## CENSUS-FARMS BY SIZE; AREA AND USE OF FARM LAND, PROVINCES AND CENSUS DIVISIONS, 1976

This report presents a classification by size and distributions by different uses of agricultural land of the "census-farms" reported in the 1976 Census of Agriculture. The census was taken as of June 1, 1976.

**Census-farm** — This term is defined in the 1976 Census as a farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the year 1975 of \$1,200 or more.

This definition differs from that used in previous Censuses of Agriculture. The figures relating to previous censuses in this report were derived using the 1976 census-farm definition.

In the appendix of this report, there is included a table which presents figures to help users evaluate the effect of the change in the 1976 census-farm definition. Additional figures for individual provinces are available on request from the Census of Agriculture Division of Statistics Canada.

### Improved Land

This is the total of the area under crops, improved pasture, summer fallow and other improved land.

### Area Under Crops

Included in this figure is the total area of field crops, fruits, vegetables, nursery and greenhouse products.

### Improved Pasture

All land which was used for pasture and grazing and which had some improvements made to it in recent years was included in this item. The more common types of improvements that had been made were seeding and/or fertilizing, weeds and/or brush cleared or controlled, an effective drainage system established and the use of an irrigation system. Natural prairie or pasture land and hay land that was pastured after the hay was cut were not reported as improved pasture.

### Summer Fallow

Land from which no crop was to be harvested during 1976 but which was cultivated or worked during the year for weed control and/or moisture conservation

## FERMES DE RECENSEMENT SELON LA TAILLE; LA SUPERFICIE ET L'UTILISATION DE LA TERRE AGRICOLE, PROVINCES ET DIVISIONS DE RECENSEMENT, 1976

Ce bulletin donne le classement selon la taille et la répartition selon l'utilisation de la terre agricole des "fermes de recensement" déclarées au recensement de l'agriculture, le 1<sup>er</sup> juin 1976.

**Ferme de recensement** — Ce terme est défini au recensement de l'agriculture de 1976 comme étant une ferme, un ranch ou toute autre exploitation agricole d'une acre ou plus dont les ventes de produits agricoles en 1975 se sont élevées à \$1,200 ou plus.

Cette définition diffère de celle employée aux recensements antérieurs de l'agriculture. Les chiffres relatifs aux recensements antérieurs dans ce bulletin furent calculés en se servant de la définition d'une ferme de recensement en 1976.

Dans l'appendice de ce bulletin se trouve un tableau dans lequel sont présentés des chiffres pour aider l'utilisateur à évaluer l'effet du changement dans la définition d'une ferme de recensement en 1976. Des chiffres additionnels pour chaque province sont disponibles en s'adressant à la Division du recensement de l'agriculture de Statistique Canada.

### Terre améliorée

Superficie totale des terres mises en culture, des pâtures améliorées, des jachères et autres terres améliorées.

### Superficie en culture

Superficie totale des grandes cultures, des cultures de fruits, de légumes, des produits de serre et de pépinière.

### Pâturage amélioré

Toute terre utilisée comme pâturage et pacage et où des travaux d'amélioration ont été faits durant les dernières années. Les genres de travaux les plus répandus sont l'ensemencement et (ou) la fertilisation, la destruction et (ou) le contrôle des mauvaises herbes et (ou) des broussailles, l'établissement d'un système efficace d'écoulement et l'utilisation d'un système d'irrigation. Les prairies naturelles ou pâtures et les terres à foin qui avaient servi de pâturage après la fenaison n'étaient pas déclarés comme pâturage amélioré.

### Jachères

Toute terre qui n'avait pas servi aux cultures en 1976 mais qui était labourée durant l'année pour enrayer les mauvaises herbes et (ou) conserver l'humidité était déclarée

was reported as summer fallow. Areas which were sown to a crop with the intention of ploughing under as green manure were also reported as summer fallow. Land ploughed or cultivated after a crop (such as hay or fall rye) had been harvested was enumerated as crop land.

#### Other Improved Land

This item includes the area of barnyards, home gardens, lanes and roads on "census-farms". It also includes agricultural land that had been cultivated at one time but which was not being pastured or summer-fallow. Areas of new breaking that had not yet been cropped were also reported as "other improved land".

#### Woodland

Woodlots on "census-farms", private land leased from others for woodcutting, sugar bush and cut-over land with seedlings or trees which have or will have value as timber, fuelwood or Christmas trees, were included as woodland. The area of trees planted for windbreaks was also included. Large timber tracts run as a business separate from the agricultural operations and which were leased or under permit solely for cutting of forest products were not included.

#### Other Unimproved Land

Areas of natural pasture or hay land that had not been cultivated, brush pasture, grazing or wasteland, sloughs, marsh and rocky land, etc., were all included in this item.

#### Conversion of "Imperial" to "Metric"

This report presents area data in metric (hectares) as well as imperial (acres) units. This conversion from acres to hectares was made by Statistics Canada using the factor 0.404 685 6 hectare equals one acre. Some of the metric figures may not add because of rounding.

#### Conversion of "Arpents" to "Acres"

In some sections of the province of Quebec, the land measure is the "arpent" and respondents reported area data in this unit. The conversion to acres was made by Statistics Canada using the factor 1,000 arpents equal 845 acres.

#### SYMBOLS

- n/a
- less than one unit
- .. not available

comme jachère. Les superficies ensemencées d'une certaine culture et retournées ensuite comme engrais vert étaient aussi déclarées comme jachères. La terre labourée après une récolte (foin ou seigle d'automne) était classée comme terre en culture.

#### Autres terres améliorées

Superficie des basses-cours, des jardins potagers, des routes et des sentiers des "fermes de recensement" ainsi que la terre qui a été cultivée un certain temps, mais qui n'a pas servi de pâturage ni de jachère. La superficie des nouveaux labours non encore ensemencés était aussi déclarée comme "autres terres améliorées".

#### Terres à bois et boisés de ferme

Les boisés dans les "fermes de recensement", les terres privées louées d'autrui pour la coupe du bois, des sucreries et des déboisés qui ont ou auront de la valeur comme bois d'œuvre, de chauffage ou arbres de Noël. La superficie des arbres plantés comme brise-vent était également incluse. N'étaient pas compris les grands lots boisés exploités sur un pied commercial indépendamment des exploitations agricoles et à l'égard desquels on obtenait un bail ou un permis exclusivement en vue de la coupe de produits forestiers.

#### Autres terres non améliorées

Superficie des pâturages ou terres à foin naturels, des broussailles, des terres incultes ou à pacage, des marais, marécages et terrains rocheux, etc.

#### Conversion d'"impérial" à "métrique"

Ce bulletin présente les données de superficie en unités métriques (hectares) ainsi qu'en unités impériales (acres). La conversion d'acres en hectares a été faite à Statistique Canada en employant le facteur 0.404 685 6 hectare égale une acre. Certains chiffres métriques ayant été arrondis, leur somme peut ne pas additionner aux totaux indiqués.

#### Conversion des "arpents" en "acres"

Dans certaines régions du Québec, la terre se mesure en "arpents" et les répondants ont inscrit la superficie suivant cette unité. La conversion en acres a été faite à Statistique Canada à raison de 1,000 arpents pour 845 acres.

#### SIGNES CONVENTIONNELS

- néant
- moins d'une unité
