WATER TEMPERATURES
BRITISH COLUMBIA AND YUKON TERRITORY

P R E F A C E

Spot observations of water temperatures have been measured in British Columbia and the Yukon Territory, by the Water Survey of Canada, since about 1949. This publication makes available water temperature data that has previously been available only by special request. The data collected at each measurement site is plotted on a graph to enable users to determine the approximate range and distribution of water temperatures throughout the year. Each set of data is also tabulated on the facing page to allow a more detached analysis of the temperatures. The records of water temperatures at 799 sites on streams and on lakes are included in this publication.

Source of the data. The records at almost all sites are spot observations made while making stream flow measurements or while taking sediment samples. At just a few sites, daily observations have been made. These records are included here since at present there are too few sites to justify separate publication in a more suitable format.

The West Kootenay Power and Light Company Limited collected the records of the Kootenay River at Nelson and the United States Geological Survey collected many of the records at stream gauging stations along the Canada-United States border. Their contribution is gratefully acknowledged. The Water Survey of Canada is the source of all other records.

Selection of the sites. All sites with a minimum of 15 water temperature observations have been included.

Explanation of the graph. The horizontal scale is partitioned into monthly intervals. Each month but February is allocated 10 print positions with each position representing a 3 day period. Thus, the first to the third of a month uses print position 1, the fourth to the sixth uses print position 2 and so on. The thirty-first day is included in position 10. February requires only 9 print positions with the twenty-eighth day and, on leap year, the twenty-ninth day being included in position 9.

The vertical scale spans the temperature range 0°C to 25°C with each vertical print position representing a 0.5°C interval. Where water temperatures greater than 25°C have been recorded, a message warning that some points are not shown is printed above the 25°C line.

Single points are plotted with an 'X'; coincident points are plotted with a number giving their frequency of occurrence. An ampersand, '&', indicates more than 9 coincident points.

Explanation of the tables. The records have been arranged in tabular form so that the printed records appear directly below the same records plotted on the graph. The odd numbered months, (January, March etc.), appear first, followed by the even numbered months. All the records for a particular month are arranged in chronological order.

For some sites, several pages are required to print the table. For the user's convenience, the graph is printed again, facing each continuing page. Note, however, that all the records for the site are plotted; not just those tabulated on the facing page.

Accuracy of the data. A few of the more recent observations have been measured in degrees Celsius to the nearest 0.5°C; all other observations have been measured in degrees Fahrenheit to the nearest degree. The Fahrenheit records have been converted to Celsius and rounded to the nearest 0.5°C for publication here.

Human error is probably the single most significant source of inaccuracy. There are two reasons for this. Firstly, only a single observation of the temperature is made; which means that there is no possibility of correcting mistakes. Secondly, both air temperature and water temperature are often recorded at the same time so that occasionally the two readings are transposed. Only during the summer and winter can this transposition be easily recognized.

A few instances of water temperature records of 30°F and 31°F, (corrected to 0°C here), point to either incorrect readings or, more likely, to errors in technique.

Finally, users are reminded that the temperatures recorded here are just spot observations; they are not daily means.

ALPHABETIC INDEX

STATION NUMBER	STATION NAME	PAGE
08LD001	ADAMS RIVER NEAR SQUILAX	1
08AA001	AISHIHIK RIVER NEAR WHITEHORSE	3
08NF005	ALBERT RIVER AT 4300 FOOT CONTOUR	5
