In the evidence given re classification, I wish to add that Inspecting Engineer Macfarlane and the present chief engineer, while assistant to Mr. Lumsden or inspecting engineer, each made trips over our work as I understood it, for the purpose of looking into the classification, and while we have never seen their report, we believe that they sustained the classification that was being given by the engineers in charge of the work, as no material changes were made until the last summer, about two years after this portion of our work had been completed. We understand that you then sent engineers over the work, and notwithstanding that they knew really nothing personally about the work during actual construction, they do not hesitate to reclassify the work over the heads of such men as your present chief engineer, Inspecting Engineer Macfarlane, District Engineer Foss, Assistant District Engineer Balkam, and the other engineers on the work, as well as Inspecting Engineer Bouillon for the G.T.P., all of whom saw the work in actual construction and all, with the exception of Mr. Grant and Mr. Macfarlane, saw it many times, and continually during construction.

As we understand it now, our final estimates are returned and a very considerable change has been made in the classification, and we trust that you will readily see the unfairness of said changes and issue an order to have our final estimates returned as formerly.

I wish again to thank you for giving me this opportunity of amending my evidence.

Yours very truly,

WILLARD KITCHEN CO., LTD.

Per Willard Kitchen.
SESSIONAL PAPER No. 123

(NATIONAL TRANSCONTINENTAL RAILWAY ENQUIRY COMMISSION
OTTAWA, JANUARY 17th, 1913.)

Present: G. Lynch-Staunton, K.C., Chairman; F. P. Gutelius, C.E.

E. F. Fauquier, sworn:

By Mr. Staunton:

Q. You are a member of the firm of Fauquier Brothers?—A. Yes.
Q. You are the senior partner, are you?—A. We are equal partners.
Q. Your firm have two contracts on the Transcontinental Railway?—A. Yes.
Q. Your first contract was No. 15?—A. Yes.
Q. And commencing at Cochrane it ran for how many miles west of Cochrane?—A. Practically one hundred miles.
Q. It was through a clay country, was it not?—A. Nearly altogether, yes.
Q. Do you know how many tenders there were put in for that work?—A. I think there were only two.
Q. Your tender and the Grand Trunk Pacific?—A. Yes.
Q. Your prices on that work were $1.85 solid rock; loose rock, 70 cents; common excavation, 40 cents; concrete 1 x 3 x 5, $15.00; concrete 1 x 3 x 5 in arch culverts, $16.00; concrete 1 x 3 x 6 in arch culverts, $15.50; is that correct?—A. I would have to refer to the contract.
Q. Look at the contract and see if it is correct?—A. It is.
Q. You sublet all that work, did you not?—A. Do you refer to the mason's work?
Q. The excavation and concrete work?—A. Some of that work we did ourselves.
Q. But the excavation and concrete work, grading, except the train filling, I understood you sublet?—A. Oh no, some we did.
Q. Did you sublet the solid rock?—A. That would be a hard question to answer. We did some ourselves, you understand.
Q. Do you remember the price you sublet the solid rock at?—A. You have copies, I think, of all my sub-contracts.
Q. I find in the sub-contracts that you sublet solid rock at $1.57, loose rock 52 cents, common excavation 31 cents, concrete 1 x 3 x 5 $11.00, concrete 1 x 3 x 5 in arch culverts, $11.50, concrete 1 x 3 x 6 in arch culverts, $11.25, is that right?—A. I cannot say without referring to the contracts, you have copies of our subletting prices.
Q. These figures are taken from your contract?—A. Probably they are, but I would like to verify them; the copies you have will themselves prove it.
Q. Can you verify this—the solid rock returns up to the present at 25,363 cubic yards?—A. I understand it is about 35,000 yards.
Q. And the loose rock is 1,253,395 cubic yards?—A. I cannot answer that, I would have to verify.
Q. Is that about right?—A. I cannot really say, I do not know.
Q. And the common excavation, 1,262,304 cubic yards, can you say as to whether that is approximately right?—A. I believe the two are very close to one another in regard to classification, but as to what quantities I do not know.
Q. That is what I want to know; it appears from your returns that there is about one per cent solid rock, forty-nine per cent of loose rock, and fifty per cent of common excavation on your contract?—A. This is what has been returned by the engineers so far, of course we have not been paid for it yet.
Q. But these are the returns?—A. I understand it is about that.

Q. Now Mr. Fauquier, we have had this work examined by engineers and tests made on this contract, and our engineers think that twenty per cent for loose rock is a liberal classification on this contract, what do you think of that?—A. I should think your engineers are entirely wrong. In fact, the test that beautiful engineer you had up there made cost him about $1.10 a yard, we followed him close.

Q. Tell me all you know about it?—A. I do not know anything about his tests, except in that way.

Q. I want this to go down in evidence, I want you to tell me?—A. My brother has it in the office.

Q. I am only taking your evidence now and not your brother's, and I am taking your sworn statement and I want you to tell me what reason you have for saying that the engineer who examined this work, and reports, if he does report so, that twenty per cent of loose rock would be a generous classification on your work; what reason have you for reflecting on him?—A. Well, if you want me to state my views in regard to the matter, I should say that your engineer must have found, and would find it, and any engineer would find it impossible to classify that work after it was so long completed: he went into that work no doubt with what he considered—

Q. Speak of what you know, Mr. Fauquier, and do not tell anything you are in doubt about?—A. Well, I do not know.

Q. You do not know what he did?—A. Yes, I do. I know that his first test was on a cut that when we took it out it was covered with moss, it was like a swamp. The place was so bad we had to remove our camps. A big fire came over that cut and burned all the moss off the top of the cut, and there being a perfect swamp it was impossible to get there. The drainage of this 16-foot cut all through the dried up material on each side and made beautiful arable ground, and that is where he made his test. But that was not a bit the same as when the ground was taken out.

Q. So that the ground when dried became beautiful arable ground?—A. Yes, good farming land.

Q. It was clay, was it?—A. On the surface.

Q. He ploughed that ground to a depth of five feet? Was it beautiful arable ground to that depth?—A. I do not know, I did not see it.

Q. You profess to know what the ground was?—A. I do on the surface.

Q. What do you know about the cut?—A. The cut was very hard, that same cut, and just where he ploughed Mr. Lumsden and one of the engineers, now dead, were up there on a trip—

Q. Were you with them?—A. Yes, and they were looking at the material and I said that is pretty tough, and Lumsden said he didn't think it was so very tough, and I asked someone to get an axe and I bet Mr. Reid he could not put an axe through it and he couldn't. It was hard elastic sort of gumbo.

Q. How were they taking that out then?—A. Steam shovels.

Q. Do you mean to tell me that a man could not put an axe into what you could take out with a steam shovel?—A. Oh yes, they could.

Q. Do not exaggerate your statements; you said you took a piece of it up and you bet him a quarter he could not put an axe into it and he could not do it?—A. Well, of course you could get an axe into it but he could not chop it through.

Q. Your statement was that he could not put an axe into it: do you tell me he could not do so?—A. Certainly you could put an axe into it.

Q. And where you were taking that out with a steam shovel?—A. Yes.

Q. It was, at that time, you say, a swamp?—A. My evidence is that it was covered with moss which held the water like a sponge and made it swampy and thoroughly wet.

Q. And Mr. Lumsden saw that condition?—A. Oh, yes.
SESSIONAL PAPER No. 123

Q. Mr. Goodwin, the engineer we sent up there tells me he ploughed that land to a depth of five feet without any trouble, with one pair of horses, do you doubt that?—A. I have not got anything to say about it. I do not know what he did. I say that at the time we took it out it would have been utterly impossible.

Q. By reason of what, the wet condition of the ground?—A. Yes, and the material.

Q. He made an examination in other parts of that place with the same results, did he not?—A I do not know anything about any other.

Q. Are you familiar generally with the country up there?—A. Yes, in a crude way.

Q. There is no difference generally speaking in the material throughout that clay belt there?—A. Oh yes, there is.

Q. Will you tell me what difference there is between the line immediately east of and the line immediately west of Cochrane?—A. There is more muskeg I think east than there is west.

Q. There is a great quantity of muskeg in your contract, is there not?—A. No, there is not. There is a great quantity of surface muskeg that has no depth.

Q. What I mean is; this forty-nine per cent of common excavation is mostly muskeg in your contract, is it not?—A. I should not think so. The muskeg was not very deep and then we got into white clay, and in some places the white clay was filled with small stones underneath the muskeg.

Q. You say that the character of the country is not very much the same on all these contracts immediately east and west of Cochrane?—A. No, I should not think it was. All districts vary, even in our own contract they vary.

Q. Oh, yes, I know they do vary, but the main characteristics of the country are the same; it is really a clay country, nearly all through there, is it not?—A. I understand. I do not know whether I am correct or not and I have no reason to say so, but I understand that east of us they have a great depth of muskeg and more quantity of muskeg in that way.

Q. Excepting, perhaps, as to the relative depth of muskeg, the country is about the same, is it not?—A. It is practically a clay belt mixed up with muskeg, if that is what you mean; that is about as far as I can describe it.

Q. That is what I mean. Did you acquire any gravel pits or borrow pits personally along this road?—A. My brother acquired some which we used.

Q. Why did your brother acquire borrow pits there?—A. We had to get them to do our work.

Q. Why had you to get them?—A. Because the engineers of the commission did not.

Q. Did the engineers ask you to get them?—A. No, we asked them to get them.

Q. You asked them to get borrow pits for you?—A. Yes.

Q. Whom did you ask?—A. I do not know, I would have to look it up and see what correspondence we had. I cannot say as to that now, it would be in the head office.

Q. It is all in correspondence, is it?—A. I do not know.

Q. So far as you know, it is?—A. I should judge there would be some correspondence about it, but I do not know.

Q. At all events the commission did not ask you to get any borrow pits?—A. No.

Q. Then your position is that you requested the commission to furnish you with borrow pits, is that right?—A. Yes.

Q. And that the commission neglected to do so?—A. Yes.

Q. You did not head them off and get these borrow pits before you got your contracts?—A. No.
Q. You did not head them off and get these borrow pits before they had a chance to get them?—A. They never had a man up there to discover these pits.

Q. You did not take time by the forelock and get in there first?—A. No, sir, we had a man up there busy all the time scouring that country looking for pits.

Q. Did you just do what the other contractors did, look for the borrow pits?—A. We are not supposed to.

Q. I know you are not and I am wondering at your generosity?—A. It was forced on us.

Q. Did not you do just what the other contractors did?—A. I do not know what they did.

Q. When did you begin work on that first contract of yours?—A. Well, it was practically somewhere about the fall, about September or October, September I should judge, 1908. I do not know exactly. The contract was signed some time in 1908.

Q. But by June, 1909, you had not done very much work?—A. Oh, yes.

Q. Had you worked through the winter?—A. Oh, yes, we worked all winter. In June, 1909, we were laying tracks and ballasting.

Q. You commenced in the autumn of 1908 and you had done a substantial quantity of work by 1909?—A. Yes, we worked all through the winter. We were instructed to by the engineer; we worked through frost and all.

Q. You say that you only got out these patents and leases for the borrow pits because the Commission did not furnish you with them?—A. Yes.

Q. How much money did you spend on that work?—A. That is a matter that is not going into evidence.

Q. It is a matter you are going to tell us, Mr. Fauquier?—A. All right, I shall not just now without consulting my solicitor.

Q. You had better consult him, because you have to tell me?—A. I do not feel that I should.

Q. Then we will have to adjourn until you make up your mind and we might do it as well now as any other time?—A. All right.

Q. We will adjourn until you make up your mind, because we want that evidence?—A. I know what you want it for; I suppose there is some catch about the investigation.

Q. There is no catch about it but we are going to have this evidence?—A. Well, I do not know anything about it myself.

Mr. Gutelius:—Then I think it would be better for you to say that you do not know?—A. I do not know, but if I did know I would not tell it.

By Mr. Staunton:

Q. Then, if you are going to put it in that way, you had better find out if you do not know?—A. The man handling this matter for me is Mr. Nesbitt and I suppose you do not object to my having a few days to consult with him. I do not want to give any information that might be brought up against me afterwards if we had a controversy about that.

Q. I want the information, and that is what we are here for?—A. Then I would like to have it adjourned.

Q. It is adjourned if you so desire?—A. I do not desire it, except to say that I don't answer, I do not know.

Q. Then you had better make up your mind whether you will answer or not?—A. I say I do not know.

Q. It is your business as a witness to furnish yourself with the information, we want you to furnish yourself with that information?—A. Very well.
Q. On the understanding that we will adjourn the enquiry for that purpose, I will go on with something further . . . you have made a claim or you intend to make a claim against the Commission for gravel taken from these pits, have you not?—A. I suppose so. I have got to get paid for it in some way. We have either got to make a settlement with the Commission or charge so much a yard.

Q. But you made no bargain with the Commission?—A. No.

Q. Wait a moment; you made no bargain with the Commission to pay you for this material?—A. Not that I know of.

Q. You got a patent from the Ontario Government for several parcels of land for which you paid $1.00 per acre, is not that correct?—A. I do not know. I am conscientious when I tell you that I know nothing about it.

Q. You only paid the ordinary Government fee?—A. Of course, our expenses were heavy.

Q. I mean, outside of that?—A. I do not know, I cannot say.

Q. Who does know?—A. You can find out of course; my brother would know, he has the record of it.

Q. There is no use my asking you unless you are prepared to give the facts about this transaction and can say what negotiations or what communications there were with the Commission respecting borrow pits; are you familiar with the facts?—A. No, I am not.

Q. Well, we will ask your brother about that?—A. I know this far, that we had made an application in what form, whether verbal or written, I cannot remember now.

Q. Your brother is the one who can give the information?—A. I do not know whether he can give any more on that point than I can.

Q. Can your brother give information about the licenses and patents you obtained from the Ontario Government?—A. No doubt he could, he would know more about it than I do. I do not know the cost or anything else.

Q. You do not know whether or not there was an understanding with the Commission about paying you for it?—A. Paying by the yard?

Q. Yes, or in any other way?—A. No, that was only very lately put before them. They asked us to put in our bill for ballast pits and we put that in at so much a yard. We sent it in to Mr. Balkam.

Q. You had another contract, No. 18, had you not?—A. Yes.

Q. From about nineteen and a half miles west of the crossing of the Mud River, easterly seventy-five miles, is that right?—A. That is about right, I do not know exactly.

Q. There were seventy-five miles in District E?—A. Yes.

Q. Do you know that if the engineers had not made an absurd mistake, as to the quantity of moss in that country, that your tender would not have been the lowest?—A. I have been told so.

Q. Moss is easily removed?—A. Yes.

Q. Yet the engineers estimated that there were 655,000 cubic yards of moss in there, was there any such quantity?—A. I do not know that we were allowed anything for moss.

Q. You were allowed 13,000 yards?—A. Yes.

Q. And that was about all the moss that was on the right of way?—A. I think so.

Q. Your price on that contract was 12 cents for moss; do you remember that?—A. I think it was about 12 cents. On looking at the tender, I find it was 12 cents.

Q. And Chambers tendered at 35 cents for moss?—A. Yes, it was an absurd price. Chambers told me he tendered at somewhere about that, and that is all I know about it.
Q. Your tender was $1.80 for solid rock there?—A. Yes.
Q. And for loose rock, 60 cents?—A. Yes.
Q. And for common excavation, 38 cents?—A. Yes.
Q. And Chambers tendered for $1.75 solid rock, 65 cents for loose rock, and 31 cents for common excavation?—A. I do not know as to that.
Q. And if it had not been for the moss, he would have got the contract?—A. Possibly.

By Mr. Gutelius:

Q. Had you any knowledge or do you know whether your brother had any knowledge that there was any such large amount of moss being estimated upon?—A. I think I had, but I cannot tell you how I gathered it, or how I knew.
Q. Do you mean it is impossible for you to tell us?—A. It is impossible for me to trace back how I got it. I got it from some of the junior engineers. I was enquiring about the whole contract and one thing and another, and I got the information.
Q. I want you to make your position as clear as you can?—A. I had the advantage of that knowledge; I do not mind acknowledging it; I do not want to husband it up in any way.
Q. And the fact that you tendered 12 cents on moss—A. I would have tendered that anyway.
Q. At all events, it gave you the contract?—A. Yes, but I should have tendered about twelve cents on moss, whether I knew it or not. You know yourself that it is easy to remove moss.
Q. But you did have knowledge that there was going to be a large amount of moss figured on that contract and you rather expected it?—A. Yes.
Q. And you knew when your bid was going in that your moss bid was going to get you the contract?—A. I expected it would be very favorable.
Q. Was much of the clay which was classified as 50 per cent loose rock excavated by steam shovels on this contract No. 15?—A. The proportion was very small, I should judge.
Q. About what yardage was the steam shovel capable of handling in an ordinary ten hour shift?—A. I have forgotten; it is one of those automatic sixteen ton or twenty ton.
Q. What would be a fair day’s work average in that material?—A. I cannot tell you exactly. I should think that in good material it should handle 250 yards.
Q. You in your final estimate have received something like 6,000 to 8,000 yards of solid rock which was classified because of its being small stones closely assembled, what is called “assembled rock” in the estimates?—A. Do you mean in our work?
Q. In your work?—A. I do not know; I do not know how they classified it. I was never with them when they classified. I thought it was all solid rock we were allowed for, but you say there is a certain amount of assembled rock.
Q. Do you think, as a contractor, that any material composed of stones less than a cubic yard, and sand and clay mixed in with it, should be called solid rock under that specification?—A. If it is cemented, I should think it would be hard-pan, but if it were frozen I should say it was solid.
Q. You would only make solid out of it if it was frozen?—A. If it is cemented it would be blasted continually and it is the same thing.
Q. If the cemented material did not have any stones in it, and you shot it, what would you call it?—A. There are a good many different kinds of cemented material, do you mean cemented sand?
SESSIONAL PAPER No. 123

Q. Cemented sand and clay if it did not have any stones in it, what would you call it?—A. That would be open to quite a lot of argument because you can get it cemented when it is very easily handled.

Q. Did you ever get solid rock for this stuff they call assembled rock on any other contract you were ever on?—A. I do not think so.

Q. This is a new proposition?—A. Yes; my specifications in the other contracts were for solid rocks or boulders measuring over a cubic yard.

Q. When you made your tender did you expect that solid rock was going to be the same solid rock that you as an engineer and contractor had been handling in previous contracts?—A. No, because I read the specification and the other specifications run differently.

Q. That is argument, but it is facts we want. Did not you expect when you made your tender on these specifications to receive the same treatment in the matter of interpretation from the engineers that you had been in the habit of receiving on other contracts?—A. No, I could not have done so because the specifications were different and worded differently. The specifications of the different materials were different.

Q. Did you put in a lower price for rock, than you would have put in on that account, did you reduce your rock price?—A. No, I got every cent I could possibly venture to ask without competition knocking me out.

Q. Then the interpretation which you contend for did not influence you in making your bid?—A. No, in the first place, on the contract you are referring to now, I never expected any very large quantity of rock. Of course, the estimates of the rock on that line were something like 250,000 yards or over.

Q. How did you know there was an estimate of that kind?—A. I got a copy of the estimate after I got the work. They gave me estimated quantities. I think I got them from Mr. Lumsden. Certainly, I got them from one of the engineers; anyway, I wanted to see what the total would be.

Q. What was your reason for asking Mr. Wallace Nesbitt for an opinion on this clause of the contract?—A. On account of the frozen material.

Q. Did you lay Mr. Nesbitt's opinion before the Commission or the engineers?—A. I showed it to our particular commissioner; our particular commissioner was Mr. Reid. I showed it to him and Mr. McIsaac and Mr. Lumsden, I think. I showed them the written opinion. In the same way, I had one from Shepley, Chrysler, and Arnoldi.

Q. You laid all these opinions before the Commissioners or the engineers?

—A. Yes.

By Mr. Staunton:

Q. Why did you go to all the expense and trouble of getting so many opinions on this?—A. We intended to fight it out, and I have not abandoned the idea yet.

Q. Then the Commission was disputing your right?—A. The right to frozen material. In the first place, the Commission or the engineers on the line allowed it in Mr. Lumsden's reign, and then later Mr. Lumsden cut it more than in half, anyway he cut it down to $25,000. During the dispute I got these opinions in order to try the influence of laying first-class legal opinions before them to influence them to reinstate that, and they did not do it.

Q. Did they take all the frozen material from you?—A. Yes, I understand so.

Q. They did not allow you anything for frozen material?—A. I understand not.

Q. And you got these opinions to fortify your case before the Commission?

—A. Yes.
Q. Did you get any opinions on any other matters excepting the frozen materials?—A. I cannot tell you offhand, I do not remember now. Of course, when they entered into the classification of frozen material, they entered into the whole classification of these three items: solid rock, loose rock, and common excavation.

By Mr. Gutelius:

Q. Referring again to that moss contract, was it generally understood between the contractors and the Commission that the estimate on which they would money-out the tenders was private information of the Commission?—A. It was not given to us for the purpose of tendering and so forth: we were not allowed to see that.

Q. So that if anyone had been given that it might have influenced their bid?—A. Certainly it would, very materially.

Q. In other words, you would be very glad to have had that private information?—A. I think anyone would. You are enough of an engineer to know that yourself.

By Mr. Staunton:

Q. It would be quite improper to give it to one person and not to another?—A. Certainly.

By Mr. Gutelius:

Q. You happened to secure this information because you were chasing up and down the line and heard in a general way what the boys were doing, that is right, is it?—A. Yes.

Q. Is there anything that has occurred to you that you would like to tell this Commission?—A. Excepting that I might tell you about that letter. There is a letter in existence which in my estimation would make my estimate final as I have paid the subcontractors on the classification as made, on the estimates which were marked "final" by the district engineers or division engineers. I am not sure which. The letter to which I refer and which caused the issue of these final certificates was one written by Mr. Grant in the spring of 1911 to Mr. Molesworth at North Bay, instructing him to issue these certificates as there would be no revision of classification on that work. The letter is every bit as strong as that. On the strength of that letter. I paid my subcontractors on these estimates.

By Mr. Staunton:

Q. Your firm is the firm of "Fauquier Brothers"; you and your brother constitute the firm?—A. It is not called Fauquier Brothers, it is E. F. & G. E. Fauquier.

Q. Was anyone else ever in partnership with you?—A. Do you mean at previous dates?

Q. Yes?—A. On work we did in 1884 there was Mr. Denwoody.

Q. Have you ever had any person else interested with you in a monetary way in the contracts on this Transcontinental Railway?—A. No.

Q. No person else?—A. No.

Q. No person had any direct or indirect interest in your contract?—A. Not the slightest.

Q. Did the profits go to you and your brother?—A. Equally.

Q. And to nobody else?—A. No, if we ever get them.

The Witness:—I would suggest in reference to the question as to the borrow pits that you should ask my brother without recalling me on that question, as I have no personal knowledge of it.

Mr. Staunton:—Yes, we will agree to that, but tell your brother to come prepared to give us the information.

The witness was not further examined.

(NATIONAL TRANSCONTINENTAL RAILWAY ENQUIRY COMMISSION.
OTTAWA, JANUARY 31st, 1913.)

Present: G. Lynch-Staunton, K.C., Chairman; F. P. Gutelius, C.E.

Reid McManus, sworn:

Examined by Mr. Gutelius:

Q. You had a contract for about eight miles of the construction of the National Transcontinental Railway between mileages 52 and 58 west of Moncton?—A. Yes.

Q. Who constitutes your firm?—A. It is two brothers of mine, Edward E. McManus, and John W. McManus.

Q. And no one else is interested?—A. I have another brother, he is partly interested, but he is studying for the Church, and he has not been interested in our workings.

Q. The peculiar features of the portion of the railway which you constructed seem to be a cutting from mile 50 to mile 52, which cutting is nearly two miles long; you are familiar with the ground there?—A. Yes.

Q. Did that long cut strike you as being a peculiar bit of location?—A. No. I never looked at it from that point of view; you are speaking to me now as from the engineering point of view.

Q. No, as a contractor, from your commonsense knowledge of railway location, did you figure that it was necessary to undertake a cut two miles long at that part?—A. Can I explain that?

Q. Yes, take your time and explain it?—A. I never gave it any consideration when we tendered on the work, and it was a year or so before we started to operate on that cut. We commenced at the small operations, I do not think we touched it at all the first year we were working. I never gave that question any consideration.

Q. Did you ever before take out a cut two miles in length?—A. No.

Q. So that it was very unusual..... did you utilize all that material for fills or was much of it wasted?—A. It was practically all used.

Q. What was the greatest haul that you gave any of that material?—A.
You can see by the profile. There is a small fill before you go into the cut and a part of the cut was borrowed and brought to contract No. 1. The balance was hauled to Chipman to make that fill across the bridge.

Q. So that the material which was taken across the bridge at Chipman was hauled how many miles?—A. About four and a half miles, I should think.

Q. What did you receive for hauling this material that long distance?—A. I got train haul price, as over-haul for that portion of the cut, as far as I know.

Q. What was your train haul price?—A. Thirty-eight cents.

Q. And what was your price for common excavation?—A. Twenty-one cents.

Q. And what was your price for loose rock?—A. Fifty cents.

Q. And your price for solid rock?—A. $1.50.

Q. So that the material in the big fill at Chipman would cost for earth fifty-nine cents and for loose rock eighty-eight cents?—A. The first part of the fill put in was put in from the west side from the borrow pit there about mile 59; we borrowed off the Toronto Construction Company’s work about 40,000 yards.

Q. What I am referring to is the cost to the Commission of that portion of this big fill at Chipman which was hauled from the two mile cut at Mile 51; whatever you hauled down there would cost what?—A. The excavation price plus the thirty-eight cents. 

Q. Which is common excavation, fifty-nine cents; loose rock, eighty-eight cents; solid rock, $1.58?—A. Yes.

Q. What proportion roughly was hauled down there from the big cut?—A. I think there was about 150,000 yards and perhaps more, I cannot say exactly as I do not remember.

Q. Anyhow you think there were over 100,000 yards?—A. Yes, over 100,000 yards.

Q. Did you grade the Y at Chipman?—A. Yes.

Q. Where did the material for that come from?—A. Some of it was borrowed right in the Y and some of it came from the first cut out from Chipman.

Q. But no considerable quantity of this Y grading came from the big cut?—A. No, the Y was practically completed before we opened that cut at all.

Q. In looking over the Y at Chipman I was surprised to find that you made such a long Y, do you know any reason why they should not make a Y there with an ordinary 10-degree curve?—A. I never gave that any consideration.

Q. The Y now is of such curvature that you could run it at thirty miles an hour without any trouble?—A. Yes, one leg is nearly straight.

Q. And the other is ordinary curvature that is used on main line track on many railways?—A. On many railways, yes.

Q. How did they happen to let an eight-mile contract when the other contracts were all for greater mileage?—A. Only from what I heard that they let fifty miles, and when they came to sign the contract... I understood though, when the contract was asked for, that the work was to extend to Chipman, and then when the notice said only fifty miles they ended their contract there which was six miles out of Chipman.

Q. So that it was a remnant that was not covered by the larger contracts?—A. I understood that the Grand Trunk Pacific or the contractors who had the contract for the fifty miles, asked the Commission that they take eight miles more, expecting they would get it, and give them access to the works from each end.

Q. But for some reason or other they stopped back at the fifty miles?—A. Yes.

Q. And that left this eight mile piece?—A. Yes.

Q. Did you have much trouble in getting this contract?—A. They asked for tenders.
Q. Did you have any trouble about it?—A. We tendered and found we were the lowest. Then some of them discouraged us, they thought we were too low and then Corbett & Floesch offered to buy us out.

Q. But you concluded to do the work yourselves?—A. Yes.

Q. I see that the original estimate amounted to $289,000, what did your last estimate show?—A. $587,000.

Q. Do you know Mr. McManus, why there was such a great difference between the original estimate and the final estimate? Do you know where that difference occurred?—A. I do not know, I did not see any first estimate, but I understand that the engineers did not estimate any rock in that eight miles, that is my understanding of it.

Q. You have no idea of the quantities the engineers figured in their original estimates?—A. No.

Q. Is there any other reason why the contract should have practically doubled the estimate?—A. I do not know unless it was mainly due to classification.

Q. And by that you mean that there was more rock discovered when the cuts were opened than they expected?—A. Yes.

Q. How did the final classification compare with what you expected for your different prices, did you get all the loose rock that was coming to you?—A. I do not think we got all the solid rock that was coming to us. Some of that which we called solid rock they gave as loose rock, but I think our classification was a very fair one. We were continually fighting for more classification and as we had differences with our engineer from the start we thought we were not getting sufficient.

Q. Is not that always the case on contract work with the contractors?—A. I do not know as to that.

Q. The contractors are always trying to get the best classification they possibly can?—A. Yes, that is natural.

Q. That is considered good business for a contractor?—A. Yes.

Q. But there is not anything that stands out particularly in your mind as to which you got higher classification than you thought was coming to you?—A. No.

Q. You said a moment ago that you should have received more solid rock, what do you mean by that?—A. There was one cut in this work that the ledge overlying what they called loose rock, ordinary material; the ledge was over the top of the cut, they called it indurated clay and gave us loose rock or hardpan. We claimed that as the rock formation was on the top, we should have rock to the bottom of the cut.

Q. Regardless of what material was underneath?—A. The rock was there first.

Q. But you didn't fight that very hard?—A. I tried to get it.

Q. I can understand, but you did not have a great deal of heart to try to make solid rock out of indurated clay?—A. It was kind of marl or fireclay. We had to blast it to take it out, but the moment you laid it in the air, it slackened like lime.

Q. Then, they did not make any mistake in classifying it as loose rock, that was low enough?—A. Oh, yes, it was low enough.

By Mr. Staunton:

Q. You have a claim, Mr. McManus, for overhaul on ballast?—A. Yes.

Q. What grounds do you base that claim on?—A. According to our contract as I understand it, the Commission furnished us with ballast pits on the work. There were no ballast pits within reasonable distance from our eight miles, and so we hauled ballast from the North River pit, and I had a verbal understanding with Mr. Foss, the district engineer, that he was going to pay us one cent a yard overhaul beyond the five miles.
Q. The same as is done in overhaul for borrow?—A. Train haul overhaul yes.

Q. The clause in the contract is 228 of the specifications, and it reads:

"228. The land for ballast pits and approaches thereto will be furnished by the commissioners and approved by the engineer. In selecting land for this purpose, a preference will always be given to those points where the best material can be procured within a reasonable distance as determined by the engineer. During the working of any pit, should the material be found unfit for ballasting, the engineer shall compel the contractor to close such pits and open others. The cost of clearing land for ballast pits outside the right-of-way and grading and laying the main branch track to pits (but not sidings in same), shall be paid for according to the general schedule of prices."

Now, clause 225 reads:

"225. Ballasting will include the loading, hauling, unloading, alongside of track, and transportation of all material hauled by train for the purpose of ballasting the track, said material to be duly accepted as ballast by the engineer. Ballast shall consist of broken stone, gravel, or coarse sand, approved by the engineer."

The item in the Schedule is No. 75:

"75. Ballasting—no overhaul allowed."

Now, those are the only clauses that I find in the contract referring to the subject, and I would like you to explain to me, if you can, how you came to infer that the Commission was bound to supply you with a ballast pit on the ground?—A. It says: "Where the best material can be procured within a reasonable distance as determined by the engineer."

Q. It says "Preference will always be given to these points where the best material can be procured within a reasonable distance as determined by the engineer." Certainly, the preference would be given if there are any such, but where there are no points where you can get ballast within a reasonable distance, you must still get ballast, must you not?—A. Well, I did not talk to Mr. Grant very much about it. I understood that he and Mr. Foss had a discussion about that, and I understood that we were entitled to a certain overhaul for ballast as it was costing us as much or more than we were getting for the delivery on the ground.

Q. As a fact you say there was no ballast along your contract?—A. There was no ballast along our contract.

Q. And you had perforce to bring that ballast to your contract how many miles?—A. Forty-five miles before we entered on our contract.

Q. Forty-five miles to the commencement of your contract?—A. Yes.

Q. So that some of it would be hauled over fifty miles?—A. Yes fifty-three miles, the average was about forty-nine miles.

Q. Do you know what that ballast cost you?—A. I cannot tell you.

Q. Did you never make a calculation?—A. I was figuring it as we went from day to day, you have the force accounts, and I think it is all there.

Q. But it cost you more than forty cents?—A. More than forty cents. You see we hauled it in the fall of the year and we could not leave the trains loaded over night. We hauled the most of it in November and December and we were afraid it would freeze on the trains if we left it over night.
SESSIONAL PAPER No. 123

By Mr. Gutelius:

Q. How many yards did you haul for the eight miles?—A. I think about 30,000 yards.

By Mr. Staunton:

Q. Have you any written promise from the engineer?—A. No, it was put in one estimate or two estimates. We got it one month in the estimate, that was the December or January estimate, and then in the spring of that year it was taken away from us again; it was cut out altogether.

Q. How much money do you think you will lose by it if you are not allowed?—A. I think the estimate is $6,800 for overhaul.

Q. It means $7,000 to you?—A. Yes, but that was only on part of it; we were allowed $7,000 on the overhaul for one month.

Q. Did you draw any surfacing from there?—A. I do not know, I do not think so.

Q. There is a clause here which allows you for surfacing:—

"221. Surfacing 'B' will include the cost of all train hauled material under the track, surfacing, lining and all other work incident to the preparation of the track for running work trains where surfacing is done with train hauled material other than ballast. The surfacing must be kept up with the track laying as far as possible. All new tracks must be brought to surface and tamped up before it is run over. Rails that are damaged by reason of neglect on the part of the contractor will be replaced at his expense."

A. The contract we were working on we surfaced with sand from Chipman.

Q. You have a small allowance made to you for what was called "assembled rock". 600 yards on the eight miles, do you know what assembled rock is; did you get an allowance on indurated material, clay and small stones put in as solid rock?—A. I do not know. In certain of the cuts this sandstone would throw out as boulders but it was in flakes and it would show out on the side of the cut as rock.

Q. Show out on the estimates as rock?—A. No, we made a claim for that but I do not know how much we got.

Q. Have you not heard of this discussion about assembled rock?—A. Is that in reference to that blue print of Mr. Lumsden's?

Q. Yes?—A. Yes, I heard of that.

Q. Did not that assembled rock go down to your line at all, did it appear on your contract, to your knowledge?—A. Not that I remember.

Q. Did you, or did you not, try to get from the engineers small stones and cemented material in combination passed as solid rock?—A. No.

Q. Then if you are given stone smaller than a yard and cemented material as solid rock, it was not through any effort of your own that that was called solid rock?—A. The only claim I made was for what we usually call boulder measurement, that would show up in the cut as ledge.

Q. It is sandstone?—A. Yes.

Q. Why did you try to get that in as boulders?—A. It would show up in the face of your cut perhaps four or five feet wide and a few feet high, and go along five or six feet and disappear altogether. There would be nothing to show after the work is finished that there had been any rock there at all.

By Mr. Gutelius:

Q. These were all pieces of rock larger than a yard that you claimed boulder measurement for?—A. Yes.

Q. And if the pieces were smaller than a yard you knew they were loose rock?—A. We made a claim for it.
By Mr. Staunton:

Q. You made a claim for big or small?—A. No, not for small.
Q. That country down there has no hard boulders in the work; what you see all through the place was little junks of hard sand?—A. No, it was sandstone.
Q. Well, of sandstone through the sand?—A. No, it was in hard material, hard clay material.
Q. But you got allowed as solid rock those pieces of sandstone that were less than a cubic yard?—A. I do not know.
Q. Were they not generally less that a cubic yard, you got 610 yards of assembled rock and 94,000 yards of solid rock—in that solid rock how much of this sandstone was there?—A. It was practically all sandstone formation there.
Q. I do not remember seeing any stone there that was not sandstone; was it not all fragmentary sandstone?—A. It was ledge.
Q. It was not ledge as spread out beyond your contract?—A. Do you mean beyond the sides of the cut?
Q. Yes?—A. Oh yes, it was ledge.
Q. Where did you get the small fragments?—A. There are certain of the cuts there that were clay and through these cuts you would find that sandstone.
Q. Did that wandering sandstone amount to much?—A. Apparently, it was over 600 yards; there was quite a bit of it.
Q. There was not quite a bit of it that was over a yard?—A. It lay along in trenches, I can show it to you on the work a good deal easier than I can explain it to you.
Q. The point I am asking you is, was it in large or small pieces?—A. It was not in large pieces but I think there were pieces as large as this desk, over a yard.
Q. You say most of it was over a yard?—A. I cannot say that.
Q. Were the pieces of fragmentary sandstone small pieces, generally, or were they large pieces over a yard generally?—A. I cannot answer that, I do not know.
Q. From what you saw, what do you think?—A. I think we are entitled to all we made claim for.
Q. That is not the way I am asking you, were you entitled to all you were allowed?—A. I do not know.
Q. You may not have claimed it, they may have put it in under a misapprehension or under a misconstruction of the specifications; and Brer Rabbit he say nothing; may not that have been the result?—A. I do not know.

By Mr. Gutelius:

Q. You did not get all you claimed?—A. We did not get all our claims.

By Mr. Staunton:

Q. Of the sandstone?—A. Of the ledge as boulders.
Q. Did you ever get a copy of the opinion of the Minister of Justice on your claim for overhaul of ballast?—A. I don't remember that we did.
Q. Were you informed that he had given an opinion stating that you were not entitled to it?—A. Yes, I think that is the reason we did not get it.
Q. Had you any understanding, verbal or otherwise, with the engineer before you hauled this material, that you would be paid for overhaul?—A. Yes, we had.
Q. What was that understanding and with whom was it?—A. Before I hired the outfit, that is the engines and cars to haul this ballast, I had a talk with Mr. Foss and I asked him if he was to pay for overhaul on the work, and he said: Why certainly, the same as train haul, as I understood it, and as he awarded it to us on the first estimate.
Q. You were paid, you told Mr. Gutelius, for train haul in certain cases the common excavation price plus the train haul material price, were you not?—A. Yes, as the train hauled material price was considered as overhaul.

Q. Now when you take out common excavation, your labor in connection with it is to remove it from its place on your carts and then dump it either on the way or as waste?—A. Put it in the dumps or waste, yes.

Q. Now in train hauled material, your contract is to remove that from its place, put it on the train, and haul it and deposit it along the way?—A. To make up fills, yes.

Q. Your price for train-hauled filling is 38 cents. Now, if it became necessary to use trained-hauled material, you would have to go to the ground, dig it up, put it on the train and haul it five miles for 38 cents and there deposit it on the road, is not that right?—A. Yes.

Q. Now why should you be paid the two prices?—A. You see the fill was across the river over at Chipman. To make up that fill they would have to go on to the west side as the borrow and the material we had to borrow was a hard kind of material. It would cost them more money than to pay us the overhaul price plus excavation price from the cut.

Q. But the point I make, Mr. McManus, is this: it makes no difference where you get the train-hauled material, whether it comes out of the line itself or out of the ballast pit, your labor and expense are the same, that is, if the borrow pit is as close as the place where you take it out of the line cut?—A. Yes.

Q. As a fact you contracted with the Commission for 38 cents, plus mileage for material carried by train and deposited on the line, did you not?—A. Yes.

Q. And you contracted with the Commission for material which is known as common excavation moved on the line for 500 feet at 21 cents?—A. Yes.

Q. Now, if you had not train-hauled that common excavation, you would have had to move it for 21 cents?—A. I would have to move it from this cut in the spoil pit and then I was entitled to a cent a yard for every one hundred feet beyond the 500 feet haul.

Q. Let us study that out. . . . you have, we will say, 1,000 yards of common excavation that you have no use for and that you propose to move into the spoil bank and that spoil bank is within 500 feet of the place where you were taking it out of the line cutting. Now then, the engineer comes along and says: Mr. McManus, instead of depositing that in the spoil bank, carry it down the line on the train forty-six miles and deposit it on the line. You carry it down the line. The only extra cost you are put to is for hauling it by train that extra distance, is that right?—A. Yes.

Q. Then they give you 38 cents for material, hauling that on the train five miles, because all the other expense you were put to anyway, is common excavation?—A. Yes.

Q. Now, what justification is there to give you 38 cents for hauling it that distance?—A. I do not know. From the understanding of my contract I could pull it out on to the spoil bank and they could borrow to make a fill on the other side.

Q. But they could come to you and say: Mr. McManus, we want you to take that out as train haul, we won’t allow you to spoil that?—A. Then I guess they would have to pay me extra as train-hauled fill.

Q. They would pay you just on the train-hauled fill alone. The material removed by you is called common excavation when it is taken out and moved along within the 500 feet and deposited on the track or put in the spoil bank. The material is called train-hauled when it is put on the train and moved by the train. That is the only distinction between the two?—A. No, as I understand your contention there would be no classification in any cut, you would not be able to make any classification of loose rock or solid rock in a cutting?
Q. No, I say that any material that is carried by train is train-hauled and should come under that heading, but why you should drag in the other heading and put them both together, I cannot understand. You see the train-hauled filling, as interpreted by me, in this specification is for any extra filling to bring your cuts up to grade. You get a price for the train-hauled filling, but your line cuts have got to be excavated any way as classified. Therefore, if they make you haul line cuts anywhere, they are supposed to pay you one cent a yard for every 100 feet over 500 feet. When they make your haul five miles from the line cut they said the overhaul clause would not cover it and they made the other arrangement.

Let me read this, clause 224 X reads:—

"224 X. Where there is not sufficient material suitable for making embankments by men and teams within reasonable haul, of which the engineer shall be judge, and it becomes necessary to make use of the track laid at the expense of the commissioners to haul material for such purpose by train either for the widening of embankments to their full width or raising them to their full height, or for the purpose of filling temporary trestles the contractor will have the use of the commissioners’ rails, fastenings and necessary switches for such purpose, it being understood that the track-laying will only be paid for once by the commissioners, and that any damage to rails, fastenings, or switches while in such service shall be paid for by such contractor to the commissioners, or the commissioners may deduct it from the monthly or final estimate due, or to become due to the contractor. The price given in the schedule for such train-hauled filling shall include the cost of all temporary trestles which the contractor may require, which he shall erect according to his own plans and at his own cost and risk, and all tools, plant, material and labor necessary for the loading, hauling, putting in place and trimming, as directed by the engineer. The limit to which the contractor will be called upon to haul such train-hauled filling at the price stated in this schedule will be five (5) miles; beyond such distance a price of one cent (.01) per yard per mile will be paid him, the measurement of such haul being made to the nearest mile, one-half mile or over counting as a full mile. Measurements of all train-hauled filling will be allowed on train-hauled filling from borrow pits."

Now, that applies, without any exception, to all material which you put on the train and haul, does it not?—A. No.

Q. I would like to know why it does not?—A. You see the line cuts are taken out with a steam shovel and trained. The stuff you load from these cuts on the train would not be termed train-hauled filling, but the excess, to make up the rest of your dump, after you borrow outside of your line cuts, would make your train-hauled filling.

Q. But all the material which you call train-hauled filling is material that you take out of its original position, put on the train, and haul to a given point. Now, you have to bear all that expense for thirty-eight cents, but when you take it out of the line, you say: now, I will charge for the common excavation price and I will also charge for the train-hauled filling price. So you are paid for taking that out of the ground and moving it by your trains twice?—A. No.

Q. Start from the other end of it. . . the line excavation is your classified material and your common material, you have to excavate your line cuts. If you move that 500 feet you get overhaul, if you move that up to 4,300 feet you get 38 cents in regular overhaul price. In this train-hauled filling you charge for
the train-hauled full price and the common excavation price. Why don’t you also charge the common excavation overhaul price, too? I don’t see if you get one why you should not get the other. You are getting a double-headed charge for this anyway?—A. No, I am not.

By Mr. Gutelius:

Q. Is there anything which as a contractor you would like to lay before this investigating committee that has not been brought out in the questions so far?—A. Can I add a reference to pipelaying. They made a unit charge at so much a yard and so much a running foot for laying pipe, and they gave us an extra work order to do it. Then, since we finished our work they took and changed it all back into common or line cutting price.

Q. The price you thought you were getting for these ditches was considerably higher than your line-cutting price?—A. Yes.

Q. Did you get a work order which showed what those ditching prices are to be?—A. Yes.

Q. And that paper was signed by whom?—A. I do not remember, you have it here, probably the chief engineer, it came from Mr. Foss.

Q. And in good faith you carried out the work expecting you would receive a higher price?—A. Yes.

Q. And after the work was finished?—A. They changed back to line cutting price.

Q. Do you remember what these ditching prices were?—A. We had, I think, 50 cents for common excavation, $1.00 for loose rock, and $2.00 for solid rock, together with the price of common excavation, 21 cents for back filling.

Q. And you were given that on your progress estimates?—A. Yes, we were paid, and it has been taken away from us. They have changed it back to 21 cents for common, fifty cents for loose, $1.50 for solid in trench, and back filling 21 cents. I think that the pipe-laying should be the same as foundation excavation price if we laid the pipe under the track. If we laid the pipe under the track, twenty-four inches or any kind of an outlet, with a culvert pipe, we would be paid foundation excavation price for that. Now they take us off the main line out into the woods about 800 feet and they expect us to do it for the ordinary line cut price.

Q. This was a waterpipe line?—A. Yes, for the tanks.

Q. At what station?—A. At Chipman.

Q. Did you do this with your own force account or sublet it?—A. We did it with our own force account.

Q. How much money roughly was involved in that reduction?—A. $2,000 or $3,000.

Q. And that is a claim that is now before the Commission?—A. Yes.

Mr. Gutelius:—I think I may say that justice will be done you when the matter is finally settled.

End of examination of witness.
(NATIONAL TRANSCONTINENTAL RAILWAY ENQUIRY COMMISSION.)

OTTAWA, JANUARY 23rd, 1913.

Present: - G. Lynch-Staunton, K.C., Chairman; F. P. Gutelius, C.E.

John D. McArthur, sworn:

By Mr. Staunton:

Q. You are the J. D. McArthur of J. D. McArthur, Limited, are you not?
   A. Yes.

Q. Who are your associates in that company?
   A. There are two or three boys in my office.

Q. It is just a one-man company?
   A. Practically.

Q. Has any person got any substantial interest in the company except yourself?
   A. No.

Q. What is the capitalization of the company?
   A. One million dollars.

Q. Do you own the whole million dollars' worth of stock?
   A. Except just two or three shares.

Q. I understand you to mean that the other members of the company are mere nominal shareholders?
   A. Yes.

Q. You wrote a letter to the late Mr. S. R. Poulin, district engineer of the Transcontinental Railway, dated at Winnipeg, February 10, 1910, in which you state that you are in receipt of estimate sheet for the months of January and February (1910); these sheets show deductions to the amount of about $185,000 from notes and estimate sheets; these deductions are made by the order of the chief engineer and we presume the reduction is made for overbreak; we consider this question of overbreak settled at a meeting held in Kenora on February 8, 1907, when Mr. Lumsden, chief engineer, Charles Young, one of the commissioners, and all the divisional engineers were present; the matter was gone into fully then and Mr. Lumsden agreed to allow overbreak as solid rock. Now, was that letter written by you, Mr. McArthur?
   A. I think that was written by the engineer.

Q. It is signed, "J. D. McArthur & Company, by R. A. H."—who is he?
   A. R. A. Hazelwood.

Q. He was your engineer?
   A. Yes.

Q. You say that letter was written by him?
   A. It was written by him, I believe.

Q. Were you present at Kenora at that meeting?
   A. Yes.

Q. Will you tell us from your recollection who were there?
   A. The chief engineer, Mr. Lumsden was there, and Hodgins, the district engineer, and the divisional engineers, A. G. Macfarlane, and McIntosh, and Reehan, and another; the divisional engineers were there anyway.

Q. What was the meeting called for?
   A. The meeting was called for when the men that were doing the work were complaining that they were not getting their estimates for the overbreak.

Q. A complaint had been made then by the contractors or sub-contractors?
   A. Well, from the subcontractors to the contractors.

Q. That they were not getting a just allowance for overbreak, is that it?
   A. That they did not get anything in their monthly estimates for overbreak.
Q. And this meeting was for that purpose?—A. For what purpose, for the purpose of discussing that question?
Q. For the purpose of discussing and settling the overbreak?—A. Yes.  
Q. That was in February, 1907, how much work had been done at that time?—A. I cannot tell you offhand.  
Q. I am only asking you approximately, because we have the record?—A. It was certainly small, compared with the total work.  
Q. Only a small amount of work comparatively speaking had been done then?—A. Yes.  
Q. And you met there for the purpose of discussing and arriving at some understanding with respect to overbreak. Was that the idea?—A. Yes.  
Q. What happened at the meeting?—A. That was discussed and settled.  
Q. I want you to tell me the discussion; I want you to tell me what occurred, we will draw our own conclusions, did you say anything?—A. No, I do not think I did.  
Q. You had no complaint then personally?—A. Not as much as the men who were doing the work.  
Q. Who made any complaint?—A. All the other contractors.  
Q. Tell me one?—A. There was Chambers Brothers.  
Q. What did Chambers Brothers say?—A. They wanted to pull off the work.  
Q. What for?—A. On account of that they would not get any overbreak. If that were continued they would have to throw up their job.  
Q. At that time, as I understand you, the engineers took the position that the contractors were not entitled to any overbreak. Is that the point?—A. That they didn't have any instructions.  
Q. To allow any overbreak?—A. To allow any.  
Q. And none was being allowed?—A. None was allowed.  
Q. Then you say there was a general complaint that there was no overbreak allowed?—A. Yes.  
Q. What did Mr. Lumsden say?—A. Mr. Lumsden gave instructions to Major Hodgins to allow overbreak.  
Q. Did he give him a standing order to allow overbreak, or what occurred?—A. As I understood, it was left with the resident engineer.  
Q. To do what?—A. To use his judgment.  
Q. That was not giving him any more discretion than he always had; he was to use his judgment in any case?—A. Yes, but still he had no authority to return any overbreak.  
Q. Then you say that Mr. Lumsden gave him instructions to use his judgment, that does not carry us any distance?—A. To pay for overbreak and return it in the estimates.  
Q. Return what overbreak?—A. Whatever he thought was just. The road could not be built unless it was allowed.  
Q. You had a contract yourself with the Government for building a portion of the road?—A. Yes.  
Q. Now, in that contract, your allowances are provided for; what you are to be paid for is provided for in that contract, is it not?—A. Yes.  
Q. And you and the subcontractors were claiming you were entitled to overbreak?—A. Yes.  
Q. And Mr. Lumsden told the engineer, as I understand you now, to make you such allowances for overbreak as you were entitled to under the contract?—A. I do not think it was put in that way.  
Q. If you will not tell me what his words were, I will try and suggest to you what appears to be the natural thing for him to do. I would like you to tell me what occurred. You make certain statements in this letter and I want you to tell me what was your understanding of what occurred at that meeting?—A.  

I am just trying to tell you that what occurred at that meeting was that they came to a conclusion they would pay for overbreak and they instructed the engineers to return it in the estimates and pay for it.

Q. Were you to get all the overbreak you had, no matter under what conditions it was made?—A. That was left for the engineer.

Q. To find out what was proper?—A. Yes.

Q. If you were to put in outrageously large shots and piled up large quantities of overbreak that were improper and unnecessary, do you think he had instructions to allow you that?—A. That was some years ago and it was on a work that I cannot account for at all; I was not there when they were working.

Q. I am not saying the contractors did so, but I want to know whether Mr. Hodgins had instructions from his chief to allow you unnecessary overbreak?—A. I do not think he put it in them words.

Q. Would the chief engineer's words lead anybody to conclude that that is what he did?—A. No.

Q. He was to make proper allowances for overbreak, would not that be the way to put it?—A. As I understand overbreak, that occurs and it cannot be accounted for till it happens. slides in cuts, you take a shot and there will probably be fifty yards slide down at the side of the cut.

Q. That is slip and slide?—A. Yes.

Q. That was what he was to allow?—A. That was what he was to allow.

Q. You see the word "overbreak" is not used in the contract, that is a term that contractors and engineers use, but the word itself is not used in the contract. But in Section 37 of the specifications, it says:

"37. Material in slips, slides and subsidences extending beyond slopes in cuttings will not be paid for unless, in the opinion of the engineer, such occurrences were beyond the control of the contractor and not preventable by use of due care and diligence."

You are familiar with that section?—A. I am.

Q. The contractors were contending that on the contract there was material which came within that description, not allowed for, and they called it overbreak, is not that right?—A. Yes.

Q. But it was not contended that the engineer should allow something that was not authorized by the contract, was it?—A. Well, it was left with the engineer.

Q. To use his judgment and make such allowances as were proper under that clause?—A. Yes.

Q. Now if the contractors put in unreasonably large shots and blew out unnecessary quantities, you would not expect to be allowed for that, would you?—A. No. I think they tried to protect themselves from anything of that kind.

Q. You would not expect that to be allowed if the shots were unnecessary and unreasonably large quantities were thrown out?—A. Well, that is a question that comes under the heavy shots: I do not know whether they were heavy shots or not.

Q. We are not talking about what occurred on the work. I am talking about what occurred at this meeting: did Mr. Lumsden tell them they were to allow the contractors where the shots were too heavy and the material was unnecessarily blown out?—A. I do not recollect that being discussed.

Q. I should not have thought it would have been, but you say the contractors contended they were entitled to be allowed for overbreak under the contract and they were not getting it?—A. Yes.

Q. And instructions were given by the chief engineer to the district engineer to give them proper allowance?—A. The pay for overbreak was left to the engineer as the best authority to say what he thought was just.

Q. Is that all that occurred at the meeting?—A. That is all. that is what the meeting was for, that was the grievance.
Q. You say in this letter that overbreak was to be allowed as solid rock?—
A. Yes.
Q. You know how the overbreak under the contract is to be classified, do you not; it is to be classified as in the condition in which it falls into the cut after the shot, that is right, is it not? Section 38 of the specifications says:—
"38. The classification of material from slides shall be made by the engineer, and will be in accordance with its condition at the time of the slide, regardless of prior conditions."
A. That is just in slides and slips.
Q. Yes, that is to say that where there is a slide or a slip he is to go and look at the material after the slide or slip and see whether it comes within the solid rock or the loose rock class, and allow accordingly, is not that right?—A. Yes, of course there might be some loose rock come from the top of the cut you know, very often there is two or three feet of material or more, like that.
Q. So that he should not allow solid rock for small stones under a yard, should he?—A. Oh yes, we never expected but what we would get paid for anything that was all rock, even though it broke very small. It was solid rock in the first place and it was broken up. There might not be a yard in it after it was broken up.
Q. Why should you be allowed for that, when the contract said you should not?—A. It cost us more money to handle it than if it was two yards or five yards.
Q. Why should you be allowed for it when the contract said you should not?—A. There was only a small percentage of that.
Q. Whatever percentage there was under a yard in size, all these pieces of rock should be put in as loose rock, should they not?—A. I do not think it should.
Q. How do you get around the contract?—A. I do not know how you are going to get around it or anything of that kind, I am just speaking as a contractor moving rocks which cost me more money to move it.
Q. It may have cost you more money, I do not know anything about that, but when you make a bargain that states definitely that slips and slides must be classified in the shape in which they exist after the explosion, you surely do not expect it to be classified as it existed before the explosion?—A. I do.
Q. Notwithstanding the contract?—A. Notwithstanding the contract.
Q. You are an old contractor, are you not?—A. That is what they say.
Q. Were you ever on this contract yourself?—A. I must say that I was not.
Q. Did you do any of this rock work yourself?—A. No.
Q. Sublet it all?—A. Yes.
Q. You made contracts with your sub-contractors for this work in writing, did you?—A. Yes.
Q. Were those contracts similar to the contracts you made with the Government?—A. Yes.
Q. So that the sub-contractors had only the same rates as you had?—A. That is all.
Q. And they were only entitled to have slips and slides classified as against you in the same way as you were entitled to have it classified as against the Government?—A. Yes.
Q. I suppose that you have studied this specification?—A. No, I think not.
Q. Have you submitted it to your lawyer for advice on its meaning?—A. I have, this last eighteen months, when the work was finished.
Q. You knew though, at the Kenora meeting, that up to that time somebody thought you ought not to get overbreak?—A. That was the attitude that the engineers took.
Q. I thought at that time you submitted it to your Winnipeg lawyers, I think I saw a letter about it, Mr. Wilson was your lawyer in Winnipeg?—A. Fisher Wilson, yes.

Q. Did you not submit it to them at that time?—A. I might have done that, but I cannot tell you offhand.

Q. Fisher & Wilson did write the Commission for you, did they not?—A. Yes.

Q. Do you remember what they wrote about?—A. I do not.

Q. Who were your sub-contractors who were interested in the overbreak?—A. Chambers Brothers and McCaffrey, W. A. Dutton, it was Dutton & McArthur, but Dutton was really the man.

Q. Is McArthur, J. D. McArthur?—A. No, another one. There was Guy Campbell, Olsen & Larsen, and Wardrope, and James Walsh, and Anderson Johnston, and then there was what they called the Eastern Walsh Company. That was the bulk of the contractors.

Q. Have you settled with these people?—A. No, there are four or five I have not settled with.

Q. Have you settled with Chambers?—A. No.

Q. Have you settled with Dutton?—A. No.

Q. Have you settled with Campbell?—A. No.

Q. Have you settled with Olsen?—A. No.

Q. Have you settled with Wardrope?—A. Yes, I settled with him.

Q. Have you settled with Walsh?—A. Yes, he is settled with.

Q. Have you settled with Anderson & Johnston?—A. No, they are not settled with.

Q. Have you settled with the Eastern Construction Company?—A. No. There is a little fellow named Charlie Patterson.

Q. Is Patterson settled with?—A. No.

Q. There are eight of them outstanding?—A. Yes.

Q. Have they large claims against you?—A. Yes.

Q. Have you settled with them for this overbreak?—A. I settled with them all along as we were getting our monthly estimates.

Q. I know that, but did you settle with them all along, because they would have only 10 per cent left if you did?—A. That is all they have.

Q. Do you mean to say that these men have got all that is coming to them except the 10 per cent hold back?—A. Do you mean the estimates with the arbitrators' cut?

Q. No. I asked you if you paid them the estimates to date for the whole claim?—A. I have.

Q. From these estimates were deducted what you call the arbitrators' overbreak, was it not?—A. No.

Q. They didn't allow that to them?—A. Yes, in the first estimates.

Q. Have they been all paid by the Government for that overbreak?—A. Yes.

Q. That is all paid?—A. Yes.

Q. And what claim they have now is the 10 per cent hold back?—A. Yes.

Q. That is the whole matter?—A. Yes.

*By Mr. Gutelius:*

Q. And the amount deducted from them by the arbitrators.

*By Mr. Staunton:*

Q. Have you paid the amount of the arbitrators' deduction?—A. Yes.

Q. So that the sub-contractors have no claim whatever against the Government except for the final ten per cent?—A. That is all.
SESIONAL PAPER No. 123

Q. I want to understand this, let me put this question: The arbitrators were Mr. Grant, now chief engineer of the Transcontinental, Mr. Kelliker, chief engineer of the Grand Trunk Pacific, and Mr. Schreiber?—A. Yes.

Q. When did they go over the work?—A. About two years and a half ago.

By Mr. Gutelius:

Q. Was the work about finished at that time?—A. When they went over for the last arbitration, the work was just about finished.

Q. The rock excavation was about completed?—A. Oh, yes, that was completed. I thought you meant the whole line.

By Mr. Staunton:

Q. That was the second arbitration. they took about $400,000 off you?—A. Yes, more than $500,000.

Q. Which they said was not properly allowable under the contract?—A. Yes.

Q. The arbitrators went over the ground before that?—A. Yes.

Q. Who were they?—A. The same parties.

Q. When did they first go over the ground?—A. I think it was in the spring of 1909.

Q. What did they do that time?—A. They went over the work but there was no report and no deduction came in.

Q. Did they direct that deduction should be made?—A. I do not know that, I never was notified.

Q. Did the engineers act differently after the arbitrators went over the first time?—A. No.

Q. Was the work all done then?—A. Practically.

Q. You say all this work was completed before 1909?—A. A very great deal.

Q. The rock excavation?—A. Yes.

Q. Now, after the second arbitration, the Commission cut your estimates so as to deduct from you the amount the arbitrators said you were not entitled to?—A. Yes.

Q. And that amount has never been paid you?—A. They took off a percentage.

Q. And an amount equal to their deductions is being retained from you?—A. Yes, they kept my percentage back and cut this overbreak off it.

Q. What you say is that they went on paying estimates up to that time and that you got allowed overbreak without any deduction?—A. Yes.

Q. The arbitrators then came along and said, it is not proper to make allowances for this overbreak and they took off $400,000 from you?—A. Yes.

Q. And that is what you are objecting to?—A. Yes.

Q. Now, the engineers in the field did not deduct anything for overbreak?—A. Oh yes.

Q. Did they in the beginning?—A. No.

Q. They allowed you all the overbreak that occurred on the line?—A. I expect they did.

Q. Have you ever seen that work yourself?—A. Not very much while they were grading it.

Q. Have you seen it since?—A. Yes, I have been over the lines since the rails were down.

Q. There are some pretty wide cuts on it?—A. Yes.

Q. There is a lot of waste is there not?—A. Very little waste.

Q. Do you remember District F, Mile 5.8, Residency 19, just near the junction; here is a picture which shows an enormous piece of rock which stands
out of the ground about 18 feet and blown out into the side, don't you think it would take some shooting to do that?—A. Is not that more than five miles from the junction?

Q. It is over five and a half miles. Do you remember that big monument there?—A. Is there a ravine running below?

Q. Yes?—A. That was on Swanston's work.

Q. I do not know whose work it is on?—A. There is a cut down there, but I thought it was further west of the junction.

Q. Don't you think that would take a lot of shooting to throw that out?—A. Yes.

Q. Do you think they ought to get allowed for that?—A. If it is the cut I have reference to, but I thought it was further west on the line than that, if it is the cut I have reference to, you have seen it, Mr. Gutelius, it is a big cut and there is a ravine away below it.

Q. Here is the cut with the ravine below it, it is another picture?—A. That is the only thing I objected to on the line, was that one.

Q. But this big one here, didn't you object to that?—A. I must say that I cannot recollect that.

Q. You can see the size of that stone by comparison with the size of the persons standing around and the trees, could you think there is any justification for blowing a great big stone like that from the side of the cut?—A. It depends on how it was lying, very probably; it might be that it could not be moved or touched at all without throwing it there.

Q. It is not a boulder though, it is ledge rock?—A. Side work is different.

Q. This is not side work, it is right out of the cut, you would not expect that fellow to come out would you?—A. I would suppose they would adjust it as they were going on with the work.

Q. If by putting in big shots they did throw stuff up like that, do you think it should be allowed if the material was required in adjoining fills; that is clean waste of overbreak. I do not mean in the cut, clean waste of the overbreak?—A. That is the way I feel about it.

Q. Do you think that should be allowed?—A. No, that should not be allowed.

Q. And what would you say about that at Mile 24.6?—A. That is the ravine I refer to. I would say that certainly should not be allowed. That was intentionally done.

Q. Now, the arbitrators made these deductions because they thought it was improperly done?—A. I do not know what their intention was, I did not take any part in it at all.

Q. Do you think that three gentlemen of their standing and experience would make a deduction of nearly half a million dollars for unnecessary overbreak, if there was not some very good reason for it?—A. I claim that it was not all unnecessary overbreak, that it went into the work.

Q. But Mr. McArthur you could not go over that work as a fair-minded man and say that there is not unnecessary overbreak, could you?—A. I think there is very little overbreak there but what was used.

Q. I am not speaking about whether it was used or not, could you, as an honest man say, with your knowledge and experience as a contractor, that there is not a great amount of unnecessary overbreak on that contract?—A. At first we were pushed with the work.

Q. We will come to that after. I will give you a chance to show excuses for it, but I ask you a straightforward question as an honest man, and an experienced contractor: can you say that there was not a large quantity of unnecessary overbreak on that contract?—A. Well that is a question that creeps in in the answering of it, right with another, and that is that a lot of that overbreak was done because it was wanted in the work.
SESSIONAL PAPER No. 123

Q. That is a matter for us to discuss afterwards.

Mr. Gutelius:—He could answer yes, and then say that they expected to get paid for it because they were going to use it in the fill.

Mr. McArthur:—That is correct.

By Mr. Staunton:

Q. Then, if it was not to be used in the fills, you admit that there was a lot of unnecessary overbreak?—A. What is that?

Q. Suppose they did not want to use it in the fills, would there be any justification for the great quantities of overbreak there were in that contract?—A. Of course that is a matter of engineering and how this rock lay.

Q. It seems to me it was a matter of engineering by the fellows who were putting in the shots. I am asking you that question and I want you to give a candid answer. If there had not been any use for that overbreak, would there have been any justification for the great quantity that is there?—A. You are talking about shots now, and that is a thing I do not know anything about. I never saw a shot in my life.

Q. You have great contracts and you are a contractor of great experience?—A. The men were on the work and the men doing the work had a great deal more experience than I had.

Q. You have been on work in your time?—A. I was not on this work.

Q. You have seen a lot of work done?—A. Most of my work was dirt work.

Q. This contract shows over 40 per cent and 50 per cent of overbreak. Was there ever on the American continent such great quantities of overbreak as on this road?—A. I do not know that.

Q. You cannot point me to any other similar case, can you?—A. I do not know.

Q. If you don't know, who would, can you justify this overbreak on any ground, except that it might have been wanted in fills?—A. That is the point.

Q. What do you say about that point?—A. I say if it was wanted in the fills, that would justify it so far as the overbreak was concerned, and it would remove any objection to paying for it, if the rock was wanted.

Q. But if the rock was not wanted and you had to pay for it, would there be a strong objection on your part?—A. If the rock was not wanted, there is room there for an argument.

Q. What do you mean by saying there is room for an argument?—A. If there was a case of overbreak from heavy shooting, and it was thrown out at the end of the dump and wasted.

Q. Then it ought not to be paid for?—A. I mean it should not probably be paid for at the rate per yard that we were getting, unless it was slip and slide.

Q. Oh, yes, of course. What is a reasonable percentage of overbreak?—A. I do not know.

Q. You do not know?—A. No, I do not.

Q. I am told that about 12 per cent is a reasonable percentage for overbreak, what do you think of that?—A. I do not know; I never had that experience.

Q. These three arbitrators ought to know, ought they not?—A. They ought to know what?

Q. What is the fair allowance?—A. Well, the overbreak was there. Of course, I do not see how they could come in at that stage of the game and cut down so much overbreak.

Q. Why should not they; they saw the cuts?—A. Yes.

Q. And they saw the rock that was taken out?—A. Yes.

Q. And they saw the condition in which the cuts were left?—A. Yes.
Q. Now, these men know how that kind of rock should be treated, don’t they?
A. Well, it is the men that are on the work; they know the conditions at the
time.
Q. Yes, but conditions don’t change in rock you know. People may say they
change in earth exposed to the air, but rock is everlasting and stays the same, does
it not?—A. Yes.
Q. Now then, a man that is going to put a shot in, when he looks at the rock
that he is going to blow out, he ought to know about how much powder to use?—
A. They claim they do.
Q. And if he ought to know before he puts in the shot how much powder he
should use, surely great engineers like these men should know how much powder
should have been used on that amount of rock?—A. I do not know if these men,
even if they had experience, had ever done any of that class of work themselves.
Q. But should they not know? Mr. Kelliher is chief engineer of the Grand
Trunk Pacific and has had large experience, has he not had?—A. I do not know
what experience he had before he came on the Grand Trunk Pacific, but he has had
a large experience on the Grand Trunk Pacific, there is no question about that.
Q. Mr. Grant has been a railway engineer for twenty-five years?—A. Yes.
Q. And he has had large experience?—A. Yes.
Q. And Mr. Schreiber is I suppose one of the oldest and most experienced
engineers in America?—A. He is one of the oldest.
Q. He has had great experience has he not?—A. Yes.
Q. These men are fair-minded men are they not?—A. I do not know.
Q. Why should they be prejudiced?—A. One reason why they should be
prejudiced, a man like Mr. Kelliher he wanted to get the road built for less money,
and if he took a thousand yards out of a cut it was so much less.
Q. You say that Mr. Kelliher’s business was to get the road built for as little
money as possible, and if that be so, then Mr. Grant’s business was to put all the cost
he could on the Grand Trunk?—A. I do not know about that.
Q. Is not that right; Grant wanted to put all the expense he could on the
road when the Government had to pay for it, and the Grand Trunk make a return
in interest?—A. I do not know that.
Q. Well, if you know one thing you ought to know the other. If Mr. Kelliher
was prejudiced on one hand, there would be the same reason for Mr. Grant being
prejudiced on the other.

By Mr. Guteilus:

Q. If a large amount of money was spent on that work, Grant wanted to make
sure that the Grand Trunk Pacific would pay interest on that money rather than
to leave an opportunity for the Grand Trunk Pacific to say: no, we won’t pay on that.
That would be an incentive that would make Grant stand up for practically all the
work that had been done. Grant must have been your friend on that Commission,
I mean in the sense that, representing the Government, if the Government had to
pay he did not want to give the Grand Trunk Pacific a chance to slide out?—
A. He is chief engineer of the Government.
Q. You say that Kelliher wanted the work done as cheaply as possible so that
the Grand Trunk Pacific would have to pay interest on as small a sum as possible;
is that right?—A. Yes.
Q. Now then, on the other hand, Grant wanted to make the Grand Trunk
Pacific to pay as much interest on as much of the money spent by the Government
as he could possibly make them pay; is that right?—A. No; I do not say that is right.
Q. Why?—A. I suppose it would be his interest to see that the Grand Trunk
should pay interest on all that the road cost.
SESSIONAL PAPER No. 123

By Mr. Staunton:

Q. You say they paid for this overbreak at that time, and so Grant wanted to load off all he could on the Grand Trunk, did he not?—A. I suppose so.

At the afternoon session of the Commission, when the examination of the witness, Mr. J. D. McArthur, was continued, Mr. McArthur was represented by Mr. John H. Moss, K.C., of Toronto.

Examination resumed.

By Mr. Staunton:

Q. Referring to the arbitration that we were speaking of before lunch, that arbitration was to settle difficulties between the Grand Trunk Pacific and the Commission?—A. That is what I claim.

Q. That is what you understood?—A. Yes.

Q. The contractors were not parties to that arbitration?—A. No.

Q. Under the Transcontinental Railway Act, questions in dispute between the Company and the Commission, which cannot be otherwise settled, are to be referred to an arbitration?—A. Yes.

Q. You understand that this was the arbitration under the statute?—A. I do not know anything about the statute.

Q. Under the Transcontinental Railway Act?—A. Yes.

Q. I believe you refused to take part in the arbitration?—A. Yes.

Q. You wrote a letter to the Commissioners that it was not your concern?—A. Yes.

Q. Did anybody on your behalf accompany the arbitrators?—A. No.

Q. Was your engineer with them?—A. My engineer was with them part of the way anyhow, because he was engineer and superintendent of the road; our engine was pulling their car.

By Mr. Gutelius:

Q. He did not take part in the discussion?—A. No.

By Mr. Staunton:

Q. Did you get a copy of the arbitrators' finding?—A. Yes.

Q. Do you remember how much money they took off?—A. In the second arbitration it was over $500,000 or nearly $600,000.

Q. That was in deductions for what they claimed were unnecessary overbreak?—A. I do not know what for, but it was put in.

Q. You understood it was on account of the overbreak?—A. It was for classified material and overbreak.

Q. Do you know what they did on the first arbitration?—A. No.

Q. You had no information concerning that?—A. No.

Q. Who are the Eastern Construction Company?—A. It is Alex. McDougall and Son; it is an incorporated company.

Q. How much work did they have?—A. They had fifty miles.

Q. I understand you have not settled up with your subcontractors until you get this question of overbreak settled?—A. Some of them.

Q. These contractors that you say you have not settled with, you are holding back from them until this question of overbreak is finally settled?—A. Yes.

Q. Have you held back from them the whole amount of this $500,000 or $600,000?—A. No, not that much.
Q. How much have you held back?—A. I held back somewhere I think about $300,000.
Q. Had you a uniform price with these men?—A. Oh, yes.
Q. What percentage did you get?—A. It varied; I do not know there is much difference between all of them, but there is a difference.
Q. What percentage do you get on solid rock?—A. I get in some cases fifteen per cent and in other cases it runs down to about twelve per cent or ten per cent.
Q. And loose rock, what percentage do you get?—A. It would be about five per cent.
Q. And on common excavation, what percentage do you get?—A. On common excavation it would not go one per cent.
Q. There was not very much common excavation in this district?—A. There was quite a bit.
Q. There was not a very large percentage of common excavation?—A. It was not a large percentage.
Q. About how many yards of solid rock do the estimates show up to date?—A. Somewhere about 6,000,000.
Q. And how many yards of loose rock?—A. I cannot tell that; I see from the statement shown me now that it is 1,900,000 odd.
Q. About how many yards of common excavation?—A. 2,470,000.
Q. With reference to overbreak, suppose that it had been classified strictly in accordance with the specification in which it says that these slides shall be classified as they fall in the cuts, what percentage of stones after the shots had been fired, in an ordinary cutting would be less than one cubic yard in size?—A. I cannot tell you.
Q. What is your judgment as a contractor about that?—A. I cannot answer that.
Q. Take an ordinary granite cut in which a proper shot has been placed, and you and I walk into the cut and see how much is broken and we are going to make an ordinary guess, how many pieces of that rock would be less than a cubic yard—certainly we would get somewhere between 10 per cent and 80 per cent, would we not?—A. I cannot say; I never was a foreman in a cut, and I never took out a cut.
Q. From your knowledge in a general way, such as I have spoken of, do you not know that they only need to block holes about one-third of the cut, would not that be a lot of block holing?—A. For the first shooting.
Q. You take out the loose stuff and would not one-third of it be pretty badly shot?—A. What percentage of block holing I would do for heavy shooting, I do not know.
Q. I have this information from other sources and I would like, if I can get some kind of idea from you?—A. I cannot answer it, because it would not be fair to you and to myself if I did, because I have never done any of that.
Q. The reason it is so important to you is that under the specification all overbreak found in a cutting, the pieces of which are less than a cubic yard ought to be classified as loose rock; you see the importance of it in connection with this very case?—A. Yes.
Q. And if you don’t feel that you would like to make any kind of an estimate we will pass on to something else?—A. That is the way I feel about it, I did not study it.

By Mr. Gutelius:

Q. Now, with reference to the original contract, here are the two original bids, are they not?—A. Yes.
SESSIONAL PAPER No. 123

Q. You see both of these original bids?—A. Yes.

Q. Now take one copy and I will keep the other. Now referring in your copy to page 6, and particularly to Item 58: Concrete facing 1 x 2 x 2 1-2 inches thick, including forms, what price did you get for that?—A. $15.00.

Q. You got $15.00 for that on these tenders?—A. Yes.

Q. What price did you get on Item 59, concrete 1 x 2 x 4?—A. $15.00.

Q. What price did you get on Item 60, concrete 1 x 3 x 5?—A. $15.00.

Q. What price did you intend to bid for concrete 1 x 3 x 5 here, I see the space is left blank?—A. I intended to bid $15.00.

Q. Then Item 61: Concrete 1 x 3 x 6, what did you bid on that?—A. $15.00.

Q. What price did you intend to bid for Item 62; Concrete 1 x 3 x 5, arch culverts, including curves. I notice that is blank?—A. That would be $15.00.

Q. On Item 63, Concrete 1 x 3 x 6, in arch culverts, including curving, your bid calls for $15.00?—A. Yes.

Q. On Item 64, Concrete 1 x 3 x 6 in box culverts, including curving, what did you intend this to be? I note that it is blank?—A. $15.00.

Q. On Item 65, Concrete 1 x 4 x 8, ordinary foundations, including curving, your bid for that is how much?—A. $13.00.

Q. On Item 66, Concrete 1 x 4 x 8, walls of buildings, including curving, I notice this is blank, what price did you intend to bid?—A. I should think that would be $13.00.

Q. It would appear that if you had put brackets in here, (indicating in the book presented to the witness) and taken these different items off, it would have made clear what you were bidding instead of leaving these items blank, am I right? A. Yes, that would be the proper way to do it, I guess.

Q. Or it would have been equally plain if the word “ditto” had been written in under each of these figures which I showed you?—A. Yes.

Q. Now, Mr. McArthur, I would like to have you compare the contract with the original tender in connection with the items I have just enumerated. In the contract Item 58 is $15.00 per cubic yard?—A. Yes.

Q. This is the contract I am showing you?—A. Yes.

Q. And Item No. 59, is $15.00?—A. Yes.

Q. And Item No. 60, is $12.00?—A. Yes.

Q. You remember then a moment ago that you told me Item No. 60 was intended to be $15.00, am I right?—A. Yes.

Q. Item 61 is $15.00 in the contract?—A. Yes.

Q. Item 62 is $13.00 in the contract?—A. Yes.

Q. You told me a moment ago that you intended it to be $15.00?—A. Yes.

Q. Item 63 in the contract is $15.00?—A. Yes.

Q. Item 64 in the contract is $11.00?—A. Yes.

Q. Item 64 you intended to be $15.00 in your bid?—A. Yes.

Q. Item 65 is $13.00 in the contract, which is the same as in the bid?—A. Yes.

Q. Item 66 in the contract is $10.00 and you intended it to be $13.00 in the tender?—A. Yes.

Q. Is that information new to you, Mr. McArthur?—A. I would have to say yes, and I ought to know better all right. It is through not just checking both up, I guess.

Q. You do not mean to tell us that this is the first information you have had that in the contract price for concrete they gave you in some cases $1.00, in other cases $2.00, in other cases $3.00, in other cases $4.00, and in other cases $5.00 a yard less than your tender called for?—A. Was there any of this done on the work?

Q. You have received on the $13.00 concrete $22,750.70, on the $12.00 concrete you have received $188,953 in your estimates. Was there not some informa-
tion in connection with this given to you, between the time that you handed in your tender and the time you signed the contract?—A. No, I do not recollect that there was on the concrete.

Q. There were other items that you overlooked, were there?—A. There were some small little things, I forget what they were, and we asked for prices and we did not get them and they did not amount to anything, something about tracks or connections or something of that kind, that is the only thing I recollect.

Q. I will refresh your memory in connection with twenty-seven items, where unit prices are given in the contract and not in your tender, and by reference to the contract and the original tender which I will place before you, you will be able to answer the question. While you are looking at them, I will call them off and when I read the items that are shown in the item and not covered in the tender you will say nothing in the tender. Now, Item No. 15, pole drains, 25 cents per lineal foot?—A. Nothing in the tender.

