VOL.4 NO.1

WEATHER HIGHLIGHTS FOR THE PERIOD - JANUARY 5 TO 11, 1982

Cold Arctic air covers the country

Intense storms battered eastern Canada with high winds and very cold temperatures. On January 10th and 11th the wind effect created wind chill factors in Ontario in the extremely dangerous zone prompting warnings for all persons to go outside only if very necessary. Wind driven tides flooded some Newfoundland outports and Gander recorded a wind gust of 172 km/h. Some communities suffered power outages.

The west shivered through some very cold temperatures. Many prairie stations recorded temperatures below -40° . In B.C., high snowfalls created avalanche conditions which cut off Terrace and isolated Kitimat for 3 days.

Temperatures varied from a maximum of 10.6° at Sandspit, B.C. to a minimum of -52° at Mayo, Yukon. McInnes Island, B.C. recorded 229 mm of precipitation during the week.

NOTE: The data shown in this publication are based on unverified reports from approximately 225 Canadian and 115 northern United States Synoptic stations.

YUKON

The new year made its debut with two weeks of cold weather. The minimum oscillated between -40° and -55° at many interior stations. On the 8th the temperature refused to climb above -48° at Mayo. The temperature fell to -58.5° at Ross River on January 4th, the 3rd lowest temperature ever recorded at that station. The lowest temperature ever recorded in North America was at Snag (-62.3° on February 3rd, 1947).

The very cold air also produced frequent ice fog and naturally many vehicles were reluctant to face those temperatures.

NORTHWEST TERRITORIES

Cold weather, bringing below normal temperatures, covered the Mackenzie District. In contrast, above normal temperatures persisted at most stations in the Franklin District. The temperature fell to -47° at Shepherd Bay on the 9th but rose to -1.9° at Cape Dyer on the 6th.

Cold but humid Atlantic air reached Baffin Island producing abundant

snowfalls. Precipitation totaled 59.8 mm in one day bringing the total accumulation for the week to 84.8 mm.

