

## West Nile Virus and Other Mosquito-borne Disease Report

### September 9 – September 15, 2018 (Report Week 37)

#### West Nile Virus

##### Canada

###### Human

During surveillance week 37, ending on September 15, 2018, the Public Health Agency of Canada was informed of 5 additional West Nile virus (WNV) infections: 4 in Ontario and 1 in Québec. A number of other possible infections remain under investigation.

As of week 37, a total of 160 clinical cases of WNV have been reported by the following four provinces: Alberta (19), Manitoba (29), Ontario (72), and Québec (40). Of these, 67 (42%) have been classified as WNV neurological syndrome, 52 (32%) as WNV non-neurological and 41 (26%) are unspecified. Six deaths have been reported. In addition, 17 WNV asymptomatic infections have been reported: Alberta (4), Manitoba (3), Ontario (5), and Québec (5).

###### Mosquito

To date (week 37), the PHAC has been notified of 16,067 mosquito pools tested for WNV: Saskatchewan (761), Manitoba (1,924), Ontario (11,914), and Québec (1,468). Of these, a total of 553 (3.44%) have tested positive for WNV: 50 in Saskatchewan, 168 in Manitoba, 296 in Ontario, and 39 in Québec.

###### Wild Bird

To date (week 37), 86 out of 176 dead wild birds have tested positive for WNV by the [Canadian Wildlife Health Cooperative](#) (CWHC), Manitoba Agriculture and BC Ministry of Agriculture-Animal Health Centre: British Columbia (2), Saskatchewan (3), Manitoba (14), Ontario (28), and Québec (39). In addition, 12 live birds in Québec have tested positive for WNV by the University of Montréal.

###### Equine

The [Canadian Food Inspection Agency](#) (CFIA) has reported 98 horses with West Nile fever in the following six provinces: British Columbia (1), Alberta (58), Saskatchewan (29), Manitoba (6), Ontario (3), and Québec (1).

##### United States and U.S. territories

As of September 18<sup>th</sup>, 1,077 human cases of WNV have been reported to the US [Centers for Disease Control and Prevention \(CDC\)](#). Of these 608 (56%) were classified as neuroinvasive disease and 469 (44%) as non-neuroinvasive disease. Thirty-five deaths have been reported. In addition, 196 presumptive viremic blood donors have been identified.

##### Europe and Neighboring Countries

As of September 13<sup>th</sup>, 1,318 human cases of West Nile fever have been reported to the European Centre for Disease Prevention and Control. Ninety deaths have been reported. ([Weekly updates: 2018 West Nile fever transmission season](#))