Q. Item 21: piling out reserved stone from rock cuttings, $1.00?—A. Nothing in the tender.

Q. Item 28: Cedar timber in culverts, 8-in. x 12-in. 10-in. x 12-in. and 12-in., per M. ft. b. m., $40.00?—A. Nothing in the tender.

Q. Item 32, vitrified pipe culverts—14-in. diameter, $1.25 a lineal foot?—A. Nothing in the tender.

Q. Item No. 33, Vitrified pipe culverts—15-in. in diameter, $1.35 a lineal foot?—A. Nothing in the tender.

Q. Item No. 35: Reinforced concrete pipe—12 inches in diameter, $1.20?—A. Nothing in the tender.

Q. Then Items from 35 down to 50 inclusive have all been interpolated in the contract and are not shown in the tender?—A. That is correct.

Q. The following are the Items from No. 35 down to No. 50, inclusive: 35—Reinforced concrete pipe, 12 inches in diameter; Item 36, Reinforced concrete pipe—14 inches in diameter; Item 37, Reinforced concrete pipe—16 inches in diameter; Item 38, Reinforced concrete pipe—18 inches in diameter; Item 39, Reinforced concrete pipe—20 inches in diameter; Item 40, Reinforced Concrete pipe—24 inches in diameter; Item 41, Reinforced Concrete pipe—30 inches in diameter; Item 42, Reinforced Concrete pipe—36 inches in diameter; Item 43, Reinforced Concrete pipe—42 inches in diameter; Item 44, Reinforced Concrete pipe—48 inches in diameter; Item 45, Reinforced Concrete pipe—54 inches in diameter; Item 46, Reinforced Concrete pipe—60 inches in diameter; Item 47, Reinforced Concrete pipe—4 inch agricultural under tile drains; Item 48, cast iron pipe culverts—16 inches in diameter; Item 49, cast iron pipe culverts—18 inches in diameter; Item 50, cast iron pipe culverts—20 inches in diameter?—A. Yes.

Q. These are all interpolated in the contract and are not shown in the tender?—A. That is correct.

Q. Items 54 and 55, cast iron pipes?—A. Nothing in the tender.

Q. Item 56, cast iron pipe?—A. Nothing in the tender.

Q. Item 57, cast iron pipe culverts?—A. Nothing in the tender.

Q. Items 60, 62, 64 and 66 are the concrete items the details of which we have gone over?—A. Yes.

Q. Item 81, Semaphore at stations, complete, $550?—A. Nothing in the tender.

Q. Item 82, Interlocking appliances, complete, eight levers, including all connections, signals, etc., $6,000?—A. Nothing in the tender.

Q. Item 83, Each additional lever $200?—A. Nothing in the tender.

Q. Item 86, rock sections (unlined) $75.00 per foot?—A. Nothing in the tender.

Q. Item 87, tunnels (lined), $85.00 per foot?—A. Nothing in the tender.
Q. Item 88, tunnel, concrete lining, per cubic yard, $15.00?—A. Nothing in the tender.

Q. Item 89, tunnel, masonry lining, $15.00 per cubic yard?—A. Nothing in the tender.

Q. Item 90, drainage tunnels, 4 cubic yards, $25.00 per lineal foot?—A. Nothing in the tender.

Q. Item 93, turntables, $3,000 each?—A. Nothing in the tender.

Q. Item 94, track scales, $1,000 each?—A. Nothing in the tender.

Q. Item 95, tunnel shafts, $5.00 each?—A. Nothing in the tender.

Q. Now, Mr. McArthur, I wish you to tell us how you permitted those prices to be put in in the contract which you executed and which were not covered in your tender?—A. In the first place, there were a lot of these items there that we never used in the road; there is no estimate for some of them today. There were no tunnels shown on the first profile.

Q. How about those items that were shown on the profile?—A. There were none of them shown on the profile as far as quantities or anything of that kind, but of course it was in the specifications.

Q. I wish you to explain very fully how you undertook a contract of that character?—A. In the first place the way we put in our tender, when putting in those figures, it was figured out that they did not amount to very much, that we didn't have a price. It was done in a very short time, and then when they were awarding the contract it was left to the chief engineer.

Q. Do you say it was left to the chief engineer to fill in the prices?—A. Yes, with his experience of that kind of work.

Q. How did you leave it to the chief engineer to fill in those prices, was it by any legal document?—A. No.

Q. Who did you tell to do that or that you would be willing to have that done?—A. Mr. Lumsden.

Q. Mr. Lumsden personally?—A. Yes. We talked over it and put it up to him that he had the experience and knowledge of these things.

Q. Be very sure just whom you mentioned it to that it would be all right for the chief engineer to fill in these figures?—A. As far as I recollect, he was the man that spoke to me about it.

Q. When he spoke to you about it you knew then that you were the lowest bidder, he told you that same time that you were the lowest bidder?—A. Yes.

Q. And that it took those prices he put in to get you the contract?—A. I don't know he put it exactly that way only I did not have the prices in and that if there was a price put in it would go in with his experience, and I was satisfied that it did not matter very much on a large contract whether I was a little out or not, it was a small amount. It is the way we do on contracts, as you know.

Q. Did you and Mr. Lumsden discuss the fact that the more expensive concrete there was going to be put in for the lower figure; that is, concrete 1 x 3 x 5 was $12.00, and concrete 1 x 3 x 6 was $15.00; did you know you were getting such an unbalanced bid?—A. Yes, it was a small item of arch in the $12.00 contract. The mass was in the other, in the foundations.

Q. You would be surprised when you look at your estimates, a copy of which I have before me, that the $12.00 concrete amounted to 15,700 yards, and the $15.00 amounted to 11,000 yards, that is, there is more of the $12.00 than there is of the $15.00?—A. I do not know that was discussed at the time; we thought the other was going to be the massive work.

Q. Did you know from your conversation with Mr. Lumsden that unless you allowed these interpolated prices to stand, you would not get the contract?—A. No.

Q. You are sure you did not?—A. No, it was not put in that way, I don't think.
Q. In your bid for piles, you wrote the pile items No. 10 and No. 11 in the tender. Item No. 10, piling delivered as per engineer's bill, per lineal foot, 25 cents. Item 11, piling driven, 15 cents. Now, after 15 cents, you wrote in the words "driving only." Why did you put the words "driving only" in there? —A. I don't remember. These words are not written in by me. It means that it only includes the driving and not the piles themselves.

Q. You did that because the specifications were not entirely clear as to whether the piles were to be included or not in the tender for Item 11? —A. The words must have been put in because it was thought the specification was not clear without them.

By Mr. Staunton:

Q. Did Mr. Lumsden bring these prices to you filled in or suggest that he would fill them in? —A. He mentioned that there were several items that I did not fill in.

Q. Did he suggest that he should fill them in? —A. No, I do not think so. I suggested that he would fill them in. There were some little items and things that I did not know the price of them and in his experience he could fill them in.

Q. Did you and he go over these particular items and arrive at the exact figures for them together? —A. No.

Q. Then he made them up by himself without consultation with you? —A. Yes, he mentioned to me that he put them in or before he put them in, I cannot vouch for that.

Q. All you know is that he spoke to you about that? —A. Yes.

Q. And you cannot recollect any further than that? —A. No.

By Mr. Gutelius:

Q. From information before us, you appear to have been paid for 408,220 cubic yards of solid rock in your progress estimates for material known as assembled rock, which is composed of pieces of rock smaller than one cubic yard mixed in with sand and clay and hardpan, what have you to say why this material, not being solid rock, should not be classified as loose rock? —A. I cannot tell you.

Mr. Moss: —Surely that is an engineering question.

Mr. Staunton: —It is a contract question.

Mr. Moss: —It is a mixed engineering and legal question. There were pages and pages of evidence about that in the Lumsden investigation and opinions of all sorts.

By Mr. Staunton:

Q. You were to be paid for solid rock of a cubic yard and over in size and you were paid for solid rock which was under a cubic yard? —A. Yes, assembled rock was something I never heard of except on this job.

By Mr. Gutelius:

Q. And when you made your tender on this job you never heard of assembled rock? —A. No.

Q. So that any advantage or disadvantage that accrued from the adoption of assembled rock was a new feature to you? —A. Yes.

By Mr. Staunton:

Q. Did you see any of this assembled rock yourself? —A. No.

Q. Do you know where it occurred mostly? —A. I know it occurred particularly in the east, end of the contract.
Q. Tell me one thing about rock removal, Mr. McArthur, is it not a fact that in the last few years contractors are shooting material, blasting material, which ten years before was taken out with pick and shovel, only just blasting it to loosen it?—A. I suppose a great deal of the blasting and shooting on the contract you are speaking about was probably done in the winter months when the ground was frozen.

Q. Generally speaking, is there not a change in the method of removing loose rock as compared with ten or fifteen years ago, don't they shoot stuff now that they did not shoot then?—A. I guess we do.

Q. I think I recognize a tremendous change between now and the time I was resident engineer watching work of that kind in the methods they employ, that is my reason for asking the question?—A. Of course it is changed some alright, I think. They are using more explosives now to loosen it up where they used to pick it more.

Q. It has been said that larger shots were used on this work on account of hurrying the works to completion, what have you to say about that?—A. I guess that is probably right.

Q. Did you receive many communications from the chief engineer yourself in connection with rushing the work?—A. No, not so very many.

Q. And it did not cut much figure in the way of handling the work?—A. You mean the letters we got?

Q. No, the haste. There were no great amounts of money expended on your part or on the part of your sub-contractors on account of any haste in completing that work?—A. Yes, I am sorry to say there was.

Q. I wish you would tell me more about that, if you can?—A. One of the things was the conditions of labor we were up against and the work that was going on in the country at the time and we spent large sums of money trying to get labor on the work to hurry it along, as the commissioners were urging us to push the work; we were trying to comply with their wishes.

Q. Who paid for getting the men in?—A. I paid a great proportion myself, the large proportion I expect, the sub-contractors also.

Q. When you were given this contract, Mr. McArthur, was there any stipulation, verbal or otherwise, as to whom you should buy your powder from?—A. There were two powder men in the field at the time. They tendered for the supply.

Q. And you gave it to the lowest tenderer?—A. Yes.

By Mr. Staunton:

Q. But were you asked to give it to any particular firm?—A. No, I don't think I was asked to say you have got to give it to any particular firm. I may have been told what-you-call-him will be able to supply you, they are a good firm.

Q. Who were you told was a good firm and would be able to supply you?—A. These people in Montreal, I think it is the Standard Explosives Company and the Hamilton Powder Company were the two.

Q. Who gave you that information?—A. I cannot tell you offhand who it was, someone around the Russell House, each one had its friends, they were both strangers to me.

Q. What we want to know is, did any person in connection with the Commission suggest to you that it would be well to buy your powder from any particular firm?—A. I do not recollect anyone on the Commission.

Q. Anybody in connection with it?—A. I do not recollect of any of them going that far.

Q. How far did they go?—A. I cannot say that I ever mentioned it at all, myself.
By Mr. Gutelius:

Q. I would like very much to get this cleared, because there is an impression that has prompted this special enquiry about the powder?—A. I do not see that I can clear it up more than I am giving you just now. I do not know that probably if Mr. Moss were around the hotel he would mention somebody.

Mr. Moss:—No, I am not in that business.

By Mr. Gutelius:

Q. You can say that there was no pressure brought on you by any member of the Commission or anyone connected with the Transcontinental Railway to have you purchase your powder from any one special firm?—A. I can certainly say that.

By Mr. Staunton:

Q. Do you know of any pressure being brought to bear on any of your subcontractors to purchase their powder from any particular firm?—A. No, not that I know of. Under my contract with the sub-contractors, they were supposed to take their powder from me.

By Mr. Gutelius:

Q. You undertook to supply your sub-contractors with powder?—A. Yes, but they bought from other firms.

Q. Why were you interested in supplying the powder to your subs?—A. Well, because I was trying to make 10 per cent.

Q. On the supplies?—A. Yes.

Q. Did your sub-contractors buy all their supplies from you?—A. No, they did not.

Q. Were they supposed to?—A. Oh they were, but I left them off to suit themselves. There were not very many of them that could buy without coming to me, they were not strong enough.

Q. I read from your evidence a moment ago, that if the new classification of assembled rock had never been born, that you would have expected to have completed the same as on railroads with similar specifications, by giving solid rock only for solid rock, the fragments of which are larger than a cubic yard, is that right?—A. That is right.

By Mr. Staunton:

Q. Before you made your tender, what information was furnished by the Commission to you?—A. All the information that was furnished was the profile and what we were getting from the engineer out in the field, Major Hodgins.

By Mr. Gutelius:

Q. And the copies of the specification?—A. Yes.

By Mr. Staunton:

Q. What were you getting from Major Hodgins in the field?—A. I sent a man down there and gave him a letter for him to get all the information he could from Major Hodgins.

Q. This Major Hodgins gave you a copy of the engineer's preliminary estimate?—A. No.

Q. What kind of information did he give you?—A. Oh, it was rough information, just the direction that the line was going through, and you see that was not final. They did not have a profile of the whole line at the time that they asked for bids for this work, and particularly the profile they had the location was all changed and, as I said a while ago, there were no tunnels shown in the first profile or anything like that and the line was changed afterwards as they considered better for the road.
Q. Do I understand you to say that you did not see or get any information which gave you any knowledge of what the preliminary estimate of the engineers was as to the cost of this work?—A. No, I did not get it in figures more than that it was approximately spoken of.

Q. By whom?—A. Well by Major Hodgins.

Q. Do you know whether he had a copy of the preliminary estimates made in the office by the engineers?—A. No, I do not.

Q. He did not show you any?—A. No.

Q. Did any of the commissioners show you any?—A. No, not by really showing it to me. They may have talked over it but I do not recollect them showing me the figures.

Q. Did any of the commissioners tell you approximately what the estimates of the engineers were?—A. I think probably they did, just the same as Major Hodgins did and he was down here at the time.

Q. Who probably told you?—A. I guess probably Young told me and Reid.

Q. So that you had a more or less accurate idea of what the Commission expected this work would cost?—A. These figures were mentioned.

By Mr. Gutelius:

Q. To clear up that pile-driving note, did anybody know you wrote that in there except you and your men who wrote it, did anyone connected with the Commission or their engineers know that you had written in the words "piles driven"?—A. I do not think so.

Q. You feel that that was your own idea because the specification was not quite clear?—A. I think that was put in so as to make it clear.

Q. I want you to be very sure on this point, because, as I told you before, you would not have got the contract if you had not written these words in there; you can quite understand why we would want you to tell us very candidly about it.

Mr. Moss:—It's a pity he wrote it in; he would not be here this afternoon if he had not.

Mr. McArthur:—That is true. I do not know of anybody knowing that was written in except my own man and myself.

By Mr. Staunton:

Q. Item No. 62 is concrete 1.3.5. in arch culverts, including curving; Item 63 is concrete 1.3.6. in arch culverts, including curving; you said to Mr. Gutelius that you thought more of Item 63 would be used than of Item 62; why did you think that?—A. We figured out, whatever one it comes under, that there was one of the items there would be more of such as foundations and piers.

Q. But you would not put the more expensive mixture in the massed concrete, would you?—A. The other item did not amount to very much.

Q. You would not expect as a contractor to use a richer mixture in mass concrete?—A. That would be left to the engineers, I suppose.

Q. You said you expected to use more of 1.3.5. than of 1.3.6. because you said that you expected 1.3.5. would go on largely massed concrete?—A. Yes.

Q. That is not the usual custom to put the richer mixture in the massed concrete, is it?—A. No.

Q. So that you would naturally expect that 1.3.6. for which you charged $15.00 would be more used than 1.3.5. for which you charged $13.00, would you not?—A. Yes.

Q. And you were going to get a bigger price for the cheaper concrete than for the more expensive concrete?—A. Yes, there was more of it.

Q. How on earth did you ever arrive at that conclusion?—A. Oh, that follows contracting; you cannot expect you are going to win on everything.
Q. You would not expect me to accept a tender from you and to pay you more money for a cheaper article than for a dearer article?—A. No, but there is the figures and the other fellow didn't beat it.

Q. Concrete 1.3.5. is more expensive to the contractor than 1.3.6., is it not?—A. I do not think it is very much more.

Q. Then why did you make a difference of $2.00 per yard between these two items?—A. As I said before I figured there was more of that.

By Mr. Gutelius:

Q. Lumsden put those prices in for you; he put that cheaper price in for you; you were going to bid $15.00 all through, except for the foundation stuff?—A. Yes.

Q. He put these other prices in?—A. Yes.

By Mr. Staunton:

Q. What I cannot understand is how the two of you could sit down and not laugh at each other when you put in these figures.

Mr. Moss:—He did not sit down with Lumsden.

By Mr. Gutelius:

Q. One other question, you signed up that contract, knowing that Lumsden had made some changes in your figures, some additions and changes in your figures, and you did that without studying what these changes were?—A. Yes, it was figured at the time such a small item that we did not consider it one way or the other.

Q. They must have told you it wasn’t so; Mr. Lumsden must have given you that idea; you could not tell yourself?—A. Perhaps he did when he mentioned to me this items that were not filled in in the tender.

Q. And you did not feel as if it would make much difference and you let it go?—A. Yes, the big things are two or three items in the contract, which make the contract as a rule.

By Mr. Gutelius:

Q. Before closing this enquiry, is there anything you have in your mind that you would like to tell the investigating Committee that has not been brought out, if so let us hear it?

Mr. Moss:—That is a wide question.

Mr. Gutelius:—There may be little things we have not asked about. Nearly every contractor has some little things he wants to tell us and we give him that opportunity.

Mr. Moss:—I was going to say, before Mr. McArthur answered that question, that Mr. McArthur has attended here voluntarily and without any notice of the matters that were to be discussed and of their bearing, and that a number of points have been touched on to-day which it is obvious he is speaking about off-hand, after recollection of two or three years, and if it is proposed to make any findings, which would reflect in any way on Mr. McArthur or his business, he should have an opportunity of giving further evidence and explaining further if necessary. I do not know what importance is attached to them at all in the mind of the Commission, but I should think it would not be proper to make any public finding based on them on this very informal and unprepared evidence.

Mr. Staunton:—If Mr. McArthur wished to prepare himself to give evidence, he could have told us so. True, we did not subpoena him, but we asked him to come here and give us this evidence. You came yesterday to see us, and I told you generally what we wanted to ask about, and if Mr. McArthur was not prepared to give evidence he should so state. Now, this evidence is taken for the purpose of the Commission, for the purpose of making our report, and we expect to rely upon it. We do not regard it as taken informally or in any other way than in
the ordinary course. We do not exactly understand what you mean by that, Mr. Moss. We do not desire to get evidence from any person who is not ready and thoroughly posted on what he testifies to, and if Mr. McArthur desires to give us any further information in connection with this case, we will be very glad to hear him. He certainly is not very clear on a good many things, but we are not responsible for that. Our desire is to get all the information possible. So, if there is anything else......

Mr. Moss:—I think, for instance, in reference to what was said about the assembled rock, I do not think Mr. McArthur's evidence in regard to that was quite clear or quite of the kind to be brought out in further explanation.

Mr. Staunton:—What Mr. McArthur told us was, that he knows nothing about it; I suppose that is correct; and that he never heard of assembled rock before.

Mr. Moss:—I think what Mr. McArthur meant was that he had not experience with that class of material before.

Mr. Gutelius:—If you have a private talk with Mr. McArthur you will find, I think, that everything he told us is just what he believes.

Mr. Staunton:—I wanted Mr. McArthur to tell us as a contractor what he knows about classifying stones of a smaller size than a cubic yard, when they are mixed with a matrix composed of clay, sand, or other material.

Mr. Moss:—Cemented together so as not to be removed without blasting, that was Lumsden's definition.

Mr. Staunton:—He may tell us what he thinks about that, and then he may qualify it in any way he chooses.

Mr. Moss:—Lumsden's definition of assembled rock, as I remember it, is that these have to be cemented together in such a way as is best removed by blasting.

Mr. Staunton:—That is interjected afterwards. There is nothing at all about that on the blue print.

Mr. Moss:—It was interjected by him.

Mr. Staunton:—Not in the blue print.

Mr. Moss:—May I have a conversation with Mr. McArthur?

Mr. Staunton:—Certainly. We would like Mr. McArthur to tell us all about that and if he desires I will take him over it.

This ended the examination.

(NATIONAL TRANSCONTINENTAL RAILWAY ENQUIRY COMMISSION.
MEETING AT OTTAWA, JANUARY 30th, 1913.)

Present: G. Lynch-Staunton, K.C., Chairman; F. P. Gutelius, C.E.

M. J. O'Brien, sworn:

Examined by Mr. Gutelius:

Q. You are one of the principals in the following contracts on the National Transcontinental Railway: Contract No. 10, from Mile 50, west of Quebec Bridge westerly for 100 miles; Contract No. 11, from La Tuque to Weymontachene, 46.4 miles; Contract No. 12, from near Weymontachene, westerly 107 miles; Contract No. 13, from about 107 miles west of Weymontachene, westerly 115 miles; Contract No. 16, from west of Contract No. 15 (Fauquiers'), westerly 100 miles; Contract No. 17, from the west end of Contract No. 16, westerly 100 miles; Contract No.
19, from the westerly end of Fauquier's contract No. 18 to near Dog Lake, a distance of about 126 miles; Contract No. 20, from near Dog Lake westerly about 25 miles?—A. Yes.

Q. With reference to Contract No. 10, I find that this contract was assigned to McDonald & O'Brien by Hogan & McDonald, to whom the contract was originally awarded, is that right?—A. Yes.

Q. How did you happen to get this contract?—A. At that time I tendered with Mr. Mullarkey and Mr. Hogan tendered with Mr. McDonald, being an old partner of his, and it would appear that Mr. Hogan became ill and was not able or did not want to proceed with the contract and they asked me if I would come in in his place, which I decided to do, after seeing Mr. Mullarkey. I simply came out of the other firm into this one, taking Mr. Hogan's place in this contract.

Q. Was there any consideration passed between you and Mr. Hogan in connection with that transfer?—A. None whatever.

Q. Now, contract No. 11 was sublet to McDonald & O'Brien by the Grand Trunk Pacific Railway Company?—A. Yes.

Q. How did you happen to get this contract and what was the consideration?—A. We were tenderers for that work against the Grand Trunk Pacific, and, of course, they outbid us by a little. Then, we being on the ground and having the plant, approached them about taking the work off their hands. We were to give them 5 per cent, if my memory serves me right; that is all they got.

Q. 5 per cent of the gross returns on the contract was given to them and you retained the balance?—A. Yes.

Q. On Contract 12, you were the original successful bidders?—A. Yes.

Q. And you received your contract direct from the Commissioners, in the name of McDonald & O'Brien?—A. That is correct.

Q. I note that there were only two bids in connection with this contract No. 12, did you know at the time of putting in your figures that there was only one other competitor?—A. Oh, no, certainly not.

Q. You had no knowledge of how many tenders were being placed on contract No. 12?—A. No.

Q. You are certain of that?—A. I am, in fact I was under the opinion that there was more than two tenders on that work.

Q. Then contract No. 16 in which you are interested, I note was originally awarded to M. P. Davis and J. T. Davis, and subsequently sublet to O'Brien, McDougall & O'Gorman?—A. Yes.

Q. What were the conditions in connection with that subletting?—A. Well, we being working up in that section west of these sections, we formed this combination and took these two sections from Mr. Davis, giving him a margin.

Q. What was that margin?—A. 10 per cent.

Q. 10 per cent on the gross estimates?—A. Yes.

Q. Contract No. 17 was taken from M. P. & J. T. Davis by you, on a 10 per cent basis also?—A. Yes.

Q. On contract No. 19, O'Brien & McDougall Brothers were the successful bidders and received their contract from the Commissioners direct?—A. Yes. O'Brien & McDougall Brothers. I think it was O'Brien, Fowler & McDougall Brothers.

Q. Did not Fowler come in afterwards?—A. Yes, perhaps he was not here at the time of the tender. I think you are right.

Q. You tendered as O'Brien & McDougall Brothers?—A. I think so, I was not here at the time.

Q. Contract No. 20 you received direct from the Commissioners of the National Transcontinental Railway?—A. Yes.

Q. Did you know that there were only two tenders for contract No. 20; had you any knowledge of that fact?—A. No. I was not here at the time. I was in the Province of Nova Scotia when these tenders were put in.
SESSIONAL PAPER No. 123

By Mr. Staunton:

Q. You are a contractor of very large experience, are you not?—A. Extending over a good many years.
Q. In contracting for work of the description to be performed for the National Transcontinental Railway, when you have worked for other railway companies, have you ever been required by these other companies to put up security for the due performance of your contract?—A. Yes.
Q. Does the C.P.R. require security?—A. Well, let me see, I know in the case of the Quebec & Saguenay Railway, I was obliged to put up security, that is the only case I remember, I wish I had not put it up there.
Q. As a matter of fact, the C.P.R. and the G.T.R. and the Canadian Northern Railway Company do not require security?—A. Not so far as I am aware.
Q. In a contract of this kind, is there the slightest necessity to ask a man to put up security?—A. If the contractors are responsible, I would say no.
Q. And it is the business of a man who has a contract to let to see that he gets a responsible contractor?—A. Yes.
Q. And if he goes about the business in the proper way, he can ascertain whether or not the intending contractor is responsible financially and experienced sufficiently to perform the contract, is that right?—A. Yes, it appears to me to be right, looking at it from the contractor's point of view, certainly.
Q. Looking at it from the business point of view, if you had a railway to build you would want to get all the contractors who are able financially and experienced sufficiently to perform that contract, to tender, would you not?—A. Yes.
Q. And it would be to your interest not to put any difficulty in the way of such men if you could avoid it?—A. Quite true.
Q. So that both from the contractor's point of view and from the proprietor's point of view, the requiring of security is an unnecessary impediment put in the way?—A. Well, let me tell you that in the shape of cash it is certainly a great impediment. In the shape of the bonds which perhaps should be exacted in most cases, it would not be so bad.
Q. Why should a bond be exacted?—A. So that we would carry out the contract and be sure to carry out the work undertaken.
Q. Why should it. The C.P.R. has spent many millions, and they have not found it necessary to have bonds taken. Why should a bond be taken from a responsible contractor who is going to put a large plant on the work?—A. That is my own view of it, that is what I would say.
Q. My view is that it is a very imprudent thing to ask a contractor to put up security and I want to find out whether you agree with that or not?—A. So long as the contracting firm is financially strong and capable in every respect, I would say that there would be no need of asking for security, that would be my answer.
Q. And a person who had a big work to let would be very foolish not to find out if his contractors were strong before he let them have the work?—A. Yes.
Q. Now, in this Transcontinental Railway competition, the Commissioners advertised in the newspapers for tenders?—A. Yes.
Q. And those advertisements advised the contractors of Canada and the United States that each tender must be signed and sealed by the parties to the tender and must be accompanied by an accepted cheque on any chartered bank of Canada, payable to the order of the Commissioners of the Transcontinental Railway, in the advertisement I am looking at, ranging from $75,000 up to $100,000, according to the size of the work. Now, with each of your tenders you had to enclose a certified cheque on the bank for a large sum of money?—A. Yes.
Q. And it was necessary for you to furnish that money and to lose its use while these tenders were being considered?—A. Yes.
Q. The advertisement goes on to provide further, that any person whose tender is accepted, shall, within ten days after the acceptance thereof, furnish such additional approved security as may be required by the Commissioners. So, you had to put your head into the noose, or your cheque into the hands of the Commissioners, and then if they said to you: Mr. O'Brien, your tender is for a million dollars and we want a million dollars security, you had to put up that million dollars security or lose your deposit of $100,000?—A. That is the meaning of it, as I understood at the time.

Q. Did you know though, at that time, that although the commissioners did not so advise the public, they had made up their minds that the security to be required in addition to the certified cheque would be limited to 33 per cent of the estimated cost of the work?—A. You are asking me if I had knowledge of that?

Q. Yes?—A. No, we did not know exactly where we were on the basis of that advertisement.

Q. I have heard it said by substantial contractors, men of large experience and large men, that they did not tender on this work because the security required was so unreasonable?—A. They said they did not tender on that account?

Q. Yes, they were afraid to put up $100,000 because they did not know what the commissioners might exact from them afterwards, and they might lose their money as their money is to be forfeited if they did not sign the tender; you know that?—A. Yes, that is the way the advertisement reads.

Q. That the deposit is to be forfeited if they did not sign the contract in the event of its being awarded to them and put up this security which the commissioners might demand, whatever it might be?—A. The commissioners had that power.

Q. Did you make any enquiry from the Commission to find out what securities they were really going to ask you for?—A. No, we imagined that the accepted cheque sent in with the tenders would be all that would be asked.

Q. That is what Mr. O'Brien imagined?—A. Yes.

Q. But it was pure imagination?—A. That was all it was.

Q. Didn't you take the trouble, Mr. O'Brien—I do not think there would be anything improper in your doing so, I think it would be a most prudent thing to do—to come to the Commission and say; have you made up your mind what security you will require?—A. We did not do so. We took the documents as they were. We accepted the contract, we accepted the specifications as they were.

Q. Did you ever hear of large works being let on such conditions before?—A. Well, I have no recollection of any such stipulations and such a large security being asked; in this case, we had to have 15 per cent.

Q. The Government does not require such a large security in connection with its works?—A. No, it is 5 per cent I think.

Q. In the Railway & Canals Department there is a standing order in Council saying that you shall give security to the amount of 10 per cent if your contract is $250,000 or less, and if the contract is over $250,000, the security is 5 per cent; that is the Government practice?—A. That is, as I understand it.

Q. And that is the advertisement put in the newspapers?—A. As to the amount to be deposited?

Q. Yes?—A. It was in this case.

Q. But in the Railways & Canals Department the 5 per cent and the 10 per cent as stated in the advertisement?—A. I suppose so. I don't remember, but I thought it was 5 per cent all around.

Q. It is 5 per cent up to a certain limit. The difficulty put in the way of contractors was enormously increased in the case of the Transcontinental?—A. Yes, and especially in the first tendering.

Q. The total amount of the contracts you have on the Transcontinental Railway, according to the estimates of the engineers is about $26,800,000?—A. Yes.
SESSIONAL PAPER No. 123

Q. Do I understand from you that you were required to furnish cash security to the extent of 15 per cent on that?—A. No, that is a misunderstanding. The 15 per cent only applied to the first contract of ours, No. 10.

Q. How much cash security were you required to supply in that case?—A. I should say in the neighborhood of $1,000,000 more or less.

Q. The total estimates of that contract were about $6,000,000?—A. Yes.

Q. And you put up as security $1,169,000?—A. That I think is about right.

Q. Now then, Mr. O'Brien, they did not keep that money, did they?—A. Keep it, oh no.

Q. They gave it to you back again?—A. Yes, as the work progressed.

Q. Did you get it all back or nearly all back long before you had finished your work?—A. They handed me the draw back, that is customary in contracting practice.

Q. It is not customary in contracting practice, because it is not usual in contracting practice to make you put up a security at all?—A. I think in all Government contracts they ask for a security of 5 per cent and this being a Government contract I suppose they thought they would do the same thing and the contract provides that from time to time they can make advances to us for the purpose of carrying on the work.

Q. Where is there any right under this contract entitling the commissioners to give you up the security before the work is completed?—A. I am not so sure that they say anything in the contract providing for that.

Q. They may if they so choose, being satisfied that the security is sufficient, pay you any portion of the 10 per cent drawback on your performed work? That is what you refer to?—A. Yes, I was referring to that.

Q. The fact is, that although it appeared in the public newspapers that you had to deposit a cheque with your tender, and although it appeared that you had to give security afterwards to the satisfaction of the commissioners, and although it appeared when you signed your contract that you had to give security up to 33 per cent of the engineers' estimates on the cost of your work, they eventually did take 10 per cent of the estimates as deposit and then paid it back to you before the work was completed?—A. Not before the work was completed.

Q. I think so, I think you personally got all your security back?—A. No.

Q. Not your drawback, but your security?—A. No, we have not, No. 10, No. 11 and No. 12 are practically finished contracts.

Q. McDougall & O'Brien got back in July, 1910, $150,000 on contract No. 12, and they got on contract No. 19, in May, 1910, $200,000, and on contract No. 20 the same thing; I am not saying there is anything wrong in this?—A. No, there could not be for the simple reason that the security has changed its form; it has taken the form of plant.

Q. They gave up the cash, that is all I am talking about?—A. To buy plant.

Q. They gave up the cash?—A. Yes.

Q. You did not give them any lien on your plant?—A. By virtue of the contract?

Q. They had that lien anyway?—A. Yes.

Q. The security that the commissioners had was a cash deposit, a drawback, and a lien on the plant. By the contract they had that?—A. We remonstrated with them.

Q. I know you did?—A. We said this to them; you have now the plant, we have $1,800,000 worth of plant on your works. It was nothing more than reasonable they should release our security because they had it in the form of plant which by virtue of the contract became theirs until the work was finished.
Q. I quite agree with you, I think your statement is perfectly reasonable, but they would have had that plant as security anyway, even if they never had asked you to put up any other security?—A. Quite true.

Q. You do not approach the matter from the point of view I am approaching it from. I think it was ridiculous to ask for that security, and, as a matter of fact, after the Transcontinental commissioners got it, they gave it up, and they only had the same security for the performance of the work as they would have had if they never had asked for security at all; they had your plant and your drawback?—A. They had it in a different form.

Q. But if they kept the $200,000 you would have to get your plant anyway?—A. Yes.

Q. Then you would have the plant and the $200,000 which I agree with you would have been quite unreasonable?—A. It would be away up in the millions; it would be so unreasonable that we could not proceed.

Q. You think I am trying to make you say that they did something improper in your case in releasing that security, but I am not at present enquiring into that phase of it at all; I am trying to get you to say that in the course of the performance of this contract, the Commission found themselves eventually in no better position than if they had not asked for security at all in the first place; I think they should not have asked that security, is not that correct?—A. Well, all I can say is that it is Government custom.

Q. We will leave the Government out for the present, we are talking about the Transcontinental Railway Commissioners. Nobody is condemning anybody for that at the present time, but that was the result—for example, in contract No. 19 you got back that $200,000 and you say the way you got it back was by saying to the Commission; I need that money to put it into plant?—A. Yes.

Q. But if they had not acceded to your request, you would have had to put the plant on anyway?—A. Certainly.

Q. You will agree with me then, that in the end the Commission were in the same position as if they had given you this contract on the same terms as the C.P.R. would have given it to you so far as the security is concerned?—A. Yes.

Q. What I am driving at is this: this Commission, in my view, did not adopt a businesslike method in encouraging people to bid on the contract, and although they put impediments in the way of bidders with regard to putting up security, they had no more security in the end than an ordinary railway would have?—A. Do you mean for the reason that they made the contracts larger and asked for larger security?

Q. Yes?—A. As to that I do not know.

Q. You do not pass any opinion on it?—A. No.

Q. Now I will come to the question of the large contracts. They divided this railroad, for the purpose of tendering, into very large sections mostly?—A. Yes.

Q. So that an ordinary man with a good plant and a good experience could not come within gunshot of getting a contract on this road?—A. Well, it tested the strength and the ability of the contractors. It was open to all to come in and tender.

Q. Oh yes, just the same as it is open to me to buy the Chateau Laurier if I had the price?—A. We were not always successful; we were as often sub-contractors as chief contractors on the works; they outbid us.

Q. I am only saying that a man had to have very large resources in order to successfully tender for this work?—A. Quite true, and that is the kind of man they wanted.

Q. But the number of such men is very limited in Canada in the contracting business, is it not?—A. They are not very numerous, I am free to admit.
Q. And the result was, that there was only on most of these works two or three people who tendered?—A. It would seem so, I do not know how many tenders were in.

Q. For instance, J. D. McArthur got a $13,000,000 contract and he never did any of the work himself at all, he sublet it to fifteen or twenty other contractors?—A. Yes, that is the grading.

Q. Now then, if the Commission had divided J. D. McArthur's Section F into three or four divisions, they would have had perhaps twenty tenders?—A. And twenty sets of contractors to deal with and twenty troubles.

Q. They would have had the twenty tenders anyway?—A. Yes.

Q. And where did the trouble come in, because in any case they had to give estimates to all the sub-contractors; they had to keep track of all these sub-contractors just as if they were chief contractors?—A. Pardon me, it is hardly that way. We have our own engineers, we get the estimates from the Commission, they give us the estimate on the whole section in one lot; we then subdivide them according to our subcontractors and the Commission has nothing to do with that.

Q. Yes, but these Commissioners were public servants, they were being paid to get this work done in the most economical way they could for this country; now then, if Mr. O'Brien were building that work, he would have thought about the money end of it, would he not?—A. Well, I should say so.

Q. You seem to think that these Commissioners only should think about the trouble to themselves. If they could save, for instance, on the M. P. Davis contract $1,000,000 by letting it to Mr. O'Brien in the first place, it would have been a laudable act on their part to have done so, would it not?—A. I suppose so.

Q. You know, as a matter of fact, that M. P. Davis got that contract one year before he sublet it to you?—A. All of that.

Q. He never did a thing on it?—A. He was unable to reach it.

Q. If he knew that when he tendered?—A. I don't know that.

Q. Didn't he? Do you suppose he tendered for a ten or twelve million dollar contract without knowing where it was, I don't think he would do that?—A. Contractors do foolish things.

Q. You knew it was inaccessible?—A. At the time?

Q. Yes?—A. Well, we did not give it much attention at the time because we were not tendering.

Q. Why didn't you tender?—A. We were not close enough to it.

Q. You were not close enough to what?—A. Close enough to it with our western work.

Q. You mean you were not close enough to it geographically?—A. Yes.

Q. That work was advertised, why did not you tender on it?—A. Well, I may say this to you right on that point; we had a very large amount of security up at the time and the Bank of England has its limits and we were not inclined to tender on that at that particular time.

Q. You did not want to put up any more money?—A. No, we had so much money in securities and drawback and plant that we did not feel disposed to put up $300,000 there to carry out that work. We were not close enough to it.

Q. One of the great stumbling blocks in your road was putting up more security?—A. That is a very great stumbling block in the way of all contractors.

Q. When you took these contracts Nos. 16 and 17 east of Lake Nipigon, off the hands of Davis & Company, did you go over the work?—A. We sent a man over it.

Q. And you looked it over?—A. Yes.

Q. And you made a bargain with Mr. Davis to take it off his hands?—A. Yes.

Q. Were you substituted for him in the contract, or are you sub-contractors under him?—A. I think if my memory serves me right, that we just stepped into Mr. Davis' place.

123.—34
Q. And his security remained? — A. Yes.
Q. Did you put up any security? — A. Not in that case, we are paying our share of the amount.
Q. What do you mean by saying you are paying your share of the amount?
— A. We would have to pay that money anyway.
Q. Do you mean to say that you pay the interest on the deposit? — A. Half of it.
Q. And you also pay Mr. Davis 10 per cent on the gross? — A. Yes.
Q. How much more did you pay him? — A. That is enough I suppose.
Q. I think so, but I was just wondering how generous you might be? — A.

It is conceded that I am generous.
Q. On that work which you took from Mr. Davis, do you think you will have a fair profit? — A. Yes, I think we will make a fair profit.
Q. You took the contract after sending a man over the work? — A. Yes sir.
Q. Did you negotiate this bargain with the Davises? — A. Well, I concluded it in Montreal.
Q. When you negotiated with the Davises, did they want any more than 10 per cent? — A. Yes.
Q. What did they ask you? — A. 15 per cent I think.
Q. Did they also ask you to pay interest on the deposit? — A. Well you see it was like this: Mr. Davis' deposit was up. His deposit is there yet. I said to them; the first thing to do was to leave that undisturbed, the Commission is paying 3 per cent for this deposit, and the money will cost us more. Of course we could not get it for 3 per cent so I suggested myself paying the other 3 per cent, which made 6 per cent and it cost Mr. Davis nothing. My suggestion was accepted and that is the way it stands.
Q. So that you and the Government are paying the interest on the deposit?
— A. Quite true.
Q. And Davis gets clean and clear 10 per cent on the gross cost of the work? — A. Yes.
Q. How did you bring him down to 10 per cent and give away half a million dollars difference between the 10 per cent and the 15 per cent? — A. We would not give him more than that and besides there were others who were negotiating as well as us and they were not offering as much, so that I think we went a little better to get the work.
Q. As compared with the prices on the adjoining contracts, how do the prices on contracts 16 and 17 compare? — A. I think they compare favorably with the prices on the adjoining works.
Q. That is to say they are higher? — A. That is what I mean.
Q. You could afford to pay Davis 10 per cent on the gross cost and still make as well out of it as you did on the adjoining works? — A. That is my recollection of the figures.
Q. That is the way you viewed it? — A. Yes.

By Mr. Gutelius:
Q. Coming back to the security and what you have told us as a reason for your not bidding on contracts 16 and 17 originally, you would have bid on that work if no special security had been demanded of you? — A. We might have done so.
Q. Don't you think that in the light of the fact that you did take it up later on that you might have bid? — A. We might, although we had our hands pretty full at the time.
Q. Now referring to the newspaper advertisement in connection with these Transcontinental contracts, which provided that the Commissioners could demand any security they liked, if that same provision had been made by a railway company or a railway promotion syndicate such as Mackenzie & Mann, would you
have put your original marked cheque in, knowing that a private concern or a railway company could have demanded from you any securities that they desired; would you have considered it a business proposition. I refer now to the phrase: "Such additional security as the Commissioners may require"?—A. We would hesitate a good deal.

Q. If they wanted to, they might defraud you out of the deposit that you put up with the tender?—A. Well the powers given there are very great; it would depend on the men, of course.

Q. Don't you think that many good Canadian contractors, I mean standing high financially, were deterred from bidding on the National Transcontinental Railway contract because of that very security clause?—A. I do not know of any that were deterred. Of course, I am free to admit this: that had the sections been cut into smaller sections and the security made smaller, that there no doubt would be more tenders, there is no question about that.

Q. I noticed recently in looking at a report of the royal commission on the original construction of the C. P. R., that that Commission show in their report the various tenders given for the different sections, and these tenders average about twenty tenders to every section. Now, when I see nine contracts on the Transcontinental Railway, in each case there being only two bidders, the idea occurred to me that this additional security which the Transcontinental Railway Commissioners demanded is a reason for having only two tenders instead of twenty. Does it not look like that to you?—A. What you say there is right; that open book in the advertisement there would scare off perhaps a good many contractors and I have no doubt it did. We had the moral courage to go in.

Q. Did you know when you sent in these tenders that you were absolutely in the hands of the Commissioners to the amount of security that would be required?—A. I say their powers were very great. Yes, that is so, especially in the first two contracts.

Mr. Staunton:—But the provision as to that is the same in all the contracts.

By Mr. Gutlieus:—The reason the subsequent contracts were not so alarming to you, was because in the first two or three you found they did not take advantage of the whole 33 per cent?—A. Well, I do not know that any percentage was mentioned; it was only 15 per cent we put up.

By Mr. Staunton:

Q. But you signed an agreement that you would put up to the extent of 33 per cent?—A. Is that in the contract?

Q. Yes. In your tender, in fact, you say so, you knew it when you signed your tender. It says: "And we do hereby agree that in case of refusal or failure to execute the said contract with the Commission and also to furnish an approved security to an amount not exceeding one-third of the estimated cost of the work, you shall forfeit your deposit." You knew it at the time?—A. Is this the original tender?

Q. Yes, they are all the same?—A. They are not exactly all the same.

Q. On that point they are?—A. Oh, yes.

By Mr. Gutlieus:

Q. Recognizing, as you must have, the tremendous powers of the Commission in demanding additional security after holding this first big marked cheque, did you not have some information that led you to believe that they were not going to hold you up to the whole amount of the 33 per cent?—A. No. You see, as
I remarked before, when we tendered first and when O'Brien & Mullarkey were not the accepted tenderers, and when Mr. Hogan became ill, I came into his place on the contract. We then were up against it as to security. We remonstrated with the Commission at that time and we were here quite a long time getting that security fixed up.

Q. They wanted a larger security?—A. They wanted 15 per cent but we were not inclined to put that up and we asked them to accept a cheque. We had a siege here at that time but were not successful. They exacted 15 per cent security. I remember myself saying at the time that I had no recollection of any such security being demanded by any Government or any company in the country. 15 per cent was very large and it was no use.

By Mr. Staunton:

Q. Did they offer to let you out of the contract?—A. No.
Q. Did you say: I cannot put up the security; did you put up any bluff at all?—A. I did not say whether we would put up the security or not.
Q. Did you say you would not?—A. We never went that far.
Q. Was it said to you, if you don't put up the security you can drop out?—A. Not to me.
Q. Did they tell you they would keep your money?—A. I have no recollection of their saying that, that was understood.
Q. Did they ever say: now, Mr. O'Brien, put up that security or withdraw, did you ever have a position like that taken with you?—A. No, I have no recollection of that, it never went that far, they would not do that with me, I don't think.
Q. What did you understand from them would happen if you did not put up the security?—A. They did not say that.
Q. Did they intimate it to you?—A. No, I cannot even say that.
Q. What did you expect would happen?—A. Well, if we failed to put up our security I suppose we would have to step aside.
Q. And lose your deposit?—A. Well, we would come back for that later on and see what we could do; you know what contractors do.
Q. From the negotiations that took place between you and the Commission or the individual members of it, what conclusion did you come to would happen to you if you failed to put up the security?—A. They did not intimate to me anything of the kind, they simply asked for the security.
Q. You had no idea that you would get your money back and be allowed to go if you did not put up the security?—A. No.
Q. You had no idea of it from any of these Commissioners?—A. No, they sat down flat on the 15 per cent and we had an awful siege of it. We tried every means to get them down to the original cheque and we were not successful, we could not do it.
Q. Do you know anything yourself about the actual work on any of your contracts?—A. Not very much.
Q. When you tendered for this work I suppose you took an interest in your tender?—A. If I was here I did.
Q. You signed it, did you not?—A. I do not know that I did. I do not think I signed them all. I commissioned someone else to sign for me.
Q. In your contract you signed a tender which contained a unit price list. No. 4 of that unit price list is called solid rock, and you were to get a price per cubic yard for item No. 4, what is solid rock?—A. Is that the specification there?
Q. Yes, what is solid rock to you as a contractor in that specification?—A. It depends on the specification under which we were working.
Q. What does solid rock mean to you as a contractor?—A. Solid rock is that which can best be removed by blasting; anything that is difficult and expensive to take out is solid rock, from a contractor's point of view.
Q. Forget this contract for the moment, and tell me what does a contractor understand by solid rock?—A. That which is expensive to move is solid rock excavation; that which is as expensive to move as solid rock excavation is, should be classified as solid rock.

Q. If you saw a sand bank that was as hard as you could imagine, do you say that that could be called solid rock?—A. Yes, if it becomes sandstone.

Q. I did not say sandstone?—A. You said as hard as it could be.

Q. I did not mean that it was in the form of sandstone, I meant in the form of sand, can you imagine clay being solid rock?—A. I cannot imagine clay to be solid rock.

Q. But that would come within your definition when you said that solid rock was anything that could best be removed by blasting?—A. Yes, continuous blasting, you asked me what was solid rock, and I say that rock could be mixed with clay.

Q. Keep along the line you started on; you said anything that could best be removed by blasting?—A. Continuous blasting.

Q. You have found indurated clay that could best be removed by blasting?—A. Yes.

Q. You never had the confidence to ask that that should be put in as solid rock when there was no stone in it?—A. If we were entitled to it under the contract.

Q. Have you ever got solid rock prices for that clay when there was no stone in it?—A. I do not just remember. We struck a lot of that in the Province of Nova Scotia in the eighties. If it was as expensive to take out as solid rock, it should be classified as such.

Q. Did you ever get paid for clay, where you had the three classifications of solid rock, loose rock, and common excavation; did you ever get paid for clay with these classifications at solid rock price?—A. I have no recollection.

Q. If you signed a contract embodying the three classifications, solid rock, loose rock, and common excavation, in your most bountiful frame of mind you would never expect clay to be classified as solid rock?—A. Ordinary clay?

Q. Yes?—A. Oh, no.

Q. You would not have clay, no matter how hard, if it was not mixed with stones, classified as solid rock?—A. I think not.

Q. So therefore when you talk of solid rock you mean rock?—A. Do you mean rock ledge?

Q. You mean rock, stone?—A. Yes.

Q. And when you talk of indurated clay, you expect that is to be loose rock, don't you?—A. Well, it depends. As I said before if it is mixed with rocks of all sizes and kinds, then I think it should be classified as solid rock.

Q. Where did you ever get it before?—A. I never worked on specifications like that before.

Q. I am not talking about specifications, when, under Heaven, did anyone ever pay you for clay mixed with rock of less size than a cubic yard, as solid rock, before the Transcontinental Railway commissioners set the pace?—A. I have no recollection myself, except as I say in Nova Scotia in the eighties.

Q. In Nova Scotia, where you had signed a contract for solid rock, loose rock, and common excavation, did they ever pay you solid rock prices for any kind of clay intermixed with stones of less than a cubic yard?—A. I have no recollection of it.

Q. You have no recollection, have you, of anybody or of any railroad ever paying solid rock prices for clay intermingled with stones of less size than a cubic yard?—A. Well, where the stones are thickly assembled.
Q. Keep outside of the Transcontinental practice now, and give your answer?
A. I said before, so far as the other roads are concerned and under the specifications under which we were working, I had no recollection that it came that way, and perhaps we were not properly entitled to it.

Q. Have you worked for the C.P.R.?—A. Yes.
Q. Have you worked for the Canadian Northern Railway?—A. Yes.
Q. You have worked for these corporations in grading?—A. Yes.

Q. Now then, have you not, as a matter of fact, in the case of the Transcontinental Railway, been paid for material as solid rock for which you were only paid as loose rock in these other cases, never mind the specifications now?—A. I have no doubt as to that.
Q. That is right, is it?—A. That is right I believe.
Q. To use a familiar phrase, this assembled rock was a new one on you when you got into the Transcontinental?—A. Do you mean that assembled rock is a new phrase?
Q. Yes?—A. Yes.
Q. It is a new phrase and a mighty good one for you, is it not?—A. It is very appropriate.

Q. When did you last have a contract with the C.P.R. or the C.N.R.?—A. The Canadian Northern, two or three years ago.
Q. How did the prices compare with the Transcontinental prices?—A. My memory does not serve me as to that, I cannot recollect what our prices were on the Canadian Northern.

Q. Well, what would be more favorably impressed on your mind, how did the profits compare?—A. I do not know that a contractor should be telling what his profits are.
Q. Did they compare favorably on the Transcontinental?—A. I do not know about that. I think on some of our sections, the Canadian Northern was just as profitable.
Q. But these sections on the Canadian Northern that were just as profitable as the Transcontinental, were rare birds?—A. Well, they might not be in the majority.

Q. I suppose, as a matter of fact, your most profitable sections on the Transcontinental were where assembled rock did most congregate?—A. Where it existed, yes.
Q. And assembled rock was very plentiful on section B, in the vicinity of La Tuque?—A. Yes.
Q. That was the best section you had, was it not?—A. Well, I do not know that. I am not prepared to say it was the best, do you mean in so far as rock is concerned?
Q. So far as profit is concerned?—A. I do not know that, it might be.
Q. If you were betting you would pick that out as a winner, would you not?—A. Well, I do not know.
Q. That is the banner contract, is it not?—A. I am not so sure about that.
Q. I would like you to think it over?—A. Pardon me, you see we were chief contractors you understand on that section.
Q. I know, and you did not get as much fat out of it, you think?—A. Let me explain that. We have about the same margin of profit on that section that we have on the others.
Q. As a matter of fact there was more profit on the entire work on that section than on any others?—A. Our margin of profit would be the same as on any other section.
Q. But in that case you had such an enormous amount of assembled rock?—A. We only had a margin of profit.
Q. But the profit to you and the subcontractor combined would be larger on that than on any other section?—A. I cannot say about the subs.

Q. I am not talking about your individual profit, I am talking of the profit on the work above actual cost, was it greater on that than on any other contract?—A. On account of the mileage?

Q. Yes?—A. And the magnitude of the work?

Q. Yes?—A. Around La Tuque I happened to be there myself. Around La Tuque, these cuttings are full of what they call assembled rock.

Q. I am talking about La Tuque now, and I am asking you if on that contract there was not in your opinion a larger gross profit than on any other contract in which you were engaged?—A. Not to us, I don't think.

Q. No, not to you, but the gross profit to everybody?—A. As to that I cannot well say.

Q. What is your judgment?—A. My judgment in the matter would not be worth much; some of our contractors did not make money.

Q. If you don't know, you need not tell me; you were at La Tuque?—A. Yes.

Q. I was at La Tuque, Mr. Gutelius and I were there, and we went all over that work, and we took the engineers over it, and I can tell you this; that we asked them to point us out where there was any cementing material, and they could find none, and afterwards in their evidence they said that they did not think there was any on the whole work. Now can you tell me where I can find anything of that extraordinary thing, cementing material, in La Tuque district?—A. I cannot name a cutting, but the cuttings we went over at that time with the old chief engineer and the whole outfit, these cuttings were at that time in progress and there was nothing else but thickly assembled bunches of rock, gravel, and stone of all kinds, and we had to use blasting.

Q. Mr. Schreiber said that he could find no cementing material?—A. No cementing material?

Q. No cementing material. The assembled rock was there all right, I am not denying that, but what we have been searching for with great anxiety is this cementing material and it seems always to be like the fish, a little further up?—A. Well, we came to the conclusion that day when we saw the work in progress that there was lots of cementing material in some of those cuttings and that at all events they were one mass of boulders.

Q. They were a mass of boulders, we will not quarrel about that, but what I want to get at is this cementing material. If anyone can tell me where it is, I can send someone there to see it. Mr. Doheny has not pointed it out to us and we tried him. It looks to me as if this was clay and sand mixed with these stones, am I wrong?—A. There was no clay in the cutting I have in mind.

Q. It was a fine white sand?—A. It was not exactly sand.

Q. What was it?—A. It was closer to what you call cementing material. These rocks laid there as thick as they could be in the cutting. In fact, the cutting was what is called assembled rock mixed up with this stuff, so much so that we could not do anything else than blast it.

Q. Don't mind the blasting, you would not build a house with that cementing material?—A. No.

Q. It would tumble down, it would not cement?—A. If you could put cement in it it would.

Q. You did not salt these cuts by putting cementing material in them?—A. Oh, no, we are bad enough without doing that.

Q. Now, Mr. O'Brien, frankly and candidly, is there any cementing material, as an ordinary man would understand it, along there at all, is it not just simply
that these small stones and large stones are packed tightly in in clay or fine sand, is not that a fair description?—A. It may not be what you call conglomerate or cementing material, but it is just as difficult to remove as solid rock.

Q. I am not quarrelling with that?—A. I think some of the cuttings were more expensive than solid rock.

Q. I am asking you to be fair with me and to say if I am properly describing these cuts, when I say that they were composed of stones, large and small intermixed, and packed into sand or clay?—A. It might be that.

Q. What you saw might be that?—A. No, not in that big cut, it was not that, there was no clay at all in this cut.

Q. It was sand?—A. It was gravel and boulders.

Q. Let us get away from the boulders?—A. I want to get away from the sand.

Q. Now, I could not find anything but sand or clay, or boulders, or stones there, did you?—A. I counted that mixture of all kinds in these cuttings as just as difficult to remove as solid rock, and requiring blasting, I will say positively as a practical railway man, without fear of successful contradiction, that that could best be removed by blasting. It is the most economic way and the only way it could be done.

Q. I agree with you that it might be most economically done that way and you may be right, but so will a cutting which might be entirely cemented gravel, would it not? Take a cutting of this hardpan, or cemented gravel, you have to remove that by blasting every inch of it?—A. It is the most economical way of doing it.

Q. That is loose rock?—A. It is better to take it out that way than to wear it out, and there are only two ways of doing it.

Q. Well, that is loose rock and the specifications say so. Section 35 of the specifications says:—

“35. All large stones and boulders measuring more than one cubic foot and less than one cubic yard, and all loose rock whether in situ or otherwise, that may be removed by hand, pick or bar, all cemented gravel, indurated clay and other materials, that cannot, in the judgment of the engineer, be ploughed with a 10-inch grading plough, behind a team of six good horses, properly handled: and without the necessity of blasting although blasting may be occasionally resorted to, shall be classified as 'loose rock.'”

A. That says that blasting may be occasionally resorted to, but the other refers to continuous blasting.

Q. You cannot get away with it as common excavation, it is loose rock?—A. It is solid rock excavation, according to this specification.

Q. What is?—A. Anything that may best be removed by blasting.

Q. Not at all, here is what is described as solid rock excavation:—

"Solid rock excavation will include all rock found in ledges or masses of more than one cubic yard, which, in the judgment of the engineer, may be best removed by blasting."

A. That word "masses" there, is masses of anything.

Q. No, it reads:—

"Solid rock excavation will include all rock found in ledges or found in masses."
SESSIONAL PAPER No. 123

Of course, for the purposes of this contract, you read it as you describe, but when you saw that first and put your first interpretation upon it, would you ever have thought of that?—A. Yes, sir, the very first shot out of the box, that was the interpretation put upon it by A. R. McDonald and Mr. Barwick and myself. We did not come to the chief engineer and ask any questions either with reference to that or train fill, we took the documents as we found them.

Q. Then, what sort of cemented gravel is to be loose rock?—A. That would be, I suppose, where you found it occasionally, and where an occasional shot would be required to take it out. That would probably be classified as loose rock.

Q. Then what kind of indurated clay would be loose rock?—A. The same.

Q. Do you mean to tell me that you thought indurated clay under this specification would be solid rock?—A. No.

Q. But you did say so just now. You said that all masses of any material which could be best removed by blasting, was to be solid rock?—A. It is just like this: Solid rock excavation includes all rock found in ledges. That is so since the time of Adam. And then it reads: or masses of more than one cubic yard which can best be removed by blasting. It does not say solid rock.

Q. Then it means indurated clay?—A. It might.

Q. Where did you ever, in the whole course of your experience, make the contention on a contract that you were entitled to be paid solid rock prices for indurated clay?—A. I never had these specifications before.

Q. You said just now that from the beginning you construed this specification in such a way as you thought it entitled you to solid rock prices for indurated clay, which could best be removed by blasting?—A. I said anything in masses.

Q. That brings in indurated clay, does it not?—A. Yes.

Q. Did you ever before put in such a claim as that?—A. We never had the opportunity, because we were not entitled to it under our other specifications.

Q. Did you ever, even against the Transcontinental Railway, set up a claim to be paid solid rock prices for clay of any kind?—A. Well, we did not specify the material.

Q. They never allowed it to you; they have never allowed you solid rock prices for indurated clay?—A. If they did not, and it could best be removed by blasting, then they were doing us an injustice.

Q. But you know they did not?—A. I was not close enough in touch with the work to know.

Q. No person on your works, to your knowledge, has ever claimed until today that they are entitled to solid rock prices for indurated clay, have they?—A. I am not aware.

Q. You said you were alive to that fact in the very beginning?—A. Yes.

Q. Then why did you not see that you were getting solid rock prices for it?—A. The great complaint is that we are over-classified and getting something we are not entitled to.

Q. There is not a single claim to be paid on solid rock prices for clay?—A. If it is stuff that can best be removed by blasting.

Q. Did you ever make any claim for solid rock prices for cemented gravel?—A. Personally?

Q. Yes?—A. I did not.

Q. Did your partners, to your knowledge?—A. I am not aware.

Q. Did they ever claim solid rock prices for any material in which there were no stones?—A. I cannot say. I am not aware.

Q. It would mean a difference to you of many millions of dollars if you did or did not get solid rock prices for indurated clay or cemented gravel?—A. Yes, if we were properly entitled to it and did not get it.

Q. I would have thought that if you were alive to your rights from the very beginning, you would have taken sufficient interest to have at least made a claim during the last four or five years?—A. Let me say this, that this time I was at
La Tuque it was in the very early stages of the work, and we had a battle royal on
the ground, and as a result of that meeting there were instructions issued by the
late chief engineer and he issued a blue print.

Q. And that blue print distinctly says that you shall not be paid solid rock
prices for any kind of clay or material in which there is no stone?—A. It may,
I do not know.

Q. You saw the blue print?—A. I just had a glance at it.

Q. And you never protested against them excluding indurated clay and
cemented gravel as solid rock?—A. We have been protesting all the time from our
office, but I do not know what the nature of it was exactly. I say right here now
that any material in these cuttings that can be economically removed by blasting,
we are practically entitled to solid rock excavation for that.

Q. That is to say, that all stuff that is not free shovelling is solid rock?—
A. No.

Q. You have to blast everything that is not free shovelling?—A. Not con-
tinuously.

Q. When you come to a place where you don’t blast it, it is free shovelling?
—A. Where we don’t require to blast it.

Q. Everything that is not free shovelling, has to be blasted, for its economical
removal?—A. Yes.

Q. And your contention is that everything that has to be blasted is solid
rock?—A. Not at all, the specification provides for that.

Q. What is your contention?—A. Where the cutting is either one thing or
another mixed up, and can best be removed by blasting, I don’t care what it is,
if that cut is a solid mass of indurated earth and we cannot take it out any other
way economically except by blasting, we must resort to blasting, and we are pro-
perly entitled to that as solid rock excavation.

Q. Would you say that all material that is not free shovelling is solid rock?
—A. I did not say that.

Q. Free shovelling is the only thing that you do not class?—A. I do not
know about that.

Q. Be serious, don’t you blast everything that does not come under the head
of free shovelling material?—A. Yes, an occasional blast.

Q. Don’t you blast everything that is not free shovelling?—A. We might.

Q. And therefore, according to your argument, that is all solid rock; they
have done you terribly if that is so?—A. That is my claim and my contention.

By Mr. Gutelius:

Q. Before you signed your first tender did you have the idea that that word
“masses” would be interpreted to cover other than rock larger than a cubic yard?
—A. I do not know as to that.

Q. Did you form your opinion before you signed your first tender?—A.
Yes, that is the only time Mr. McDonald and I were here together. There were
several omissions in the first specification and one of them was “train filled”. Mr.
McDonald wanted to come down and discuss the matter with the late Chief Lums-
den, and Mr. Barwick and I were a unit in saying: no, when we come to train fill,
which was omitted altogether, we would deal with it. We dealt with this at the
same time. We read the thing over very carefully. There must be something
more than solid rock to be classified as such from the reading of that clause 34. If
it was only solid rock in ledge that was to be specified as such, they need not put
that in about masses.

Q. If you did not discuss it with the chief engineer and did discuss it be-
tween yourselves, was not that really a joker in the pack when you were making
your first bid?—A. It might be so, it might be considered so.

Q. That expression is a little strong?—A. Yes, and the train fill was the
same thing.
SESSIONAL PAPER No. 123

By Mr. Staunton:

Q. What do you mean by the train fill?—A. There was no figure for it.

By Mr. Gutelius:

Q. If you had that idea in mind, that you could get solid rock for anything that could more economically be done by blasting, did you convey that idea to your sub-contractors?—A. I do not think we did.

By Mr. Staunton:

Q. I should think you would not like to put your pen to it?—A. We gave the sub-contractors whatever we got, you know.

By Mr. Gutelius:

Q. If there was any advantage to you in connection with that, on account of your interpretation, you would not get the benefit of that unless you wised up your subs?—A. Quite true, but it was immaterial to us as chief contractors, whether we got a margin on loose rock or solid rock; it would have been the same per yard.

Q. You were up at La Tuque with the engineers at that time?—A. Yes.
Q. That discussion at La Tuque was Woods and Lumsden on one side, and the balance of you on the other?—A. That is right.
Q. You were satisfied when you left La Tuque that you had the Commissioners with you?—A. Well, I could not say just then what the result of the discussion was.

Mr. Staunton:—Lumsden says the Commissioners argued with the contractors?—A. Well with regard to that, I may say that I myself read that very clause. I was the only one that happened to have the specifications in my pocket and I read the clause in this way: Solid rock excavation will include all rock found in ledges; I said there can be no dispute about that, that the chief engineer agreed, and I said there must be something in the mind of the framer of the subsequent part of the clause, that something more than solid rock in ledges would be classified as such.

Mr. Staunton:—Sure, boulders
A. It says: masses of more than one cubic yard which can best be removed by blasting. It does not say boulders nor anything else. There happened to be two lawyers among the Commissioners, the chairman, Mr. Parent and Mr. McIsaac. They took this thing out of my hands and they commenced reading it, and they were all trying to interpret it then. We had it interpreted long before that.
Q. What did the two lawyers say?—A. They did not say anything just then and we did not know where we were when we left.
Q. Did they seem to favor your view or the other view?—A. They were at sixes as to how it read. I think the legal minds took the view I was right. The ex-chief was inclined not to express himself.

Mr. Staunton:—Lumsden said he said it had to be rock, and the Board agreed with the contractors?—A. When I asked the late chief engineer what was solid rock under the specification, his words to me were; solid rock is solid rock, and loose rock is loose rock, and I said it was so since the time of Adam, but what was it in the specification.
Q. What did he say to that?—A. He repeated that twice, and then, of course, we had to get into some kind of a discussion. I wanted to know what it was in the specification and when I read that in the way I did, he seemed to be a little dumbfounded about it.
By Mr. Gutelius:

Q. What reduction did you make in your solid rock prices, because you discovered this joker?—A. I cannot say as to that. Our price was low on solid rock, going to show that we were not building on that very much. I think it was the lowest in the schedule; $1.50, that is a low price for rock.

Q. You would not like to say how much reduction you made, because you expected masses to be made up of loose rock material?—A. No, we figured it more closely on that account, but I cannot say that.

Q. Now, separating this assembled rock, stone on one side, if the stone was less than a cubic yard, it would be called loose rock?—A. Separating them one by one they might.

Q. And the matrix material, if separated, and had no stones in it would be loose rock, or common excavation, would it not?—A. It might be.

Q. And the reason you say it is solid rock is because the two are associated in such a way as that they can be most economically removed by blasting?—A. That is it, exactly.

Q. And you never knew of that interpretation being placed on it in any other specification in your career as a contractor?—A. I have no recollection of it.

Q. Do you think that specification was drawn by a person who was inexperienced in framing specifications?—A. I would not like to say that. I tell you the opinion I would offer on that question would be that I thought whoever framed the specifications were trying to be fair and to pay for that which would cost as much as solid rock or could best be removed by blasting.

Q. From the information before us, it appears that in your various contracts you have 1,000,000 cubic yards of solid rock, that is composed of stones less than a cubic yard, and a matrix of sand or clay or indurated clay which when combined formed this material which is known as assembled rock, what reasons can you give this Commission for not having it classified in its component parts as loose rock, and your estimates revised accordingly?—A. What reason can I give?

Q. Yes, why would it not be right and fair for us to recommend that that reduction be made?—A. I have this reason to give, that inasmuch as we were chief contractors, as I said before, and we have paid our sub-contractors right along on the estimates given to us, from time to time by the engineers of the Commission, and on which we have paid our sub-contractors in the best of good faith, that we do not think the estimates should be revised. In fact, I think it would be the grossest injustice to us. If there was anything wrong we had no knowledge of it and the estimates should not have been issued and they should not have been certified to, and we should not have been instructed to pay the sub-contractors on that basis, in fact, we were urged to pay them in many cases.

By Mr. Staunton:

Q. That is what you consider the real meritorious reason for being paid?—A. That is one reason.

By Mr. Gutelius:

Q. Is there anything else you would like to tell this investigating Commission that has not been brought out in our discussions to-day?—A. I do not know there is anything I could recall at this moment that I would like to tell. I have nothing at the moment that I think it would be necessary for me to state. I do not know what you have in your minds.

Mr. Staunton:—Mr. Gutelius does not want, after this Commission is closed, for a contractor to come and say: if they afforded me an opportunity I could have explained things and given evidence which would have put another light entirely
upon the facts which were before them. We have asked all we could think about, and if you have anything more that you think would help us or would put a different light upon the facts which are before us, you can tell us now, in connection with anything that you have been interested in, in this work?—A. I repeat that at the moment I can think of nothing more. If I do at some future time and think about it, I may.

Mr. Staunton:—If anything occurs to you before we make our report, that you wish to have added, will you communicate with us.

Mr. O'Brien:—Yes.
The witness was not further examined.

(NATIONAL TRANSCONTINENTAL INVESTIGATING COMMISSION,
OTTAWA, FEB. 4th, 1913. EVIDENCE TAKEN IN N.T.R. OFFICES,
BEFORE THE CHAIRMAN AND MR. GUTELIUS.)

E. F. Powers, sworn:

By the Chairman:

Q. How long have you been engaged in concrete bridge foundation construction?—A. Fifteen years I have been connected with deep water work in different ways.

Q. Taking all your work together in the fifteen years, what do you think it would amount to in dollars?—A. I could not give you it. We have been doing about $200,000 worth of work a season; that is different kinds of work.

Q. So that it might amount to as much as $3,000,000?—A. Yes.

Q. You were a sub-contractor, were you, under Mr. Kitchen?—A. Yes.

Q. In the name of Powers and Brewer?—A. Yes.

Q. What was your sub-contract?—A. To complete all the concrete masonry under Kitchen & Company's contract.

Q. You used a mixture of one-two-four, instead of a mixture of one-three-five, in massed contract in some portions of your work, did you not?—A. I did not quite catch that.

Q. You used a mixture of one-two-four instead of one-three-five, as specified in the contract?—A. Yes.

Q. In some of your massed concrete pedestals?—A. Yes.

Q. Why did you do that?—A. We did that through instructions from the engineers.

Q. Where did you use it?—A. In the pedestal shafts only.

Q. Where?—A. At Salmon River, Caton Brook, and a part of the pedestal shafts at Graham Brook.

Q. Take the Little Salmon River first: why did you use at the Little Salmon one-two-four?—A. We were instructed to use it.

Q. By whom?—A. Through chief engineer Grant, and Mr. Balkam.

Q. Did they instruct you personally to use it?—A. Yes.

Q. Why did they instruct you to use it?—A. Owing to the size of the structure and the great weight to be added on to these concrete blocks.

Q. Are those the only reasons?—A. And probably a question of the material not being sufficiently good enough to use the leaner mixture.

Q. Are you a professional concrete man?—A. No, I do not say that I am.
Q. What experience have you had in it?—A. I have been in concrete the last ten years.

Q. Was there anything the matter with the gravel or sand at the Little Salmon, in your judgment?—A. No.

Q. It was all right, was it?—A. I would think it was.

Q. Was it any different from any other gravel or sand that you used in other portions of the work?—A. No, I cannot say that it was, with the exception of Little River, where we brought in outside sand.

Q. You say that at Little River it was inferior to this?—A. Yes, a portion of Little River.

Q. What you mean is that the sand at Little River was not as good as the sand at Little Salmon?—A. No.

Q. So there was no good sand used by you which was better than this sand at Little Salmon?—A. Except the sand we brought from Magaguadavic, so called.

Q. Did you use any 1-3-5 mixture at Little Salmon?—A. In the footing courses.

Q. Is that all you used there?—A. And in the bodies of the abutments, I think the west abutment.

Q. And in the remainder of your work at Little Salmon you used 1-2-4, did you?—A. Yes.

Q. Did you get any instructions in writing to use 1-2-4?—A. Yes.

Q. Who were the instructions in writing from?—A. From concrete inspector Lowe.

Q. What does the inspector say?—A. To put in 1-2-4 in all shafts, under letter same date from divisional engineer Ballock:

"George Lowe, concrete inspector, Salmon River, N.B.: Dear Sir:—1-3-5 concrete is to be used in all pedestals, footings and west buried piers, and both in footings and pier bodies, the pedestal shafts are to be built of 1-2-4 mixture, without fillers.

"Yours truly,

"GUY R. BALLOCK, Div. Eng."

Q. Is this the original?—A. No, a copy.

Q. Where is the original?—A. It is in our fyles. I did not think it was necessary.

Q. Was that letter handed to you?—A. Yes.

Q. By the concrete inspector?—A. Yes.

Q. Did you say anything to him about the price at that time?—A. Yes.

Q. What did you say to him?—A. I asked if it was to be paid for at 1-2-4 prices, at our price, and he said it was.

Q. I see in this letter Mr. Kitchen wrote to us, that you wrote on the 4th November to him:

"We have asked to be allowed to use this gravel in a 1-2-4 mixture, and we were told that we might do so, but we would only be paid for 1-3-5 mixture, as the price for the 1-2-4 mixture was too high. This we consider unjust, for the other contractors are putting in a 1-2-4 mixture and are being paid at their 1-2-4 prices for it."

That does not accord with your statement that you have given me?—A. We never thought for a minute of going on with the work—

Q. Never mind what you thought about it; that is not in accord with what you have told me just now, that when you were ordered to do it you were promised a higher price?—A. Well, we would not go—

Q. How do you reconcile these two statements?—A. I do not quite understand you.
Q. You stated to me that you were ordered in writing to use 1-2-4 mixture in the parts of the structure mentioned in the letter which you have just read, and that you were told by the inspector that you would be paid a 1-2-4 price: that is correct, is it not? — A. Yes.

Q. Now, in your letter written on November 4th, 1908, to Mr. Kitchen, you state that you would not be paid a 1-2-4 price. How do you reconcile these two statements? — A. I do not see any answer to that. I do not quite catch the meaning of it.

Q. It should be pretty clear. You wrote a letter, did you not, on the 4th November, 1908? — A. Yes.

Q. To Mr. Kitchen? — A. Yes.

Q. And you stated in that letter: “We have asked to be allowed to use this gravel”; that is the gravel at Little Salmon, is it not? — A. Yes.

Q. “In a 1-2-4 mixture, and were told that we might do so, but would only be paid for a 1-3-5 mixture”? — A. Yes.

Q. Is that statement true? Did you write that letter? — A. Yes.

Q. And is that statement that you made there true? — A. Well, I should say it was.

Q. Then your statement that you were to be paid for a 1-2-4 mixture now is not true? — A. Well, we were told by someone not in authority. At the time I wrote that letter, it was not our intention to go on with a 1-2-4 mixture until we were paid for it.

Q. That letter, April 27th, 1909, is apparently written long after? — A. Yes.

Q. You put in a whole lot of this mixture before you got orders to put it in? — A. We put a lot of it in on the rings of arch culverts and were paid for it 1-2-4 the arch culverts, the first concrete work we did on Kitchen & Company’s contract.

Q. Stick to the Salmon River part; you were not putting in arch culverts at Salmon River? — A. No.

Q. You are speaking in this letter of the Salmon River? — A. Yes.

Q. And you told me that you were told you might put it in 1-2-4 with that gravel, but that you would not be paid for it. Now, where else did you put it in? — A. At Graham Brook.

Q. How far is Graham Brook from the Little Salmon? — A. I judge about three miles.

Q. Why did you not use 1-3-5 at Graham Brook? — A. I do not know; we had the same instructions.

Q. Had you another letter about Graham Brook? — A. The concrete inspector at Graham Brook had a letter the same date.

Q. Have you that letter? — A. No; I think it was the same date.

Q. What was the matter with the gravel at Graham Brook? — A. I am not prepared to say.

Q. You do not know anything wrong with the gravel there? — A. We were ordered to put in a mixture and we adhered to it, 1-3-5.

Q. You say in your letter:

“We are advised by the division engineer that all of the sand which we planned on using in the concrete work at Salmon River, Graham and Caton Brook has been condemned as unfit for the work, and it has been suggested that we bring in sand from Magaguadavic. We are bringing in this sand at great expense to use at Little River, but in the case of the other work, the cost of the sand would be more than doubled, owing to the long haul. At the time we contracted with you for this work, Mr. Mitchell, in company with Mr. Balkam and Mr. Balloch and in the presence of yourself and the writer, examined the sand at Salmon River and Little Salmon River, and pronounced it O.K., and it was mainly owing to this sand being accepted that we entered into contract for this work. We have had a hard season and have spared
Mr. Kitchen goes on to say that Mr. Grant came down in January, 1909, and went over the work with you. What do you say Mr. Grant did when he came down?
—A. On January 1st, 1909, Mr. Grant told Mr. Balkam in my presence that he would allow 1-2-4 in all shafts of pedestals at Salmon River. I asked him if that meant the entire work of all the concrete, and he said no, the shafts only, and I remember asking him the yardage; he told me about 7,000 yards; that looked a little larger; and then again I thought it might cover Caton and Graham Brook, where we put in about that much of 1-2-4.

Q. Did you ask him if it covered Caton and Graham Brook?—A. No. I asked him how many yards at 1-2-4.

Q. You did ask him about the Salmon River then?—A. Yes.

Q. You had no right to think it was in some other place?—A. No.

Q. On that authority, whatever it amounted to, you put it in in the three places; is that right?—A. Well, we had instructions to put it in—at least, the concrete inspectors had instructions to see that it was put in at Caton and Graham Brook.

Q. They told you so?—A. Yes.

Q. Who told you so at Caton and Graham Brook?—A. The inspector.

Q. What was his name?—A. I cannot recall his name; I think it is Patterson; I would not be positive.

Q. Can you say how much more concrete did you put in, in making a 1-2-4 mixture than you would have put in, in making a 1-3-5 mixture—how much more cement?—A. Well, it would be pretty hard for me to answer that question.

Q. You can tell it roughly?—A. The engineers made tests of the sand and gravel from time to time, and they would have to change the quantity of cement—

Q. What does the “1” stand for?—A. One of cement.

Q. And the “2”?—A. It would be sand.

Q. And the “4”?—A. It would be crushed stone, or whatever you might use.

Q. So that you would use those proportions in a cubic yard, if you used that mixture?—A. Well, that would not make a cubic yard.

Q. It would, if you had enough of it; 1-2-4 is only a division of a cubic yard?
—A. Yes, that is quite right.

Q. And one seventh, in that case, would be cement, would it not, in a 1-2-4 mixture?—A. I am not quite clear on that.

Q. There are seven parts and only one of cement; so that one seventh would be cement?—A. Yes.

Q. In seven yards of concrete there would be one cubic yard of cement, would there not?—A. Well, it might.

Q. That would be the proportion theoretically?—A. Yes.

Q. If you make it 1-3-5 it would be one-ninth of cement; eight parts of sand and gravel and one of cement?—A. I am not familiar enough with that to tell.

Q. Why should you be paid any more than for the additional amount of cement you put in in the richer mixture, when it was done in order to relieve you from going abroad for gravel? Can you answer that?—A. No.

Q. The only difference in cost to you was the additional cement, was it not?—A. Well, more than that, Mr. Chairman.
Q. What would be the difference in cost to you?—A. There was more waste in connection with the bags. We have a great number of bags of cement to carry to our work; more loss in bags, and, generally, mixing 1-2-4, we just mix that proportion and put it in. We do not mix up a yard. We mix it both by hand, and it would cost the same to mix a batch of 1-2-4 as 1-2-5, only we do not get the quantity of concrete at each mixture.