BRITISH COLUMBIA

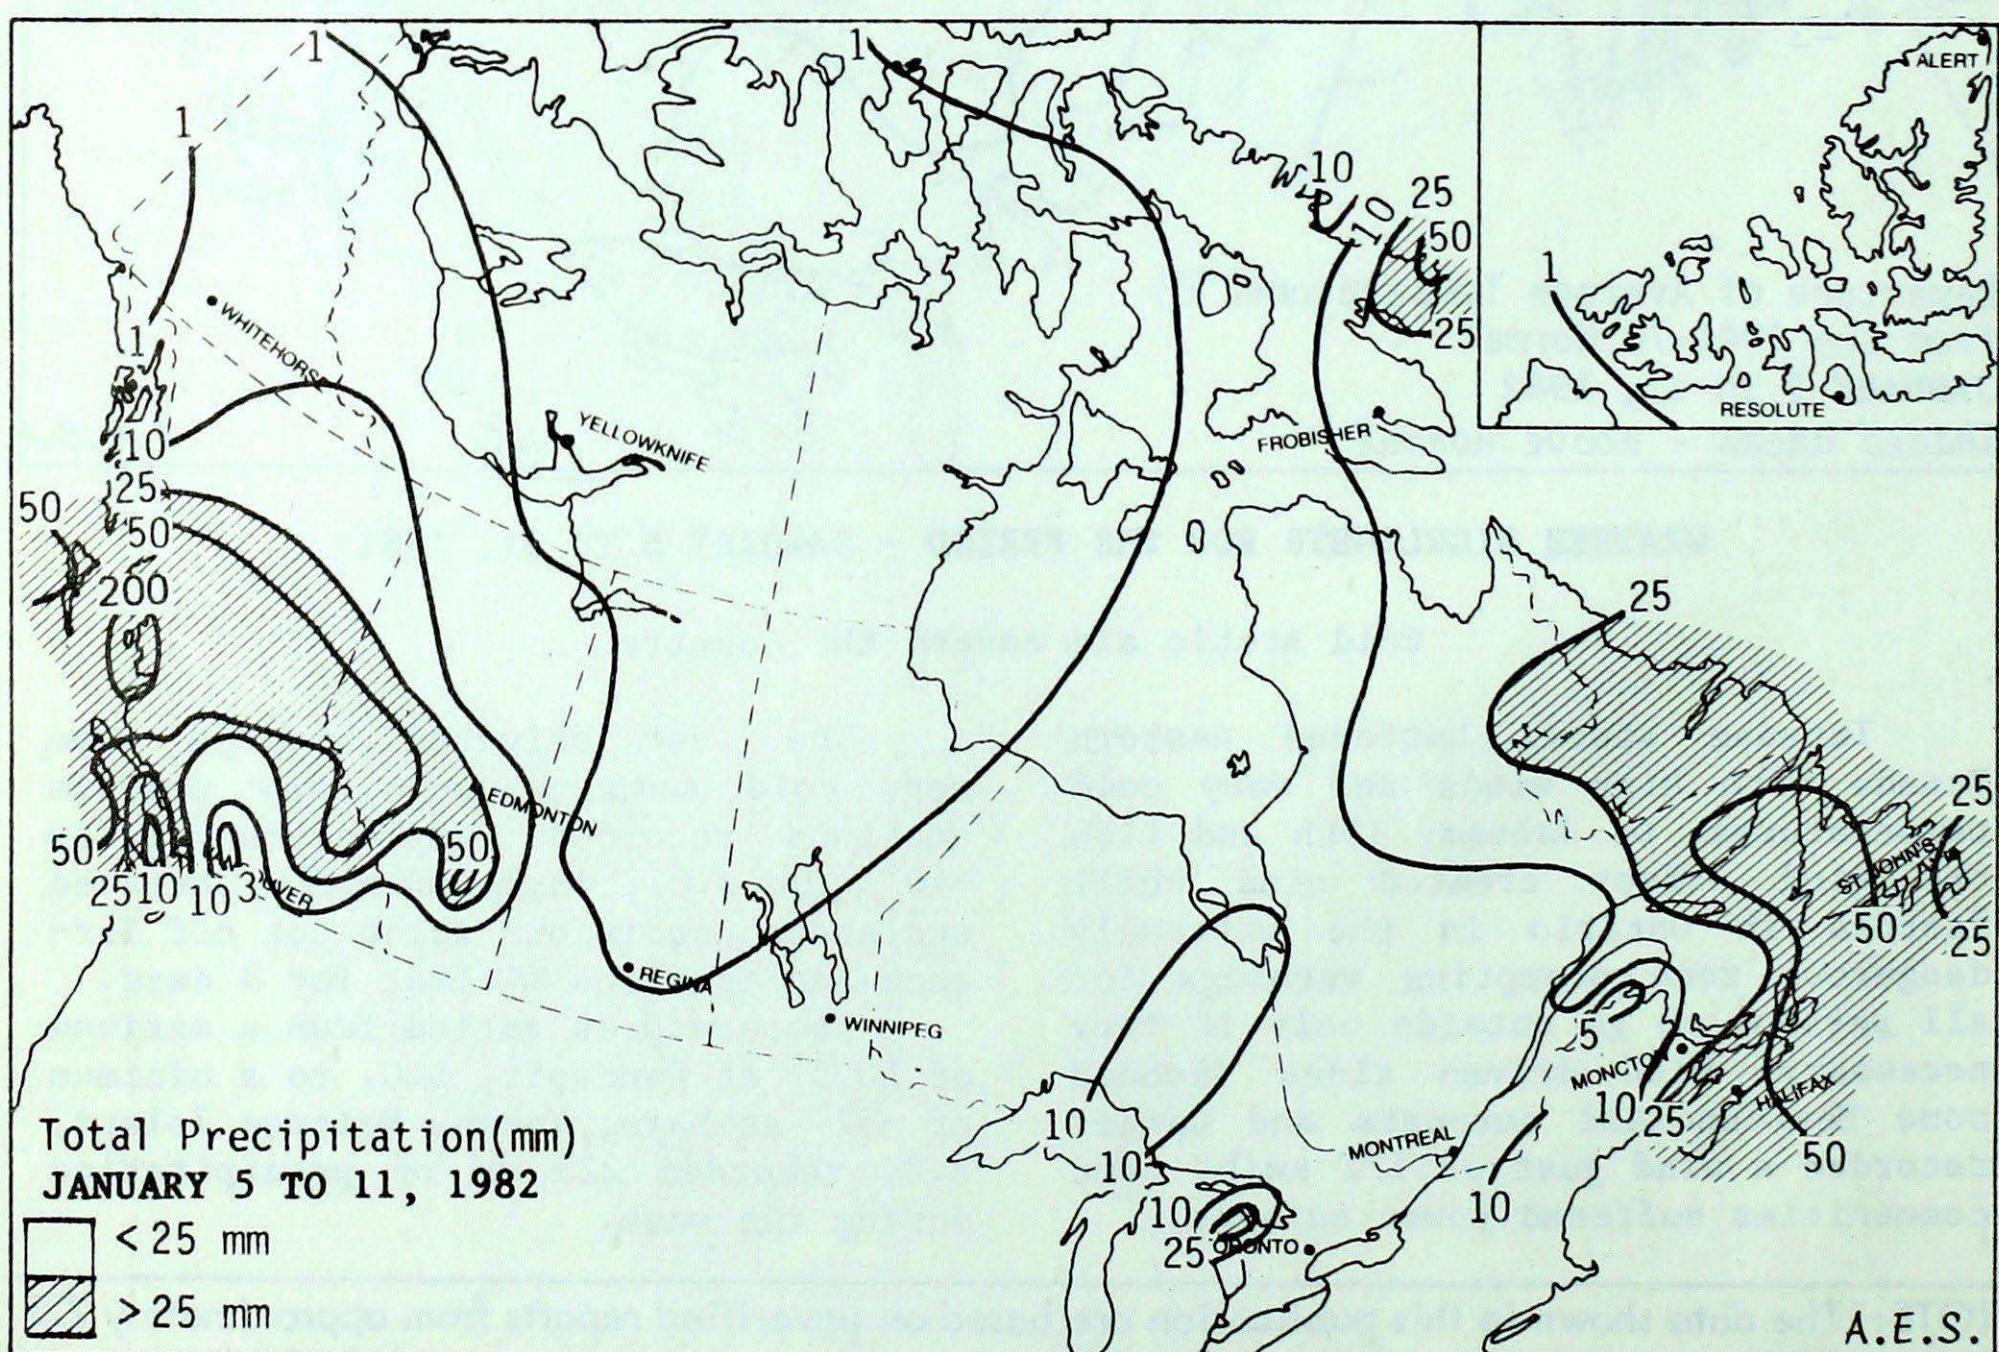

The cold weather covering the province at the beginning of the week moderated by week's end. Temperatures varied from a minimum of -43.2° at MacKenzie on the 5th to 10.6° at Sandspit on the 6th.