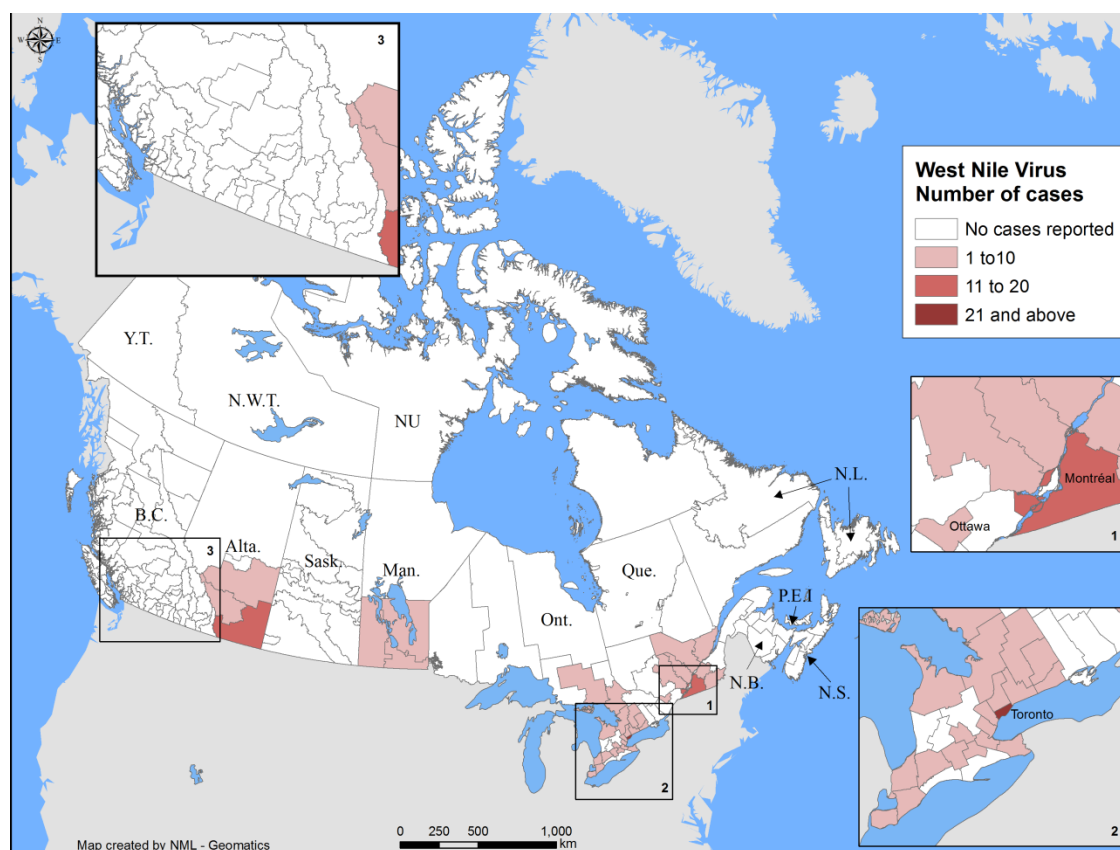

##### Other Mosquito-borne Diseases in Canada

###### Eastern Equine Encephalitis virus

The CFIA has reported 11 horses testing positive for Eastern Equine Encephalitis virus (EEEV) in Ontario. No human cases of EEEV have been reported to the PHAC during the 2018 season.

###### California Serogroup virus

Since May 1, 2018, 23 human cases/exposures of California serogroup virus have been reported by the [National Microbiology Laboratory](#) in the following seven provinces: Alberta (1), Saskatchewan (4), Manitoba (1), Ontario (5), Québec (5), New Brunswick (5), and Nova Scotia (2). Additional work to further type these as Jamestown Canyon virus or Snowshoe hare virus is on-going.

**FIGURE 1: Geographic distribution of WNV human clinical cases and asymptomatic infections in Canada, 2018****FIGURE 2: WNV human clinical cases and asymptomatic infections in Canada by report week<sup>±</sup>, 2018**

<sup>±</sup> WNV clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

\* WNV likely acquired while travelling outside of Canada.

**FIGURE 3: WNV human clinical cases and asymptomatic infections for selected years by report week<sup>±</sup>, in Canada**

<sup>±</sup> WNV clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

<b>Total</b>	<b>67</b>	<b>52</b>	<b>41</b>	<b>160</b>	<b>7</b>	<b>17</b>

\* WNV clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

<sup>1</sup> Total clinical cases are the sum of confirmed and probable: WNV neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

<sup>2</sup> Likely related to travel outside the Province/Territory. These cases are included in either the total clinical cases or WNV asymptomatic infections.

<sup>3</sup> Satisfies WNV diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test, by blood operators (i.e. Canadian Blood Services or Héma-Québec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary WNV specific nucleic acid amplification test following any positive donor screen test result.

<sup>4</sup> Saskatchewan provides counts of WNV neurological syndrome cases only.