Q. You did not mix this stuff by hand?—A. The greater part of the pedestal shafts; they were only small.

Q. Do you know what it really cost you?—A. No.

By Mr. Gutelius:

Q. Don’t you know what your cement cost you?—A. Well, we could hardly determine that. You understand, hauling cement practically for miles in the country, there is more or less loss, loss of bags, and it would be hard to determine the cost.

By the Chairman:

Q. I should think there would be an infinitesimal difference in the loss. However, that is what you say. That is the difference to you?—A. Yes.

Q. In your judgment it was not necessary to make the change, anyway, was it?—A. I think the sand would make an average concrete, using it in a 1-3-5.

Q. How many thousand dollars’ difference does it make in the work?—A. I could not tell you off-hand; I really do not know.

Q. Did you get any cost at all on your work, or any price as to how you were doing, or did you just do the work and draw the money and take the chances on whatever profit there was in it?—A. I cannot say that; it is hard to refresh your memory on work that has been done three years.

Q. Did you make this concrete work larger than the specifications required?—A. You mean the shafts?

Q. Yes?—A. No, we built our shafts as directed.

Q. But you had a specification for them?—A. We had a plan.

Q. Did you exceed the plan?—A. No.

Q. In quantities?—A. I am not so sure about that. The shafts varied in height.

Q. Did they vary in thickness?—Not on top.

Q. Anywhere?—A. Well, along the shaft, of course, the greater the batter the greater the base would be.

Q. That would be shown on the plan?—A. No; they built the pedestals, as far as I can understand, to suit the contour of the ground.

Q. Was there any specification showing the size of these pedestals?—A. Yes.

Q. I am asking you now, did you exceed in the quantities the amount shown on the plan in these pedestals?—A. I am not familiar with that.

Q. You ought to know something about this business?—A. Well, we were directed to put in a pedestal a certain height here, and a certain height over there, as the case might be. There were not any two, I do not think, the same height from the footing course to where the shoe plate of the steel rested.

Q. The height would be regulated by the contour of the earth?—A. Yes.

Q. But the size of the pedestals would not be, except as to height?—A. No, the size on top would not be.

Q. Nor the size at the base?—A. The base increases as it goes down.

Q. Did you build the culverts according to the specification?—A. Most of them, I think, we were ordered to increase the depth of the footing on account of requiring a good foundation.
Q. Were you ordered to increase the depth of the footings in many cases?
A. I do not remember, Mr. Chairman; in a few cases, I think.
Q. Was it necessary, in your judgment?—A. Yes.
Q. You say there were only a few cases of that kind; is that correct?—A. Well, I could not tell you the number of them off-hand; no doubt there would be several on a contract of that size.
Q. Do you remember how many culverts you put in?—A. No.
Q. Did you have any claim for extra work?—A. Yes.
Q. What for?—A. For diverting watercourses with culverts and increasing the size of foundations.
Q. What did your extras amount to in cash?—A. I do not remember.
Q. Was it a large or small amount?—A. Not a large amount at all.
Q. $1,000?—A. Yes, there would be more.
Q. You know about what it was, do you not?—A. I cannot recall the exact amount.
Q. You can recall it approximately? Give me it in round numbers?—A. I would not like to say just what it was.
Q. What is your recollection?—A. I would think two or three thousand dollars.
Q. All over your whole contract?—A. Well, it would be—yes, it would be more than that all over the contract. Some of our work was sublet.
Q. What prices did you get for 1-2-4?—A. Off hand I could not give you the exact figures.
Q. Surely you remember something about this?—A. I have not seen our contract for so long.

By Mr. Gutelius:
Q. I have a copy of your contract before me, and it reads: "concrete, 1-2-4 $10; 1-3-5 $8.50; 1-3-6 $8?—A. Yes.
Q. The difference between 1-3-6 and 1-2-4 then, in your contract with Mr. Kitchen, was $2 a yard?—A. Yes.
Q. 1-3-5 is $8.50; it was to be 1-3-5 originally in the pedestals and 1-3-6 in the footings; was that the original mixture?—A. I am not sure.
Q. It was understood with you that the price for 1-2-5 of $11.50 was to be used, was it not?—A. Yes.
Q. And this Little Salmon River viaduct is on your contract?—A. Yes.
Q. So that it would be included?—A. Yes.
Q. Your price for 1-2-5 is $8.75?—A. Yes.
Q. So that the difference, so far as you are concerned, is between $8.75 and $10 for the concrete in question?—A. Yes.
Q. I know you are a concrete man, and I know you have some general ideas about the cost of various mixtures, and I want to help you get this cleared by suggesting that the difference in the amount of cement used in 1-2-4 and 1-2-5 is one bag of cement when you are making batches of a cubic yard. Does that sound about right to you—one bag more of cement in the 1-2-4 than in the 1-2-5? Just roughly?—A. No. I think it would take more.
Q. Did you use one yard batches in your machine?—A. In some of our machines I did.
Q. Does not an extra bag of cement strike you, as a concrete man, as being about the difference between 1-2-4 and 1-2-5? About three bags for 1-2-5 and four bags for 1-2-4 in mixing yard batches? Does that not look about right?—A. No, I cannot say that it does.
Q. Well, what is right?—A. We used seven bags of cement to a yard, 1-2-4.
Q. What was the size of the bags?—How many bags in a barrel?—A. Four.
Q. You used seven bags to a yard?—A. Yes; no fillers allowed in the work.

By the Chairman:

Q. How many bags in the 1-2-5?—A. I cannot say; there was not very much 1-2-5 used.

By Mr. Gutelius:

Q. That is what you used to start with. Would five bags be about right?—A. Five would be about right.
Q. The difference, then, between 1-2-5 and 1-2-4 is two bags of cement, or half a barrel?—A. Yes.
Q. What would that cement cost you at the railway station?—A. I do not recollect just what it would be, it is so long ago.
Q. Well, you know within ten cents?—A. If I remember right, it was $2.20.
Q. How far did you have to haul it to Salmon River?—A. Some of it nine miles.
Q. How far did you haul the remainder?—A. Fourteen.
Q. Would the average haul be twelve miles?—A. The average haul would be about 13 miles.
Q. How many barrels would they haul on one sled?—A. It varied, according to the road conditions.
Q. Did you haul on your own teams?—A. No.
Q. What did it cost you to have it hauled?—A. It cost us 40 cents a barrel and in some cases sixty.
Q. The average 50 cents a barrel?—A. Yes.
Q. That would make your cement cost you $2.70 a barrel?—A. Yes.
Q. And your difference between 1-2-4 and 1-2-5 being half a barrel, would be $1.35 a yard?—A. Yes.
Q. I see that you bid for 1-2-5 $8.75 and for 1-3-5 $8.50; 25 cents a yard difference between those two mixtures, when the cement difference is practically the same. According to that statement, you would be losing $1.10 if you had to build very much 1-3-5, as compared with your price for the 1-2-5? (No answer.)
Q. The point I want to make is that the difference in cost to you between these two mixtures of cement, according to your own figures, which have been liberal, is $1.33 a yard?—A. Yes.
Q. Referring to the letter which the chairman read to you a few minutes ago, in which you stated to Mr. Kitchen that other contractors were being paid 1-2-4 price for 1-2-4 mixture, what other contractor do you refer to?—A. I refer to a bridge at Four Mile Brook on Lyons & White's contract.
Q. Do you happen to know that that was a special arrangement between the chief engineer's office and Lyons & White?—A. No.
Q. Simply hearsay?—A. No.
Q. Why did you make the statement?—What authority had you for making the statement?—A. From the contractor who was putting in the concrete.
Q. He told you they were getting the 1-2-4 price for that material?—A. Yes.
Q. Did you know it was the result of a special arrangement or bargain?—A. No.
Q. If he had told you it was the result of a special bargain, you would have endeavoured to make a similar bargain?—A. No.
Q. You would have tried to have done the same thing as he did?—A. No, I cannot say that.
Q. Did you have any definite understanding with Mr. Balkam or Mr. Foss that you were to receive $10 a yard for that 1-2-4 concrete?—A. Verbally.
Q. With either of these gentlemen?—A. Yes.
Q. Did not Balkam simply tell you he would put it in?—A. He and Mr. Grant would allow 1-2-4 mixture.
Q. You are resting on Mr. Balkam and Mr. Grant telling you personally that they would allow 1-2-4 price for that 1-2-4 mixture?—A. Yes. If they would allow 1-2-4, we had a price for 1-2-4, the same as any other mixture. If they had said 1-2-4 I would expect to be paid for it in the same way. They mentioned 1-2-4.
Q. But what they really intended to do, as I read it, is that they agreed to permit you to use 1-2-4 of that native sand and gravel and would pay you the schedule of 1-2-5? Permit instead of allow?—A. We had a letter from Mr. Balloch ordering us to discontinue the 1-2-4 at Graham Brook and putting in 1-2-5.
Q. I have a statement before me showing that on your work there was used 1-2-4 concrete in masses, item 59a, 5136 yards, covering work on 37 different structures; does that look about right?—A. Yes; that is on the 31 miles—
Q. On the whole contract of Mr. Kitchen?—A. Yes.
Q. I would like you to be quite clear as to whether Mr. Grant said he would allow you 1-2-4 for that concrete. Do you remember distinctly that Mr. Grant said it?—A. I have a note of it here, taken at the time, both Mr. Grant and Mr. Balkam, in my presence.
Q. You are quite sure about that?—Yes. He told Mr. Balkam in my presence that he would allow 1-2-4 in the pedestal shafts.

By Mr. Kitchen:

Q. When you were ordered that two would not be paid for the 1-2-4 mixture, did you intend to go on using 1-2-4 and get paid for it at the 1-2-5 price?—A. No.
Q. When you were ordered to go on with the 1-2-4 mixture, did you expect to be paid for that mixture at the 1-2-4 or 1-3-5 price?—A. At the 1-2-4 price.
Q. I thought I heard you say you had a letter from Mr. Mitchell, the chief inspector of concrete, writing to you from Ottawa, saying the sand was all right?—A. Yes.
Q. You have not that letter?—A. No, I have a note of it here.
Q. About the payments of your estimates, were you being paid for the 1-2-4 mixture before Mr. Grant came down?—A. Yes.
Q. After Mr. Grant told Mr. Balkam this in your presence, and you afterwards received word from Mr. Balloch to go on with this work, how long did you get the 1-2-4 price?—Did you get it afterwards?—A. No; it was returned in the estimates until some time in December, 1912.
Q. Was it not 1913? You did not know about it till you got your final estimate?—A. No.
Q. You did not know it was cut out?—A. No.
Q. It was fair for you to assume it was the 1-2-4 price, and you were being paid for it right along?—A. Yes.
Q. And no talk that you would not get the 1-2-4 price?—A. No.

By Mr. Gutelius:

Q. What was the greatest depth you had to go for foundations of the footings of the Little Salmon River Viaduct?—A. 22 feet.
Q. What method did you use to reach that depth?—A. We built an open caisson and excavated inside.
Q. To the bottom?—A. Yes, and we put on rails and rocks to weight it down and have it properly braced.
Q. You had no trouble to make it 22 feet with that character of open caisson construction?—A. No; and we used the pumps all the time while we were doing it.

Q. To keep out the water?—A. Yes.

Q. Supposing you had been compelled to go to 40 feet, would you have used the same method of sinking?—A. The same method of sinking, but with a heavier style of dam.

Q. That is, you would puddle on the outside?—A. Yes; we used pockets to make it puncture through.

Q. Filled with concrete?—A. No, filled with sand, so as to increase the weight sufficient to carry down the open caisson with your excavation.

Q. Suppose you had a pier 40 feet long and 16 or 18 feet wide, and 40 feet to solid foundation, would you have adopted the same method of construction?—A. Yes. The same method of construction, with a heavier type of cutting edge, and use concrete for weight instead of sand.

Q. That is, your puddling space would be filled with concrete?—A. Yes, to make the walls stronger.

Q. To make the walls strong enough to withstand the external pressure?—A. Yes.

Q. If it were necessary to go through eight or ten feet of water, would you use the same method?—A. Overlaying the mud?

Q. Yes?—A. Yes.

Q. In such a case as last described to you, would you, under any circumstances, use pneumatic caisson, 40 feet, 18 by 40, ten feet of water? Forty feet total depth; you have 10 feet of water then 30 feet of mud, then solid foundation; would you use the same method?—A. Yes.

Q. Would it be cheaper than the pneumatic caisson?—A. In my experience it would be.

Q. You might tell us of the deepest of your open caisson pier construction?—A. The deepest done to date would be 69 feet, in 38 feet of water, at low water, to begin with.

Q. And at high water?—A. About 62.

Q. And you went into the mud how deep it that place?—A. About 23 or 24 feet into the mud.

Q. Where was that pier located?—A. At the Bear River bridge on the Dominion Atlantic Railway.

Q. Do you think of another one deeper than 40 feet from the top of the water?—A. We have one we are preparing for now 105 feet from low water to ledge.

Q. To the bottom of the foundation?—A. Yes.

Q. And that is being built in open caisson?—A. Yes.

By the Chairman:

Q. Why did you build it with open caisson? Was it because you could do it cheaper?—A. Yes.

Q. Could you do it as quickly?—A. Yes, when I consider our excavation is done by means of orange peal buckets.

Q. The open caisson work is cheaper and more expeditious than the pneumatic caisson?—A. Yes, in my experience.

Q. Is there a marked difference in the price?—A. Well, yes, I would say there was. I have known cases where there has been as high as $14 a yard paid for excavations in pneumatic caisson.
By Mr. Gutelius:

Q. Whereas in the open caisson you could do it for—-A. The average price would be $5 to $7.

Q. So that the cost of the excavation in the open caisson is about half what it would be in the pneumatic caisson?—A. Yes.

(EVIDENCE TAKEN IN N.T.R. OFFICES, OTTAWA, APRIL 9th, 1913.)

ALEXANDER MACDOUGALL, sworn:

By Mr. Gutelius:

Q. You are a member of the firm of O’Brien, Fowler and Macdougall?—A. Yes.

Q. Did your firm have a contract with the Commissioners of the National Transcontinental Railway for the construction of an engine house at Graham,—A. Yes.

Q. Was this to be paid for by schedule prices, or by a lump sum?—A. Schedule prices.

Q. With whom did you arrange these schedule prices?—A. The Chief Engineer Lumsdon, and Chief Engineer Grant, and I think some of them with MacPherson.

Q. But the final effect of whatever arrangement you made was with the Commissioners?—A. Yes, they approved afterwards.

Q. Did you build this engine house yourself?—A. Well, we sublet it.

Q. To whom did you sublet?—A. Farlinger and Macdonald.

Q. Among the schedule prices, I notice that you received $17 a cubic yard for concrete of 1-3-6½ mixture: is that correct?—A. Yes.

Q. The records show that the total in connection with this concrete was $90,191?—A. About 5,000 yards, yes. Could I make an explanation there?

Q. Yes.—A. The price of the concrete was taken from the price of concrete in the main contract, you know.

Q. Then you received $17 a cubic yard for concrete in bridges and culverts?—A. Yes, and walls of buildings and foundations; it ran from $16 to $30, and $17 was arranged as a fair price.

Q. What did you pay these sub-contractors per yard for concrete?—A. $10.

Q. And you paid them on the same yardage basis that your own estimates were made?—A. Yes.

Q. How did the other items in the schedule of prices with your subcontractors compare in the matter of profits with the concrete prices?—A. Do you ask me if the percentage of profit on the other item was the same?

Q. Or something near like it?—A. No, it was not.

Q. Was there a fair margin of profit in each of the items?—A. Not on each of them, no.

Q. Not a fair margin?—A. No.

Q. What is a fair margin?—A. A fair margin ordinarily—oh, fifteen per cent, I presume.
SESSIONAL PAPER No. 123

Q. Have you any idea what the total profits of that contract with Farlinger and Macdonald amounted to?—A. In the neighbourhood of $50,000, practically.
Q. Is this the only building you had under your concrete contract?—A. No; the Armstrong roundhouse.
Q. How did that compare in prices with the one at Graham?—A. A little higher.
Q. Margin of profit a little higher?—A. No.
Q. About the same?—A. No, a little less.

(NATIONAL TRANSCONTINENTAL RAILWAY INVESTIGATING COMMISSION; QUEBEC, MARCH 12th, 1913.)

(EVIDENCE TAKEN IN THE OFFICES OF THE TRANSCONTINENTAL RAILWAY.)

ALFRED CURZON DOBELL, sworn—

By the Chairman:

Q. You are a practising advocate in Quebec?—A. Yes.
Q. And have practised here for several years?—A. Yes; eleven years, I think.
Q. I believe you have a power of attorney to act for the Duchess of Bassano in connection with her business in the Province of Quebec?—A. No, it was only regarding the property she owned up Champlain street in the City of Quebec.
Q. Did you make any lease of any portion of the Duchess of Bassano’s property?—A. On the 25th February, 1908, I gave a lease, and this lease ran out on the first of May, 1909, but it was tacitly renewed from year to year. There was a provision in the lease that I could give the lessee six months’ notice to quit.
Q. What you mean is that, after the expiry of the lease by effluxion of time, the tenant continued in possession of that property as a tenant from year to year, subject to be put out of possession on six months’ notice, ending with any one year?—A. Six months’ notice at any time.
Q. What was the name of that tenant?—A. Napoleon Martineau, junior.
Q. Where does he live?—A. He lives in Quebec, and he rented this property at that time for an ice house.
Q. Where is this property?—A. 2525 Champlain Ward.
Q. What do you mean?—A. It is designated and known upon the Cadastral plan, and in the book of reference for Champlain Ward in the City of Quebec under number 2525.
Q. And it is situated where?—A. Near the west end of the City on the River front.
Q. Below the citadel?—A. Below the citadel, further west than the citadel.
Q. But below the cliff?—A. Yes.
Q. What is the size of the property?—A. A piece of land measuring 37 feet by 60 feet.
Q. 37 feet frontage, running from the street to the water?—A. Well, I could not tell you that.
Q. Look at the plan. Do you know whether it ran to the water edge?—A. The building, no.
Q. But the property?—A. No, it does not.
Q. Describe the property that is covered by the lease you speak of?—A. Well, it is a property running alongside of Champlain Street, with a measurement of 37 feet.
Q. Does it run back to the water?—A. No, it does not.
Q. What is there between it and the water?—A. If I remember right, part of the old wharf.
Q. There is land between it and the water?—A. Well, it is made land.
Q. But who owns the water front there?—A. We do.
Q. Did you rent him the water front?—A. No, it is just the size of the building.
Q. You say "I leased to him a piece of property 37 by 60, entirely covered by a building"?—A. Well, he put up the building.
Q. He put up a building which entirely covered the land leased to him?—A. Yes.
Q. This building fronts on Champlain street, but does not go down to the water's edge?—A. No.
Q. You did not lease to him the land between the water's edge and the building?—A. No; of course, remember, he put up the building.
Q. Napoleon Martineau put a building on this land, did he?—A. Yes.
Q. What was it?—A. An ice house.
Q. And he continued your tenant of this property for how long?—A. Well, he paid me rent up to the 1st May, 1912.
Q. And what was the rent he paid you?—A. It was $75 a year.
Q. And that lease was in writing?—A. Yes.
Q. And you have a copy of it in your possession?—A. Yes.
Q. Then did you terminate his lease on the 1st of May, 1912?—A. Well, I told him in the summer of 1911 that we had received—when I say we, my brother and myself look after my mother's estate, which adjoins the Bassano property, and we ran the two properties more or less jointly—that we had, I cannot say whether it was to me or my brother, received notice that we were not to relet any property after the 1st of May, 1912.
Q. From whom did you say you had received that notice?—A. I cannot say that I got it myself, but I understood that it came from the Transcontinental Commission.
Q. Either to you or to your brother a notice was given by the Transcontinental Commission that they intended to take this property?—A. A part of it, and that we were not to relet.
Q. What did Napoleon Martineau do?—Did he leave the property on the 1st of May?—A. I first of all must tell you that some time in September of 1911, he came to me and asked me if I would give him a complete discharge of all rent that he owed me, and I told him that he owed me a certain amount.
Q. How much did you tell him he owed you?—A. He owed me either a year or a half year's rent, I have forgotten which.
Q. In September, 1911, Napoleon Martineau came to you respecting this property?—A. Yes.
Q. What did he want?—A. He wanted to settle for the rent for the balance of the lease.
Q. He wanted to make a settlement with you for his rent up to the 1st of May, 1912?—A. Yes.
Q. And then did you make a settlement with him?—A. I took an order on the Garrison Club.
Q. You did have a settlement with him?—A. Yes.
Q. So that you had no further claim on him personally for rent up to the 1st of May, 1912, respecting that property. What did he want to make this settlement
SESSIONAL PAPER No. 123

with you for?—A. I understood, either from him or from somebody else, I cannot recall which, that his desire to make this settlement with me was so that he might be able to sell the icehouse.

Q. To whom did you understand he wished to sell the icehouse?—A. I subsequently learned it was to Raoul Bergevin.

Q. Who is he?—A. He is a haberdasher and tailor in the City of Quebec.

Q. How did you subsequently learn this fact?—A. It was when Adolphe Chevalier, to whom I had rented the balance of the property, showed me a deed, by which he had sold all his rights to Raoul Bergevin, and we also learned that Raoul Bergevin had bought Chevalier's rights in the property.

Q. I want you to tell me how you learned that Bergevin bought Martineau's icehouse?—A. I learned this either from Adolphe Chevalier or from Mr. J. P. Cantin, a Notary Public, of Quebec.

By Mr. Gutelius:

Q. Did you give Martineau any notice that the lease would terminate on the 1st of May, 1912?—A. Yes, I had told him during the summer I would not be able to release it.

By the Chairman:

Q. Why did you tell him that?—A. On account of the notice we had got from the Transcontinental. I may say that I understood that the Transcontinental Railway intended to expropriate this property, but whether I had any legal notice I cannot recollect.

Q. Have you any more personal knowledge from Martineau respecting the sale which he afterwards made of the icehouse?—A. No, sir.

Q. Have you any personal knowledge from Bergevin that he purchased the icehouse from Martineau?—A. I do not know Mr. Bergevin by sight.

Q. You have had no conversation with him?—A. No.

Q. Respecting this property, is that all the information you can give us?—A. Yes, regarding that part of it.

Q. Your evidence comes to this: that you were agent for the owner of the property, that you leased the property to Napoleon Martineau, $75 a year, that he put an icehouse on the whole property leased by you to him, and that his lease terminated by mutual agreement between you and him on the 1st of May, 1912?—A. Yes.

Q. That is correct?—A. Yes.

Q. And that he knew that you could not extend the lease?—A. He knew I could not renew it.

Q. Did you lease a portion of the property belonging to the Duchess of Bassano east or west of this?—A. It surrounds that property.

Q. The whole of the property belonging to the Duchess of Bassano on Champlain street, on which this icehouse, of which you have been telling me, is situated, had a frontage of how much on Champlain street? It is approximately 450 feet?—A. Yes, approximately.

Q. And did you not lease a portion of that property to a man named Adolphe Chevalier?—A. Yes.

Q. What frontage has that property that you leased to Chevalier on Champlain street? Tell me, roughly speaking?—A. It is the 450 feet, deducting the frontage occupied by the icehouse. The Chevalier property, therefore entirely surrounds the icehouse, excepting the street frontage.

Q. It is an irregular piece of land, running to the water's edge?—A. Going down to low water mark.

Q. Are there two piers on it?—A. Yes, I believe so.
Q. And it has two piers running out into the water?—A. Yes.
Q. These are all ruinous piers?—A. They are in a fair condition.
Q. You let the land we have been endeavouring to describe to Chevalier?—A. Yes.
Q. When did you let it to him?—A. On the 1st of October, 1908.
Q. Under a written lease?—A. Before Notary Campbell, of this City.
Q. At what rent?—A. It varies.
Q. Read the clause about the rent?—A. The sum of $350 for the first year, expiring on the 30th April, 1910, the sum of $375 for the second year, expiring on the 30th April, 1911, and the sum of $400, for the third year, expiring on the 30th May, 1912.
Q. It was a three year lease?—A. Yes.
Q. Any right to renew?—A. No.
Q. Did he occupy the property?—A. Yes.
Q. What with?—A. He had a repairing slip for schooners and barges, and such like.
Q. What was his business? He was a ship repairer?—A. Ship repairer.
Q. Did he build a slip there?—A. He built a slip there himself.
Q. Was it a moveable structure?—A. Yes, it could be removed.
Q. It was a wooden structure, put in for the purpose of holding vessels while they were being repaired?—A. It was a moveable cradle, that could be slipped under a ship, and pull it up on the bank.
Q. On rollers?—A. Yes. The rollers were, if I remember right, wooden rails.
Q. It was a contrivance for loading a boat into the water and hauling it up on the land for repairs?—A. Yes.
Q. It was a moveable structure?—A. Yes.
Q. Had Chevalier any interest in that property, excepting as a tenant for three years?—A. No, sir.
Q. Had he any right to acquire any interest in the property?—A. No.
Q. Then he was simply a tenant and no more during all the time he occupied it?—A. Exactly.
Q. His interest terminated on the 30th April, 1912?—A. Yes.
Q. And he could remove his slip?—A. Oh, yes, as long as he gave me back my property on the 1st May, 1912, I had no further interest.
Q. And you had no pretence to claim you owned the cradle or slip?—A. No.
Q. I have always understood a slip to mean a channel cut out in the water, with a dock on each side, in which boats floated; this wooden structure you speak of is not anything of that description?—A. No, none whatsoever; it is a cradle.
Q. It is a carriage, for carrying boats up on the shore?—A. Yes.
Q. Have you any more information about what Chevalier did with this property, as to whether he tried to sell this property, or did sell it to anybody?—A. I know personally that he sold all his rights that he had in the property to Raoul Bergevin, but he had no delivery of it.
Q. You say he undertook to sell some rights in the property to Raoul Bergevin?—A. Yes. I produce a notarial copy of deed or instrument, number 15315, a sale from Adolphe Chevalier to R. R. Bergevin, where he is described as a carpenter, and by that he undertakes to sell all his rights and interest of every description to the occupation of a certain property, more particularly known and described on a plan or book of reference for the Champlain quarter in the City of Quebec, under number 2355, which is the property I have been speaking about.
Q. And by that document he agrees to give possession on the 1st of May, 1912, and the consideration for the sale is $4,000. Does he acknowledge he has received it by this?—A. Yes.
Q. You notice that by this deed, exhibit 1, Chevalier only undertakes to sell his right of occupation to the land, whatever that is?—A. Yes.
Q. And he undertakes to deliver possession on the 1st of May, 1912?—A. Yes.
Q. And he refers to the lease which he has from you as the attorney for the Duchess of Bassano?—A. Yes, sir.
Q. I suppose he had a copy of that lease in his possession?—A. Yes.
Q. Was that lease on record?—A. I do not think we ever registered it.
Q. But it was in the possession of Mr. Campbell, the notary?—A. Yes.
Q. Who, according to this exhibit, prepared this lease?—A. He prepared the lease.
Q. So that any person dealing with Mr. Chevalier could have seen that lease with the notary?—A. Yes.
Q. Had he any right to give possession of this property on the 1st of May, 1912?—A. None whatever.
Q. So that, as a matter of fact, for the $4,000 which he received from Raoul Bergevin, he gave no consideration whatever?—A. So far as I can see, he got no value for his money at all.
Q. When did you learn about this deed, exhibit 1?—A. About the 1st October, 1911, when I returned from my holidays, Mr. Cantin, Notary Public, of Quebec, came into my office, and asked me if I would ratify deed of sale between Raoul Bergevin and Adolphe Chevalier. I said I would have to see it before I would ratify it, as Chevalier had no rights, except as tenant on the property; and he promised to bring me over the deed, to show it to me. I waited some days, and he did not come over, and I went to his office, and I was told by C. E. Taschereau, his partner, that they did not want my ratification at all, as they had got round it in another way.
Q. What is the name of the firm?—A. They divide offices, but there is really no firm.
Q. That is about all you know about that transaction?—A. Yes.

By Mr. Gutelius:

Q. Did you advise this man that you would not be able to renew his lease on account of the Transcontinental Railway?—A. Yes; I notified Chevalier during the summer of 1911 that I could not renew his lease, as I expected it was going to be taken by the Transcontinental Commission.

By the Chairman:

Q. Up to the 1st of January, 1912, did the Transcontinental Commission purchase any of the Bassano property from you?—A. No, they did not.
Q. Did they purchase the property from you up to the 1st January, 1912, that you had leased to Martineau?—A. No.
Q. Did the Commission, up to the 1st of January, 1912, negotiate with you for the purchase of either of these properties?—A. No, sir.
Q. I understand, however, that the Commission, after the 21st September, and before the 5th October, filed an information in the Exchequer Court, to expropriate these two properties?—A. I am told the Commission did so, but I cannot vouch for it, as no papers were ever served on me.
Q. Did they do so, as a matter of fact?—A. Cannon asked me to accept the information. Mr. Cannon, who was the lawyer for the Commission at Quebec, asked me to accept service of informations respecting this part of the property leased to Chevalier, but he did not serve the papers on me, as I declined to accept service. I understand the expropriation proceedings did not cover the property which had been leased to Martineau.
Q. After Major Leonard became the sole commissioner of the Transcontinental in the summer of 1912, I believe you sold a strip through the property leased, which had formerly been leased to Chevalier, for right of way for the Transcontinental Railway?—A. I sold the whole property belonging to the Duchess of Bassano.

Q. And in that was included the property leased to Chevalier and the property leased to Martineau?—A. Yes.

Q. Then, if the Commission, in the year 1911, paid to Bergevin, or to anybody else, a sum of money to compensate them for the expenses of moving the ice house, they were paying damages for removing the ice house from property which the Commission had not purchased?—A. There is no reason why they should pay the sum of money, so far as I know.

Q. A tenant who has a right to remove his fixtures or belongings, erected by him on the leased land, by the law of Quebec must remove them, must he not, at his own expense?—A. Yes.

Q. So that if Martineau, as he did, put an icehouse on the property which he rented from you, and wished to remove that icehouse, he must do so during the currency of the lease, or within a reasonable time after its expiry, at his own expense?—A. Yes.

Q. So that if the Transcontinental Railway Commission purchased the freehold that is the land on which the icehouse stood—after the expiry of the lease, the tenant Martineau would have no claim against the Transcontinental Railway for the expense of moving his building, or the loss of trade occasioned to him for removing the building?—A. If he did not remove it he would have to give up his claim to it—surrender it to the landlord.

(EVIDENCE TAKEN IN N.T.R. OFFICES, AT QUEBEC, March 13th, 1913.)

Mr. Dobell produces notarial copy of lease between the Duchess of Bassano and Chevalier, through himself. Exhibit 5.

(Evidence of Martineau and Chevalier in French.)

F. M. STANTON, sworn:

By the Chairman:

Q. What is your position?—A. Accountant, District B, Transcontinental Railway.

Q. You produce what?—A. The register of the cheques received in connection with the right of way.

Q. Referring to cheque number 557, 1911-12, payable to A. Doucet, in right of way, Raoul R. Bergevin?—A. Yes.

Q. Sold by Raoul Bergevin for $500?—A. Yes.

Q. Read the entry?—A. Cheque 557, 1911-12, to the order of Mr. Doucet, to be handed to notary——

Q. Name of vendor?—A. Raoul R. Bergevin.

Q. And the amount?—A. $500.

Q. Cheque sent to whom?—A. C. E. Taschereau.

Q. What is this at the top?—A. Receipted voucher sent to Ottawa; there was no receipted voucher sent to Ottawa.
Q. What is written here?—A. Cheque and voucher sent to D. Hoctor, Chief Accountant, Transcontinental Railway for cancellation, October 23rd; deed kept by Mr. Taschereau.

Q. Why was that cheque returned?—A. Because I received instructions—I do not remember exactly, but Mr. Taschereau informed us that Bergevin would not accept the cheque; why, I do not know; the land agent might know, and, as he would not accept the cheque, we notified Mr. Hoctor to that effect, letter, October 23rd, and we enclosed the cheque in question, and asked him to hold it for a while. In reply dated October 25th, 1911, Mr. Hoctor stated that he would hold the cheque until the end of the month, awaiting further news. He also noted that the deed had not been returned to him, and he presumed that it was still held by Mr. Taschereau, whereupon we wrote to Mr. Hoctor on the 26th October, asking him if he required us to send him the deed in connection with this matter, to which he replied on October 27th that this was unnecessary, and that Mr. Taschereau might hold the deed until the matter was adjusted.

Q. That is all you have to do with it?—A. I know of nothing further.

(EVIDENCE TAKEN IN N.T.R. OFFICES, AT QUEBEC, March 13th, 1913.)

Antheod Tremblay, sworn:

By the Chairman:

Q. What is your position?—A. Assistant Land Agent.

Q. In 1911 what position were you in?—A. That is the position I was in then.

Q. In Quebec?—A. Yes.

Q. Do you know what cheque number 557 refers to?—A. I would sooner speak French.

(Answer given in French, and translated by Mr. Rivard.) It was to buy a certain gridiron from Madame Chevalier.

Q. Were there any negotiations for more than one gridiron from her?—A. No, just the one.

(Adjourned till 2.30 p.m.)

(EVIDENCE TAKEN IN N.T.R. OFFICES, AT QUEBEC, MARCH 14th, 1913)

Antheod Tremblay, sworn:

By the Chairman:

Q. You were the secretary, were you not, of the valuators who valued the right of way and other matters between Champlain Market and the Quebec Bridge, on the St. Lawrence River?—A. Between the Champlain Market and Point au Piseau.

Q. As well as the right of way agent for the district?—A. Yes.

Q. You were assistant right of way agent for the district?—A. Yes, land agent.
Q. You produce a copy of the plan which was fyled under the statute by the Transcontinental Railway Commission, showing the lands which the Transcontinental Railway proposed to expropriate for the purposes of the railway between Champlain Market and Point-au-Pineau?—A. Yes.

Q. We have taken the evidence of a man named Martineau who owned an icehouse on lot 2525, Champlain Ward, and that icehouse is shown on this plan as “Icehouse, R. R. Bergevin, $3,700, September 23rd, 1911”. Now that icehouse was not, according to the plan, on any land which the Commission intended to expropriate, was it?—A. Not according to the plan that we have fyled in the Registry Office.

Q. And there never was any plan fyled, was there, by the Commission showing that they intended to expropriate the land on which that icehouse stood?—A. No.

Q. And if the Commission paid this man Martineau for this icehouse, they bought it on land which they had never expropriated; is that not right?—A. That is right.

Q. Now, tell me, has the Commission bought this land yet?—A. Yes, by private sale.

Q. Do you know whether or not the Commission have any idea of expropriating this land between Champlain street and the water—all the land?—A. I know there were two propositions at the time that we made the valuation, the one was to take all the land between Champlain street and a line parallel with the centre line of the railway about fifty feet south of the centre line, and another alternative was that the Transcontinental was to take all the land between Champlain street and the river St. Lawrence.

Q. But before the Commission changed, that scheme was not carried through; there was no plan laid down?—A. There was no plan deposited.

Q. Was there ever a plan drawn?—A. Yes, and the areas calculated.

Q. But it was never fyled?—A. No.

Q. Do you know that Raoul R. Bergevin received $3,700 on the 30th September, 1911, from the Commission?—A. I can refer to my fyle.

Q. Here are your initials on it?—A. Yes.

Q. You certified that the account was correct?—A. Yes.

Q. Do you know what that was paid for? It says it is compensation for removal of ice house cadastral number 2525, Champlain Ward, Province of Quebec, $3,700; you know what that transaction was?—A. I know we made several transactions.

Q. Do you know that one transaction?—A. I do not know for which property this is.

Q. It says it is for 2525?—A. Yes, it is the Martineau ice house.

Q. You know that transaction was for the removal of the Martineau icehouse?—A. Yes.

Q. What does this mean?—A. That is a certificate of search in the Registry Office.

Q. From the evidence which we have before us, Bergevin had nothing to sell to this Commission, and had no right or claim to damages for removing the ice house, because he had only bought Martineau’s claim, whatever that was, and Martineau, if he wanted to move his ice house, would have to move it himself before the 1st of May, 1912. Did you know what Bergevin’s rights were?—A. No, I did not.

Q. What did you mean by putting your approval on here, “Correct, 28th September, 1911, A. Tremblay,” on the voucher?—A. The voucher means that the statement as written on the voucher is in conformity with what is intended in the deed.
Q. So that you were not familiar with the transaction any more than to see that the man got what the deed provided he should get?—A. Not exactly that, because the instructions to the notary were given by me; the notary prepared the deed.

Q. What instructions did you give to the notary?—A. I gave instructions to prepare that deed—I must have written a letter. I must have said something like that, that the Transcontinental Railway has bought an ice house that belonged to Mr. Raoul Bergevin and to prepare a deed of sale for the amount.

Q. It is for compensation for the removal of the ice house, and for damages?—A. I do not remember exactly what it was.

Q. Would it not be well to see if you could find that? Could you find it?—A. I suppose so.

(Witness retired and returns with documents.) Here are the letters.

Q. This letter reads as follows:—

"I desire to have your instructions in these transactions which we have to make with Monsieur R. Bergevin, who has acquired the following properties: Adolphe Chevalier, which he will sell to us for $5,500; Alfred Beauchamp, $1,500; the claim of Adolphe Chevalier was valued at $3,000 by the valuers, Tanguay and Giroux. Mr. Scott differs in opinion. His valuation is $6,000; Alfred Berthiaume and Jean Lachance are proprietors in virtue of an emphyteutic lease. The first pays an annual rent of $25 and the other $18.75 to George and Fred Lampson. The lease to Berthiaume expires in nine years, and that to Lachance in three years. After the expiration of the lease the buildings become the property of the Lampsons. The valuation for the properties made by the Commission are, Alfred Berthiaume $532, and Jean Lachance $815. The opinion of the advocate, Taschereau, on the manner to settle these transactions: we are to pay the price to the tenant, who has the right to enjoy during the whole time of his lease. At the expiration of that he should agree to pay the capital over to the proprietor of the freehold."

The tenant might take it and go off. He enjoys the use of the capital instead of the property in the meantime.

"In each case, our valuation for the two properties are $1,438, and Bergevin asks us $3,000. However that may be, our valuation for the two properties is $1,348, while Bergevin claims from us $3,000."

For what does he claim? Berthiaume and Lachance?—A. Yes.

Q. The letter continues:—

"Alfred Miller is a locataire, but the buildings belonged to him. Our valuation is $1,926 and Berthiaume claims $3,500."

Here are the instructions to the notary:—

"We have bought from Berthiaume one ice house built on lot 2525, cadastral, in the Champlain quarter, number 96 B, according to the plan of the Transcontinental. Will you please prepare contract as soon as possible."

That is not the contract he prepared. He did not prepare a contract for the purchase of that. How do you follow that out?
Mr. Dobell:—I do not think Mr. Tremblay has to see those instructions were followed out; it was the lawyer, I think.

Q. You produce a copy of a letter dated August 22nd to C. E. Taschereau, who was a notary public, in which you tell him that you have bought from Raoul Bergevin an ice house constructed on lot cadastral number 2525, in the Champlain quarter, and 96 B on the Transcontinental Railway plan, and ask him to prepare the contract as soon as possible. The contract, which was signed, is a contract for $3,700, but the $3,700 by the contract is paid to him as indemnity and compensation for the damage which is caused to him by the demolition of the icehouse. Why did the notary draw the contract in that shape, and not in the shape in which you told him by your letter?—A. I do not remember.

Q. Who gave you your instructions?—A. The president.

Q. Mr. Parent?—A. Yes.

Q. What did he tell you in respect of this transaction?—A. Of course I did quite a lot of things, and I do not remember exactly what was done in respect of this particular case, but if I remember right, I think Mr. Bergevin came in to see Mr. Parent when he was here, and I was called in the office here and a discussion took place between Mr. Bergevin and Mr. Parent as to what he should get for the properties he had to sell to the Transcontinental, and it was agreed—we consulted the valuation that was made by the valuators, and it was agreed that the transactions should be made at the price as valued by the valuators.

Q. That is that all the properties that Bergevin sold to the Commission should be at the valuation made by the valuators?—A. Yes; that was for this transaction, and, further than that, I had instructions from Mr. Doucet to make all the transactions for the price given by the valuators, with all those landowners that would be ready to settle with the Transcontinental, whose property had been valued.

Q. In fact, you were told to make all the transactions, if they would accept the price fixed by the valuators?—A. Yes.

Q. Did Bergevin and Mr. Parent talk over the damage that Bergevin sustained by moving his icehouse?—A. Yes. In all these cases there was always a discussion between the owner and Mr. Parent, when they came to see him, and very often I was called in, and I had to give Mr. Parent my opinion of what we should do.

Q. Did you give Mr. Parent any opinion on this transaction?—A. I do not think so, I do not remember, but I would have no scruples of recommending to close the transaction at the price that was valued by the valuators, because I thought the valuators were responsible.

Q. On this transaction would you have paid him $700 if you had known he had to move that icehouse at his own expense?—A. I do not think I would, with what I know now.

Q. But you thought the Commission had to pay the expense of moving that icehouse?—A. Yes. They had acquired the right-of-way, and it was cheaper to give this man the value of his building and let him do what he liked with it than to have the Transcontinental clear the right-of-way down.

Q. Do you mean to tell me it would cost $3,700 to tear that building down? You could burn it up, could you not, if you owned it? What did you understand he got that $3,700 for?—A. That was the value of the building.

Q. You notice that the agreement does not state that, does it? You say in your letter, August 22nd, that you have bought the building from him, and that you are going to pay him that much money for it?—A. Yes.

Q. Therefore, you understood you were buying the building?—A. Yes.

Q. But the notary drew up the document as though you were only paying him damages for removing the building?—A. Yes; that is an indemnity.

Q. This document is written in French?—A. Yes.
Q. Is this a correct translation of this:— "Considering that the said party of the one part is ready to accept the indemnity in compensation for the damage which has been caused to him by the demolition of the icehouse"—that is a correct translation?—A. Yes.

Q. "In consequence these presents are made by the said party of the one part, in consideration of a sum of $3,700, which he acknowledges to have received from the party of the other part at the time of the execution of these presents, giving to these latter parties a general and final discharge for all damages which may be caused to him by the demolition of the said icehouse"—is that correct?

A. Yes.

Q. That is not the transaction you told him to put through at all?—A. Not exactly.

Q. Did you notice that when you got back the paper?—A. I do not remember; I do not think I noticed that, although my signature is there.

Q. Your signature is not there; your signature is on the voucher; it is a different proposition. How did the notary get his instructions? He could not get them from your letter alone. Your letter did not give him any instructions?—A. No.

Q. Did you go and see the notary?—A. I saw him very often; I do not remember giving him any instructions about this; it is possible, of course.

Q. Did anybody else see him?—A. I do not know.

Q. Were you present when the document was signed?—A. No.

Q. Mr. Parent signed it?—A. Yes.

Q. And so did Bergevin?—A. Yes, and the notary.

Q. And they all signed it together; did the three of them sign at the same time?—A. No, Mr. Parent signed it in Ottawa, and it was sent on here with the cheque to the notary, and the party signs it when he gets the cheque.

By Mr. Gutelius:

Q. The original deed had your approval and Mr. L. A. Taschereau's approval on it?—A. Yes.

Q. Did you see Mr. L. A. Taschereau?—A. No, I did not.

By the Chairman:

Q. Do you know whether he saw that paper?—A. Which paper?

Q. The original document?—A. He must have seen it, because he signed it.

Q. Did you send it to him?—A. No, it was not my duty to send it to him.

Q. Whose duty was it?—A. The notary's duty. The notary gets the deed approved by the lawyer.

Q. If the notary does not know what the facts are, will the lawyer know what the facts are?—A. I do not think they would know anything about it.

By Mr. Gutelius:

Q. He would only get the information from the notary, and you instructed the notary?—A. Yes.

Q. I do not understand why you, then, in turn, if these people had drawn a document different from your instructions, approved of it?—A. He might get it from the notary.

Q. He is the man you instruct; you instruct the notary what to do; he does it, apparently, and it comes back to you and you approve of it; there must have been something in between your instructions and the time you approved this, to justify you in this approval. There must have been some other letter about this to that notary, I think?—A. I do not know.

Q. You might look it up and see if you can tell us to-morrow?—A. I will (Adjourned till to-morrow.)
(EVIDENCE TAKEN IN N.T.R. OFFICES, AT QUEBEC, MARCH 14th, 1913.)

ANTHEOD TREMBLAY, recalled—

By the Chairman:

Q. Referring to the voucher which I produced to you last night, you certified that Bergevin was entitled to be paid $3,700?—A. Yes.
Q. And your letter of the 22nd August says $3,700?—A. Yes.
Q. Did you know that Bergevin was acting for the Transcontinental in making that purchase from Martineau?—A. He bought that from Martineau. When he bought that from Martineau I did not know he was acting for the Transcontinental.
Q. When did you learn?—A. Well, I never learned it officially that he was acting for the Transcontinental.
Q. When did you learn unofficially?—A. Well, during the fall of 1911.
Q. Was he paid a salary, or was he paid anything by the Transcontinental?
—A. I do not know what his arrangements were.
Q. Did you ever know he only paid $2,000 for that?—A. I did.
Q. Where did you learn that?—A. I got the deed and found out.
Q. And the deed from Martineau to him showed that he only paid $2,000?
—A. Yes.
Q. Did you know that before the purchase was closed?—A. I did.
Q. Did you tell anybody about it?—A. I did.
Q. Whom did you tell it to?—A. When the deed was in my hand for approval, before I approved of it—
Q. When the deed came—A. When the deed came from the notary’s office.
Q. That is the deed from Bergevin to the Transcontinental Railway?—A. Yes; when this was in my hands I checked it the same as I checked all the deeds, and I had the information about what Bergevin had paid, namely $2,000, and I did not like to approve the deed the way it was, because the purchase was made only recently, and I spoke to Mr. Doucet about it, and he told me we had nothing to do with that.
Q. You then put it through?—A. I put it through then; after I had this answer from Mr. Doucet, I put it through because I was satisfied that the price in the contract was the same as the one fixed by the valuators. $3,700. Then I said to myself, to satisfy myself, that whatever Bergevin had paid—he might have get it for nothing for all I know—whatever Bergevin had paid, if what the Transcontinental had paid was justified by the valuation, my conscience was satisfied.
Q. Anyway, it was taken out of your hands; you did not make the transaction; you just put it through?—A. Yes.
Q. Is that a photograph of the place?—A. Yes; there is a front view and back view.
Q. What is that building worth as a building in your judgment?—A. I think it is worth the valuation put by the valuators.
Q. How do you figure it out?—A. We have all the details in the valuation.
Q. Are they here?—A. Yes. There is one wooden building used as an ice-house, 101,088 cubic feet, and it was put at three cents; it was in good order; it was put at three cents a cubic foot; that amounts to $3,032.64, and, besides that, a wooden stable, paper roof, dimensions 36 by 15 by 16; 8,640 cubic feet, $3,336.84, to which we add ten per cent, $2,703.52.
Q. Why do you think it is worth that much money?—A. Not so much because I know a lot about building myself, but because the valuation was made by the architect and real estate agent and business man.

Q. Do you know how much lumber there is in it?—A. Yes, there is the cubic contents.

Q. Do you know whether it would cost anything like that money to reproduce that building?—A. I could not tell you that.

Q. Can you describe the building? I mean, do you know the class of material that is in it?—A. You can have a good idea by the photograph.

Q. By the photograph, it appears as if it had been tongued and grooved. Is it tongued and grooved, or is it clap-boarded?—A. It must be tongued and grooved, because it is as tight as possible.

Q. Is it sheeted on the inside?—A. Yes.

Q. Just one sheeting?—A. Yes.

Q. What is it sheeted with, do you know?—A. No, I do not know; I did not make the valuation.

Q. Do you know the size of the studding?—A. No.

(Photographs exhibits 12 and 13.)

Q. It is funny that Martineau should take $2,000 for it?—A. That would be an evidence of what the value would be to him.

Q. Do you know anything about the Miller transaction?—A. Yes.

Q. What was that? This is another ice house?—A. Yes.

Q. What was that valued at?—A. $2,500, I think.

Q. Have you the papers there?—A. The valuation of the Miller building is $1,926.32, plus $489.55.

Q. A total of $2,415?—A. Yes.

Q. I want you to tell me the size of the building? Have you the cubic contents?—A. 82,560 at two cents.

Q. It is not as good a building as the other?—A. No.

Q. Who was that bought from?—A. From Bergevin.

Q. Do you know what he got from the Transcontinental?—A. He got $2,500.

Q. What did he pay for it?—A. I do not know.

Q. Have you seen his deed?—A. No.

Q. Miller was a tenant too, was he not?—A. He was a tenant after we bought.

Q. Was he a tenant before you bought? He did not own the land?—A. No. He was the tenant of the Transcontinental for a certain time after we became the owner.

Q. The Transcontinental paid $2,500?—A. Yes.

Q. To Bergevin?—A. Yes.

Q. And allowed Bergevin to occupy the place, or allowed Miller to occupy the place?—A. Miller occupied the place, but he paid $25 a month to the Transcontinental.

By Mr. Gutelius:

Q. When did Miller’s lease expire?—A. Last May.

Q. It was purchased in September, and expired in May following?—A. Yes.

Q. How do you keep your records in connection with the findings of the valuators—the reports in connection with the findings of the valuators? Is that public property?—A. Oh, no, it is private property.

Q. How could information in connection with these valuations become public?—A. They could not become public, unless they were stolen from my office.
Q. So that, if authentic figures were given out in connection with the details of these valuations, you think they would have to be stolen?—A. Yes, but I must say that in a couple of cases I gave Mr. Bergevin the amount that was valued by the valuators, by instructions from M. Parent.

Q. You gave some valuator's opinion?—A. Yes.
Q. Did you ever give any to Morency?—A. I never did.
Q. How could Morency get that information?—A. I do not see any way he could get it, but get it from my staff.
Q. Without your knowledge?—A. Without my knowledge.
Q. Mr. Parent, of course, was familiar with these reports as fast as they could come in?—A. Oh, yes.
Q. You worked closely with him?—A. Yes.

(EVIDENCE TAKEN IN OFFICES OF N.T.R. AT QUEBEC,
MARCH 13th, 1913.)

Omar Morency, sworn:

By the Chairman:

Q. You are an employee of the Transcontinental Railway?—A. Yes.
Q. District purchasing agent?—A. Yes.
Q. Do you know a man named Adolphe Chevalier?—A. Yes.
Q. Did you write him that letter, exhibit 10?—A. Yes, that is my letter.
Q. Tell me all about that letter?—A. I tell you really what I know about that, to the best of my memory. Yes, I can tell you now; he said—let me remember.
Q. You know all about it?—A. I do not want to tell you something that is not true; that is 1911; that was about some estimate—something like that.
Q. Do not put up any story on me; I have some more papers lying around?—A. I tell you, I think, if I remember rightly, that he asked me "What do you think of the estimate? Do you know anything of an estimate of the property of the"—some Duchess of something.
Q. Duchess of Bassano?—A. Yes, that is the only thing.
Q. You wrote him "Dear Sir; I sent you a telegram last night, asking you to call me up by telephone"?—A. To my private house.
Q. "And that I had something very important to tell you before you saw your man"; who is "your man"?—A. Wait a minute.
Q. You know right now?—A. That was a little information I gave him; I do not remember just what information I had to give to him.
Q. What was the man's name? He told you it was Monsieur Parent, the Chairman of the Transcontinental Railway, and you know it was, don't you?—A. No, really, I won't tell you something that I don't know very much. I have to be very careful, because I do not remember very much of the things at that time; that is a year and a half ago, and it was something very—
Q. What you were going to speak to him about—perhaps I can help your memory—was about how much money he was going to get for selling his right to the property that he had leased from the Duchess of Bassano, through Mr. Alfred Dobell?—A. What I know, I know—
SESSIONAL PAPER No. 123

Q. And he asked you to find out how much Mr. Scott, the valuator, placed on his property; was that not right?—A. I would tell you straight, I do not remember very much of that thing.

By Mr. Gutelius:

Q. For your own protection, you should tell Mr. Staunton just the truth?—A. Yes, but Mr. Gutelius, as far as I remember, I remember that Chevalier called me to my office; that was the fact; he said "I have got an offer for $4,000."

By the Chairman:

Q. For what?—A. For what you call his damage to his property.
Q. His lease?—A. Yes. He said "I know that Mr. Scott said before Mr. Hoar that five or six thousand was about the value of my property there, for the damage for the lease", and he asked me "Do you think Mr. Scott put that in his report?"?
Q. And you told him you would look it up?—A. Yes.
Q. And you said "If you want to find out anything, you had better go and see Mr. Parent", did you not?—A. What is that?
Q. Did you not tell him he ought to go and see Mr. Parent himself about it?—A. Oh, yes, I suppose I told him that.
Q. And then he went up to Ottawa to see Mr. Parent?—A. I think so.
Q. And did you not then try to find out what the damages were?—A. At that time—I knew that—not for six months, but the day Mr. Scott and Mr. Hoar went there, I knew that at that time; I knew Scott put in his report that it was $6,000.
Q. When he went up to Ottawa it was the end of July, 1911?—A. I do not remember the date.
Q. You telegraphed him "Please call me on phone immediately, Omar Morency"; and then there is written down there "Scott $7,000, Giroux $3,000". I understand you told him over the telephone how much it was, and he wrote that down on the telegram itself?—A. Yes.
Q. He called you up by the telephone before he saw Mr. Parent, to find out how much it was that Scott valued the property at; he was trying to get all he could?—A. I suppose so.
Q. You wrote him that you had sent him the telegram; you gave him that memorandum too, did you not?—A. I do not know really who made that; it is not mine.
Q. I produce this to you, but you do not know who wrote the typewritten words?—A. No.
Q. But the other is your writing?—A. Yes.
Q. Marquis de Bassano $59,764.95; Grenier $3,281.36; Martineau $3,703.52?—A. Yes.
Q. What did you give him that paper for?—A. Really, I do not remember that; I know that is my writing, but I do not remember that.
Q. You got the information; that information which is on that is correct, is it?—A. I suppose so.
Q. You did not give him this information secretly, did you?—A. Really, I tell you that appraisal was made.
Q. Did anybody in the office know you were giving out this information?—A. I do not remember.
Q. You do not want to remember very badly?—A. Certainly I do. Really, if I remember—I don’t care very much—I will give you all the information possible.

Q. You are pretty slow at it?—A. Certainly, because it is a thing I never noticed.

Q. You were very careful in that letter, and you pointed out to him you had something very important to tell him, and you said “Before you see your man”; if you did not want to tell him something on the quiet, you would put the name in there. You were not born yesterday?—A. No, but I will swear that I do not remember the name of the man that is mentioned there.

By Mr. Gutelius:

Q. Mr. Chevalier has told the other side of it; you are on your oath?—A. Yes, and I am a Catholic, but I tell you really I do not remember the name of the man that is mentioned there. Now you say it is Mr. Parent; you think it is Mr. Parent. Mr. Chevalier will know that better than me; that is my writing there, but I do not remember who typewrote that.

By the Chairman:

Q. Do you typewrite yourself?—A. I can typewrite myself, but that is not mine. I remember a little of that occasion; I remember Chevalier came to my office crying, and saying “If I do not receive $8,000 or $10,000 I will be poor” and so on and so on, and ruined, and something like that, but I remember he said that in my office, and he had to see somebody about that, and he talked about Mr. Fraser, something like that, and he said Mr. Scott told before me—and I knew that—that Mr. Scott told before me that seven or eight thousand is about the right amount to give to me—something like that.

By Mr. Gutelius:

Q. Where did you find out how much Scott estimated it at? Where did you get that paper with those figures on? In your office?—A. No, it was not at my office.

Q. Whose office did you get it at?—A. I don’t know; let me remember; I can get that if I see the report. We can see by the report.

By the Chairman:

Q. It is in the valuator’s report?—A. Certainly.

By Mr. Gutelius:

Q. What right did you have to the valuator’s report?—A. If I saw that, I must have been in that office to get it.

Q. As it looks now, you sneaked into somebody’s office and got that information?—A. No, I never sneaked into anybody’s office.

Q. Well, make it clear, how did you get it?—A. I won’t swear, but if it is the same typewriting as this, the report has been made in my office.

Q. You remember where you got those figures?—A. That is about a year and a half ago; it is hard to remember; if it is the same typewriting as this letter—

By the Chairman:

Q. What you want to see is the report, and then you can tell where you got it?—A. Then I can tell where it had been made; I do not remember that at all; that thing has been handed to me by somebody; by the typewriter; that is not my typewriter.

Q. You would not swear that it was not Mr. Parent that you meant in that letter?—A. No, I know nothing; I do not remember.
Q. It might have been Mr. Parent you meant in that letter when you said "Your man"?—A. Perhaps.

Q. You knew he was going up there to see him, did you not?—A. Yes, but I do not remember about that; Mr. Chevalier might tell you it was Mr. Parent, but I won't swear that; because really I won't swear it was Mr. Parent.

Q. When was Chevalier talking to you about it? Was he not talking to you to-day about that? How long ago?—A. Mr. Chevalier was kicking about Bergevin, that Bergevin was getting something like that; and he said he would get an enquiry about Bergevin.

Q. How much did Bergevin get?—A. I do not know.

Q. You know Bergevin did get something?—A. Yes. The public knew it; everybody knew it—that he was buying land, selling land for the Transcontinental. That is as far as I know. If I remember well, Chevalier came to my office and he said he was to receive only a few thousand dollars for his shipyard, and he said he was poor; he would have to get seven or eight thousand dollars, something like that; I do not remember the amount, but it was higher than $4,000, and he said he did not see why—I remember he has to see somebody in Ottawa, I cannot say it was Mr. Parent.

Q. But you think it was?—A. No, I cannot say; I won't say something that is not true, but really I do not remember, not at all. Mr. Chevalier told me that, and I suppose they were making—that is my writing—that document; if you see the report and it is the same writing as this letter it will be in my office, and I suppose it was made there.

Q. Did you see Martineau? Did he come to you?—A. I do not know Martineau; is that the ice man?

Q. Yes, the ice man?—A. I know him, but I never see him.

Q. You won't tell us anything more?—A. Mr. Staunton, if I know anything I will tell you. I do not know the date that I gave that.

Q. Bergevin said that he was buying Chevalier's land for the Government, did he not?—A. Yes.

Q. Told you that?—A. No, he never told me that.

Q. Did he not tell you afterwards?—A. I knew that a long time. It was public that Bergevin was buying a house and all those things for the Transcontinental. He bought the Thibaudeau house for the Transcontinental Railway, and he said before me, about one o'clock this afternoon, "I received a subpoena to appear before the Transcontinental Investigating Commission, but I cannot go, I have to go to St. Hilaire this afternoon. I will come to-morrow". He said it was public. He said, "I purchased the house for the Transcontinental Railway, and I paid out of my own pocket, and the next day the contract was signed by the Transcontinental".

Q. He purchased the property for the Transcontinental and paid the money out of his own pocket, and next day he got it back?—A. He said that.

Q. Were you mixed up in buying these lands at all?—A. No.

Q. Nothing to do with it?—A. No, nothing to do with it.

Q. You simply got the information?—A. I do not know the date. I know at that time that everything was settled for $4,000 at that time; he told me that.

Q. Chevalier says you are a friend of his, and you just got him the information?—A. He came to my office, but I never gave him anything. When I wrote him that letter, it was because he left Quebec, and I would not go in any other office, but if he was here and I got the estimate I would let him know. Now, if he went to see Mr. Parent or Fraser I do not know anything about it. If he told you it was Mr. Parent, I suppose it was Mr. Parent. That is my writing, but I do not remember anything about that part.

Q. That is your writing, the memorandum commencing, "Mr. Scott, one of our valuators"?—A. Yes.
Q. And you say that typewriting is not yours? — A. No.
Q. But the penmanship below is? — A. I do not know the date of that.
Q. You did not write that "69" — it is in French? — A. No.
Q. 20th October, 1911, is that pencil writing not yours? — A. No.
Q. Better go away and think it over, and see if you cannot remember something more? — A. Certainly I will think it over.

By Mr. Gutelius:

Q. What you have given us now is not clear; if you stop right there it will not look quite right? — A. I would not tell you anything I was not sure of. I remember Chevalier came into my office and said he was getting something like $4,000, and Scott told me seven or eight thousand dollars, something like that, I do not remember, and I said, "I do not know if Mr. Scott put that in his report. I do not know why I put that down, because it has nothing to do with Chevalier.
Q. Did you get that information for Chevalier for nothing? — A. Certainly.
Q. Who paid for that telegram? — A. I paid myself.
Q. Did you ever get that money back? — A. No.
Q. You are out of pocket on it? — A. It is not marked whether it is collect.
Q. Yes, it is marked "Prepaid"? — A. If I paid for it I suppose I got a receipt for it upstairs. If the report had been in my office I would certainly have the information there. Sometimes the reports are made in my office.

By the Chairman:

Q. You told him to call you up by telephone? — A. Yes.
Q. "I have something important to tell you". If it had only been the $6,000, you would have told him in the letter. You would not have put him to a $2 telephone message? — A. It only cost five cents.
Q. You told him to call you up by telephone? — A. I suppose he paid the telephone.
Q. I suppose it cost him a couple of dollars, and you could have told him in the letter that $6,000 proposition. "Call me up by telephone, I have something important to tell you before you see your man". It is ridiculous to say you had not anything more to tell him than that. Do you mean to tell me you have forgotten that? — A. I won't say more; I know nothing more.
Q. Think about it till to-morrow; you know what we are after? — A. All right.

(EVIDENCE TAKEN IN N.T.R. OFFICES AT QUEBEC, MARCH 13th, 1913).

Camille Lockwell, sworn:

By the Chairman:

Q. Lockwell and Leclerc? — A. Yes.
Q. Real estate dealers in Quebec? — A. Yes.
Q. You sold a piece of property to the Transcontinental Railway on October 20th, 1911, in Quebec, cadastral 2268? — A. Oh, yes, yes, yes, on Champlain street.
Q. You see the map in front of us here?—A. Yes.
Q. And the property is marked on the map that we show you, Lockwell and Leclerc, $8,152.65, and then ditto, ditto, $12,214.40, and then comes J. C. Hearn, $5,950 and then Lockwell and Leclerc $9,443.52. The three Lockwell and Leclerc properties are in red ink. What are those properties? What are they used for?—A. For private houses.
Q. What sort of buildings?—A. There is the corner in stone and the two others in brick.
Q. How many storeys?—A. One of three storeys, one of five and the last one is four or five again.
Q. You bought these properties, did you not, from Belanger?—A. Yes, Major Belanger.
Q. What did you pay for them?—A. We paid for those $3,500, I think; well, it is hard for me to swear: I have to see the contract. I was just calling at Mr. Parent's office, and you called me in, and it is hard to swear, but I do not remember the exact figures now.
Q. It is not $3,500; it is $35,000?—A. Yes, to the best of my knowledge, but I would not swear the exact figure; something round that.
Q. Did you sell them to the Commission?—A. Yes.
Q. How much did you sell them for?—A. I think I sold them for $30,000.
Q. Did you sell them for less than you gave for them?—A. Yes, because when the Government took that, we really believed the station would never be built there, and we had better sell them the lot.

By Mr. Guteleus:
Q. Whose money did you buy them with?—A. Our own money.
Q. Who furnished the money you bought them with?—A. We did.
Q. Yourself and Leclerc?—A. Yes, and then we had two or three friends.
Q. How much money did you and Leclerc put in of your own cash?—A. I think we just made monthly payments.
Q. What proportions did your friends hold?—A. One-fifth or one-sixth.

By the Chairman:
Q. Who put up the money to buy them? Did you pay the people for the property?—A. We paid the people for it, but Belanger settled with us; he had a share.
Q. How much did Belanger have in it?—A. Belanger had—I am not sure.
Q. He owned it all?—A. Belanger had the whole thing.
Q. You did not pay Belanger any real money?—A. Yes, we did.
Q. How much? $50?—A. Oh, more than that; I do not remember. We make a straight sale; it was a straight sale, Belanger to us.
Q. Did you pay him $100 in all?—A. Oh, more than that.
Q. Take another run at it, and tell me what did you pay on it?—A. We should have paid Belanger in cash a few thousand dollars; I do not remember well, but if you wait till to-morrow I will bring papers and everything and give it better. I do not see why I should be here without being advised.
Q. That is fair enough; I thought you knew what we wanted you for?—A. No, I did not. At first we thought the station was going to be there, and later on, after the election of 1911, we saw two or three weeks afterwards that Sir Rodolphe Forget stated at Ste. Anne de Beaupre, in his own county, that the station will never be there, and Mr. Parent was Chairman of the Commission, and I tried to find some of his good friends, and I went to Ottawa, and we had the offer made before the election of $30,000, and we took it, and I said: "We had better get out of this affair and put our money in other business." Belanger was the sole pro-
priest and he was living in Winnipeg or Calgary; he was an old Quebecker; he came down to our office and he says: "I have a chance to make money with the Commission; in case the station is built on Champlain market, we will do our best to make a few thousand dollars on that"; and I says, "Belanger, we will form a little syndicate of a few friends, three or four of us, and you will stay with us, and if you take a share of it we will give you so much," I do not remember the amount, but every month we were paying to Belanger $100, I think it was $200 a month we gave him, and if we sold to the Commission we were going to share up with Belanger.

Q. And if you did not, you were to give back the property?—A. Oh, no.
Q. Were you going to give up your money?—A. Yes, and Belanger would lose his share, and he will lose one-sixth of the lot, whatever it was.
Q. Did you lose any money on the deal?—A. Certainly we did.
Q. How much did you lose?—A. Three or four thousand.
Q. Have you paid Belanger yet?—A. He is paid; there is a tax account of a few hundred dollars.
Q. Will you bring down the cheques, showing what you paid Belanger?—A. I do not know if I could do that; I will show you the notes we gave him.
Q. Will you try and prove to us that you lost money on this deal?—A. Yes, I will show you what we have paid Belanger, all the notes we gave him in settlement of the transaction, if you like.

By Mr. Guteius:

Q. Whatever you consider necessary to show us the transaction; you can tell from what you have what would fit?—A. I do not understand.

By the Chairman:

Q. We want you to show us a genuine transaction. I am not disputing your word. I can quite understand how you would go into a transaction of this kind, and the public think there is a good deal of crooked work about these transactions, and the public say "Why, he never gave Belanger $35,000 and sold for $30,000." You were going to sell for $30,000?—A. I am not quite sure if that is the amount.
Q. How much did you want to get from it?—A. We asked. I think, $45,000; I am not sure; I think we asked $45,000.
Q. How much did you intend to take?—A. We were going to split our profit between us.
Q. You said to the Commission you wanted $45,000?—A. Yes.
Q. But what did you intend to take?—A. Our intention was to get $45,000.
Q. And divide how much profit—A. All the profit there would be in it.
Q. How much profit would there be in it?—A. There would be then about $15,000. We are a syndicate, and we make our profit on our syndicate; it is private business at our office.
Q. Did you lose money on the transaction?—A. Not me, but the syndicate loses.
Q. How much did they lose?—A. The syndicate lost two or three thousand; I would not swear the exact amount, but round that.
Q. You went up and saw Mr. Parent and coaxed him to buy it and take it off your hands at the best price you could get?—A. We took the offer that was made. We had the Exchequer Court price made to us before the election, and then after the election, after we had the news that it might happen the station would never be built there, we will sell it for less and get out.
Q. How did you coax the Commission to give you the money?—A. They were buying.
SESSIONAL PAPER No. 123

By Mr. Gutelius:

Q. You were friends?—A. They were not friends; I fought against Parent in the election.
Q. Had you any friends in the syndicate that were friends of his?—A. No.
Q. How did you work him?—A. His notary was my notary.
Q. Who was his notary?—A. Taschereau; he was well known to me, and had been working for me, and I went to Taschereau and I says "Could you give me a help in that"; and I says "If you like, we will go to Ottawa and offer the Commission the same price as they offered us" and Parent says "All right, we will give you your cheque" and I got my cheque right away.
Q. You were very lucky?—A. I was very lucky, indeed, and to-day I would not pay $30,000 for that.
Q. How much are the three places worth?—A. $18,000 to $20,000, because they are good paying houses; there are about thirteen or fourteen tenants there.
Q. I think we have all the information we require, and you need not attend further?—A. Very well.

(EVIDENCE TAKEN IN N.T.R. OFFICES, AT QUEBEC, MARCH 14TH, 1913.)

Raoul R. Bergevin, sworn:

By the Chairman:

Q. What is your business?—A. Dry goods merchant.
Q. You live in Quebec?—A. Yes.
Q. Were you employed by the Transcontinental Railway in the year 1911?—A. No, sir.
Q. You were never in their employment?—A. No.
Q. Did you make any purchases of property on the right of way through Quebec for the Transcontinental?—A. No, sir.
Q. Did you buy any lands on the right of way for yourself?—A. Yes.
Q. Which ones did you buy?—A. Well, I bought some in Champlain ward: Martineau's—I will have to have a list of them.
Q. What did you buy from Martineau?—A. I bought from Martineau the building they used to put the ice in.
Q. It was an ice house?—A. Yes.
Q. This is the deed from Martineau to you?—A. Yes.
Q. And it says you bought an icehouse constructed and a stable?—A. Yes, the stable was on the back there.
Q. You agreed to allow Martineau to remain in possession, did you not?—A. To remain in possession, I think, until the 1st of May. You know I have to see the papers, because I cannot remember it all, but all that was done there was correct.
Q. That is your impression, and we will put in the deed and show it from that?—A. Yes.
Q. You knew, did you not, that his time as lessee of that property was up on the 30th April, 1912?—A. Yes, but he could renew.
Q. You knew the time was up?—A. Yes.
Q. You saw his lease?—A. I did not see it, but he told me it was finished, and I applied to Mr. Dobell, the proprietor of the ground.
Q. He had no right to renew his lease; you knew that, did you not?—A. No, I did not know that, because all the ones I bought was from persons who had a right to renew.

Q. You knew his lease was in writing?—A. Yes.

By Mr. Gutelius:

Q. Did you apply personally to Mr. Dobell?—A. No, I sent Mr. Martineau, the same as in the case of Chevalier.

Q. Do you know Mr. Dobell?—A. Yes, I know him, but I never spoke to him myself; I went there a couple of times.

Q. Martineau showed you his lease, did he not?—A. I cannot remember if he did show it to me, but he told me.

Q. Do you swear that you did not know that he could not renew that lease?—A. No. I do not swear that.

Q. You did know he could not renew the lease?—A. I did not know he could renew—I did not know that.

Q. You did not know whether he could or not?—A. No.

Q. And what did you want that ice house for?—A. Well, I bought it the same as I bought the other one.

Q. What did you buy it for?—A. The same as I buy any other property.

Q. Tell me what you intended to do with that ice house when you bought it?—A. I have no reason to tell you that.

Q. Yes, you will?—A. No, I won't for sure; I cannot tell you my business.

Q. You are bound to answer these questions that are put to you?—A. I won't do it.

Q. I am going to give you all the opportunity; if you do not answer the questions, you are subject to go to jail?—A. Yes, I am ready.

Q. You won't answer me?—A. I won't answer my business.

Q. I am told you had a dishonest purpose in buying the property, and I am going to give you an opportunity to show you were not dishonest. Do you wish to avail yourself of it?—A. No, but I do not know whether the question you put to me—(Witness answers in French).

(Mr. Rivard questions the witness in French).

Mr. Rivard: He says he is ready to answer. He did not know what you were wanting.

Q. What did you buy that for?—A. I bought those properties to sell to the Transcontinental Railway.

Q. Mr. Rivard, K.C., is here for the purpose of explaining to you any question which I may put to you in English, that you do not understand perfectly; so that if you do not understand the question thoroughly, or have any doubt about it, ask Mr. Rivard to translate it into French; you understand?—A. Very well, I want you to understand the answer I gave before, I thought you were referring to my business.

Q. What did the Transcontinental Railway want with an ice house?—A. Well, you see they wanted to pass the road through there.

Q. They did not want to buy the ice house?—A. This is a thing I do not know, but they had to pass the road, the same as the other.

Q. But this man that owned the ice house would have to take it away, if he wanted it himself?—A. I do not know; you would have to question himself.

Q. What did you pay Martineau for this property?—A. It must be on the deed.

Q. $2,000, I am told?—A. It must be on the deed.

Q. Do you know how much money you paid him?—A. You can see it on the papers.

Q. I am asking you if you know.—A. I do not remember positively.

Q. What is your recollection?—A. I have some papers in my store, but I will have to go over and get them.
Q. Do you say you cannot recollect without looking at the paper?—A. No, because I have bought so many that I do not know one from the others.

Q. "This sale is made for the price of $2,000"?—A. I think that is correct.

Q. How much did you sell it to the Transcontinental Railway for?—A. Well, I cannot tell you; I know it is two thousand some—you must have the price there.

Q. The receipt that you gave the Transcontinental is for $3,700; is that your signature?—A. Yes.

Q. So that you bought this and made $17,000 out of it on the transfer?—A. Yes.

Q. What was the next transfer you had?—A. Miller, I think.

Q. You bought from Miller; what did you buy from him?—A. I think it is $2,500, if I remember well.

Q. You bought an ice house from him on Champlain ward?—A. Yes.

Q. Cadastral number 2316 and street number 559; Miller sold to you his ice house, did he?—A. Yes.

Q. And where is the deed?—A. The deed to Mr. Miller, well, it may be at Allaire's, the notary.

Q. He put it through, did he?—A. Well, when I bought it I put the deed through there; I do not know if it was Allaire, because I was at the other notary.

Q. Taschereau?—A. No.

Q. Couture?—A. Yes.

Q. Either Allaire or Couture?—A. Yes, I used to do business with the two; I am not sure whether it was Couture or Allaire.

Q. Did you see Miller himself?—A. Yes.

Q. Did you take his lease to the notary?—A. Yes.

Q. You knew then that Miller had no right to sell his lease to you?—A. He did not sell me the lease.

Q. What did he sell?—A. Just the building.

Q. Just the building?—A. That is all.

Q. You knew then his lease ran out?—A. The lease of the ground: I fixed that up with the proprietor of the ground, Lampson, and I paid the lease for the balance that was owed to Mr. Lampson.

Q. You saw the lease?—A. Yes.

Q. This is the lease, is it not?—A. Yes, I saw it before. (Exhibit 14).

Q. In that lease it provides that it runs out on the last day of September, 1912, and there was no right to renew it?—A. No.

Q. And you only purchased, you say, the building?—A. Yes, I purchased the building, because I had to pay the balance of the lease until the 1st of May.

Q. And you allowed Miller to remain in possession?—A. Until the 1st of May.

Q. Did you sell that ice house to the Commission?—A. Yes.

Q. How much money?—A. I do not know: I do not remember.

Q. On the second of October you made a deed to the Transcontinental Railway before C. E. Taschereau for $2,500 for the damages for the destruction of the ice house?—A. Is it not more than $2,500?

Q. That is what it says in the papers?—A. It must be more than that?

Q. That is all you have there, so far as the deed goes?—A. What it says on Miller's deed: how much did I pay for Miller's?

Q. We have not got that?—A. I can telephone to Allaire and find out.

Q. You bought a gridiron from Madame Chevalier?—A. Oh, yes, from Mr. Chevalier, not Madam.

Q. From Madam?—A. No, from the young man.

Q. Did you not buy anything from Madame Chevalier?—A. She gave the money back to me: she did not want to finish it with me.

Q. You bought from Joseph Chevalier?—A. Yes.

Q. What did you buy?—A. I bought all his good will and things he had there on the ground.
Q. What did he have on the ground?—A. He had some machinery to repair the boats and all these things.
Q. And you gave him $500 for this?—A. No, that is Mrs. Chevalier.
Q. No, that is Joseph. Did you go before the notary with Madame Chevalier?—A. Yes.
Q. Did you try to buy from Madame Chevalier in September, 1911?—A. Yes.
Q. This gridiron, or grize, they call it in French, for putting ships on?—A. From Mrs. Chevalier I bought only the house.
Q. It is called a slip?—A. I bought the slip from Mr. Chevalier, not Madame Chevalier.
Q. Did you go with Madame Chevalier before a notary?—A. Yes.
Q. What did you want to buy from her?—A. She had a part of the right to the slip and the machinery that was there: this son had a share and she had a share.
Q. And you went up to the notary with her and had the deed drawn?—A. Yes.
Q. And Joseph signed it?—A. The young one; I do not know if it was Joseph.
Q. And then you gave him the money?—A. Yes.
Q. How much money did you give him?—A. $500 or $550.
Q. That was on the 20th September: when did you give him the money?—A. As soon as we passed the deed at their house.
Q. Did you give him it at their house or before the notary?—A. Before the notary.
Q. That was on the 20th September, the deed says?—A. Yes, I think so.
Q. Did you go and get the money back?—A. Yes, I went and got the money back in a few days after.
Q. What for?—A. Because one of his sons did not want to sign it.
Q. His son did sign it?—A. One, but not the two.
Q. What did you say to Madame Chevalier?—A. I must have the signature of the two: I want to have it clear.
Q. Did you tell her she got the money by false pretences?—A. No.
Q. By false representations?—A. She told me it belonged to her only, and the son told me he had a right to this thing.
Q. What son?—A. The one that used to be proprietor of the slip.
Q. Is it Joseph?—A. No, Adolphe.
Q. What did you want to do with that machine?—A. Well, the same as the other, to sell it to the Transcontinental, to clear up this thing.
Q. You knew that was not on her ground, did you not?—A. Yes.
Q. Because you bought the ground from somebody else?—A. No, I did not.
Q. You bought a lease from somebody else?—A. Yes, from Mr. Lachance.
Q. What did you imagine the Transcontinental wanted that machine for?—A. For the same reason, because I thought they wanted to buy that, to clear the line that was going into the Champlain Market.
Q. You thought that?—A. Yes.
Q. Anyway, a couple of days after you went to this woman and got back the money that you gave for it?—A. Yes, three or four days after.
Q. On the 26th August you bought from Adolphe Chevalier for $4,000 all the rights spoken of in the deed?—A. Yes.
Q. Is that correct?—A. Yes.
Q. You saw his lease, did you not?—A. I cannot remember if I did see the lease. I think he produced them to the notary, Allaire.
Q. And you knew his time was up on the 30th May, 1912?—A. Yes.
Q. And you were allowing him to keep possession of the property till then?—A. Till the 1st of May.
Q. What did he have to sell to the Transcontinental?—A. That is the slip and the right that he had there.
Q. But his right was over on the 30th April, 1912?—A. Yes.
Q. You knew that?—A. Yes, and that was in September.
Q. And he was to keep possession?—A. Until the 1st of May.
Q. Then he would have to get out anyway?—A. Yes.
Q. So that he had nothing to sell to the Transcontinental, and you knew it?—A. If I knew it—
Q. You are an intelligent man, and you sit there and on your oath want us to believe that you did not know that the man had nothing to sell?—A. No, I bought something.
Q. What did you buy?—A. I bought the right.
Q. What right?—A. Until the 1st May.
Q. You were allowing him to stay there until the 1st of May?—A. Yes.
Q. So that the Transcontinental was not going to pull out till the 1st of May?—A. I do not know what the Transcontinental has to do with this. I allowed them to stay there until the 1st of May.
Q. It is like you coming to me and telling me, if I have rented a house, you will give me $500 for my right, and then let me stay there?—A. Put it in French.
(Mr. Rivard puts question in French).

