APPENDIX A

Questionnaire

Hello, my name is...and I'm calling from a research company hired to listento the views of Aboriginal people across Canada. We are speaking to people 18 years of age or older, who are living on reserves to get their opinions on a number of issues facing First Nations communities today. The information collected will be used for research purposes only, and no comments will be attributed to any individual. Your participation is completely voluntary, and all of your responses will be kept completely confidential.

It is really important that we talk to as many residents of reserves as possible, so can I take a few minutes of your time now?

***IF ASKED: "We are doing this work on behalf of the federal government"
        "The interview will take about 20 minutes"

APPENDIX B
Field Report

Survey Logistics and Response Rate

The fieldwork for this project involved a customized survey of 1427 respondents from across Canada. The following are technical details of the data collection.

- The sample was distributed from across Canada and came from an exhaustive database of all telephone number from a specified set of postal codes. These postal codes were identified from either Statistics Canada as "reserves" or from a listing of all band offices across the country. The sample frame of telephone numbers included approximately 120,000 numbers. Numbers for the survey were drawn randomly, within a specified (stratified) proportion by province.

- A first round of pretests were conducted with 10 respondents on August 1[st h], 2001. The pretest was conducted to ensure that the clarity and flow of the survey instrument were reasonable. It also allowed a chance to check that the CATI programming of the instrument was free of errors in logic or content, and to check the average length of the questionnaire. Pretesting indicated a number of changes which were then implemented.

- Data collection proper began on August 7th, 2001 and was complete by August 21st, 2001 .

- Ekos assembled a team of 80 fluently bilingual interviewers between our 2 call centers, to conduct the surveys. Every shift was supervised by 2 survey supervisors. Both facilities had a survey manager present on all shifts. Training included a review of the study issues, the survey questionnaire items, as well as telephone interviewing techniques and survey administration procedures.

- Daily records were kept of all calls made, whether successful (i.e., interviews completed or appointments made), or not. Supervisors were on hand at all times to monitor the progress of all work including interviewer performance, contact records and data quality. The supervisor was also available to any respondents to legitimize the survey, by providing the telephone numbers of the Project Manager at Ekos for further information if required. The survey supervisor reported to the survey manager on a daily basis.

- In calculating response rates, sample attrition considers all numbers not in service, cases of duplicate numbers, and business numbers. Screened out cases were largely individuals who were not living on reserve or who did not have status. Total eligible cases comprised all of the unused cases, all refusals, retired cases (cases called a total of 8 times without success) and cases where the only person able to respond to the survey was unavailable for the duration of the study. The response rate was 52 per cent of the functional sample contacted at the conclusion of the survey.

Exhibit 1
Call Results and Response Rates Table

Total Sample	32119
Numbers not in service	5690
Duplicates	17
Non-residential numbers	900
Numbers blocked by Phone companies	66
Total functional sample	25446
No answers	7829
Unavailable	24
Language difficulty	127
Other	80
Referred to Client	7
Total Asked	17379
Refusals	4112
Cooperative Callbacks	13267
Completes	1427
Non-status respondent	3916
Non-reserve resident	7128
Ineligible	796
Response Rate	52%

low ⌐ (handwritten, next to "Language difficulty")

APPENDIX C
Segmentation

- **Factor analysis – description of underlying dimensions**

The purpose of the factor analysis is to uncover the underlying dimensions (called factors) and limit the redundancy of the measurement variables. All scale-based variables from the survey were included in a factor analysis. During the initial factor analysis, 25 composite variables were identified for the further simplification of data, minimization of measurements and elimination of redundancy. Through additional factor analysis, a final set of six different dimensions was created:

SCALES	VARIABLES INCLUDED	Reliability Coefficient
Scale1 Assessment of the Government of Canada in general areas	How well is the government of Canada doing in the area of: Q7L Children Q7G Regional economic development Q7E Improving job skills Q7B Education Q7J Managing natural resources Q7A Unemployment Q7D Health Care Q7K Managing the economy Q7F Housing Q7E Environment Q5 How would you rate the performance of the government of Canada Q5b How would you rate the quality of services provided by the government of Canada	$\alpha=0.88$ (+0.2)
Scale2 Assessment of the Government of Canada in regard to Aboriginal issues	How well is the government of Canada doing in the area of: Q7I Supporting Aboriginal Self-government Q7H Settling Aboriginal land claims	$\alpha=0.63$
Scale5 Views on Government communications	Q17c I generally believe the information I get from the government of Canada Q17a I think that information from the government of Canada is generally easy to understand Q17b I can definitely tell if an advertisement or publication is sponsored by the Government of Canada	$\alpha=0.59$ (-.6)
Scale6 Support for Aboriginal self-government (SG)	Q21K I think that Aboriginal self-government idea is a good idea Q20F Increasing the level of self-government on reserves would improve the standard of living on reserve	$\alpha=0.64$
Scale7 Feeling about community:	Merged q21i and q21j: Q21i My community has a good future	$\alpha=0.66$

safe/ helps, run well/good future	Q21j My community is run well Merged q21e and q21f: Q21e I get the help I need from my community Q21f I feel safe in my community	
Scale8 Economic outlook	Q2 Overall, thinking about your economic future in the next 12 months, do you think it will get better, slightly better, worsen slightly, or worsen a lot? Q3 Overall, thinking about your children's economic future/quality of life, do you think it will get better, slightly better, worsen slightly, or worsen a lot?	$\alpha=0.63$

The second step involved a reliability analysis of these five factors. Alpha coefficients for all of the factors (noted in the chart) turned out to be 0.59 or higher, suggesting that the scales computed on the basis of the listed dimensions are statistically reliable.

▪ Cluster analysis – segmenting the population

The third step involved cluster analysis, the purpose of which was to identify mutually exclusive, homogenous and interpretable groups of individuals defined by their attitudes and opinions. Six dimensions were applied in the cluster analysis: *Assessment of the Government of Canada in General Performance; Assessment of the Government of Canada in Performance on Aboriginal Issues; Assessment of Communications by the Government of Canada; Support for Aboriginal Self-Government; Feeling about On-Reserve Community; and Economic Outlook. These dimensions came together to define five distinct clusters.* This five group typology is summarized in the next chart in terms of their loading on each of the six dimensions. More detailed profiling is described in the main body of the report and banner results are featured in the detailed tabular results section of these Appendices.

Summary of Segments

GROUPS	Scale1	Scale2	Scale5	Scale6	Scale7	Scale8	SES
1. Middle of the Road (24%)	$\bar{x}(+)$	$\bar{x}(+)$	$\bar{x}(+)$	$\bar{x}(+)$	$\bar{x}-$	$\bar{x}$	+
2. Super Content (23%)	++	++	++	++	++	++	--
3. Concerned-Insecure (17%)	$\bar{x}(+)$	$\bar{x}(+)$	$\bar{x}(+)$	--	--	--	--
4. Activists (22%)	--	--	-	++	++	+	++
5. Super Discontent (15%)	--	--	--	--	--	--	+

* $\bar{x}$ average; ++ much higher than $\bar{x}$; -- much lower than $\bar{x}$; + slightly higher than average; -
slightly lower than average;

how democratic would you say the system of government on reserves in Canada is? Please respond using a 7-point scale where 1 means not at all, 7 means extremely, and the mid-point 4 means somewhat. By democratic we mean open, fair, responsive and accountable.