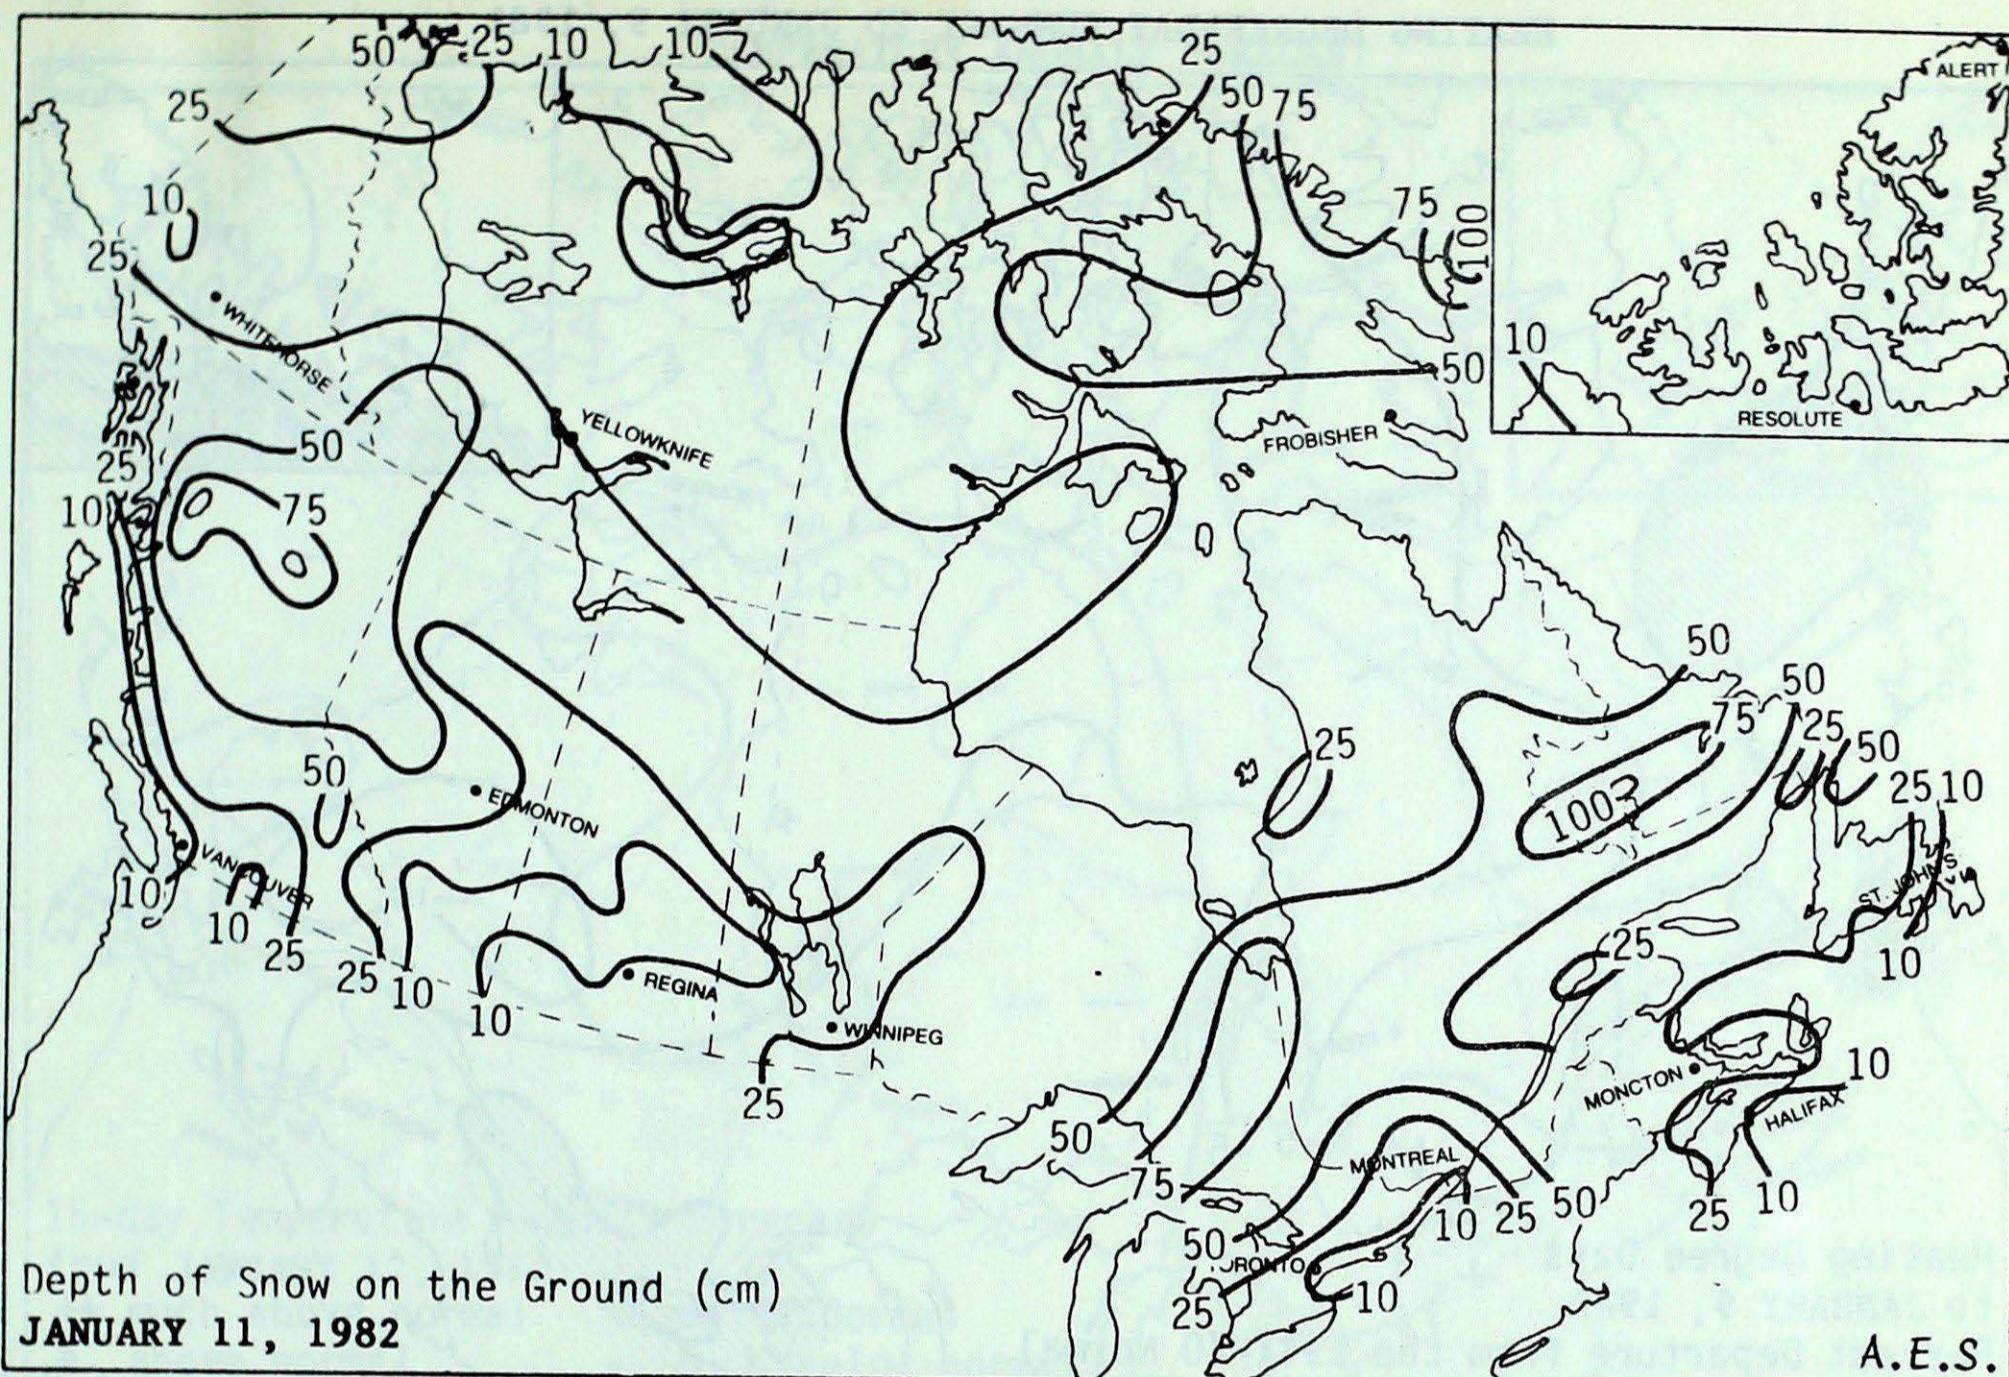

Several stations recorded large snowfalls. Prince George measured 62 cm, Terrace 145 cm and Nass River (100 km north of Terrace) measured 235 cm. McInnes Island recorded the highest weekly precipitation total in the country, 229 mm.

Terrace was cut off from the rest of the province over the weekend as a series of 17 avalanches blocked roads and Kitimat was isolated for 3 days.

PRAIRIE PROVINCES

Very cold weather covered most of the prairies this week. Mean temperatures in many areas of southern Saskatchewan were more than 13° below

normal. Many stations recorded temperatures below -40° and Cree Lake measured a minimum of -47° on January 16th.

Snowfalls were light except in west-central Alberta which measured 10 cm of snow on the 7th. Red Deer recorded 62.5 mm of precipitation during this week.

Despite the snow in western Alberta, southern Alberta has little snow on the ground and farmers are worried about the possibility of winter wheat kill.

ONTARIO

Extreme cold combined with winds gusting to 90 km/h created blizzard conditions across Ontario on January 10th and 11th.

Heavy snows in northern and central Ontario closed numerous roads, while in the south conditions were a little less severe. Temperatures fell to below -40° in the north and -25° in the south. The wind effect created wind chill factors in the extremely dangerous zone prompting warnings for all

persons to go outside only if very necessary.

Some of the more notable records show Muskoka with a record low minimum of -39° on the 12th, erasing the old mark of -38° set in 1968; Toronto International Airport recorded -27° breaking the old mark of -26° set in 1981; and North Bay reported -34° breaking the old mark of -31° set in 1981. Geraldton recorded the lowest temperature in the province, -45° .