Mr. Rivard. He says what he does not understand is because he thinks that Chevalier had the right to renew the lease and stay after the 30th April.
Q. You think he had the right to stay there after the 1st May?—A. Well, renew his lease.
Q. You knew that was not true?—A. Why?
Q. Because the lease was produced to the notary?—A. Yes, I have just told you.
Q. The lease does not give him any right to renew it at all?—A. No, but he himself could go to Dobell and make a new lease, but I have no right.
Q. But Dobell could not give him a lease?—A. He could not give him a lease before the 1st of May.
Q. Do you want us to understand that you bought this and gave up $4,000 without knowing whether you could get the lease renewed or not?—A. No, I had nothing to do with the renewal of the lease myself.
(Witness answers in French).

Mr. Rivard. He says he did not know himself whether the lease would be renewed or not; he bought it to sell to the Transcontinental.
Q. You have said to Mr. Rivard that you did not care whether the lease was renewed or not, and you did not bother yourself about it?—A. No.
Q. Mr. Chevalier says that you asked him to go and see Mr. Dobell, and ask Mr. Dobell whether he would renew the lease, and that he came back and told you that Mr. Dobell would not renew the lease?—A. I sent him to Dobell to have him sign the papers that I have made up with him. The answer was that Mr. Dobell did not want to sign it. (Witness retires and telephones). My bookkeeper says that everything was given to the Transcontinental, only the one that has remained on my hands just now—the two properties that remain on my hands—I have the papers.
Q. How much did you pay Adolphe Chevalier for whatever rights you got from him under the deed number 15315?—A. I think it must be $4,000.
Q. That is what the deed says: it is correct?—A. Yes.
Q. You bought from Chevalier, according to the deed, all his rights and interests?—A. Yes.
Q. All his rights and interests of every description of a certain land and anse—that is cove—known and designated on the plan and book of reference for Champlain Ward as number 2525, and all the damages resulting from and caused by the expropriation by the Transcontinental Railway, save and excepting the part of the said lot now occupied by Martineau for an ice house. Is that right?—That is what you bought?—A. Yes.
Q. It also recites in your deed that the said rights and interests to the occupation of the land belonging to Adolphe Chevalier is in virtue of a lease made to him by Alfred Curzon Dobell, advocate, as attorney for the Duchess of Bassano. "It is understood," you say also, "that the vendor will give possession of the land on the 1st of May next to you, Bergevin, and that he will pay, up to the 1st of May, the taxes and municipal and school rates, and other public contributions affecting the property and the rent to that date, and shall occupy the property until the 1st of May."—A. Yes.

Q. That is all you bought, what I have said to you, is it not?—A. Yes.
Q. What you sold to the Transcontinental Railway was your damages which would result to you from the demolition—that is the destruction—of the Bassin de Radoub—that is the slip?—A. Yes, everything that is required to repair the boats.
Q. You did not buy that at all?—A. No. He had to unfix this slip in the spring.
Q. But you did not buy the slip?—A. No.
Q. But why did the Transcontinental give you $4,250 for what you had no right to sell to them?—A. Well, I did not sell them any property.
Q. You sold them your damages for removing that Bassin de Radoub?—A. Yes.
Q. You did not own it?—A. But on the 1st of May I had nothing to do with it no more.
Q. And you had nothing to do with that machinery?—A. The slip?
Q. Yes?—A. No, I did not buy the slip.
Q. What did they give you $4,250 for?—A. For what I bought there.
Q. Your deed says that was for damages for removing the slip?—A. Yes.
Q. So that you got $4,250 for nothing?—A. Why?
Q. Because you did not own the slip?—A. No, but I bought the right from the 1st of September till the 1st of May, that is what I sold them: I could not have them anything that did not belong to me.
Q. But you did not sell them anything?—A. No.
Q. According to your own deed, you sold something which you did not own?—A. No, I did not sell them anything which did not belong to me.
Q. Did you own that Bassin de Radoub?—A. No. I owned only the right, as I explained.
Q. You did not own the Bassin de Radoub?—A. No, only the right to the 1st of May.
Q. You knew quite well you did not own that Bassin de Radoub?—A. Yes: I did not buy no property.
Q. Why did you sign a deed, and say in that deed that you owned it? (Deed shown to witness). Now, be honest about this thing. Did you not give that man that money, and then find yourself in trouble after the election, and come down here and get this money back on this deed?—A. No, sir.
Q. Yes, you did; you got it on the 16th October?—A. Yes, but that transaction was made before the election.
Q. The transaction with whom?—A. With the Transcontinental.
Q. With whom did you make it?—A. Mr. Parent.
Q. He is a lawyer?—A. Yes.
Q. And a very distinguished lawyer?—A. I had to pass that before the notary, Taschereau.
Q. And you made the bargain with Mr. Parent himself?—A. Yes.
Q. And he agreed to give you $4,250 of Transcontinental money for destroying the Bassin de Radoub?—A. Yes.
Q. And you knew you did not own it?—A. For the right I had there.
Q. For the Bassin de Radoub?—A. No, they say for the demolition of it.
Q. What was your bargain with Mr. Parent?—A. $4,250, the way the deed days there.
Q. For the demolition of the Bassin de Radoub?—A. No,
Q. Tell me the bargain: What did you say to Mr. Parent?—A. I told him
"I will sell what I have there made with Chevalier, and that is all". I produced
my contract with Chevalier, and that was the arrangement, I would get $4,250 for
this thing.
Q. Did he read it?—A. Yes, and the notary too.
Q. Did Mr. Parent go to the notary with you?—A. No, Mr. Tremblay went,
not before me, but I gave them the papers and they went to the notary with it.
Q. But Mr. Parent gave Tremblay the instructions?—A. Yes.
Q. In your presence?—A. Yes, to send the papers to Taschereau.
Q. Did Mr. Parent give Tremblay your deed from Chevalier?—A. Yes, he
must have given it to him, because he had it in his hand.
Q. When did you make that bargain with you and Mr. Parent?—A. I cannot
tell you, but it was a week or so before the election.
Q. And he put the transaction through after the election and gave you this
money?—A. No, this was with the notary, just the next day after I made the trans-
action with him.
Q. With whom?—Mr. Parent?—A. Yes.
Q. Did you sell anything else to the Commission?—A. Yes.
Q. To go back to the Martineau ice house; you bought the ice house from
Martineau for $2,000?—A. Yes.
Q. You did not sell the ice house to the Commission; you only were paid by the
Commission for compensation for removal of the ice house and damages. Cadastral
2525, Champlain Ward, City of Quebec, $3,700, according to your receipt; that is
correct, is it not?—A. Yes.
Q. So that you could remove that ice house?—A. Yes.
Q. And the Commission was giving you $3,700 for the expense of moving it?—
A. Yes, to take it away from there.
Q. Don't you think it was a pretty tall price for removing the ice house?—
A. I do not know; you are the judge of that.
Q. I am asking you?—A. I sold for what I thought I could; if I could have
sold it for more I would have.
Q. With whom did you make that bargain?—A. With the Transcontinental.
Q. With Parent personally?—A. Yes.
Q. He agreed you should take that ice house away?—A. Yes.
Q. And they would pay you $3,700 for taking it away?—A. Yes.
Q. No doubt about that?—A. No.
Q. Did you move that ice house?—A. No, because the Transcontinental
rented it, I think.
Q. They did not pay you rent?—A. They kept it there.
Q. It is belonging to you?—A. No, it is not; I sold everything.
Q. Here is what you sold to them?—A. Yes.
Q. You have a right to go and move that ice house?—A. I do not know; I
was not positively sure that I could or not, because I see the Transcontinental
Railway since that have been renting it; they took possession I think.
Q. You forget about what was in the receipt?—A. Yes, I never saw it.
Q. You were satisfied to let the ice house go when you got the $3,700?—
No, because I thought I had no right.
Q. But you did not sell the ice house?—A. No, but I thought I had no right
on the house after that.
Q. Your deed says differently?—A. Yes, I see that, but if I had known this,
that I could move this thing, because I had been asking Miller, but I thought they
put on the contract the house and moving at the same time.
Q. You forgot what was in the receipt?—A. Yes, I thought the Transconti-
ental had the house, and I was obliged to take it away from there.
Q. Did you forget?—A. I forgot it belonged to me still, because they put on the deeds, the house and the moving of it, because if I did know the house belonged to me I would not have let the Transcontinental to rent it.
Q. How could you sell the house and the moving of it?—A. Well, I am obliged myself to move them on the first of May.
Q. But if you sold it, you were not obliged to move it?—A. If I had sold the property?
Q. Yes?—A. No, but if they had asked me to move it—
Q. Was it not a pretended transaction altogether?—(question put in French).
MR. RIVARD: He says what he sold was the cost of removing the ice house, that the material and ice house still belonged to him.
Q. That is right, is it?—A. Yes.
Q. You were bound to clear the ground to take away the material, but the material belonged to you?—A. Yes,
Q. You owned the materials; that is the wood, the building?—A. That is all.
Q. Because you bought it from Martineau?—A. Yes.
Q. Then you could take it away, if you did not sell it to the Transcontinental?
—A. Yes, in the spring.
Q. The Transcontinental gave you $3,700 for the cost, to make good to you the cost of moving that building?—A. Yes.
Q. Then you could go and take that $3,700 and use it to pay the expenses of moving the building?—A. Yes, clear the ground.
Q. Why did you not do it?—Did you not want to do it?—A. Because I did not remember what was on the lease, that they could oblige me to take it off, but I was not called for it; it was not necessary.
(Witness speaks in French).
MR. RIVARD: You say that you were under the impression at spring time on the 1st of May, if the Transcontinental asked you to move the ice house you had to move it, and if they did not ask you to move it, it remained there?—A. Yes, until they called for it.

By the Chairman:

Q. And, because they did not call for it, you left it there?—A. Yes, because I had nothing to pay for it.
Q. It was not worth enough to you to move it?—A. Oh, yes; the wood that is there is always good.
Q. Now, what was the Miller transaction?—A. It was an ice house too.
Q. You were going into the ice business pretty extensively?—A. No, I did not care for the business.
Q. You got into this ice business just about election time?—A. No, I bought a great deal before that.
Q. When did you buy the Miller ice house?—A. I bought it before that.
Q. How much did you pay Miller?—A. I think it is $2,250, I am not positively sure.
Q. You got then, from the Transcontinental, in the Chevalier matter, $4,250 for compensation for demolition of the graving dock, and $3,700 for compensation for the removal of the ice house?—A. Martineau, yes, I may have.
Q. So that 'you got $7,950 all told for the two'?—A. Yes, you have it there.
Q. Did you get anything from the Transcontinental for the gridiron business, for the property you bought from Mrs. Chevalier.—A. No, sir.
Q. Did you sell any other property to the Transcontinental?—A. No, I bought some more, but I have them on my hands.
Q. What did you buy?—A. I bought Lachance and Berthaume.
Q. Have you Lachance's there?—A. No.
Q. You do not know what you paid Lachance?—A. Perhaps I have it in my books: I think it is $900 and some odd: one was $875 and the other was $900.
Q. That is Lachance and Berthiaume?—A. Yes, that is the best of my memory, but that is about it.
Q. Why did you not get that money from the Transcontinental?—A. Because they did not want to buy it.
Q. Did you go and see Mr. Parent about it?—A. Yes.
Q. What did he tell you?—A. He said they did not need it then.
Q. Why not?—A. I think it was two or three days before the election: he says: "We will have those things finished, and if we want to buy them, we will buy them."
Q. Did you go and see him after the election about it?—A. Yes.
Q. What did he say about it?—A. He said he did not want to do any more transactions, because everything was turned up.
Q. You did do a transaction after the election: he gave you the money after the election?—A. Yes, but the transaction was made before.
Q. But the money was not paid?—A. I do not know if he had the money over there, but I got the cheque here.
Q. You did not get the cheque till after the election?—A. No.
Q. You got the cheque after the election?—A. For one only, I think: you must have the dates there.
Q. Those are both after the election?—A. I know I had one or two: I must have had some before the election, if you go to the deed there.
Q. Where did you get the $4,000 that you gave to Chevalier?—A. I got it from the bank.
Q. Can you produce the cheque from the bank?—A. Chevalier must have it —oh, well, it must be in the bank.
Q. What bank was it?—A. Union Bank.
Q. Can we go and look at your account in the Union Bank?—A. I can produce the cheque.
Q. Can you produce the bank book and show it to us?—A. No objection to that: you what only to check those things?
Q. That is all?—A. You can look over those things, I think I have the cheque in the house.
Q. Where did you get the $4,000?—A. From the bank.
Q. Did you have $4,000 lying there?—A. Yes, I had $10,000 margin there.
Q. For how long?—A. As long as I needed it.
Q. For how long?—A. I had $10,000 from the Union Bank as long as I wanted to buy the properties: as soon as I got back the money I gave them the money.
Q. Did you give security for it?—A. No. I think my name is good for it.
Q. You got the money from the Union Bank under arrangements you made with them to advance it for you?—A. Yes, when I was buying some property.
Q. Do you think the Union Bank would lend money on this kind of business?—A. Yes, and I think if I asked for $10,000 more they would give it to me.
Q. On this kind of stuff?—A. No, on my name.
Q. The only person that you know of that would give $4,000 for this kind of property is the Transcontinental Railway?—A. I have no answer to give you on that. You can judge yourself, or I will judge it.
Q. Did you take these papers in these two transactions to a notary yourself, or did you send them by Mr. Tremblay?—A. By Mr. Tremblay.
Q. And you made no bargain with any person excepting the Chairman, Mr. Parent?—A. Yes.
Q. He was the man you dealt with entirely?—A. Yes.
Q. Did you take any part in the election?—A. Yes.
Q. You were active in the election canvassing?—A. Yes.
Q. Were you working down on Champlain Street?—A. No, I have been working down in Montmorency, and the last week I think I did the work here.
Q. The last week you worked down on Champlain Street?—A. No, I was not working there: I was working down here.

Q. Who was present with you when you made this bargain with Chevalier? Was it Chevalier and O'Neill?—A. O'Neill was not with me.

Q. Who was with you down at the hotel?—A. I did not make the bargain there.

Q. You saw Chevalier at his house?—A. Yes, and at my store.

Q. And at O'Neill's hotel?—A. Yes.

Q. You talked the transaction over with him at O'Neill's hotel?—A. Perhaps I was there.

Q. You and Chevalier and O'Neill talked about buying what you bought from Chevalier in O'Neill's hotel?—A. Perhaps: I do not remember how many times.

Q. How much money did O'Neill get out of the transaction?—A. Not one cent.

Q. Not anything from you?—A. No, if he got anything, it was from Chevalier: he never got anything from me.

Q. You remember talking to Chevalier down in O'Neill's hotel?—A. Yes.

Q. What were you doing down there? Just looking up this transaction, or engineering?—A. I go there every day, because I have some money on interest there.

Q. You do not have to go there every day to get the interest?—A. No, but I go there as I go everywhere, because I am in the beer business, and I look all over the city.

Q. You are in the beer business?—A. Yes, I am in the brewery, and have to look over the hotels.

Q. And O'Neill is one of your customers?—A. Yes, like everyone in town.

Q. When did the Champlain Brewery come into existence?—A. We started in 1911; we had no beer then, and commenced February, 1912.

Q. You want to make another guess at what you were doing at O'Neill's tavern?—A. No, because I paid $1,000 to Mr. Boswell for his hotel when he started—I mean I paid $1,000 on account.

Q. You knew the Transcontinental was going to buy these properties, did you?—A. Well, I know that the road was passing by there.

Q. And you knew how much money they paid for it?—A. Yes.

Q. You said you made your bargain?—A. Well, I made a bargain after I bought the property.

Q. The same day?—A. No.

Q. How many days after?—A. Some four or five days after, or a week.

Q. You are a business man, are you not?—A. Yes.

Q. What is your business?—A. Dry goods business.

Q. And you are now president of a brewery company?—A. Yes.

Q. What else are you engaged in?—A. Only those two things: I have two stores, and I am doing some work myself.

Q. You have been in business a number of years?—A. Twenty-two years.

Q. And you are a man of property?—A. Yes.

Q. Will you tell me how a business man like you would think of buying what you bought from Chevalier, and paying him all the money, $4,000, without knowing whether you could sell it or not, to the Transcontinental?—A. Well, I did not say that I did not know: I was buying them to sell to the Transcontinental.

Q. You knew the Transcontinental would pay you that much money for it?—A. Yes.

Q. And you knew they had valued this property at $6,000?—A. No, I did not know that.

Q. What did you know?—A. I know that I could sell the property to the Transcontinental. The way to prove to you what you say is not correct, because some I sold at $250 profit. I was pretty sure I could sell it to the Transcontinental.
Q. I would like to know how you could expect the Transcontinental Railway Commission, if it was looking after its business properly, to buy hat from you?—A. I can answer you on that. I say I did know pretty well that I could sell to it the Transcontinental. I would not go there if I did not know the road would pass there.

Q. You were not selling any right of way?—A. No.

Q. You were selling them a lot of old buildings they did not need, and you knew it?—A. No, I did not know it: at the same time when I bought these two houses I did not know. If I don't sell those houses I have now to the Transcontinental they are no good to me, unless I rent them that way.

Q. And they are no good to anybody?—A. Well, they are good houses. I get $16 upstairs and $9 downstairs for those houses. It is not a big amount. I bought them to sell to the Transcontinental, but I would not have bought them if I had not thought I could sell them to the Transcontinental.

Q. You still say, without ever having made sure you were going to be able to sell, you gave that $4,000?—A. What?

Q. You still say that, without being sure you could get the money back again, you paid Chevalier $4,000?—A. Because I was expecting to get more than $4,000 from the Transcontinental Railway.

Q. And you did get more than that by selling something you did not own?—A. Well, you have the deed there: I think it is $250 more.

Q. How long did you know the Chairman of the Commission, Mr. Parent?—Oh, I know him for ten or twelve years, I suppose, perhaps more, I cannot answer you that.

Q. Did you know any other members of the Commission?—A. Yes, I saw them sometime when I used to go to Ottawa: I did not know their names.

Q. You did not do any business with anybody else on the Commission?—A. No, not with the Commission: I saw them many times when they used to sit here and in Ottawa. I know them by their faces.

Q. Did you ever do any business for the Commission?—A. No.

Q. You never did any business for the Commission?—A. Well, I bought one house for the Commission.

Q. Which was that?—A. That was the Thibaudeau.

Q. And what did you pay for that?—A. Well, it was by auction I bought it.

Q. What did you get paid for that?—A. I think it was $9,000.

Q. What did you make out of it?—A. I bought it and gave the deed of the right of way.

Q. You acted for the Transcontinental in purchasing that, but got no money out of it?—A. No.

Q. Did you get any money from the Transcontinental on any other transaction?—A. Never.

(NATIONAL TRANSCONTINENTAL RAILWAY. INVESTIGATING COMMISSION, QUEBEC, MARCH, 13TH, 1913).

Before: GEORGE LYNCH-STAUNTON, Esq., Chairman., F. P. GUTELIUS, Esq., Commissioner.

NAPOLEON MARTINEAU, of the City of Quebec, manager for the Remington Typewriter Company, being duly sworn on the Holy Evangelists, doth depose and say:
Examined by Mr. Rivard:

Q. Did you have a lease with Mr. Dobell?—A. I had a lease the first year, at the beginning, with Mr. Dobell, who represented the Duchess of Bassano—a lease for three years. I have been for five years an ice merchant. My lease had expired.

Q. What was the date of that lease, about what year?—A. I could give it to you. Mr. Dobell also could give it to you.

Q. But approximately?—A. In any case it was just the year of the Tercentenary—I began in the autumn before—that was in eighteen hundred and eight—in the fall of nineteen hundred and seven.

Q. In the fall of nineteen hundred and seven, or in the month of August you had taken a lease from Mr. Dobell, representing the Duchess of Bassano?—A. Yes, sir.

Q. That lease for three years?—A. Yes sir.

Q. And after that it could be tacitly renewed?—A. Yes sir, naturally if he was willing.

Q. On condition that he would be willing?—A. Certainly.

Q. And you passed those three years there and you remained under the same lease afterwards?—A. Yes sir.

Q. By that lease what did you rent?—A. He rented to me the ground where my ice house was situated.

Q. There was no ice house there at that time?—A. No sir.

Q. It was you who built that ice house?—A. Yes sir.

Q. Was the lease made to you or to Mrs. Martineau?—A. No sir, to myself, to Napoleon Martineau, junior.

Q. To yourself?—A. Yes sir.

Q. You were a bachelor then?—A. Yes.

Q. You got married since?—A. Yes sir.

Q. After the three years were expired the lease continued without any other paper, by tacit renewal?—A. Yes sir, certainly.

Q. On the same terms?—A. I wished to renew my lease but Mr. Dobell told me he could not.

Q. But you continued under the same conditions?—A. Yes sir, except that he gave me a notice that in case the railway needed my lot, or if he made a sale, on three months notice, I was obliged to go away, to clear what was there and to go away.

Q. In other words, in virtue of the lease that you had from Mr. Dobell you continued to occupy the lot after the three years were expired, but on the condition, which was signified to you by a notice from Mr. Dobell that if the Transcontinental Railway needed the lot you were to abandon it and to clear the ground within three months?—A. Yes.

Q. At three months notice?—A. Yes, at three months notice.

Q. Now, this went on in this way up to the month of August nineteen hundred and eleven?—A. Yes sir.

Q. In the month of August nineteen hundred and eleven even you saw Mr. O'Neill who was one of your friends?—A. Yes.

Q. Who had often helped you?—A. Yes.

Q. And with whom you spoke of that matter?—A. Yes sir.

Q. You asked him if it was possible to sell your ice house?—A. Yes.

Q. At that time did you know that the Transcontinental Railway was going to pass there?—A. I did not know it.

Q. You did not know it at the time?—A. I did not think it would pass there.

Q. You did not know at that time that the Transcontinental Railway was going to take some land on the lot number 2525 in question?—A. No, I did not.
Q. Before going any further,—the land in question—I draw your attention to the plan produced before the Commission and I think I shall describe the thing correctly in saying that what you had leased was part of the lot of ground described as cadastral number 2525?—A. Yes.

Q. Being that part of the plan which is marked as occupied by an ice house and also that part of the plan which is marked as being occupied by stable?—A. Yes, the part occupied by the ice house but not the part occupied by the stable because the ground occupied by the stable I occupied it in virtue of another lease which I had from Mr. Chevalier.

Q. The stable besides is not marked on plan?—A. No.

Q. To come back to what you were saying a few minutes ago, you went and saw Mr. O'Neill and you spoke to him about your affairs, did you not?—A. Yes.

Q. Your affairs at that time were not in a brilliant state?—A. No sir.

Q. You spoke to Mr. O'Neill about selling the ice house if there was any possibility of doing so?—A. Yes sir.

Q. And I understand that Mr. O'Neill referred you to Mr. Raoul Bergevin of Quebec?—A. Yes sir—to begin with the thing was not put into the hands of Mr. Bergevin immediately. The matter was discussed during two or three days before it was referred to Mr. Raoul Bergevin.

Q. Between whom was it discussed?—A. Between O'Neill and myself.

Q. After having discussed the matter for a few days with Mr. O'Neill, Mr. O'Neill introduced you to Mr. Bergevin?—A. Yes sir—I knew him beforehand.

Q. You knew Bergevin?—A. I knew him by sight. I went with him.

Q. He suggested to you to see Mr. Bergevin in order to arrive at a sale of that property?—A. Yes, Bergevin came at O'Neill's place to meet me.

Q. Did O'Neill tell you why you had to go to Bergevin for that matter?—A. Because he was a buyer for the Transcontinental.

Q. O'Neill told you so?—A. Yes sir.

Q. O'Neill told you that it was necessary to go to Bergevin because Bergevin was buyer for the Transcontinental?—A. Yes. There is another important point also.

Q. What is it?—A. In the first place about the price. I asked four thousand dollars. O'Neill asked me how much I would ask. I told him: four thousand dollars. He said: you ask a good deal too much, it may be worth fifteen hundred dollars. I said: No, it is worth four thousand dollars on account of my trade. It is not only for the property but it is worth that amount to expropriate me. Upon that he said: I should see Mr. Bergevin about that and we shall discuss the matter together and after that I shall give you an answer. The next morning I saw O'Neill again, he told me that they had come to an understanding the day before about the ice house. He said: we are willing to give fifteen hundred dollars for your ice house. You are valued at eighteen hundred dollars. I said: did you see the valuation—He said: no. We shall go and see it together. That day passed and on the next day I asked him: Is it not possible to go and see that? He said: no, they won't show the books to any one but Mr. Bergevin who is employed for the Transcontinental, who is buyer for the Transcontinental.

Q. I suppose it was then you saw Mr. Bergevin?—A. No, it was on the the second day.

Q. Did anything important occur after what you have just stated and before you saw Mr. Bergevin?—A. O'Neill told me; Martineau, you will have to shut your mouth and to stay quiet, and to mind your own business—speaking about the election.

Q. What is that O'Neill?—A. O'Neill is a bar keeper.

Q. Here in Quebec?—A. Yes, on Finlay Market.

Q. Is it a friend of Bergevin?—A. He is a friend of Bergevin's and has received favors from him.
Q. Then where did you meet Bergevin in connection with that matter for the first time, was it at O'Neill's or at Bergevin's, or at your own house?—A. It was at O'Neill's in a room.

Q. In a private room?—A. Yes.

Q. In O'Neill's hotel?—A. Yes, sir.

Q. O'Neill, Bergevin and yourself were there?—A. No, I was alone with Bergevin.

Q. Did Mr. Bergevin know that you had a lease from Mr. Dobell?—A. It is the first thing that he inquired about and I told him just as it was.

Q. The first thing that Bergevin told you was to ask you if you had a lease for the lot in question?—A. Yes.

Q. And then—if I am not stating the facts correctly, you will tell me so, because we are here to get at the truth—did you tell him how the matter stood just as you have stated here a moment ago?—A. I told him just what I said here a moment ago.

Q. Did you have your lease with you?—A. No, sir.

Q. But you told him?—A. But I had my marriage contract any way.

Q. The lease that you had passed with Mr. Dobell is the one which I now exhibit to you and which is signed by you?—A. Yes, sir.

Q. And also by Mr. Dobell, before a witness, Mr. Stavely?—A. Yes, sir.

Q. And the original of which is now produced as exhibit number three?—A. Yes, sir.

Q. You did not have your lease with you when you saw Mr. Bergevin?—A. No sir.

Q. Did he see that lease?—A. Yes, he saw it.

Q. How do you know that he saw it?—A. I had a copy of it—I have it still at home.

Q. You had a copy of the lease?—A. Yes, the notary who made the sale saw it.

Q. You had a copy of the lease and you showed it to the notary?—A. Yes, sir.

Q. Was it the first interview you had with him?—A. Not the lease at the first interview, but when we were a little more——

Q. When you had gone a little farther with the transaction?—A. Yes, sir.

Q. Did Bergevin at that time, during the first interview make any offer to you?—A. No, sir.

Q. What did he say?—A. He showed himself pretty independant as if he was not much interested in buying the ice house but rather as it he were trying to further my own interests. He said: Martineau, you are in a bad fix—he touched me to the quick there. I did not let him see that I felt insulted. he said; Now, listen—when you were speaking about your affairs you told O'Neill that you would like to sell your ice house? I said: yes, so long as I am paid what it is worth. He said it goes without saying that if you have no lease it is not worth anything. The building had cost twelve hundred dollars. He said: it is not worth anything, it costs about one thousand dollars, perhaps only nine hundred dollars, that building. Upon that I said yes I don't say the contrary. I told him that it had cost about that, I had built it myself.

Q. What did he say then?—A. I said: yes, but the question is not about the building, Mr. Bergevin, the question is about my trade which I shall have to abandon if I sell this, because I am not able to have a property in that part of the city where I am now, because the Transcontinental Railway is expropriating all those lots. They are going to build wharves and I won't be able to fill up my ice house.

Q. Then Bergevin on that occasion spoke about the expropriation that were to be made by the Transcontinental?—A. It was I who asked him. I said: Mr. Bergevin, what is your reason for saying that it is worth only fifteen hundred to eighteen hundred dollars as you offer me?—

Q. What did he answer?—A. I have not finished my answer. I said: Mr. Bergevin, I know that a land surveyor has passed, they have measured the land,
SESSIONAL PAPER No. 123

Yes, you know there is a valuation in the books of the Transcontinental and I would very much like to see what that valuation is. He said: you cannot see that valuation, I am the only one who can see it. You are valued at two thousand dollars, or two thousand two hundred dollars. He told me that after we had been speaking together for about an hour. Then I said: if I am valued only two thousand two hundred dollars—of course I was in a bad fix, I was in a bad position, the things were advertised and it had to be sold. I said: I will sell to you for two thousand dollars, and two hundred dollars will pay your interest. I said this because he wanted to give me only fifteen hundred dollars and then he raised his offer to eighteen hundred dollars.

Q. To make a long story short, I understand that in that first interview you had with Mr. Bergevin, there was a question of selling the ice house to him and you discussed together about the value and his pretention was that it was worth eight or nine hundred dollars?—A. Yes.

Q. He pretended that it was not worth much and he began by offering you fifteen hundred dollars and after a great deal of discussion with him you brought him to admit there was, according to him, in the books of the Transcontinental, a valuation of two thousand two hundred dollars and it then that you consented to sell the property to him for two thousand dollars?—A. Yes.

Q. He making a profit of two hundred dollars?—A. Yes, and after that there is something else. O’Neil told me that he had gone with Bergevin at the Transcontinental Railway’s office in order to see my valuation and that it was two thousand two hundred dollars.

Q. Is it on that occasion that you showed him a copy of your lease?—A. No, sir, it was when we went at the notary’s to make the sale, to sign the deed of sale.

Q. In the interval between your first interview and the day on which the deed of sale was signed did you see Bergevin again about the same matter?—A. Not until we went to sign the deed of sale.

Q. You went to the notary’s to have the deed of sale drawn up how many days after this?—A. The next day we went to sign the deed of sale. I did not lose much time. The next day after this we went at the notary’s.

Q. Which Notary?—A. Notary Couture.

Q. In order to sign the deed of sale in favor of Bergevin?—A. Yes.

Q. And there you had the copy of your lease, the original of which is produced as exhibit number three?—A. Yes sir.

Q. And you showed your lease to Bergevin?—A. Yes sir.

Q. Did you read it in his presence?—A. Yes sir.

Q. Did he hand it over to the notary that he might read it?—A. I think so; yes sir.

Q. It is not “I think so”—but do you remember?—A. Yes, I remember now.

Q. That it was read to the notary?—A. Yes.

Q. Is there any other person, any lawyer or notary, who was aware of the transaction?—A. At that time, not at all.

Q. What became of the copy of the lease, did you bring it back or did Bergevin keep it?—A. I am almost sure I have it at home. If I have it I shall produce it.

Q. At that time, do you know if Bergevin kept it for sometime?—A. No.

Q. Well you sold to Mr. Bergevin the buildings or the constructions which in the ground in question and which you used as an ice-house, and also a stable?—A. Yes sir, but the stable was built upon another piece of ground forming part of the same lot.

Q. The stable does not appear on the plan?—A. No.

Q. And that other piece of ground, you held it in virtue of a lease from Mr. Chevalier?—A. Yes, but the stable was not on the lease.

Q. Anyhow you sold it?—A. Yes, I sold all the buildings that were there.
Q. Now, in the deed which you passed with Mr. Raoul Bergevin and which is produced here as exhibit number two, it appears that it is Madame Laura Toussaint, your wife, who sold the ice-house?—A. Yes sir, because she was the proprietor.

Q. How did it belong to your wife?—A. Because when I got married I gave her everything. I am kind-hearted, you know.

Q. When you had the deed of sale drawn up, Mr. Bergevin and yourself were there and you had your marriage contract with you?—A. Yes.

Q. You had brought your marriage contract in order to show Bergevin and the notary that the ice-house belonged to your wife?—A. Yes sir.

Q. And you showed it to the notary and Bergevin?—A. Certainly.

Q. By the same deed exhibit number two it appears that you personally transferred to Bergevin all your rights as lessee of that part of the lot occupied by the ice-house that is which you occupied in virtue of your lease exhibit number three and also the right to the occupation to the piece of ground leased to you by Chevalier as you have said before?—A. Yes sir, certainly.

Q. At that moment is it not true that Bergevin knew that in virtue of the agreement you had with Mr. Dobell your right to occupy that piece of ground ended on the thirtieth of April nineteen hundred and twelve?—A. Yes sir, and what proves this is that he used this as an argument to offer me only fifteen hundred dollars.

Q. Will you take communication of the exhibit now produced as number four and say whether this is a document to which you have referred when you said there was a lease between Chevalier and yourself?—A. Yes, sir.

Q. And this document is signed by you and also by Mr. Adolphe Chevalier?—A. Yes, sir.

Q. And it was signed in the presence of Mr. Alfred Dobell acting as witness?—A. Exactly.

Q. You have told us a moment ago—and as the matter is of importance I wish it to be stated clearly so that there be no error—that when this deed of sale was passed between Bergevin and yourself, Bergevin knew that your right to occupy that piece of ground expired on the thirtieth of April nineteen hundred and twelve?—A. Yes, sir.

Q. And this applies to the land occupied by your ice-house in virtue of the lease which you had from Mr. Dobell, as well as to the land upon which the stable was built and which is referred to in exhibit number four?—A. Yes, sir.

Q. All this ended on the thirtieth of April, nineteen hundred and twelve?—A. Yes.

Q. And Bergevin knew it?—A. Yes.

Q. Consequently, when he gave two thousand dollars for what you sold him he gave those two thousand dollars only for the ice-house and the stable?—A. Yes, only the buildings.

Q. This included only the building?—he knew there was no lease?—A. He knew that I had asked Mr. Dobell to renew the lease—I had offered him to double the amount of rent in order to renew the lease for one year more.—I even offered him two hundred dollars, for one year's renewal, because Mr. Bergevin had asked me: go and try to renew the lease. Mr. Dobell would not do so. He said: "I cannot do it."

Q. And you notified Bergevin that he would not renew the lease?—A. Yes, I told him: Mr. Bergevin, it cannot be done.

Q. He knew then that there was no lease?—A. Exactly.

Q. You were to deliver the position with him only from the first of May, nineteen hundred and twelve?—A. Yes.

Q. And on the first day of May nineteen hundred and twelve you had no more lease?—A. No.
SESSIONAL PAPER No. 123

Q. Who got those two thousand dollars?—A. I did. He gave me five hundred dollars cash by a check on the Union Bank—not in cash, but by a check on the Union Bank, on the same day that I settled at the notary's.

Q. That is to say on the nineteenth of August nineteen hundred and eleven?—A. Yes.

Q. When did he give you the balance?—A. On Monday.

Q. On the following Monday?—A. Yes, two or three days after. I think this was a Friday or a Saturday—I believe I sold on a Saturday—I am not sure whether it was Friday or Saturday.

Q. Did he give the money directly to your wife or to you for your wife?—A. He gave it to me, naturally for my wife.

Q. You had settled with Mr. Dobell for the rent up to the thirtieth of April nineteen hundred and twelve?—A. Yes sir.

Q. Did you tell him at that time that you were going to sell to Bergevin, when you settled with Mr. Dobell?—A. I don't think I told him. I did not tell it to Mr. Dobell. If I told him, I don't remember.

Q. Now, when this transaction was going on did Mr. Bergevin give you any warning or any advice concerning the election?—A. Yes, as I have just told you, he said: You know, Napoleon, you are in a bad fix.

Q. Bergevin told you this?—A. He said: you know you are in a bad fix. I said: yes. He said: you know we are pulling you up from a hole, you must show yourself grateful for this. I don't ask you to work on our side, but mind your own business, keep quiet and don't make a noise. I said: look here Mr. Bergevin if you will give me four thousand dollars I am going to shut my mouth, I won't say anything, but if you don't give me four thousand dollars I will go on as usual, do as I have always done and I will show myself as I am. The same evening I went to see O'Neill and I said to O'Neill: if you give me three thousand five hundred dollars I shall mind my own business, but if I sell for two thousand dollars I will act just as before and do all I can for my party. O'Neill said to me: 'listen, Napoleon, don't make a fool of yourself now, I believe I shall have good news for you tomorrow.' I said: "all right." On the next day I went there he said: "it looks bad," I went again in the afternoon and he told me: it is not possible to give you more than two thousand dollars. I said: "well I am very glad. I would not accept three thousand five hundred dollars because I want to keep my liberty. If you don't give me three thousand five hundred dollars I shall keep it."

Q. That is to say: Bergevin, and O'Neill probably acting on Bergevin's instruction, asked you to keep quiet about the elections, and you, in order to do so, you asked for more, and you said: give me four thousand dollars and I shall keep quiet, otherwise I shall keep my liberty, and then he told you: we are going to try. At last he told you that it was not possible to give you more than two thousand dollars and you answered: well, that is all right, because I had rather be free? A. Yes sir.

Q. This is in substance what was said?—A. Yes, and with respect to that I could give you a good plea for Chevalier.

Q. No matter, this is useless. If I have understood you right—and if not you will tell me so—I gather from what you have just said, and which has not been taken down in shorthand—I understand that in the course of last summer you met Mr. Bergevin?—A. Yes sir.

Q. And that Bergevin spoke to you about Chevalier?—A. Yes sir.

Q. Complaining that he had given Chevalier four thousand dollars and that Chevalier was not acting about politics as he Bergevin would have wished, and he complained to Chevalier in that respect—A. Yes.

Q. Giving you to understand by this that he had given Chevalier four thousand dollars in order to obtain the political support or the political opinion of Chevalier and that Chevalier did not now give him such political support as he expected from him?—A. Yes sir, he told me so in the cars.
Q. Do you know anything else which you would consider useful to put before the Commission—I don't speak of details but facts absolutely relevant to the matter in question?—A. It is probably all, we have covered every point.

Q. You think you have a copy of the deed of the lease at home?—A. Certainly.

Q. If you have it and if you find it, can you send it to us this afternoon?—A. Yes sir.

Q. Now, what did Bergevin do with the ice house you sold him?—A. It is there still.

Q. He did not take it away?—A. I will tell you something else. It may interest you. After the elections of the twenty first of September, O'Neill was sick in bed. O'Neill is one of my friends and I went to see him and tendered my sympathies. He told me: Napoleon, it looks bad, Bergevin has some difficulty in selling his ice house. I said: how is that? did he not get the Transcontinental to buy it? He said: no, Parent won't buy any more, Parent won't pay him. He had been to Ottawa.

Q. O'Neill told you that Bergevin complained that he had difficulty in getting money for that ice house because Parent would not pay him?—A. Parent would not pay him because the Government had changed and he did not wish the thing to appear.

Q. In any case the ice house is there still?—A. Yes.

Q. It has not been removed?—A. I saw it last summer.

Q. And the stable?—A. The stable is still there also.

Q. The stable is still there also?—A. Yes sir.

And further deponent sayeth not.

Adolphe Chevalier, of the City of Quebec, dock-yard owner, being duly sworn upon the Holy Evangelists, doth depose and say:

Examined by Mr. Rivard:

Q. You have been engaged since several years in repairing boats, have you not?—A. Building and repairing.

Q. Building and repairing boats?—A. Yes.

Q. In the usual course of your business I understand that on or about the first of October nineteen hundred and eight you rented a piece of ground from Mr. Dobell, representing the Duchess of Bassano, said piece of ground being part of lot number 2525 of the cadastre for the Champlain Ward in the City of Quebec?—A. Yes, sir.

Q. The land which you rented by this lease and which I now show you on the plan before the Commissioners, is the land marked number 2525 and comprises all the land mentioned under that number with the exception of that part which lies on the east side of said lot and which is occupied by an ice-house and which had previously been leased to Mr. Martineau?—A. Yes, sir.

Q. What is marked on the plan as ice-house?—A. Yes, sir.

Q. Now, as there are two ice-houses on the plan is it not true that the ice-house in question which was excluded from your lease was that which is situated on the west side of the lot?—A. Yes.

Q. Next to the street?—A. Next to the street.

Q. So that the land which you rented from Mr. Dobell encloses on all sides the piece of ground leased to Martineau except on the street front?—A. Yes, sir.

Q. And you also rented the beach lot up to deep water?—A. Yes, sir.

Q. All that you required for your business?—A. Yes, sir.

Q. The lease which you passed is exhibit number five which I now show to you?—A. Yes, sir.
Q. This lease was made for three years from the first of May nineteen hundred and nine?—A. Yes, sir.
Q. Ending on the thirtieth of April nineteen hundred and twelve?—A. Yes, sir.
Q. It was mentioned in the lease and agreed between you and Mr. Dobell, acting as aforesaid, that Mr. Dobell had the right at any time to end the lease by giving you six months notice, and upon such notice you had to abandon the lot and to clear it?—A. I had to deliver the lot in question.
Q. After the six months had expired?—A. Yes, sir.
Q. What did you do on that lot?—A. I built and repaired boats.
Q. You built and repaired boats?—A. Yes.
Q. You have put upon that ground some kind of blocks, what is called in English a skidway?—A. Yes.
Q. This is the skidway which is quite visible on the photograph produced as exhibit number six?—A. Yes, sir.
Q. The skidway in question is just what is visible on that photograph from the stern of the schooner down to the water edge on the left side of the photograph?—A. Yes, sir.
Q. And the schooner itself is lying on the skidway?—A. Yes, sir.
Q. You have also built on the same piece of ground what is seen on the left side of the skidway, what is called a gridiron?—A. Yes, sir, a gridiron.
Q. In the month of August nineteen hundred and eleven you were still in possession of that piece of ground as lessee as you have just said?—A. Yes, sir.
Q. Meanwhile you had leased to Mr. Napoleon Martineau, junior, a certain part of the land in question, which is described in the lease sous seing privé produced as exhibit number four?—A. Yes.
Q. It is the same piece of ground of which Mr. Martineau spoke in his evidence you have just heard?—A. Yes, sir.
Q. This is the piece of land on which the stable has been built?—A. I beg your pardon. The stable, I gave it free to Mr. Martineau. The ice-house was on the other side. I gave this through kindness.
Q. The piece of ground which you leased to Mr. Martineau by exhibit number four is it this piece of ground?—A. One-half of the piece of ground. It is divided in two. One part is leased by Mr. Dobell and the other part by myself but the stable was not included in the lease, I gave that as kindness.
Q. In the month of August nineteen hundred and eleven did you see Mr. Bergevin?—A. Yes, sir.
Q. Mr. Raoul Bergevin?—A. Yes, sir.
Q. To give him his exact name, Mr. Raoul Rene Bergevin?—A. Yes.
Q. Of the City of Quebec, merchant tailor and dry goods merchant?—A. Yes, sir.
Q. Is it Mr. Bergevin who asked you to sell him something concerning this piece of ground or was it you who offered to sell him?—A. I beg your pardon, if you will just let me tell—
Q. Answer my question first?—A. No, it was not he.
Q. Well, then will you explain how the negotiations began between Bergevin and yourself?—A. In the month of July nineteen hundred and eleven I went to Ottawa in order to see Mr. Parent as I had seen surveyors going over the ground and I thought the land was to be bought that year.
Q. In other words, in the month of July, nineteen hundred and eleven, you knew there was going to be expropriation?—A. Yes.
Q. And for that reason you left Quebec and went to Ottawa to see Mr. Parent?—A. I went to see Honorable Mr. Parent, yes sir.
Q. Who was then Chairman of the Commission?—A. Yes, sir.
Q. To see how you could settle your business?—A. Yes, sir.
Q. While you were in Ottawa, did you get a telegram from Mr. Morency?—A. Yes.
Q. Who was Mr. Morency?—A. Mr. Morency was agent for the Department here.  
Q. He told you to wait?—A. He told me to call him up by telephone.  
Q. Did you speak to him by telephone?—A. Yes, I spoke to him by telephone.  
Q. And he wrote to you?—A. Yes.  
Q. And you saw him?—A. Yes.  
Q. And he read a note to you to what effect?—A. To the effect that my valuation, according to Mr. Scott, was six thousand dollars. I received that letter.  
Q. Then I understand you went to Mr. Bergevin in order to sell?—A. No, before that, I had learnt that Martineau had sold his ice house. Then I went and saw O'Neill.  
Q. From whom did you learn that Martineau had sold his ice house?—A. I was told by some people.  
Q. Were you told that it was Bergevin who bought it?—A. Yes, sir.  
Q. And knowing this you went and saw Bergevin?—A. I went and saw O'Neill. I went into his bar as anybody could go and I said to him: "Jimmy, I am told that Martineau has sold?" He said: "Yes." He said: "Do you wish to sell?" I said: "If the offer is reasonable I will sell." He said: "How much do you want for your slip and your damages." I said: "Six thousand dollars." He said: "You ask too much, you will never get that. If you wish to sell we will fix that. But then you shall give me something out of that and you must not say a word in election time." I said: "That is all right." Then he said: "We will go up to Bergevin's to-morrow." On the next day Bergevin and O'Neill came to my house and they went and visited the ground.  
Q. I want to understand this right. After your trip to Ottawa you understood from what you heard from Mr. Morency by telephone or by letter that you could sell with a good profit?—A. Yes.  
Q. At the same time you learned that Martineau had sold?—A. Yes, sir.  
Q. Then you went and saw O'Neill?—A. Yes, sir.  
Q. Because you knew or you supposed at the time that it was through O'Neill that Martineau had sold or that it was necessary to see O'Neill in order to reach Bergevin?—A. Yes, because I knew that politics were mixed up with that matter.  
Q. Then O'Neill asked you if you wished to sell?—A. Yes, sir.  
Q. And you told him that you would sell for six thousand dollars, relying upon what Mr. Morency had told you?—A. Yes, sir, on what he had written to me.  
Q. O'Neill found the price too high?—A. Yes, sir.  
Q. He told you that there was a way to settle the matter, but on condition that you should stay quiet during the elections, what was the meaning of that?—A. Not to work against them, because I am a friend of Mr. Price.  
Q. Not to work against them?—A. Yes.  
Q. Then it was O'Neill who made arrangements to visit the ground and what was on it a few days later?—A. It was he who saw Bergevin.  
Q. Bergevin and O'Neill went there with you?—A. No, they came and saw me at my house.  
Q. They came to your house and went with you to see the land?—A. Yes, sir.  
Q. They examined it?—A. The tide was high and they could not see what we call the gridiron. They only saw the skidway.  
Q. Is it at that moment that Bergevin made an offer to you?—A. No, sir, he said he would think about it and would settle that later on, saying that we would see each other again.  
Q. In what capacity did Bergevin talk about buying? Was it individually or as buyer for the Transcontinental?—A. When it was decided to buy my property I went and saw O'Neill. They made me come to O'Neill's place and Bergevin told me: "Listen, Chevalier, I am working for the Transcontinental. I have just seen the books and your valuation is four thousand dollars, we will give you four thousand dollars. You had better take it because you won't get more and later on you may not
get anything. If you will take four thousand dollars, we will buy your property." I said: "If I am valued at four thousand dollars, but if my valuation is higher I would like to get it."

Q. Then Bergevin gave you to understand that he was working for the Transcontinental?—A. Yes, he told me so directly.

Q. He gave you to understand that he was buying or that he wished to buy your rights, whatever they might be, for the exact sum which the Transcontinental was willing to pay you?—A. Yes, sir.

Q. Did you know at the time or did he give you to understand or to suspect that he was acting as an intermediary so as to make money out of it for himself?—A. No, I thought at the time, and I have always thought, that he was employed by the Department, because he told me so.

Q. He told you that he was employed by the Department?—A. He told me that he was employed by the Department and that he was the only man who could see the valuations in the books.

Q. And he told you that you would receive exactly the amount which the Government was going to pay?—A. Yes, sir.

Q. And not less?—A. Not less. Then O'Neill told me: "I will cause you to sell and you shall give me one hundred dollars."

Q. O'Neill was to get one hundred dollars?—A. Yes, and he gave them to him too.

Q. Did Bergevin speak to you about the election?—A. Yes, sir.

Q. Bergevin also?—A. Yes.

Q. What did he say?—A. That was in the room—he made me enter into a room at Mr. O'Neill's.

Q. In the hotel?—A. In the hotel.

Q. A private room?—A. Yes, and after that he said: "Listen, Chevalier, now that we are buying you up, that we are paying you, that we are doing you a good turn you must not work against us, you must help us in the election." I said: "That is all right."

Q. Do I understand that in this circumstance Bergevin gave you to understand that in giving you four thousand dollars he was acting for the Transcontinental?—A. Yes, sir.

Q. Bu the told you that in giving you four thousand dollars he was doing a good turn to you so that you would not be against them in the elections?—A. Yes, that is correct, that is so.

Q. Was it long after that that you passed the deed of sale?—A. No, I saw Mr. Dobell and two days later they came to my house.

Q. Is it the circumstance to which you have already referred?—A. On the next day he passed the deed. He asked me to get a copy of my lease and I went and saw Mr. Dobell.

Q. The lease which you have passed with Mr. Dobell as you have stated before is exhibit number four?—A. No, sir.

Q. I mean exhibit number five?—A. Yes, sir.

Q. Did Mr. Bergevin know that lease?—A. Not at the time.

Q. When did he know it?—A. When I showed it to him.

Q. When did you show it to him?—A. When I went at the notary's. He sent me to Mr. Dobell's to try and get a copy of the lease and he said; you shall bring me to me at the notary's.

Q. Who said that to you?—A. Mr. Bergevin. I went and saw Mr. Dobell.

Q. Before that, did Bergevin know that you occupied that piece of ground in virtue of the lease from Mr. Dobell?—A. I don't know.

Q. You don't know?—A. I don't know.

Q. Did he ask you what you were able to transfer to him?—A. Certainly he asked me and I told him.

Q. That you had only a lease from Mr. Dobell and that this lease expired on the thirtieth of April?—A. Yes.
Q. When did he tell you that?—A. While the sale was being discussed and before we went at the notary's.
Q. You told him that you held a lease from Mr. Dobell and the lease expired on the thirtieth of April?—A. Yes.
Q. On the thirtieth of April nineteen hundred and twelve, you knew that the lease expired?—A. Yes, sir.
Q. By the terms of the lease it was to expire on the thirtieth of April, nineteen hundred and twelve?—A. Yes, it expires then.
Q. Had you received a notice that it would not be renewed?—A. Mr. Dobell had told me so several times; Chevalier, I cannot renew it.
Q. You had on several occasions asked Mr. Dobell to renew the lease that it might continue after the first of May, nineteen hundred and twelve, and Mr. Dobell had refused?—A. Yes, sir, he had refused.
Q. Did you tell this to Bergevin?—A. No, he did not speak about that.
Q. He did not speak to you about that?—A. No.
Q. After that you went at the notary's?—A. Yes.
Q. And there Bergevin saw the lease exhibit number five?—A. Yes, sir.
Q. You showed it to him?—A. Yes.
Q. You had taken a copy?—A. Yes, it is Mr. Dobell who procured it for me.
Q. Did Mr. Bergevin then ask you if it was possible to renew the lease?—A. No, he did not speak about it.
Q. Or to extend it for some time?—A. No, he did not speak about it.
Q. He knew at the time that the lease had expired or would expire on the first of May, nineteen hundred and twelve?—A. Yes, sir.
Q. Or rather on the thirtieth of April?—A. On the thirtieth of April, nineteen hundred and twelve.
Q. Not on the first of May, but on the thirtieth of April, nineteen hundred and twelve?—A. Yes, sir.
Q. Then it is under those circumstances that you passed the deed which is produced as exhibit number one?—A. Yes, sir, he bought my lease, nothing more nor less.
Q. By this document you sold him your rights to occupy the piece of ground of which you have spoken?—A. Yes.
Q. And which was leased to you?—A. Yes, sir.
Q. That is to say, number 2525 except what had been leased or underleased to Martineau?—A. Yes.
Q. And moreover, this occupation or right to occupy, whatever it may be, were sold to be delivered on the first of May nineteen hundred and twelve?—A. Yes, sir.
Q. He knew at the time that on the first of May, nineteen hundred and twelve, you had no more lease?—A. He knew it certainly, he read it.
Q. Bergevin knew from what you have shown him and what you had told him, that when you would be called upon to put him into possession of the piece of ground in question on the first day of May, nineteen hundred and twelve, you would no more be in possession of the same?—A. Certainly, he had my lease.
Q. Consequently he was buying something which did not exist?—A. He was buying nothing. So far as I was concerned it suited me very well.
Q. Now the skidway that we have already referred to, is it the same thing as what has been called the slip in the different documents and deeds which you have passed?—A. Yes, sir, that is the way we called it.
Q. You used that expression and you knew that in English this thing is called the skidway?—A. It is called a skidway, yes sir.
Q. Then what is called a slip here is the skidway in question?—A. Yes, sir.
Q. That skidway with the gridiron that was there, where are they now?—A. They are at St. Laurent.
Q. They are at St. Laurent on the St. Laurent dock-yard?—A. Yes, sir.
Q. They were removed from lot number 2525, and were put on the ground belonging to the St. Laurent dock-yard, at St. Laurent, on the Island of Orleans?—A. Yes, sir.
Q. And they are now the property of that company?—A. Yes sir.
Q. To whom they were transferred by a transaction which does not concern the present matter at all?—A. Just so.
Q. When were they removed from lot number 2525 and brought to St. Laurent?—A. I believe it was in the month of August, nineteen hundred and twelve.
Q. By whom were they removed?—A. By myself.
Q. By yourself?—A. Yes.
Q. Who paid for removing them?—A. The St. Laurent Company, Limited. I beg your pardon—it is I who paid for removing them and the company paid to build them up again upon their ground.
Q. Bergevin never worked at the removal of that thing?—A. No, he is much too lazy for that.
Q. Had he anything to do with the matter at all?—A. Not at all, I never saw him again after that.
Q. When you had to remove the skidway and the gridiron and all that was there did you consult with Bergevin?—A. I have no business to do so.
Q. Did you notify Bergevin?—A. No, because the deed of sale gave me the right to take away my property and Bergevin had nothing to do with this, he did not buy those things.
Q. The skidway, the gridiron and all what constituted your dock-yard, I understand that this was not sold to Bergevin by that deed?—A. No.
Q. Is it to your knowledge whether Bergevin did anything else in connection with that skidway—did he have anything to do with Mrs. Chevalier, for instance.
A. Not for that one, but for another one.
Q. Was the skidway in question ever sold to Bergevin by anybody in virtue of some other deed?—A. Not at all, not the skidway, it was the gridiron.
Q. But the gridiron that was on the ground in question has also been removed from St. Laurent?—A. No, I beg your pardon, it is in Levis.
Q. Then this gridiron belongs to you?—A. Not at all, the wood belonged to my father and when my father died he left it to my mother and I rented the ground and I fixed the wood on the property, but I was earning my mother's living. I was the owner and the business went on under my name.
Q. If I understand you right, this gridiron was made up of pieces of wood which formerly belonged to your father?—A. Yes.
Q. Mr. Chevalier the father?—A. Yes.
Q. Your father is dead?—A. Yes, sir.
Q. And you are his heir?—A. No, he left it to my mother.
Q. You took those pieces of wood and you fixed them on the property and built them up into a gridiron?—A. Yes, such as they were before.
Q. You built that gridiron yourself?—A. Yes sir.
Q. You built it on the land in question?—A. It was built before that, it is a thing which is taken asunder every fall. My father had begun it before me and had left it to my mother.
Q. Was it your father who completed it or was it you?—A. It is a thing which is taken away every fall and is replaced in the spring.
Q. Those pieces of wood were destined by your father for the gridiron?—A. Yes, sir.
Q. The gridiron was built by your father?—A. It was built by my father but I renewed it frequently.
Q. Did you renew the pieces of wood?—A. Certainly.
Q. Then it was almost new?—A. No, because they are soon worn out. The ships' keels cut into it.
Q. You have to replace the pieces of wood, then who furnished the wood?—A. I did. When my father died he left me with eight hundred dollars debts to
pay and I had four hundred dollars to pay to Mr. Dobell and there was not one cent in the house. I borrowed two hundred dollars to pay Mr. Dobell.

Q. And you went on that way?—A. Yes, and very hard up all the time.

Q. It was you who used the gridiron and you continued using it?—A. Yes.

Q. You were supporting your mother?—A. Yes, I gave my mother the revenue I got from the slip.

Q. You say that you gave the revenue that you got from the slip to your mother, what do you mean by the slip?—A. I mean the gridiron.

Q. The gridiron?—A. Yes sir.

Q. It has been said that what you call the slip was the skidway?—A. Yes, it can be called a slip.

Q. The revenue from the skidway was your own?—A. Yes.

Q. It did not belong to your mother?—A. No.

Q. And you say that the revenue from the gridiron—A. It went to the mother.

Q. It went to your mother?—A. Yes.

Q. To Mrs. Chevalier?—A. Yes.

Q. What became of that gridiron?—A. Well, the time for the elections came. The mother was expropriated, the mother's gridiron was expropriated, I mean to say a valuation was put upon it.

Q. It was not yet expropriated?—A. Well, yes, the notices were given, people had passed at our place on purpose for that.

Q. By that time you had already sold?—A. I had sold.

Q. To Bergevin?—A. Yes.

Q. By the deed produced as exhibit number one?—A. Yes sir.

Q. Was it before or after the elections that Bergevin had anything to do with the gridiron?—A. It was before. It was on the twentieth of September at three o'clock in the afternoon, on the day before the election.

Q. On the twentieth of September at three o'clock in the afternoon Bergevin went to your house?—A. I have a brother who is a conservative like myself—we have always been conservatives—they fixed the matter up at O'Neill's but that is all I knew about it. They fixed the matter up at O'Neill's and my brother came and fetch my mother and brought her down town without consulting her notary, Mr. Parent, and they made the bargain and I only knew of it three weeks later.

Q. Was it a written agreement which they entered into?—A. A notarial agreement.

Q. Have you got that agreement?—A. Yes, here it is. I produce it as exhibit number seven.

Q. This is an authentic copy which I now show you of the sale by widow Thomas Chevalier to Raoul Rene Bergevin?—A. Yes sir.

Q. I see by this deed that she has sold a slip and its accessories? Must I understand that by the word slip on that deed is meant the skidway or the gridiron?

—A. The gridiron. That gridiron does not exist but it was the gridiron.

Q. On exhibit number six you have explained what was the skidway?—A. Yes sir.

Q. And here the gridiron is shown?—A. Yes, this belongs to me.

Q. The skidway belongs to you?—A. Yes.

Q. The gridiron which is visible on that photograph belongs to you?—A. Yes.

Q. In the deed produced as exhibit number seven mention is made of a slip. This slip and its accessories do not include the skidway nor the gridiron which appear on the photograph?—A. That belonged to me.

Q. It refers to another gridiron which is situated a little more to the left on the photograph?—A. Yes.

Q. Towards the west?—A. Yes sir.

Q. That gridiron we say was sold by the deed, exhibit number seven?—A. Yes sir.
Q. What became of it?—A. The sale was made without any notice to me. A couple of weeks after the sale—I was not aware of anything—Bergevin telephoned to me and asked me to come down to his place. I went there and he told me: Chevalier, will you sign this? I said what is this? He said: it is the sale by your mother. I said: you don’t need me to sign this. He said: yes, you must sign it. I said: if I was not able to sign it on the twentieth of September, I am no more able to-day. Then I went and saw Mr. Dobell and I explained the matter to him. He even asked Mr. Dobell to sign it. I refused to sign it. One day I came home and my mother was crying.

Q. About what time was that?—A. It was on the eleventh of October, on the same day of the retrocession of the sale.

Q. That was some time, about ten days after the elections?—A. Yes, it was on the eleventh of October. Then my mother told me about it.

Q. Your mother told you she had sold?—A. Yes, I knew it then because Bergevin had asked me to sign.

Q. What took place then—did Bergevin go to your house?—A. No, Bergevin telephoned. Bergevin sent word to the mother that if she did not give him back his money he would have her put in jail.

Q. Bergevin sent word to your mother Mrs. Chevalier that if she did not give him back the five hundred dollars which had been given to her as the price of the deed exhibit number seven he would sent her to jail?—A. Yes.

Q. So that naturally Mrs. Chevalier was in great grief and anxiety?—A. Yes, sir, she even died from the shock she received on that occasion.

Q. She died from that shock?—A. Yes.

Q. What took place after that?—A. My sister came to me and told me that my mother was in great grief, she said: “she has done a foolish thing and now she is sorry for it.” I went to the other room and said to me: “Bergevin has sent word to me to give him back the money or else he is going to send me to jail.” Then she began to sob. She said “if I get into trouble I won’t ask you to get me out of it.”

Q. Let us leave all those conversations aside and let us get at the facts.—A. I told my mother: “I shall never give Bergevin the satisfaction to sign this. If you wish, I am going to give you four hundred dollars—she had not got the five hundred dollars.—I am going to give you four hundred dollars and you will transfer the thing to my name and you will give back the five hundred dollars to Bergevin and transfer every thing to my name and I will give you the profits so long as I shall be able to work.” She said: “that is all right.” We went down to Mr. Parent’s and he made a retrocession, which you have here.

Q. Mrs. Chevalier had passed the deed produced as exhibit number seven without speaking to you about it?—A. Yes, even without speaking to a notary about it.

Q. By this deed she had sold to Bergevin the gridiron of which we have just spoken and which is not the one which is visible on the photograph?—A. She had.

Q. But which was built on the land in question?—A. Yes, sir, on my property.

Q. That is to say on the property you had leased from the Bassano estate?—A. Yes.

Q. And this gridiron was precisely the one about which you have spoken, which you had repaired and put together each year as it used to be done and into which you had put new pieces?—A. Yes, sir.

Q. You became aware of this deed about the tenth or eleventh of October?—A. I knew it before that, when he telephoned to me.

Q. You were made aware of it about ten days after the elections?—A. Yes, sir.

Q. By a telephone from Mr. Bergevin?—A. Yes.

Q. And about the tenth or eleventh of October you saw that such was the case because on coming home you found your mother and your family in a state
of great anxiety, your mother crying and much distressed because Bergevin had sent word to her saying: "if you do not give back the five hundred dollars which I paid you for that gridiron I will have you sent to jail"?—A. Yes.

Q. Thereupon, in order to save your mother from the consequences of this business in which she had been taken in you consented to give her four hundred dollars?—A. Yes, sir.

Q. And to buy the whole thing?—A. Yes.

Q. To whom did you hand those four hundred dollars?—A. To my mother.

Q. And it was then that this document was drawn up?—A. Yes, sir, before Mr. Parent, notary.

Q. Before notary Parent, on the eleventh of October, Bergevin re-assigned to your mother, Mrs. Chevalier, the right which he had bought by the deed produced as exhibit number seven?—A. Yes, sir.

Q. For the price of five hundred dollars?—A. Yes.

Q. And on the same day your mother sold that to you the same gridiron and accessories for the sum of four hundred dollars?—A. Yes, to get clear of the whole business.

Q. Such is the story of the gridiron?—A. Yes.

Q. Did you pay four hundred dollars to Bergevin?—A. I paid them to my mother.

Q. Is it to your knowledge that your mother handed over to Bergevin the five hundred dollars?—A. Yes, certainly both deeds were passed in my presence at Mr. Parent’s and it was Mr. Parent who gave him the money.

Q. What became of the gridiron?—A. It is in Levis. When Mr. Parent came to visit the premises, he estimated that all the wood that was there was worth about thirty dollars.

Q. Which Mr. Parent?—A. The notary.

Q. The gridiron in question which formerly belonged to your father and which you had repaired as you have said, you removed it to Levis?—A. Yes, sir, some pieces, part of it.

Q. What you removed to St. Laurent consisted in the skidway and the gridiron which are visible on the photograph?—A. Yes.

Q. The other gridiron of which we have just spoken and which passed from your mother’s hands into those of Bergevin and which was reconveyed to your mother was removed and brought to Levis?—A. Yes.

Q. When?—A. Last fall.

Q. During the fall of nineteen hundred and twelve?—A. Yes.

Q. You told us that it was quite dilapidated?—A. Yes, it was worn out, it was old, it was made up of all kind of old wood, it was no longer of use, it was old wharf timber, it is not worth anything now.

Q. Since how long?—A. Since last summer. We were obliged to renew it this spring.

Q. Since last summer it was not worth anything?—A. No.

Q. So I suppose that last summer it was not worth much either?—A. No, ever since three years I had been renewing pieces every year—each year it had to be renewed almost entirely.

Q. Each year a gridiron like this has to be renewed almost entirely?—A. Yes, almost.

Q. In order to be worth some thing.—A. Yes.

Q. Since three years it had not been renewed to speak of?—A. Just one piece here and there.

Q. So it was not worth anything?—A. No.

Q. Is it still in Levis?—A. Yes.

Q. It belongs to you?—A. Yes.

Q. So you had inherited this gridiron, or your mother had inherited it when your father died?—A. Yes.

Q. When did he die?—A. He died five years ago last January.
Q. Now listen—you got this gridiron from your father and after using it for one year you renewed a good part of it?—A. I beg your pardon, I did so immediately during the winter. I borrowed money and I bought some wood and in the spring I began to fix it, I lengthened it.
Q. You have told us that a gridiron of this kind, in order to be worth something must be renewed almost entirely each year?—A. Yes.
Q. Or partly renewed in any case?—A. Yes.
Q. You have it in your possession since five years?—A. Yes.
Q. Did you, each year, renew it so as to make it serviceable?—A. Yes, so that I could utilize it.
Q. In order to utilize it you had to renew about half of it?—A. Yes, I dare-say one half, because last year I rebuilt one half of the gridiron at my own expense
Q. Did you do the same thing the first year after you had it?—A. Yes.
Q. And in each subsequent year you renewed it again?—A. At least half of it.
Q. At least half of it?—A. Yes, about one half.
Q. And this went on during five years?—A. During four years.
Q. Consequently when the transaction in question was made you might well claim the gridiron as your own?—A. I would not presume to say that it belonged to me but I left it to my mother.
Q. You did this for your mother's sake?—A. Yes.
Q. Who removed that gridiron, your mother's gridiron, and who brought it over to Levis?—A. I did.
Q. Yourself, personally?—A. Yes.
Q. At your own expense?—A. Yes, because they hid themselves from me when they sold it. They did it so that I should not know it.
Q. Now, this gridiron, together with the skidway and the other gridiron had to be removed on the thirtieth of April, nineteen hundred and twelve?—A. Yes, sir.
Q. You were obliged to remove it then?—A. Yes.
Q. Will you now produce as exhibit number eight the retrocession of which you have spoken already made by Raoul Rene Bergevin to Mrs. Chevalier, on the eleventh of October, nineteen hundred and eleven?—A. Yes, sir.
Q. And will you produce as exhibit number nine the sale already referred to by Mrs. Chevalier to yourself dated eleventh of October, nineteen hundred and eleven?—A. Yes, she made a retrocession on the eleventh and she died on the twenty-eighth of the same month.
Q. You said that it was the cause of her death?—A. It was the principal cause. She was suffering from heart disease and since that time—
Q. Will you produce as exhibit number ten a certain number of documents in connection with the beginning of your evidence, when you said that you were in Ottawa and received a telegram, a telephone message and a letter with notes by Mr. Morency—that is to say, a telegram received by you from Mr. Morency on the twenty-sixth of July, nineteen hundred and nine, while you were in Ottawa, also the letter that he wrote to you on the same date in which he refers to his telegram and tells you that he has something very important to communicate to you, also the typewritten notes which he handed to you when you saw him again?—A. Yes, sir.
Q. And in which he speaks of the valuation made by Mr. Scott?—A. Yes.
Q. Was it written with the pen at the foot of the document, was it written by himself?—A. I don't know, he gave it to me as it is there.
Q. With those notes?—A. Yes.
Q. Is it Mr. Morency's handwriting?—A. No, I know Mr. Morency's handwriting, and this is not his handwriting.

And further deponent saith not.
GEORGE VIDAL, of the City of Quebec, Bailiff of the Superior Court, being duly sworn upon the Holy Evangelists, doth depose and say:

Examined by the Commissioner:

Q. You are a Bailiff of the Superior Court?—A. I am.
Q. Do you know Raoul Rene Bergevin?—A. Yes, I do. I know him very well.
Q. What does he do?—A. He is a merchant, on Notre Dame Street.
Q. Did you serve him with an order of this Commission to-day?—A. Yes, I did.
Q. Is this a duplicate original of the order?—A. Yes, sir.
Q. What did he tell you?—A. He told me he could not come as he was going to St. Romuald, where he was called as an expert. I did not ask him what kind of an expert.
Q. At what time did you serve him?—A. I served him at about five minutes to one o'clock.
Q. To-day?—A. Yes, sir.
Q. Where did you serve him?—A. On St. Peter Street.
Q. Did you speak to him personally?—A. Yes, I spoke to him.
Q. And you gave him a duplicate of this order?—A. Yes.
Q. Which he retained?—A. Yes, sir, he did.
Q. Which order is filed as exhibit number eleven?—A. Yes. He asked me for some money and I told him I had none.
Q. He asked you for some money although he told you he did not intend to come?—A. Yes, he asked me if I had any money for him and I told him that I had not.
Q. When you subpoena a man in the city to attend in the city do you have to pay him?—A. I never do.

And further deponent saith not.

CORRY BUILDING, OTTAWA, ONTARIO, 3 P.M., THURSDAY, APRIL 24, 1913.

Examination of Mr. C. F. McIsaac, by the Transcontinental Investigating Commission.

MR. McISACC, sworn and examined:

By Mr. Lynch-Staunton:

Q. What is your first name?—A. Colin F.
Q. You are a barrister and solicitor?—A. Yes.
Q. And practise where?—A. Antigonish, N.S.
Q. Had you any railroad experience before you came onto the Transcontinental Railway Commission?—A. No.
Q. You were appointed Commissioner on August 1, 1905, I believe?—A. Yes, sir.
Q. And you remained on the Commission until the end of 1911?—A. I think the 31st of March, 1912.
Q. So you were a member of the Commission when the original contracts for the construction of the road were let?—A. Yes.
Q. And when they were advertised?—A. Yes.
Q. Are you familiar with the advertisement that was put out, or were you familiar with it at the time?—A. Yes. I was familiar with it at the time.
Q. The advertisement was for the construction of different sections of the Transcontinental Railway, and in that advertisement was there not a condition that each tender must be signed and sealed by all parties to it, and be accompanied by an accepted cheque on a chartered bank of the Dominion of Canada, payable to the order of the Commissioners of the Transcontinental Railway, as follows: for section No. 1, District A, $75,000; for section No. 2, District A, $90,000; for section No. 3, District B, $225,000; for section No. 4, District B, $75,000; for section No. 5, Districts C. and B, $225,000. (I am quoting from the second advertisement.) Now, I understand that all the advertisements were in the same words excepting as to the amount of the deposits for the various sections, which differed in amounts. Is that right?—A. So far as I remember, yes.
Q. Each tender contained the following clause, did it not: "Any person whose tender is accepted shall, within ten days of the acceptance thereof, furnish such additional approved security as may be required by the Commissioners, and sign the contract, specifications and other documents required to be sent to the said Commissioners; and in any case a refusal or failure on the part of the party whose tender is accepted, to complete and execute the contract with the said Commissioners, and to furnish the additional approved security within ten days after the acceptance of the tender, the said cheque shall be forwarded to the Commissioners as liquidated damages for such refusal or failure, and all contract rights acquired by the acceptance of the tender shall be forfeited." That is right, is it not?—A. Yes.
Q. Now you notice, Mr. McIsaac, that beyond stating the amount for which the tenderer must fill in his cheque that accompanies the tender, there is no indication given in the advertisement of what amount of security the Commissioners may require?—A. No.
Q. So that the person tendering could be required to give any amount of security which the Commissioners, in their uncontrolled discretion, might require him to put up before he was allowed to have the contract?—A. Yes. It was put there for the purpose of giving additional powers to the Commissioners, in case the lowest tenderer was a man who was not financially or by experience able to carry out the contract.
Q. Why should that be necessary, when Clause 16 of the National Transcontinental Railway Act of 1903 provides, "that the Commissioners shall accept the lowest tender put in by a contractor who, in the judgment of the Commissioners, is possessed of sufficient skill, experience and resources to carry on the work, or such portion thereof as he is tendering for?"—A. Well, we did it for that purpose and that purpose only. In regard to the very first two contracts that were let, the Quebec one and the McArthur one, both Mr. Lumsden, our Chief Engineer and Mr. Schreiber, the Government Engineer, reported that the prices were too low to enable them to carry out the contract, and there was a difference of opinion among the Commissioners. The Chairman, Mr. Parent, wanted to give the contract to the Grand Trunk Pacific, who were higher.
Q. I just want the reasons?—A. For just such reasons as I have given. We considered, at the time, they were necessary conditions.
Q. As a lawyer, do you now think they were necessary?—A. I do. I think it was a good thing to put in.
Q. Is there any precedent, to your knowledge, for putting such a clause in an advertisement, either by the Government or by any railway company in Canada?—
A. I cannot recall any one just now, but in the public interest, I think it is a very safe thing to put in, and we have never had any complaints from tenderers.

Q. But cannot you appreciate this: that it put absolutely out of the running, in tendering for this work, anybody who was not of very large means?—A. I do not think so.

Q. For instance, a man might put up a $100,000 deposit with his tender for a $5,000,000 contract. You would ask him to put up additional approved security or forfeit his money?—A. I think it would be absurd to suppose such a case. I do not think the Commissioners or any officials of the Government or a Minister would undertake to do anything so outrageous as that. As I said before, we did it in one case.

Q. As a matter of fact, on the McArthur contract you compelled McArthur to put up, in addition to his deposit, $900,000?—A. We did so for the reason I told you. Mr. Lumsden and Mr. Schreiber said the prices were low, but the case never occurred again.

Q. But cannot you see there must necessarily be very few people who would risk being put in that position?—A. I never heard of any complaints.

Q. No, because there were very few people tendered for this work?—A. Those who did not tender on account of that would, no doubt, have come to us or the Government or some other source, I should imagine.

Q. We will just consider it: for all this work on nine contracts—Nos. 3, 4, 12, 13, 14, 15, 16, 17 and 20—totalling 760 miles, where the estimated cost would be over $25,000,000, there were two or less tenderers for each of these contracts. That is right, is it not?—A. I do not remember the number.

Q. This document shows you?—A. Yes.

Q. And these men, did they not, when they were awarded the contracts as successful tenderers, immediately sub-let the work to a great number of sub-contractors?—A. Yes, in the usual way. I understand that is what is usually done.

Q. And those successful tenderers did not require any such deposit as this to be put up by their subs?—A. I do not know anything about that.

Q. If I understand it, you approved of the sub-contractors?—A. Yes, but they were only agents of the large contractors.

Q. Did you see their contracts?—A. No.

Q. They were filed here with you?—A. I cannot recall any of them.

Q. But they were submitted to the Board?—A. I do not think so.

Q. Now I ask you candidly, what possible good could come to the Commission by putting a clause in the advertisement that would leave the contractor at the mercy of the Commissioners or lose him his deposit?—A. It was done for that purpose, so far as I know, and for no other, that is, to secure the public interest.

Q. Was it done under anybody else's advice?—A. Not that I know of. I think it was generally discussed at the time by Mr. Lumsden and ourselves.

Q. Would not you know that it would discourage tenderers?—A. I do not think so.

Q. Don't you think it was rather extraordinary that so few people tendered for this great work?—A. I do not know. I think the number of tenderers was just as many as on the Hudson's Bay and the Halifax, Musquodobito & Guysborough Railway contracts.

Q. Do you know that as a matter of fact?—A. No, just from hearsay.

Q. But don't you think that you would have got more tenderers if you had divided the work up into shorter stretches?—A. We might.

Q. For instance, McArthur's contract amounted to over $20,000,000 and extended over 245 miles. Don't you think a huge contract like that might be advantageously split up into two or three stretches?—A. It is just a question.

Q. Did you personally give any consideration at all to that phase of the question?—A. Quite a lot, and I think it was my own view at the beginning, that it should be split up.
Q. That it should be split up?—A. Yes, that was my idea.
Q. Why did you alter that opinion?—A. I cannot recall all the arguments that were used. It was argued that by cutting up in small sections one contractor would likely interfere with or be in the way of the adjoining one and thus create many difficulties. Again it was stated a contractor with a large section would be in a better position to purchase a large plant and thus do the work cheaper.
Q. But this is a momentous question. One would have to have very strong reasons for arranging this so that only great millionaire contractors could tender for it, should not he?—A. All I can say is that in discussing it with our Chief Engineer, he thought it better to give longer sections than to cut it up into shorter ones, and thereby get too many contracts.
Q. I might understand that if you had carried out that plan, but you allowed the work to be split up into small contracts and dealt with the small contractors yourselves afterwards.—A. I think that is the usual way with all railroads.
Q. Then how would it benefit the Commission, even in avoiding trouble, to cut it into large sections and then afterwards divide it into small sections for sub-contractors?—A. Of course, experienced contractors and those who are financially well off, are not so apt to give trouble to the Government or to the Commission, in failing, and eventually throwing the work into the hands of the Government, and perhaps in the end costing more. That was an argument used by Mr. Lumsden, I think, and a number of the Commissioners too, which probably had a good deal to do with my coming to that conclusion.
Q. Why did you, then, not require the contractors, excepting Hogan & Macdonell, and McArthur, to put up security greater than the deposit?—A. Why did we?
Q. Why did you not? You started out with that plan and you made McArthur put up $900,000, and Hogan & Macdonell put up $568,000 and then you did not make anybody else put up anything at all.—A. Afterwards?
Q. Yes?—A. The reason was that our Chief Engineer, Mr. Lumsden, and Mr. Schreiber, who was also consulted, both reported to us that they felt the prices of these two contractors were too low to enable them to carry out the contract. And for the sake of protecting the public, we required additional security. In none of the succeeding contracts was any report given us by the Chief Engineer, stating the prices were too low, so far as I remember. If you see our report at the time you will notice that there was a difference between the Chairman and the Commissioners.
Q. I read that. In the McArthur contract there was only $746,000 difference between the tender and the Chief Engineer’s estimate of $13,750,000.—A. I forget the figures, but I have reference particularly to Mr. Lumsden’s report on the tenders. I do not want to speak from memory. I would like to see Mr. Lumsden’s report at the time and our own report in accepting these tenders.
Q. Mr. Lumsden’s letter to the Commissioners, of March 14, 1906, says: “Herewith please find an estimate of the works tendered for in Districts B. & F., exclusive of viaduct. This estimate, which was prepared before knowing any of the prices given by the tenderers, I believe to be ample for the completion of the work and leave a fair margin of profit for the contractor; but a variation of say ten per cent might be a reasonable price for a tenderer to make. If below this margin of ten per cent, it would, in my opinion, be too low to ensure the completion of the work.” Now, McArthur’s tender was not much more than five per cent below what Mr. Lumsden estimated, and I cannot find any letter from Mr. Lumsden, in which he says that McArthur’s price was not high enough. Mr. Schreiber says, in his report of the 28th of March, 1906, after setting out the facts: “The question to be considered is which of these tenders is in the public interest to accept. No. 4 Tender (that is McArthur’s) is $745,624, and No. 2 Tender is $727,270 less than the Chief Engineer’s estimate. Considering the larger amount of the tenders, compared with those for the Quebec section, the disparity between the Chief Engineer’s estimate and the lowest tender is not so great. However,
I consider that either of these tenders, though low, would cover the cost of the work." And he goes on to say it is a matter for the Commission to settle under Clause 16 of the Act of 1903, whether they will accept it or not. I have already given you what Mr. Lumsden said, which is that it is sufficient. So they both thought McArthur's tender high enough.—A. I do not think they say that, do they?

