; fruits et légumes; produits forestiers; spécialités diverses; combinaison de bétail; combinaison de grandes cultures; et autres combinaisons. (Voir la définition complète dans les publications 96-701 à 96-711 au catalogue.)

**Statut** – Classement des recensés suivant leur activité sur le marché du travail en fonction de leur principale forme d'emploi. La période de référence est la semaine précédent

ence is the week prior to enumeration for those employed, or otherwise any time since January 1, 1970 for the job or business of longest duration.

**Employment income** – Refers to the total income received in 1970 as wages and salaries, net income from a business or professional practice and/or net farm income.

**Farm income (net self-employment)** – Refers to total receipts from farm sales less depreciation and operating expenses during 1970, regardless of whether the farm was operated by the respondent alone or in partnership, or for the respondent by a paid manager. In the case of a partnership, only the share of income actually received was reported. Cash advances and supplementary and assistance payments from governments as well as acreage reduction payments were considered as farm income. Provision was made for reporting a loss or no income.

**Major source of income** – That component which constitutes the largest proportion of the total income reported by the respondent.

**Off-farm employment income** – The total income received in 1970 as wages and salaries and/or net income from a non-farm business or professional practice.

**Total income** – Aggregate income received in 1970 from wages and salaries, net non-farm or farm self-employment, family and youth allowances, government old age pensions, other government payments, retirement pensions from previous employment, bond and deposit interest and dividends, other investment sources and other sources. (See Appendix for copy of 1971 Income Question from long form Population Questionnaire.)

**Labour force, employed** – Refers to all non-inmates 15 years and over who, during the week prior to enumeration, worked for pay or profit, or in unpaid family work, or had a job from which they were temporarily absent because of illness, vacation, strike, etc.

le dénombrement pour les personnes qui avaient un emploi ou, pour les autres, l'emploi ou l'entreprise de plus longue durée depuis le 1<sup>er</sup> janvier 1970.

**Revenu de l'emploi** – Revenu total reçu en 1970 sous forme de rémunération, de revenu net provenant de l'exploitation d'une entreprise ou de l'exercice d'une profession pour compte propre et (ou) de revenu agricole net.

**Revenu agricole (revenu net d'un emploi autonome)** – Recettes totales provenant de la vente de produits agricoles, moins l'amortissement et les dépenses d'exploitation en 1970, que la ferme ait été exploitée par le recensé seul ou en association, ou pour le compte du recensé par un gérant. Dans le cas d'une association, seule la part du revenu effectivement reçue est prise en compte. Les avances, les paiements supplémentaires et les paiements d'assistance versés par des pouvoirs publics ainsi que les paiements en vertu du programme de réduction des stocks de céréales sont comptés comme revenu agricole. Il était également possible d'indiquer une perte ou l'absence de tout revenu.

**Principale source de revenu** – Élément qui constitue la plus grande part du revenu total déclaré par le recensé.

**Revenu d'un emploi hors exploitation** – Revenu total reçu en 1970 sous forme de rémunération et (ou) de revenu net provenant de l'exploitation d'une entreprise non agricole ou de l'exercice d'une profession pour compte propre.

**Revenu total** – Revenu total, reçu en 1970, sous forme de rémunération, de revenu net provenant de l'exploitation d'une entreprise non agricole ou d'une ferme, d'allocations familiales et d'allocations aux jeunes, de pensions de vieillesse de l'État, d'autres sources publiques, de pensions de retraite relatives à un emploi antérieur, d'intérêts d'obligations et de dépôts et de dividendes, d'autres placements et d'autres sources. (Voir en appendice la question sur le revenu de 1971 du questionnaire sur la population.)

**Population active occupée** – Tous les non-pensionnaires d'institution de 15 ans et plus qui, au cours de la semaine précédant le dénombrement, ont travaillé contre rémunération ou en vue d'un bénéfice, ou sans rémunération dans une entreprise familiale, ou avaient un emploi dont ils étaient temporairement absents à cause d'une maladie, de vacances, d'une grève, etc.

**Labour force, unemployed** – Consists of all non-inmates 15 years and over who, during the week prior to enumeration, were not working but were "looking for work", or were "on temporary lay-off".

**Not in labour force** – Refers to persons of 15 years and over who are inmates, students, housewives, retired workers, seasonal workers enumerated in an "off" season who are not looking for work, unpaid female workers helping less than 20 hours in a family farm or business, or persons who cannot work because of long-term physical or mental illness or disability.

**Occupation** – Refers to the kind of work the person was doing. If he had more than one job, data relate to the job at which the respondent worked the most hours. If he did not have a job during the week prior to enumeration, the data relate to the job of longest duration since January 1, 1970. (See Catalogue No. 94-727 for the complete list of occupations.)

