## Census education information: an inventory

by George Mori, Marc Lalonde, Michael Crew

Data in Many Forms...
Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information
Inquiries about this publication and related statistics or services should be directed to:

Housing, Family and Social Statistics Division,

Statistics Canada, Ottawa, K1A $0 T 6$ (Telephone: 991-2546) or to the Statistics Canada reference centre in:

| St. John's | $(772-4073)$ | Sturgeon Falls (753-4888) |  |
| :--- | :--- | :--- | :--- |
| Halifax | $(426-5331)$ | Winnipeg | $(949-4020)$ |
| Montréal | $(283-5725)$ | Regina | $(359-5405)$ |
| Ottawa | $(990-8116)$ | Edmonton | $(420-3027)$ |
| Toronto | $(973-6586)$ | Vancouver | $(666-3691)$ |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centros.

## PREFACE

This bulletin brings together various items of information that will be useful to researchers and analysts of Census of Canada education data. It does not contain any data, but rather auxiliary information needed to find, understand, interpret and analyze the available published census data on education.

Topics covered in this inventory include: a brief overview of sources of Statistics Canada education information other than the census; products and services of the 1981 Census of Canada; the census education questions, 1971, 1976, 1981, 1986; other historical aspects of census education information; selected education indicators, and an inventory of all published 1981 Census education data (table titles, catalogue numbers, and a description of the legends used).

## ACKNOWLEDGEMENTS

The authors would like to express their appreciation for the assistance of S. D'Antoni and W, Clark of the Education, Culture and Tourism Division, Statistics Canada.

Thanks are also extended to the support staff of the Housing, Family and Social Statistics Division, in particular to L. Lamadeleine, G. Gaulin, J. Lepage and B. Burke.

The authors are also most grateful to the Editing and Proofreading Services and the Text Production Services, whose work greatly facilitated progress in the production of this paper.

Users interested in exploiting census.education information to its fullest degree, should use these publications as a base.

## OTHER STATISTICS CANADA EDUCATION INFORMATION

In order to put the utilization of census education information in the context of other available statistical information on education, the following Figure 1 provides a brief summary of the three main sources of Statistics Canada education information: the Education, Culture and Tourism Division (ECTD), the Labour Force Survey (LFS) and the Census of Population. As we can see, there are some fairly important differences and distinctions to be drawn between these three sources. First, in terms of the sphere of observation and the type of data, the ECTD data relate to educational institutions and the students enrolled in them in a given school year or term. The LFS data provide a $1 \%$ sample estimate of the flow (or attendance) and the stock (or inventory) of educational attainment. In terms of these two items, the census is not too different from the LFS. However, in terms of sampling proportion (which is related to the reliability of the data), we see that the ECTD data are collected on a $100 \%$ basis (for the most part), the LFS on a $1 \%$ basis, and the census on a $20 \%$ basis. In terms of actual detail related to education programs and types of graduates, the ECTD data are highly specific and detailed. The LFS has a general measure of educational stock and flow, and the census carries a slightly more detailed measure of schooling than the LFS.

Now, when we turn to other details available from these three sources; we see that the census is capable of providing a higher degree of geographic detail than either ECTD or LFS data, and also a higher degree of detail related to other demographic, social and economic variables. Thus, it is possible to cross-classify the census education data with a wide range of variables, and furthermore this can be carried out for a wide range of geographic aggregations.

Finally, in terms of the last point of comparison, we see that the LFS is the most timely of the three sources, coming up with monthly estimates and annual averages. The ECTD data are reported annually and occasionally. The census education data, however, are produced only once in every five years.

FIGURE 1. Sources of Statistics Canada Education Information: An Overview

These are the advantages and the disadvantages of the census education data vis-à-vis the other two sources. The census data have strengths in cectain areas of application - such as detailed cross-classification analysis at subprovincial geographic levels - while the ECTD and LFS information also have their distinct advantages and strengths, such as detailed educational program data from ECII) and timely monthly estimates from the LFS.

## PRODUCIS AND SERVICES OF THE 1981 CENSUS OF CANADA

Users should refer to the booklet with the above title for a comprehensive overview and listing of almost all of the available products and services of the 1981 Census of Canada.