**TABLE 2: WNV mosquito surveillance\* in Canada, as of September 15, 2018**

Province	Number of positive mosquito pools	Number of mosquito pools tested	Percentage of positive mosquito pools (%)
Saskatchewan	50	761	6.57
Manitoba	168	1,924	8.73
Ontario	296	11,914	2.48
Québec	39	1,468	2.66
<b>Total</b>	<b>553</b>	<b>16,067</b>	<b>3.44</b>

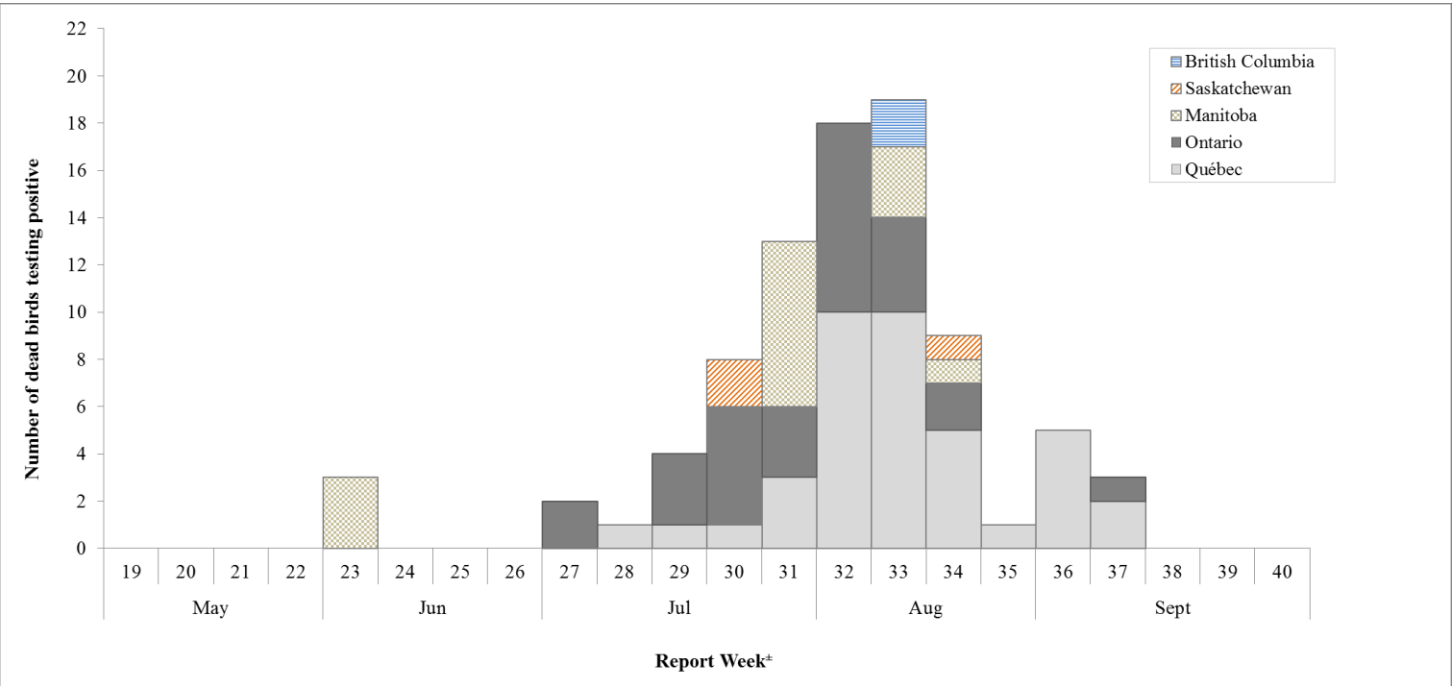

\*Mosquito surveillance data is reported by the following four provinces: Québec, Ontario, Manitoba, and Saskatchewan.

**TABLE 3: Total number of WNV mosquito pools tested by report week and by province/ territory, 2018<sup>†</sup>**

<sup>†</sup> Detailed West Nile Virus mosquito surveillance data can be accessed through provincial/territorial websites.

FIGURE 4: Number of WNV positive dead wild birds in Canada\* by report week<sup>‡</sup>, 2018

\* Not all provinces conduct dead wild bird surveillance as part of their respective WNV surveillance program. However, WNV positive dead wild birds may be identified through the National Wildlife Disease Surveillance Program, CWHC or by specific provinces.

<sup>‡</sup> WNV positive birds are grouped by report week, based on best date available. Best date could include one of the following: date found, date of death, date submitted, or date received.