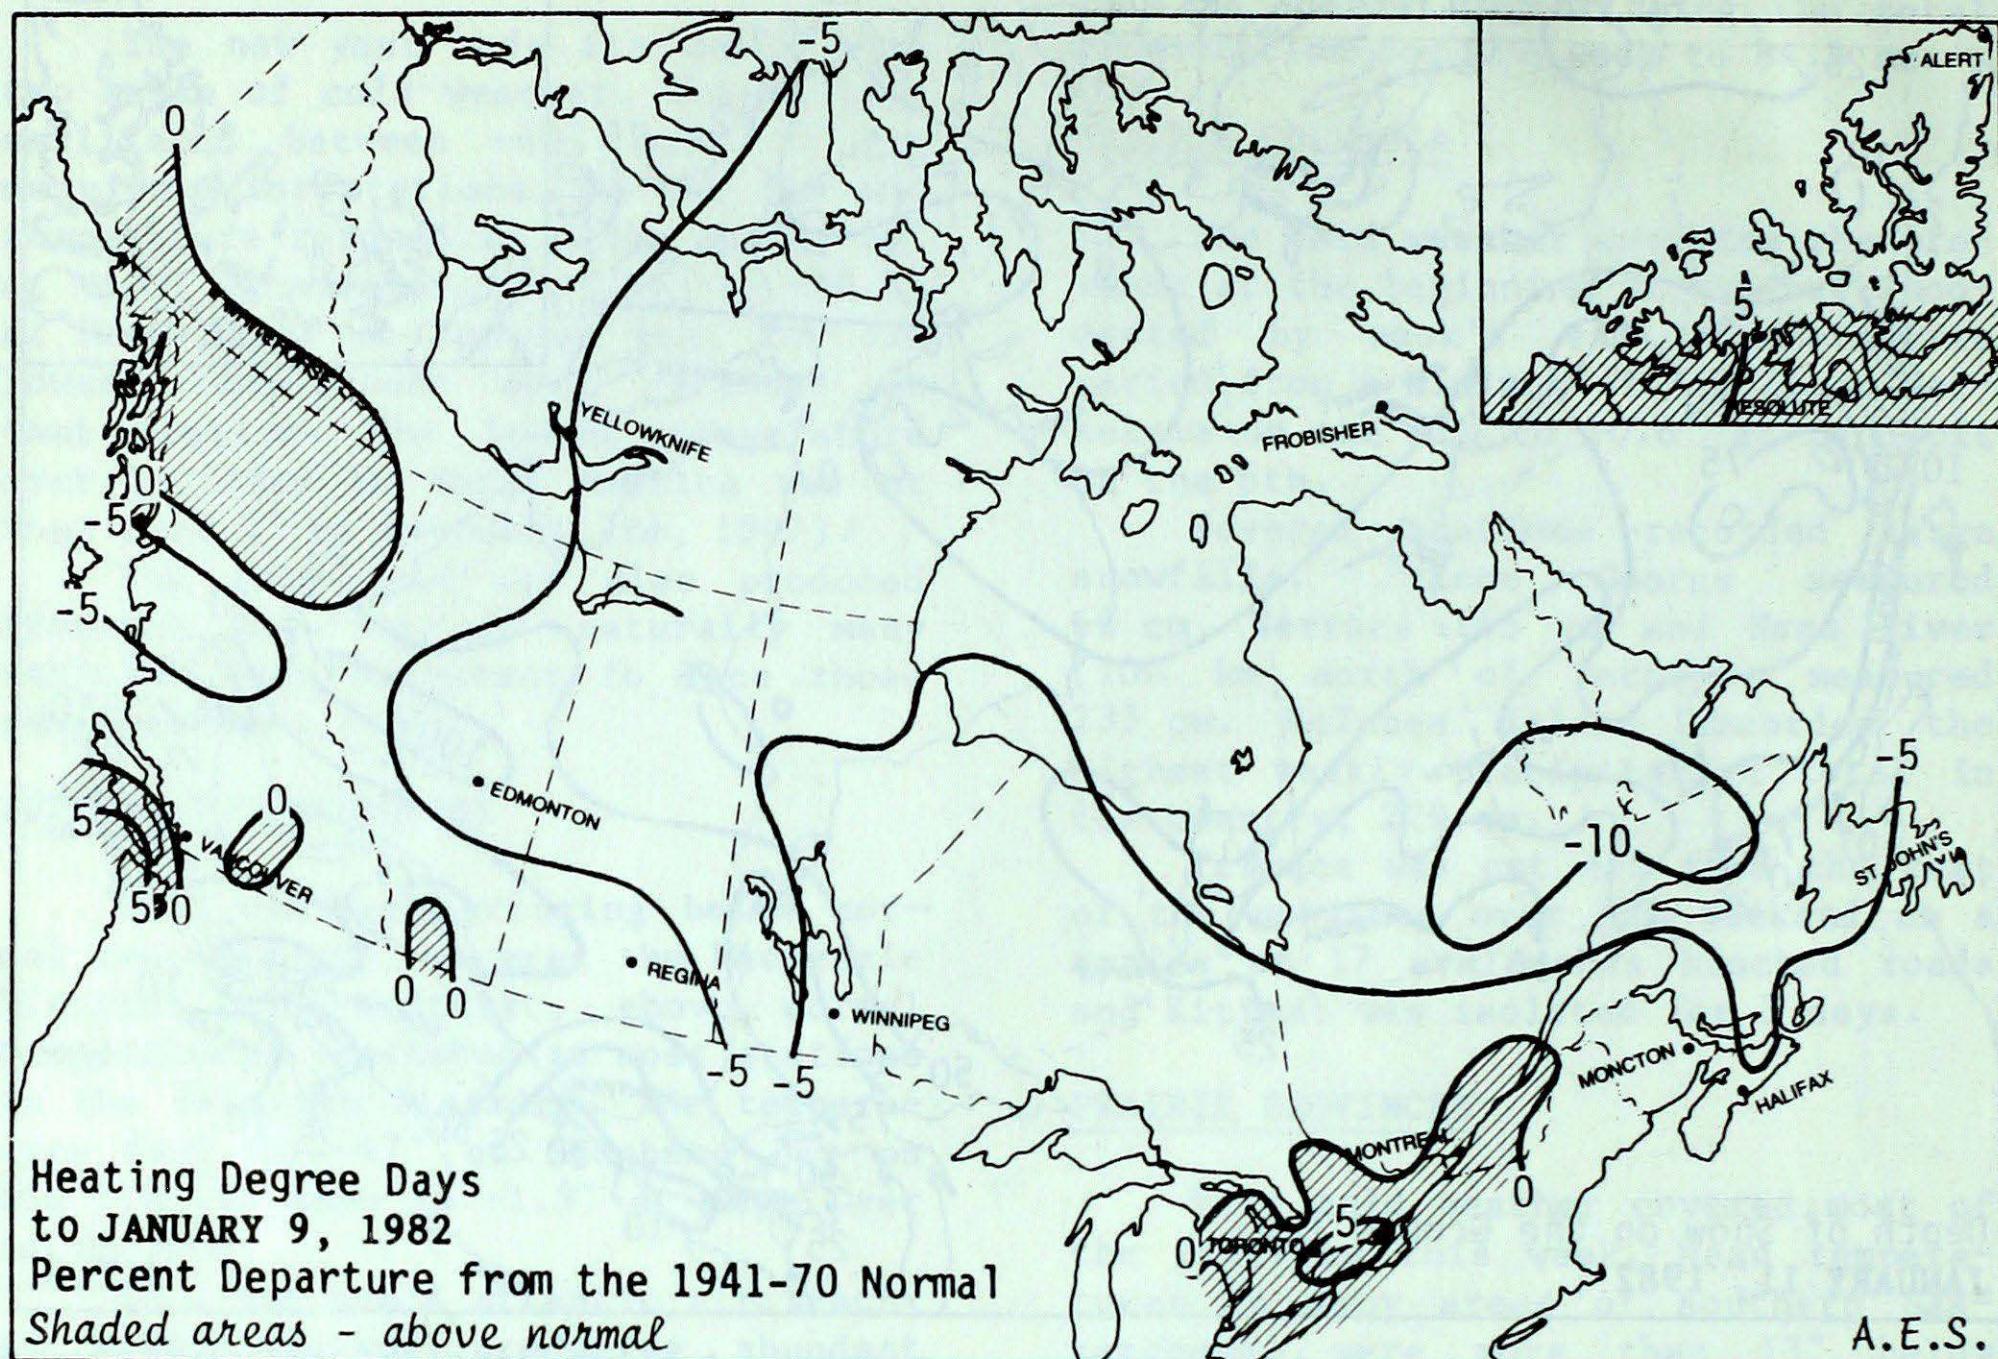

QUEBEC

The week began with warm weather in the south (the mercury reached 6.6° at Gaspé on the 5th), but cold weather dominated the rest of the week. Mean temperatures were below normal in the south but were more than 6° above normal in some northern areas. The temperature fell to -40° at Nitchequan on the 11th.

Precipitation was above normal along the lower south shore and Natashquan recorded 53.1 mm. Precipitation did not exceed 10 mm at most other stations.