A brief review of the contents of this booklet will reveal that the education data appear in a multitude of forms and cross-classifications. Education, in fact, is probably one of the most cross-classified variables in the census. Some of the more prominent areas of cross-classification would be:

- Occupation and schooling
- Labour force activity and schooling
- Income and schooling
- Mobility and schooling
- Cultural factors (such as language, ethnicity, religion and place of birth) and schooling
- Demographic and family factors and schooling

In addition to the above print products, education cross-tabulations also appear in two different media:

User Sunmary Tapes;
Microfiche.
The User Summary Tapes or UST for short refer to tabular cross-classification tapes containing data in machine-readable form. The advertising pamphlet "Census User Summary Tapes" gives a brief overview of the contents of the UST. The main advantage of having a set of UST files is that they can be used to further manipulate or cross-tabulate the data. It should be noted, though, that the UST are not an individual data base file, but can only deal with data in an aggregated or matrix form. One of its main uses is to compute percentages, rates, or ratios or other analytical measures that are useful in social science and policy research.

The microfiche series are a virtual replica of the UST only in microform; the microfiche is similar to hard-copy or ink-print in that the information is not machine-readable. It is, however, a far more compact and much less expensive medium of information storage. The microfiche replicate all of the above ink-print products and also include all of the UST tables. The cost of a complete set of microfiche is $\$ 600$ or only $35 \%$ of the cost of the print products.

The only drawback, of course, is that one must have access to a microfiche reader and preferably a printer as well which sell in the $\$ 1,500.00-\$ 3,000.00$ range for current models (1986).

Another medium in which census data in general, and education data in particular, are disseminated is the Public Use Sample Tapes (or PUST for short). The PUST are a set of two micro-data files, one for individuals and a second for families and households. The PUST micro-data files are subsamples systematically drawn from the larger 2 A and 28 data bases. The individual file represents a $2 \%$ sample (or $10 \%$ of the 2 B sample) and the family/household file a $1 \%$ sample. The cost for the individual file is currently set at $\$ 300.00$ and the family/household file at $\$ 600.00$.

There is one final medium of disseminating non-print census products and this is the "custom tabulations" which are made-to-order tabulations (or other data outputs) that are produced for users, at cost. If you turn to page 117 in Products and Services of the 1981 Census of Canada, you will note some of the conditions under which custom tabulations are produced.

## THE CENSUS EDUCATION QUESTIONS

Figures 2 to 7 contain an overview of all of the census education questions asked in the past four censuses.