Q. I think it would be fair to say this: that as the Chairman thought it was low, and as it was below the amount of the estimate, you, as a matter of perhaps super-caution, insisted on the additional security.—A. I would not put it that way.

Q. How would you put it?—A. We did it because it was the first tender we received, and on account of the engineer's report we felt we should exact it.

Q. But the engineers did not express an opinion that the tender was too low?—A. I think they did in one of the reports. I thought they did it in both. The opinion they expressed, even in this, will show it was pretty low—lower than their estimate, was it not?—

Q. Yes, five per cent lower than their estimate.—A. And we considered that as it was lower than the estimate, it would be safer to make McArthur put up more.

Q. That is your reason?—A. Yes, I have no other reason.

Q. Why did you not follow that out in the tender for Section No. 1? There the tender was $27,000 below the estimate. That was very nearly the same proportion—A. Well, I suppose our Chief Engineer did not raise any question or doubt about that.

Q. But you had his opinion?—A. We were satisfied from his report.

Q. In No. 2 you had more than ten per cent below the estimate and you did not exact additional security; in No. 3 it is more than ten per cent below, and you did not exact it. It was twenty per cent below in that case. The Chief Engineer's estimate was $933,000 and the tender was for $767,000.—A. Our Chief Engineer was satisfied in all these cases. I suppose he estimated more generously than in the other.

Q. I cannot find any such statement by the Chief Engineer.—A. I do not suppose there is.

Mr. Gutelius:—It would be for the Commission to decide these things.

By Mr. Lynch-Staunton:

Q. I will show you another one, a very large one, from 98 miles west of Moncton to Tobique River. The estimate was $2,356,000, and the tender $1,898,000. No additional security was asked to be put up. In fact, generally, they seemed to be below the estimate. Here is one from Quebec, the M. P. & J. T. Davis division from New Brunswick boundary westerly. The estimate was $3,139,000 and the tender was $2,377,000. The 107 mile contract of McDougall & O'Brien was below the estimate. The amount of the tender was $4,559,000, and the estimate was $5,715,000 so you see the tenders were, as a rule, below the estimates quite an amount, and yet they were not made to put up this money?—A. The only occasion on which we ever had to consider the question even at the letting of the first contracts, and it was raised then on account of the difference between the Commissioners and the report of the engineers, both Mr. Lumsden and Mr. Schreiber. These contractors were kicking at the time, that we were too severe with them, and so on. Perhaps we were, but we felt we were doing it solely in the public interest.

Q. It put McArthur to an expense of $200,000.—A. Probably it did.

Q. And if you thought he was low, you were putting him further in the hole, were you not?—A. Yes, if he did not undertake it, he might keep out of the hole.

Q. You got that security from McArthur in a very peculiar form. You got from him three deposit receipts from the Traders Bank of Canada, in this form: "Received from the Commissioners of the Transcontinental Railway the sum of
SESSIONAL PAPER No. 123

five hundred thousand dollars, which amount will be counted over to the said Commissioners of the said Transcontinental Railway upon the surrender of this receipt. Thirty days' notice of withdrawal to be given. This receipt is not negotiable. For the Traders Bank of Canada, H. S. Strathy, Manager. "You did not deposit any money with the Traders Bank?—A. No.

Q. How could you collect that money from them? They did not make any contract with you to guarantee McArthur?—A. I presume McArthur deposited.

Q. Don't you, as a lawyer, know that you cannot sue on a contract unless it is made by yourself or assigned to you?—A. You are speaking of the additional security?

Q. Yes. Now, after all that trouble, costing McArthur $200,000, you got a receipt from the bank for a deposit which he did not make?—A. That is a question of law.

Q. I am not saying you could not collect it, but is it not rather a formidable question of law?—A. I do not care to give any opinion on that. I think that security was fairly good security, in addition to what else we had.

Q. You were dealing with a very large sum of money, and did it never dawn on you that you should have had either the money or a sure contract with the Traders Bank that they would make good if McArthur failed? It looks to me as if that is a receipt from the bank for money which both you and the bank knew you did not deposit; if you went to sue on that receipt the bank would say, "We never received any money from you," and if you went further then and said, "But McArthur did," they would say, "But you didn't, and we never agreed to guarantee his contract, and McArthur never deposited a dollar either." However, you did not consider that?—A. We considered, at the time, that that was additional security.

By Mr. Gutelius:

Q. Did you pass on that security as being ample and conforming with your recommendations to the Government, when letting the contract to McArthur?—A. I presume so, but of course, as I have said before, I do not like to be positive about these things.

By Mr. Lynch-Staunton:

Q. Mr. Fielding objected to that. He said it should not be done. In a letter written by him to Mr. Parent, on June 14, 1906, he objected to the form of advertisement and to your receiving any such stage money as that, and suggested that the advertisement for tenders should show what security was going to be required from successful tenderers?—A. Yes, I remember that now.

Q. Mr. Fielding says, in his letter of the 14th June, 1906: "Do you not think it expedient that whatever conclusion the Government and the Commissioners arrive at should be, in substance, expressed in the advertisements, so that parties tendering will be in a position to know exactly what class of security and what amount would be required of the successful bidders? This would avoid some of the questions which arose upon the awarding of the recent contracts." You did not accept the suggestion of the Finance Minister, and the advertisements continued in the old form?—A. What was the reply to that letter?

Q. On December 17th, Mr. Parent wrote Mr. Fielding, saying that they were about to let certain contracts and suggesting a conference between themselves and the Government, so that the matter of securities required might be settled. Mr. Fielding replied on the 18th of December, 1906, and after referring to a conversation he had on that day with Mr. Parent, goes on to say that he thinks it is desirable "that the commission, in letting contracts, should conform to the practice of the Department of Railways and Canals, and if, owing to the large sums involved, full application of the ordinary rule would require too large a deposit, there might be modification in the percentage, so that the amount deposited, while substantial as security, would not be such as to unduly embarrass intending contractors; but it should be distinctly understood in all cases that the cheque so
sent in when the tender is accepted shall be converted into cash for the Government." That is the opinion Mr. Fielding gave to the Commission: that in the first place they should let the tenderer know what he had to put up as security, and that they should also, when he had put up that security, convert it into cash?—A. Let me have a look at those letters?

(Letters handed to witness.)

This letter has reference altogether to depositing deposit receipts to the credit of the Receiver General.

Q. Yes, but you did not do it?—A. I think we did after we got this notice.

Q. You did not deposit McArthur's. All I am drawing your attention to is the fact that Mr. Fielding apparently thought that you should require not any more security from contractors on the Transcontinental Railway than they do in the Departments of Public Works and Railways and Canals?—A. I do not think that is just what he meant.

Q. He insisted in two letters, one on February 20, 1906, and another on May 21, 1906, that these deposit receipts should be cashed, and then on May 26th he wrote to Mr. Parent, "My dear Mr. Parent, I beg to acknowledge receipt of your letter of the 23rd instant. Without expressing any opinion as to the course which the Commission have deemed it proper to take, in relation to the securities required in connection with the construction of the Transcontinental Railway, I think I should remind you that the general practice of the Government's Departments, in relation to such matters, as established by Order-in-Council, is to require all deposit receipts to be sent to the Department of Finance and to be dealt with as so much cash." That is pretty straight?—A. So far as deposit receipts go.

Q. Now we will see the rest. Then on June 14th he makes the suggestion I have already quoted, as to the expediency of stating in your advertisements how much security should be put up, so that contractors could know what they are doing. Then on December 18th he says: "I think it desirable that the Transcontinental Railway Commission, in letting these contracts, should conform as far as possible to the practice of the large constructing Departments of our Government, namely, the Railways and Public Works Departments. The practice there is to require a certified cheque for a certain percentage of the value of the work, which cheque, on the acceptance of the tender, is sent to the Finance Department and is at once converted into cash. I would suggest that you adopt this rule." Then he goes on: "If, owing to the large sums involved, full application of the ordinary rule would require too large a deposit, there might be a modification of the percentage, so that the amount to be deposited, while substantial as security, would not be such as to unduly embarrass intending contractors, and it should in all cases be distinctly understood that the cheques so sent in when the tender is accepted are converted into cash by the Government." This suggestion was not carried out with regard to Hogan & Mcandonell and McArthur?—A. I do not remember, but I know we carried it out afterwards.

Q. But you did not carry out his suggestion about naming the security in the advertisements?—A. I do not know just exactly whether that is what he meant. I think he had reference altogether to the lump sum that we asked.

Q. But you did not carry out his suggestion, that you follow the practice of the Public Works and Railways Departments, which never require a man to put up more than five per cent, and that only in contracts under $200,000. It all comes down to this: That it seems to me that the conditions of your advertisements were so exacting that they prevented many people who were quite competent and were financially able to perform this work, from tendering, and thereby the country lost the benefit of competition? A. I do not know. We never heard any objections, as I said before, and we did it for the sole purpose of additional security.

By Mr. Gutelius:

Q. But there was objection. Mr. Fielding speaks of it in his letter?—A. I think his objection was chiefly to the fact that we took a deposit receipt instead of certified cheques or cash.
By Mr. Lynch-Staunton:

Q. You could not have read his letter very carefully. He says in his letter of June 14th: "Do you not think it expedient that whatever conclusion the Government and the Commissioners arrive at should be, in substance, expressed in the advertisements, so that parties tendering will be in a position to know exactly what class of security and what amount would be required of the successful bidders. This would avoid some of the questions which arose upon the awarding of the recent contracts."

Mr. Gutelius: So that there were questions raised?

By Mr. Lynch-Staunton:

Q. Then Mr. Parent replied on the 16th of June, "After the interview I had with you this morning, your letter of the 14th, referring again to the inspection of securities on our contracts, was submitted by me to the other Commissioners. They concurred in the suggestion which you made, and consequently the next time tenders have to be invited, for construction on our line, we will see that an understanding is reached on those points beforehand." But it never was done. I imagine it was forgotten, was it not?—A. I am not sure of that, but I do not remember. My memory of it is that it had reference chiefly to the cashing of certified cheques.

Q. We will go on to something else. In your specifications for the grading and for the general contracts for the building of this railway, engine houses and section houses are included in the general grading contract, but no prices are provided for which this work is to be done. Did you know that?—A. Is that in the first, or all of them?

Q. In all of them.—A. I really cannot remember about that.

Q. The contract is here, and you know that it provides for unit prices, and it also provides that these buildings shall be put up by the grading contractor; but luckily for the contractor, he was not bound to give the prices for constructing them. I want to point out to you the consequence of that: it was this, that while one-three-six, made up of one cement, three of sand and six of gravel, was, on other works, put up for from $10.50 to $16.00, when you came to build these engine houses the contractors got $17.00 for them because they said: We are going to have the work, and you will have to pay our price. We have got you in a cleft stick. Is not that right?—A. I do not know. The prices were fixed by the Chief Engineer.

Q. Yes, but the law required that they should be fixed by tender. It is an error. Why was it not discovered after you found the first trouble. Do you know anything about it?—A. I do not remember.

Q. Now, with regard to bricks. They charged you, for common bricks, $34.40 to $40.00 a thousand, in place. They charged you, for lumber, $60.00, $70.00 and $75.00 a thousand feet board measure, and I figure it out, that little mistake cost $800,000 more than if it had been in the contract. Has your attention not been drawn to that fact before?—A. I do not remember. The Chief Engineer in all such cases fixed prices that were fair and reasonable as I understood.

Q. I want to ask you something about Transcona. Why were those shops built on such an expensive scale? They have cost nearly $4,000,000 to date. I am told by Mr. Calvert that the original intention of the Commission was to spend $1,500,000. That afterwards the Grand Trunk Railway approached the Commission and the Government and an understanding was arrived at, that the capacity and extent of the shops should be increased so as to accommodate both the Eastern and Western divisions, that is, the Transcontinental and the Grand Trunk Pacific, west of Winnipeg; and he says he understood that the Grand Trunk were to pay for the use of those shops, in so far as they were used for their Western division. Now, I am asking if you agree with him, because we cannot find anything about it, and it is an important matter to know what the Commission's understanding was.

Q. Would you mind, if you have any recollection, giving just your own view?—A. The shops were built for the Eastern Division.
Q. You can see it is a very important matter, because the Grand Trunk Railway will use those shops?—A. Yes.

Q. And where is their liability to pay for the use of them? Don't you think there should have been a contract made with them?—A. It was always thought there would be if they would use the shops.

Q. A contract?—A. Yes.

Q. I would like you, very much, to think that over, because we would like to have you write us a letter on that.—A. I would not care to do that, because I might not remember the details accurately enough, but it was always expected that they would pay for the use of these shops for the Western division.

Q. It was recognized, then, that the shops were made larger than originally intended, so as to accommodate the Grand Trunk's requirements for the Western Division?—A. The shops were built for the Eastern Division, but it was considered that if the Western Division would make use of them, they should be made to pay for such use.

*By Mr. Gentili:*

Q. Was there any written contract?—A. No.

*By Mr. Lynch-Staunton:*

Q. Can you tell me by what lawful authority either the Commission or the Government made that expenditure?—A. We felt we had authority to build them, so far as the Eastern Division is concerned.

Q. And you arrived at the conclusion to spend $1,500,000?—A. That is the original estimate given by Mr. Lumsden, but after the plans were prepared by the Grand Trunk Pacific it was found out that that sum would not be at all sufficient to build the accommodation required.

Q. For both railroads?—A. It was considered that $1,500,000 would not be sufficient to cover the requirements of the Eastern Division itself.

Q. Is your statement correct, that your recollection is that the shops were made the size they were to accommodate both divisions?—A. The shops were built for the Eastern Division but if used by the Western they would have to pay for such.

Q. Then by what authority did either the Commission or the Government make shops to accommodate the Western Division?—A. I do not think we had authority to build for the Western Division.

Q. Yes?—A. We assumed we had the authority and that settlement could be made later on.

Q. I want to ask you, did you yourself or did any Commissioner, to your knowledge, receive any sum of money or sums of money from any contractors or intending contractors on the Grand Trunk Pacific?—A. Never.

Q. Never received any?—A. Never received any.

Q. Will I understand that to be a full denial by you of ever having been a party to receiving money for any purpose from any persons who had contractorial relations with this Commission?—A. Yes. I think I can go further, Mr. Staunton, and say that so far as I am concerned neither any contractor, sub-contractor, engineer, or anybody else, directly or indirectly connected with the Transcontinental Railway, ever made a corrupt or what I consider an improper offer or suggestion to me, and I desire my statement to be recorded.

Q. I am glad to hear you say so.—A. So far as I am concerned, I repeat that statement and you can put it as wide as the English language can put it.

Q. Can you say so, so far as your knowledge goes, about others?—A. I know of nothing.

Q. I want to go back again to the tenders. Before the advertisement was put in the press, inviting tenders for this work, estimates were made by the engineers of the Commission, of the probable cost of the work. Is that not right?—A. Yes.
Q. Those estimates, with profiles of the work, were sent in here to the head office of the Commission by the various district engineers. Is that right?—A. Yes.

Q. Those estimates were not supposed to be shown to the tenderers?—A. No.

Q. And if any tenderer saw those estimates, was it or was it not improper, under the practice adopted by the Commission?—A. You mean to show them to the tenderers?

Q. Yes?—A. I think it is improper.

Q. It would give the tenderer who saw the estimate an advantage over one who did not see it?—A. They say it would. Other people say it would mislead them.

Q. But in your opinion, would it not be an advantage to one tenderer if he got that information and his competitor did not get it?—A. Yes. That is generally conceded, although it may not always be the case.

Q. You would not, at all events, have been a party to showing those estimates to one contractor and not to another?—A. No. I took the position, myself, in the beginning, that those estimates were not of much value any way. They were guess work, and I thought it proper to give them to the whole public, for all they were worth.

Q. But it was agreed that the public should not see them?—A. Yes. Mr. Lumsden thought that should be the custom, and Mr. Simon too.

Q. Mr. Simon wrote a very strong letter about it?—A. I was very strong the other way, at first, until I saw all the engineers were against me.

Q. The reason was that they were not reliable and a contractor might afterwards complain that he had been misled?—A. Yes. That is the reason they were not to be shown.

Q. But the tenders were to give unit prices. There were 103 items in the price list, covering clearing, grubbing, solid rock, loose rock, and so on, and the amount was to be put opposite those unit prices, under each of those headings, by the engineers?—A. That is, in figuring out their private estimates for us?

Q. Yes, the amount?—A. Yes. They named their own figures and figured them out upon their own supposed estimate.

Q. I will give you one case. In Fauquier's contract they estimated there was over 600,000 yards of moss. Fauquier said he knew from information he got out on the ground that the engineers thought there was an enormous amount of moss, but he said, "I knew the engineers were wrong. There was a very small quantity of moss. I therefore put in 11c a yard for moss; although I knew that was a cheap price, yet I knew there was not much of it." As a matter of fact, he only had 16,000 yards, and he expected that his competitors, not knowing this, would put in a big price for moss. He says he got the contract on this knowledge?—A. Could not any other contractor have had that knowledge?

Q. No., He says, "I picked up the knowledge myself."—A. I suppose any other contractor could do the same thing.

Q. I am not saying that they could not, but I am pointing out to you the advantage of having a knowledge of what was in the estimate. The consequence in this case was that the engineers, when they looked at their estimate, put down $63,000 as the amount at which Fauquier said he would remove 600,000 yards of moss. Other tenderers put down 35c for moss, and so when they moneyed it out, it was found that these other tenderers agreed to remove the moss for about $200,000. So that Fauquier, although for the real work to be done, had in a higher price, yet on the supposed work to be done, he had a lower price and got the contract. Now you can see from that the advantage of knowing what those estimates were, if his fellow-tenderers did not know?—A. Yes. You can say that about all contracts where there are schedule prices and estimates.

Q. That is right. That is a general rule. Therefore, you will agree with me that it would be very wrong to show those estimates to one tenderer and not to another?—A. Yes. I think so.
Q. And it might result in the lowest tenderer for the actual work not getting the contract, as did happen in two cases, might it not?—A. Yes.

Q. Now, do you know, personally, of any tenderer having been shown those engineers' estimates?—A. No. I do not.

Q. Did you ever hear they were shown?—A. No. Of course you see this, that and the other thing in the papers. People sometimes say this man got information or that man got information, but I never heard of such a case from any person who would have knowledge.

Q. You have never heard more than the merest street rumour?—A. Exactly.

By Mr. Gutelius:

Q. Did you know that Fauquiers got their contract on account of that moss?—A. I never heard it until to-day.

By Mr. Lynch-Staunton:

Q. You undertook to settle with the right of way people in Madawaska County, did you not?—A. You mean personally?

Q. Yes?—A. No. I did not.

Q. Did you personally conduct the negotiations for the land, with the men along the right of way?—A. No. I did not. I went down there once or twice and heard them talk about it, but I did not undertake to settle anything.

Q. Who did the work in your time?—A. There were some appraisers, first, and they were getting along very well, but some French people objected that they were all English speaking people and that they could not understand them, so we got an English and a French appraiser. The English appraiser, Mr. Stoat, was one of the appraisers in Victoria or Carleton County and did satisfactory work there. The District and Division Engineers had instructions to watch the work of the appraisers. After they were to work for some time, Mr. Foss, the District Engineer, held back a number of the claims and reported to the Commission when the appraisers were dispensed with and Mr. Stevens was appointed.

Q. Now, Stevens reports to Atkinson on November 30, 1911, after the general election:

"The causes leading up to my appointment may be briefly stated as follows:

The first appraisers appointed to appraise lands in Madawaska County and take options or agreements were inexperienced in such matters and muddled things badly by seeking to obtain agreements based on land values only and without taking into consideration or allowing anything for damages caused by injurious affection such as severance, loss of water, cutting off from the River St. John, etc., etc., so that it was not long before considerable dissatisfaction was expressed by the land owners, resulting, in many cases, in their refusing to treat with these men, or, in cases where agreements had been obtained, not recognizing the validity of such agreements, alleging fraud and misrepresentation on the part of the appraisers in obtaining them.

New appraisers were then appointed and they, in many cases, went to the other extreme and made agreements with the land owners for what appeared to be excessive amounts, which agreements, on the recommendation of Mr. C. O. Foss, the District Engineer, who considered them exorbitant, the Commissioners would not approve and the District Engineer gave instructions to hold up a number of them, which had not then been paid, pending investigation. This action on the part of these new appraisers made matters still worse, especially among those who, by comparison, had accepted much less, or had agreed to accept much less, and also among those whose agreements were not approved by the Commissioners, and such settlements, before they were held up, had the effect of encouraging all the others to hold out for large amounts.
These new appraisers were then discharged and things were at a deadlock with only about 100 claims paid and about 450 not paid, when I was requested by the Commissioners, on the recommendation of Mr. Foss, to meet them at Ottawa (which place was subsequently changed to Quebec) to discuss the rather grave situation which had arisen in regard to right of way matters in Madawaska County."

Q. Is that right?—A. Yes. That is right.

Q. Who picked out these appraisers that Stevens speaks so unfavourably of?—A. They were recommended, I suppose, by some of the members down there. I think they were as good men as we could get in the localities, but the situation in Madawaska was very peculiar. A lawyer, by the name of La Forey, went to most of these people before the appraisers were appointed at all, and made some sort of agreement with them, to fight their claims, for a certain percentage or consideration, and that made it very difficult for the appraisers first appointed to make any settlement at all. The people complained, of course that they were not offered enough, and that was the trouble our first appraisers had. I think Mr. Stevens mentions, in that letter, that the first appraisers only took into consideration the exact value of the land taken, and did not allow anything for damages. The people would not settle with them and we had afterwards to get the other appraisers to try and settle. That letter puts it fairly well, I think. We always tried to get the best arrangements and settlements we could with the people.

Q. Now, the average cost of land in Madawaska County was $457.40 per acre, and in only four instances are buildings included. Did you know that?—A. How much an acre?

Q. $457.40. In Westmoreland, Queens County, Victoria, York and Sunbury County (all in New Brunswick) the cost of land was from $16.00 to $93.00 per acre. Why did Madawaska get such enormous prices? In the other counties the road passes unsettled country as a rule.—A. I would much rather you would get Mr. Stevens to explain that. I would not undertake to do it. I do not remember any of these cases in particular, but I remember this: Along the Transcontinental Railway in Madawaska County the houses are all pretty well in a line, and the C. P. R. goes pretty near their buildings, so that with the Transcontinental on the other side of their buildings the road really injures their land very much.

Q. What you say then, to put it fairly, is that conditions were peculiar in this county?—A. Exactly. They were peculiar, and if you ask Stevens or any person down there who knows the individual cases, I think you would find that fully explained. At least, we did all we could to fight down the prices and get them as reasonable as we could.

Q. Will you explain this to me? You first thought of entering Winnipeg from Transcona, through St. Boniface, alongside of the Canadian Northern Railway. That was afterwards abandoned, and on the advice of the Chief Engineer you ran a straight line farther west of the Canadian Northern into Winnipeg, where you built that great embankment. Is that right?—A. That is what you call the new entrance into Winnipeg?

Q. Yes. Now will you tell me why you did not treat with the owners and secure that land either by compulsory proceedings or private contracts, before you built the railway?—A. Before we built the railway?

Q. Yes.—A. I do not think that has been done anywhere.

Q. But was it not an awfully reckless thing to do?—A. We would have had to go to the Exchequer Court to settle with them.

Q. It has never been settled to this day.—A. No.

Q. And Mackenzie & Mann are now claiming $2,500,000 for a piece of their land. Don't you think it would have been the part of wisdom to have quietly approached those men before committing yourselves to the building of the railway?—A. Yes, if you could get it.
Q. You should make a try, shouldn’t you? So far as I can find out, they never tried to secure it. They simply built over the land and left themselves in the hands of the land-owners.—A. Or left themselves in the hands of the Exchequer Court.

Q. Is that a prudent way to act?—A. What applies to one place does not always apply to others.

Q. You agreed on the terminal, you built the bridge across the Red River, and so made it impossible for you to deviate your track, before you even filed your plans, and let the owners see you were coming and get ready for you. Do you think that was prudent?—A. Of course it may have been prudent in some cases and not in others.

Q. How could it be prudent in any case?—A. I think, as a rule, we tried to get settlement beforehand, but we had great difficulty in that Winnipeg end of it, I may say, because everybody wanted a big price.

Q. But was it not the part of prudence to try and settle on the cost before you went in?—A. Well, I will tell you. No. We bought the land for the shops first of all, at what we considered very good terms under the circumstances. We were found fault with a great deal afterwards, for giving excessive prices, and we were told that we should have gone to the Exchequer Court.

Q. But you know that as a public commission, you are bound to be found fault with?—A. Yes.

Q. And when you accept the responsibility of a Commissioner, you should act as a prudent business man, quite irrespective of street criticism.—A. I am not giving that as a reason, but as an answer to your question that we should, in all cases, settle beforehand.

Q. Now before it was known that you were going to put the shops where they are, you bought the land. That was a business proposition?—A. Yes.

Q. Why didn’t you buy the land before the people knew you were going into Winnipeg?—A. I do not know that we could, because the question was under consideration for a long time, as to the two routes.

Q. On the advice of your engineer, you could make up your mind quietly, where you were going, and then get busy and buy the land just as you bought the land for the shops, could you not?—A. I do not remember how much of that land was not taken. I am just talking now without recollection of the facts.

Q. As I understand it, Mr. Young took umbrage at the criticism that was levelled against him, for his purchase of these shops, and said, “Oh well, after this we will let the court decide. We won’t decide to buy it ourselves any more.”—A. I have no doubt he did.

Q. He expressed himself in that way, did he not?—A. He was very much disgusted at the criticism of what he considered a very good bargain, and I have no doubt he did. We could not settle with Mackenzie & Mann who I think controlled most of the land, as they strongly opposed this Northern entrance and we were delayed over a year in bringing suits in the Exchequer Court on account of Judge Cassel’s decision that he had no jurisdiction. The matter had to go to the Supreme Court of Canada.

By Mr. Gutelius:

Q. In connection with letting the McArthur contract, we find, in looking over the moneyed-out statements, that the Chief Engineer filled in some twenty prices that were left blank in McArthur’s tender. Did you know that they were filled in at this office by the Chief Engineer? Had you any personal knowledge of it?—A. So far as I can remember, the Chief Engineer after he moneyed out the tenders and reported the amount of each, informed us that he filled in some prices that were left blank in McArthur’s contract. The Chairman, I think, called his attention to it and Mr. Lumsden stated that McArthur was the lowest according to his quantities, or words to that effect.
Q. Do you remember receiving or seeing Mr. Lumsden's estimate of $114,000,000. Was that given to the Commissioners?—A. $114,000,000 for what?

Q. For the building of the whole railway.—A. I cannot remember.

Q. There was an estimate made, and I just want to know whether you personally saw it.—A. Do you mean the estimate sent to the Government?

Q. No. It was sent to you, I think. Here is a print of the original. You will probably recognize it.

(Document handed to witness.)

A. If this was sent to us, I should probably have seen it.

Q. You would not forget, when the $114,000,000 first came out. And now in connection with this large security, which you had in your power, as Commissioners, to demand from tenderers or contractors: in the light of subsequent events, do you not recognize that that advertisement had the effect, or would have the effect of deterring contractors from figuring, unless they knew about what you were going to demand?—A. From my experience, I do not think it has had that effect.

Q. It did have the effect, did it not, of placing the work in the hands of one or two contractors? A.—I never heard of any person that was prevented. Possibly a man of small means might have been prevented. The question is, whether it is desirable and in the public interest that people who are inexperienced and without financial means should get the work.

Q. If you would have to accept the tenderers, yes; but you had in your hands, according to the Act, absolute control. It looks, you know, to us, as though competition, on account of that advertisement, was throttled, and I do not see how you can escape agreeing, to a certain extent, that our idea is right.—A. I do not agree for this reason: it was put in so far as I am concerned, solely in the public interest. I never saw any reason, in the actual working out of the contracts and tenders afterwards, for thinking that any person or persons who otherwise might have tendered, had been deprived from tendering by that advertisement. That is, so far as any complaint reached us.

Q. Your position is based on the lack of complaint. You would not be surprised if I showed you a list of contractors who would have tendered under the ordinary conditions of the Public Works Department.—A. Contractors will say anything. You are trying to draw me out.

Q. Just as a business man, I wanted to see if I could not get you to agree with what seems to be right.—A. It might, of course, prevent some people from tendering, but if there was any contractor who had any fears on that score, he could make inquiry and ask what the conditions were.

By Mr. Lynch-Staunton:

Q. Do you think it was right to let the Grand Trunk Pacific tender at all?—A. I would not like to pass an opinion on that.

By Mr. Gutelius:

Q. Did the Commission agree to and authorize the construction of a double track at Winnipeg on that new line?—A. This line we are speaking of?

Q. Yes?—A. I do not remember that.

Q. It is a double track line?—A. Yes.

Q. You think you just accepted Mr. Grant's recommendation?—A. I presume so. What is the record?

Q. He recommended the construction of that line and it was built double track. The point is, had you any right, under the Act, to build double track railroad?—A. No. I think the Act says single track, does it not?

Q. Yes.—A. Unless the entrance into a city like Winnipeg would be more like a terminal, and it might be double tracked under that heading, might it not?
Q. Do you remember whether you have given the Commission any opinion as to whether they could build double track under the Act, at such a place?—A. I forget.

Q. There is also a double track from Cap Rouge Bridge down to the yard at St. Foye, where a large amount of money was required for the heavy rock cut. Do you remember how that double track happened to be constructed?—A. No, unless it was considered part of the terminals.

Q. You do not think the proximity of the Canadian Northern had anything to do with that double track?—A. I do not remember.

Q. You do not remember any discussion as to the Canadian Northern proposing to use double track?—A. No.

Q. Were you down at Quebec the day they settled the price of 55 cents for train fill on tracks Nos. 9 and 10 (the Davis and O'Brien division)?—A. No, I do not think so.

Mr. Lynch-Staunton: No. He would not.

By Mr. Gutelius:

Q. Did you have anything to do, as a Commissioner, with the adoption of the use of pneumatic caissons in the construction of the foundation of the Cap Rouge Viaduct where it crossed Cap Rouge River?—A. Our Chief Engineer and Mr. M. J. Butler reported in its favor and the Commission approved the report so far as I remember.

Q. But you were personally not a factor in arranging it?—A. Except in approving the engineer's report.

Q. Did you understand the Act to provide for betterment on the part of the Government, after the railway was completed?—A. Yes.

Q. That the Government would furnish additional capital money, as it was desirable or necessary? Your understanding of the Act was after the road was turned over and the lease completed the Government was still under obligation to expend capital money, where desirable or necessary? Is that right?—A. Yes.

Q. And knowing that, you did not take advantage of it to defer any capital expenditures, did you?—A. I cannot remember any particular case.

Q. You do not remember one case where a big expenditure was to be made in the future?—A. No. I do not remember, unless you can call my attention to some particular case.

Q. Did it occur to you, while you were an active Commissioner, that upon the cost of this railway would depend the possibility of securing lower rates between the East and West?—A. Yes.

Q. Did you appreciate that if the railway was made unnecessarily expensive, the rent which the Grand Trunk Pacific would have to pay for it would be so high as to prevent their being able to carry freight more cheaply over that road than at present rates?—A. Of course, the more the road would cost, the higher the rental would be and the higher the rental, the more they would have to get out of the traffic to pay for it. But an engine on a road with the grades and permanent structures of the Transcontinental Railway can haul, so engineers say, nearly double the freight, and the maintenance and operating expenses would be less.

Q. That is right. Was that the idea that the Commission kept before it at their various decisions?—A. I cannot speak for the others, but speaking for myself, that was the idea. We all wanted to build it as cheaply as we could, that is, consistent with the grade.

By Mr. Lynch-Staunton:

Q. Is there any place along the whole railway where you took cost into consideration at all?—A. There is a portion of the road which we did not want to construct according to the plans and specifications.
SESSIONAL PAPER No. 123

Q. You had the control of those plans and specifications and did not you make them such that it was the very highest priced single track railroad that could be built?—A. Yes. We could have built it for less money if we had chosen an inferior standard.

Q. It was a very expensive class of railroad you undertook, was it not?—A. Yes.

Q. Do you know any railroad in America as expensive, I mean in its original construction and subsequent development?—A. I do not know. I cannot remember just now.

By Mr. Gutelius:

Q. Was there ever discussion before your board on the subject of economy, in connection with the size of yards?—A. I think so. I think we discussed these matters with a view of getting everything done as cheaply as possible, consistent with the plans and specifications.

Q. I am speaking of the criticism of the plans. You may as well be frank about it. Did you ever see a letter written by the Minister of Railways or by your Chairman, Secretary, or Chief Engineer, the subject of which was economy in the execution of this work?—A. Well, I do not know what would call for that. We certainly had objections from the engineers of the Grand Trunk Pacific as to the cost, and so on.

Q. Can you point to a letter or a line that was ever written and signed by anybody, on the subject of economy in connection with the construction of this railroad?—A. I do not remember any letters, but we always endeavoured to honestly carry out the work according to plans and specifications, so far as I know.

Witness discharged.

(CORRY BUILDING, OTTAWA, THURSDAY, APRIL 24th, 1913.)

Examination of Mr. W. S. Calvert, by the Transcontinental Investigating Commission.

Mr. Calvert, sworn and examined:

By Mr. Lynch-Staunton:

Q. What are your initials?—A. W. S.

Q. Where do you live?—Q. That is pretty hard to say. My home is in Strathroy, Ont.

Q. And your business?—A. Well, I guess I am a manufacturer. I am interested in two or three different companies.

Q. You have been a manufacturer all your life?—A. For the last twelve or fourteen years.

Q. Were you ever in the railway business?—A. No, only while I was on here.

Q. You never had any connection with railway building or operating until you became a Commissioner?—A. No. I have just been a business man all my life.

Q. When were you appointed a Commissioner?—A. In October, 1909.

Q. Whom did you succeed?—A. Mr. Reid.

Q. Which Reid?—A. Robert Reid, of London.

Q. Will you tell me who were the other members of the Board at the time you joined it?—A. Mr. Parent was Chairman and the Commissioners were Mr. Young and Mr. McIsaac.
Q. None of the contracts for the construction of the road were advertised for or awarded after you became a Commissioner?—A. No. I think the last one was in 1908, a year before I was appointed.

Q. So it would be vain to inquire from you anything in connection with the advertising or letting of these contracts. You know nothing about it beyond what we can learn for ourselves from an inspection of the papers.—A. Exactly. All the contracts were let before I came on.

Q. When you joined this Board, were any particular duties assigned you, in connection with the business of the road?—A. No, nothing in any particular way. I was just appointed a member of the Board and we went on in the usual way that a Board does. We did rather understand that each one would look more particularly after individual sections; for instance, I was on D and E.

Q. Did you exercise all the patronage in Ontario?—A. You mean appointing young men to go up on the line?

Q. Yes.—A. Yes, pretty much up there, east and west of Cochrane.

Q. You were a member of the Board at the time of the Hodgins inquiry?—A. No. I do not think so. I was at the time of the Lumsden inquiry.

Q. When the controversy over the classification which culminated in the Lumsden inquiry arose, did the Commissioners, so far as you know, take any legal opinion on the interpretation of the clauses in the specification relating to classification?—A. I do not think I can answer that. I really do not remember. As I understand it, we engaged Mr. Smith to look after our own interests, also Mr. Chrysler. The investigation was asked for by us and I was under the impression that everything necessary was done.

Q. But can you recall whether either Mr. Smith or Mr. Chrysler or any other counsel gave any opinion as to the meaning of the specification on solid rock?—A. I must confess that I cannot just recall that. He may have, but I do not recall it.

Q. You were not a Commissioner at the time that most of the work, the classification of which was then under consideration, had been done?—A. No.

Q. Were you present at La Tuque at the time the contractors and Mr. Lumsden were there?—A. No. I never was on the work with Mr. Lumsden.

Q. Was Mr. Lumsden in the employ of the Commission while you were there?—A. No. Mr. Grant had been chief engineer for some time before I came on.

Q. So that you can give us very little reliable information about the Lumsden or Hodgins controversy?—A. I know nothing of them.

Q. All that you know about them is really hearsay?—A. Yes.

Q. You know that the chief engineer was appointed, not by the Commission, but by the Government?—A. Yes.

Q. By whom, in your time, were the engineers who were appointed, appointed?—A. Well, I do not know that there were any new engineers, except resident engineers, appointed during my time. I think that Mr. Molesworth, Mr. Balkam, Mr. Doucet, Mr. Eustace, Mr. Foss, Mr. Poulin, Mr. McFarlane and Mr. Grant were engaged on the work when I came on. A odd resident engineer might have been put on afterwards.

Q. What was the date of your appointment, again?—A. October 21, 1909.

Q. Was the question of momentum grades ever raised in your time?—A. No.

Q. Do you understand what a momentum grade is?—A. I understand it means a kind of toboggan slide down which a train is allowed to run, and then it runs up the other side. I am not very much in favour of it, but I understand that is what it is.

Q. You say you are not very much in favour of it. Why not?—A. I do not know that I can give you any reason further than that, according to my judgment, the level road is preferable.
Q. You would prefer the level road if you thought the toboggan slide, as you call it, was cheaper and just as useful?—A. Yes. I certainly think I would prefer the level road to a road of the other class.

By Mr. Gutelius:

Q. No matter what it would cost?—A. I would not say that, because, according to Mr. Grant, the intention is to fill up grades and level up the road later on.

By Mr. Lynch-Staunton:

Q. You are referring now to Mr. Grant’s letter of December 3, 1912.—A. Yes.
Q. In that letter Mr. Grant says, ‘Disregarding ordinary sags in long fills or fills over soft ground, it has been considered inadvisable to bring up to profile grade, at present, and take contractors’ prices for the necessary work. There are, as you will see, only two places where virtual grades have been adopted, and the saving effected with this slight change amounts to $27,797. They are both well within velocity limits, and will not affect the hauling capacity of a locomotive to the extent of a single pound. The introduction of virtual grades in railroad construction, for the purpose of economy in first cost and subsequent economy in operation, by reason of reduced interest charges, cannot be considered other than as a good business proposition.’ That is Mr. Grant’s opinion. Did you ever hear the question of momentum grades discussed while on the Board?—A. No.
Q. Were you at all familiar, at that time, with the advisability or inadvisability of adopting them?—A. It never was discussed, to my recollection. The question for us was to build a four-tenths grade road to the East and a six-tenths grade road to the West.
Q. And you understood that meant to keep the grade uniform from one end to the other?—A. With the exception of one or two places where they used pusher engines, I think they call them.
Q. Don’t you know that if you are building a given length of railroad, and if you have a pusher grade in one spot, that destroys it as a low grade road?—A. I suppose it does, to a certain extent. It means a little more expenditure to keep a pusher engine to haul the other train up, but I suppose, if it is a question of saving a large amount of money, then you must consider whether it is better to use a pusher engine or to spend an additional amount of money.
Q. I quite agree with that.

By Mr. Gutelius:

Q. What is the difference between actual and virtual grades on a railroad?—A. I do not know that I can just answer that properly.
Q. Did you ever hear that matter discussed?—A. No, not if you put it that way. In fact, I may say I was not very conversant with momentum roads until this question came up.

By Mr. Lynch-Staunton:

Q. Since you left the Board?—A. Yes.
Q. Do you know anything about curvature in railroads? Did you ever hear it discussed at the time you were on the Board?—A. Oh, well, sometimes, I suppose, the question was discussed, but not very much at the Board meetings.
Q. You never became very familiar with it?—A. I would not like to say so.
Q. You could not form any judgment as to curvature?—A. I would not like to give an opinion on a thing like that.
Q. Did you have anything to do with the Transcona shops?—A. Something.
Q. Were they undertaken before you came on the Board?—A. They were started in 1908, I believe. The contract was let for about one and a half million
dollars, which was supposed to be all that was necessary, so far as the Transcontinental was concerned, and was what Mr. Lumsden recommended.

Q. Why did you go to the additional expense?—A. That question, of course, was settled later by the Government.

Q. That is just what I want to find out. What was settled by the Government, what did they do?—A. I cannot give you the full particulars, further than this: As I understand it, there was a meeting of the Grand Trunk people with our Chairman and some members of the Government, in regard to further expenditure for the building of those shops, and they eventually decided, the Government, that it was necessary to have additional shops, and on the report of our Chairman, which, as you know, had to be concurred in by the Government, we went on and built the rest of the shops. Our intention, of course, was that the Grand Trunk Pacific would pay rental or a percentage of the cost of what would be more than one and a half million dollars, as was intended in the first place, when Mr. Lumsden recommended that figure. But that has not really been settled yet.

Q. In your understanding, they were for the joint use of the Eastern and Western road?—A. It was supposed that it would do for both portions of the road, and that the Grand Trunk Pacific should certainly make an allowance to the Transcontinental for the use of those shops.

Q. Now, we will get into a country with which you are familiar, that is to say, the purchase of land. Everybody has more or less knowledge of that.—A. I never purchased any land.

Q. Why did not the Commission make a bargain for and secure the right of way into Winnipeg before they built the road?—A. Well, of course, I cannot tell you that, because the road was built into Winnipeg before I came on: that is, not the last portion, but the road up to Dundee Junction.

Q. Do you know that Mackenzie & Mann put in a claim for about $2,500,000 for the land on the St. Boniface side of the river, and that it has never been settled in any way?—A. There was no claim put in to us.

Q. Don’t you think it was an unwise thing to build a railway through a man’s property and then deal with him afterwards?—A. The first intention was to build alongside the C. N. R., but they objected to having another road built along their line. Later on, Mr. Grant, Mr. Poulin and, I think, the council of St. Boniface, with the concurrence of the Grand Trunk Pacific people, recommended the route we have now. That question, of course, was debated for a considerable time, and referred to the Minister of Railways; but all the interests, and especially the Grand Trunk people themselves, who were to pay the interest on the money, wanted the route we have now, and to my mind, although it may have cost more money, we were building a road which would be there forever, and I think if I were going to run the G. T. P. I would like to have my line into a city like Winnipeg.

Q. You know, I suppose, that in cities ten times the size of Winnipeg the railroads do not have it?—A. I suppose that is true, and in some places they don’t even allow the engines to go in.

Q. In Chicago and New York they do not have their own entrance.—A. I think it would have been built alongside the line if Mackenzie and Mann had agreed to it.

Q. When you came to that conclusion, why did you not settle about the land before you built the railway, instead of making the bargain afterwards?—A. I do not think we could have settled. It had to be expropriated.

Q. Why didn’t you expropriate it?—A. Was it not expropriated?

Q. You built over another man’s land. It was not expropriated and has not been settled to this day. It is now in the courts.—A. I should think we would have had to expropriate it.

By Mr. Gutelius:

Q. The road was practically completed before the plans for expropriation were filed.—A. That may be. I could not just say in regard to that point.
SESSIONAL PAPER No. 123

By Mr. Lynch Staunton:

Q. You had nothing to do with it?—A. I was more particularly interested in what was considered my own section, Cochrane, and I endeavoured to look after anything there that I could. Just the same as Mr. McIsaac looked after his eastern portion, and the Chairman his Quebec portion, and Mr. Young the West. Then, if anything came up, it would be referred to the particular member of the Commission concerned, to get all the facts concerning his own division. So that I cannot speak about that other portion.

Q. After you became a Commissioner, Mr. Mattice issued a circular to his staff, which I produce:

COPY OF CIRCULAR NO. 252, DISTRICT "D."

Office of District Engineer.

Cir. 252. North Bay, February 24, 1910.

To Division Engineers:

Mr. Calvert is asking that no appointments be made to the staff in future without his consent, and these instructions must be carried out, except in so far as cooks and building gangs are concerned.

Promotions of the staff will also be referred to me before being carried into effect.

Please acknowledge receipt.

Yours truly,

(Signed) C. L. MATTICE,
District Engineer.

Do you recollect that?—A. I do not just recollect in regard to that. I know I had to call Mr. Mattice down in regard to purchases. I insisted on his buying very, very small things and what was needed immediately, through our Purchasing Agent, and I gave him instructions not to go on buying without consulting our Purchasing Agent. In regard to these appointments, I do not just remember, but I suppose I wanted to know what he was doing. I did not want any engineer to make appointments without at least advising us in regard to the matter, and perhaps asking us about it before he did anything.

Q. That is what it would amount to?—A. Yes.

Q. But after you came on the Board you made all the appointments for that district yourself?—A. No engineers, I think, but the linemen, cashmen, time-keepers, and appointments of that kind.

Q. Just the ordinary run?—A. Yes, and I appointed both Grits and Tories, I can tell you that, only I wanted to be in touch with Mr. Mattice. I did not want him to run haphazard, without our knowing what he was doing, and I did insist on his seeing our Purchasing Agent before buying a large amount of goods.

Q. Did you take any interest in the classification up in that district?—A. I cannot say I did. That was left in the hands of our engineers; I had nothing to do with it; I did not presume to classify.

Q. That is what I understand. All the policies for the construction of the road were adopted before you came on the Commission?—A. I think that is right.

Q. So that it is correct to say that it had got beyond the stage of discussion when you came on?—A. That is my impression. We were endeavouring to carry out the contracts as best we knew, as we went along.

Q. The contracts were based on a preconceived policy, approved and settled?—A. Yes.
By Mr. Gutelius:

Q. Is there anything that you would like to tell this Commission, that has not been brought out in your evidence?—A. I can only say that all the time I was on this Commission I was under the impression that everybody tried to do what was absolutely right, as between the Government and the contractors. We did not want anybody to have an advantage: we wanted to deal fairly with everyone, and personally, I know of nothing that I can say was wrong. We may have heard things, but from what our engineers reported to us, I believe everybody tried to carry out his duty as honestly as he could.

By Mr. Lynch Staunton:

Q. You say that so far as you are concerned you were guilty of no wrong yourself, nor was anybody else?—A. I am not conscious of being wrong anyway. Witness discharged.

(NATIONAL TRANSCONTINENTAL RAILWAY ENQUIRY, COMMISSION MEETING AT OTTAWA, FRIDAY, APRIL 25TH, 1913.)

Before G. Lynch-Staunton, K.C., Chairman: F. P. Gutelius, C.E.

S. N. Parent, former Chairman of the Transcontinental Railway Commission, sworn:

Mr. Staunton: Mr. Parent has written saying that he wishes to take his examination in French and I think he is perfectly right. I was suggesting to him that perhaps it could be taken in English, but we will see as we get on. Do you want me to put the questions in French, Mr. Parent?

Mr. Parent: Just as you like.

Mr. Staunton: Is that your desire?

Mr. Parent: Of course, if the question is put in French I will answer that way.

Mr. Staunton: Well, we will see. I will commence in English.

Q. How long were you Chairman of the Transcontinental Railway Commission?—A. From, I think, the 1st of August, 1905, until the 6th of October, 1911.

Q. You were Chairman during the time that the contracts for the building of the road were let?—A. Yes, from the first contract until October, 1911.

Q. Before advertising for these contracts, you had estimates made by the Commission's engineers of the probable cost of the work about to be let?—A. Yes.

Q. The estimates were made by the District Engineers and their assistants, and then forwarded to the Chief Engineer?—A. Yes.

Q. I see, that under the advice of Mr. Collingwood Schreiber, it was decided by the Board that the estimates made by these engineers should not be shown to the tenderers?—A. Yes, sir.

Q. And the reason given for that was, that as the estimates might be inaccurate the contractors afterwards might complain that they had been misled by the Commission?—A. Yes, one of the reasons.

Q. I want to draw your attention, Mr. Parent, to Contract No. 8, which is the contract embracing the railway from a point at or near the Quebec Bridge, running easterly 150 miles; do you recall that contract?—A. I think so, that is the Davis contract.
Q. Yes, just the 150 miles east of the Quebec Bridge—now the tenders for that contract were—you can take these to be right:

No. 3. Grand Trunk Pacific Railway, $5,018,554.

I leave out the cents. These were all the tenders that were taken then?—A. I presume so, the tenders speak for themselves.

Q. That is correct, I tell you it is correct, I will let you look at them in a little while. The estimates were made by the engineers at unit prices on a form which contained 101 printed items; is that right? I will put this in in a moment?—A. Yes, the form speaks for itself.

Q. The engineers on contract No. 8 originally put in no estimates for items 24, 25, 26 and 27 which are:

24. Framed trestles per 1,000 feet board measure, except stringers.
25. Gaps, walings, and braces for pile trestles, per 1,000 feet board measure.
26. Sawn ties and guard rails for bridges, per thousand feet board measure.
27. Stringers per thousand feet board measure.

Do you remember that there was no estimate put in for timber for trestles, included in items 25, 26 and 27?—A. You mean quantities?

Q. Yes, for example, they said in the case of common excavation that there would be 3,091,210 cubic yards estimated?—A. You mean that was the estimate made before tenders were called?

Q. Yes exactly. Did they estimate they would not require any lumber at all for trestles?—A. Well, they may have done so.

Q. Do you remember that?—A. Those things were made by the engineers themselves.

Q. Do you remember that when you first saw the estimates that they had no allowance for timber for trestles?—A. We told them they should have an estimate for lumber.

Q. Mr. Lumsden says, I might as well explain it to you, and Mr. MacPherson says that there was no estimate for lumber for permanent trestles, and afterwards the engineers changed it and put in an estimate for lumber for trestles?—A. Well?

Q. That you then came and told them to strike that out, that it should not be put in?—A. The estimate for lumber?

Q. Yes?—A. I never did that, on the contrary we obliged them to have them in.

Q. Come over here and examine this, I want you to be sure, he says that after he put them in you told him to change it back to where it was?—A. He made a mistake there. The quantities which they prepared before tenders were made by the engineers and nobody at all interfered with them because they were the sole judges of what was required, and I could not on my own hook come and dictate to them what they had to do on these estimated quantities.

Q. Mr. Lumsden and Mr. MacPherson say that the engineers made these estimates, forwarded them to the head office, and that then he gave you a copy of this estimate, is that right?—A. If he gave it to me, he gave it to the Board.

Q. He gave it to you for the Board; he says he gave it to Mr. Parent?—A. He may have given it to me; anything that came to me that way went to the Board.

Q. Then he says that after the advertising was done he changed this estimate and put in these items: 25, 26 and 27, that you, after he made these changes happened to see it, and that you said to him: why did you make these changes, and he explained that he thought they might require some lumber, and that you told him to put them back the way they were before and that he then changed them back and left them out, what do you say to that?—A. Well if Mr. Lumsden says that he must have a very queer memory. Whatever instructions were given to him were given to him through the Board, and so far as these things are concerned, for my part personally I had no reason at all to have that changed.
Q. Did you have it changed?—A. Not that I recollect. I do not believe I ever did either. I do not see any reason at all why they should have been changed. It would be an advantage to nobody. Everybody would be on the same footing. I do not see why I should suggest any change.

Q. I will show you why I am asking you, and you will see the gravity of it in a minute. They say you got them to sign this estimate after it was changed, and that this is the one they changed they signed?—A. Was that before tenders were called?

Q. No, after the tenders were called, after the tenders were in?—A. Well, I suppose if they signed it it must be correct.

Q. They say you got them to sign it?—A. What do they mean?

Q. I am trying to call your attention to it, do you remember?—A. There is one thing, Mr. Chairman, that I would be the last man to force the Chief Engineer or anybody else to do anything they would not like to do, and I suppose if they signed it it must be according to their own will and because it was right.

Q. Well, but you see the position now is this: that in the first place before the tenders went out the engineers had made an estimate, and that estimate did not include any estimate for timber on these items?—A. These items never went to the contractors and never went to the bidders; they are not supposed to go to the bidders. They never went to the bidders, they would deceive them.

Q. I will come to that in a minute?—A. All right.

Q. Then they say that you told them that they should change those estimates after the bids were in or while the contractors were figuring on them?—A. That I told them?

Q. Yes?—A. That is not so, I never did that.

Q. Then they say they made a fair copy of it so as to bring the estimates back as they originally were, and that you got them to sign it; that is the only case in which they signed it?—A. When you say "they" do you mean I was dealing with MacPherson?

Q. MacPherson and the Chief Engineer?—A. MacPherson was the last man I was dealing with. I dealt with the Chief Engineer; I had only to deal with MacPherson in a very few cases.

Q. I will show you what he says. He says: that the Chairman on the 21st of January asked for the statement of the engineers' estimated quantities for each item of the Schedule, Form 89, covering the five sections for which tenders were closed on the 14th of February—do you recollect that?—A. I may have to the Chief Engineer; I do not remember.

Q. And that you got these copied. He says that when the Chief Engineer after the tenders were called for, altered these items, 24, 26, and 27, and instead of estimating nothing for these, he estimated for item 24: 732,190 feet instead of nothing; for 26, 166,600 feet instead of nothing; item 27, 192,780 feet instead of nothing. He said that when you saw that you told him to strike out these items and not to estimate for any of these items?—A. When?

Q. Some time between the 15th and 18th of February, 1907?—A. Can I look at that letter?

Q. Yes, I do not know that I want to show you the whole letter, as it is a private letter, yes I will hand it over to you now?—A. It is a letter from MacPherson.

Q. Yes, there may be something in it of a private nature?—A. Never mind, if you don't want to show it.

Q. Oh yes, I think you ought to see it—I will show you the letter, do you understand it now?—A. I do not understand it very much, because I do not know where he got all that.

Q. What answer do you make to that, he says that when you saw that on the form you said to strike out these items, and not to estimate for any of these items, 24, 26, and 27?—A. I never did that, because there was no reason in the public interest to do so.
SESSIONAL PAPER No. 123

Q. He said then that you had him and Mr. Lumsden sign these revised estimates, make a clean copy of it and bring it back to the original shape and sign that?—A. I do not recollect that.

Q. Come over here till I show you something—the reason I am so particular about it is this—I will put this in as an exhibit. Hugh D. Lumsden and D. MacPherson, Assistant Chief Engineer, signed this apparently on the 8th of February, 1907. Now, as a matter of fact, somebody has erased the figure one from that 8. It was really signed on the 18th of February, and somebody has erased the figure 1 from before the 8, making it to read that it was signed on the 8th of February?—A. It is the first time I have ever seen that paper.

Q. Mr. Lumsden was not here on the 8th of February at all; he was, as he swears, at Kenora on the 8th of February, and some person has altered his certificate, so as to make it appear that he signed that document before the tenders came in for that contract, while, as a matter of fact, he signed it after the tenders came in. Do you say you know nothing about that?—A. I never knew anything about that. This is the first time I saw the papers. I would not be surprised if anything is made up in that way it has been made up since I resigned.

Q. It has been made up by somebody has it not?—A. You say so.

Q. I do not say so?—A. I do not know when it was done, I know nothing about it. For my part I am prepared to swear now that it is the first time I saw that document. If the alteration which you suggest there has been done, I am perfectly well convinced that it has been done since I resigned here, they have the new administration going on and they try to find fault with the last administration.

(The document was filed as Exhibit A in Mr. Parent's evidence.)

Q. You say you do not know anything about that?—A. So far as I am concerned I do not see anything at all which would affect the public interest as to these quantities that you are talking about there.

Q. I am going to show you how it could affect the public interest?—A. Well that is my answer at present.

Q. Now supposing that one of the tenderers had seen the original estimate, he would know that he would not be required to furnish any of the material covered by items 24, 26, and 27; if he saw the estimates, he would know that?—A. That would be a matter of assumption.

Q. That is not assumption at all. If the tenderer had seen it he would know. I do not say now that the tenderer did see it, but if he had seen it he would know that he would not be required to furnish any material under these three items?—A. That would go so far as to say some tenderers may have had the privilege—

Q. Not yet; after a while it will go that far but not yet; I say now, that if a tenderer saw it, you will agree with me that he would know that he would have no material under these three items to furnish?—A. That may be the case but at the same time the form of contract would tell the contractors that any quantity or anything they would have seen would not have been binding on the Commission, and they would do it at their own risk and have no claim against the Commission. Even if they had seen it, I do not know what good it would have been to them. That is why we refused them the quantities.

Q. You keep your mind on this now: the fact that these three revised estimates were struck out, gave M. P. & J. T. Davis that contract?—A. What do you mean?

Q. M. P. Davis would not have got that contract if that change was not made in these estimates?—A. I cannot see that. The way the things were made was this: tenders were coming in, they were put in a box with two keys, one kept by me and one by the Secretary. The tenders were opened publicly by the Board and copies made of their contents by the clerks and they were referred, without any names on them at all, to the Engineers' Department. Then they came to
the Engineers’ Department and they did not know who they were coming from and they were asked to figure who was the lowest tenderer, and they came back with a report showing who were the lowest tenderers.

Q. Let me show you where the trouble would be. If M. P. Davies saw that estimate, or anybody in his firm, I do not mean him particularly and I do not mean he did see it, but if he saw that estimate he would know that he was not going to be asked to supply any of that material, and he tendered under these heads; M. P. Davies and J. T. Davies tendered for item 24, $80 per thousand; item 26, $80 per thousand; item 27, $85 per thousand—that is a huge price for that material?

—A. I cannot say.

Q. He did so tender; there is the thing signed by you?—A. The tenders speak for themselves; there is no question about them.

Q. Now then you see the only difference between Davies and the Grand Trunk Pacific Railway, on the tender for that contract, was $7,200, and if these items had been left in they would have raised Davies’ price by $27,000 and they would have lost the contract by nearly $22,000; do you agree with that?—A. For my part it is a hypothetical question; to assume a fact that I do not know anything about.

Q. All I ask you to agree with me in is this—A. You suppose things there, that Davis might have seen something that somebody else might not have seen?

Q. Yes?—A. I deny that.

Q. So far as you are concerned, I want to ask you——A. So far as I am concerned Davies had no more privilege on the Transcontinental Railway than anybody else had.

Q. The inference is that the Davies firm, or some of them, might have seen that estimate, you say you do not know about that; you say if they did it was not with your knowledge?—A. If the Davies firm had seen something, I do not think they did, if they did the Grand Trunk people or somebody else would have the same chance of seeing it. There was no more preference for Davies than for any other tenderer. So much so, that for my part from the start I was against all these contractors, I was in favor of the Grand Trunk Pacific Company accepting the whole work, because I was convinced that if we did give them the contract we would have saved money, delays, and trouble. My opinion was this: they were the company who were to pay the interest on the capital expenditure and I thought they would be interested in saving money and building the line at a low cost, and as they were also obliged to have the Western Division line finished for 1911, they would have been anxious to get the line finished in that time, and doing that, if they had been late in their contract, they could not not come against the Government or the Commission for delays, because they would have been the principal party and it would have been their own fault. From the very first contract I made a distinct report to my own colleagues on that. I knew Davies for a long time before but at the same time I made a dissenting report, stating that the work should be given to the Grand Trunk Pacific at the price of the lowest tenderer. My idea was to give them the preference of the work at the price of the lowest tenderer.

Q. Then you utterly deny any knowledge of the Davies firm having had information with respect to the estimate, that everybody else did not get?—A. If Davies got some information I am prepared to swear that somebody else who asked for it got the same information, because nobody would say, on the quantities like that, even if they had seen them, what the figures would be. You will find in some of the contracts a difference of two or three million dollars and a figure of a few dollars here and there would not make any difference in that.

Q. There is only a difference of $7,000 in this case?—A. In this contract it happened to be that, but certainly the Grand Trunk Pacific, or anybody else, if they asked for information which was given to somebody else, would have got it. There was no preference given at all.
Q. As a matter of fact, did the Davises see these estimates to your knowledge?—A. I cannot say that.

Q. Do you know whether they did or not?—A. I do not think so, for this reason, that I do not recollect at all the changes that MacPherson and Lumsden speak about.

Q. Did you show the Davises this estimate?—A. I cannot say that. If it was asked of me, and I thought it was in the public interest to do so, I would have done so. Davis may have seen it, or the Grand Trunk may have seen it, or somebody else may have seen it, but I gave no preference to Davis over anybody else.

Q. I understand that, but I want to know if you remember whether or not these estimates were shown to the Davises?—A. I cannot swear that.

Q. You do not know whether they were or not?—A. I cannot swear that.

Q. You do not know whether you showed them to them or not?—A. If I did the others must have seen them too.

Q. Do you remember whether you showed Mr. Davis?—A. I cannot say as to that. There were so many things going on in the Commission that you could not recollect a special thing like that. We refused to give quantities to any contractor from the start, because by doing so we might get into trouble.

Q. The chief engineer, Mr. Lumsden, says he was asked not to be present at the Board meeting when the tenders were opened?—A. Why?

Q. I do not know?—A. Neither do I. If there was anything we were cautious about it was the opening of tenders. The whole Board was there, the Secretary was there. I was opening the tenders and handing the cheques to the Secretaries, I initialled every one of them and handed them over to the Secretaries, and they were sent afterwards to the engineer upstairs without my name. I do not see why the chief engineer should not have been present. I do not know why he was not present and I do not recollect he was asked to retire. It would, of course, be a matter of no importance to be cautious, if one contractor received the estimates and another did not?—A. Nothing has been done like that to my knowledge.

Q. Mr. Fauquier said he got his contract because he knew from his own observation on the ground or from information he got from engineers out on the ground, that there was no moss on his contract, or very little moss, and he said he knew that the engineers thought there was a great deal of moss and he put in a tender at twelve cents for moss, and the other tenderers put in thirty-five cents for moss, and he got the contract, and instead of there being 655,000 cubic yards of moss, as was estimated, there was only 13,550 yards. It was a great advantage to know the estimates you see. Fauquier says he got his information, picked it up out there. Do you know anything about that?—A. Nothing at all, it is the first time I heard anything about it.

Q. Were you in favor of giving out the estimates?—A. I was against it.

Q. Why?—A. Because so far as I knew it, the engineers were not far enough advanced in their location, and these estimates were supposed to be changed, and in doing so we would have deceived the tenderers and the contractors if we gave out these estimates, because they would say we have been in good faith in tendering on the estimates, and they have afterwards been changed, and we will have a claim in equity against you. I was against it, and it was referred to Mr. Schreiber, who gave his opinion on that point also. That is why I say now, speaking about Contract No. 8, that I did not see any difficulty at all about the estimated quantities, because we put them aside completely, and if it happened that there was a small difference between the Grand Trunk Pacific tender and Davis' tender, for my part it makes no difference at all so far as the public interest is concerned, because Davis was the lowest tenderer, and he was a perfectly good contractor, and he got the contract.

Q. Listen to what Mr. Lumsden swore on the point of not being present when the tenders were opened:
“Q. On the 14th February your entry in the diary is that you were in the office all day and you say: ‘Commissioners opening tenders, not present?’—A. Yes.”

“Q. Why were you not present when the tenders were opened?—A. I was not wanted. I was not asked to be present. I was asked to leave.”

“Q. It was intimated to you that your presence was not required?—A. I do not know it was on that occasion, but it was on a previous occasion.”

“Q. Why didn’t you remain when the tenders were being opened?—A. Because I was told by the Commissioners I was not wanted. I do not say I was told on that day, but on a previous occasion I was told they would open the tenders themselves and give me the figures afterwards.”

“Q. It was understood you were not to be present when tenders were opened?—A. Yes, that is the long and short of it.”

You have heard the evidence of Mr. Lumsden given at his examination with regard to his not being present in the office when the tenders were opened. Would you like to add anything to what you have already said on this point?—A. I say this: It may have happened that somebody, somebody on the Board I cannot say whom, would have made the remark that as the tenderers were to go back to the chief engineer’s staff, and as the staff were not to know the names of the tenderers when they figured them out, it was better that he should not know the names of the tenderers, which he would if he were present. We wanted to keep the engineer’s staff completely in ignorance of the names of the tenderers, so as to get an unbiased report from the engineers.

Q. That may be the reason, and it seems to me it may have been a very good reason?—A. Yes, because there was nothing to hide from the chief engineer, because everything was done on his report and approval all the time, and if he was asked to withdraw or not to be there it was to protect him in one way or his staff by not knowing who the tenderers were, and thus to give a completely fair report to the Board.

Q. Mr. Parent, you are an eminent lawyer in your own province, are you not?—A. Well I will say I am a lawyer.

Q. You are a lawyer in your own province?—A. I was.

Q. You have been connected with large business enterprises most of your life?—A. Yes, for a good many years. Since 1890 I have been in public life, in politics and municipal affairs.

Q. You were Premier of the Province of Quebec?—A. I was Premier for five years, from 1900 to 1905.

Q. And you were Mayor of Quebec?—A. I was Mayor of Quebec from 1894 to 1906, nearly 12 years. I resigned to come to Ottawa for the chairmanship of the Transcontinental Railway Commission.

Q. And you enjoyed a large practice at the Bar for years?—A. Yes, I made my living from my practice.

Q. So that you ought to be pretty familiar with contracts?—A. I know something about contracts.

Q. I want to ask you some questions about this contract respecting the Cap Rouge Viaduct. The Cap Rouge Viaduct was a great bridge built across the Cap Rouge River near the Quebec Bridge and it cost $316,000 to build it, and it was designed to carry the railway from one side of the Cap Rouge Valley across on its way to the Quebec Bridge, that is right is it?—A. Yes, sir.

Q. In Contract No. 9, District B, which was originally let to Hogan-Macdonald, it was afterwards assigned to M. P. & J. T. Davis?—A. No, it was afterwards assigned to McDougall & O’Brien.

Q. Explain that?—A. After that 50 miles of that contract was sublet to M. P. & J. T. Davis.

Q. And the 50 miles covered the Cap Rouge Viaduct?—A. Yes, sir.
SESSIONAL PAPER No. 123

Q. Under the contract which is dated 15th May, 1906, they agreed to have the work completed by the 1st of September, 1907?—A. The contract speaks for itself.

Q. Is that correct?—A. That is correct, if the contract says so.

Q. You agree with me that it is correct?—A. Yes.

Q. And that included the building of the Cap Rouge Viaduct?—A. Yes, well it included the foundation.

Q. It included the substructure in connection with the Cap Rouge Viaduct?—A. Yes, and the substructure was to be done by the Dominion Bridge Company.

Q. Now, the concrete price on this contract did not cover pneumatic caisson excavations?—A. No.

Q. Did it cover all material which was used in the sub-contracts of the Cap Rouge Viaduct?—A. Yes, sir.

Q. Now under their contract the Davis people had to put down these foundations for the price mentioned in the contract?—A. You mean pile foundations?

Q. Yes, whatever foundations were necessary, they were to put down for the price mentioned in the contract?—A. Yes.

Q. And they had to have it completed by the 1st of September, 1907?—A. Yes, I presume so.

Q. You know that the Board changed this contract and allowed them to use pneumatic caisson works at an additional cost to the Board of $250,000, do you know that?—A. Well, when the work was proceeding on the foundations they discovered that it was too risky to build a viaduct on these pile foundations and it would require pneumatic foundations. The matter was referred to their own engineer, to Mr. Lumsden, and I think Mr. Uniacke, one of the bridge engineers here, was asked to look into it, and the matter was referred to Mr. Butler, then Deputy Minister of Railways, and to report on, and after looking over the matter they found that it would be too risky to do the work as the contract was signed, and they ordered the new work, which was approved, if I remember well, by order in council.

Q. Here is what Mr. Uniacke says. Mr. E. A. Hoare was in charge of the construction of the bridge site; is that right?—A. Yes.

Q. The preparations for work for the sub-contractors were begun in May, 1906, that was before the change was made?—A. Yes.

Q. Mr. Lumsden, dealing with the question of river piers, favored a bottom-less caisson with the addition of piles, and Mr. Uniacke was directed to make plans on these lines, is that right?—A. Not that I know of. Of course that was the special work of engineers, and what they say there must be correct, but I do not know anything about it.

Q. You are not familiar with it?—A. No, in an enterprise like that we have to rely on the report of the engineers for these works. We were not experts. Sometimes they don’t agree amongst themselves either.

Q. Read this letter of May 31st, 1912, to Mr. Gutelius, from Bridge Engineer Uniacke, and tell me what you think about it. You see what is stated on page 5 of that letter which is in effect: The Chairman decided these questions himself and directed what the engineers were to do?—A. Mr. Uniacke is mistaken there. I would never take on my own shoulders to decide such an important question. When the engineers are in a bad box, generally speaking they try to put it on somebody else’s shoulders.

Q. Is it true they met you and Mr. Davis in your office. He says in this letter; while we were discussing it we were summoned to the Chairman’s office, bringing down the plan to lay it before him. Mr. Davis was already with the Chairman. Is that so?—A. That may have happened.

Q. Then he says: the Chairman refused to consider the change decided upon by Mr. Butler. Is that so?—A. My own recollection is that it was the contrary. When they found out the thing was wrong, it was referred to Mr. Butler and Mr.
Schreiber, and then Mr. Schreiber referred it to Mr. Butler to act himself, Mr. Schreiber having no time. He referred it to Mr. Butler to fix the matter. At that time we did not know what would be done.

Q. He says that you did not follow Butler's advice?—A. We did follow Butler's advice because the order in council was passed later on on Butler's advice. Butler and Davis and Uniacke fixed the price for the pneumatic works amongst themselves.

Q. Was Mr. Butler's design accepted?—A. It was I think Uniacke's design, but it was fixed between Uniacke and Butler.

Q. Mr. Uniacke says he recommended the design "C" and that was approved by Mr. Butler?—A. I suppose that was correct.

Q. But that you did not follow that design but changed it?—A. In what way was it changed?

Q. Here is what he says was done: the Chairman refused to consider such a change decided upon by Mr. Butler, impressing upon me the fact that time was the most important consideration and that the object was to have the Cap Rouge trestle ready by the end of 1907 so as to complete the transport and heavy structural section of the Quebec Bridge from Belair Station and Cape Rouge for the Quebec Bridge, and instructed that the caisson method be followed. I thereupon gave Mr. Davis the following day blue prints of the pneumatic caissons and a bill of timber and iron which he took with him to Boston, where I believe he placed the order for Southern pine. It was Mr. Davis' statement that he could have the pneumatic caissons finished ready for steel by August, 1907, and he did as promised, but the lamentable fall of the Quebec Bridge in August rendered further haste unnecessary and it was finished in 1908. What he says is that it was your absolute direction that Davis should be given this job, that it was to be done by pneumatic caissons and that you took that on your own shoulders?—A. Why should I have done that, I did not know anything about it. We referred the matter to Mr. Butler.

Q. Did you do it, that is the point?—A. As far as I remember I could not have done it, because for my part it would have been impossible to do it, not knowing the importance of it from an engineering point of view.

Q. Did you do it?—A. I did not know how much it would cost more. The change was not suggested by me, the change was made because it was a risky job.

Q. They said it was only made because they wanted the job done in a hurry?—A. Not at all.

Q. That is not so?—A. No, it is not so at all, because at that time Davis objected to go on with the work because it was a risky job, the viaduct might have sunk and gone down with the first foundation and the change was made in the public interest so as to avoid a collapse of the viaduct.

Q. Why could he not have put it down with open caissons instead of pneumatic caissons?—A. The engineers agreed on that I presume, because it was not my report, it was the engineers' report that they should be pneumatic.

Q. Under the contract, you had a right to make them put down any form of foundation you liked; you had a right to change your plan if you wished?—A. I do not know about that.

Q. The first contract was given to Hogan & Macdonald?—A. Yes.

Q. Did they make an assignment of that contract to Davis?—A. Yes.

Q. He was bound to put down whatever kind of foundation you directed?—A. Certainly.

Q. And he had to put the foundation down at the price of the contract?—A. Certainly.

Q. Then why should you give them more money?—A. Because the work that was done afterwards was more expensive work but it was sure work.

Q. But you could make him put down that work without giving him more money?—A. No, you could not do it. The engineer said pneumatic work was the best way, and we had to follow it, and the Government followed it all right, and
the order in council was passed on it, and Uniacke and Butler approved of the pneumatic work being the best.

Q. Do I understand you to say it was not a question of base but a question of safety?—A. Certainly, it was a question of safety, it was a question of safety for my part.

Q. So far as you know it was a question of safety?—A. Certainly, we would never have changed that work only it was a risky job the way it was at first. I do not think the contractor will tell you otherwise or the engineer on the spot either. The work would be dangerous work and would not stand.

Q. Why were M. P. Davis and J. T. Davis given contract No. 29A without public competition?—A. Which contract is that?

Q. The Quebec branch line running down the river front from St. Foye to Champlain?—A. They had that contract before on the old Quebec Bridge contract.

Q. Did they get a new contract?—A. They had a new contract because at that time it was contended that Davis had some rights from the Quebec Bridge. The Quebec Bridge having assigned their rights to the Government, the Government afterwards gave their right to Davis. It was referred to us and there was an agreement entered into with Davis with the consent of the Grand Trunk Pacific.

Q. But the law says you have to advertise all your contracts?—A. And so we did.

Q. How could you override the statute?—A. We did not override the statute.

Q. You did not advertise that contract?—A. That contract was agreed between the Government and the Grand Trunk Pacific.

Q. What right had the Government to do that?—A. It was Quebec Bridge work, not Transcontinental work at all. The Government assumed the obligation of the Quebec Bridge Company, and that is why Davis continued the work.

Q. Your idea is that this was a Government contract and not a Transcontinental Commission contract?—A. It was a Quebec Bridge contract and the Quebec Bridge having assigned its obligation to the Government, the Government assumed the obligation and Davis was contractor for the Quebec Bridge Company for that part of the line.

Q. You know what is called the Sillery incline?—A. Yes.

Q. You built a road there quite off the Transcontinental Railway entirely, and it cost $40,000?—A. What kind of a road?

Q. A highway road down from Sillery Church, what right had you to do that?—A. They made a change there, that replaces an old road with a new one.

Q. The old road is there yet?—A. The other one, I understand, is in the way of the yard, and so on, if I remember well.

Q. Is it there yet?—A. It may be there yet but it belongs to the Transcontinental Railway Company, it is an exchange that was made.

Q. What I can learn about it is this: that a lot of your fellow-citizens down there came up with a petition and told you that that road was dangerous now by reason of your having a railroad down there and they got you to build them a nice road up the side of the hill for their benefit?—A. I can tell you one thing, Mr. Chairman, about the cutting of that road. I never saw the road myself. I remember there was a delegation came to my office in Quebec for that, and the matter was referred to Mr. Doucet, district engineer, to look into and what has been done has been done, there through him on his approval, and what he has done, I cannot say exactly, because when I left the Commission the road was pretty well advanced, but I am surprised the road cost $40,000.

Q. You have never gone over it?—A. No, I do not think I ever went over that road, because when I went there first it was not started. There is no doubt there is something in what they were saying about the danger at one spot. The slip might have given away and caused an accident, and it was a deep road there and the horses might get frightened. At the time it appeared to me that it was a small affair to make the change. If the amount comes to $40,000 it never entered into
my mind that this would be such an expensive undertaking. Doucet was down at my office one day and I think he said it would be a small affair. I cannot understand how it would cost that sum of money for the highway alone.

Q. I have not before me the exact figures, but I know it was very nearly $40,000 or perhaps more than that?—A. If it is, I can hardly believe it and I do not know why it cost that much.

Q. To pass on to the question of classification, you heard of the Lumsden Enquiry?—A. I did.

Q. The Lumsden Enquiry grew out of a dispute between Mr. Lumsden, the chief engineer, and some of his own engineers as to what should be classified as solid rock?—A. Yes, solid rock, loose rock, and common excavation.

Q. Mr. Lumsden said that his opinion was that only rock should be classified as solid rock, do you recollect that?—A. Yes, you have all the letters on the file; at first he said that.

Q. And that the rock should be at least a cubic yard, that was his first idea?—A. Boulders of the size of a cubic yard.

Q. Then he said that Doucet and the other engineers were classifying the smaller stone, stone less than a cubic yard which they said was cemented together so that they had to be blasted, they classified that as solid rock, and Mr. Lumsden objected, is that right?—A. I suppose it was at first.

Q. At first, I am coming to that—then he said that the contractors got five or six opinions from eminent lawyers to show that they were right and that Lumsden was wrong?—A. That the district engineers were right?

Q. Yes, that the district engineers were right and the chief engineer was wrong?—A. Yes, and also the Deputy Minister of Justice gave an opinion.

Q. I will come to that but I want first to get the history of this. Then he says that you gave him a copy of these opinions of these lawyers obtained by the contractors?—A. Everything was brought before the Board and referred to the chief engineer in due course.

Q. I did not mean you, I mean the Board. The Board gave him a copy of these opinions and then he said he consulted Mr. Collingwood Schreiber; you understood he consulted Mr. Schreiber?—A. Yes, I think his letter says so.

Q. And Mr. Schreiber suggested that he should put in the famous clause with the blue print, about assembled rock, do you remember that, I will show you the blue print—rock in masses of over one cubic yard or assembled rock, which in the judgment of the engineer can best be removed by blasting. He says that was put in by reason of the lawyers’ opinions and by reason of what Collingwood Schreiber said?—A. We had to take for granted that blue print with Lumsden’s signature.

Q. That is right, I only want to know if that is what he said?—A. No, I do not know.

Q. He signed it all right?—A. He did.

Q. Did you yourself ever ask for any lawyer’s opinion about that specification as to what solid rock meant?—A. Our own lawyer for the Commissioners of the Transcontinental was the Minister of Justice. That is the man to whom we had to go for an opinion on matters connected with law. We had our law clerk here but on these important matters we had to go to the Minister, and generally his Deputy Minister gave us an opinion for the Board.