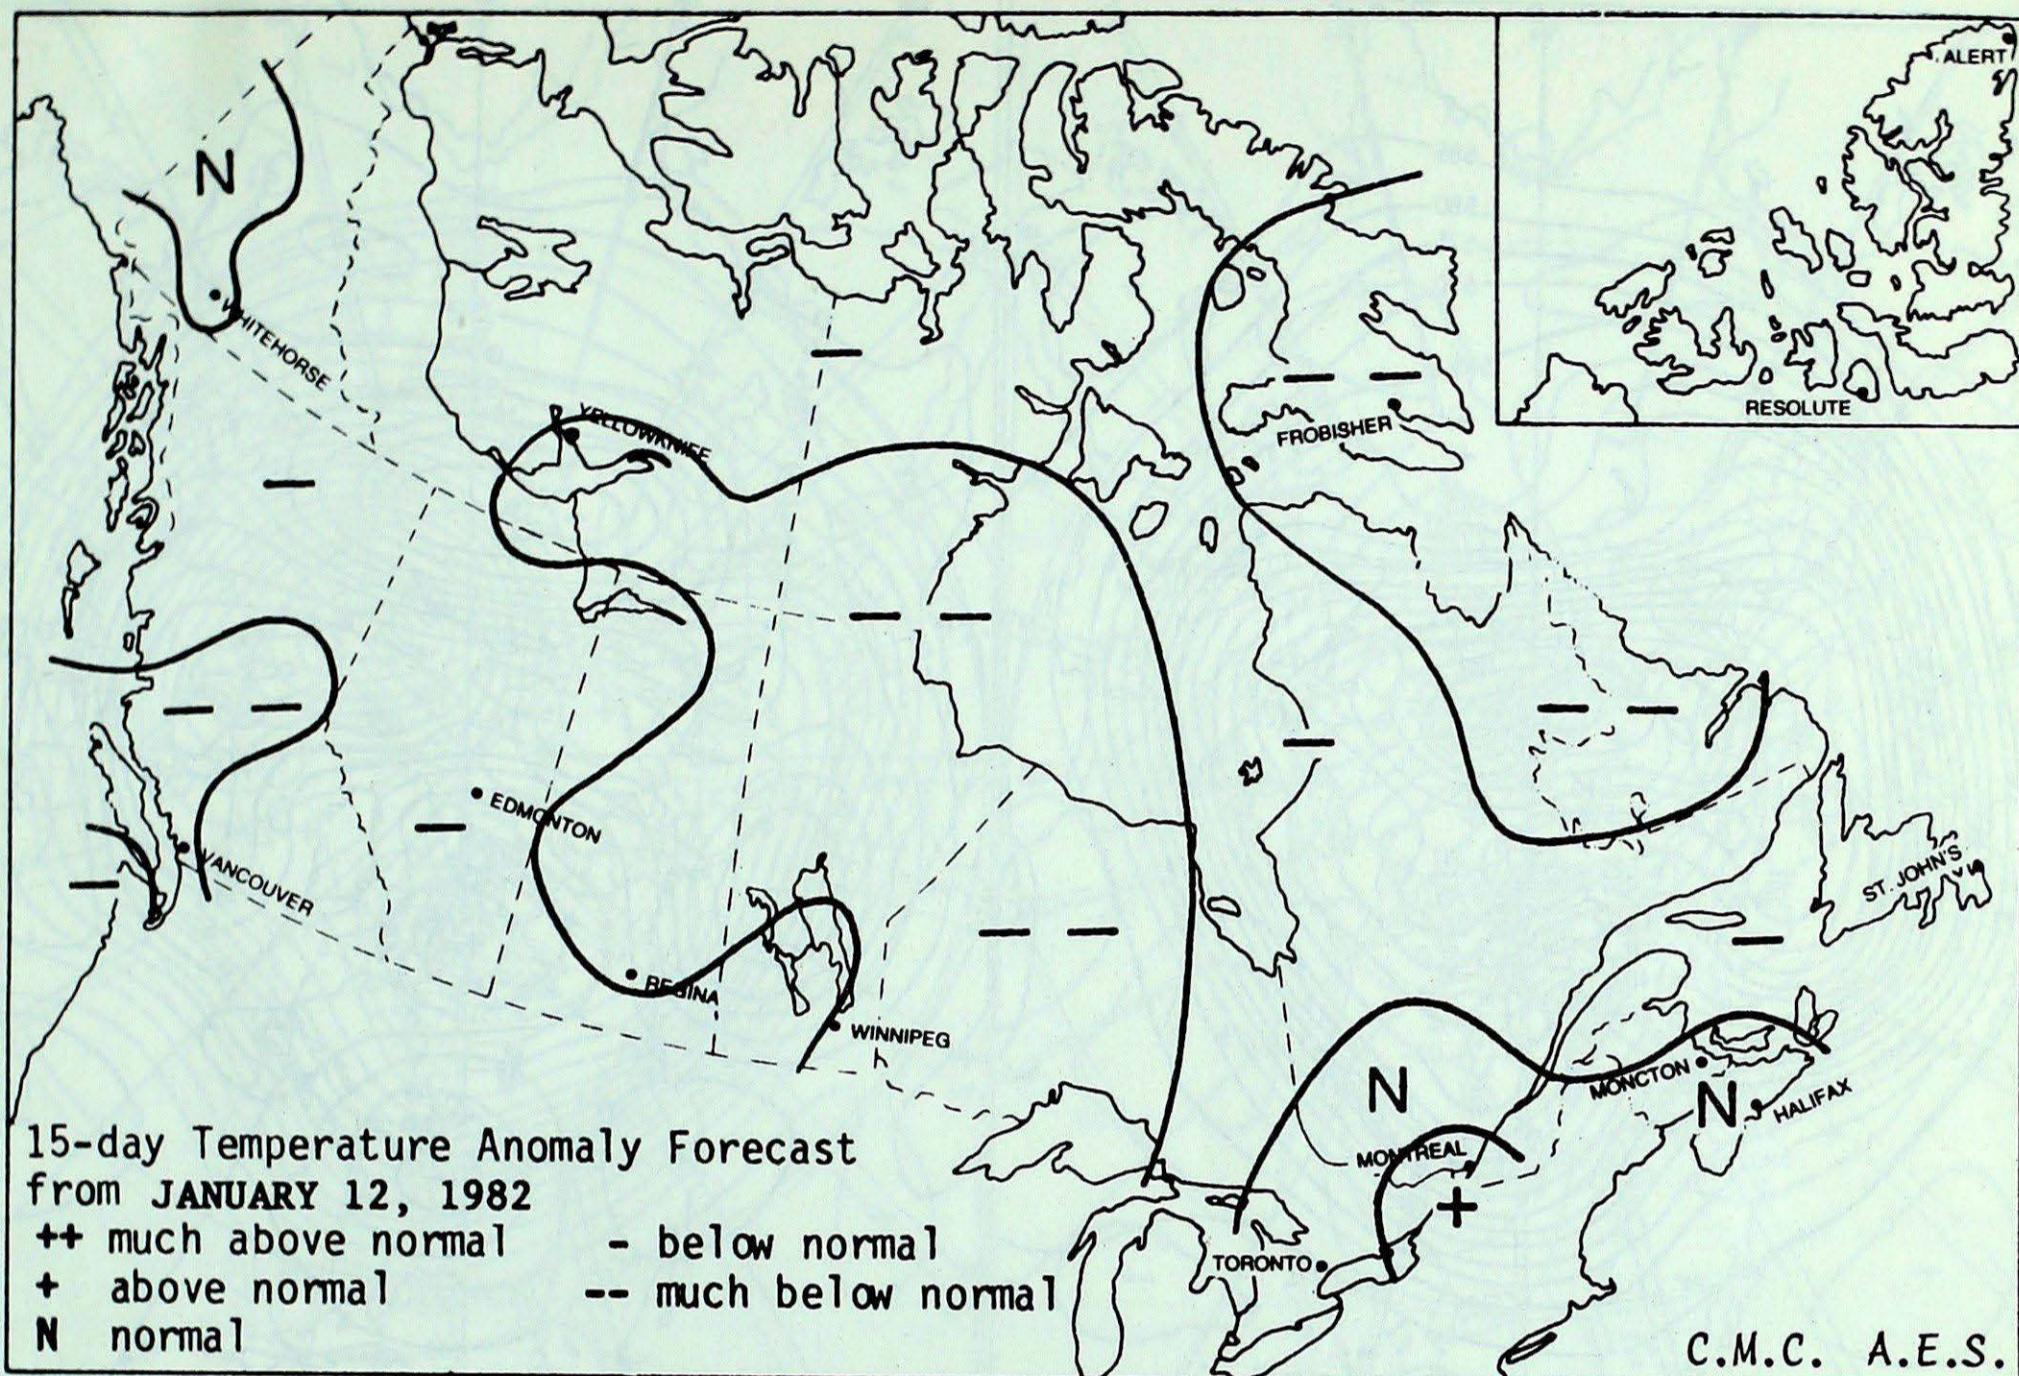

(continued on page 6)

HEATING DEGREE-DAY SUMMARY TO JANUARY 9, 1981

(continued from page 3)

ATLANTIC PROVINCES

An intense storm moved through Newfoundland during the last half of the week. Wind gusts of 172 km/h were recorded at Gander. Flooding occurred at some outports due to high wind driven tides and some small communities experienced power outages.

The storm brought more snow to the Maritimes where many stations have already accumulated a large fraction of their normal monthly snowfall. Several stations in New Brunswick have already equalled or exceeded their monthly normal.