FIGURE 2. Census Questions on Elementary-secondary Education

1971

|  |  | - |

```

Years of other nonuniversity (community college, institutes of technology, CEGEPs (general and professional), private trade schools or private business colleges, diploma schools of nursing, etc.): (Less than 1 year (of completed courses); 1;
2; 3; 4 years or more)

FIGURE 8. Educational Attaimment and School At tendance Information in the Census of Canada, 1827-
1986 - Concluded

The first thing to note is that the education questions immediately follow the age filter question which means that only persons 15 years of age and over, as of the Census day, are to answer the education questions, as well as all of the remaining questions dealing with labour force activity, occupation, industry, place of work, mobility, nuptiality-fertility and income.

From the basic set of education questions are derived a number of representations or combinations.
In general there are three main breaks or categories of education data - elementary-secondary only, other non-university and university.

The elementary-secondary only category includes persons who reported no other non-university or university education. The trades certificate subcategory included here indicates persons who probably obtained a certificate (or diploma) from a non-educational setting such as through apprenticeship or journeyman's training where licences or certificates are issued by provincial labour departments or by trade unions.

The other non-university education area generally covers the traditional post-secondary nonuniversity educational institutions such as community colleges, CEGEPs and institutes of technology, in addition to training received at vocational training centres, manpower training programs, or private trade schools.

The university sector is precisely defined and presents very few problems of interpretation.

## historical aspects of census education data

Figures 2 to 7 show the evolution of the education questions over the 1971-1986 period. For a longer range view of census education information, Figure $B$ shows the kinds of information on schooling and school attendance which have been published since 1827.

In the first decennial census, that of 1870-1871, the first attempt to measure literacy was made in Canada. The census question was whether persons 20 years and over were able to read or to write. In the 1890-1891 Census the question became slightly more detailed and was extended to the 10-19-year old population. From 1901 to 1931, the population covered included all persons five years and over and the "literacy" question remained the same over the 60 -year period between 1871 and 1931. In 1941, the literacy question was eliminated and replaced by a question on the total number of years of schooling obtained. In actuality, this question was first asked in the 1936 quinquennial Census, but only for the three Prairie provinces of Alberta, Saskatchewan and Manitoba. In 1961, the schooling question assumed a new form. First, it referred to the highest grade or year of schooling ever attended, and for the first time the census explicitly identified university schooling, in terms of years attended and whether a degree was obtained. In 1971, several questions were added including a separate question on university and other schooling as well as questions on the location where the highest grade or year of elementary or secondary was attended, type of university certificate or degree, and completed full-time vocational courses.

In 1976, the university and non-university sectors were accorded separate questions and the degree, certificate or diploma question was expanded. The 1981 and 1986 questions more or less replicated the 1976 set (with minor variations).

In 1986, the school attendance question was not asked. However, a new question was added which asked persons to write in the major field of study of their highest degree certificate or diploma obtained (excluding secondary or high school graduation certificates).

The historical bulletins Catalogue 13-579 and 13-579S are an example of how effective comparisons can be carried out using selected 1971, 1976 and 1981 census data.

Some other uses and applications of census education data are described in the following section on Selected Educational Indicators.

## SELECTED EDUCATIONAL INDICATORS

The following is a list of selected educational indicators that are derivable from the 1971, 1976, 1981, 1986 and future census data bases. The primary feature of these indicators is that the census information on educational characteristics is reduced, summarized or otherwise transformed such that the salient or major elements are highlighted. The use of a particular indicator will depend to a
large degree upon the population or subpopulation in question. For example, for income groups an appropriate educational indicator might be median years of schooling, whereas for selected occupational groups, an appropriate indicator might be degrees per 100 population - similarly, for a given age group, say 15-24, an indicator for full-time school attendance would be appropriate, whereas for the $25-44$ age group an indicator for part-time school attendance might be more relevant. The important thing to bear in mind is the relationship between the educational indicator and the population subgroup (be it income groups, family size, family composition, age-sex, occupation, labour force, industry, mobility groups, fertility, marital status, nuptiality, language, religion, immigration, ethnic or geography).