**Population active en chômage** – Tous les non-pensionnaires d'institution de 15 ans et plus qui, au cours de la semaine précédent le recensement, ne travaillaient pas mais "cherchaient du travail" ou étaient "en congédiement temporaire".

**Inactifs** – Personnes de 15 ans et plus qui sont des pensionnaires d'institution, des étudiants, des maîtresses de maison, des travailleurs à la retraite, des travailleurs saisonniers recensés en saison morte et qui ne cherchent pas de travail, des travailleuses non rémunérées travaillant moins de 20 heures dans une ferme ou une entreprise familiale, et personnes qui ne peuvent travailler en raison d'une maladie ou d'une infirmité physique ou mentale de longue durée.

**Profession** – Genre de travail que faisait le recensé. S'il avait plus d'un emploi, les données portent sur l'emploi auquel il consacrait le plus grand nombre d'heures. S'il n'avait pas d'emploi pendant la semaine précédent le dénombrement, les données portent sur l'emploi de plus longue durée depuis le 1<sup>er</sup> janvier 1970. (La liste complète des professions est donnée dans la publication n° 94-727 au catalogue.)

**INCOME QUESTION FROM THE LONG FORM 1971 CENSUS  
POPULATION QUESTIONNAIRE**

**QUESTION SUR LE REVENU TIRÉE DU QUESTIONNAIRE COMPLET DU  
RECENSEMENT DE LA POPULATION DE 1971**

<b>40. INCOME FOR 1970</b>	(State in dollars only)	
(a) During 1970 what were your total wages and salaries, commissions, bonuses, tips, etc.? ( <i>before any deductions</i> )		
Amount .....	\$ _____._____/00	<input type="radio"/> None
(b) During 1970 what was your net income from self-employment or operating your own non-farm business or professional practice? <i>State total business income less expenses of operation.</i> <i>If lost money, give amount and write "Loss".</i>		
Amount .....	\$ _____._____/00	<input type="radio"/> None
(c) During 1970 what was your net income from operating a farm on your own account or in partnership? <i>State total farm income less expenses of operation. If lost money, give amount and write "Loss".</i>		
Amount .....	\$ _____._____/00	<input type="radio"/> None
(d) During 1970 how much income did you receive from:		
1. Family and youth allowances?		
Amount .....	\$ _____._____/00	<input type="radio"/> None
2. Government old age pensions, Canada pensions, and Quebec pensions?		
Amount .....	\$ _____._____/00	<input type="radio"/> None
3. Other government income? ( <i>e.g., unemployment insurance, veterans' pensions and allowances, welfare</i> )		
Amount .....	\$ _____._____/00	<input type="radio"/> None
4. Retirement pensions from previous employment?		
Amount .....	\$ _____._____/00	<input type="radio"/> None
5. Bond and deposit interest and dividends?		
Amount .....	\$ _____._____/00	<input type="radio"/> None
6. Other investment income? ( <i>e.g., net rents</i> )		
Amount .....	\$ _____._____/00	<input type="radio"/> None
7. Other income? ( <i>e.g., alimony</i> )		
Amount .....	\$ _____._____/00	<input type="radio"/> None
(e) During 1970 what was your total income? ( $a+b+c+d$ )		
Amount .....	\$ _____._____/00	<input type="radio"/> None

<b>40. REVENU DE 1970</b>	(Montant en dollars seulement)	
a) Quel a été, en 1970, le montant total de votre salaire ou traitement, de vos commissions, gratifications, pourboires, etc. ( <i>avant les déductions</i> )?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
b) Quel a été, en 1970, votre revenu net provenant d'un travail à votre compte, de l'exploitation d'une entreprise non agricole ou de l'exercice d'une profession? <i>Indiquez le revenu total moins les frais d'exploitation. En cas de perte, donnez le montant et écrivez "Perte".</i>		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
c) Quel a été, en 1970, votre revenu net provenant d'une exploitation agricole à votre compte ou en association? <i>Indiquez le revenu total moins les frais d'exploitation. En cas de perte, donnez le montant et écrivez "Perte".</i>		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
d) Quel a été, en 1970, votre revenu provenant des sources suivantes:		
1. Allocations familiales et allocations scolaires?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
2. Pensions de vieillesse de l'État, du Régime de pensions du Canada et du Régime des rentes du Québec?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
3. Autres sources publiques ( <i>par ex., prestations d'assurance-chômage, pensions aux anciens combattants, bien-être social</i> )?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
4. Pensions de retraite relatives à un emploi antérieur?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
5. Intérêts d'obligations et de dépôts et dividendes?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
6. Autre revenu de placements ( <i>par ex., loyers nets</i> )?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
7. Autre revenu ( <i>par ex., pension alimentaire</i> )?		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
e) Quel a été votre revenu total en 1970? ( $a+b+c+d$ )		
Montant .....	\$ _____._____/00	<input type="radio"/> Aucun