Q. I cannot find that you ever got an opinion from the Minister of Justice on that question?—A. We had it from Mr. Newcombe the Deputy Minister of Justice.

Q. But Mr. Newcombe does not give any opinion as I read it; Mr. Newcombe was the Deputy Minister of Justice and according to the file, on December 20th, 1907, Mr. Ryan, now Secretary, under instructions from the Board, wrote a letter to Mr. Aylesworth, Minister of Justice, and Mr. Ryan in that letter says:

‘The Commissioners accordingly herewith submit all the correspondence with respect to this matter and request that you will favor them with your
"interpretation of Clauses 33, 34, 35, and 36 of the general specifications for "construction, a copy of which accompanies this letter."

Then Mr. Newcombe answered that letter on January 6th?—A. Yes.

Q. If And he says in his letter:—

To the Secretary of the National Transcontinental Railway Commission.

"Sir,—

"Referring to your letter of the 20th ultimo, with which you submit the correspondence with regard to the classification of excavated material and the interpretation of Clauses 33, 34, 35 and 36 of the general specifications for construction of the Eastern Division of the National Transcontinental Railway, I have the honour to state that upon consideration of the papers submitted I see no reason to differ from the classification stated by the chief engineer in his letter to the Commissioners of the 16th ultimo except as to the statement that rock, assembled (the individual pieces of such assembled rock exceeding one cubic foot in size) . . . such as in the judgment of the engineer may be best removed by blasting, is to be classified as solid rock excavation under clause 34. I do not understand upon what principle the chief engineer limits the size to pieces exceeding one cubic foot. The specification speaks of rock found in ledges or masses of more than one cubic yard which in the judgment of the engineer may be best removed by blasting. If 'rock assembled' may be regarded as a mass of rock, and if it may be best removed by blasting, I do not see why under the specification it is material whether the individual pieces exceed or are less than one cubic foot in size, and if 'rock assembled' is not regarded as a mass, the minimum limit of size which can be classified as solid rock exceeds one cubic yard.

"It seems to me, however, that these quantities are largely engineering questions, the solution of which depends principally upon the judgment of the engineers and, having regard to the terms used in the specifications, I must call your attention also to clause 15 of the contract which provides that the engineer (this term to be construed as defined in clause 2 of the contract) shall be the sole judge of work and material, and that his decision on all questions in dispute with regard to work and material shall be final, thus expressly stipulating that such questions as these shall be submitted to the decision of the chief engineer.

"I wish to say that it is very difficult for me to advise generally upon the interpretation of these specifications, and a general ruling may not infrequently overlook the peculiar facts or circumstances of an individual case which if stated might lead to an exception or modification. I would prefer to advise upon any special case as it may arise, having all the particulars and circumstances stated.

"Papers returned herewith.

"I have the honour to be, Sir,

"Your obedient servant,

"Sgd., E. L. NEWCOMBE,

"Deputy Minister of Justice."

"Ottawa, 6th January, 1908."

He does not give any opinion at all in that letter?—A. I am not here to criticise Mr. Newcombe. I had to take his opinion as it was.

Q. That is why probably the chief engineer has modified his opinion when Mr. Newcombe writes this:
"To form a judgment as to whether or not it is best to move by blasting
the chief engineer must view the work in process or leave it to be decided by
the engineer in charge, whose duty it is to frequently visit the work during
its operation and be governed thereby and act accordingly."

That meant that the engineers who saw the work done day by day were the
best judges of the classification? I guess that is right, but the question there is as
to being judges of the material; it is not to judge what the specification means?—
A. Well, the specification interpreted by the legal opinion and also by the modifi-
cation brought afterwards by Chief Engineer Lumsden, in his letter of January,
in which he shows that the legal opinions on record were correct, because he had
to follow them, and which also corroborates the opinion given by the district engi-
eers who saw the work going on in their respective districts.

Q. But what I am coming to is this: the first thing to be done was to find
out what the meaning of Clause 36 was, what the meaning of the language was.
No lawyer gave an opinion on that on behalf of the Commission that I can find?—
A. Well, so far as we were concerned, we were satisfied with what had been on
record. We had the best lawyers' opinions on record and the Minister of Justice
did not in his letter raise any objection to the opinions given by these gentlemen
which were taken irrespective of party politics, and I am convinced that the inter-
pretation given by these lawyers is perfectly correct.

Q. But, Mr. Parent, you are too old a lawyer to take the opinion of your oppo-
rient's lawyer?—A. Well, I can test that. A good lawyer, a man of reputation
that would put himself on record on a thing like that, takes the legal point of view
strictly speaking, as to the right interpretation, because it is not a matter of a few
dollars with the lawyer to leave his client in error and at the same time try to have
a case before a court of justice with the result that he would be beaten.

Q. Then why don't we in this world always take the opinion of the plaintiff's
lawyer and settle it?—A. That is why we went to the Department of Justice
which by their opinion does not at all contradict the legal opinions on record given
by the parties interested. Of course our law clerk also is a lawyer. His opinion
was to the same effect. For my part, I may add at once that I am perfectly
convinc'd there was no error and that there was nothing done on that interpretation
which is against the public interest.

Q. Let me ask you this: we went over the ground at La Tuque and all over that
country, and we asked the engineers to show us any cementing material and they
did not do it, and they said under oath they could not show us any in the whole
country?—A. These engineers have been examined in the Lumsden investigation.
There were photographs produced at the time. We went over that place a few
times ourselves and we found out it was a very hard piece of work. It was one
of the worst you could find and now as Chairman of the Transcontinental Com-
mission I have always based myself a good deal upon the interpretation of Clause
7 of the agreement which says that for the economical construction of the work,
specifications and plans should be approved before the work started and inspection
and supervision of the work was given to the Grand Trunk Pacific because they
were the party interested in the construction, they were the party interested in the
payment of the expenditure incurred and any difficulties that arose were to be
settled by arbitration, and when the engineers of the Transcontinental and the
Grand Trunk agreed on the classification, we would naturally suppose everything
was all right. When they disagreed as they did in some cases, arbitrators were
called in to settle the differences, and nothing more could be expected from the
Commissioners. We could not go on the work hundreds of miles away on the
line and follow what was doing from day to day. We had to rely on our own
engineers and also on the supervision of the Grand Trunk Pacific in doing that
work.
Corry Building, Ottawa, Ontario, 2.30 P.M., Friday, April 25, 1913.

Examination of Mr. Parent, by the Transcontinental Commission.—Continued.

By Mr. Lynch-Staunton:

Q. Before you let any of the contracts, you advertised for tenders?—A. Yes.

Q. And the advertisement provided that besides the deposit to be made by an intending contractor with his tender, the Commission could require him to furnish such additional approved security as the Commissioners might require?—A. Yes.

Q. And in the case of District F (the McArthur contract) McArthur had to furnish an additional security of $900,000.—A. As I told you this morning, I did not agree with my colleagues as to McArthur's contract. I made a dissenting report. I refer you to the record. You will find out. I think that my three colleagues made a special report on that work and they asked, I think, fifteen per cent guarantee.

Mr. Gutelius: Thirteen per cent for Hogan & Maclachlan and ten per cent for McArthur.

Mr. Parent: I was not a party to that at all. In McArthur's it was ten per cent, as you say, but I did not sign the report. I dissented from my colleagues.

By Mr. Lynch-Staunton:

Q. Mr. Fielding said, when it was brought to his attention, that the advertisement should not contain a clause like that: that the contractors ought to know what they were going to be required to put up. In his letter to you on June 14, 1906, he says: 'Do you not think it expedient that whatever conclusion the Government and the Commissioners arrive at should be, in substance, expressed in the advertisements, so that parties tendering will be in a position to know exactly what class of security and what amount will be required of the successful bidders. This would avoid some of the questions which arose upon the awarding of the recent contracts.' And in your letter to Mr. Fielding of the 17th December you said it would be necessary, in order to avoid the possibility of any misunderstanding with the contractors or tenderers as regards the nature of the securities to be required, to have the question settled in the near future. Mr. Fielding, in reply to that letter, wrote to you on the 18th of December, and said: 'I beg to acknowledge receipt of your letter of the 17th, on the subject of contracts on the Transcontinental Railway. I had an opportunity of having a conversation with you on this subject to-day, in the anteroom of the Privy Council, so that now I need only write in confirmation of what I then said, I think it desirable that the Transcontinental Railway Commission, in letting these contracts, should conform as far as possible to the practice of the large constructing departments of our Government, namely the Railways and Public Works Departments. The practice there is to require a certified cheque for a certain percentage of the value of the work, which cheque, on the acceptance of the tender, is sent to the Finance Department and at once converted into cash. I would suggest that you adopt this rule. If, owing to the large sums involved, full application of the rule would require too large a deposit, there might be a modification of the percentage, so that the amount to be deposited, while substantial as security, would not be such as to unduly embarrass intending contractors, but it should in all cases be distinctly understood that the cheques so sent in, when the tender is accepted, are to be converted into cash by the Government.' Now, after that, the Board did not change the form
of its advertisements at all. You still left the contractors in the dark, as to what would be required from them as security. How do you explain that?—A. We kept to the old form, and I do not think there was a change of 5c. between the contractors and the Commission.

Q. Why did you not accept the Finance Minister's suggestion?—A. What Mr. Fielding wanted was a cheque. He wanted the cash. On McArthur's contract we took deposit receipts. The amount involved was so large that he had trouble to get the money from the bank, and to help him, the Commission, although I dissented in the report, took deposit receipts, and Mr. Fielding did not like that. He said we should have got the cash, but if we had insisted on the cash, McArthur could not have taken the work at all, and that is one way of justifying my contention with my colleagues, that the Grand Trunk Pacific had the lowest figure. I am still of opinion that what Mr. Fielding was suggesting there could not change our position at all. Under Rule 17, I think, of the law, we were responsible for the security to be asked, and we took great care to avoid bogus tenders, and if I were Chairman I would do the same thing again to-day.

Q. Don't you think it might frighten off intending contractors?—A. No. They were all anxious to tender and we had no complaints about it. I have no knowledge of it doing that.

Q. Very few people tendered, though?—A. There are not very many in this country who can tender on a contract like that, and in doing that we were certainly avoiding trouble by having good contractors.

Q. I suggest to you, it might have been better to have had smaller contracts. —A. Smaller contracts would certainly bring trouble. The engineer was of opinion, and the government also, that in order to have the work done cheaply big contracts were necessary. A small contractor cannot do the work as cheaply as a big contractor, he cannot afford to buy the plant. But a big contractor can recoup himself for the cost of his plant because he has lots of work. The small contractor who has not the plant certainly cannot compete with the man who has a big plant.

Q. But these big contractors did not do the work. They sublet it to small people.—A. You could not prevent that. It is done every day with private companies. You cannot prevent that. And as long as the Government and the Commission were secured, that is all we had to do.

Q. Your idea was that a big contractor would have a big plant, but you knew that a big contractor would not do the work because it was not the practice?—A. We did not know that at first. Some of the contractors have kept a large stretch of work for themselves: others sublet. We were not in the confidence of the contractor; we did not know who was going to do the work and consequently we could not know in advance if they would sublet. For instance Hogan & Macdonell sublet fifty miles to O'Brien & McDougall. They were good subcontractors. We could not prevent that. We had sufficient security and we accepted the subcontractors in their place. Speaking generally, the subcontractors were certainly glad to make the money. Some lost money and some made money. Some did not have a plant of their own and they were glad to get the work.

Q. That is your explanation of why you did not follow Mr. Fielding's suggestion?—A. His suggestion was as a member of the Government. As a member of the Commission responsible to the people and the Government I was not inclined to follow it. I follow my own opinion in a case like that. I am sure of one thing; if the tenderers at that time had put up cash instead of deposit receipts Mr. Fielding would not have made any remark. He was looking for the cash.

Q. You received from McArthur three deposit receipts on the Traders' Bank in Toronto?—A. Yes.

Q. Acknowledging that the Traders Bank had received from the Commission in all some thirteen hundred thousand dollars. That is right, is it not?—A. I would like to see the deposit receipt. As far as the Fielding letter goes, I may add
this: we agreed with him about getting a certified cheque. We stopped the de-
posit receipt question but we did not amend the form of tender.
Q. Did it strike you that there might be some difficulty, if it ever became
necessary, in collecting that money from the 'Traders' Bank'?—A. In what way?
Q. You did not deposit any money with them?—A. The deposit receipt was
money at the bank. They had at our credit there the sum of so much and the
only thing was that we said they should not be responsible unless the contractors
defaulted.
Q. If your banker were to write you a letter to-day, telling you he had $10,000
at your credit and he had not the money there, you could not get the money out of
him in a lawsuit?—A. That is a matter of law, and I think the way receipts
were made out the bank would have been liable if there had been any default on
the part of the contractor.
Q. The bank did not agree to guarantee the contractor?—A. No, I think
they acknowledged they had money in the bank at our credit.
Q. They knew that that was not true; they would say that you knew that was
not true?—A. In business we could not argue like that.
Q. I think it is very serious?—A. I do not think so.
Q. You did not think anything of it?—A. Not at all, and as the contract
was executed there was no harm done, anyway.
Q. I want to ask you about three contracts, Nos. 16 and 17, about Lake
Nipigon. These two contracts which covered over two hundred miles grading are
located due north of Lake Superior. Do you know where those are? They were
let to M. P. and J. T. Davis?—A. Yes.
Q. You first advertised this work in July, 1908, and received a tender from the
Grand Trunk Pacific to do it at cost, plus 10 per cent?—A. I refused that.
Q. You refused that. Did you advertise again?—A. We did later on.
Q. On September 12th, 1908 you advertised again?—A. Yes.
Q. You got two tenders: one from M. P. & J. T. Davis for $3,308,000 and one
from the Grand Trunk Pacific for $3,402,000.?—A. Yes. In regard to the
Grand Trunk Pacific, I do not think it was a plain tender.
Q. The second tender was an ordinary tender in the regular way. You
awarded the contract to M. P. & J. T. Davis?—A. They were the lowest tenderer.
Q. Yes, they were some $94,000 lower than the Grand Trunk Pacific. Why
did you award that contract then?—A. Because it was the time to give it.
Q. For what reason—did you want them to start work on it?—A. Certainly.
The Grand Trunk Pacific at that time was urging to have that contract given as
soon as possible. It was at their request the tenders were asked.
Q. They wanted the work started as soon as possible?—A. Yes.
Q. The work was to be completed under the contract on December 31st,
1910?—A. I suppose so.
Q. No work was commenced on that until the 16th of January, 1910?—A. I
guess so.
Q. And at the close of that year it was reported that 12.49 per cent was com-
pleted. Do you agree with that?—A. If that is the engineer's report, it speaks
for itself.
Q. Work did not commence on contract No. 17 until March, 1911. So that
one contract was let nearly a year and a half before work was commenced and the
other was let two and half years before work was commenced. Is that right?—A.
A. In what month?
Q. October 29th, 1908. Work commenced on 16th January, 1910, and on
17th of March, 1911?—A. Those contractors could not get their supplies on the
spot.
Q. It took two and a half years?—A. I do not know about the time. They
must have started work before that.
Q. Davis never did anything on the work at all?—A. I understand he sublet
to O'Brien.
Q. Yes on September 29th, 1909, he sublet to O'Brien, and he has up to date received a profit on that of approximately $600,000 for doing nothing?—A. That is his own business. We lost nothing by it.

Q. I do not agree with you on that. I think you did?—A. In what way, I would like to know?

Q. O'Brien was a big contractor was he not?—A. Yes.

Q. He could take the work himself?—A. Why did he not bid?

Q. He could take the work?—A. O'Brien had the right to bid.

Q. The point is this: you let the work when it was inaccessible, and nobody started to work on it until the railway got up to the work?—A. Nearly all the contracts were let at a time when the work was not accessible.

Q. Now Mr. Hayes wrote to you and asked you to cancel that contract?—A. He did.

Q. He says in his letter of October 9th, 1909: "Dear Mr. Parent, I have yours of October 7th in regard to the contracts covering certain sections in Districts "D" and "E". You do not seem to cover the point to which I made reference. There is no question as to the regularity of the tenders at the time they were asked. The point I am making is that these tenders—as well as those made by other contractors—were all based on the work having to be taken up at once and completed within a certain time, thereby making necessary the taking in of the supplies overland at great expense. Several months have been allowed to pass without anything having been done by the contractors; in the meantime the work immediately adjoining the sections under discussion has been completed to an extent that will permit the bringing in of the supplies at a very much lesser price, meaning thereby a much greater profit to the contractor on the sections named, than if he had commenced work as was assumed he would be required to do when the contracts were let.

"What we are asking now is that since we are to pay the interest on the cost of this work, and the contractors having not been pushed, that new tenders should be asked and if this is done, the work could be let very much more reasonably than was the case in the first place at a saving to the Government and eventually to the Grand Trunk Pacific, which is to pay rental based on the cost.

"May I ask you what were the provisions in the contracts referred to as to the commencement of the work, and when was it to be completed, and what was the penalty for non-completion.

"Since commencing this letter, I have had laid on my desk clipping from the Montreal Gazette of October 9th, in reference to this very piece of work, and you will note it states that Fauquier Bros. will have 50 miles of steel laid on the Transcontinental west of Cochrane before winter sets in, and that this will enable supplies to be taken forward by rail over the T. & O. and the Transcontinental, leaving a "tote" of only 50 miles to the east end of the big M. P. Davis' contract. Of course, this will very much cheapen the cost of getting in the supplies, and unless the contract is revised and lower prices for the work obtained, it will correspondingly increase the profit to the contractors."

Why did you not act on that suggestion and cancel the contract?—A. You have my answer.

Q. Your answer is dated the 14th October, 1909.

"Dear Mr. Hayes:

"The essential point in your letter of Aug. 2nd to the Honourable the Premier, regarding certain contracts in districts 'D' and 'E' was a request that they should be cancelled. In my answer, I therefore endeavoured to show that, the award having been quite regular in every respect,—which you admit,—such a step as was suggested would be illegal on the face of it.

"I noticed your contention that the prices were too high, but did not think necessary for the reason just given, to dwell at very great length on that side of the
question. Even granting the propriety of the ground taken, there is little doubt that it would not be sufficient before law to render void actions which were regularly performed.

"For the purpose of discussion, however, I am willing to go into particulars. 

"Among other proofs that your Company had urged with us that the work referred to should be let at an early date, I shall quote from a letter written by Mr. Morse to the Honourable the Minister of Railways, on May 12th, 1908, which says: 'In order to give the Grand Trunk Pacific an outlet to the east through Northern Ontario, the contracts for the unlet portions of the line between Lake Superior Junction and the T. & N. O. Railway to be let without further delay, it being understood that the surveys are sufficiently advanced to permit this being done.'

"We complied with these wishes and contracts were signed on the 26th December of the same year. At such a late date in the season the contractors were unable to get their supplies, material and plant in soon enough to begin operations during the next season.

"Our forms of contract provide, it is true, that work be started at once and pursued diligently until completion, which in the present case is to take place on or before December 31st, 1910. Allowance must be made, as you know, for adverse conditions. I need only point out the fact that we have done so for more than one of your sub-contractors, namely the J. H. Reynolds Construction Company, who were so much behind in their work and gave us endless trouble. They were unable to carry out the undertaking and we had at one time to advance money to pay their men. Yet your company could not withdraw its contracts, although they were practically in default. There is surely much less cause and possibility to do so in the present instance where the facts are altogether different.

"Now we come to your statement that tenders were all based on the work having to be taken up at once and completed within a certain time. As supplies had to be taken overland at great expense, prices would naturally be high. Perhaps the work done on the adjoining section may reduce somewhat the cost to the contractors in one way, but the difference would not be as large as you claim. There will be still a considerable distance to cover by 'tote' roads, while haulage by rail through to the point of delivery is no small item, and this remains the same. Labour conditions, which you represented as favourable at the time, must have been taken into account by the tenderers. It is not likely that workingmen can be had to-day as cheaply as could be expected a year ago during the financial stringency.

"There is no certainty, therefore, that better prices than before could be obtained now if new tenders were to be called for. Any advantage that might be gained on one hand would be more than counterbalanced by the loss of time on the other, not to mention the liability incurred. It would take a year or more before another contractor could get down to work.

"We are told that preparations have been made to proceed actively with the work, and it can be expected that these two sections will be ready in good time.

"In any event there would be no way of complying with your suggestion, as stated before, unless the contractors would give their consent to the work being let anew, which, it seems, would be a most unusual course in business.

That is your answer?—A. Yes.

Q. That was in October, 1909, and Davis & Co. had sold the contract to O'Brien at that time?—A. They may have done so. Reports will show.

Q. Section 20 of the contract provides that if the contractor shall make default or delay in diligently continuing to execute or finance the work to the satisfaction of the engineer, and such default or delay shall continue over six days after notice in writing shall have been given, you can cancel the contract. You had it absolutely in your power to cancel the contract.

Q. And you agree, in that letter, that it might be let cheaper, and Davis was not going to do it.—A. I do not agree to that. I gave my reason in the letter. To try to cancel a contract like that would involve litigation.
Q. Why did you not make Davis get busy and go on with the work?—A.
Well, I will tell you. The country has lost nothing by it. To my mind, the country
has gained by the delay. If we had pushed that part or some other part, we should
have had to pay interest on it and taken care of the line pending the operation of
the whole line. For instance if Davis finished ahead of the others we could not use
the line but we would have to pay interest on the money and take care of the line
which would involve a large sum of money. So the country has lost no money.
Q. That being so clear, why on earth did you let the contract so early.—A.
Because we were asked by the Government and the Grand Trunk to do so.
Q. Why did you not compel them to go ahead?—A. We did, but they are
just like contractors for private companies. For instance if you let a contract to
be completed within a certain time, I think you won't find one perhaps who will
do the work in the time specified. They never do it in the time specified.
Q. Don't you think it was a great piece of folly to build the National Trans-
continental end of that line before the West end was completed?—A. That is
a matter of opinion. We were asked by the Grand Trunk Pacific to have the con-
tract let, and as soon as the location was prepared we did so.
Q. You know that work has been completed down there for years, and is
no use?—A. It has been completed.
Q. And it is no use yet?—A. If we had finished the Davis contract, which
you were talking about just now, we should have been in the same position with
that. In building that line, contractors had to meet a lot of difficulties. There
was fire, in some cases, and they lost their supplies in others. They could not do
any better. It is very easy to criticise an enterprise when it is over, but when you
are meeting all the difficulties, that is the time to talk about it. It is easy to find
fault with it when it is finished, and very unfair sometimes.
Q. I want to ask you, did you or any of your fellow Commissioners receive
any money from any of the contractors?—A. Not that I know of.
Q. Neither for yourself nor for political purposes?—A. Not that I know
of. Speaking for myself, I have been in public business for many years, and it has
always been my duty to put public interest before private interest, here or else-
where, and in this case, if I were to die to-day, I would say the same thing: that so
far as I am concerned, I have been taking care of the public interest as much as
possible. For my part, I would not give undue preference to anybody, contractor
or otherwise, for money or other consideration.
Q. Did any contractor pay any sum of money to you or to any of your fellow
Commissioners for personal or political purposes?—A. I do not know that.
Q. You say they did not.—A. Not to my knowledge.
Q. Did they pay any to you for personal or political purposes?—A. No.
Q. Did any of their friends pay money for them to you?—A. No.
Q. Do you know of their paying any money for personal or political purposes
during the time they had this contract?—A. To me?
Q. To anybody.—A. Not that I know of. Those contracts were let on their
merits, without any compromise or favour whatever.
Q. Did any of the contractors make any contributions for personal or political
reasons, after they got the contracts?—A. Not that I know of. If they did, it
must have been elsewhere.
Q. But not through you or with your knowledge?—A. No.
Q. Nor through you?—A. Certainly not. If it had been through me, I
must have had the money.
Q. Did they pay it to any other person, at your suggestion?—A. Not at all.
Q. Do you know of their paying any money?—A. I cannot say that. I am
speaking from my personal knowledge.
Q. Did they tell you they paid any other, money?—A. I won't tell that.
I do not know that.
Q. Will you say they did not tell you they paid money?—A. I do not re-
member that.
Q. Try and remember.—A. If they paid money to somebody, it would be their business.

Q. Did they tell you they had paid any money to anybody during the time they had these contracts?—A. To anybody outside?

Q. Yes.—A. A fellow talks that way sometimes. He might say, I contribute to both sides of politics, to both parties, but without giving any name particularly.

Q. Did any of those contractors tell you, during the time they were doing this work, that they contributed any money for political purposes?—A. I do not remember that.

Q. You don’t remember?—A. No.

Q. Will you try to remember?—A. If I knew, I would tell you. In a thing like that, I speak for myself. I cannot speak for anybody else, nor will I speak from hearsay.

Q. You do not remember their telling you so?—A. No. I always avoid politics.

Q. You say they never told you they put up any money for personal or political purposes?—A. I do not remember that. You think I know better than I do. We did not touch those matters. I had a duty to perform and I performed it.

Q. And you say now, candidly, you do not know of any case where any contractor put up money while he was contracting with this Commission?—A. I do not say they did not put up any money.

Q. But so far as you know?—A. So far as I know, they did not, to me.

Q. Do you know of their doing it?—A. To know it, I must have been with them when they did it.

Q. Oh no.—A. If they did, I was not with them.

Q. This is not the point. Did they tell you they did?—A. I do not remember that. They may have said so, I do not know. I do not remember it and I could not swear to it.

Q. Do you remember their telling you they were going to put up money?—A. That is about the same thing. They may have said so, some of them, but I could not point out exactly. They may have said so.

Q. Cannot you recall any case?—A. There were no special cases.

Q. Think it over now. Cannot you recall some case?—A. No. What case?

Q. Never mind just now.—A. Have you a case to point to?

Q. Just see if you cannot think of a case.—A. No. I cannot find a case.

Q. You mean to tell me that you cannot remember a single case during all the time you were Chairman of that Commission, where a contractor told you he paid money?—A. You must think of this. I never bothered myself with the contractors about a money question. My sole duty, as Chairman, was to see that the work was done in the public interest and according to the specification, and I would not have dared to speak to contractors about subscriptions or anything else.

Q. Did you ever speak to them?—A. I have had experience enough in politics not to bother with this question. If these things were done, they were done by outsiders, but not by those having the responsibility of the work. That is why I am not in a position to talk about them.

Q. Do you mean to tell me you were never curious to find out whether they had put up any money?—A. That would not be doing any good at all.

Q. But you never were curious enough to find out?—A. I am not very curious on those questions.

Q. Did you try to find out?—A. No. I never tried to find out, because it would have been against my whole interest and duty to do so.

Q. And do you say you did not find out?—A. I did not look for it. I did not want to bother with it.
Q. I knew you did not want to bother with it, but sometimes when these men become generous they would likely want their generosity to be known to the proper people.—A. That is as old as Adam and Eve. You will find something like that on both sides of politics. We know very well both have their friends at election time, but this has not been done, so far as I know, by a party contracting with us. I would take it to be an offense to do it. That is why I would not touch a thing like that.

Q. Do you say you do not know anything about it?—A. Not personally.

Q. Anybody told you?—A. On that question I would not swear. I do not remember.

Q. You do not remember?—A. No, because so many things pass in election times that a fellow may say, well, I have given so much to this person and so much to that—not on this special question, but generally—and therefore, I would not take on me to swear on a thing like that.

Q. Was there anybody that you know of that got any money from the contractors for political or other purposes, during the time they had contracts for the Transcontinental Railway?—A. I answered that. I said no.

Q. Now your answers are without any mental reservation?—A. No mental reservation on my part.

Q. It is an absolutely frank statement?—A. A frank statement, so far as I know.

Q. I could not get a ‘yes’ out of you by putting the question in another form?—A. Put it any way you like. You will get the same answer.

Q. Now I want you to explain a matter down at Quebec. I think it is only fair that I should draw your attention to this. You know the Chevalier case down there?—A. In Cap Baleine.

Q. Yes, the ice house case. On the 1st of October, 1908, Alfred C. Dobell leased for three years, from May 1, 1909, to Adolphe Chevalier, a lot of land known as cadastral No. 2525 in Champlain Road. That is Cap Baleine, is it not?—A. Yes.

Q. Now, Chevalier says that a man named Bergevin came to him through a hotelman named O’Neill, and bought out from him in the summer or autumn, just before the general election in 1911, his lease for $4,000; and he reserved the right to occupy that land until the end of the lease. The notarial deed was executed before Joseph Allaire, notary public for the Province of Quebec, and it provides that Chevalier is to give him all his rights and interests of occupation, of a certain piece of land known as cadastral No. 2525. He is not to give up possession until the 1st of May next, when the lease runs out.—A. (After examining the deed and lease). Both are the same thing.

Q. Did Bergevin, under those deeds, receive any consideration for his $4,000?—A. I do not know about that.

Q. You ought to know. You are a lawyer.—A. But I have not studied the conditions enough to answer that.

Q. But under those deeds?—A. They speak for themselves.

Q. I have shown you the deed, and you can see by that deed, can you not, that Bergevin got nothing at all for his money?—A. I know nothing at all about that.

Q. I am asking you now to look at the deed from Dobell to Chevalier and the deed from Chevalier to Bergevin, and tell me, as a lawyer, whether Bergevin got anything for his $1,000. (handling deeds to witness). Generally they show Bergevin got nothing for something, and knew it when he took that deed.—A. I cannot say that.

Q. You know he did not get anything. The deed says he does not.—A. The deeds speak for themselves.

Q. Do the deeds say so?—A. I do not want to speak of a lease to which I am not a party.
Q. Am I not correct in stating that the lease from Dobell to Chevalier is for three years?—A. That will be for you to say in your report, whether correct or not.

Q. Now, won’t you say to me whether I am correct or not: whether that is not a lease for three years from Dobell? You have read both?—A. It looks like that. You asked me whether I knew Bergevin had got nothing.

Q. Leave that out. Does not the deed to Bergevin provide that Chevalier shall occupy the land until the end of the lease?—A. It does, according to this, but there may be something else. This does not show he had very much, but he may have something else. I do not think a man is such a fool as to pay money for nothing.

Q. Under these two deeds he had nothing to sell, had he?—A. Not very much, judging by that alone.

Q. Now here is a deed to which you are a party yourself. In 1911, Bergevin received $4250 for a graving-dock. The deed I have in my hand is in French, but I will translate it. “Considering that it is necessary for the Transcontinental Railway to demolish, for purposes of their line of railway, the graving-dock belonging to the said Bergevin, situated on Lot 2525, and considering that Bergevin is ready, in consideration of a certain indemnity, to give up the said graving-dock, therefore, Bergevin accepts $4250.00 in full and final discharge of all damages resulting to him from the demolition of the said graving-dock.” Now, why did you give him $4250? Your notary had all the papers before him?—A. That was built by Chevalier when he was a tenant of the property.

Q. Yes, but Chevalier did not sell that graving-dock to Bergevin. What did you want with the graving-dock?—A. The engineer wanted to cross that property, and we had to remove the graving-dock.

Q. Now, Chevalier’s lease was up, and they had to remove their buildings. That is as plain as a pikestaff.—A. Not so plain as you think, because at that time I understand Chevalier could have got an extension of his lease, and so would not have had to remove that dock.

Q. But he could not get the lease if you chose to take the property. Dobell could not give him the lease.—A. We did not pay for the property itself, but as a place to build on.

Q. If you chose to expropriate that property, Dobell could not give him another lease?—A. Certainly not.

Q. You knew that. Now then, he would have to move that graving-dock, and he would not have any claim against you. You do not mean to tell me that you thought for one moment that man had any claim for damages against the Transcontinental Railway for that graving-dock?—A. Why did the engineer and the right of way agent recommend it if it were not wanted.

Q. I do not care if all the men on earth recommended it. Any lawyer knows that that man had no claim.—A. You could not remove his house without paying for it, and moreover, I think it was used by our own men, who were picking borings in the river at that time.

Q. What do you say you paid that money for?—A. For what is specified on the voucher here, and approved correct by the right of way agent and the engineer. If I remember rightly, our men who were picking borings in the River St. Lawrence used that dock all summer.

Q. But that is not what you paid $4250.00 for.—A. I cannot say exactly, but if my memory is correct, I think we paid that money to use it.

Q. Chevalier say that everybody knows all about it, and he says that when he got this from Bergevin, Bergevin knew all about it. Now Bergevin, according to the law of Quebec, would have to produce the papers to show his title, and his papers show no title. Is not that true?—A. I cannot say as to that. If I remember the facts, the graving-dock was bought and used by the Commission during the whole summer.
Q. Is that all the explanation you want to make about it?—A. So far as my memory is concerned, but we would never have bought it if our men had not thought it was worth that amount. I did nothing to Bergevin or Chevalier, and they did nothing to me. I have no interest in the property at all.

Q. This transaction was made with you, yourself, and I cannot understand how any lawyer would put that deal through?—A. The certificate of the right-of-way agent is there, and the matter was fully discussed with those fellows, and they agreed to pay that amount of money. I would not have paid that amount of money if I thought it incorrect.

Q. But the point I am trying to impress on you is this: that this man's tenancy had expired, that he had no claim whatever against anybody, that he must remove his things or leave them there, and he had no claim on earth against the Commission, and I want you to explain to me how he got that money?—A. He got that money because we bought the thing. It was valued by our right-of-way agent and engineer at Quebec. We were satisfied it was correct, and we bought it.

Q. You say Bergevin bought this tenancy from Chevalier and never mentioned anything about the graving-dock in the deed, and he professed to give $4,000.00 for what he knew, if he read his deed, was nothing at all?—A. So far as I am concerned, I had nothing at all to do with these matters.

Q. But the notary did?—A. Yes, but it went to our engineer's office.

Q. No. Bergevin and Chevalier say it went through you?—A. Did they know what was going through me and my office?

Q. They say they came to you personally?—A. They came to me personally, but it was referred to our engineer's office.

Q. No, no. It was referred to the notary?—A. Not at all. You find, on the voucher, the certificate of the real estate agent.

Q. That certificate of the real estate agent shows this: Mr. Tremblay says that the voucher means that the statement is wrong, but the voucher is in conformity with what is intended in the deed. He says that voucher only means the amount that is stated in the deed?—A. It does not mean that to me. When a real estate agent certifies an account as being correct, he does so because he has put his valuation on.

Q. Supposing he did put a valuation on. How could that make you responsible? You might send him out and tell him to value anything, but that is no reason why you should buy it?—A. I do not ask any man to value anything. He has to notify me. I say if we want something, it is for him to certify the value of what we want.

Q. What was the duty of the notary? To see that there was a proper title and to see the deeds?—A. I never studied those deeds. We were discussing the value of the graving-dock at the time, and if I am not mistaken, we have used that thing, but I am not sure about it. But surely we would not have bought that if it had not been valued by our own men in Quebec.

Q. There was another man named Martineau in exactly the same position. He had a lease of part of the land from Chevalier, and he had an ice house on it?—A. Yes.

Q. Martineau sold out to Bergevin his right to occupy the premises under his lease. It was agreed that Martineau could remain in possession until the lease expired. Bergevin paid him, as appears by the deed dated the 18th of August, 1911, $2,000.00 for nothing. Did he get anything for his money? I will show you the deed. (Deed handed to witness.)—A. This is not our own deed.

Q. It is the deed to Bergevin. You can see there he did not get anything for his money?—A. In this case, it was only the sale of an ice house.

Q. The ice house is not sold there, is it?—A. Yes. They were selling the ice house.

Q. I did not see the sale of an ice house in that. Will you point it out to me?—A. Here it is (indicating).

Q. Oh yes. Bergevin bought that ice house?—A. The deed shows.
Q. And he would have to move out at the end of the lease if he wanted it, would he not?—A. Well, it would be a question between him and the landlord.
Q. If the lease came to an end, he would have to move it if he wanted it?—A. If there was no renewal.
Q. Yes. If you expropriated the land, he could not get a renewal?—A. Not a renewal, but he could have remained there a few months more.
Q. But he could not have got any damages out of you?—A. No.
Q. And therefore, when he got $2,500.00 for damages, he got it for nothing?—A. It might be for damages alone, it might be for the building, also.
Q. It does not say for the building. It seems to me that you ought to pay that money back to the Commission.—A. It is a question of having value for the money.
Q. I cannot see where they got any. I would like you to explain it, because it is a transaction that needs explaining?—A. For my part, the transaction was bona fide. So far as we are concerned, I say frankly we never received anything at all either directly or indirectly from any of these parties.
Q. They say it is an election transaction. They swore to it. Chevalier says he did not sell anything, and it was just a cloak to give him money for the elections?—A. Did he?
Q. He swore to it?—A. If he did swear, I am swearing too, now, that I do not know anything about it, neither from Bergevin nor Chevalier. This was made after the election, was it not?
Q. No. It was made before the election?—A. No. It was after the election.
Q. Bergevin is a man of intelligence, is he not?—A. I suppose he is.
Q. A business man?—A. Yes.
Q. And he has large property in Quebec?—A. Yes. He has some there.
Q. And he is not a shipwright?—A. I do not think Bergevin got a cent for election purposes. I will be more than surprised if he subscribed to the elections, and as far as we are concerned, there was no election in the business.
Q. It is my duty to tell you what they say, because there is the evidence?—A. What did Bergevin say?
Q. Oh, he denied it, but he could not make any decent explanation of it?—A. We never paid any money to Chevalier.
Q. You know everybody in Quebec is talking about it?—A. They can talk as much as they like.
Q. I would like to see it explained, because it seems to me it needs explaining. Bergevin said what he bought from Chevalier was bought by him to sell to the Commission. That is his evidence. Listen:
"A. (Bergevin) Well, I do not say that I do not know. I was buying them to sell to the Commission.
"Q. You knew the Transcontinental would pay you that money for it?—A. Yes.
"Q. What did you know?—A. I knew I could sell the property to the Transcontinental Railway. The way to prove to you that what you say is not correct—because some I sold at $250 profit. I was pretty sure I could sell it to the Transcontinental Railway."
Now, so far as I can see, Bergevin got nothing for his money. Chevalier had no claim for damages, and the Commission got nothing for its money. If you can explain to me where I am wrong, I will be delighted to hear it?—A. I cannot explain to you the value put on those properties. I never saw those deeds. They were supposed to go to the notary, and he handled them in due course. The property was valued by our own officers. So far as I am concerned, I never went there myself. The real estate agent was supposed to satisfy himself that that was correct.
Q. Your notary, then, has to bear the blame of putting through that transaction?—A. There is something in that. I cannot say whether the amount is correct or not. If the graving-dock or the ice house or whatever it is was bought too high, I am not prepared to admit it. I do not see those things myself, but I
never did a thing unless my right-of-way agents had certified or recommended it. I relied upon this man, who is supposed to be honest and perfectly honourable, and when such a man certifies a thing to be correct and comes to me like that, from the Quebec office, it is supposed to be correct.

Q. Did you know yourself—you ought to know, I should think—that that was something which the Transcontinental ought not to buy at all and did not have any use for?—A. It was not the way to do it. The Government would never dare to go on or go through a property because a lease had expired or was on the eve of expiring, and pay nothing at all for it. I know that although Bergevin's lease might have expired, he would have got some little time.

Q. Mr. Dobell swears he had given him notice—Chevalier swears he had got notice. Chevalier says he told Bergevin he had no right to stay on there any more. —A. When they came to me they said the lease had three more years to run. There was a building on the property and they were asking so much for it, (I have claims, if I remember right, up to $5,000 and $7,000). The matter was referred to Mr. Tremblay and to Mr. Doucet. Tremblay, later on, recommended that amount of money and the thing was put in the notary's hands, but I never saw anything of those deeds.

Q. Did you think you were buying the lease?—A. Certainly. At the time they came to me there was supposed to be an unexpired time of lease.

Q. The deed shows you did not buy the lease?—A. The deed was not before me. I suppose the notary was looking after that.

Q. You signed the deed yourself?—A. I signed this, and it was supposed we were buying something.

Q. It did not show you were buying any lease?—A. This one was for an ice house.

Q. What did you intend to do with the ice house and graving dock?—A. I do not know.

Q. But you did not buy the ice house?—A. Yes, we did.

Q. You were giving this man $2,500 for moving an ice house which he had to move himself?—A. But we bought the ice house.

Q. Oh no, you didn't, and you didn't buy the graving dock—the demolition of them, I think, but you did not buy either of them?—A. The demolition is about the same thing.

Q. They moved the graving dock over to Orleans Island?—A. I did not follow that. We bought the property to get the right to demolish it.

Q. Knowing he was to demolish it himself?—A. We were buying it for that.

Q. You were giving him the money for the expense of demolishing the ice house?—A. We were buying the ice house because it was to be demolished.

Q. I do not see it in there (indicating)?—A. We had to demolish it.

Q. To move it off?—A. Yes, or demolish it.

Q. You had a very eminent Ontario lawyer, Mr. Taschereau?—A. He is supposed to be.

Q. Then you had a solicitor. You had a lawyer to examine the title and a notary to put through the deeds, both of the name of Taschereau. The lawyer is the Minister of Crown Lands for Quebec, is he not?—A. The Minister of Public Works.

Q. And did he certify there was a title to that?—A. I did not say that. I see his brother signed the deed.

Q. Well, his brother had all the papers before him?—A. He was supposed to have, and it was his duty to have them.

Q. And you signed the deed before the brother?—A. All the deeds in Quebec are on the minutes.

Q. It is not. I would like to see it explained?—A. I have given you my explanation. It was a bona-fide transaction like the rest, so far as I am concerned. It went through our office in Quebec and we paid lots of money there. I never
saw the place myself. I am most surprised to hear you state that too high a price was paid. I never put a valuation on the building myself. There is no politics attached to it.

Q. Do you understand the transaction?—A. I understand it as it is now. I signed, that is all.

Q. Here is what Bergevin says about it himself:—

"Q. Your deed says that that was for damages for removing the slip?—

A. Yes.

"Q. So that you got $4,250 for nothing?—A. Why?"

"Q. Because you did not own the slip.—A. No, but I bought the right from the 1st of September to the 1st of May. That is what I sold them. I could not have sold them anything that did not belong to me.

"Q. But you did not sell them anything?—A. No.

"Q. According to your own deed, you sold something which you did not own?—A. No. I did not sell them anything which did not belong to me.

"Q. But did you own the Bassin de Radoub?—A. No. I owned only the right, as I explained.

"Q. You did not own the Bassin de Radoub?—A. No, only the right to the 1st of May.

"Q. You knew quite well you did not own the Bassin de Radoub?—A. I did not buy any property.

Q. Why did you sign the deed and say in that deed that you owned it? (Deed shown to the witness) Now, be honest about this. Did you not give that man that money and then find yourself in trouble after the election and get your money back at this date?—A. No.

Q. Yes you did. You got it on the 16th of October.—A. Yes, but that transaction was made before the election.

Q. The transaction with whom?—A. The Transcontinental Railway.

Q. With whom did you make it?—A. Mr. Parent.

Q. He is a lawyer?—A. Yes.

Q. And a very distinguished lawyer?—A. White puts him before the Ontario Taschereau.

Q. And you made the bargain with Mr. Parent himself?—A. Yes.

Q. And he agreed to give you $4,250 of Transcontinental money for destroying the Bassin de Radoub?—A. Yes.

Q. And you knew you did not own it?—A. For the right I had there.

Q. For the Bassin de Radoub?—A. No. That was for the demolition of it.

Q. What was your bargain with Parent?—A. $4,250, the way the deed says there.

Q. For the demolition of the Bassin de Radoub?—A. No.

Q. Tell me the bargain. What did you say to Parent?—A. I told him, I will sell what I have there made with Chevalier, and that is all. I produced my contract with Chevalier, and that was the arrangement. I would get $4,250 for the thing.

Q. Did he write it?—A. Yes, and the notary too.

Q. Did Parent go to the notary with you?—A. No. Mr. Tremblay would not bother me, but I gave them the papers and they went to the notary with it.

Q. Did Mr. Parent give Tremblay instructions?—A. Yes.

Q. In your presence?—A. Yes, to send the papers to Taschereau.

Q. Did Mr. Parent get the deed from Chevalier?—A. Yes. He must have given it to him, because he had it in his hand.

Q. When did he make the bargain with you and Parent?—A. I cannot tell you, but it was a week or so before the election.”

Now, there he says very plainly that you knew all about it.—A. I never saw those deeds. I referred the whole thing to Mr. Tremblay, as I did other things.
There were no exceptions made in the case of Bergevin or other fellows. Tremblay was the man to look after those things, and he was satisfied to pay a sum of money, that was all I knew about it.

Further on he says this:

"Q. To go back to the Martineau ice house. You bought the ice house from Martineau for $2,000?—A. Yes. 
Q. You did not sell the ice house to the Commission. You only were paid by the Commission compensation for the removal of the ice house, and damages to cadastral No. 2525, $3,700, according to your receipt. That is correct, is it not?—A. Yes. 
Q. So that you removed the ice house?—A. Yes. 
Q. And the Commission was giving you $3,700. for the expense of moving it?—A. Yes, to take it away from them. 
Q. Don't you think that was a pretty tall price for removing the ice house?—A. I do not know. You can judge of that. 
Q. I am asking you?—A. I sold for what I thought I could. If I could have sold it for more, I would have. 
Q. With whom did you make the bargain?—A. With the Transcontinental. 
Q. With Mr. Parent personally?—A. Yes. 
Q. He agreed that you should take the ice house away?—A. Yes. 
Q. And they would pay you $3700. for taking it away?—A. Yes. 
Q. No doubt about that?—A. No."

Now, they put it right up to you.—A. Well, the facts are as I told you. Our own men are responsible for the valuation of those things, not myself. I never was in any of these things. I do not settle a thing like that unless it goes through in the regular way.

Q. But you must have known that this man had no claim whatever against the Transcontinental Railway, no matter who valued it?—A. If I had known he had no claim, do you think I would have signed the deed? 
Q. I would not think that you would sign the deed?—A. I signed it because the certificate of our real estate agent was there on the voucher and I supposed it to be correct. Mr. Tremblay was satisfied the amount was correct. 
Q. But Mr. Tremblay would not know whether the Commission was liable or not?—A. He is supposed to know. If our plans show that the line has to go through certain property and he finds that property belonging to Bergevin or somebody else, and he finds out that so much money is required for the removal or demolition of that property, and says, I will recommend the payment of so much, I would assume that to be correct. I will say this: that nothing, directly or indirectly, has been paid by Bergevin, Chevalier, or anybody else, on account of this deal. There was no election business in it. There was not a cent paid, to my knowledge. I never heard anything about it, and I am pretty sure that Bergevin had not spent a cent on the election, on account of these exactions. I never had any. I never expect to get money from any of those fellows. I never deal in that way with anybody. If that thing is too high, the ice house, the Bassin de Radoub, or whatever it is—I do not admit it—but if it so, Tremblay and the notary and the real estate agent are responsible for it because they deceived us by certifying an amount which is not correct. For my own part, to be perfectly frank, under the same conditions I would repeat the deal again to-day, having confidence in my agent. Tremblay was a man of great honesty. He was as good a man as you could get, a good land surveyor with good judgment, and when I found his certificate on a document I had no doubts about it. 

Q. Mr. Tremblay struck me as an extremely conscientious, honest man.—A. He is too. I never put through any deal in Quebec without going to see him.
I always referred them to Tremblay and Tremblay would come back and say: Compromise the thing or pay so much, and we would do it.

Q. But Tremblay says he did not do it? A. For my part, I never did anything unless Tremblay certified it. There is the voucher showing he certified it.

Q. He says that the account showed the amount mentioned in the deed?—A. Of course, but the amount was fixed by him.

Q. He says not.—A. I say yes.

Q. Bergevin says not too?—A. Bergevin was not there when I dealt with my real estate agent. The man does not stay there all the time.

Q. Bergevin says he fixed the amount with you?—A. Of course, I knew how far Tremblay was prepared to go, but when Bergevin came back to the office we did not close the deal in the first instance. I knew how far Tremblay was prepared to go, and we agreed on it.

Q. I think it is only fair to you to read you this portion of the evidence:

"Q. Who gave you your instructions?—A. The President.
Q. Mr. Parent?—A. Yes.
Q. What did he tell you in respect to this transaction?—A. Of course, I did quite a lot of things, and I do not remember exactly what was done in respect to that particular case, but if I remember right I think Mr. Bergevin came in to see Mr. Parent when he was here; and I was called into the office here and a discussion took place between Mr. Bergevin and Mr. Parent as to what he should get for the property he had to sell to the Transcontinental, and it was agreed—we sold at the valuation that was made by the valuators, and it was agreed that the transaction should be made at the price as made by the valuators.

Q. That is, that all the properties that Bergevin sold to the Commission should be at the valuation made by the valuators.—A. Yes. That was for this transaction, and further than that, I had instructions from Mr. Doucet to make all the transactions for the price given by the valuators, with all those landowners that would be ready to settle with the Transcontinental Railway, whose property had been valued."

I think that is all I want to ask Mr. Parent.

Mr. Parent: I never concluded any of these transactions for damages unless they had been discussed beforehand and agreed to by the agent or the engineer. Sometimes they would come into my office, discussing matters and then come back another day, and I would discuss it with the real estate agent or engineer. I had not the least interest in that matter directly or indirectly. I want to go a step further. Bergevin says that Tremblay went to the notary with the deed. That shows that Tremblay was supposed to know all about it.

By Mr. Gutelius:

Q. This railroad has been a very expensive one, and it is supposed to be a very high class road. Who designed this railroad? Was it the Commission or was it the Government?—A. It is an expensive road because the law says we were to take the outline into consideration, bridging, curves, etc., and because the standard of the road is high. When I became Chairman, the specification had already been made by, I think Mr. Butler, who was then second chief engineer, and by the chief engineer, Mr. Lumsden. The plans were supposed to be approved by the engineer and the Board of the Grand Trunk Pacific.

Q. Do I understand you correctly, then, to say that so far as you personally are concerned, or the Board, after you became Chairman, had no responsibility for fixing the standard of the road?—A. When I came in as Chairman, the standard
of the road had been settled on and the specifications made, and my duty and the
duty of the Board under me was to build the road according to the design and
specifications already made. Standard means the class of road: four tenths one
way and six tenths the other. I do not think there is anything in the specification
which mentions four tenths and six tenths.

Q. Was that settled before you came in?—A. I cannot say whether it was
or not. I know the specifications were.

Q. Although the curvature and the gradients were settled before you took
charge of the Commission, the question of the construction of wooden trestles,
had not been settled. Why did you not use wooden trestles, in the interest of
economy, in the construction of this railway?—A. I am not an engineer, but I
think any engineer will admit that steel bridges are better than wooden trestles,
because, in the first place, they are permanent, and in case of fire it would be
disastrous to have wooden trestles on the line. Further, if you take into consider-
atation the cost of lumber, at tender prices, and the cost of filling for wooden trestles,
you would come to the conclusion that steel bridges, in the end, are cheaper.

Q. Did you ever have the engineers make comparative estimates for you to
prove what you have just suggested?—A. We discussed matters more than once,
especially when an offer was made by the Grand Trunk Pacific to build wooden
trestles, and for them to do the filling afterwards at so much per yard. At that
time we discussed the matter thoroughly and came to the conclusion that it would
not be worth while to make a change, in view of the fact that we were building a
first class road, and that besides the Grand Trunk had nothing for the filling and
we should have had to have the consent of the main contractor. We thought it
better to refuse their offer and finish the road at once with steel bridges and make
it permanent.

Q. If you had been advised, in the early stages, of the construction of the
railway, that you could have saved $7,000,000, do you think you would have come
to the same conclusion?—A. In a case of that kind, I would have gone a step
further and submitted it to the Grand Trunk and the Government.

Q. It would have made you perk up your ears?—A. If our chief engineer
had put the question, say, in a special report, as you have put it to-day, that there
would be a big saving in wooden trestles, then it would have been our duty to submit
it to the parties interested. When we thought we could save a few million dollars
in La Tuque, we did it.

Q. I do not find that you were ever advised of the money involved?—A. The
specifications were approved beforehand by the Government and the Grand Trunk
Pacific, that was before I came on. It was modified, perhaps, a few times after-
wards, about twice or something like that, but the specifications could not be
changed by the Chairman or modified by our Board, neither by the Government
alone, but only by the common consent of the Grand Trunk Pacific and the Govern-
ment. If we had undertaken, ourselves, to modify the specifications, we should
have been doing something illegal and might perhaps have been thrown out.

Q. The specifications did not say anything about wooden trestles or steel
bridges?—A. Oh no. I do not think so.

Q. In the matter of using new eighty pound steel in sidings, if you had known
that by purchasing lighter rails you could have saved $300,000, would you, with
the Grand Trunk Pacific's concurrence, have undertaken that?—A. That matter
was taken up once by Mr. Morse, and he said, I remember well, that perhaps they
would save some money on the sidings, but in order to make it uniform road, they
would not object to having the 80 lb. rails in the sidings, the same as the main line.

Q. So that you let it go through?—A. So at this point we let it go through.
We had trouble about getting rails. We had to wait sometimes for months and
months after the contract was let.

Q. But if you had known you could save that amount, and if it had been
satisfactory to the Grand Trunk, you would have, in the interests of economy,
used lighter rails, would you not?—A. If the rails are all of the same standard and
weight, it is very easy to change them. That is one advantage of having a uniform weight. At that time, Billings seemed to object to 80 lb. rails. About wooden trestles, I want to be fair on that point. Considering the fact that we asked for prices for tender from contractors, I have my doubts whether, taking tender prices, you could save $7,000,000, as compared with steel bridges, but of course, assuming for a moment that you could get timber at prices lower than we have now, you might be able to save a large amount. But I have my doubts, when I consider the tender prices, whether wooden trestles would have made such a difference in the cost of construction.

Q. That is only your opinion?—A. Certainly. I am not an engineer. The transportation of timber is a great factor in construction. The distance and the place it is to be put have all to be considered. To build a railway in some places would be very cheap, but in building a trestle at a long distance, and where there is no railway communication, the transportation alone might sometimes cost much more than the material. That is where the trouble comes in and the expenditure increases.

Q. $45.00 to $50.00 a thousand was the average, was it not?—A. I do not think so. I think the average was over $60.00.

MR. LYNCH-STAUNTON: I do not think so.

MR. PARENT: I did not make any calculations, but that was my impression. Although I am not an engineer, when I was Chairman of the Board I used to figure out for myself at night, to help me along. They have tried to get an engineer at the head of this Commission. It is a matter of opinion whether he would be any better than a business man. Unless you could get an ideal engineer, his plans might be often worse.

Q. Was the payment of $350,000.00 to the Grand Trunk Pacific for surveys made with your approval?—A. It was before my time.

Q. How did you happen to build double track between Cap Rouge and St. Foye, and between Transcona and Winnipeg, and provide for double track over the Little Sturgeon River near Graham, when the Act seems to call only for a single track railroad?—A. They are not double track; they are terminal facilities. At Cap Rouge there will be more than two tracks. No railway can do without terminal facilities. You have to have them whether you are going to Winnipeg or Quebec, and we do not consider them as double track at all, or that we are going against the law in providing them, because it was required and approved by the Grand Trunk Pacific and the Government. What could you do in a city like Winnipeg or Quebec, with a single track? You have to accommodate the cars coming in and going out. Take the C. P. R. in Winnipeg, for instance. I think their yards are over thirty miles long.

Q. They are only building their second track now?—A. But they have lots of tracks into Winnipeg and in the yards. In regard to Quebec, the Government assume the obligation of the Quebec Bridge Company, which called for more than one track, and we had to carry out that obligation. When the bridge collapsed, the Government took it over and assumed all the obligations. The Quebec Bridge Company was going into Champlain Market in Quebec, and they were to build four tracks or more and a station there. That is why, I suppose, there is more than one rail from Cap Rouge to Quebec.

Q. At the Winnipeg terminals, when you made that agreement with the Canadian Northern, why did you not extend the terminal so as to connect up with the Transcontinental at Dundee Junction?—A. At that time Winnipeg was supposed to be their terminus. Going further on was a matter for discussion afterwards. Dundee Junction was on the Canadian Northern, and at that time the chief engineer never suggested anything else than what we had at first supposed.
By Mr. Lynch-Staunton:

Q. Why did you not bring the terminal yards at all events down to the banks of the river?—A. We were not asked to do that.

Q. Were you actively engaged, personally, in making the terminal agreement with the Grand Trunk Pacific and the Canadian Northern in Winnipeg?—A. Certainly. The Board had a long discussion with the Canadian Northern on that matter, and the Grand Trunk Pacific people were also often met. I have many recollections of the first deed they made, before it went to the House for approval. On one occasion they sent for Mr. Lash, their lawyer, who was in New York, because they objected to something in the deed, and they wanted to find out if we were correct. It was approved of and sent to the House for approval.

By Mr. Gutelius:

Q. It looks as though the Canadian Northern were in a position to extend the terminal from the passenger station down to Dundee Junction, if the other parties to the agreement had insisted on it?—A. It was not discussed at that time.

Q. You did not think of it at that time?—A. No. The point was not raised at that time. The matter came up afterwards when they modified the line in Winnipeg.

By Mr. Lynch-Staunton:

Q. I want to ask you about the Transcona shops. Your first intention was to spend $1,500,000 there. That was the estimate of Mr. Lumsden?—A. Yes.

Q. I am told by Mr. Melssaac, and I think by Mr. Calvert, that the reason the shops were made so much bigger and so much more money was spent on them was because there was an understanding with the Grand Trunk Pacific that those shops should be used not only for the Eastern but for the Western division as well. Is that right?—A. No.

Q. It is not so?—A. No.

Q. And that the Grand Trunk should pay a rental for whatever use they made of those shops for the Western division.—A. I do not think it was so.

Q. Nothing of the kind?—A. Nothing of the kind. We built those shops for the Eastern division and we had no right to do anything else. We could have made an agreement for the Western division, but the shops were essential for the Eastern division. I do not know any railway company of any importance that has not got its own shops, and we started to build shops for repairing locomotives. Afterwards we were asked to build repairing car shops, coaches, and so on; and we made provision for that later. At first they were asking us to build more than that. Morse had very big plans for constructing car building shops, and I said, we cannot do that, all we can do is to get shops to repair cars and locomotives, you cannot have shops to build cars, but only to repair them. They were not satisfied with what we had done. They thought we should have got much larger shops for locomotives and also for building cars. Incidentally, I presume that when the Grand Trunk Pacific has finished the Eastern division, they will take control of and operate the Western division. Nothing will prevent them repairing their cars in the Transcona shops.

Q. Will you tell me why it is that when they agreed to supply the rolling stock and keep it in repair at their own expense, the Government supplied them tools and machinery for doing it?—A. The law says so.

Q. No.—A. If you read Sections 14 and 15 you will find something to that effect. They are only bound to furnish their rolling stock.

Q. They are bound to maintain the line themselves?—A. You will find out there is a reserve by which the Government has the right to make permanent improvements, even during the lease, to be charged up to capital account.

Q. Shops are not mentioned once, for the Eastern division.—A. Terminal facilities includes everything. We had the right, by law.
Q. You have not to provide terminal facilities, only land for terminal facilities. Accommodation only means holes through the tracks, and things of that sort.—A. The general opinion of the law is that you have to build shops. They are only, bound, themselves, to build rolling stock.

Q. My opinion is that you should not have built the shops at all, but you built shops there that you could make anything in. You will not find any shops mentioned in that agreement at all?—A. If the Government was operating the line, they would require shops.

Q. So they would, and they would require cars too?—A. Of course, there is a clause (No. 47 I think it is) modifying the Act. You seem to doubt whether we could build shops. We discussed it at the time with the Minister of Justice and members of the Government, and we came to the conclusion that we were bound to build the shops. That is why we did it. They referred the matter to Sir William White, but whatever Clause 47 says is binding on everybody.

By Mr. Guletius:

Q. With reference to letting the contract, District F, to McArthur. When the tenders were received, it was found that McArthur's tender contained a great many blank spaces for prices, which required that they be filled in or that his tender be thrown out. Mr. Lumsden tells us that he filled those prices in with the knowledge and consent of yourself. Do you remember that transaction?—A. No, because at the time I had protested against it.

Q. You had protested against it at that time?—A. Yes, at that period, and he explained that it was necessary to put in the prices to make it a bona fide tender. I was, as I said before, against those tenders, against McArthur's and all the others.

Q. Now stay with the red figures. Did you finally agree to let the red figures that were put there go in?—A. The chief engineer did not ask me to do it. At that time I was a new man to him, and he was more familiar with the other Commissioners than myself. Mr. Reid and Mr. Young were before me and I was a comparatively new man. He said it was perfectly regular to do that for everybody.

Q. Did it strike you as though it were not regular?—A. I just asked for an explanation about it and he satisfied me it was the right thing to do, and I thought, at the time, that being the lowest, the Government perhaps gave the contract to the Grand Trunk Pacific at McArthur's prices.

Q. Suppose it had been pointed out to you that McArthur was not the lowest tenderer excepting for those red ink figures. Would you have taken any firmer stand in connection with putting them in?—A. Then he would not have been the lowest tenderer.

By Mr. Lynch-Staunton:

Q. You would have got rid of him if you had not put those figures in?—A. I was against them all the time, but you have to rely on your engineer. MacPherson made the figures, I think. Lumsden didn't.

Q. He signed the paper, though.—A. But MacPherson is the guilty party.

By Mr. Guletius:

Q. But you all knew of it?—A. I did not know of it at all.

Q. You knew they had put those red ink figures in?—A. Afterwards.

Q. But you did not know at that time that the red ink figures gave McArthur the contract?—A. Oh, certainly not. If what you are telling me now is correct, that but for those figures McArthur would not have been the lowest tenderer, I would not have accepted him.

Q. Well, it happens that if those red ink figures had not been put in, the contract would have been given to the Pacific Construction Company and the Government would have saved $400,000 on the final estimates?—A. My report was in favour of the Grand Trunk Pacific.
Q. This is the Pacific Construction Company, Fauquier's, I think. You did not know anything about this at that time?—A. Not at all.

Q. And if you had been advised that the red ink figures filled in here meant that McArthur was getting the work for which he was the second lowest tenderer, you would have made a row about it?—A. I was, at that time, making a row, by objecting to this tender.

Q. That was on general principles, and not on this detail?—A. No, but I would have taken action to have these contracts rejected. If I had known that it would have supported me in my position.

Q. You would have taken advantage of that?—A. Yes.

Q. Now in the printed specification, you include on page 4 engine houses and section houses, but you do not show prices for engine houses or section houses in the description of the work to be done?—A. No.

Q. Your personal attention was called to that by your secretary, Mr. Ryan, in a letter dated January 25, 1906, in which he says: "I cannot find, in our schedule of prices, items calling for prices for buildings such as depots, section houses, shops and round houses," but you continued to let those words remain in all the subsequent specifications, and as a result paid for those engine houses about twice as much as, in our judgment, they would have cost if you had let the contract for engine houses separately. What defence have you to offer for that?—A. I have no defence, because I think we were right.

Q. You think you were right in letting a contract for buildings that would have cost over $100,000 and not asking for prices?—A. You could not, at that time, put an initial price on an engine house, because you could not tell where it was to be built and what kind of plan it would be built on; and at the same time we thought that the contractor who had the main contract could do that work later on at prices agreed on by our engineers, with the help of the Grand Trunk Pacific engineer, and thereby get better conditions. I do not think, today, any man can say we could have built them for less money than we have, unless by calling for tenders. I think we did right, and if I were there to-day I would do the same thing again.

Q. You will be surprised then to know that one at least of these engine houses was sub-let by the original contractor, and in his evidence he told us he made $50,000 on that building?—A. You might have paid just as much if it had been otherwise, because your own contractor had the advantage of his line, over which to transport his material and supplies, and I presume he makes money by furnishing all these things to the subcontractors, and that is where a big portion of the profit would come in, but another man could not do it. When a man has not the difficulty of transportation, that helps him to make money; and as I said a minute ago, all those contracts have been given through MacPherson, generally speaking, fixing prices with the contractor and the chief engineer of the Grand Trunk Pacific, and if they are not good judges of what they have done, it is their fault. Our engineers were supposed to be good men who knew what they were doing.

Q. But their hands were tied when the contractor knew he had to build the houses, and that you had to pay such prices as he demanded?—A. We never consented to agree to the prices they demanded. They have, of course, brought down figures a good deal. On a couple of occasions they came to me and I said they had to agree to the engineers' prices, and they were forced to take them too.

Q. Now, in connection with the La Tuque pusher grade. Your engineers recommended that 34 miles of .65 grade, constructed immediately west of La Tuque, instead of four tenths, would have saved the Commission about $500,000. You recommended to the Government that you would be permitted to construct this steeper grade at that point, did you not?—A. We did.

Q. You took the matter up with Mr. Hayes of the Grand Trunk Pacific?—A. Yes.
Q. And he was willing that you build it, was he not?—A. You have his letter on record. The tenor of his letter left the thing open, and I thought, in a way, it would be just as well to have a four tenths grade all along, but did not object. At the same time, he was satisfied to submit to the Government view.

Q. The argument that he gave, for building it four tenths, reads as follows: "In my opinion, however, the Commission should carefully consider the effect upon the minds of the public, regarding the Transcontinental Railway, which has been widely advertised as being the only low grade line from the Atlantic to the Pacific, with the definite statement to the effect that the maximum limited would be limited to four tenths of one per cent east of the Rocky Mountains." You remember that clause in his letter, do you not?—A. Yes.

Q. That seems to be, you, the real reason that you have advertised the line as being a four tenths?—A. Yes.

Q. Then the Government instructed you, did they not, to build four tenths?—A. Yes. After that I saw Mr. Hayes. He came up to Ottawa and told me he would prefer to get a uniform line, although it would cost more. It was on that we made no recommendation.

Q. The Government decided not to approve any pusher grades in the line between Quebec and Winnipeg?—A. Yes.

Q. And on account of that decision you refused to consider the opportunity to save $240,000 by introducing a pusher grade east of the Chaudiere. You remember Mr. Lumsden wrote to you about it and said in his letter that in view of the La Tuque decision he did not suppose there was any use in taking it up with the Government?—A. He was right too.

Q. And that had the effect on the minds of the Commissioners and the engineers?—A. We made up our minds that it would be a four tenths, regardless of cost.

Q. And that the Grand Trunk Pacific would agree?—A. Yes.

Q. Just one more question, and that is in regard to the selection of engineers for the manning of the engineering department. We have been told that Mr. Lumsden's recommendations for engineers were always based upon the selection of men made by the various members of your Commission. Did you interfere at all with the personnel of the men in the field?—A. When I came on, the engineering staff was all engaged, and working. Very few were chosen afterwards, except in the case of a man resigning or death, but the bulk of the engineers, those who were on the line, were appointed before I became Chairman.

Q. So that your answer is that there were very few changes after that, and in those changes the various members of the Commission did have some influence?—A. I do not think we had much to say about the appointment of engineers, except in one case, when we appointed Grant. Other than that, I do not remember any case where we forced on Mr. Lumsden anybody that he did not like.

Q. He did not make any protest?—A. Not that I remember. He did not like it when we appointed Grant, but we thought we required an inspector, to report very often to the Board, in view of the complaints prevailing. Mr. Lumsden was an old man and could not get out on the line himself very often, and consequently we had no accurate information by which to govern ourselves. That is why we appointed Grant as engineer.

MR. GUTELIUS: All right. That will do.

Witness discharged.
(EVIDENCE TAKEN IN N. T. R. OFFICES, AT QUEBEC, MARCH 14TH, 1913.)

E. A. Hoar, sworn:

By Mr. Gutelius:

Q. You were Division Engineer of that portion of the railway on which the Cap Rouge Viaduct was being constructed, were you not?—A. Yes.
Q. At the time of constructing this bridge the question arose as to the character of foundations and the kind of structure which would be used over the Cap Rouge River?—A. Yes.
Q. And when you were discussing the various kinds of foundations and the method of building, you secured from Messrs. M. P. and J. T. Davis a preliminary estimate, based on unit prices, did you not?—A. Yes, they made three estimates to handle that foundation work three different ways, and not only the estimate of cost, what they would do it for, but the time it would take to do it.
Q. With reference to the first estimate which you used in preparing your figures for the chief engineer, you recall a letter or memorandum which they sent you and you sent to Mr. Uniacke not a bid, simply figures to be used in the estimates. Do you recall that? I show you a memorandum dated October 27th, 1906, signed by M. P. and J. T. Davis. Just turn to the letter immediately preceding that, October 31st, which you wrote to Mr. Lumsden, enclosing this memorandum?—A. That recalls the whole thing: that is all right.
Q. With that letter and memorandum, you then discussed the matter with Mr. Uniacke as to how these piers should be constructed, and, on account of the low price of the pneumatic caissons, were of the opinion that that would be the proper thing to do?—A. Yes.
Q. Then you asked Mr. M. P. Davis for an official tender, for official prices, that could be used in the contract?—A. I think they asked him for that, yes.
Q. I show you a copy of his final tender. What is the difference between the final tender and the original estimate in the matter of excavation. Refer to the prices under "Pneumatic foundations" in the estimate of October 27th. What was to be the price per cubic foot for excavation in that estimate?—A. Forty cents.
Q. What is the price for the same work in the final estimate?—A. 70 cents.
Q. Timber in caissons in the original estimate was at what price per cubic foot?—A. He has not any price for timber at all.
Q. What is this?—A. 80 by 40 by 25: that is the price for the timber in the caissons.
Q. What was the price for timber in the final?—A. That is not the same thing. You would have to take that money for the timber in the caissons and divide it by the cubic contents in this estimate to get that.
Q. Refer to concrete. What was the price for concrete in his original estimate?—A. That is 75 cents.
Q. What did they finally put in the timber?—A. Same price.
Q. In the crib what was the original price?—A. I do not know what it is here: 44½. That is 44½, I suppose.
Q. What was the final price?—A. 55 cents.
Q. And concrete?—A. 45 cents.
Q. And what was the ultimate price?—A. 60 cents.
Q. So that the prices were, in the final bid, very much higher than in his estimate?—A. Yes.
Q. What effect did that higher price have on you when you were considering the character of structure? Were you surprised to receive such a high tender, in view of the low estimate?—A. It occurred to me first that there had been a mistake made somewhere: that is all. I thought there was an error some way in figuring.

Q. You thought they must have made some mistake?—A. I thought there was some mistake in figuring in one estimate or the other at first: I did not know which.

Q. But after you saw those higher figures you were ready with Uniacke then to change the design, were you not?—A. Yes.

Q. And while you were figuring on changing the design you were called down into Mr. Parent’s office, and he then took the bit in his mouth and told you it must be caisson work: is that right?—A. I am not quite sure where it came from, exactly who said it, but I know caisson work was decided to be the work by somebody, I do not know whether it was Mr. Parent, or who it was: it was settled by Mr. Parent and Butler and Uniacke, between them.

Q. You must remember very vividly that day you were called down: M. P. Davis was there, Mr. Parent was walking up and down the room, and the two of you came in, and he wanted to know what business you had to talk about changing this plan, that caissons were to go, and to get out and do it: is that about it?—(No answer).

Q. Read the fyle and consider it, and see if it is a fair statement of the case, if you recall it, and if you find anything that you think is not right, mark it, and we will talk it over. (Witness retires.)

(EVIDENCE TAKEN IN N. T. R. OFFICES, QUEBEC, MARCH 14TH, 1913.)

E. A. HOAR, Recalled:—I have refreshed my memory, and wish to make the following statement:

Statements in Mr. Uniacke’s letter, May 31st, 1912, are substantially correct, to the best of my recollection, except respecting myself, when I was called to Ottawa December 22nd, 1906, I did not see comparative designs A. B. C., or any estimate showing cost of a long span to dispense with river piers. Mr. Uniacke showed me Mr. Davis’s figures for foundations and piers before going to Mr. Butler’s office, and I understood him to say that Mr. Butler considered them fair and had approved them. At a meeting at Mr. Butler’s office the question of construction was discussed for saving time and cost as well. Mr. Butler favored a single span as being the most expeditious, but no figures were given, nor had any estimate been made to my knowledge at the time. Nothing in the conversation conveyed to me any positive decision to change the river piers, but a suggestion to get rid of the latter work for one span. Not having any figures at my disposal for comparison, I was more or less insistent in trying to get one pier cancelled, as apparently being less disturbing to agreements made. After returning to Uniacke’s office to consider proposed changes, the Chairman sent for us to say that no further changes could be permitted, as it would cause too much loss of time making plans, going back to council again, and submitting revised plans, and the delay to the Quebec bridge might be considerable, if such a course were adopted.
Present:  G. Lynch-Staunton, Chairman; F. P. Gutelius.

Mr. M. P. Davis, called, sworn and examined

By Mr. Gutelius:

Q. You took a number of contracts on the Transcontinental Railway during its construction. Can you give us the larger contracts that you were interested in as constructor?—A.  The first one is known as No. 9.  No. 9 was from the Quebec Bridge westward fifty miles. The next was contract 8 from the Quebec Bridge eastward 150 miles. The next was contract 7, from the 150th mile to the New Brunswick boundary, about 52 or 53 miles. The next were contracts 16 and 17 west of Cochrane.

Q. Contract 9 was let originally to Hogan and Macdonell?—A. Yes.

Q. And you afterward took that contract over?—A. No, we took fifty miles of it.

Q. Were you interested with Hogan and Macdonell in the original tender?—A. No, sir.

Q. How did you happen to take that 50 miles?—A. Mr. Hogan backed out of the contract and A. R. Macdonell, now dead, came down to my office and asked me if I would join as partner with him and O'Brien on the whole contract. I said I never went into partnerships of that kind, but that I would take fifty or seventy-five miles, or I would go as far as what we call Harvey Junction where we pass on the C. N. R. There is a road across there.

Q. Yes, the C. P. R.—A. No, it is not the C. P. R. It is a road running from Montreal to River Pierre.

Q. The Canadian Northern?—A. Yes; it is now called Harvey Junction on the Transcontinental. So, he agreed to let me have the first fifty miles.

Q. You got the same prices?—A. Exactly the same prices. I signed the same contract.

Q. So, you actually took over that portion of their contract the same as if you had been on the original tender?—A. The same as if we had been on the original tender.

Q. You constructed what is known as the Quebec Branch from the yard at Ste. Foye down in Quebec?—A. Yes, sir.

Q. We did not find that there was any competition in the way of tenders for that contract. How did you happen to get it?—A. I was the original contractor for the Quebec Bridge and Railway Company from Quebec to the north abutment of the Quebec Bridge, for the Quebec Bridge foundations, for the road from the south abutment of the Quebec Bridge to a junction with the I. C. R. When the Dominion Government took over the Quebec Bridge Company, they assumed my contract and then they turned the contract over to the Commissioners. That is all in the contract. The reasons are all given in the fyle of the contract for No. a In that contract, in all of the original documents held in the Commissioners' office, I signed off all rights and claims under the old contract.
Q. The old Bridge Company being released?—A. The Government absolved
the Bridge Company.
Q. Do you know what is known as the Sillery incline?—A. Yes, sir.
Q. That is a roadway constructed from the hill under the old church at
Sillery down to the right-of-way? Under what conditions did you get that job?—
A. Simply ordered to do the work by the engineer as part of Contract 9A.
Q. Was it paid for in unit prices the same as Contract 9A?—A. Under 9A.
Q. As far as you know it was a portion of work under 9A?—A. Yes.
Q. And you were paid for it under your contract basis?—A. Yes.
Q. Did you have any property along there? Do you remember any property
that was used for the construction of this incline?—A. Yes, the whole of it was
on my property. They removed some houses.
Q. Do you remember what you were paid for this property?—A. Never paid
me anything; never even offered me anything.
Q. That matter is still open?—A. (Witness nods assent.)

By the Chairman:

Q. Speaking of what Mr. Gutelius asked you about the Sillery incline, I am
told that it was built by the Commission because a number of influential gentlemen
in Quebec asked that it should be built. Do you know anything about that?—
A. Yes, your information is good.
Q. And that it is not really a part of the railway?—I don't mean to say now
you were one of the gentlemen asking for it?—A. I certainly was not one of those
gentlemen who asked for it.
Q. I don't want to make that out. It was no part of the railway, was it?—
A. Well, it was a part of the railway, when the same is in diversion of any road.
Q. But they did not divert the road?—A. It was a diversion of the road.
Q. The two roads are there yet?—A. One was abandoned.
Q. Is not this the fact, that on the Sillery hill there was an old kill-horse
road?—A. Yes.
Q. And that when the railway was built a number of influential gentlemen
in Quebec waited upon the Chairman?—A. You are getting beyond my knowledge.
Q. Is it not a fact, that the building of this road was simply to improve the
means of communication from the top to the bottom of the hill?—A. I do not think
so.
Q. What reason was it for?—A. Because the foot of the old road came so
close to the railway that I have heard the argument that it would be dangerous to
drive horses down that hill with a train coming up against them.
Q. Do not the two roads meet at the foot of the hill?—A. No, sir. The
foot of the two hills is quite a distance apart.
Q. How close to the foot do the two roads come together? Where the
man drives down the hill on the old road he comes within how far of the
railway?—A. I would not say how far, possibly a hundred feet.
Q. Where a man drives down to the foot of the hill, how far is the new road?—
A. Nearer three hundred feet.
Q. So that they were 100 feet away on the old road and 300 feet on the new?—
A. Yes.
Q. And the new road is how far from the railway lands?—A. It would be
about 250 feet. They have 100 feet right-of-way.
Q. Have you any claim for the land on which the new road is built?—A.
Most certainly.
Q. What did you claim?—A. I have not put in my claim yet.
Q. What do you think it is worth?—A. Seven or eight cents a foot.
Q. What does that mean in dollars?—A. I could not tell you just now.
Q. Was it expropriated by the railway company?—A. They took pos-
session and built the railway, and pulled down my houses.
Q. The position was, that you, under the instructions of the Commission, built a public road on it?—A. Of the engineers.

Q. Built a public road on it. I think you will have some difficulty in getting paid for it?—A. I am not afraid of that.

By Mr. Gutelius:

Q. In connection with the method of constructing deep foundations at Cap Rouge, where the railway is carried across the Cap Rouge River, it appears from the evidence we have taken that these foundations were not built in accordance with the engineer’s original scheme, and that after a discussion which you had with Mr. Parent, a proposition which you had recommended, and method, was adopted. Is that, in a general way, right?—A. No, sir.