In general, there are two main classes of educational indicators: measures of central tendency such as the median and the mean (and to a lesser extent, the mode); and rates or ratios (also denoted as indexes) in which two (or more) sets of related data are expressed as coefficients of each other. The following, then, is a selective, but not exhaustive, list of educational indicators derivable from the census data base.

## I. Measures of Central Tendency

## a) The Mean

The mean represents the weighted arithmetic average of the number of years of schooling completed by a specified population.(1) Some slight complications in the calculation of the mean occurs for the years of university and other non-university which includes a category for "less than 1 year of completed courses", and also for all three educational attainment variables (university, other non-university and elementary-secondary) in terms of the open-ended upper bound which is denoted as so many years or more. The recommended procedure is to ascribe a value of $1 / 2$ to the "less than 1 year" class, and a value of $11 / 2$ to the upper bound of elementary-secondary, a value of 2 to the upper 6-year bound of university and a value of 1 to the upper 4 -year bound of other non-university.
b) The Median

The median is defined as that value of a variable distribution that divides the frequency into two equal halves, one-half falling below the value, and one-half exceeding the value.(2) The same calculating provisions used for the mean also apply to the median: that is the value of $1 / 2$ is used if the medium class occurs in the "less than 1 year" category; also in the very rare occurrence of the median falling in the upper bound, the same conventions as used for the mean above apply for the median. The assumption that all cases in the median class are evenly distributed is made for the convenience of computation. However, in reality the distributions are likely to be skewed or normal, rather than linear. Since it is difficult to determine the actual distribution, in any case, the simplifying assumption of linearity is justified.

The median and the mean will be equal in the distribution of cases and perfectly normal; however, the median is less sensitive to skewed distributions than is the mean. The median is also simpler to calculate using grouped data, and is probably the most widely utilized educational indicator.

The interpretation of a fractional median value, such as 9.5 years of schooling, assuming linearity, is that one half of the population has less than 9.5 years and the other half has more than 9.5 years of schooling.
(1) The arithmetic mean of a set of values $x_{1}, x_{2}, x_{3}, \ldots x_{n}$ is their sum divided by their number, on $\bar{x}=\frac{1}{n} \sum_{j=1}^{n} x_{j}$
(2) For a total frequency of $2 N+1$ cases the median is the value of the $(N+1)$ th case; for $2 N$ cases, the median is the average of the $N$ th and the $(N+1)$ th case.
c) The Mode and Mid-range

The mode is the value of the variable that is represented by the greatest number of the cases in the population, or the most frequently occurring value. There may be more than one mode for any given distribution. The mid-range is the value defined for a set of values $X_{1}, X_{2}, \ldots X_{m}$ as $1 / 2\left(X_{m}+X_{1}\right)$, or the average of the highest and the lowest values.

Both the mode and the mid-range can be determined directly from the distributions indicated below for the mean and median. They are mainly applicable for populations of small sizes, where variation is minimal.

The following represent five educational indicators that can be depicted in terms of the mean, median, mode or mid-range. The subsequent table summarizes proposed acronyms which could be used in a retrieval software program.

Years of elementary-secondary schooling attended (based on HGRAD);
years of highest level of schooling attended or completed (based on level of schooling - 32); years of total number of years of schooling (based on the sum of HGRAD + PS_OT and PS_UV); years of other non-university completed (based on PS_OT); years of university completed (based on PS_UV).

Acronyms for Educational Indicators

| Indicators | Mean | Median | Mode | Mid-range |
| :---: | :---: | :---: | :---: | :---: |
| Variables | MEAN | MDN | MOD | MID |
| $\begin{aligned} & \text { HGRAD } \\ & \text { HG } \end{aligned}$ | MEANHG | MDNHG | MODHG | MIDHG |
| Level of Schooling - 32 HL | MEANHL | MDNHL | MODHL | MIDHL |
| $\begin{aligned} & \text { HGRAD + } \\ & \text { PSUV + PS }{ }^{-10 T} \\ & \text { TOT } \end{aligned}$ | MEANTOT | MDNTOT | MODTOT | MIDTOT |
| $\begin{aligned} & \text { PS } 0 \mathrm{OT} \\ & 0 \overline{7} \end{aligned}$ | MEANOT | MDNOT | MODOT | MIDOT |
| $\underset{U \bar{V}}{P S}$ | MEANUV | MDNUV | MODUV | MIDUV |

## II. Rates, Ratios or Indices(3)

a) The Specific Education Index (SEI). This index is defined as the ratio of the number of persons ever attending university to every 100 persons who did not attend school beyond Grade 8;

SEI $=\frac{\sum P S \text { _UV }>0}{\Sigma H G R A D<9^{*}} \times 100$