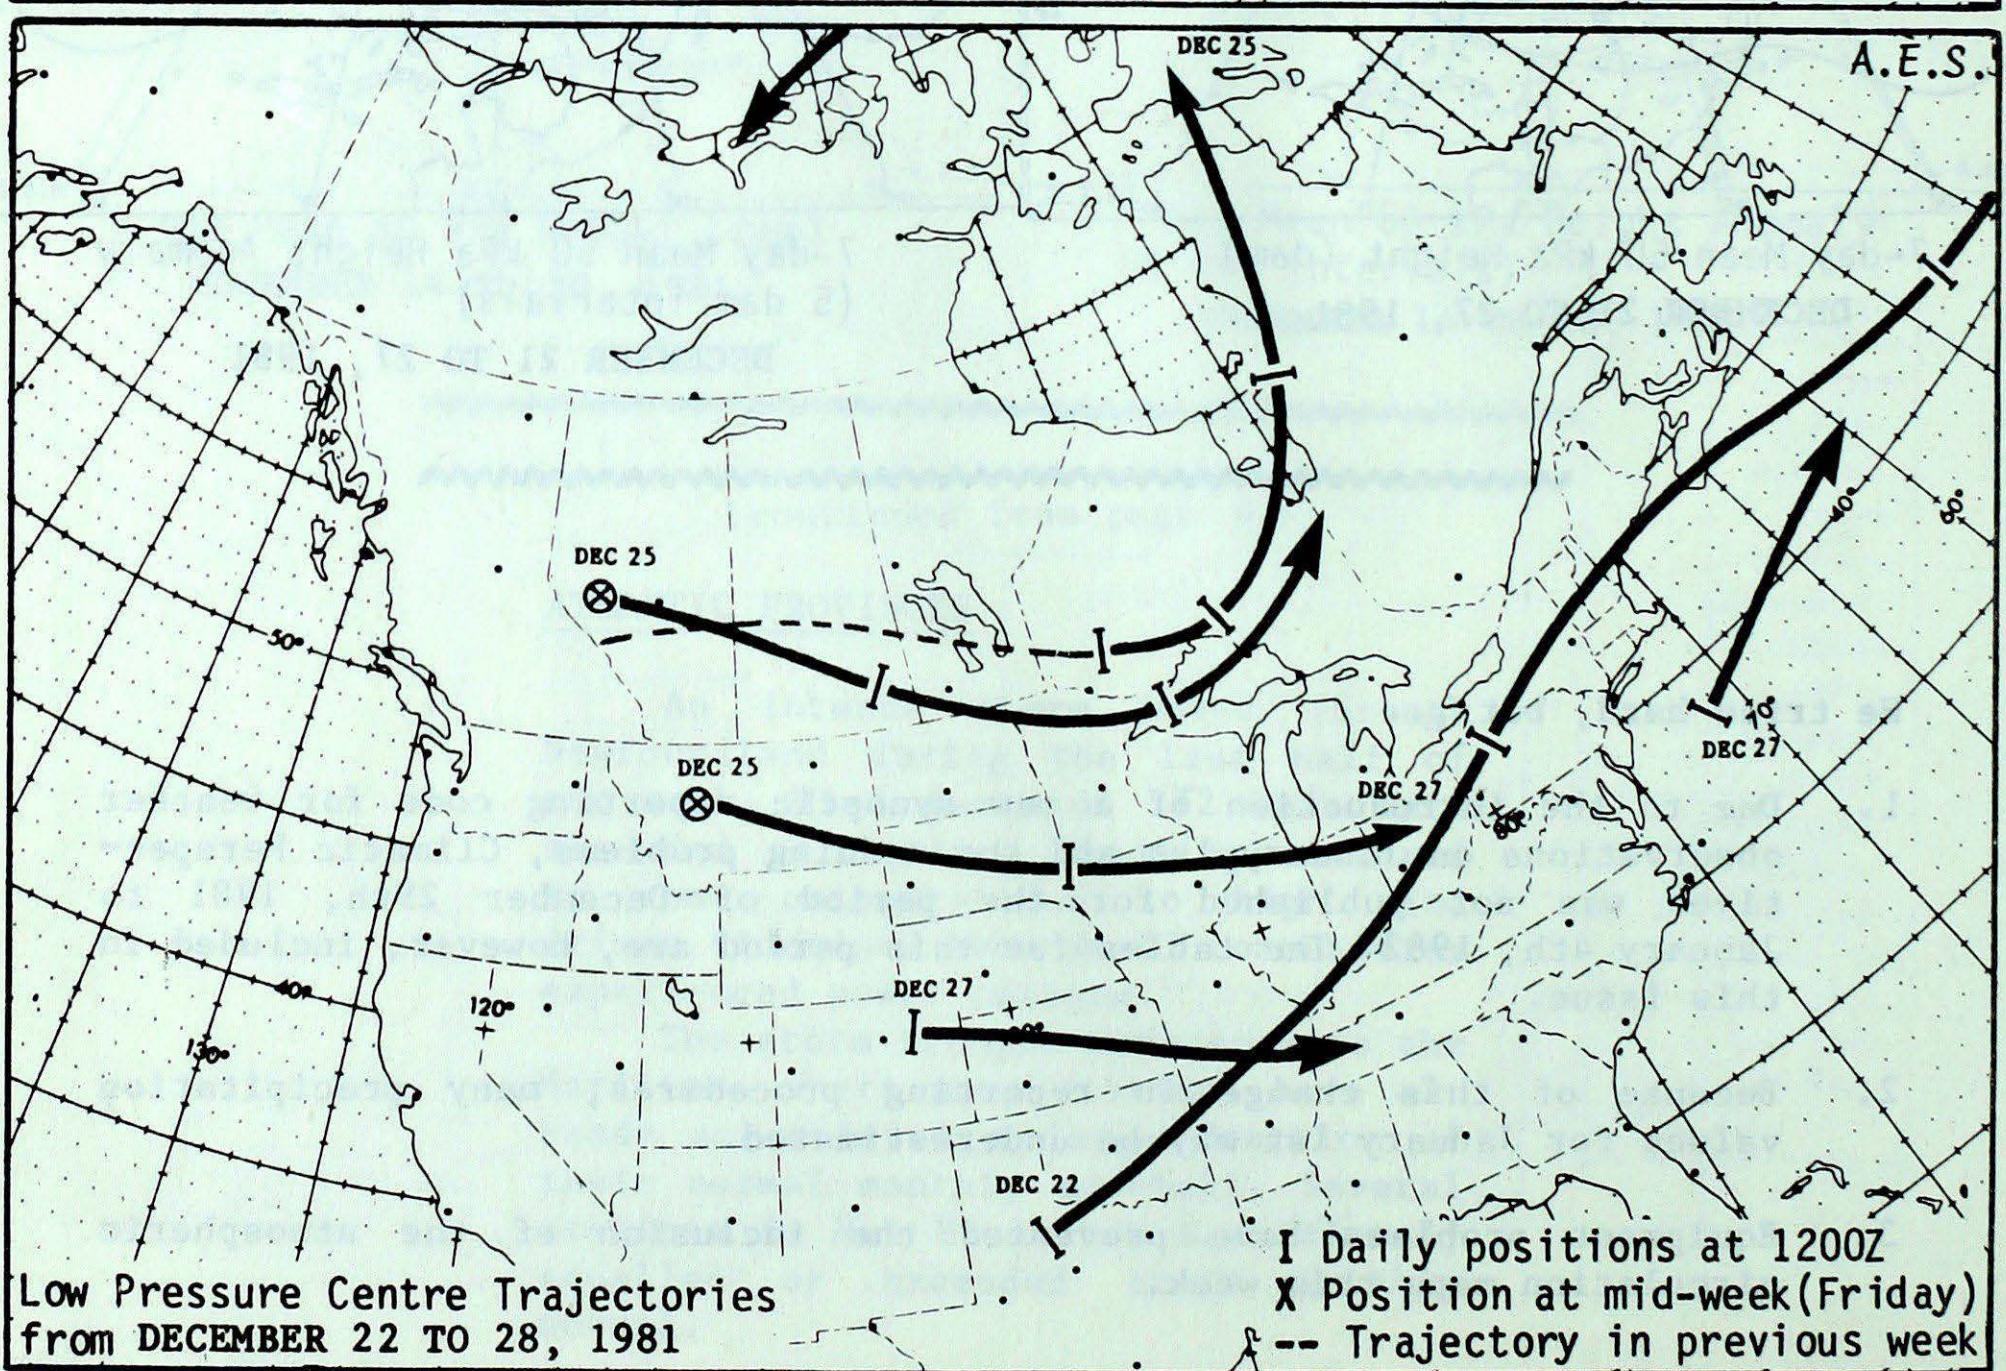

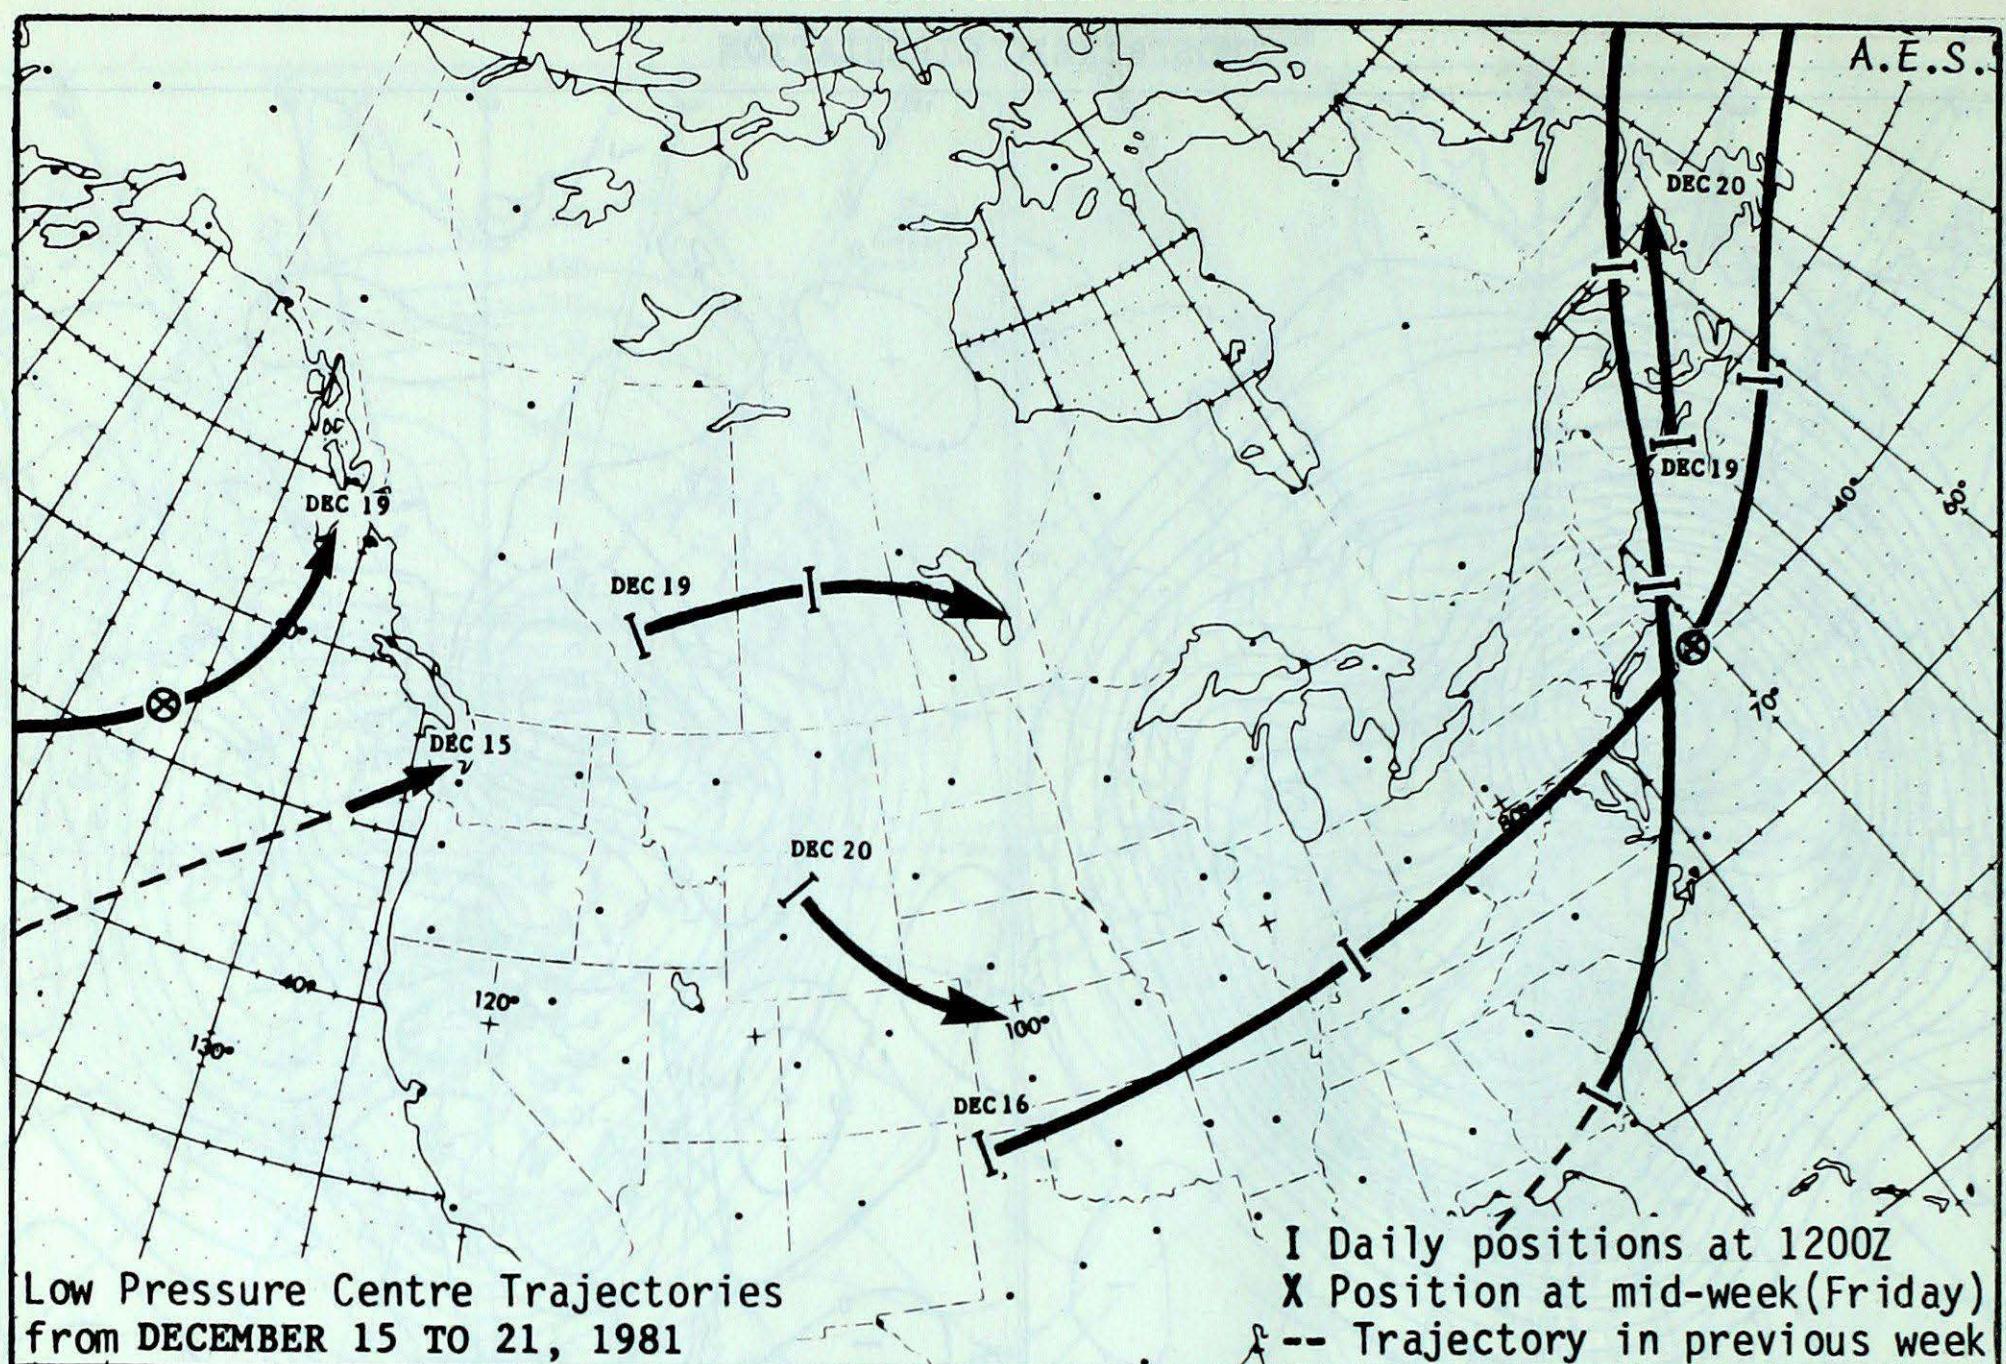

ATMOSPHERIC CIRCULATION

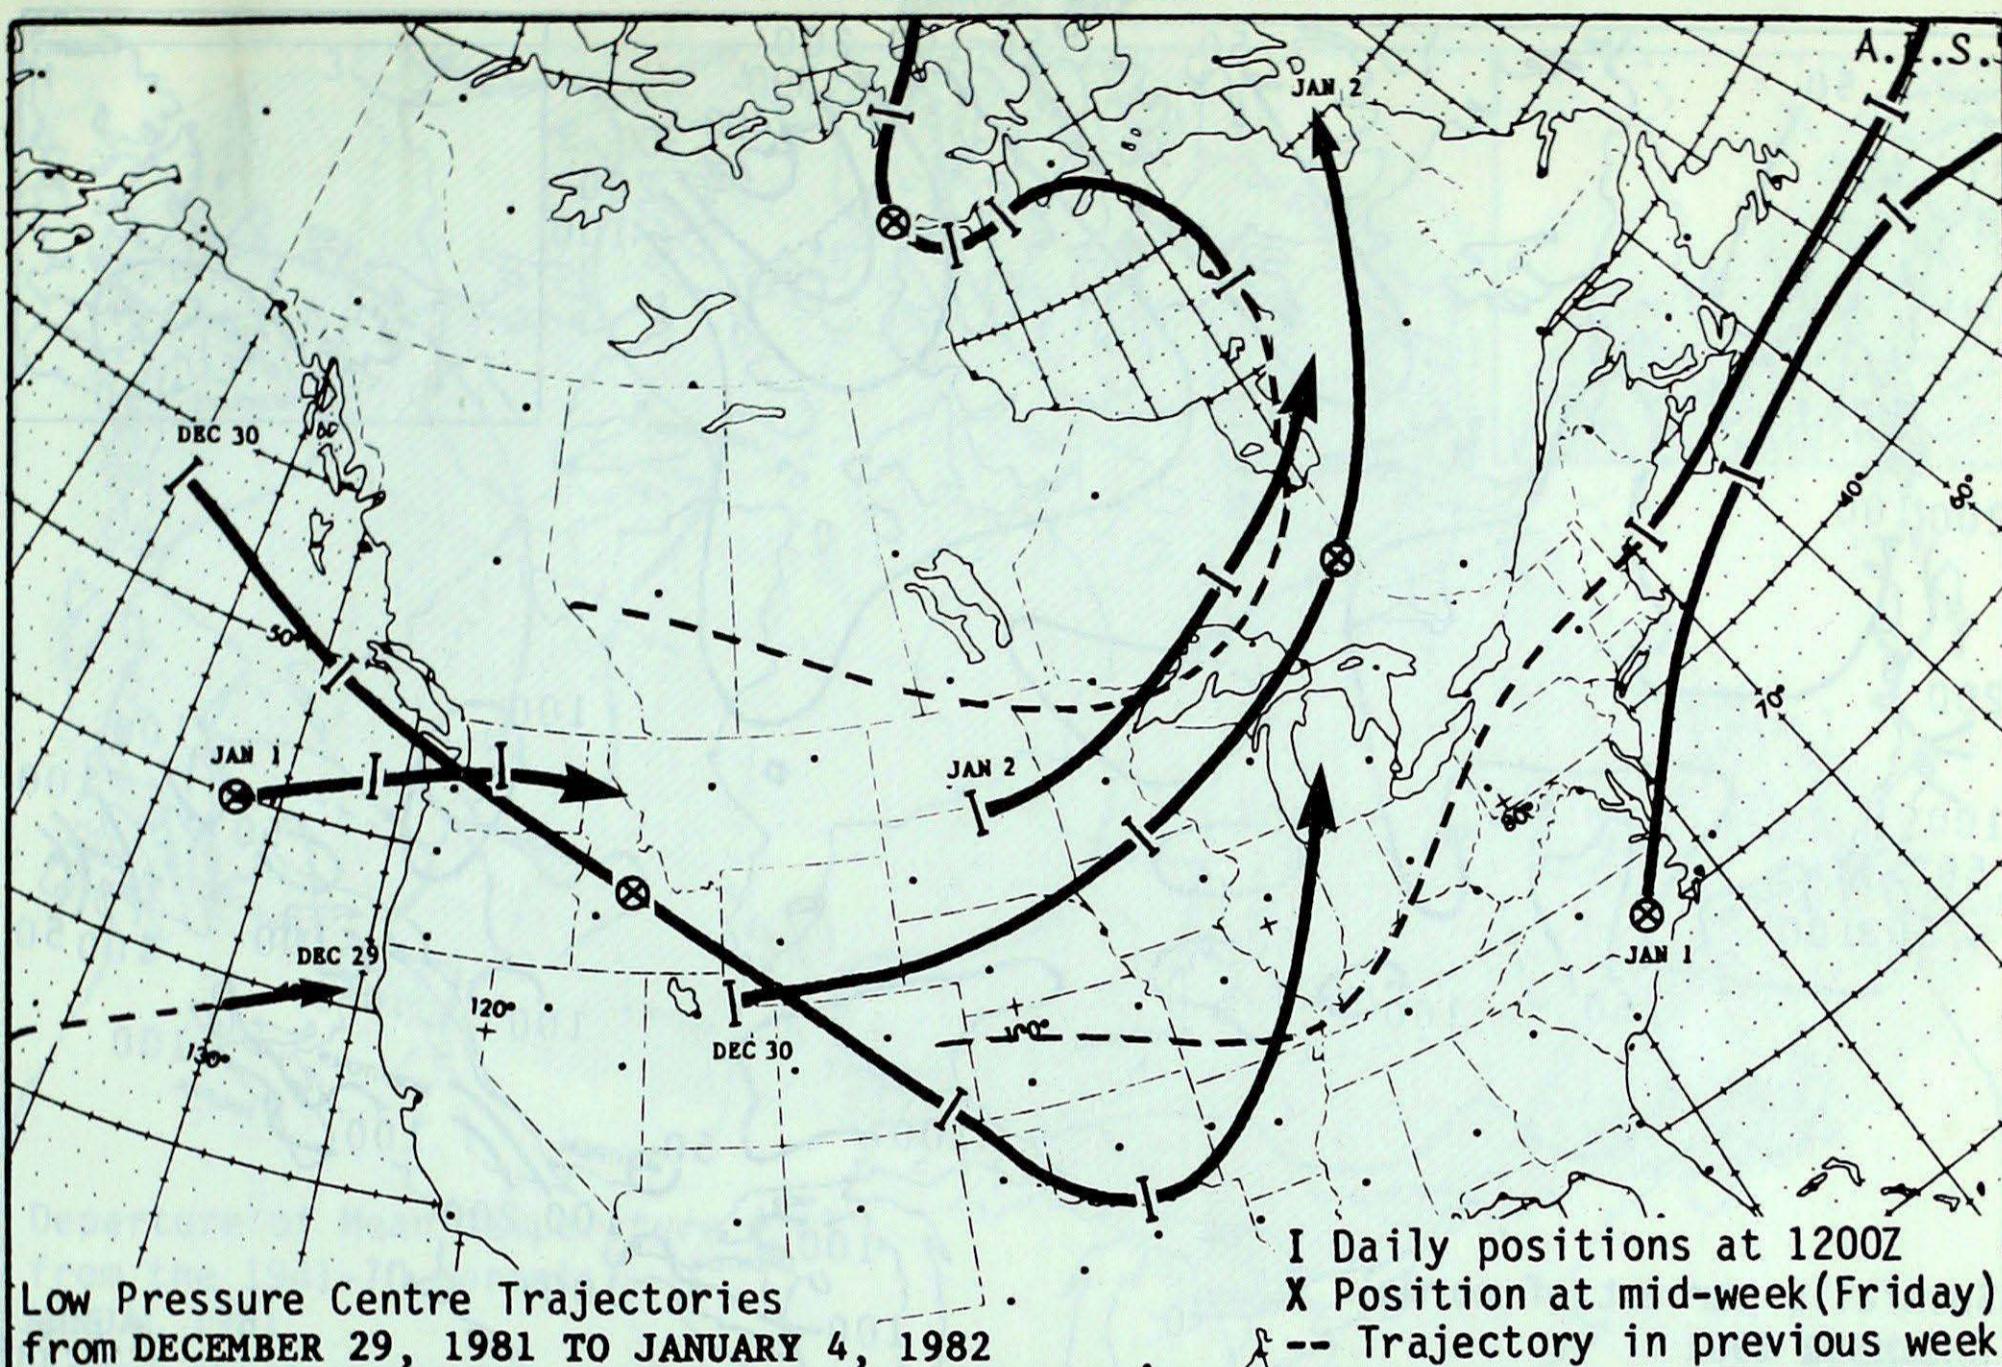

We tried hard, but ...

1. Due to the introduction of a new synoptic reporting code for weather observations on January 1st and the ensuing problems, Climatic Perspectives was not published for the period of December 29th, 1981 to January 4th, 1982. The tables for this period are, however, included in this issue.
2. Because of this change in reporting procedures, many precipitation values for January 1st may be underestimated.
3. Equipment problems have prevented the inclusion of the atmospheric circulation maps this week.
