# BULLETIN VII. FIFTH ETENSUS OFACANAMA AGRICULTURE OF ONTARIO FOR THE EXEAR 1910 AS ENUMER-  

Pubushed by Authority of the Honourable George E. Foster, Minister of Trade and Commerce.<br>Archibald Blee, Chief Opficer of the Census and Statistics Office, Ottawa. June 24, 1913.

## ONTARIO.

Canada was the early name of the provinces of Quebec and Ontario. In 1791 the territory comprised under this name was divided into the provinces of Upper and Lower Canada, each with a separate legislature and government. In 1867 Upper Canada became a province of the Dominion under the name of Ontario.

The first settlers of the province were largely refugees from the United States; who, in 1784 , to the number of 10,000 , braved the rigours of the unbroken forest rather than forego their allegiance to the motherland. No census of the province was taken until 1824, when the population was 150,066 . An estimate by Bouchette gave the population in 1806 as 70,718 , and in 1811 the population was 77,000 , thè latter figure being calculated from the assessment rolls furnished to the provincial $\backslash$ legislature.

The population in 1831 was 236,702 ; in 1841, 455,688; in 1851, 952,004 ; in 1861, $1,396,091$; in 1871 ; $1,620,851$; in 1881, $1,926,922$; in $1891,2,114,321$; in 1901, 2,182,947; and in the last census 2,523,274.

The census of lands and cattle in the early settlement of Ontario is given in the following table, beginning with 1831.

EARLY RECORDS OF THE AGRICULTURE OF ONTARIO.*

| Years. | Acres of Land. |  | Iorses and Catile. |  |  |  | Grist Mrls. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

* Taken from Volume IV Census 1871.

The rural population of Ontario numbered 1,295,323 in 1891, in 1901 the number was $1,246,969$, and in 1911 it had fallen to $1,194,785$.

At the date of the census the area of the province was $166,951,636$ acres; since then the area has been increased by the Extensions of Boundaries Act, 1912, by $93,696,000$ acres, or 146,400 square miles, making the present area of the province $260,647,636$ acres or 407,262 square miles, which is over three times the area of the United Kingdom and over one and three quarter times greater than the area of either France or the German Empire.

The area of occupied land in 1911'was 21,933,700 acres as against 21,349, 524 acres in 1901, and of $21,091,698$ acres in 1891, being an increase of 2.73 per cent in the last decade, as against 1.22 per cent in the previous one. The land area of the province, exclusive of the new addition which is called the District of Patricia, is $141,125,330$ acres. Of this only 15.54 per cent was occupied for agricultural purposes.

The number of farm holdings in 1911 was 223,260 as against 224,127 in 1901 and 285,608 in 1891. This decrease in the last decade has occurred wholly in the case of the smaller holdings, the number of occupiers of less than one acre having decreased by 5,659 and those of from one to five acres by 225 . These small holdings being usually contiguous to cities and towns, the natural tendency is to convert them into building lots to provide for the rapid development of urban centres and thus remove them from the number of producing agricultural areas.

It is also to be noted that while the number of small holdings have decreased in the decade, yet the number of holdings of the larger dimensions are on the increase, there being an increase, of 1,140 in holdings of from 5 to 10 acres, of 470 in holdings of 11 to 50 acres, of 1,007 in holdings of 51 to 100 acres, of 1,810 in holdings of 101 to 200 acres and of 434 in holdings of over 200 acres. The average size per holding-in 1911 was $98 \cdot 25$ acres as against $95 \cdot 25$ acres in 1901.

The area of improved lands increased from 13,266,335 acres in 1901 to 13,460353 acres in 1911, being an increase of less than $11 / 2$ per cent in the decade. This small showing is no doubt more apparent than real, owing to the stricter interpretation of the term "improved land" in the last census.- "Improyed land" for the census of 1911, according to the Manual of Instruction' to enumerators, was defined as "land which-has been brought under culitivation, and has been cropped and is fitted for producing crops." In previous censuses no clear definition was given of the term "improved land". The result was that under this heading was included non-tillable areas used as pasture. In this census the areas of arable lands onlv.were enumerated under this heading. Therefore the areas of improved land in mis census are not strictly comparable with those of the previous ones.

Land in field crops increased from $9,212,478$ acreas in 1901 to $9,691,116$ acres in 1911, being an increase of 478,638 acres or $5 \cdot 19$ per cent in the ten years; the land in orchard and nursery increased from 267,478 acres in 1901 to 268,000 in 1911; the land in vegetables rind small fruits was 70,437 acres in 1911 as against 65,303 acres in 1901. Land in vineyards increased by 1,081 acres in the decade. The acreage under small fruits is placed in this census at 10,883 acres, in 1901 the area was included with vegetables.

Tables III. and IV. give the area and production of field crops by census or electoral districts for the hairvest year 1910 and by totals for the province for 1910 and 1900 , and table IX. gives the areas of field crops by totals for 1911, 1910 and 1900 . The land under spring wheat decreased from 1900 to 1910 by 262,038 acres or more than 70 per cent, and that under fall wheat by 355,240 acres or 32 per cent. There were decreases in the areas and total production of all cereals excepting oats, buckwheat, mixed grains and flax, the greatest falling off having occurred in corn for husking, wheat, peas and barley. A reference to Table IX. will show that there has been a remarkable increase in the areas devoted to the various field crops, except for oats, for the year 1911 over 1910.