```
* Excludes any person who had some university; that is persons with
\(P S U V>0\) and \(H G R A D<9\) are included in the numerator.
```

This indicator applies primarily to geographic units such as CMAs or CDs; the range is normally 5-70. The higher the index, the greater is the concentration of persons with at least some university education. In 1971, the three highest SEIs for CMAs were Calgary, Dttawa-Hull and Victoria (59, 57 and 55 respectively), while the three lowest CMAs were Sudbury, Thunder Bay and Chicoutimi (19, 19 and 18 respectively).

This "education index" can be generalized to any set of appropriate ranges for the numerator and the denominator. The general education index (GEI) can be expressed as:

GEI $=\frac{c_{a}^{g+n}}{c_{a}^{b+z}} K$
where:
$c_{a}^{g+n}=$ Persons at age a who completed grade or year $g$, or higher ( $n$ ).
$c_{a}^{b}+z=$ Persons at age a who completed grade or year $b$, or less ( $z$ ).
$K=$ Constant $(100,1,000$ or 100,000$)$.
b) Attendance Rates (Full-time School Attendance)
(i) Crude Attendance Rate (FTCAR)

FTCAR $=\frac{e}{p} K$
$\mathrm{e}=$ Number attending school full-time at all levels in 15-24 age group.
$p=$ Total population 15-24 in the region to which data applies.
$K=$ Constant $(100,1,000$ or 100,000$)$.
(3) Based on The Methods and Materials of Demography, Volume I, by Henry S. Shryock, Jacob S. Siegel and Associates, U.S. Bureau of the Census), U.S. Government Printing Office, Third Printing (1975), Chapter II: Educational Characteristics, and Education and Population, Edited by Helmut V. Muhsam, International Union for the Scientific Study of Population, 1975, Appendix: "The Methodology of Educational Demography" by Charles B. Nam.
(ii) Age-specific Attendance Rate** (FTASP)

FTASP $=\frac{e_{a}}{P_{a}} k$
$e_{a}=$ Number attending school full-time in specific age group a.
$P_{a}=$ Population in specific age group a.
$K=$ Constant $(100,100$ or 100,000$)$.
** This rate can also be expressed as an age-sex specific rate.
(iii) Age standardized Attendance Rate (FTAST)

$e_{a}=$ Number attending school full-time in age group a.
$P_{a}=$ Population in age group a.
$p_{s a}=$ Standard population on age group a.
$p_{s}=$ Total standard population.
$K=$ Constant (100, 1,000 1,000,000).
c) Attendance Rates (Part-time School Attendance)

The above three full-time rates can be replicated for part-time attendance simply by substitution. Thus,

> PICAR

PTASP
PTAST
are the part-time equivalents of the above.
Both the full-time and part-time figures are retrieved from the variable ATENDR.
d) Grade/Year Attainment Rates

> (i) Specific Grade/Year Attainment Rate (SGYAR)
> SGYAR $=\frac{C^{g}}{P_{a}} K$
> $C^{g}=$ Number of persons at age a who have completed exact grade or year g based on $a \quad$ highest level of schooling (32) or HGRAD.
> $P_{a}=$ Population at age a.
> $K=$ Constant $(100,1,000$ or 100,000$)$.

This indicator is a measure of the proportion of the population which has attained a specific number of grades or years of schooling. This rate is more meaningfully applied to the population not attending school full-time, as it is indicative of completed or terminal schooling.
(ii) Cumulative Grade/Year Attainment Rate (CGYAR)

$$
\begin{aligned}
\text { CGYAR } & =\frac{C^{g+n}}{P_{a}} K \\
C_{a}^{g}+n & =\begin{array}{c}
\text { Number of persons at age a who have completed grade or year or higher } \\
(n), \text { based on highest level of schooling }(32) \text { or HGRAD. }
\end{array} \\
P_{a} & =\text { Population at age a. } \\
K & =\text { Constant }(100,1000 \text { or } 100,000) .
\end{aligned}
$$

This indicator is a more general measure of the educational stock of a population, indicating the proportion of the population at each age a who have completed grade or year g or beyond, or who have ever completed a given grade or year.
e) Educational Qualification Attainment Rates
(i) Earned Doctorates per 100, 1,000 or 100,000 Population (EDR)
$E D R=\frac{e d}{p} K$
ed $=$ Number of earned doctorates based on DGREE.
$\mathrm{p}=$ Population.
$K=$ Constant (100, 1,000 or 100,000 ).
(ii) University Degrees per 100, 1,000 or 100,000 Population (UDR)
$U D R=\frac{u d}{p} K$
ud $=$ Number of persons with bachelor degree or higher based on DGREE (university certificate above bachelor is counted here).
$p=$ Population.
$K=$ Constant ( $100,1,000$ or 100,000 ).
(iii) Secondary Certificate or Higher per 100 , 1,000 or 100,000 Population (SC + R)