Q. Will you tell us the story of that?—A. The plan set down for these two piers in the river was first on piles with a bottomless caisson on piles. In the first place, there were some 30 or 40 feet of almost liquid mud there. This plan was piles driven in the mud and a bottomless caisson filled with concrete. Now, we have a tide 15 or 18 feet there, and I said I would not be responsible for putting concrete in a bottomless caisson with the water flowing through it four times a day. Then they suggested a bottom in the caisson to land on the piles. I said I would not be responsible for that, because the current would shoot the mud out between the piles. We had considerable discussion with Mr. Lumsden. He asked me what method I would agree to. I said: “Put in a pneumatic foundation.” He did not want to agree to that. After a while, the whole Commission met in Quebec. Lumsden was there; Woods, for the Grand Trunk;—I don’t know whether Kelhiher was there or not. I said: “Gentlemen, I won’t be responsible for the structure or its foundation if it is built on either one of these foundations; but you can take that piece of work out of our hands and discharge our contract and do it yourselves. I don’t want to do it for you by the day under those conditions, but cut it out, and go ahead and do it yourself.” Then Lumsden was asked: “Now, Mr. Lumsden, you give two propositions there for building those piers. Will you undertake to assure the Commission and guarantee them that either one of these propositions will be a safe foundation?” But he said: “I will not.” I was asked the question: “Certainly, if you build a pneumatic foundation you will naturally go until you are satisfied your foundation is good?” And I replied: “If we get a good foundation I will guarantee our work.” Mr. Lumsden said: “We want a safe bridge;” and undertook to arrange that the contractor should put in a pneumatic foundation. Then the next point we came to: Mr. Lumsden even then had designed a caisson for the pneumatic foundation. His design of the caisson was the peak, fore and aft, and that only gave us a foot on the lap at the shoulder. I said: “I won’t build that caisson if we get leaks in that we have on that shoulder no strength; give me a square caisson. So he said: “Well, gentlemen, pneumatic work is outside of my line; if Mr. Davis will submit a plan of caisson he will guarantee to put down there, then we will agree to take it.” Well, I was after building the Quebec Bridge and I submitted a plan, just the Quebec Bridge, only modified for a load, where we had four or five feet of a roof on the Quebec Bridge we had only two feet on that caisson. Our sides were only 20 inches altogether, and we reduced them all in that way. Then these plans and designs were submitted to Mr. Lumsden and he took them to Mr. M. J. Butler, then chief engineer and Deputy Minister of Railways and Canals, and he made some modifications and actually made the prices we worked on.

Q. There is some criticism of prices. You first gave the engineers an idea of detailed prices without a tender, and then later you made a tender?—A. I think they were not detailed prices.

Q. But the final detailed prices were very much higher than the first prices that were given to the engineers?—A. The prices, sir, were made by Mr. Lumsden and Mr. J. M. Butler. I think any prices that were made would have been the prices per yard, take it all round.
By the Chairman:

Q. Mr. Uniacke says you first put in a price: that was a price which was a little more than the plain caissons: that, afterwards, you increased that price so that it brought it up to two hundred thousand dollars more, and that Butler refused then to act on them, and the matter was then sent to the Chairman, and the Chairman and you were in his room in Ottawa, when Uniacke—and this is according to Uniacke's statement to us—was sent for and he came down and the Chairman told him he was to build the caissons in that way at those prices.—A. I must contradict him absolutely and positively.

Mr. Gutelius: There is no doubt the figures that were finally agreed upon were passed on by Mr. Butler?

The Witness: Yes.

Mr. Gutelius: But as to how that was arrived at your side of the story, while there may be some variance, finally lands at that place, at any rate.

By Mr. Gutelius:

Q. The special point that we desire to call your attention to, Mr. Davis, is that you gave a tentative figure on which the engineers estimated. They then agreed that pneumatic caissons were the proper things to build. You were then asked for an official tender. This tender was so much higher than the tentative figures that the engineers decided that they would adopt some other method, as it ran the total cost too high to make the caisson method the proper and economical one. It is said that, after the engineers agreed to change the plan, you went to Mr. Parent's office and had him instruct the engineers to build the caisson and accept your final prices. What have you to say?—A. I never in any shape or form, made any request of Mr. Parent to build the foundations of that bridge or to build those piers in any one way or the other. The only point that I ever raised was, that I would not be responsible for the work being built either on a pile foundation with a bottomless caisson or on a pile foundation with a bottom in the caisson, and that we preferred to have them take that piece of work out of our hands and build it themselves.

Q. So, we are wrong in the assumption that you used any influence with Mr. Parent to adopt a given plan in connection with it?—A. Positively so.

Q. We are advised that the original plans for the piers and abutments of the Boucanne River Bridge contained groins and arches, or voids, and that you explained the matter to Mr. Parent in such a way that he over-ruled the engineers and it was built in the solid. What is the story of that?—A. The original plans of the piers were solid. After we started the work, they sent down plans showing these voids and openings in the abutments and piers and we refused to build them on the prices of the solid piers.

Q. Because?—A. Because the cost of forms was a great deal more. We were even ordered to build a solid pier and paid the neat measurement of the one with the voids. And then we were ordered to go ahead and build it on the original plan.

Q. And you arranged that through the Chairman?—A. No, sir; with Mr. Doucet.

Q. Now, with reference to classification. Did you ever know a solid rock specification in which was included rock fragments less than a yard, and paid for as solid rock in this manner?—A. No, sir.

Q. Were you aware at the time you tendered on these contracts that the solid rock specification would be construed to include these small rock fragments?—A. Yes, sir; we judged so under the specification of cemented material.

Q. It would appear from the evidence that you had access to the engineers' estimates prior to making up the tender for contract 8. Did you have those quantities?—A. No, sir. No information other than the plans and profiles for which we paid a dollar a mile. They were issued to everybody.
Q. In connection with any of the contracts which you secured, you did not have any private information in regard to quantities?—A. No, sir.

By the Chairman:

Q. Why did you put in your tender eighty dollars for timber?—A. As a fair value. That eighty dollars calls for either Southern pine or British Columbia fir. I think it calls for it in large sizes, 10 x 16 or 12 x 16 stringers, and that timber would have to be hauled twenty or thirty miles.

Q. It is the only contract in the whole construction of the Transcontinental Railway that the tenders for timber went above $55?—A. I am not responsible for that. But I submit today, Mr. Gutelius, could you take Southern pine 10 x 16 or 12 x 16 and haul it twenty-five or forty miles from a railway, and put it in place at $55? In the first place you pay about $35 per thousand.

Q. Why didn’t you repeat that $80 bid in other contracts?—A. I could not say.

MR. GUTELIUS: This was more difficult of access, possibly.

THE CHAIRMAN: This was the easiest one of access.

By the Chairman:

Q. The items are:
   No. 24. Frame trestles per 1000 feet B.M., except stringers.
   No. 26. Caps, walings and braces for pile trestles per 1000 feet B.M.
   No. 27. Sawn ties and guard rails for bridges per 1000 feet B.M.

Now, these are the items on which you bid $80, and there are no contracts on the whole line where any price was bid over $55 for the same work. (Consulting papers). $30, $45 and $60 for stringers in one case. Will you explain on that contract, which was not as inaccessible as many others, how you bid such a price with any hope of getting the contract?—A. The only thing I can say, when we bid that price we thought it was a fair price for the work.

Q. I could understand that bid, Mr. Davis, if you were aware of the fact, as the fact was, that at the time you made that bid the engineers’ estimates comprised no item for that material?—A. I did not know anything about that.

Q. Do you swear you did not know directly or indirectly, that they did not intend to use that material on that contract?—A. Positively, sir. One thing I can tell you, that the profiles we got from the engineers’ office certified to, did not show one foot of permanent trestle.

Q. Do you say that you did not know from any source, outside of the legitimate material submitted to you, that the engineers did not contemplate the use of that material?—A. Most positively, no, sir, I did not. I had no information or no idea of it other than information we got from the profile which did not show any trestles on the line.

Q. And you inferred or concluded that it was not intended to use that material?—A. No, sir, we did not. We bid that as a fair price for the work if it was required to be done.

Q. Did you ever bid a price approaching that on any other contracts for the same material?—A. I could not tell you that without having the contracts.

By Mr. Gutelius:

Q. In connection with contracts 16 and 17, there were two contractors tendering, M. P. and J. T. Davis and the Grand Trunk Pacific Railway. Was there any arrangement between you and the G. T. P. Ry. in connection with these contracts?—A. No, sir.
Q. You sublet these contracts to Mr. M. J. O’Brien and his associates?—A. Yes.

Q. Was there any arrangement between you and M. J. O’Brien in the tendering for these two contracts?—A. No, sir.

Q. M. J. O’Brien did not know he was going to get that contract if you secured it?—A. No, sir.

Q. In subletting your various contracts, did you use the same clauses with your subs that the Commission used with you, in connection with the plant becoming security for the completion of the contracts?—A. We made our specification with the Commissioners a part of the contract with every sub. We used the specification entire.

Q. So that the answer to that is, yes?—A. Yes, that is, in this way, Mr. Gutelius. We held our subcontractors’ plant for the purpose of completing the work, not as a matter of security, only for the purpose of completing the work. When the subcontractor’s work is completed we do not claim any lien on his property: we are only the same as an ordinary creditor.

Q. But the Commission would have the same hold on the subcontractor’s plant?—A. As if it was owned by us.

Q. In connection with that 80 dollar lumber, did you know that the first moneyed out tenders were sent back from Mr. Parent’s office?—A. No, sir.

Q. You had no knowledge of any switching or moneying out at that time?—A. No.

By the Chairman:

Q. You sublet part of contract 7, did you not?—A. We sublet the whole of it.

Q. Have you got any sub-contracts?—A. We have contracts with all our sub-contractors.

Q. Will you produce the sub-contracts for contract 7?—A. Yes, sir.

Q. I want to know whether or not there was ever any pressing by the Commission to you to commence the work on contracts 16 and 17?—A. No, we got that contract.

Q. Yes, but I am just asking you that. I enquired from Mr. Ryan and he tells me there was not. I just want to have a confirmation of it on your part.—A. I do not think so.

Q. Do you know whether or not there was ever any pressing or urging by the Commission to O’Brien and Co. to speed the work after they obtained assignments of the contract?—A. No, sir.

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY

GENERAL INSTRUCTIONS

From the Chief Engineer to the Staff, Explorations and Preliminary Surveys, Location and Construction.

ORGANIZATION.

The organization of the Engineering Department is as follows:—
1. Chief Engineer, reporting to the Commissioners.
2. Assistant Chief Engineer, reporting to the Chief Engineer, and in his absence acting in his place.
3. District Engineer, reporting to the Chief Engineer, with jurisdiction over the parties in his District.
4. Assistant District Engineer, in charge of a number of parties, reporting to the District Engineer.
5. Division Engineers, reporting to the District Engineer, and on construction in charge of a number of residencies.
6. Engineers in charge of parties on Exploration, Preliminary and Location Surveys, reporting to Assistant District and District Engineer.
7. Resident Engineer, in charge of a residency on construction, reporting to the Division or District Engineer.
8. Engineers entrusted with special duties, such as buildings, water service, bridges, etc., reporting to the District Engineer or Chief Engineer as may be instructed.
9. The Districts to be designated as A, B, C, D, E, F; the party will be numbered 1, 2, 3, etc., and the proper naming will give in every case the letter of the District and the number of the party.

DISTRICT ENGINEER.

10. The District Engineer is in full charge of all the parties in his District; he is responsible for the faithful execution of all instructions, general or special, which may be given from time to time, as well as for the proper maintenance of discipline in the parties. He will see that the Engineers in charge of parties are properly instructed, that they are competent men, and that they faithfully perform the duties entrusted to them; he will instruct the Commissariat Officer from time to time as to the stores required and will make all requisitions for supplies so as to give ample time for purchasing and delivering same; he will certify to all accounts, pay rolls, etc., and send them in to the Chief Engineer on the first of every month; he will report to the Chief Engineer monthly, and oftener when opportunity offers, on all matters of interest affecting the work in his District.

It will be his duty to know the general character of the country through which the line is being run and to see that ample exploration is made in advance of the preliminary lines.

District Engineers will send fortnightly to the Chief Engineer, from the Reports received by him from his Engineers, as called for in Section 12, a full report of all the work done in his District.
On the first of every month, he will summarize to date all matters bearing upon his operations, giving progress being made, and such other matters as are of interest and value affecting the work.

He will forward to the Chief Engineer, duly approved, pay-rolls, expense accounts and bills.

He will take a blue print copy of the plans and profiles received and forward to the Chief Engineer's office the original tracings.

ASSISTANT DISTRICT ENGINEERS.

Duties

11. The Assistant District Engineer has in his charge the number of parties allotted to him by his District Engineer; he will make his headquarters as near the centre of his operations as practicable, and will at all times keep in close touch with all parties under his direction; it will be his duty to guide and direct the Engineers in charge of parties, to see that they are competent and that the work is being efficiently done; he will visit the parties frequently and will remain with them for such lengths of time as will enable him to reach just conclusions; he will report by mail to his District Engineer on every available opportunity, but in every case on the first of every month, on the operations of the preceding month.

ENGINEERS IN CHARGE OF PARTY.

Size of Party

12. The party in a bush country will usually consist of a transitman, levelman, topographer, field draughtsman, rodman, two camp men, picketman, four axemen, five packers and a cook. The Engineers in charge will be responsible for the

Competency

honesty, sobriety, industry and "competency" of the men under their charge, and they must give "personal attention" to see that transitmen, levelmen and others understand their work and are conscientious in its performance; they must give special attention to see that instruments are kept in adjustment; that all possible checks upon the accuracy of the work are used, and that note books are neatly and accurately kept; that the plans and profile are plotted up every day; that the party is well supplied with instruments, tents, stationery, provisions, and that all the tools and outfit for the proper and vigorous prosecution of the work are on hand in good order.

Supplies

They must see that their camps are neat and orderly, and that the cook uses provisions economically, and cooks the food neatly and cleanly.

Cooking, Etc.

Engineers in charge of survey parties will make a report fortnightly to their District Engineer, to the extent of their operations during the preceding two weeks; sending in tracings of plans and profiles, prepared in accordance with the sample sheets Plate "C" and "D".

On the first of every month he will summarize the work done to date, by filling out the blank spaces in form 21; together with any special matter of interest or information. He will send in his pay-rolls, expense accounts and all bills for service or materials in quadruplicate. He will certify to the correctness of the pay-rolls and the bills will be certified to on the following forms:—

Stamp A

"I hereby certify the above personal expense account to be correct and to have been incurred by me on the business of the Trans-Continental Railway."

Stamp B

"I certify the above goods have been received."

Stamp C

"I hereby certify the above board bill to be correct and to have been incurred on the business of the Commissioners of the Trans-Continental Railway, and that the prices charged are fair and just."

Stamp D

"I certify that the service described in the above account has been performed, and that the price charged is fair and just."

Stamp E

"I hereby certify that the goods mentioned in the above account have been received, and that the prices charged are fair and just."
Stamp "A" is to be used in certifying to personal expense accounts when the Stamp A" regular form stamp is not available.

Stamp "B" is to be used in certifying to the receipt of supplies, etc. Stamp B"

Stamp "C" is to be used in certifying to board bills. Stamp C"

Stamp "D" is to be used in certifying to accounts for work performed, such Stamp D"
as teaming, etc.

Stamp "E" is to be used in certifying to accounts for supplies purchased Stamp E" by the Engineer in charge.

13. Whenever the Engineer in charge of a party finds it necessary to leave the party, or in the event of sickness, he shall at once notify the Assistant District in Charge Engineer, who will appoint a person to temporary take charge of such party, and in case he fails to do so, or during the interval of such appointment, the Transitman shall take charge.

TRANSITMAN—DUTIES.

14. The Transitman on beginning his work will first enter in his field book, Field Book Entries the letter of the District, the number of the party, the name of the Engineer in charge, his own name and the date on which the work began; each page shall be separately dated and initialed; he shall make full note as he proceeds of the character of the country, soil, rocks, lakes, creeks, timber, gravel pits, etc., on each side of the line. All the field notes must be clearly entered in pencil on the spot; no additional notes should be entered with the original notes after the day on which the latter are written; field notes must not be inked in or altered in any way—Plotting Plan Profile How entered copies may be made in ink. All plans and profiles must be plotted so that the end of line nearest Winnipeg shall be at the left hand of the paper and the end nearest to Moncton shall be at the right hand of the paper, regardless of the local sinusities of the line.

Horizontal scale shall be 400 to an inch. Vertical scale shall be 20 feet to an inch. Ten miles to the sheet.

The transit instrument is to be used on all lines, when the progress of the party will not be retarded thereby; in an open country it is the quicker instrument; in thick bush on preliminary lines use the compass or pickets, taking the angles with the box sextant or by compass bearings, or both. Observe for latitude and azimuth, noting the magnetic variation of the compass—check your azimuth frequently so as to insure a close check on your traverse. Measure your deflection angles carefully, noting whether right or left check by doubling the angle; at the same time note the magnetic bearings, taking all possible checks to insure accuracy.

Tie your line to all townships and sub-division lines whenever crossed, give the Survey Tie station number and plus, intersection angle, distance to nearest post; when the line runs through a village, town or city, take enough measurements and angles to correct the survey with the map of the place, send a copy of such map to the Chief Engineer's Office; note carefully all property lines and locate all buildings that are near to the line.

Test your chain with the 50 foot steel standard supplied. See that it is kept of Chaining the correct length; the chaining must be correctly done and a stake driven at the end of each hundred feet, and the number of chains from the starting point of the party marked thereon. The initial stake to be marked with the letter of the district and the number of the party.

At every apex a large stake shall be driven, having its proper distance and the deflection angle written thereon. The line is to be sufficiently cleared to enable levels to be taken.

The chaining will be noted regularly in the field book from the bottom of the page upward; each hundred foot stake as driven noted on a separate line; the Apex, how Marked Notes, how Entered
space on each side of the column for distance being used for such note and sketches in the right and left of the line as may be necessary in order to give the fullest possible information of the country.

Note every stream and river crossed, its size, direction, depth of water, nature of bottom, flood marks, probable maximum volume, and whenever possible the depth to solid foundation; give full particulars of banks.

**Levellers' Duties**

15. The Leveller will open his book by entering on the first page thereof the letter of his District and the number of his party, the name of the Engineer in charge and his own name with date of commencement, each morning he will date his notes and sign with his initials.

He will be careful to fully instruct his rodman as to the duties of his position. All field notes must be clearly and distinctly made in pencil on the spot, no additional notes should be entered with the original notes after the day on which the latter are written; field notes should not be inked or changed in any way; copies of them may be made in ink and reduced levels entered in ink. Great care must be taken to preserve the original field notes from obliteration.

In making entries be particular to describe the locality, line, etc., so that any other Engineer can easily find the place and understand the whole at a glance.

Bench marks should be regularly established about every 1,500 feet, and the elevation above datum written thereon thus, viz.: the elevation, letter of the District, and number the party. Each bench mark must be fully described in the column of remarks. When two parties meet both shall check on the same bench mark, noting difference in elevation.

On location the bench marks should be about every 1,000 feet and always at the two ends of heavy cuttings, tunnels, deep fills, bridges, viaducts, etc.; positions should be selected so that they will not be destroyed in the clearing of the railway lands or be interfered with by the works. They should be numbered consecutively in each party and their numbers and elevations above datum distinctly and permanently marked thereon with blue paint, and on timber with a "scribe." When the line does not pass through timbered land, and other suitable objects cannot be readily found for bench marks, substantial posts must be sunk in the ground at least five feet, and be well packed to insure them against being raised by the frost.

Note every stream and river crossed, its size, direction, level of surface of water, difference between high and low water, if practicable depth of the water and any peculiarities it may seem to possess. Note character and constituents of materials along the line for classification purposes.

Every care must be taken to insure accuracy. Check back on B.M.'s. when necessary or possible; particular care will be exacted to insure accurate reductions; teach your rodman to check reductions; read your rod to hundredths at every turning point and all B.M.'s.; on ordinary stations at intermediates on the line, to the nearest tenth; check the levels at the end of each day's work by adding back sights and foresights and ascertaining the differences; any doubtful sections must be re-levelled. Six hundred feet each way should be considered the maximum distance to read the rod.

Before fixing the final location cross sections of all side hill work will be made, and before beginning work of grading cross sections at least at every 100 feet station whether in excavation or embankment, and also at a sufficient number of intermediate points, wherever a change in the ground takes place, so as to insure a perfectly accurate record of the various inequalities of the original surface. These cross sections will extend on each side of the centre line and at right angles thereto...
SESSIONAL PAPER No. 123

a sufficient distance to include all side ditches. The levels on these cross sections shall be taken in the same manner as those on the line, always commencing at a bench mark, using the same datum and checking on a B. M. at the end of the work. The actual rod reading and distance out right or left, as the case may be, as observed in the field shall be entered in the cross section field book, Form No. 8. The customary cross section notes according to American practice, which are the result of a calculation, will not be allowed.

In all cross sections a level should be taken over the edge of the roadbed to facilitate the computation of earthwork. In excavations in earth the width at formation will be 22 feet, in rock 20 feet, in embankments 16 feet and under, in height the formation width will be 16 feet, beyond that height the formation width of embankment will be 18 feet. The side slopes in earth will be 1 ½ horizontal to 1 vertical, in rock excavations the side slope will be ¾ horizontal to 1 vertical. Rock embankments 1 horizontal to 1 vertical (see C. use 5 Specifications). Hence in earth excavations, the levels should be taken 11 feet north and south of the centre line; in rock excavations 10 feet, in embankments 16 feet and under, 8 feet north and south of the centre line; over 16 feet high, 9 feet, levels should also be taken at the precise point of the slope stake and the exact horizontal distance out from the centre line recorded.

When off-take drains are required, a longitudinal section of them must be made in the same manner as for the centre line of the railway, and if necessary cross sections also.

All profiles will be plotted on Plate A standard transparent profile paper, 400 feet to an inch horizontal, 20 feet to an inch vertical, and must contain all the information called for by the sample sheet "Plate C." Stencils will be supplied for the purpose of saving time in lettering. That end of the line nearest Winnipeg shall be at the left hand of the paper, and the end nearest Moncton at the right hand, regardless of the local sinuosities of the line; ten miles to a sheet should be the rule.

TOPOGRAPHER’S DUTIES

16. The Topographer will open his book by entering the letter of the District, the number of the party, the name of the Engineer in charge, his own name and the date.

He will carry an Abney or other type hand level, a fifty feet tape line, a pocket compass, a rod 5 feet long to sight from, a levelling rod graduated to tenths, and should generally have two men to assist in clearing out brush, make measurements, etc. He should always have with him the reduced levels of the stations so that all work will be on the same datum. He must determine the contour lines in even multiple of 10 feet, locating the position of the round figure contours, in general contour lines should be taken at 10 feet vertical intervals; he will carefully fix opposite the stake the true position of the contour line and will sketch in the connection between stakes; for example, assume that the reduced level at station 12 was found to be 976.2, the elevation of contour line 980 will be at 3.8 feet higher, etc. Note the distance to this point, 10 feet higher the next contour will be found, etc.

He will enter in his book in pencil on the ground all the artificial features met with on the line, being particularly careful to secure intersection plus and the angle the line makes with all farm lines, township lines or other boundaries, the names of the owner and occupant of any land so crossed, proximity of buildings, cross fences, etc., being careful to tie the line to village or town surveys, township and county lines, measuring to the nearest post, marking lots, concessions, ranges or other local subdivisions in use. All the natural features are to be sketched, as streams, shores, margins of swamps, forests, ravine ridges and bluffs, taking
care to have them correctly intersect the artificial features. It is desirable to know not only the locality of a hill or slope, but also its shape, steepness and height; sketch contour lines, do not use hatchings.

The centre line of the Topographer's book is a straight line and for the purpose of the sketch, the centre line of the survey may be considered a straight line also. Slight deflections in the course of the preliminary line may be ignored in the sketch, but if a large angle occurs it is better to terminate the sketch with the course and begin again, leaving a few blank lines between the two sketches. Fix the distance from centre line stake both by levels and measurements. Each day's work must be plotted on the evening of that day.

The Topographer should have a knowledge of geology and should be able to name the materials he finds, such as limestone, slate, shale, granite, gneiss, trap, clay, cemented gravel, gravelly loam, etc., etc. He should also designate in order of occurrence the several trees, such as pine, spruce, etc.

He should have an eye for the main essentials to enable him to only select the important things.

The width of the belt of country examined necessarily depends on the character of the country through which the line is being run. The reconnaissance line should have determined in a general way where the preliminary is to be run, which should be as near to a practicable railway line as possible; hence the width of the belt should be governed accordingly, the object being to secure such a representation of the surface of the ground as will enable the best possible line to be located on the ground under examination. It will be obvious, therefore, that when the preliminary line is made up of long straight lines with light angles and is within reasonably close distance of the grade line that less topography will be required. If on the contrary, the preliminary is made up of a series of short lines with great and small angles a wide area of topography should be taken in order that a careful study may eliminate curvature. On a side hill it is advisable to cover the whole slope; in a valley it is advisable to include the whole valley. The meandering of a river or creek should be carefully taken, boundaries of lakes, etc.

Note specially the presence of springs on side hills.

FIELD DRAUGHTSMEN.

17. The Field Draughtsman will plot up with care the plans and profiles each day as the notes are received by him. In plotting maps he will do so by latitude and departure. Show north point, giving astronomic courses of all lines, and marking on the map the magnetic variation. He will plot all contours with care, making every fifth line heavier than the others. He will mark on the lines the elevations in feet, referring to the datum by name. The left hand side of the paper will show that portion of the line nearest to Winnipeg. The same care will be taken to plot up profiles; the grade lines on profile will, however, be fixed by the Engineer in charge of the party. The map and profile must contain all the information called for in the sample sheets, Plates C and D.

Use the stencils provided for title and lettering to save time. Tracings of maps to be sent to the District Engineer on the first of the month. Profiles to be prepared on tracing profile paper and sent in along with the plan of the line. The Field Draughtsman must keep his work up tight to the field work, particularly on location work. The projected location should be made by the Engineer in charge.

PRELIMINARY LINES.

18. When the country along the projected route has been sufficiently explored to enable a choice to be made, preliminary lines will be run. The first preliminary
SESSIONAL PAPER No. 123

will be run as rapidly as possible; use either the transit or compass or a picket First
line for the alignment. Do not waste time backing up; this line is to develop Preliminary
the country; use offsets freely where required; cover as much ground as possible;
be absolutely sure of your levelling, checking with care to avoid errors. The
Topographer should make wide excursions so as to secure all the information
possible.

The second preliminary should be run with more care, seeking to place it Second
as closely as possible to a reasonable line for the railway. In crooked, difficult Preliminary
places, it will be necessary to stake out approximately the curves required. Topo-
graphy in such places must be carefully and accurately taken. Enough informa-
tion should be secured to permit of a projected location on the map. Take
out the quantities on this projected location and compare different lines on the
basis of total cost.

Run enough preliminary lines to be absolutely sure that you have exhausted
the possibilities of the country under examination.

LOCATION.

19. Once the preliminary lines are all completed and sufficient contours
have been taken to enable a projected location to be worked out on the map, fit
the first location to the ground shown on such projected location; run in the curves
with care; in thick bush it is not necessary to run in spiral curves; cross section
all side hills and rough places; take out the quantities accurately, and secure all
needful information to enable an accurate estimate of cost to be made. Full
and careful studies of all large bridges, viaducts, etc., should be made.

The second location will be made by utilising all the information secured. Second

The working profile will have on it the results of the first location, additional
contours required, additional cross sections, etc. Study the line in detail station
by station, paying particular attention to sections of heavy work, bridge and
viaduct crossings, having due regard at all times to lines of total cost. It is advis-
able to change the personnel of the Engineer in revision work. A third location
may be found desirable in certain cases; indeed, before considering the final
location as settled, it is necessary to know that no better line is to be had in the
country.

The preliminary locations do not demand that the stakes, reference hubs, etc.,
should be set with that degree of permanence which the final staking out requires;
for obvious reasons it is preferable to wait until the right of way is cleared before
such final staking out. All Bench Marks will be carefully checked, errors elim-
inated, curves will be staked out, all easement curves staked out, errors in chainage
eliminated, etc.

DIRECTION OF LINE.

20. For the purpose of measuring and record, the line of railway will be con-
sidered as running westerly.

PLOTTING.

21. All plans and profiles will be plotted so the westerly end will be at the
left hand of the paper.

CROSS SECTION PLOTTING.

22. All cross sections will be plotted so that the measurement north of the
centre line will be at the right hand, those south of the centre line at the left hand.
23. The same general datum should be carried throughout the whole line, preferably the mean sea level. As this may be found to be impracticable, each District Engineer will be required to see that a uniform datum is adopted for the several Divisions of his District. When the levels meet at the end of the Districts the exact difference will be ascertained and noted. District B has special facilities to secure the mean level at Quebec, so that all other Districts may be readily reduced to the mean sea level.

REFERENCE HUBS.

24. Reference hubs should be placed at the beginning and end of each curve and on tangent at every twenty stations. In placing reference hubs, it is well to fix the point b intersection lines rather than measurement. The hubs should preferably be set at an angle of 45° with the line at even distance of say 100 feet from the centre stake. When a line is near a river or lake or other obstruction, prohibiting the above described method, it is advisable to set off a line at right angles and two other lines making angles of 45° with the line and drive two or more hubs on each line at stated distance of 50, 75, etc., feet from the centre stake. The reference hub should be 3" diameter and 12" long, and should be driven level with the ground, the exact centre being marked with a nail or tack. The stake alongside should be marked with the station and plus, and such other marks as will identify the point. For example: R. H., 100' left, Sta. 106+25, B. C. 4° left.

TABLE OF BENCH MARKS AND REFERENCE HUBS.

25. Table of bench marks and reference hubs describing exactly their position, and in case of the former, giving the number and elevation above the datum of the District, must be made out and copies filed in the District Engineer's office. The position, number and elevation of bench marks should also be entered on the working profile, at their proper station and plus.

CURVATURE.

26. The maximum curve on a level shall not exceed 6° (Rad. 955'). This curve should be used sparingly and only when the topographical conditions prohibit an easier radius. At depots or stopping places curves exceeding 3° (Rad. 1910°) should not be used. Curves less than 300 feet long are objectionable, and should not be used. Reversed curves must not be used under any circumstance; at least 600 feet between transition curves must be had. Broken back curves must not be used. The minimum tangent between curves in the same direction shall be 600 feet clear of the transition curves.

COMPENSATION.

27. All curves will be compensated in accordance with the following rules: If at a stopping place, depot, etc., compensate 0.10' per degree in the index of the curve; at other portions of the line compensate 0.04' per degree in the index of the curve.

TRANSITION CURVE.

28. All curves of one degree and over will be spiralled at both ends by putting in an adjusted curve in accordance with the table and explanation which follows:
The cubic parabola as developed by the late A. M. Wellington, will be used in connecting tangents to all circular curves 1° and over. In staking out the transition curve, you will follow the rules below.

(a) Calculate for an ordinary circular curve as usual and run the tangents to the "B.C." and "E.C." as usual. (b) Make an offset at the "B.C." towards the centre of the curve (value of O); this is the distance the circular curve is moved inwards (note the distance within the limits of the table should be as great as possible); (note also that the length of the transition curve is a function of it), and that it should always be long enough to run out the super-elevation called for in the table (see Section) 62 (c) Calculate the distance the curve "B.C." should be moved backwards by formula Tan. \( \frac{1}{2} \) Intersection angle x O. (d) Run in the main circular curve as usual from the off-set "B.C." (e) From the tangent and curve as thus run in, make the off-sets shown in the tables for the given value of "O". These are the same IN from the tangent OUT from the curve at the same distance from the "B.C." and "E.C." of the transition curve. At the old "B.C." the transition curve bisects the off-set "O" and is bisected by it. The off-sets are calculated for every 30 feet, one rail length, up to a distance of 240 feet. (f) To record the curve put in new "B.C." off-set at old "B.C." giving Station and plus as usual, "4.5 R. or 4.5 L.," as the case may be. (g) The plotting can be done as usual and the new curves drawn in parallel with the old one showing the spiral at each end thereof. (h) The description for Right of Way calls for a given width each side of the centre line. In describing land where spiral curves are used, it will be sufficient to say: Thence by a tangent bearing "N" or "W", (as the case may be,) from Station... to Station... a distance of... feet. Thence along a curve to the right or left, as the case may be, of... degrees, a distance of... feet; thence on a course of... along a tangent from Station... to Station... a distance of... feet, there being an offset at the beginning and ending of the... degree curve at... feet for a transition curve to connect the circular curve and tangent. (i) The derivation of the functions of the spirals
will be understood by following the explanation and diagram given below. The tables which follow obviate the necessity for any calculations, the best judgment being exercised in selecting the value of \( O' \), and thereby fixing the length of the spiral.

Again, \( N = 1.868 \sqrt{\frac{a}{b}} \), nearly.

Example for \( O' \) at quarter points of the transition curve, \( O' - (\frac{1}{4}) 30' \), \( O = 1/160 \) where \( O = 10 \) feet, \( O' = 0.625 \) feet. At the \( \frac{1}{4} \) point of curve, quarter point of half-curve, the off-set will be \( \frac{1}{8} \) of the off-set at the quarter point). \( 0.78 \); at the \( \frac{1}{2} \) point (\( \frac{3}{4} \) point of half curve) it will be \( 3.27 \) times this amount or 2.11 feet all for a total original off-set of ten feet opposite old ‘B.C.’; half length of curve it will be five feet. In the Diagram, ‘D’ is the old ‘B.C.’; P is the new off-set ‘B.C.’ from which the circular curve is run (see rule ‘C’ for position of point P.) The transition curve runs from A. to C. and is staked out from the ground from the off-sets given in the table.

Example: Given 120 + 42, Apex I = \( \triangle = 32°, 20°, -6° \) curve. Therefore tangent of circular curve = 277 feet ‘B.C.’ = 117 + 65 ‘E.C.’ = 123 + 03.8. The super-elevation of the outer rail for the curve will be taken at four inches, to reach this elevation smoothly requires an approximate distance of at least 240 feet. Hence half length of transition curve should not be less than 120 feet. The nearest distance in the table is 130 feet, giving an off-set O of 3 feet. The new ‘B.C.’ (Point P., Rule C.), (tan. \( \frac{1}{8} 1 \times 0 \)) = 117 + 65 - 0.87 = 117 + 64.13. The new ‘E.C.’ will be 123 + 03.8 + 0.87 = 123 + 04.67. The ‘B.T.C.’ will be 116 + 34.13, the point of junction of transition curve with circular curve ‘P.J.C.’ = 118 + 94.13. The circular curve will run from this point to 121 + 74.67 where the spiral at the end of the curve starts the ‘E.T.C.’ is at Station 124+34.67.

The only stakes requiring attention during location are those at 117, off-set IN 0.15; 118 off-set OUT 0.49. Station 122 off-set OUT .018, 123 + 00 OUT 1.16; 124 IN 0.18 at the old ‘B.C.’ and ‘E.C.’ the spiral bisects the off-set, the hub will, therefore, be 1.5 feet in from the old ‘B.C.’

| 240'              | 3.50 |    |

The maximum grade rising eastwardly on a tangent will be 0.40% = 21.1 feet per mile; rising westerly the maximum grade will be 0.60% = 31.68 feet per mile. The maximum grade is to be used sparingly and only for the purpose of avoiding heavy work. The best grade to be had in the country must be secured in every case. On curves the rate of grade will be reduced in accordance with the rules for curve compensation.

### Level at Stations.

29. Every effort will be required to secure a level track at stations and for 2,000 feet each side, particularly at terminal points, water stations, etc. Under no circumstances will a water tank or station be placed in a sag.

### Vertical Curves.

30. It is important that all changes in grade be made by a vertical curve of such length as will allow the longest train to pass from one rate of grade to another without the cars piling up against each other. With modern equipment,
the rate should not be greater than 0.1 feet per station, and this rate should be used in sags, on summits a greater rate of change may be used, but not to exceed 0.3 feet per station.

BRIDGES.

31. The following data will be required for every important bridge:
1st. Profile of crossing on a scale of 20 feet horizontal.
10 feet vertical per inch.
(a) High water mark (extreme flood height).
(b) Low water mark.
(c) Bottom of river or stream, giving nature of same.
(d) Depth to rock, if any, nature of material, etc., the information must be carefully and fully taken. Suitable boring and sounding appliances will be provided when required for this work. A thorough survey must be made and careful records of same taken.
(e) Alignment near the bridge site and the grade of same, if any; when possible a bridge should be level.
2nd. (a) Plan of the river on scale of 100 feet to the inch, with contour lines at 10 feet; vertical intervals for a considerable distance each side of the proposed crossing, the distance to be proportionate to the importance of the bridge. Indicate nature of material composing banks, bottom, etc.; for large important bridges the traverse should run a mile each way from the bridge site.
(a) Length of span suggested, proposed location of piers.
(b) Clearance required above high water mark.
(c) Shore protection required, if any.
3rd. Is it a navigable river, if so, what clear height is required to accommodate the traffic?
4th. Is the stream subject to freshets? Give velocity of current at high water. At low water. Is it subject to scour?
5th. What is the best way to reach the bridge site? Give nearest distance from railway station, or if only can be reached when the rails are laid on the railway.
6th. How far must sand, of quality required, be hauled?
7th. How far must stone of suitable quality be hauled:
For (a) masonry? (b) cement?
State fully kind of stone, size and position of quarry, proximity of gravel, etc.

WATER SUPPLY.

32. The importance of an abundance supply of pure soft water cannot be over-estimated. Hence, location Engineers will be particular to note available sources. Softness should be tested with soap. Scale forming material by boiling. Try to find a supply of suitable quality, that will flow by gravity to water tanks. In doubtful cases send a sample securely packed to the Chief Engineer's office.

COMPUTATION OF EARTH WORK.

33 For comparing preliminary lines table of level sections may be used; in comparing location lines, accurate computation of earth work should be made, using Crandall's tables, or plotting up cross-section note and computing from same.

COMPUTING OVERHAUL.

34 Overhaul will be computed in accordance with the method shown in the sample profile Plate C, and the explanations which follow.
The contract provides that the limit of free haul is to be 500 feet, and that all materials shall be paid for at schedule price per cubic yard per 100 feet overhaul. See Plate "C" for diagram of overhaul—cuts being shown in red, fills in blue.

For purpose of illustrating the method, take the cutting from station 139 to 145 and +20; the quantities in each station and summation of same right and left are as shown in the following table:

<table>
<thead>
<tr>
<th>Station</th>

</tr>
</tbody>
</table>

As the fill from Station 145 to the bridge must all come from the cut to the east, there is no object in plotting it otherwise than from the right to the left. Call each Division on the profile paper 100 cubic yards and plot over each Station the amounts shown opposite right and left. The curves joining the several points will cross each other and a perpendicular line from the intersection point will be centre of mass of the cut or the fill, as the case may be. Next, take a pair of dividers and set them to a distance of 500 feet on the profile scale. Find where the curves between the fill and cut are at this distance, draw a horizontal line, all below it comes within the 500 feet free haul. Next, take 600 feet in the dividers, join the points with a horizontal line; the distance between the 500 feet line and this latter line will give the number of cubic yards hauled 600 feet.

A further study of the cutting at Stations 117 to 121 plus 30, and the fill from 121 plus 30 to 130, will bring out clearly the extent of the haul, etc. In the above illustration as worked out, there still remains in the cutting, after the fill to the bridge is completed, 1,807 cubic yards, which will have to be hauled to the right, and upon inspection it will be readily seen that it all comes within the free haul limit.

Note the required shrinkage so as to provide sufficient material to make the embankment; note the borrow required to complete the embankment; also, if any waste, the disposition of same. Classification can also be noted on this diagram.

Show by arrows the direction the material was moved, and the name of the contractor, the date he began and completed his work, etc.

WATER POWER.

35. Locating Engineers will take pains to secure all information possible as to the water powers along the line of the railway or within reasonable distance thereof.

The data required to be the flow of the river, in cubic feet per second, the time of the year, the stage of the river, whether normal or otherwise; the head in feet, nature of bottom and banks, kind of dam required, with height of same; nature of river bottom; in general, such information as will enable an intelligent estimate to be made of the value of the power and the cost of developing it.
PEAT BEDS.

36. The presence of large peat beds along the line is to be noted; give the approximate area and depth, send in to the Chief Engineer’s office samples of material.

GRAVEL PITS AND QUARRIES.

37. Particular attention is requested to the securing of good gravel pits and quarries, from time to time report on the quantity and quality of the material found along the line of the survey.

EQUATING VALUES.

38. Tables will be supplied from the office of the Chief Engineer giving equating values, viz.: Value of degree of curvature, foot of distance (for minor savings in length), foot of rise and fall, train mile cost, cost of pusher grade, locomotive to use for calculations, etc. Price to apply to units, etc.

DISCHARGE TICKET.

39. All men in the service of the Commission have signed contracts for definite periods of employment subject to satisfactory service. In discharging a man, always give him a discharge ticket, Form No. 7, which is printed in triplicate. Be careful to fill out the reason for such discharge and to make everything clear and plain.

TRANSFER OF MEN.

40. Should it be necessary to transfer a man from one party to another, he should be given a discharge ticket for the time due him. As reason for discharge enter transferred to party No.... On reaching the party to which the person is transferred, the Engineer in charge will allow him time for travelling by the shortest and quickest route and his reasonable travelling expenses while en route.

RECEIPTS TO BE TAKEN.

41. Receipts in triplicate for all expenditure must be taken from the person to whom the money is paid.

ACCOUNTS TO BE CERTIFIED.

42. Whenever a service is rendered or materials are supplied to any party, the Engineer in charge of such party will secure accounts in triplicate from the person supplying such materials or rendering the service, and will stamp the accounts in triplicate with the proper stamp supplied for the purpose, and will promptly certify to the same and send them in with his monthly report to the District Engineer, who will approve same and forward to the Chief Engineer for approval.

PAY ROLLS.

43. All pay rolls are to be made out in triplicate on the first of every month, marking up against any particular person the deduction, if any and showing the balance due. Forwarding such roll duly certified to the District Engineer, who will approve same and forward them to the Chief Engineer for his approval, and to be accompanied by the deduction sheet, Form 59.
44. Camp outfit, supplies, etc., will be supplied to each party as per following list. For all parties where the outfit, etc., cannot be moved by wagon, a list for parties in settled country, where camp may be moved by wagon or sleigh, will be supplied on application.

CAMP OUTFIT FOR 18 MEN—BUSH CAMP.

The following named articles may be selected by the District Engineer in quantities varying from the above list but retaining the same relative amount of meat and vegetable food as given in the list:

- Bacon, Pork, Corned Beef, Ham, Peas, Rice, Oatmeal, Cornmeal, Buckwheat Flour, Condensed Soup, assorted Jam and Marmalade.

If District Engineers find from further experience that too liberal an allowance of any article is shown on this list, they should reduce their orders accordingly and advise Headquarters. Greater proportions than shown on list should not be ordered without special authority.

Assistant Chief Engineer's Office,
Ottawa, Dec. 19th, 1905.

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY

MEDICINE CHEST CONTAINING MEDICAL EQUIPMENT FOR ENGINEERS IN CHARGE OF PARTIES.

One tin box with lock, key and strap, of neat size, to contain the following:
- Bandages, gauze, 2” wide, 6 yards long, ½ doz.
- Bandages, gauze, 3” wide, 6 yards long, ½ doz.
- Carbolized wool in ½ lb. packages, 1 lb.
- Carbolized lint, in ½ lb. packages 1 lb.
- Housewife made of canvas and tied with a tape; the inside of the housewife to have straps to hold the following:
  A. Scissors, straight, with antiseptic lock; length 5”.
  B. Bistoury, curved, sharp and scalpel with plain spring.
  C. Needles, surgeons, in antiseptic oil, six only,
  D. Catgut, No. 0, 1 and 2, in antiseptic oil, one bottle.
  E. Silk, carbolized, No. 1, 2, and 3, each, one reel.
  F. Pins, safety, size 1 ½, one doz.
  “ “ common, three doz.
  Field tourniquet, rubber tube with clasp.
  Zinc ointment, ½ lb. pot.
  Blue ointment ½ lb. pot.
  Poroplastic felt. for splints, one piece the length of the tin containing box and ten inches wide.
  Surgeons rubber adhesive plaster, 7” wide and one yard long.
  Tablets, Bi-chloride of mercury, antiseptic..25 labelled "POISON" and directions on bottle.
  Aromatic spirits Ammonia, labelled with dosage 3 oz.

One tin pill box with cover, hinges and clasp, large enough to contain the following bottles, packed closely in compartments to prevent breakage. The inside cover of the pill box to have the directions for use of the remedies enclosed. These directions to be printed or typewritten.

No. 1. Rheumatic pill................................................................. 100

2 sets Rod Papers.
1/2 pint LePage's Glue.
1 pint bottle Sizing.
1 pint bottle Varnish.
1 100' Brazed Link Chain.
3 Square Links.
2 50' Chesterman Tapes, reading to 10ths.
3 Brushes for Paint, small and stencil use.

CONSTRUCTION.

45. Ten to twelve miles will usually be allotted to each Resident Engineer.

It will be the duty of the Resident Engineer immediately on reaching his
residency to study carefully the specifications, contract and plans, so as to be pre-
pared to decide promptly all questions that may arise within the scope of his author-
ity, and in order to ensure this end, he will confer with his District Engineer on all
points that seem to him to require explanation. He will inform himself fully of all
the rules and matter contained in these instructions, and conform his work thereto
in every particular. He will do all the instrumental work required on his residency
in order that the contractor may rapidly and satisfactorily carry on the work in
accordance with the plans, specifications and contract. He will make up monthly
and final estimates of all work done in his residency in accordance with Form Nos.
4 and 5.

He will treat contractors with courtesy and will give them the aid necessary
to expedite the work, and see that the conditions called for in the plans, specifica-
tions and contracts are complied with.

RESIDENT ENGINEER REPORTS.

46. The Resident Engineer will report to the Division Engineer, if there is
one, otherwise to the District Engineer.
SUPPLIES.

47. The Resident Engineer will by requisition through his immediate superior, obtain the following supplies; and in future requisitions, maintain such list at all times while the work is under way:

2 pads Letter Heads.
12 No. 303 Pens.
6 No. 170 Pens.
24 Assorted Pens.
1 bottle Water-Proof (Higgins’ Chin-Chin) Ink, black.
1 paper Pins.
50 large Envelopes.
100 small Envelopes.
1 bottle Writing Fluid.
1 bottle Copying Fluid.
1 stick Japanese Ink.
1 box Assorted Rubber Bands.
1 bottle Water-Proof (Higgins’ Chin-Chin) Ink, blue.
1 bottle Water-Proof (Higgins’ Chin-Chin) Ink, red.
Windsor & Newton’s Colors—1 cake Blue.
1 cake Carmine.
1 cake Cobalt Blue.
1 cake Vermillion.
1 cake Chrome Yellow.
1 cake Venetian Red.
1 cake White.
1 cake Olive Green.
1 cake VanDyke Brown.
1 cake Chrome Orange.
1 cake Paynes’ Gray.
1 cake Scarlet Lake.
1 cake Burnt Sienna.
1 box Paper Clips.
1 copy Instructions.
1 Levelling Rod.
2 Pickets.
2 3½-lb. Axes, with handles.
5 lbs. Red Keel.
6 Blue Oil Crayons.
1 pot, ½-pint, Red Paint, with brush.
1 copy Specification Contract.
5 yds. Plate A Profile Paper.
5 yds. Plate A Tracing Profile Paper.
5 yds. Tracing Cloth.
5 yds. Cross Section Paper, 10ths.
5 yds. Tracing Paper.
5 yds. Duplex Manilla Paper.
1 100 Roe Aluminum Plated Steel Band Chain.
2 50’ Chesterman Metallic Tapes, with 2 extra Fillers, divided feet and 10ths.
3 Sheets Blotting Paper.
2 Transit Books.
1 large Cross Section Book, office record.
6 3H Pencils.
3 Penholders.
12 Pay Rolls.
SESSIONAL PAPER No. 123

1 Portable Roll Copying Press.
1 lb. Tinned Tacks.
4 Level Books.
2 Cross Section Books.
3 6H Lead Pencils.
6 No. 3 Pencils.
24 Estimate Sheets.
12 Scratch Pads.

SIZE OF PARTY.

48. Resident Engineer will be allowed a rodman, tapeman and one extra axeman. If more help is required, owing to heavy work, he will ask the District Engineer to supply same.

NOTICES TO BE SENT.

49. The Resident Engineer on his arrival at his residency will promptly notify his Division and District Engineer and the Chief Engineer, stating his post office, telegraph and telephone address.

WORKING PROFILE.

50. The Resident Engineer will obtain from the District Engineer data from the location profile to make up a working profile on Plate A profile paper, similar in every way to the sample working profile herewith. This working profile will show in pencil the approximate quantities and contemplated overhaul.

BOOKS REQUIRED.

On the fly leaf of each book write the title, give the number of the residency, the letter of the District, name of the Engineer in charge and address thus:

"Bridge Book."
"Residency No. 6, District A."
"John Jones, Resident Engineer."
"Grand Falls, N.B."

Do not mark the cover, number the pages, date your entries, index your book, be sure and enter in the book all original measurements, do not transcribe notes from other sources, only original notes should appear. In the Transit Book should be entered all notes, reference hubs, land and other lines, etc., so as to have a complete record of the alignment and land boundaries, names of owners, occupants, etc. In the Level Book all centre line levels will be entered up, bench marks, etc.

In the Cross Section Book, Form No. 8, all original entries of all cross sections will be entered. All original notes must be set down in the book in the field. The customary way of entering cross section notes usually followed in American practice wherein the original observations are not entered, but instead the cut off, will not be allowed. Make your entries continuously, leaving enough blank pages to summarize everything in its proper place. Index each Section Station by Station, keeping the quantities in each mile separate. Never erase a line, if an error has been made draw lines across it and write the words "Cancelled erroneous"; if notes are continued on a succeeding page refer to it and on that page write the words "forward from page."
LENGTH OF SECTION.

52. Sections will usually be one mile in length. Give the name of the contractor on each section, note the beginning and ending stations of their work, with dates of such beginning and ending of work. Plot all the excavations on cross section paper, 10 feet to one inch; each day's cross section work to be plotted, and the quantities computed the same day the measurements are taken, with the area of the section inked in. On this plotted section as the excavation is made note accurately the character and classification of the materials found in the cut. See sample sheet Plate E; the cross section book should also contain the monthly estimate of grading, with the volume excavated each month. The cross section sheet should be colored with the proper color for the month showing the area excavated. So in like manner the progress profile should have the volume colored with the appropriate color.

BRIDGE BOOK.

53. In the standard bridge book the notes of bridges, culverts and other structures, as well as drainage and other special matter, should be entered. On the left hand page, all bills of timber, piling and quantities should be entered, and on the right hand page a sketch of the structure, showing a ravine section; full notes of pile driving as per form below shall be taken, also kind of material penetrated; in case of masonry or concrete culverts or other structures, sufficient dimensions must be shown to enable the quantities to be calculated; describe fully and carefully the exact kind of material the structure is founded upon. Give the quantities, classification and disposition of the excavated material. Particular care is required to insure absolutely safe foundations. No chance will be taken; in case of doubt consult the District Engineer. Under each structure enter the name of the contractor and the foreman in charge of the work, the date in which work started and ended. The Bridge Book, properly filled up, will be returned to the District Engineer as a final estimate on the completion of the works therein entered.

PILE AND TRESTLE BRIDGES.

54. In the construction of pile and trestle bridges, a competent Inspector will be supplied, whose duty it will be to watch the driving of piles at all times and to keep a record of all piles driven. The Inspector shall require piles to be driven such depth as will make them secure against being washed out by scour, and in accordance with the clause of the specifications relative to pile-driving. See Section of Specifications 145.

The record of all pile and trestle bridges shall be kept in a book ruled and headed as per sample herewith. For convenience in designating any particular stick of timber, he will call the first bent nearest to Moncton, Panel A; the second bent and span, Panel B, etc. Piles, posts, stringers, guard rails, will be numbered from left to right (i.e., south to north) and the bridge ties will be numbered in the same direction as the letters of the panels. The position of the bridge will be designated by the station and plus of its beginning and end—and the number of the same. In accordance with the above plan, it is easy to understand the location of a timber, as pile B3—Stringer A3 or bridge tie 3B, as the case may be. The record kept by the Inspector must show the depth to which each pile is driven, the depth by the last five blows of the hammer and the depth by the last blow. The form of this record to be as below.

Bridge No. 10
Stations 160 + 60

\{ Weight of hammer, 3,000 lbs. Steam hoist, quick actions. \\

PANEL B.

PANEL C.

REMARKS.

The soil at this bridge is sandy at a depth of about 13 feet, below grade the piles strike a hard stratum of material with which piles cannot be driven more than 2 or 3 feet.

I had the depth to hard material also tested with water jet.

55. This record book of the Inspector will be turned over to the Bridge Engineer, who will then make up a complete record for each bridge in form as shown below, in which (a) represents the height of pile from the surface of the ground to the top of cap timber, and (b) represents the length of the pile below the surface of the ground. Following the record of the piles there must be a complete bill of piles and other material used in the construction of the bridge, and a memorandum of any facts of interest or importance connected with the situation of the bridge or its surroundings. In this record and in their proper place, all timber culverts and cattle guards must be entered, with description, dimensions and bill of material; also, all truss bridges, with location, description, and dimensions and bill of material in the floor system.

FORCE RETURNS.

56. The Resident Engineer will secure force returns from the contractor once a week; this return shall be taken personally by some person in the employment of the Commissioners, and must be verified with the contractor’s time book. It will show the number of men employed each day, the number of teams, hoisting engines, derricks, etc., all classified as called for in Form 54.

Under remarks note any special information. At the end of each month summarize the force returns giving daily average and total days’ work, average wages paid for men and teams, all the information called for in Form No. 55. Send one copy to the District Engineer’s office and one copy to the Chief Engineer, Ottawa, Ontario.

Under remarks briefly state the progress of the work in each mile, the location of pile driver, steam shovel, etc., and station at end of track, etc.
MONTHLY PAY ROLLS.

57. On the first day of every month all pay rolls are to be made out, with deductions, if any, in triplicate, on Form No. 143. Personal expenses statements are to be made out on Form No. 22, in triplicate. All bills are to be rendered in triplicate, to which certificate of receipt of goods or service, as the case may be, shall be attached. Approximate monthly estimates in triplicate will be prepared on Form Nos. Estimate 4 and 5. Progress profile will be made up in accordance with sample sheet. All to be certified to and signed by the Engineer in charge and forwarded by first mail to the District Engineer who will approve same and forward to the Chief Engineer.

CHECK ALIGNMENT.

58. The Resident Engineer on taking charge of his residency will as quickly as possible check all curves, spirals, tangents, run check levels over the residency, reporting at once to the District Engineer any errors found. He will reference all B.C., E.C. or other points, B.M.'s etc.

LOCATION STATIONS TO BE PRESERVED.

59. The final location stations are to be maintained throughout the work, and all records must conform to them. Should errors or discrepancies be found note the amount, long or short, giving its correct length, but preserve the station number. The track chaining must also agree with the location stations.

MILE POSTS.

60. The station for each mile post will be given the Resident Engineer, and the beginning and ending of mile thus shown must be maintained throughout the work in all records. All material excavated from cuts, borrow pits, ditches, etc., must be estimated on the mile where such material was excavated. The cost of every item of work on each mile must be kept separate, so that if material is hauled from one mile to another it must be so designated in the book, showing such mileage cost. In case a borrow pit is opened on one mile and the material goes to another, such excavation will be charged against the mile where the earth is placed in the embankment.

PROGRESS PROFILE—HOW COLORED.

61. A progress profile is to be used as a monthly progress report of work done, and will be prepared on Plate A profile paper, in every respect similar to the sample sheet Plate E, and will be forwarded as stated in Section 58. It will be returned to the Resident Engineer each month in time for him to post up for the month. Show in colors for the given month, as below, the excavations moved and embankment placed. Show the index of these colors under the title in the profile. For January, Cobalt blue; February, vermillion; March, chrome yellow; April, Venetian red; May, white; June, olive green; July, Vandyke brown; August, Antwerp blue; September, chrome yellow; October, Payne's grey; November, scarlet lake; December, burnt Sienna.

Show on the profile the direction the excavation is being hauled by arrows and by plotted haul. Note above each structure in ink, the date work started
and ended, at what bridge the pile driver is working, end of track, etc; give the contractor's name, and such other data as will plainly indicate the progress of the work.

SUPER-ELEVATION OF OUTER RAIL ON CURVES.

62. As all curves 1° and over will have their ends eased off with transition spiral curves, the tangents will be level. The super-elevation will be put in on the spiral gradually increasing with the increased radius of the spiral, the whole amount of the super-elevation called for in the table below to be put in on the circular portion of the curve.

<table>
<thead>

</tbody>
</table>

STAKING OUT WORK.

63. As soon as possible the cross sections should be finished up. Plot each cross section and calculate its area the same day. All work must be staked out, ditches, creek diversions. right of way, berms, etc.; set stakes for all excavations and embankments to sub-grade, as shown on the grade line of the profile. Stake out bridge ends as shown on masonry plans, etc: Use good strong stakes, well driven; mark the proper station and plus on the side from the roadbed and the cut or fill on the back; mark the centre stake likewise. Cross section curves at least every fifty feet, unless the surface is practically level.

DITCHES.

64. Catchwater or surface ditches shall be staked out and be excavated at the same time as the cuts are opened; they should be neatly cut, placing the material in the embankment if required to make the fill, otherwise on the lower side in a uniform manner. Ditches should not be less than eighteen (18”) inches deep and two (2’) feet wide at the bottom, with side slope of 1 1/2 horizontal to 1 vertical, and should be at least ten feet away from the edge of a cut. Secure a good grade to allow the water to run away freely. Keep the outlet away from the toe of the embankment so as not to endanger same. All ditches must be left clean by the contractors.
65. The Resident Engineer will specially mark all leaning trees that are liable
to fall across the telegraph line, or that may fall across the right of way, standing
outside thereof, and will see that they are cut down and removed as called for in
the specifications, Clause 7.

LARGE BLASTS.

66. Under Clause 13 of the specifications large blasts are restricted. On hill
side work the tendency of such large blasts is to throw material to waste. If it is
required in an adjoining bank, the contractor must supply free of cost for every
cubic yard so wasted and one-half cubic yards of other suitable material for the bank.

PUBLIC AND FARM ROADS.

67. The Resident Engineer shall take particular care to insure that, at all
public and farm road crossings at all times, a safe crossing is in good order; that
the contractor takes all reasonable precaution to protect the public from injury
due to his operations, and will hold the contractor to a strict account in this par-
ticular matter.

CLEARING.

68. The specifications must be closely observed; dead or leaning trees within
the limits called for in the specifications must be cut down and removed, the right
of way must be left clear. Great care must be taken in burning brush to see that all
the Provincial Fire Regulations are observed, and every precaution must be insisted
upon to insure the protection of the forest from fires.

GRUBBING.

69. See that all grubbing is burned up and that the specifications are strictly
adhered to. Grubbing will not be estimated in cuttings over four feet in depth
(see Clause 11 of specifications).

CENTRES.

70. Resident Engineers will give centres in all cuttings from time to time
to ensure the contractor excavating to the required lines and slopes, and will see
that the slopes are left clean and true. Projecting or dangerous rocks on slopes
must be removed. Slides of rock loose or solid must be carefully guarded against.

BACKFILLING ROCK CUTS.

71. Backfilling in rock cuts must not be done until the required excavation one
foot below grade is finished. The material used shall be broken stone, or coarse,
clean gravel.

EMBANKMENTS.

72. Embankments are to be built of the full width and slope called for in the
specifications. In setting out formation width, make proper allowance for sub-
sidence as called for under Section 39 of the specifications. Embankments up to
16 feet in height will be 16 feet wide at formation level, beyond this height 18
feet wide, side slope for earth 1 1/4 to 1, for rock 1 to 1.
BORROW PITS.

73. Borrow pits will be staked out when and where required; they must be left clean and neat with slopes of \(1 \frac{1}{2}\) horizontal to 1 vertical, and must not be excavated closer to right of way lines than three feet and not closer to the toe of embankments than the distance called for under Section 30 of the specifications. Where possible they should always be left so that they will drain through the nearest opening.

FINISHING STAKES.

74. Resident Engineers will set accurately, square strong stakes at each station, marking the toe of the embankment, correct as to finished levels and line, and will see that the embankments are graded so that when full settlement takes place they will conform to such stakes, and that the cuttings are excavated cleanly and neatly to the full lines.

STATION GROUNDS.

75. Resident Engineers will secure plans of station grounds and will not allow any borrowing to be done within the limits of the site. Tracks and buildings, drains, etc., will be accurately located and staked as shown on the plan.

TRACK CENTRES.

76. Track centres will be accurately set. Stations on tangents to be every 100 feet, on curves every 50 feet. Mark the beginning of the adjusted curves centres at 30 feet intervals on same, also the ending of the spiral; rails must be laid with broken joints; in passing around curves shorter rails will be provided in order that the centre of one joint shall, as near as may, be opposite the centre of the opposite rail. Rails should not be cut. Track must be fully spiked as it is laid and the spikes must be set vertical, and driven home so closely as to hold the rail firmly to the tie, but not so hard as to break the head of the spike. The tracks must be gauged as spikes are driven at “joints,” “centres,” and “quarters,” and no excuse will be taken for inaccurate gauging. On straight lines track will be gauged to 4 feet 8\(\frac{1}{2}\) inches. On curves, in accordance with the following, viz:

\[
1^\circ, \text{curve} = 4 \text{ ft. } 8\frac{1}{2} \text{ in.; } 2^\circ, 4 \text{ ft. } 8\frac{3}{4} \text{ in.; } 3^\circ, 4 \text{ ft. } 8\frac{5}{8} \text{ in.; } 4^\circ, 4 \text{ ft. } 8\frac{7}{8} \text{ in.; } 5^\circ, 4 \text{ ft. } 8\frac{11}{16} \text{ in.; } 6^\circ, 4 \text{ ft. } 8\frac{3}{4} \text{ in.; } 7^\circ, 4 \text{ ft. } 8\frac{5}{8} \text{ in.; } 8^\circ, 4 \text{ ft. } 8\frac{7}{16} \text{ in.; } 9^\circ, 4 \text{ ft. } 9 \text{ in.; } 10^\circ, 4 \text{ ft. } 9 \text{ in.}
\]

The joints must be firmly secured in place by the full number of bolts well drawn up, and special attention should be paid to the adjustment of any nut lock device which may be used.

Ballast grades will be set and the top of the rails must conform to the level called for by them. Particular care is demanded in packing the ties; the tamping must be thorough, the tie thoroughly supported throughout, the space between the ties packed full and the shoulder at the end of the tie as called for in specifications, and cross sections of same. The slopes to be neatly and exactly laid to that called for. Particular care will be taken to set the ballast grade stakes on curves to give the proper super-elevation called for, the inner rail being kept to the true grade. On spiral curves the super-elevation will be gradual and proportionate to that on the circular curve, the tangents being level.
SWITCHES.

77. Special attention should be given to the laying out of switches, turnouts and frogs. The frogs, of angles of $6^\circ 22'$ and those of $9^\circ$ known as number 9 and number $6^\frac{1}{2}$, only will be used.

All turnout curves are considered as beginning at the fixed end of the slide rail, and all Engineers must make their calculations for determining the position of head-block and point of frog on this basis. Sidings at different distances from the main track will be located, in the absence of special instructions, according to the following table, the turnouts being from straight lines.

**Table Showing Alignment of Sidings.**

</tr>
</tbody>
</table>

The ends of switch ties must be laid off to a line parallel with the nearest rail. Guard rails opposite frogs shall be cut twelve feet long and bent to a standard pattern upon formers. The gauge of track of all turnout leads shall be $4', 8\frac{1}{2}''$, and this width must extend from the fixed end of the slide rails to the heel of the frog.

BUILDINGS.

78. The location of all buildings will be decided in the office of the Chief Engineer, and the Bridge and Building Engineer will receive instructions in regard to location. Special care must be taken in the laying out and construction of foundations, and a full record must be kept of the dimensions of all masonry built. The following rules will govern the location of all buildings and platforms, as to their distance from tracks, viz.: The tops of all platforms adjacent to the main track should be 12 inches above the top of the rail (conforming to the grade of the track) and the nearest edge of the platform 2 feet 9 inches from the gauge side of the rail. The tops of all freight platforms on side tracks for general use should be 3 feet 8 inches above the top of rail on side track (conforming to grade of track), and the edge of platform 3 feet 3 inches from the gauge side of the nearest rail. No building should be located nearer than 7 feet in the clear from the centre of the main track.
No building should be nearer than 6 feet from the centre of any side track, which is used for meeting and passing trains, or for general purposes.

All buildings or other structures, erected by corporations or other parties, and all stone, ties or timber piles for Company use, should not be located nearer than 6 feet from the nearest rail.

**PERMANENT STAKES.**

79. Resident Engineers will plant permanent stakes at the B. C. and E. C. of every curve and at the point of commencement of spiral curves, when the track laying and ballasting is completed; for this purpose they will requisition their District Engineer for suitable monuments.

**PERMANENT BENCH MARKS.**

80. Place permanent bench marks reduced to true sea-level datum.

**DIARY.**

81. The Resident Engineer will keep a daily record of all instructions given to contractors; he will enter the date on which work under each contractor began and ended; the date of beginning and completion of all openings and important piece of work; also notes classifying material, the manner in which the contractor handles his work and such other notes as will enable a complete accurate classification to be made; the date of any special notices or instructions served upon contractors; every item bearing upon the work should be entered daily. Record in your diary all storms, such as extraordinary high winds, heavy rainfalls, low temperatures, excessive snowfalls, etc.

**LIMIT OF HAUL.**

82. It must be understood that all excavation is to be hauled to the limit; no borrowing will be permitted, unless the overhaul price exceeds the earth work price. When it is necessary to waste, the material should be used to widen embankments within the limit of the free haul, waste to be uniformly and evenly distributed. No waste will be placed on the sides of cuts nor overhaul paid on waste unless first approved by the District Engineer.

The contractor should be told where the excavation is to be hauled, to avoid waste and borrow.

**MONTHLY ESTIMATES.**

83. The Resident Engineer will prepare on Form No. 4 approximate monthly estimates of all the work done and materials delivered on the work section by section, using a separate sheet for each section. And on Form No. 5 a summary estimate of all the work done on all the sections under one contractor. This estimate must show the total amount of work done from the beginning of the work to the end of the month for which the estimate is made, entering earth works to the nearest 100 cubic yards, timber to the nearest 1 000 feet, masonry to the nearest cubic yard, etc. Fill all the blanks, or note no work done where such is the case.

The amount due for the current month should be shown in red figures.

Note in remarks column anything affecting result, such as material hauled from an adjoining mile. Should the mile post come in the centre of a structure group the two sections together, but in general each section should be shown complete by itself.
EXTRA WORK.

84. The contract provides that all claims for extra work or material must be presented to the Chief Engineer for allowance at the close of each month in which it was done, otherwise the Commissioners are not required to allow or pay for same. Resident Engineers will write to the District Engineer for the Chief Engineer’s approval for the contemplated work, noting the estimated cost. This approval will be promptly returned to the Resident Engineer and he will attach same to the contractor’s bill and return both with the monthly estimate, adhering strictly to the contract that no bills will be allowed that are rendered later than the month in which the work was done. The Resident Engineer will report fully upon the proposed extra work, the reasons for same, and in general give such full information as will enable the Chief Engineer to reach a just conclusion.

CHANGES IN GRADE OR ALIGNMENT.

85. Resident Engineers will not be allowed to make changes in grades or alignment, but will promptly call their District Engineer’s attention to any possible change they consider beneficial. Rates of grade fixed on the location profile will govern and must be adhered to. Vertical curves will be carefully graded to elevation called for. Easement curves will be staked as per table and according to the directions given for same.

FINAL PROFILE.

86. A final profile must be made as per sample Plate C, on a continuous roll of Plate A profile paper, 400 feet to an inch horizontal, 20 feet to an inch vertical. Leave 18 inches blank space at each end. Place a neat title at each end of the roll as shown in sample sheet. On the outside edge at both ends of the profile write “Final Profile Residency No. ........, District ........, National Trans-Continental Railway, Eastern Division. Miles ........ to ........, Station .......... to ........... On this final profile follow the general style of Plate C. Plot over haul as shown. Give the stations and plus of the Moncton end of stranger on pile and girders and other bridges, centre of all pipes and other culverts, plus of all roads and cattle guards, names of rivers, brooks, cities, towns, villages and stations, length of sidings with plus of switch stand, semaphores, alignment, position of water tank and stand pipe, bench marks and clearing, width of right of way, fencing for each fence, gate and farm crossings; note quality and description of ballast; summarize the entire residency mile by mile, giving totals of all classifications and quantities.

FINAL ESTIMATES.

87. Quantities for final estimates are to be made up promptly and completed as fast as the work is finished. Particular care is required to secure accurate computation, and frequent checks will be made to insure accuracy. A copy of Crandall’s table will be supplied and should be used in checking quantities. All final estimates will be made up in ink, that for all grading, clearing and grubbing in the standard field cross section book and be fully entered in the office cross section book in ink, fully explaining by notes, the classification and disposition of all quantities. These notes must be full and sufficient to enable the making from them of a summary, which summary will be the original of what is to appear on the final estimate sheet. Clearing and grubbing must be shown on a page by itself, and the station numbers given between which clearing and grubbing is estimated, with width of area, also the name of the contractor, the total being.
placed in the summary. The notes for all excavations quantities, not entered in the cross section book, are to be referred to by notation, giving the book and page upon which they appear, such as foundation pits or other excavations, the notes of which belong to the bridge book. A total summary must be made showing each mile on a separate line for the entire residency at the end of the book, which must be signed as correct. All cross sections must be inked in, showing fully the classification lines and the total classification for each cut.

The final estimate in detail for all bridge substructures, box and other culverts, pipe drains and other structures pertaining to the case of drainage is to be returned in the bridge book, as instructed in Section 54. Such book must show quantities, classifications and disposition of all the material handled, and the notes necessary to check the quantities, together with the name of the contractor. The estimate will be made out in triplicate, be signed as correct, and forwarded to the District Engineer, who will check same, approve and forward to the Chief Engineer.

ESTIMATES NOT TO BE GIVEN TO CONTRACTOR.

88. It must be distinctly understood that the Resident Engineer is not to give any estimates to the contractors. All such information must come direct from the Chief Engineer.

RESIDENT ENGINEER REPORTS.

89. The Resident Engineer will report fortnightly to his District Engineer, giving a concise summary of the condition of all the work in his residency.

DISTRICT ENGINEER REPORTS.

90. The District Engineer will send in to the Chief Engineer once a month, or oftener when opportunity offers, and there is matter of interest, full reports of all the work in his District.
ACCOUNTING.

CLASSIFICATION OF CONSTRUCTION EXPENSES.

ENGINEERING.

91. To this account should be charged all salaries and expenses of Engineers, Assistants, and Axemen; teams for transportation of Engineers and men to and from work, or upon trips of inspection of line of work, or incidental thereto; Engineer's instruments, rods, chains, axes, hatchets, tape lines, keel or marking chalk, stakes, profile and drawing paper, tracing linen or paper, cross section paper, transit and level books, cross section or topographical books, India ink and colors, drawing boards, stools, maps, cases, paper racks stationery for office or field, fuel, lights and camp equipage, and other analogous items.

Proportion of Engineers' expenses when engaged on special work should be charged to same.

RIGHT-OF-WAY AND STATION GROUNDS.

92. To this account should be charged the cost of land acquired for roadbed (of necessary width conformably to depth and slopes of excavations and embankments), station and terminal grounds; also the cost of land purchased for ingress or egress to or from station grounds; salaries and expenses of counsel, right-of-way Agent, and of Engineers and assistants when especially engaged upon such matters; stakes used to denote right-of-way limits; expenses of Appraisals, or of Juries, Commissioners or Arbitrators in condemnation cases; cost of removal of buildings when upon right-of-way, station or terminal grounds, but not included in property purchased; stationery supplied Right-of-Way Agent, Engineers, and assistants, engineers' instruments, etc., when used for such purposes; commissions paid outside parties for purchase of properties for these purposes; cost of plats, abstracts, notarial fees, recording deeds, etc.

Note particularly account No. 3, "Real Estate," as regards the cost of property purchased but not required for the operation of the road.

REAL ESTATE.

93. To this account should be charged the cost of all land purchased by the railway company in excess of that actually required for roadbed, station or terminal grounds, or other specific purpose, including all expenses incurred in connection with such purpose as enumerated in account No. 2, "Right-of-Way and Station Grounds." A portion of the cost of land purchased outside right-of-way for borrow pits or waste banks should be charged to this account.

NOTE—The amount to be charged to real estate should be an estimate of the saleable value of said borrow pits or waste banks after completion of the road.

GRADING.

94. To this account should be charged the cost of grading roadbed, whether excavations or embankments; clearing and grubbing; dressing slopes of cuts and
fills; reconstructing pikes or roads; ditching roadbeds; berm ditches; cost of material taken from borrow pits, haul if allowed; amounts paid for privilege of making waste banks outside of Company’s right-of-way or station grounds; ditches for waterways not specially required by right-of-way agreement, in which case cost would be properly chargeable to account No. 2, “Right-of-Way and Station Grounds.” This account includes retaining walls and other masonry or riprap for the protection of embankments, cuts, and slopes; cribbing or bulkheading built to protect the tracks or embankments along the seashore or banks of lakes and streams, including the cost of any cribs, breakwaters, wing dams, or other devices constructed to change the direction of the current of a stream to prevent the washing of the bank; also freight on material and transportation and subsistence of grading gangs.

**TUNNELS.**

95. To this account should be charged the cost of tunneling including such timber as may be used for canteveing, packing, etc.; cost of stone, brick, cement, sand, lime, salt, piles, timber, spikes, nails, braces, concrete, etc., used in the construction or lining of the same; cost of labor preparing or securing the same, transportation, scaffolding, cofferdams, and pneumatic caissons; cost of soundings, and machinery, pumps, engines, etc.: used for such work. This account does not include grading or surfacing the roadbed, or cost of the track through the tunnel.

**BRIDGES, TRESTLES AND CULVERTS.**

96. To this account should be charged the cost of all bridges and trestles erected to carry tracks over streams, ravines, streets, or other railways, and culverts, both substructure and superstructure, including transportation. This account should include abutments, piers, supports, draw and pier protection; machinery to operate drawbridges; masonry ends and wing walls for culverts; cost of inspection of bridge material, either at shop or site of structure; cost of tests; cost of wing dams, cribs, or ice-breakers for the purpose of regulating the current of a stream or breaking up ice jams before reaching a bridge; also labor and material used in painting structure.

In case “false work” is furnished by the railway company for erection of bridge superstructure, the cost of same should be charged to this account, and when removed, the value of the material removed should be credited to this account and charged to the account benefitted.

**TIES.**

97. To this account should be charged the cost of all cross, witch, bridge, and other ties laid in the main track or tracks, sidings, spurs, gravel, and repair tracks; in tunnels, depots, shop, and other yards, shops and other buildings, etc.; on turntables, wharves, piers, track scales, inclines, bridges, trestles and culverts; to and from coal chutes, coal pockets, fuel, and water stations, etc.; also the cost of transportation, inspection, loading, unloading, and any process of preservation.

**RAILS.**

98. To this account should be charged the cost of rails laid in the main track or tracks, sidings, spurs, gravel, and repair tracks, in tunnels, depots, shops and other yards, shops, and other buildings, etc.; on turntables, wharves, piers, track
scales, inclines, bridges, trestles, and culverts; to and from coal chutes, coal pockets, fuel and water stations, etc.; also the cost of transportation, inspection, loading, and unloading.

**TRACK FASTENINGS.**

99. To this account should be charged the cost of spikes used for laying rails, and of fish and tie plates, splice or angle bars, chairs, rail braces, bolts, nuts, nut locks or washers used in connection with same; also the cost of transportation, inspection, loading, and unloading.

**FROGS AND SWITCHES.**

100. To this account should be charged the cost of all frogs, switches, and switch material, including switch stands (throw or lever), frog guard rails, crossing frogs, and timber, bolts, etc. used in foundations or base for same, and the cost of transportation.

**BALLAST.**

101. To this account should be charged the cost of all ballast, whether of broken stone, slag, gravel, or other material especially provided for this purpose; also the expense of loading, hauling, unloading alongside of track, and transportation.

**TRACK LAYING AND SURFACING.**

102. To this account should be charged the cost of distributing, laying, spacing, and lining ties; cost of laying, spiking, and jointing rails, surfacing and lining track; including the adjustment of rail to proper elevation, and labor of placing frogs and switches; cost of track tools, including shovels, picks, track jacks, crowbars, levers, spiking mauls, gauges, and wrenches; cost of putting in ballast; service of engines, cars, and crews distributing track material, and transportation.

**FENCING RIGHT-OF-WAY.**

103. To this account should be charged the cost of all material and labor used in constructing board, wire, rail, hedge, stone, or other fences along the right-of-way or limits of roadbed, and transportation; but no charge should be made to this account for fences constructed around stock yards, fuel stations, station grounds, shops, and on other properties outside of right-of-way, which should be charged to their appropriate accounts. The cost of permanent or portable fences for protection of tracks from snow should not be charged to this account, but to account No. 28, "Miscellaneous Structures."

**CROSSINGS, CATTLE GUARDS AND SIGNS.**

104. To this account should be charged the cost of all labor and material used in constructing farm, country-road, or street crossings at grade, overhead bridges, cattle guards, and wing fences to same, and all track signs, crossing gates, and watchhouses at crossings, and transportation.

**INTERLOCKING OR SIGNAL APPARATUS.**

105. To this account should be charged the cost of interlocking or signal apparatus complete, when built by contract. If built by the railway company.
the cost of labor and material, including all levers, racks, wires, pulleys, semaphores, semaphore signals, ground signals, posts, materials in box troughs, and other fixtures, tower, foundation for same, and all other work necessary to complete it, and transportation.

TELEGRAPH LINES.

106. To this account should be charged the cost of newly constructed telegraph and telephone lines, including poles, wires, billets, insulators, instruments, and all other materials used, also labor employed in the construction work, cost of all tools used, and transportation.

STATION BUILDINGS AND FIXTURES.

107. To this account should be charged the cost of all material and labor expended on all station buildings, including cost of transportation, platforms, sidewalks, excavation, foundation, drainage, water, gas, and sewer pipes and connections, steam heating apparatus, stoves, electric light and power fixtures, including wiring for same, grading and putting ground in order after building has been finished; electric bells, elevators, and all other material, furniture, or fixtures used to complete the building; wells for water supply or stations; also salaries and expenses of Engineers and Architects.