The increase in feed grains is accompanied by increases in the areas of - hay and other forage crops in 1910, as compared with 1900 , there being an increase in acreage of hay of 609,838 acres and of $1,565,991$ tons and of forage corn of 127,719 acres and $1,357,530$ tons. Alfalfa was given a place in this census with 45,625 acres and 95,138 tons, being a yield of better than two tons per acre. The land under tobacco has increased from 3,144 acres with a yield of 3,503,739 lb. in 1900 to 7,007 acres with a yield of $7,490,211 \mathrm{lb}$. in 1910 . The production
of grass and clover seeds has more than doubled from 1900 to 1910. The statistics of horticulture as presented in table V. show a falling off in the number of fruit trees and the production of fruit from 1900 to 1910, the greatest decrease having occurred in apple trees and apples.

Tables X. and XI. give comparative statistics of area and production together with average yield per acre of the different field crops in 1910 and 1900, and the average value of the product per acre of each crop in 1910. Of cereals the largest gross monetary return per acre was given by beans with $\$ 26 \cdot 29$, followed by fall wheat with $\$ 20 \cdot 12$ and corn with $\$ 19 \cdot 11$ per acre, and the smallest return per acre was got from rye, oats, peas and barley in the order named. The return from hoed crops is very much higher than from the grain crops, tobacco giving a gross return of $\$ 170 \cdot 60$ per acre, while the returns from potatoes and roots run from $\$ 43$ to $\$ 66$ per acre. The average value per farm holding of field crops, vegetables and fruits was $\$ 693 \cdot 30$ in 1910 as against $\$ 490 \cdot 56$ in 1900, being an increase of 41 per cent in the decade.

The statistics of live stock given in table VI. show that horses increased by 90,447 in the ten years, swine by 301,469 turkeys by 27,275 , geese by 129,880 , ducks by 111,466 and hens and chickens by $3,584,185$. The number of milch cows was $1,065,763$ in 1901 and $1,032,979$ in 1911, a decrease of 32,784 from 1901 to 1911; other horned cattle increased by 49,651 in the ten years. There seems to be the same tendency to a decrease in the production of sheep in Ontario as in Quebec and the Maritime Provinces, the number having fallen from 1,046, 456 in 1901 to 743,483 in 1911. That the quality of live stock is being steadily improved is evidenced by the increase in the numbers of all pure-bred animals, the greatest improvement being made in cattle. The production of wool has dropped from $5,017,585 \mathrm{lb}$. in 1901 to $2,758,699 \mathrm{lb}$. in 1911.

The average value of horses in 1911 was $\$ 138 \cdot 64$; of milch cows $\$ 47 \cdot 15$; of other horned cattle $\$ 22 \cdot 56$; of sheep $\$ 6 \cdot 03$; and of swine $\$ 7 \cdot 28$; in 1901 the average value of horses was $\$ 76 \cdot 17$; of milch cows $\$ 30 \cdot 53$; of other horned cattle $\$ 17 \cdot 33$; of sheep $\$ 5 \cdot 27$ and of swine $\$ 6 \cdot 77$ The average of all live stock per farm holding in 1911 was $\$ 951.69$ as against $\$ 571.99$ in 1901 , being an increase of 66 per cent in the decade

In comparing the values of live stock for the census years 1910 and 1911 it should not be forgotten that a greater number of young animals are included in the returns of the recent census than there were in the previous one owing to the census of 1911 being taken as for June 1st while the census of 1901 was taken as for March 31st.

The value of live stock sold in 1910 is given as $\$ 77,550,584$ as against $\$ 35,385$, 376 in 1900, being an increase of $\$ 42,165,208$ or 119 per cent in ten years. The value of animals slaughtered on the farm shows a decrease of $\$ 219,585$ or $21 / 4$ per cent; dairy products show an increase of more than twenty-five million dollars in the decade, and eggs of nearly five million dollars.

The number of weeks of hired labour on the farm in 1910 was $1,689,123$ and the value $\$ 12,003,095$, being an average wage per week of $\$ 7 \cdot 16$ as against $2,359,632$ weeks in 1900 , with a value of $\$ 12,152,915$ with an average per week of $\$ 5 \cdot 15$, being an increase in the cost per week of farm labour from 1900 to 1910 of 39 per cent.

The working capital (including under this heading the value of lands owned, buildings, farm implements and live stock on hand) of the farmers of Ontario in 1911 totalled $\$ 1,216,864,992$, being an average per holding of $\$ 5,450$, as compared with $\$ 929,858,777$ and an average of $\$ 4,148$ in 1901 . The gross earnings from this investment as represented by field crops, fruits, live stock sold, dairy products, animals slaughtered on the farm, wool, eggs, honey and wax, were $\$ 314,112,073$. From this must be deducted the cost of seeds, of feed for animals and of labour before the net earnings can be even approximately deterdetermined.