```
\(S C+R=\frac{S C}{p} K\)
\(s c=\) Number of persons with secondary certificate or higher certificate, diploma or
            degree.
    \(\mathrm{P}=\) Population.
    \(K=\) Constant \((100,1,000\) or 100,000\()\).
```

(iv) Total Medical Degrees per 100; 1,000 or 100,000 Population (MEDR)

MEDR $=\frac{\text { med }}{\mathrm{p}} \mathrm{K}$.
med $=$ Total number of persons with medical degree based on MED.
$p=$ Population.
$K=$ Constant (100, 1,000 or 100,000$)$.

(1) Includes "No schooling or kindergarten only".
(2) Refers to courses completed at postsecondary non-university institutions which normally require a secondary school graduation certificate or equivalent for entrance, as well as to other courses in related or like institutions (such as private trade schools or adult vocational centres) which may not require secondary school graduation for entrance.
(3) Includes those with both university and other non-university education, as well as those with university only.

## highest university certificate or degree (5)

1. Total
2. No university certificate or degree
3. University certificate below $\mathrm{BA}(1)$
4. Bachelor's degree(2)
5. Master's or earned doctorate
(1) The counts for this category in 1971 were in all likelihood overestimated due to the inclusion of a number of non-university certificates.
(2) The 1971 Census "bachelor degree" category includes persons who reported "first professional degree". There is possibility of an overestimate for this latter category, particularly in the province of Quebec where the term "premier diplôme permettant d'exercer une profession" may not have been correctly interpreted by a small portion of respondents.
The 1976 and 1981 Census "bachelor degree" category includes persons who reported a degree in medicine. In 1981 the medical degree category included degrees in optometry. The 1981 Census "bachelor degree" category also includes persons who reported "university certificate above the bachelor level".

8118 Occupations in labouring and other elemental work: mineral ore treating
8119 Mineral ore treating occupations, n.e.c.
Assigned(3)
Metal processing and related occupations
8130 Foremen/women: metal processing and related occupations
8131 Metal smelting, converting and refining occupations
8133 Metal heat-treating occupations
8135 Metal rolling occupations
8137 Moulding, coremaking and metal casting occupations
8141 Metal extruding and drawing occupations
8143 Plating, metal spraying and related occupations
8146 Inspecting, testing, grading and sampling occupations: metal processing
8148 Occupations in labouring and other elemental work: metal processing
8149 Metal processing and related occupations, n.e.c.
Assigned(3)
Clay; glass and stone processing, forming and related occupations
8150 Foremen/women: clay, glass and stone processing, forming and related occupations
8151 Furnace and kiln workers: clay, glass and stone
8153 Separating, grinding, crushing and mixing occupations: clay, glass and stone
8155 Forming occupations, clay, glass and stone
8156 Inspecting, testing, grading and sampling occupations: clay, glass and stone processing and forming
8158 Occupations in labouring and other elemental work: clay, glass and stone processing and forming
8159 Clay, glass and stone processing, forming and related occupations, n.e.c. Assigned(3)
Chemicals, petroleum, rubber, plastic and related materials processing occupations
8160 Foremen/women: chemicals, petroleum, rubber, plastic and related materials processing occupations
8161 Mixing and blending occupations, chemicals and related materials
8163 Filtering, straining and separating occupations, chemicals and related materials
8165 Distilling, subliming and carbonizing occupations, chemicals and related materials
8167 Roasting, cooking and drying occupations; chemicals and related materials
8171 Crushing and grinding occupations, chemicals and related materials
8173 Coating and calendering occupations, chemicals and related materials
8176 Inspecting, testing, grading and sampling occupations: chemicals petroleum, rubber, plastic and related materials processing
8178 Occupations in labouring and other elemental work: chemicals, petroleum, rubber, plastic and related materials processing
8179 Chemicals, petroleum, rubber, plastic and related materials processing occupations, n.e.c.
Assigned(3)
Food, beverage and related processing occupations
8210 Foremen/women: food, beverage and related processing occupations
8211 Flour and grain milling occupations
8213 Baking, confectionery making and related occupations
8215 Slaughtering and meat cutting, canning, curing and packing occupations
8217 Fish canning, curing and packing occupations
8221 Fruit and vegetable canning, preserving and packing occupations
8223 Milk processing and related occupations
8225 Sugar processing and related occupations
8226 Inspecting, testing, grading and sampling occupations: food, beverage and related processing
8227 Beverage processing and related occupations
8228 Occupations in labouring and other elemental work: food, beverage and related processing
8229 Food, beverage and related processing occupations, n.e.c. Assigned(3)
Wood processing occupations, except pulp and papermaking
8230 Foremen/women: wood processing occupations, except pulp and papermaking
8231 Sawmill sawyers and related occupations
8233 Plywood making and related occupations