Note.—The account should include the cost of similar buildings on docks, wharves, and piers, when used for station purposes.

SHOPS, ROUNDHOUSES AND TURNTABLES.

108. To this account should be charged the cost of all buildings to be used as shops (including transfer tables), or roundhouses (including cinder and drop pits), and turntables; plants for heating the buildings; platforms, sidewalks, and outhouses in connection therewith; oil houses, sand houses, storehouses for company's material, scrap bins, etc. This account should include amounts paid when erected by contract; labor and material when built by company, preparing grounds before and clearing up same after construction, foundations, painting, excavation for and lining of turntable pit, and of cinder or drop pits inside or outside of roundhouses; foundation for turntable, loading, unloading, and placing turntable in position, levers and stops for handling turntable; sewerage system, connection with water supply system, shop wells; architects' fees for drawing plans, supervision of construction by Engineering Department or others; transportation and all incidental expenses. This account does not include the cost of tracks laid in connection with these buildings.

SHOP MACHINERY AND TOOLS.

109. To this account should be charged the cost of all new machinery and additional tools placed in any of the shops or roundhouses, including foundation for same; transportation, loading, unloading, and placing machinery in position. It must not include any machinery or tools purchased to take the place of those that have been worn out or destroyed.

WATER STATIONS.

110. To this account should be charged the cost of material and labor expended in the construction of water stations for the purpose of supplying locomotives with water, including cost of windmills, pumps, boilers, pumphouses, tanks,
tubs, tank foundations, track tanks, or troughs, engines and all fixtures and pipes, standpipes or penstocks and connections; wells, dams, and reservoirs or cisterns; transportation; also engineering expenses, and tools used in the work. This account must not include waterworks, wells, etc., exclusively for supply of stations, hotels, tenements, or section houses, which should be charged to the appropriate account.

**FUEL STATIONS.**

111. To this account should be charged amounts paid under contract for, or the cost of all labor and material expended in, the construction of coal platforms, coal sheds, coal pocket chutes, woodsheds, and racks, and all machinery or appliances necessary to equip them for service. This account includes inclines at fuel stations (except the cost of track laid thereon), tipple cars, buckets, cranes for handling same, elevating machinery, gasoline or other engines for operating same, dumping machinery, all appliances for weighing coal in pockets and opening coal pockets, transportation, architects' fees, engineering, etc.

**GRAIN ELEVATORS.**

112. To this account should be charged the cost of ground on which elevator is located, cost of foundations, elevator building, conveyors, fixtures, machinery complete; and all material, labor, transportation, and other charges incidental to construction. This account does not include the cost of small storage elevators at way stations, which are considered to be station buildings.

**STORAGE WAREHOUSES.**

113. To this account should be charged the cost of ground on which storage warehouses are located, and cost of buildings, machinery, etc., complete, when built by contract; if built by the railway company, the cost of ground, material, machinery, fixtures, and labor, transportation, and all other expenditures incident to construction. The buildings herein referred to are not the ordinary freight warehouses or stations where freight is received for shipment, etc., but warehouses in which merchandise is stored, and which the railway company or others operate as warehouses.

**DOCKS AND WHARVES.**

114. To this account should be charged the entire cost of docks, wharves, ferry or other landings, and inclines to transfer steamers, including grounds and riparian rights, dredging of slips, piling, filling cribs, pile protection, building cofferdams, pumping or bailing water, masonry walls or filling, etc., transportation, and all expenses incurred in the construction of these structures, except the cost of tracks and buildings thereon.

**ELECTRIC LIGHT PLANTS.**

115. To this account should be charged the cost of all labor and materials, including cost of transportation, used to put in operation either arc or incandescent light plants, such as dynamos, engines for running dynamos, wire constituting lines, glass globes, carbon or arc lights, carbonized filament for incandescent lights, poles, hangers for lights, insulators, and every expense incidental to the erection of the plant. When it is necessary to erect a building for an electric light plant, the entire cost of the same, including ground, should be charged to this account.
ELECTRIC MOTIVE POWER PLANTS.

116. To this account should be charged the cost of ground on which electric-power stations are located, and the cost of erection of power and car sheds, including all expenditures for labor and material, stationary engines, boilers, and machinery, pumps, condensers, foundations, and settings for steam plants; generators, foundations, and settings, switchboard, and lighting apparatus for electric plants; current conductors, including poles, wires, and labor for overhead work, third rails, fastenings for same and labor laying same, with cost of inspecting, loading, and unloading; feed wires, track-bonding, and grade crossing cut-outs; and all other expenditures connected with the installation of plants intended to generate and distribute electricity for motive power, including transportation.

GASMAKING PLANTS.

117. To this account should be charged the cost of all labor and material, including cost of transportation, used to put into operation a gas-making plant complete. The cost of ground on which the plant is located should also be charged to this account.

MISCELLANEOUS STRUCTURES.

118. To this account should be charged the cost of structures of every character, including cost of material, labor, transportation, and all incidental expenses connected therewith, which are permanent or a betterment to the property and enter into the cost of road, and which are not otherwise herein particularly referred to, and or which no account has been provided; the object being to designate one general classification, to which may be charged the cost of all minor superstructures, and in this way avoid increasing the number of general accounts.

LEGAL EXPENSES.

119. To this account should be charged the amount of all attorneys' salaries, fees, and expenses, and all other incidental legal expenses incurred during the process of construction of a road, except when the expense can be charged directly to the account for which it is incurred.

INTEREST AND DISCOUNT.

120. To this account should be charged discount on securities sold; interest on loans effected, and on notes issued for construction purposes or overdue payments to contractors or other creditors, and discount, interest, and exchange on other commercial paper issued for a similar purpose. Premium realized from sale of bonds, stock, or other securities should be credited to this account. Discount or premium realized from sale of bonds, stock, or other securities for a specific work should be applied to such work.

GENERAL EXPENSES.

121. To this account should be charged organization expenses, and expenses incurred in the disposal of securities; salaries and expenses of general officers of a road under construction, clerks in general offices engaged on construction accounts or work, stationery, and office expenses; also all items of a special and incidental nature which can not be properly located under any other account.

### Note:

1. Degree of Curvature means 1 degree of Central Angle regardless of radius of Curve. It is assumed that expense due to Curvature is in proportion to total Central Angle.
2. Justifiable Expenditure per degree of saving in curvature for 12 daily trains, × 88; and for 20 daily trains, × 100.
3. If a curve is in a particularly dangerous place which necessitates a Watchman or other additional expense the value of its elimination must be considered separately.

### Assumed Costs per Freight Train Mile, Engine Mile, &c.

- Train Mile $1.00, Engine Mile $0.35, both assisting and returning light; if assisting both ways with no light running $0.40.
- Minimum cost for Assistant Engine when not at Divisional Point or used for Yard Work $10.00 per day or $6.67 per annum.
- Light running $0.25 per Engine Mile, Switching $0.30 per Engine Mile, Doubling Goods $0.90 per Engine Mile straight distance, or $0.45 per additional Engine Mile.

### Level Crossings of other Railways:

Justifiable Expenditure to save one normal level crossing, $40,000.

### Between other points 12 Daily Trains will be assumed.

Approved HUGH D. LUMSDEN, Chief Engineer, AUGUST, 30th, 1905.
N. T. R.

INVESTIGATING COMMISSION

Exhibit 3

Correspondence in connection with volume of traffic to be expected on the Railway.
(See Page 16 of Report)
Mr. H. A. Woods, Assistant Chief Engineer,
Grand Trunk Pacific Railway Co.,
Montreal, Canada.

Dear Sir:—

I am preparing instructions for our Locating Engineers as to the equating value of distance, curvature, rise and fall, and shall be glad if you will kindly let me know the number of daily trains each way, which you have assumed for purposes of calculation on main line of the G. T. P.

Yours very truly,

D. MacPherson,
Asst. Chief Engineer.

Mr. D. MacPherson,
Asst. Chief Engineer, Trans-Continental Railway,
Ottawa, Ont.

Dear Sir:—

Replying to yours of July 24th, stating that you are preparing instructions for your Locating Engineers as to the equating value of distance, curvature, rise and fall, and asking the number of daily trains, each way, we have assumed for purpose of calculation on the main line. I beg to say that for our Prairie Division we have assumed ten trains, each way, daily. I think this is not in excess of what we shall require on that Division, and the Lake Superior Branch.

Yours truly,

(Sgd) H. A. Woods,
Asst. Chief Engineer.

Mr. H. A. Woods, Ass’t. Chief Engineer,
Grand Trunk Pacific Railway,
Montreal, P. Q.

Dear Sir:—

I would beg leave to thank you for your letter of the 26th July stating that you have assumed ten daily trains each way on your Prairie Division. Would you kindly let me know how many trains you have assumed for the Mountain Division, and how many you think would be reasonable for the main line of the Eastern Division. It seemed to me that ten daily trains each way was too large an assumption for our end of the line as a good deal of traffic will go via Lake Superior, and this large number of trains makes the capitalized value per mile of track very large. Assuming $1.17 as the train mile unit cost, then for distances short enough not to affect train wages the additional cost per train mile would be 37½ cents, which capitalized at 5%, would give $2,745 as the value per mile per daily train per annum, amounting to $54,900 per mile on a ten train basis. For distances requiring extra side tracks this last value would amount to $101,376.

Yours very truly,

D. MacPherson,
Asst. Chief Engineer.
Mr. D. MacPherson,
Asst. Chief Engineer, Trans-Continental Ry.,
Ottawa, Ont.

Dear Sir:—

Yours of Aug. 3rd, requesting information as to the number of trains we have assumed for comparison of alternate lines on our Mountain Division, received on return to office.

Replying to same, I have to say that, as yet, we have not progressed far enough with our surveys on this Division to give definite instructions to our Engineers. There are so many obstacles, in the way of grades and curvature, on this part of the line, which may make comparison of alternate lines unnecessary. However, I may say that where conditions are such as to admit of comparison, it will probably be on the basis of eight daily trains each way. In this connection, I may say that we expect, within a few years, our westbound business will exceed our eastbound business, west of Edmonton, and possibly for some considerable distance east of that point.

I agree with you that the ten daily trains, each way, on the Trans-Continental, east of the Junction of our Lake Superior Branch, is too large an assumption for that part of the Line. I should consider six daily trains each way, sufficient for comparison.

For your information I may say further, that we assume the unit cost per train as $1.35, which is reported cost on the Canadian Pacific Railway, and that we capitalize on a basis of 4%, instead of 5%. I am not sure that the Government will pay above 3½. The difference between the capitalization at 5% and 3½ makes quite a radical difference, as you will note.

I expect to be in Ottawa within a day or two, and shall take pleasure in calling at your office, and going into this matter a little more in detail, if you so desire.

Yours very truly,
(Sgd.) H. A. Woods,
Asst. Chief Engineer

Ottawa, August 9th 1905.

S. R. Poulin, Esq.,
District Engineer,
North Bay, Ont.

Dear Sir:—

I am preparing a table of equating values for distance, curvature and rise and fall, for the purpose of giving our Locating Engineers a basis on which to compare different lines, and I shall be glad if you will kindly let me have your opinion, based on your knowledge of the country and of existing lines, as to what would be a fair number of daily freight trains per annum, each way, to assume as the probable maximum number over your district. Ten daily trains each way have been suggested, but it seems to me too large, and I shall be glad to have your views or any suggestions that will be useful in this connection.

Yours very truly,
D. MacPherson,
Asst. Chief Engineer.
SESSIONAL PAPER No. 123

Mr. D. MacPherson,
Asst. Chief Engineer,
Ottawa.

DEAR SIR:—

In answer to yours as to what would be a fair number of daily freight trains per annum (?) over my District, I think that 7 or 8 at the most would be a fair average. My reasons for saying so is: that the C. P. R. here at North Bay, after twenty years of operation have only that number in the busy time, and that the number of cars on their trains do not average over 33 cars, that is from 28 to 42 cars according to the motive power, while over our line with the grades and curvatures contemplated, 8 trains each way would give nearly double the amount of cars, that the C.P.R. are moving past North Bay, and the freight passing North Bay is not only from the West but probably one-third or one-half comes from the Soo Line and the settlements between here and Chapleau and Sault St. Marie. Of course it can be taken for granted that there will be large settlements also along the new line and that local traffic will emanate from local points. Still if the G. T. P. build their projected line from North Bay in a westerly direction to tap the main line, it would probably take all over the Ontario traffic going and coming from the west, and would in proportion reduce the number of trains over my district, so that I think that 8 trains, probably 400 or 450 cars each way is a good average for the next 25 or 30 years, unless the wheat should find its outlet over the said line.

Yours truly,

Ottawa, August 15th, 1905.

H. D. Lumssden, Esq., Chief Engineer,
Trans-Continental Railway,
Ottawa, Ont.

DEAR SIR:—

Tables should be issued as soon as possible to Locating Engineers giving Equating Values for Distance, Curvature and Rise and Fall, in order that they may have definite values for comparing different routes. The basis for all these calculations is the assumed number of daily trains and cost per train mile.

Some calculations were made in the interim report based on ten daily trains each way, or a total of twenty daily trains, but it appears to me that this is entirely too high, and that probably the number should not be the same for all Districts, as the traffic between Winnipeg and Junction of Fort William Branch would be heavier than on any other part of the line.

As an illustration of my argument that twenty trains is too high; assume (which is C. P. R. basis of calculation) that total cost per train mile is $1.00, then for additional lengths of line great enough to necessitate extra sidings, the cost for each additional train mile would be about $0.60. In twenty daily trains this equals 25 x 20 x 60 = $4,380.00, which would be the annual extra cost of adding one mile of track under these conditions. Capitalize this at 4% and it amounts to $109,500.00. In other words, if you assume twenty daily trains you can afford to spend $109,500.00 for every mile you can shorten the line, in the distances long enough to lessen the number of sidings. It does not appear to me that we would be justified in spending that amount, and I should be glad if you will kindly advise.
me the number of daily trains each way which should be used as a basis of calculation on each district, and I will then prepare the necessary table for District Engineers.

I enclose you copies of correspondence with the Assistant Chief Engineer of the Grand Trunk Pacific and our District Engineers, on the subject.

Yours very truly,

D. MacPherson.

August 18th, '05

D. MacPherson, Esq.,
Assistant Chief Engineer.

Dear Sir,

In reply to yours of the 15th. inst., in regard to preparation of tables to be issued to Locating Engineers, giving equating values for distance, curvature and rise and fall, for comparison of routes, I think you might assume six daily trains per day each way,

Yours truly,

H. D. Lumsden.

Ottawa, August 29th 1905.

H. D. Lumsden, Esq.,
Chief Engineer,
Ottawa, Ont.

Dear Sir:—

Herewith tracing of Table of Values for Equating Distances, Curvature and Rise and Fall. If you approve, will you kindly sign same, so that I may have copies sent out to the District Engineers.

Yours very truly,

D. MacPherson.

Enclos.

INVESTIGATING COMMISSION

Exhibit 4

Mr. Collingwood Schreiber's Estimate.

(See Page 17 of Report)
Grand Trunk Pacific Railway, 1903.

I estimate the cost of construction of the Grand Trunk Pacific Railway as a road of an ordinary character such as has been built in Canada with maximum grades of 1% or 52.80 per mile, being less than the maximum grades upon the Intercolonial Railway, the maximum grades on which road are as follows:

<table>
<thead>
<tr>
<th>Location</th>
<th>Grade</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bedford</td>
<td>1.80%</td>
<td>95.00 feet</td>
</tr>
<tr>
<td>Folleigh</td>
<td>1.22%</td>
<td>64.42</td>
</tr>
<tr>
<td>Metis</td>
<td>1.22%</td>
<td>64.42</td>
</tr>
</tbody>
</table>

Estimated Cost of the Grand Trunk Pacific Railway.

COLLINGWOOD SCHREIBER.

OTTAWA, 12th July, 1903.
N. T. R.

INVESTIGATING COMMISSION

Exhibit 5

Copy of Letter from Mr. W. S. Fielding, giving Estimate of Cost.
(See Page 17 of Report)
Minister of Finance.

Ottawa, May 11th, 1904.

Dear Mr. Emmerson,

Last summer, while I was Acting Minister of Railways, and when the Grand Trunk Pacific scheme came up, I asked Mr. Schreiber's opinion as to the probable cost of constructing the Eastern Division (Government portion) of the road. Mr. Schreiber gave me the information, although not in the form of a written report, and I used it in the House, mentioning his name as my authority. His opinion was that a road could be constructed from Quebec to Moncton for $25,000 per mile, and from Quebec to Winnipeg for $28,000 per mile.

These estimates were made for a road of an ordinary character, such as is constructed elsewhere. In order to make a sufficiently liberal allowance for a road of better character, I added 25%, making the estimate $31,250 per mile from Quebec to Moncton, and $35,000 per mile from Quebec to Winnipeg. I have not spoken to Mr. Schreiber on the matter of late, but from other experienced railway men I have received assurances that my estimate was a most liberal one and that the road could probably be constructed well within these figures.

As above stated, I did not obtain a written report from Mr. Schreiber. I think it might be convenient to have a report from him. May I suggest that you discuss the matter with him and, if there is no objection, ask him to make a short memorandum, putting in writing the information which he gave me last summer.

Yours faithfully,

(Sgd.) W. S. FIELDING.

The Honourable H. R. Emmerson,
Minister of Rys. and Canals,
Ottawa, Ont.

Ottawa, 17th May, 1904.

Sir,

In compliance with your request that I should put in writing the information orally given to me by Mr. Fielding last summer, while he was Acting Minister of this Department, in respect of the estimated cost of constructing the Eastern Division, between Moncton and Winnipeg, of the proposed Grand Trunk Pacific Railway, I would state as follows: premising that the character of the railway I had in view was a substantially built railway, with maximum grades of less severity, and curves of greater radius than those on the Intercolonial Railway.

As to the section between Moncton and the South approach to the bridge now in course of construction over the river St. Lawrence at Quebec, I advised
Mr. Fielding that from my personal knowledge of the general configuration of the 
country and from information gathered from the written reports of various Engineers who have traversed the district, I have arrived at the conclusion that the cost 
of construction should not exceed $25,000 per mile.

As to the section between Quebec and Winnipeg, I considered this section on the assumption that the line would probably follow the height of land from a point some distance from Quebec to a point North of Sudbury, and thence to Winnipeg, passing North of Lake Nepigon, I availed myself of the information contained in various engineers’ reports on surveys made of the country lying between the neighbourhood of Sudbury and Winnipeg, and the conclusion I reached was that the cost of construction need not exceed $28,000 per mile, and I so informed Mr. Fielding.

I would say that I am still of opinion that a road of the standard above indicated can be constructed at these figures.

I have the honour to be, sir,
Your obedient servant,

(Sgd.) COLLINGWOOD SCHREIBER,
Chief Engineer.

The Honourable H. R. EMMERSON,
Minister of Rys. and Canals.
Ottawa.
N. T. R.

</tr>
</tbody>
</table>

Total $8576-73

Average cost per mile $63,427.

For 1803-55 miles $114,393,765
This estimate is based on quantities as estimated by District Engineers and contract prices, so far as contracts have been let, remaining prices estimated by Chief Engineer.

Distances are those of actual survey, and the average cost given is per mile of completed Main Line Track, and includes, in addition to the road bed, ties, rails and fastenings, trackage of sidings and yards (326 miles) section houses, stations, engine houses, &c., cost of surveys, right of way and bridges, and also includes 10% for Engineering and contingencies.

The following items are not included in estimate:—

St. Lawrence River Bridge, Quebec; Terminals in City of Quebec or line thereto; Terminals in City of Winnipeg, or large machine shops in that vicinity; but $90,000 included for ordinary Divisional Point at Moncton.

Hugh D. Lumsden,
Chief Engineer.

Ottawa, June 23rd, 1908.

TOTALS | $127,219,863 | $34,087,937 | $161,307,800 |

NOTE:

- Grading includes: Clearing; excavation; culverts; sub-structure of bridges; tracklaying; ballasting; ties; signals; interlocking appliances; telegraph lines; fencing; water supply; track scales; temporary trestles; extra work; pump houses and pumps; and ties purchased by commission on contracts numbers 9, 10 and 21.

- Rails and Fastenings includes: Frogs; switches and diamond crossings.

- Buildings includes: Stations; section and tool houses; divisional point buildings.

- Transport: This item was formerly included (in statements) with “Surveys and Expenses.”

- Sundry Items: Formerly combined under heading “Engineering and Expenses” and included instruments; supplies; camp outfits; general expenses; freight and express; furniture; legal Expenses; medical service, etc., etc.

- Springfield Shops.—Locomotive Shops: — Item includes plant and equipment; water supply; sewerage system; and lighting.

- Car Shops: — Item includes plant and equipment.

- Quebec Terminals: Includes line from Quebec Bridge to Quebec City; right of way; terminal facilities; and Quebec shops.

General Offices:
THE NATIONAL TRANSCONTINENTAL RAILWAY
Corry Building, Ottawa

DISTRICT
FORM OF TENDER.

To

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY,
OTTAWA.

GENTLEMEN:—

(I or we) the undersigned do hereby offer to the Commissioners to furnish all and every kind of labour, tools, machinery, implements and other plant, services and materials whatsoever necessary for the due execution and completion of, and to fully execute and complete in the most thorough, workmanlike and substantial manner on or before the

in accordance with the specifications hereto annexed and the plans, profiles and drawings prepared and to be prepared for the purposes of the work, and upon the terms and conditions set out in the printed form of contract furnished by the said Commissioners and also attached hereto, and in every respect to the satisfaction and approval of the Chief Engineer of the Commissioners, all the work of the different kinds hereinafter mentioned, set out or referred to in the said specifications, so far as the same are applicable to the classes of work hereby tendered for, and required in the construction of the following section of the Transcontinental Railway, viz:—

District
Commissioners

From a point designated on the plans of the said
that is to say, clearing, close cutting, grubbing, grading, cross logging, ditching, stream and road diversions, truss, pile and trestle bridging, masonry and concrete culverts, cast iron and other pipe culverts, drains of various kinds, piers, abutments, road crossings, bridge masonry, retaining walls, embankment protection, paving, riprap, ties, cattle guards, telegraph line, track laying, surfacing, ballasting, water service, turntables and substructures, engine houses, section houses, fences, gates and all the works below sub-grade or formation level, in fact all work necessary when the bridge superstructures are in place to complete ready for operation a single track railway, with side tracks, switches, yards, terminal yards, depot grounds, spurs and other necessary and appurtenant tracks, at and for the prices set opposite the different items in the following schedule:

</table>
It shall be understood that the Commissioners are to furnish to the Contractor all the rails and fastenings, tie plates, track bolts and spikes, either on board cars at the nearest accessible point by rail or at steamboat landing, or at a point along the line of road to be constructed, as may be directed by the Chief Engineer. All other materials required for the said construction shall be supplied by the Contractor at the schedule price for same. Not more than one-fifth of the total number of ties supplied by the Contractor shall be second-class.

It shall also be understood that the construction of steel bridges, depots, shops, warehouses, freights and fuel sheds does not form a part of this contract and is not included in the work tendered for.

The Contractor at his own cost provides all wagon roads to reach and carry on the work.

The Contractor will be required to handle all material at his own expense including the unloading and loading of cars and all material must be unloaded from cars within three days after its arrival, unless special authority to the contrary is given by the Engineer. Any violation of this rule will subject the Contractor to the usual demurrage.

Accompanying this tender is an accepted cheque on the Bank for the sum of dollars, as required by the advertisement annexed hereto.

And we do hereby declare and agree that in case of refusal or failure to execute the said contract with the Commissioners, and also to furnish the approved security required, to an amount not exceeding one third of the estimated total consideration of the contract, for the faithful performance of the said contract, within ten days after the acceptance of this tender the said cheque shall be forfeited to the said Commissioners as liquidated damages for such refusal or failure, and that all contract rights acquired by the acceptance of this tender shall be forfeited.
The full names and residence of all persons interested in this tender as principals are as follows:

The undersigned further agree to conform in all respects to the terms and conditions of this tender.

Dated at the day of 190

CONTRACT
(Railway Construction).

This Agreement made (in triplicate) the day of 190
Between:

(hereinafter called the "Contractor") of the First Part;
And The Commissioners of the Transcontinental Railway (hereinafter called "the Commissioners") of the Second Part;

Witnesseth as follows:—

GENERAL COVENANT.

In consideration of the covenants and agreements hereinafter contained and to be performed by the Commissioners and of the prices hereinafter mentioned, the Contractor hereby COVENANTS AND AGREES with the Commissioners as follows:

MEANING OF WORD "WORK."

1. In this agreement the word "work" or "works" shall, unless the context requires a different meaning, mean the whole of the work and materials, matters and things required to be done, furnished and performed by the Contractor under this contract.

ENGINEER, CHIEF ENGINEER, DEFINED.

2. The words "Engineer" or "Chief Engineer" when used in this agreement or in the specifications hereunto annexed, shall mean the Chief Engineer of the Commissioners, for the time being, acting as such either directly or through the Assistant Chief Engineer, District Engineer, Division Engineer, Resident Engineer or Inspector, having immediate charge of a portion of the works limited by the particular duties entrusted to him. All instructions and directions or certificates given, or decisions made, by anyone acting under the authority of the Chief Engineer shall be subject to his approval and may be cancelled, altered, modified and changed as he may see fit. In all cases where the Contractor or the Commissioners are satisfied with the decision of the Engineer or Inspector in immediate charge of the work, an appeal to the Chief Engineer may be made.
CONSTRUCTION OF CLAUSES AS COVENANTS.

3. Whenever in this agreement it is stipulated that anything shall be done or performed by either of the parties hereto, it shall have the same effect and be construed as if the said party had entered into a covenant with the other party to do or perform the same, and as if any such covenant on the part of the Contractor had been expressly made not only on his own behalf, but also on behalf of his executors, administrators and assigns, and that any such covenant on the part of the Commissioners had been expressly made on behalf of themselves and their successors. Whenever this agreement is entered into by more than one party as parties of the first part, the word "Contractor" shall be read "Contractors" and all pronouns in this Contract or in the specifications hereunto annexed referring to the Contractor shall be read as plural, and whenever a corporation is the party of the First Part, the said pronouns shall be read accordingly.

PERFORMANCE BY CONTRACTOR.

4. The Contractor shall, at his own expense, furnish all and every kind of labour, tools, machinery, implements, and other plant, services and materials whatsoever necessary for the due execution and completion of, and shall fully construct, perform, execute and complete in the most thorough, workmanlike and substantial manner in every respect, to the satisfaction and approval of the Chief Engineer, in the manner and upon the terms and conditions herein specified and according to the specifications annexed hereto, which, for the purpose of identification, have been signed by the Contractor and the Commissioners, and form part of this agreement, and to the plans, profiles and drawings in the office of the Chief Engineer, and to any further plans or drawings in addition thereto which the Chief Engineer may find necessary to provide from time to time for the full and complete performance of the work; and shall, on or before the finally complete and deliver to the Commissioners all the works of the different kinds hereinafter mentioned, set out or referred to in the said specifications hereto annexed in so far as the same are applicable to the classes of work hereby contracted for and shown on the said plans, profiles and drawings prepared, and those to be prepared, for the purpose of the work required in the construction of that portion of the Eastern Division of the Transcontinental Railway being District

that is to say, the clearing, close-cutting, grubbing, grading, cross-logging, ditching, stream and road diversions, truss, pile and trestle bridging, masonry and concrete culverts, cast iron and other pipe culverts, drains of various kinds, piers, abutments, road crossings, bridge masonry, retaining walls, embankment protection, paving, riprap, ties, cattle guards, telegraph line, tracklaying, surfacing, ballasting, water service, turntables and sub-structures, engine houses, section houses, fences, gates, and all the works below sub-grade or formation level, in fact all work necessary, when the bridge superstructures are in place, to complete ready for operation a single track railway with side tracks, switches, yards, terminal yards, depot grounds, spurs, and other necessary and appurtenant tracks; but it shall be understood that the Commissioners are to furnish to the Contractor all the rails and fastenings, tie plates, track bolts and spikes, either on board cars at the nearest accessible point by rail or at steamboat landing, or at a point along the line of road to be constructed, as may be directed by the Chief Engineer; however, steel bridges,
depots, shops, warehouses, freight and fuel sheds do not form part of the present contract. It is also agreed that not more than one-fifth of the total number of ties supplied by the Contractor shall be second-class.

TIME OF THE ESSENCE OF THE CONTRACT.

5. Time shall be of the essence of this contract.

In default of the Contractor completing the work by the date mentioned in clause 4, the Contractor shall, if required by the Commissioners, pay to the Commissioners by way of liquidated damages the sum of

for each calendar month which may elapse after the date mentioned before the work shall be so completed and delivered; it being understood that the Commissioners shall be the sole judges of what constitutes default on the part of the Contractor.

MANNER OF PERFORMANCE.

6. All of the said works shall be constructed of the best materials of their several kinds, and finished in the best and most workmanlike manner, in the manner required by and in strict conformity with the said specifications and the drawings relating thereto and the working or detail drawings which may, from time to time, be furnished (which said specifications and drawings and the working or detail drawings to be hereafter furnished are hereby declared to be part of this Contract), and to the complete satisfaction of the Chief Engineer.

SEVERAL CLAUSES OF CONTRACT TO BE READ TOGETHER.

7. The several parts of this Contract shall be taken together, to explain each other, and to make the whole consistent; and if it be found that anything has been omitted or misstated, which is necessary for the proper performance and completion of any part of the work herein mentioned and described, the Contractor will, at his own expense, execute the same as though it had been inserted and properly described, and the correction of any such error or omission shall not be deemed to be an addition or deviation from the works hereby contracted for.

COMMENCEMENT AND PROSECUTION OF WORK.

8. The said work shall be commenced immediately after the execution of this Agreement and shall be proceeded with continuously and diligently, and under the personal supervision of the Contractor, until completed. The work shall be carried on and prosecuted in all its several parts in such a manner and at such points and places as the Engineer shall from time to time direct and to his satisfaction, but always according to the provisions of this agreement, and, if no direction is given, then in a careful, prompt and workmanlike manner, according to this Agreement. The Contractor shall make and keep open for use in safe condition, all crossings and approaches wherever the line of railway traverses any public or private road, and shall alter and amend such roads, crossings and approaches whenever required by the Engineer in charge of the work, during the construction of the line.

AGREEMENT NOT TO BE ASSIGNED.

9. This Agreement shall not be assigned without the consent of the Commissioners, nor shall the said work or any part thereof be subcontracted, without the written consent of the Commissioners to every such assignment or subcontract.
10. The Contractor shall in all things conform to and comply with the instructions of the Engineer. All work and material shall be subject to the approval of the Engineer, and any work or material which, in the opinion of the Engineer, is not of the character, quality, dimensions or design required by the plans or specifications, or which is in the judgment of the Engineer otherwise in any manner defective, imperfect, or insufficient, shall be replaced or remedied when pointed out to the Contractor by the Engineer, and shall be made good and sufficient by the Contractor, at his own expense, and to the satisfaction of the Engineer, who shall have the power and whose duty it shall be, to have any defective work or material taken out and rebuilt, or replaced at the expense of the Contractor. Any omission by the Engineer to disapprove of or reject any insufficient or imperfect work at the time of any estimate shall not be deemed an acceptance of such work or material.

CHANGES AND EXTRA WORK.

11. The Engineer shall be at liberty at any time, either before the commencement or during the construction of the works or any portion thereof, to order any extra work to be done, and to make any change or alteration which he may deem expedient in the alignment or grade of the railway, or in the dimensions, nature, location, or position of the works, or of any part or parts thereof, or in any other thing connected with the works, whether or not, such changes increase or diminish the work to be done, or the cost of doing the same, and the Contractor shall immediately comply with all written requisitions of the Engineer in that behalf, but the Contractor shall not make any change in or addition to, or omission, or deviation from the works, and shall not be entitled to any payment for any change, addition or deviation, or any extra work, unless such changes, addition, omission, deviation, or extra work, shall have been first directed in writing by the Engineer, and notified to the Contractor in writing, and the price to be paid for such extra work shall be previously fixed by the Engineer by agreement with the Contractor, or in default of such agreement, shall be as provided by Section 35.

CLAUSES OF CONTRACT TO APPLY TO CHANGES AND EXTRA WORK.

12. All the clauses of this contract shall apply to any changes, additions, omissions, deviations, or extra work, in like manner, and to the same extent as to the works contracted for, and no changes, additions, deviations, omissions, or extra work shall annul or invalidate this Contract.

NO CLAIM FOR LOSS OF PROFITS.

13. If any change or deviation in, or omission from the works be made by which the amount of work to be done shall be decreased, no compensation shall be claimable by the Contractor for any loss of anticipated profits in respect therefore.

CLAIMS FOR EXTRA WORK TO BE PRESENTED AT END OF MONTH.

14. All claims for extra or additional payment must be presented to the Engineer for allowance at the end of the month in which the work or material in respect of which the same is claimed shall have been done or furnished, and shall, if allowed by the Engineer, be included in the estimate for that month, otherwise all claims therefor shall be deemed to be absolutely waived by the Contractor and the Commissioners shall not be required to make such or any payment for or in
respect of such work or material, unless, in the judgment of the Commissioners under the circumstances of the case, it is reasonable and proper to do so.

ENGINEER SOLE JUDGE.

15. The Engineer shall be the sole judge of work and material in respect of both quantity and quality, and his decision on all questions in dispute with regard to work or material shall be final, and no works or extra or additional works or changes shall be deemed to have been executed, nor shall the Contractor be entitled to payment for the same, unless the same shall have been executed to the satisfaction of the Engineer, as evidenced by his certificate in writing, which certificate shall be a condition precedent to the right of the Contractor to be paid therefor.

PRICES IN SCHEDULE TO INCLUDE ALL THINGS NECESSARY FOR EXECUTION AND COMPLETION OF WORK.

16. The prices to be paid for the different kinds of work set out or referred to in the list or schedule of prices are intended to and shall include not merely the particular kind of work or materials mentioned in the said list or Schedule but also all and every kind of work, labour, tools and plant, materials, articles and things whatsoever necessary for the full execution and completion ready for use of the respective portions of the works, to the satisfaction of the Engineer. And in case of dispute as to what work, labour, tools and plant, materials, articles and things, are or are not so included, the decision of the Engineer shall be final and conclusive.

FOREMAN.

17. A competent foreman shall be kept on the ground by the Contractor during all the working hours, to receive the orders of the Engineer, and should the person so appointed be deemed by the Engineer incompetent, or conduct himself improperly, he may be discharged by the Engineer, and another shall be at once appointed in his stead; such foreman shall be considered as the lawful representative of the Contractor, and shall have full power to carry out all requisitions and instructions of the Engineer.

MATERIAL OBJECTED TO MUST BE REMOVED.

18. In case any materials, or other things in the opinion of the Engineer, which are not in accordance with the several parts of this Contract or are not sufficiently sound or are otherwise unsuitable for the respective works, shall be used for or brought to the intended works, or any part thereof, or in case any work shall be improperly executed, the Engineer may require the Contractor to remove the same, and to provide proper material or other things, or to properly re-execute the work, as the case may be; and thereupon the Contractor shall and will immediately comply with the said requisition, and if twenty-four hours shall elapse and such requisition shall not have been complied with, the Engineer may cause such materials or other things, or such work, to be removed and, in any such case, the Contractor shall pay the Commissioners all such damages and expense as shall be incurred in the removal of such materials, or other things, or of such work, or the Commissioners may, in their discretion, retain and deduct such damages and expenses from any amounts payable to the Contractor.
19. All machinery and other plant, materials and things whatsoever provided by the Contractor for the works hereby contracted for, and not rejected under the provisions of the last preceding clause, shall from the time of their being so provided become, and, until the final completion of the said work, shall be the property of the Commissioners for the purpose of the said works, and the same shall on no account be taken away, or used or disposed of except for the purpose of the said works, without the consent in writing of the Engineer, and the Commissioners shall not be answerable for any loss or damage whatsoever which may happen to such machinery or other plant, materials or things, provided always that upon the completion of the works and upon payment by the Contractor of all such moneys, if any, as shall be due from him to the Commissioners, such of the said machinery and other plant, materials and things as shall not have been used and converted in the works and shall remain undisposed of, shall, upon demand, be delivered up to the Contractor.

POWER TO TAKE WORK OUT OF CONTRACTOR’S HANDS.

20. In case the Contractor shall make default or delay in diligently continuing to execute or advance the works to the satisfaction of the Engineer, and such default or delay shall continue for six days after notice in writing shall have been given by the Engineer to the Contractor requiring him to put an end to such default or delay, or in case the Contractor shall become insolvent, or make an assignment for the benefit of creditors, or neglect either personally or by a skilful and competent agent to superintend the works, then in any of such cases the Commissioners may take the work out of the hands of the Contractor and employ such means as they may see fit to complete the work, and the Contractor shall have no claim for any further payment in respect of the works performed, but shall nevertheless remain liable for all loss or damage which may be suffered by reason of the non-completion by him of the works; and all materials and things whatsoever, and all horses, machinery and other plant provided by him for the purposes of the works, shall remain and be considered as the property of the Commissioners for the purpose and according to the provisions and conditions contained in paragraph 22 hereof.

ABANDONMENT OF WORK BY CONTRACTOR.

21. If the work to be done under this Agreement shall be abandoned or be assigned by the Contractor without the consent of the Commissioners, or if the Contractor shall lose control of the work for any cause, excepting the acts of God or of the public enemy, or if at any time the Chief Engineer shall be of the opinion and shall so certify in writing to the Commissioners that the Contractor is wilfully and persistently violating any of the conditions or covenants of this Contract, or is not executing said Contract in good faith, the Commissioners may take the work out of the hands of the Contractor and may employ such means as they may see fit to complete the work, and all provisions of section 20 of the Agreement shall thereupon apply and the Commissioners shall have in regard to the said work all the powers therein provided.

POWER TO EMPLOY ADDITIONAL MEN, HORSES, ETC., AND PLANT.

22. If the Engineer shall at any time consider that the number of workmen, or horses, or the quantity of machinery, or other plant, or the quantity of proper
materials, respectively employed, provided or supplied by the Contractor on or for the said works, is insufficient for the advancement thereof towards completion within the limited time, or that the works are, or some part thereof is, not being carried on with due diligence, then and in every such case the Engineer may, by written notice to the Contractor, require him to employ or provide such additional workmen, horses, or machinery or such additional or other plant or materials as the Engineer may think necessary, and, in case the Contractor shall not thereupon within three days, or such other longer period as may be fixed by any such notice, in all respects comply with such requisition, then the Engineer may either on behalf of the Commissioners, or, if he sees fit, may as the agent of and on account of the Contractor, but in either case at the expense of the Contractor, provide and employ such additional workmen, horses, or machinery or such additional or other plant, or material or any portion thereof, respectively, as he may think proper, and may pay such additional workmen such wages, and for such additional horses, machinery or such additional or other plant and machinery respectively such prices as he may think proper, and all such wages and prices respectively shall thereupon at once be repaid by the Contractor, or the same may be retained and deducted out of any sum that may then or thereafter be or become due from the Commissioners to the Contractor, and the Commissioners may use in the execution or advancement of the said works not only the horses, machinery and other plant and other materials so in any case provided by anyone on their behalf, but also all such as may have been or may be provided by or on behalf of the said Contractor.

WORKS AT THE RISK OF CONTRACTOR UNTIL COMPLETION.

23. The Contractor shall be at the risk of, and shall bear, all loss or damage whatsoever, from whatsoever cause arising, which may occur to the works, or any of them, until the same shall be fully and finally completed and delivered up to and accepted by the Commissioners; and, if any such loss or damages shall occur before the final completion, delivery and acceptance, the Contractor shall immediately, at his own expense, repair, restore and re-execute the work so damaged.

DAMAGE GENERALLY.

24. The Contractor and his agents, labourers and all employed by him, or under his control, shall use due care that no person or property is injured or any rights infringed in the prosecution of the said works, and the Contractor shall be responsible for all damages claimable by any person or corporation whatsoever in respect of any injury to persons or property or in respect of any infringement of any right whatsoever, including damage by fire occasioned in his carrying on of the said works, or by any neglect or misfeasance or nonfeasance on his part or on the part of his servants or employees, and shall and will, at his own expense, make such temporary provisions as may be necessary for the protection of persons, or of lands, buildings, animals or other property, or to prevent the interruption of the traffic on any public or private road, or for the uninterrupted enjoyment of all rights of persons or corporations in and during the performance of the said works.

STOPPAGE OF WORK AND REDUCTION OF FORCE.

25. The Commissioners shall have the right to suspend operations from time to time at any particular point or points or upon the whole of the works, or to direct that the force employed on the works shall be diminished, and the Contractor, upon being requested in writing so to do by the Commissioners, shall stop the work or reduce the force, as the case may be, in accordance with such
written request, and the Contractor shall have no claim for damages by reason thereof. Such writing shall be signed by the Engineer and delivered to the Contractor, or to some person on the work representing the Contractor, at least ten days previous to such stoppage of work or reduction of force.

EXTENSION OF TIME IN CASE OF STOPPAGE OF WORK.

26. If there be any stoppage of the said work upon the written directions of the Commissioners or if its progress be materially delayed, from want of location, or staking of the line, or work of securing of the right of way, or by reason of any act or neglect of any of the Engineers or agents or employees of the Commissioners, the time herein specified for completing the said work shall be extended for a period of time equal to the time of such stoppage or delay, and the Contractor shall have no further or other claim therefor, or for or in respect of anything arising therefrom or caused thereby. The right of the Contractor to such extension shall be deemed to have been waived unless a claim therefor, stating the occasion and nature thereof, shall be made by him in writing, delivered to the Commissioners at the time of such stoppage or delay. At any time after operations have been suspended either in whole or in part, such operations may be again resumed and again suspended and resumed as the Commissioners may deem proper, and the Contractor, upon receiving written notice on behalf of the Commissioners that the suspended operations are to be resumed, shall at once resume the prosecution of the work under this contract and diligently carry on the same.

TOTAL SUSPENSION WITH THE CONSENT OF THE COMMISSIONERS.

27. In case of a total suspension of all work under this Agreement without any fault, default, collusion or procurement of the Contractor for a longer period than seven days, unless such suspension shall have been caused by the winter season or protracted rigor of weather, it shall be the duty of the engineer to make a final estimate of the work done according to the terms of this Agreement, and to make a return thereof to the Commissioners when the amount found by the Engineer to be then due for work done, together with all percentages retained up to that time, except as herein otherwise provided, shall be paid to the Contractor.

28. No delay within or beyond the period herein specified for completing the said work shall vitiate or void this Contract, or any part thereof, or the obligation hereby imposed upon the Contractor, or shall make void or in anywise impair or effect any current or other bond or security for the performance of this Contract, and all the Covenants and Agreements in this Contract and in the said Specifications contained shall apply to this Contract until the said work is finally completed and accepted, notwithstanding the fact that such work is not completed within the time specified herein for such completion.

CONTRACTORS TO PAY FOR LABOUR PROMPTLY.

29. The Contractor shall promptly pay for all labour, services and material in or about the construction of the work and all payments for such purpose shall be made by the Contractor at least as often as payments are made by the Commissioners to the Contractor, and in the event of failure by the Contractor at any time to do so, the Commissioners may retain from any moneys due or to become due to the Contractor such amount of money as the Chief Engineer may deem sufficient to make such payments. If the Engineer reports that there is reason to fear that any such payments will not be promptly made by the Contractor, the Commissioners may pay for such labour, services and material from
any date to any date and to any amount which may be payable and may charge
the same to the Contractor, and the Contractor covenants with the Commissioners
to repay at once all and every sum so paid. Before final settlement is made be-
tween the parties hereto for work done and materials furnished under this Contract,
the Contractor shall and will produce and furnish evidence satisfactory to the
Commissioners that the said work and any other property of the Commissioners
upon which said work may have been constructed and all structures, are free
and clear from all liens for labour, workmanship, materials or otherwise and
that no claim then exists in respect of which a lien upon the said work or property
of the Commissioners could or might attach. And the Contractor shall protect
and hold harmless the Commissioners and all their property from any and all
kinds of liens accruing from labour and services performed and material furnished
or otherwise and any of the same in or about the said work.

**DAMAGE BY FIRE.**

30. Special precautions must be taken by the Contractor at his own expense
to prevent fire; and the labourers in his employ shall be subject to the direction
of the Engineer in the event of their aid being required by the Engineer to extinguish
forest fires occurring in proximity of the right-of-way.

The Contractor shall conform to the fire regulations adopted by the Com-
missioners and also to the laws and regulations respecting fires in the different
Provinces wherein the work is being performed.

Any damage by fire that may occur to buildings or structures during con-
struction, must be made good by the Contractor, who must keep such structures
fully insured until the same have been completed and accepted by the Commission-
ers. The operation or occupation by the Commissioners of a portion of the work,
before the completion of the whole, is not to be considered as an acceptance of the
same by the Commissioners. The premiums for fire insurance shall be payable
by the Contractor, and the policies are to be made payable to the Commissioners
or in such form as they may direct, the loss being made payable as the interest
of the Contractor and of the Commissioners respectively may appear and the
policy or policies shall be deposited with the Chief Engineer of the Commissioners
until the completion and acceptance of the work.

**INToxicating Liquors.**

31. The Contractor shall not bring nor permit to be brought anywhere on or
near the said works any spirituous or intoxicating liquors, and if any foreman,
labourer or other employee or sub-contractor in the opinion of the Engineer, be
intemperate, disorderly, incompetent, wilfully negligent or dishonest in the per-
formance of his duties, he shall, on the direction of the Engineer, be forthwith
discharged and the Contractor shall not permit or employ to remain upon the
work any person who shall have been discharged from the said work for any or
all of the said causes.

32. Upon the completion of the work, the Contractor shall remove all tem-
porary structures, fill up all holes and trenches, level all mounds or heaps of earth
that may have been dug or built by him in the execution of the work or incident
thereto and shall remove and clean away all surplus and waste materials or rubbish
of whatever kind remaining on or about the works, and deposit such refuse material
at such place as the Engineer may designate.
INVESTIGATING COMMISSION

COMMISSIONERS COVENANT TO PAY.

33. In consideration of the faithful performance by the Contractor of all and singular the covenants and agreements herein contained, the Commissioners hereby covenant and agree with the Contractor that they will well and truly pay him on the full completion by him of all the work herein specified within the time specified and limited for the completion thereof to the satisfaction and subject to acceptance by their Chief Engineer and subject also as herein provided, the following sums and prices, namely:

</table>
34. Cash payments equal to about ninety per cent. of the value of the work done, approximately made up from returns of progress measurements and computed at the prices agreed upon, or determined under the provisions of this agreement, will be made to the Contractor monthly, on the written certificate of the Engineer that the work for, or on account of which, the certificate is granted has been duly executed to his satisfaction, and stating the value of such work computed as mentioned, and upon approval of such certificate by the Commissioners; and the said certificate and such approval thereof shall be a condition precedent to the right of the Contractor to be paid the said ninety per cent., or any part thereof. The remaining ten per cent. shall be retained until the final completion of the whole work to the satisfaction of the Chief Engineer for the time being having control over the work; and within two months after such completion the remaining ten per cent. will be paid; and the written certificate of the Engineer, certifying to the final completion of the said works to his satisfaction, shall be a condition precedent to the right of the contractor to receive or to be paid the said remaining ten per cent., or any part thereof; provided, however, that if and when it is shown by the Contractor to the satisfaction of the Commissioners that the application of the said ten per cent. or any part thereof will enable or hasten the completion of the work, and that the same will be so applied; and if and when, in the opinion of the Commissioners, it appears that the deposit made by the Contractor as security for the performance of this Contract is ample security for the completion of the work, the said ten per cent. or any part thereof may be released by the Commissioners in such instalments as may from time to time be agreed upon. The Commissioners shall be at liberty from time to time to take over as completed any portion of the work certified to by the Engineer as having been completed, and the Contractor shall, thereupon, be entitled to payments in full for the work so completed in like manner, and subject to the same conditions, as if the said completed portion comprised the whole work to be done. The Commissioners shall be entitled from time to time to the use of any portion of the line of railway not theretofore accepted as completed under the terms thereof for the transportation of all steel superstructures or other materials, and no such use of any part of the said railway shall be deemed to be any acceptance or taking possession thereof.

PRICE FOR EXTRA WORK.

35. In addition to the foregoing contract price, the Commissioners will pay to the Contractor for extra work or for work done under written orders of the Engineer, not covered by this Agreement, but done in the proper execution of this Contract, and for which prices are not named herein, the actual cost of such work, with an additional ten per cent. on the cost of labour and material for the use of tools, Contractor's plant, superintendence and profit, but such actual cost shall not exceed the reasonable market value of such labour and material as the case may be.

36. Where, in the opinion of the Chief Engineer, the work done is not, having regard to the nature and character of the work remaining to be performed, of sufficient value to justify computation at the prices agreed upon and determined under the provisions of this agreement, it shall be competent for the Chief Engineer, in certifying the value of the work done for the purpose of such payment, to disregard the prices so agreed upon or determined, and to compute and certify its relative and proportionate value having regard to the nature and character of the work remaining to be performed; in which case the Contractor shall only be entitled to receive ninety per cent. of the value of the work done as stated in such certificate, and he shall not be paid the difference between ninety per cent. of the value of the work done as so ascertained and certified, and ninety per cent. of the value of such work according to the prices stipulated therefor under the provisions.
of this Agreement, until such time as the Chief Engineer, by reason of the performance of additional work of greater relative value, shall certify that the Contractor is entitled to receive the same.

37. It is intended that every allowance to which the Contractor is fairly entitled will be embraced in the Engineer's monthly certificates; but should the Contractor at any time have claims of any description which he considers are not included in the progress certificates, it will be necessary for him to make and repeat such claims in writing to the Engineer within thirty days after the date of the despatch to the Contractor of each and every certificate in which he alleges such claims to have been omitted.

38. The Contractor in presenting claims of the kind referred to in the last preceding paragraph must accompany them with satisfactory evidence of their accuracy, and the reason why he thinks they should be allowed. Unless such claims are thus made during the progress of the work, within thirty days, as in the preceding clause, and repeated, in writing every month, until finally adjusted or rejected, the Contractor shall have no claim upon the Commissioners in respect thereof.

39. The progress measurements and progress certificates shall not in any respect be taken as binding upon the Commissioners, or as final measurements or as fixing final amounts; they are to be subject to the revision of the Engineer in making up his final certificate, and they shall not in any respect be taken as an acceptance of the work or release of the Contractor from responsibility in respect thereof, but he shall at the conclusion of the works deliver over the same in good order, according to the true intent and meaning of this Agreement.

CONTRACTOR'S INFORMATION.

40. This Agreement is made and entered into by the Contractor for the consideration herein expressed, solely on his own knowledge, information and judgment of the character and topography of the country, its streams, water courses and rainfalls and subject to the same, and upon information derived from other sources than the Commissioners, its officers or agents, of and respecting the nature and formation of the property upon which the said work is to be done, or the character, quantities, or location of the material required to be removed or to be used in forming the roadbed for the said railway, and the Contractor does not rely upon the information given or statement or representation made to him in connection with the said contract by the Commissioners or any of its officers or agents. The Contractor further declares and agrees that the plans, maps and profiles of the said work, furnished by the Commissioners are given only for the purpose of general information.

41. The Contractor shall not have nor make any claim or demand against the Commissioners or file a petition of right for any damage which he may sustain by reason of any delay in the progress of the work, arising from the acts of any of the Commissioners' agents, and it is agreed that, in the event of any such delay, the Contractor shall have such further time for the completion of the works as may be fixed in that behalf by the Commissioners.

42. No action shall be brought against the Commissioners upon this Agreement, or for any breach of any covenants herein contained, or for any work done or claimed to be done or for damages arising out of or by reason of this Agreement, but the remedy of the Contractor shall only be by way of Petition of Right to His Majesty the King, and it is hereby agreed that all matters of difference arising between the parties hereto upon any matter connected with or arising out of this Agreement, the decision whereof is not hereby especially given to the Engineer, shall be referred to the Exchequer Court of Canada.
43. This Contract is hereby made subject to the express condition that no Member of the Senate or of the House of Commons of Canada shall be a party to or concerned or interested in any contract with the Commissioners for the construction of any part of the Eastern Division of the National Transcontinental Railway, or shall be a shareholder in any incorporated company having any such contract.

44. The Contractors will protect and will not remove or destroy, or permit to be removed or destroyed, the stakes, buoys and other marks placed on or about the said works by the Engineers of the works, and shall furnish the necessary assistance to correct or replace any stake or mark which through any cause may have been removed or destroyed.

45. Any notice or other communication mentioned in this Contract to be notified or given to the Contractor shall be deemed to be well and sufficiently notified or given if the same be left at the Contractor's office or mailed in any Post Office to the Contractor or Foreman, addressed to the address mentioned in this Contract, or to the Contractor's last known place of business.

46. The Contractor shall, in connection with the whole of the said work, as far as practicable, use only material, machinery, plant, supplies and rolling stock manufactured or produced in Canada, provided same can be obtained as cheaply and upon as good terms in Canada as elsewhere, having regard to quality and price.

47. All mechanics, labourers, or other persons who perform labour for the purposes of the construction of the works hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and, if there is no current rate in such district, then a fair and reasonable rate, and, in the event of a dispute arising as to what is the current or a fair and reasonable rate, it shall be determined by the Commissioners, whose decision shall be final.

48. This Agreement is subject to the regulations now in force or which may at any time hereafter be in force during the construction of the works hereby contracted for, made under the authority of the Department of Labour and which are or shall be applicable to such works.

49. All the works carried on under this Agreement shall be subject to the provisions of the Act respecting the Preservation of Health on Public Works and to all regulations made or to be hereafter made pursuant to the said Act, or by any other lawful authority, and applicable to such works, and to any regulations which may be adopted by the Commissioners in reference to sanitation or the preservation of health on public works.

50. The Contractor shall at his own expense make adequate arrangements for the medical and sanitary supervision of all his employees, and shall for that purpose employ the necessary duly qualified medical practitioners, furnish and provide all necessary medicines, surgical instruments, and hospital accommodation to the satisfaction of the Chief Engineer.

The duties of the medical staff shall include not only the attendance on sick or injured men, but the inspection of the sanitary arrangements of all camps, dwellings and works, at least once a month, or oftener, if, in the opinion of the Engineer, it is necessary.

In order to compensate the Contractor for such supervision he shall deduct from the wages of every man in his employment in the district or districts in which this contract is situated per month, or a proportional rate for a less period.

It shall be optional on the part of the Commissioners, should they see fit to do so, to take over the medical and sanitary supervision of all men, camps, dwellings and works, and should they elect so to do the Contractor shall deduct from the wages of all employees as before stated the sum of per month,
or a proportional rate for a less period, and shall furnish to the Commissioners at the end of each month a full and correct statement of all such deductions, and the Commissioners shall subtract the total amount of such deductions from the moneys due or to become due to the Contractor on account of estimates for that month.

51. The Contractor shall observe and comply with all regulations made by any lawful authority and with all regulations of the Commissioners and instructions from the Engineer of the said works, from time to time during the construction made or given with reference to the prevention and extinguishing of fires, and shall pay all wages and other outlay occasioned by such regulations and instructions.

52. It is distinctly declared that no implied contract of any kind whatsoever, by or on behalf of the Commissioners, shall arise or be implied from anything in this contract contained, or from any position or situation of the parties at any time, it being clearly understood and agreed that the express contracts, covenants and agreements herein contained and made by the Commissioners, are and shall be the only contracts, covenants and agreements upon which any rights against them are to be founded.

In Witness Whereof the parties hereto have herewith caused these Presents to be signed and sealed on the day and year first above written.

INVESTIGATING COMMISSION

SESSIONAL PAPER No. 123

GENERAL SPECIFICATIONS
FOR THE CONSTRUCTION OF THE
NATIONAL TRANSCONTINENTAL RAILWAY
EASTERN DIVISION

General.

ALIGNMENT.

1. The centre of the roadbed shall conform in alignment to the centre stakes.

SUB-GRADE.

2. The grade line of the profile denotes sub-grade, and this term indicates the top of embankments or the bottom of excavations ready to receive the ballast.

CROSS SECTION.

3. The roadbed shall be formed to the section, slopes and dimensions shown upon the standard drawings, or to such modifications thereof as are required to meet special conditions, as may be from time to time directed.

WIDTH OF ROADBED.

4. When finished and properly settled the roadbed shall conform to the finishing stakes and shall be of the following dimensions at sub-grade, for single track, viz.:
   - On embankments less than sixteen feet in height, the width shall be sixteen feet.
   - On all other heights, the width shall be eighteen feet.
   - Earth excavations, twenty-two feet at formation level.
   - Rock excavations, twenty feet wide at formation level.

SLOPES.

5. The slopes of embankments and excavations shall be of the following inclinations, as expressed in the ratio of the horizontal distance to the vertical rise:
   - Embankments: Earth, one and one-half to one; rock, one to one.
   - Excavations: Earth, one and one-half to one; loose rock, one to one; solid rock, one quarter to one; unless otherwise ordered in writing by the Engineer.

Clearing and Grubbing.

CLEARING.

6. The whole, or as much of the right-of-way as the Engineer may direct, shall be entirely cleared of all trees, logs, brush and other perishable matter; all of which shall be burnt or otherwise disposed of as the Engineer may direct unless specially reserved to be made into ties, timber or cordwood. All merchantable timber, etc., cut on the right-of-way will belong to the Commissioners,
who may dispose of same as best seems fit. Unless directed in writing by the Engineer, trees and brush must not be thrown on adjacent lands, but must be disposed of on the right-of-way. Trees unavoidably falling outside right-of-way must be cut up, removed to right-of-way and disposed of.

All trees, stumps, undergrowth and brush within such clearing must be cut so that the tops of same shall not be over eighteen inches above surface of ground.

No allowance will be made for the cutting and removal of grain, grass, weeds or other annual plants on the right-of-way, the contract price of grading being assumed and understood to cover all such items.

DANGEROUS TREES.

7. All trees outside the limit of the right-of-way considered unsafe by the Engineer shall be cut down and disposed of as "other clearing," but no trees shall be cut down unless marked for cutting by the Engineer.

HOW PAID FOR.

8. Clearing shall be paid for by the acre where actually performed and dangerous trees cut outside the right-of-way at the specified rate per single tree.

CLOSE CUTTING.

9. On ground to be covered by embankments more than two feet and less than 5 feet high, all trees and stumps shall be cut off even with the surface of the ground and removed; the price paid for clearing covers close cutting.

GRUBBING.

10. In all excavations, including borrow pits, on all ground to be covered by embankments less than two feet high, and from all ditches, drains, new channels for water ways and other places when required, all stumps and large roots must be grubbed out and removed.

HOW PAID FOR.

11. Grubbing will be estimated and paid for by the acre, when actually performed in excavation less than four feet deep, under embankments less than two feet high, and on borrow pits, ditches, drains, and new channels for water within the clearing limits, but no grubbing will be allowed on the slopes of any cutting where the depth at a distance of eleven feet on either side of the centre line exceeds four feet.

REMOVAL OF MOSS.

11A. Where the moss is over six inches deep on the ground to be covered by embankments less than two feet high, or any other places where, in the opinion of the Engineer, it is necessary to remove moss, it shall be removed and wasted. Such work shall only be done on the written instructions of the Engineers, and shall be paid for at a schedule rate per cubic yard measured in excavation.
Grading.

DEFINITION.

12. Under this head will be included excavations and embankments for the formation of the roadbed; all diversions of roads and streams; all borrow pits and ditches, foundation pits for trestles, culverts, buildings and structures, and all similar work connected with and incident to the construction of the roadbed.

LARGE BLASTS.

13. The use of powder or other explosives in large blasts is prohibited, unless on written authority of the Engineer. In the event of wasting of rock through any such blasting the Contractor shall, if the material is required in the vicinity for the making up of embankments, of which the Engineer shall be the judge, furnish at his own cost an equivalent amount of material for such embankment. One yard of rock in place being taken to equal 1 1/2 yards of earth.

RESPONSIBILITY FOR DAMAGE.

14. All damage occasioned by blasting of rocks in the progress of the work, to any person, or any injury done by the Contractor, or those in his employ, to tracks, rolling stock, crops, fences, buildings or any property of the Commissioners, or of the adjoining land owners or occupants, shall be paid by the Contractor, or may be paid to the Commissioners and charged to the Contractor.

PUBLIC OR PRIVATE ROADS.

15. Whenever the line is intersected by public or private roads, the Contractor must keep open, at his own expense, convenient passing places. All dangerous places must be suitably protected by the customary warning signals, and fences when necessary.

REMOVAL OF ICE AND SNOW.

16. The Contractor shall, at his own cost, remove snow and ice from any portion of the work, whenever deemed necessary by the Engineer.

HAUL.

17. The limit of free haul will be 500 feet. For any haul exceeding 500 feet the Contractor shall be paid at one cent per cubic yard per 100 feet. The yardage overhauled will always be measured and estimated in excavation.

In all cases the work will be estimated so as to make the least cost; that is, if necessary, earth from excavations will be estimated as having been hauled regardless of the fact that the Contractor may have preferred to waste the material from the cuts and borrow the materials for the fills, but such waste and borrow must be subject to the approval of the Engineer in writing. This clause does not apply to material hauled over the rails owned by the Commissioners, or to any other train-hauled material.
Temporary Bridge or Haulway.

When the Engineer or the Commissioners so directs, material will be hauled over or beyond any bridge opening, and the Contractors shall construct such temporary bridge or haulway over or around such opening, and shall receive therefor actual cost of such bridge or haulway, including labor and material, plus (10%) per cent. This clause does not include the construction of roadways which are to be provided by the Contractor under section 244.

Excavations and Embankments.

Finishing Slopes.

18. Slopes of all excavations shall be cut true and straight, and all loose or projecting stones on the slopes must be removed.

Excess and Deficiencies of Material.

19. Excess material in excavation shall be used to widen embankments within the limit of haul. No wasting will be permitted except on written authority of the Engineer. When the quantity of excavation is insufficient to make up embankments within the limit of haul, the deficiency shall be made up by widening the cuts as directed. No borrowing will be permitted until this manner of obtaining material has been exhausted.

Reservation of Material and Payment Therefor.

20. Whenever gravel suitable for ballasting is found in a cutting, the Contractor shall, if required by the Engineer, cut a gullet through large enough to pass a train, the remainder of the material being reserved for top dressing or ballasting. The price stipulated in the schedule for common excavation shall cover the gulleting of gravel cuts, the remainder being treated as ballast. When stone suitable for special purposes is found in a cutting, it shall, if required by the Engineer, be reserved for such special purposes, and shall be piled near at hand so as to permit convenient loading on cars. The price paid for piling and reloading such reserve stone shall be the schedule price for same.

Catch Water Ditches.

21. Catchwater ditches, as required, shall be made along the tops of excavations to prevent water flowing into the cut. The location and cross-section of such ditches shall be designated by the Engineer, and, if required, shall be excavated before the cuts are opened.

Tile Drains.

22. When required, four (4) inch tile drains shall be used; their location shall be as directed by the Engineer. The trenches for these tile drains must be excavated below frost line and to a true grade. The tile shall be laid with ends butted, and shall be covered with brush, grass, hay or straw, over which shall be laid gravel or other suitable material approved by the Engineer.

Provision for Settlement.

23. Whenever it is necessary to provide for the future settlement of the embankments, the height and width of the roadbed shall be increased, as directed.
PRECAUTIONS ON HILLSIDE GROUNDS.

24. When the embankment is to be placed on steep sidehill, the surface shall be deeply plowed, stepped or trenched. If built on wet or spongy ground likely to be affected by water, the Contractor shall remove all unsuitable material, and, if required, shall underdrain the same with tile, broken stone, or pole drains as directed.

CROSS-WAYING.

25. When required, in swamps or muskegs, cross-ways shall be put in. They shall be built of logs, each log as long as the full width of the embankment, if such timber is available, or of such length as shall be directed by the Engineer, and not less than six (6) inches in diameter. The depth of the log portion of the cross-way shall not be less than one foot. Said cross-way to be thatched with full limbs and brush to a depth of at least eighteen (18) inches. Such cross-way shall be paid for at the schedule price per acre. (If the cross-logging is two feet or more in depth, with the eighteen inches of brush on top, the price will be the schedule price for two or more acres, as the case may be.) No ditches shall be made on either side of cross-ways, except by direction of the Engineer.

EMBANKMENTS AGAINST MASONRY.

26. Embankments over culverts of masonry or concrete, or iron or vitrified pipe, shall be built of the best obtainable material. The portion against the sides of the culvert or pipe shall be thoroughly tamped. The portion over the arch or crown shall be deposited as loosely as possible, using all necessary care to avoid injury to the structure or pipe. The price paid for common excavation will cover the cost of doing such work.

SLOPES WHERE RIPRAP IS USED.

27. When directed, embankments or slopes which are to be riprapped, shall be flattened to a slope of 2 to 1.

Side Ditches, Borrow Pits, &c.

SIDE DITCHES ON PRAIRIE.

28. On prairie or level country, where embankments are much in excess of excavation the material to form the embankments will usually be obtained from parallel side ditches; such ditches must be made continuous, of uniform cross-section and constructed to a regular grade to facilitate drainage.

LOCATION OF BORROW PITS.

29. Borrow pits shall be located in such places as will be approved by the Engineer. They shall be regular in width, unless otherwise permitted by the Engineer, and, if required, shall be connected with ditches and drained to the nearest water course.

BERMS.

30. Berms of not less than the following widths must, where possible, be left
between the slope stakes and edges of borrow pits or ditches: For banks under 3 feet in height, berms 6 ft. wide; for banks 3 to 10 feet in height, berms 8 feet wide; for banks over 10 feet in height, berms 10 feet wide.

Slopes of Borrow Pits.

31. The side slopes of borrow pits on the right-of-way nearest the embankment, shall not be less than 1½ to 1, and those nearest to the outside of the right-of-way, not less than 1 to 1, always leaving sufficient berm to prevent the right-of-way fence from caving, but in no case less than four feet.

Borrowing at Stations.

32. Borrowing from the side will not be allowed on either side of the centre line within eight hundred (800) feet of a station building, or a proposed station site, except where otherwise directed by the Engineer.

Classification.

33. Grading will be commonly classified under the following heads: "Solid Rock Excavation"; "Loose Rock" and "Common Excavation."

Solid Rock Excavation.

34. Solid rock excavation will include all rock found in ledges or masses of more than one cubic yard, which, in the judgment of the Engineer, may be best removed by blasting.

Loose Rock.

35. All large stones and boulders measuring more than one cubic foot and less than one cubic yard, and all loose rock whether in situ or otherwise, that may be removed by hand, pick or bar, all cemented gravel, indurated clay and other materials, that cannot, in the judgment of the Engineer, be ploughed with a 10-inch grading plough, behind a team of six good horses, properly handled; and without the necessity of blasting, although blasting may be occasionally resorted to, shall be classified as "Loose Rock."

Common Excavation.

36. Common excavation will include all earth, free gravel or other material of any character whatever not classified as solid or loose rock.

36a. No classification other than that of common excavation will be allowed on material from borrow pits, except by order in writing of the Engineer.

Slides.

37. Material in slips, slides and subsidences extending beyond slopes in cuttings will not be paid for unless, in the opinion of the Engineer, such occurrences were beyond the control of the Contractor and not preventable by use of due care and diligence.
SESSIONAL PAPER No. 123

CLASSIFICATION OF SLIDES.

38. The classification of material from slides shall be made by the Engineer, and will be in accordance with its condition at the time of the slide, regardless of prior conditions.

MEASUREMENTS—HOW MADE.

39. Measurements will usually be made in excavation, and will only be made in embankments when borrow pits of great irregularity only can be had, and where it is practicable to measure the material in excavation. In such cases the following percentage will be deducted from the bank measurements, viz: When the bank is made up from side casting and shovel work, 10%; wagon and wheel scraper work, 7%; slush scraper work, 5%.

Foundations.

DIMENSIONS.

40. Foundation pits shall be of such dimensions and excavated to such depths as are shown on the plans, and, if required, shall be excavated to such further dimensions and depths as may be necessary to insure stability of the structure to be erected, according to the instructions of the Engineer, but in no case less than is shown on plans, except by the order in writing of the Engineer.

MATERIAL WHERE DEPOSITED.

41. Material excavated from foundation pits shall be deposited in the embankment, unless otherwise directed. Excavation for foundation pits, including those excavated under water, but not requiring caissons, cofferdams or other special appliances, shall be paid for at the schedule price per cubic yard excavated, such excavation to be kept dry, and the schedule price shall include the necessary bailing or pumping. Solid rock in such foundations will be paid for at a rate of three times that given in schedule, Item 4.

COFFER DAMS AND PUMPING.

41A. Foundations requiring coffer dams and pumping—excavation shall be made in the dry, that is, ample pumping capacity shall be furnished by the Contractor to insure dry work, and the price per cubic yard of excavation shall include the cost of said pumping or bailing. Coffer dams or caissons shall be built only when necessary in the opinion of the Engineer and ordered in writing by him, and shall be paid for at the schedule rates per thousand feet net timber, and per pound for iron, bolts or spikes in place in the structure, which prices shall include all labor and material incidental thereto, including caulking.

BUILT TO STANDARD PLANS.

42. Foundations must be built strictly according to the general or special plans. Material used in their construction must, in every respect, conform with the specifications of the Commissioners.

TAMPING.

43. Great care must be used to thoroughly tamp and solidify the ground in
the bottom of foundation trenches for bridges, trestles, culverts, buildings or other structures. Where mud sills are used they must be settled to a permanent bearing by ramming with heavy rammers.

*Specifications for Portland Cement.*

**BRAND.**

44. No cement will be allowed to be used, except established brands of high-grade Portland cement, which have been successfully used under similar climatic conditions, and approved by the Engineer.

**WEIGHT.**

45. A sack of cement shall mean $87\frac{1}{2}$ lbs., four sacks making a barrel of 350 lbs.

**PACKAGE.**

47. The package shall be plainly labelled with the name of the brand and of the manufacturer, and must be put up in good, sound, strong barrels, well lined with paper, or in case where bags can be advantageously used, in good stout cloth or canvas, tight sacks.

**TESTS.**

48. Tests must be made from time to time of the fineness, specific gravity, soundness, time of setting, tensile strength and chemical composition.

**FINENESS.**

49. Ninety-four per cent. of the cement must pass through a sieve made of No. 40 wire Stubbs gauge, having ten thousand (10,000) openings per square inch.

**SPECIFIC GRAVITY.**

50. The specific gravity of the cement, as determined from a sample, which has been carefully dried, shall be between 3.10 and 3.25.

**SOUNDNESS.**

51. To test the soundness of the cement at least two pats of neat cement mixed for five minutes with 20 per cent. of water by weight shall be made on glass, each pat about (3) three inches in diameter and one-half (\frac{1}{2}) inch thick at the centre, tapering thence to a thin edge. To be well trowelled to work out air bubbles and surplus moisture. The pats are to be kept under a wet cloth until finally set, when one is to be placed in fresh water for twenty-eight (28) days. The second pat will be placed on the rack in "Faija hot bath tank" over the vapour of water heated to 170° Fahr., and allowed to remain there from 3 to 4 hours, after which it will be placed in the hot water, temperature 170° Fahr. where it will remain for the balance of the twenty-four hours, and then be allowed to cool. In some cases it will be found desirable to raise the temperature of the water to the boiling point 212° Fahr. Neither sample should show distortion or cracks.
TIME OF SETTING.

52. The cement shall not acquire its initial set in less than 45 minutes and must have acquired its final set in ten hours.

The cement is considered to have acquired its initial set when the pat will bear, without being appreciably indented, a wire one-twelfth of an inch in diameter loaded with one-fourth of a pound. The final set has been acquired when the pat will bear, without being appreciably indented, a wire one twenty-fourth of an inch in diameter, loaded to weigh one pound.

TENSILE STRENGTH.

53. Briquettes made of neat cement, after being kept in air for twenty-four hours under a wet cloth, and the balance of the time in water, shall develop tensile strength per square inch, as follows:

After seven days, 450 pounds; after 28 days, 540 pounds. Briquettes made of one part cement and three parts clean sharp sand, by weight, shall develop tensile strength per square inch, as follows!

After seven days, 140 pounds; after 28 days, 220 pounds.

GOVERNING TEST.

54. The highest result from each set of five briquettes made at any one time, is to be considered the governing test. Any cement not showing an increase of strength in the 28 days over the seven days' test, will be rejected.

MAKING BRIQUETTES.

55. When making briquettes, neat cement will be mixed with 20 per cent. of water by weight, and sand and cement with 12\(\frac{1}{2}\) per cent. of water, by weight. After being thoroughly mixed and worked for five minutes, the cement or mortar will be placed in the briquette mould in five equal layers and each layer rammed and compressed by 30 blows of a soft brass or copper rammer, three-quarters of an inch in diameter (or seven-tenths of an inch square, with rounded corners), weighing one pound. It is to be allowed to drop on the mixture from a height of about one half-inch. When the ramming is completed, the surplus cement shall be struck off and the final layer smoothed with a trowel held almost horizontal and drawn back with sufficient pressure to make its edge follow the surface of the mould. The briquettes will be kept in air under a wet cloth until set, when they will be placed in clean fresh water where they will remain until broken.

CHEMICAL ANALYSIS.

56. Manufacturers shall furnish a chemical analysis which will give the average composition of the cement supplied by them.

Specification for sand for Concrete and Masonry.

SAND.

57. Sand shall be clean, sharp, of variable size of grain, largely silica and must be free of loam, mica or other deleterious substances.
Specification for Stone for Concrete.

STONE.

58. Stone for concrete shall consist of hard, strong stone, granite, gneiss and allied rocks, limestone or other approved solid stone, or suitable gravel approved by the Engineer. Under no circumstances will shale, slate or similar friable rocks be used.

FOR MASONRY.

59. Stone used for masonry shall consist of the strongest, hardest and best description of rock that can be found. Sound, hard limestone, granite, sandstone (when equal to Wallace stone) or other approved rock. Particular care will be exercised to exclude rock with “drys” shaky stratification or weak cleavage planes. All stones shall be laid upon their quarry beds, and shall be well selected sound stone. Particular care will be taken to exclude all rock shattered by blasting. No stone shall be used for masonry or concrete until it has been approved by the District Engineer.

Concrete Culverts and Concrete Pipes.

MUST BE BUILT TO STANDARD.

60. Concrete culverts must be built in strict accordance with the standard plans, and the concrete used in their construction must strictly conform to the standard specification.

Specifications for Concrete.

CONCRETE FOR FOUNDATIONS, ETC.

61. Concrete will be used whenever suitable stone for masonry is not to be had at reasonable cost; it will always be used in foundations, hearting of piers, backing of abutments, small culverts, and generally, where in the judgment of the Chief Engineer, a more satisfactory work can be had than by other methods. The proportions to be used in making concrete, will vary with the nature of the work as hereinafter described. Proportions are to be by measure, the barrel being the unit, being the volume of a 350 pound barrel.

FACE CONCRETE.

62. Face concrete will be used in all cases where the structure is exposed to the air or water, and when the body of the structure is made of concrete, it will consist of one part Portland cement, two parts sand, mixed together thoroughly while dry, when sufficient clean water will be added to bring the mortar to the consistency of rather stiff plasterer’s mortar. (A ball of it taken in the hand will retain its form and the impress of the fingers.)

MACHINE MIXED CONCRETE.

63. Machine mixed concrete will be acceptable when a suitable batch mixer is used.
The face concrete will average 2 1/2 inches in thickness and will be placed as nearly as possible simultaneously with the mass concrete of the body of the pier or structure. An excellent plan to secure a homogeneous mass, is to deposit the face material against the form in a triangular piece, some two inches higher than the regular bed in the body of the pier, then ramming the entire mass together; see sketch:

64. The concrete will consist of one part Portland cement, three parts sand, six parts broken stone, or screened gravel, the same shall vary in size, the largest pieces shall pass a 2 1/2 inch ring, the smaller may be of the size of a lima bean. In piers exposed to the action of running ice or logs, the cut-waters and up-stream corners must, if considered necessary, and ordered in writing by the Engineer, be faced with first-class stone masonry up to high water mark, which actual masonry shall be paid for at the schedule rate for first-class masonry. 

HAND-MIXED.

The sand and cement shall be thoroughly mixed together, dry, when the stone will be added, the whole then to be well wet down and to be thoroughly mixed together with shovels.

MACHINE MIXED.

65. Machine mixed concrete shall be mixed in approved batch mixers and the whole of the material may be dumped into the mixers at once, providing the apportionment of material is properly made before being placed in the mixers. It is intended to secure wet concrete, the whole mass after being as above described, thoroughly mixed, will be deposited in place, in the dry. Only in exceptional cases will any concrete under any circumstances be permitted to be deposited through water, and only when the approval of the Chief Engineer has first been obtained, approving of the method to be used, and the proportions to be used. In all cases when large masses of concrete are being placed, subject to the approval of the Chief Engineer or Inspectors, large blocks of approved stone, spaced at least 12 inches apart in every direction and ten inches from the face—may be used—"plums in the pudding." In fixing the size of the stone to be so deposited, due regard will be had to the mass of the structure in general, the proper size will be found by looking at the drawing of the structure.

DEPTH OF LAYERS.

66. As a general rule concrete shall not be deposited in layers of a greater depth than 12 inches, the whole layer to be well and thoroughly rammed with
suitable rammers. Great care will be required to insure homogeneity in the mass; in depositing on a layer that has set or partially set, it must be thoroughly cleaned and wet down. No layer or surface will be rammed smooth. It is desirable to leave the surface as uneven and rugged as is consistent with proper compacting of the layer.

CONCRETE FOR ARCH CULVERTS.

67. The concrete composing the arch ring will consist of one part cement, three parts sand, five parts broken stone, mixed and deposited in the manner heretofore described, except that the ring will be built up from both springing lines simultaneously. When considered necessary by the Engineer, steel beams, bars, rods or other approved reinforcement may be imbedded in the concrete, and, if necessary, secured by clamps, bolts, etc. Such steel beams, bars, rods, clamps, bolts, etc., to be furnished, placed and secured in the work by the Contractor for the price mentioned in schedule, Item 103, which price shall include the material and all labor incidental to securing it in place.

COPING COURSE AND BRIDGE SEATS.

68. The concrete for same shall consist of one part cement, two parts sand, four parts finely crushed, hard selected stone, or screened gravel, the coarse particles not to exceed three-quarters of an inch and to vary in size down to that of pea size. This coping course to be at least six inches thick. Particular care shall be exacted to insure the thorough mixing and depositing of this layer, which must be placed before the mass beneath it has set. The whole surface to be floated off even and perfectly level, with a wooden float, so as to insure a perfectly smooth, even surface.

TANK FOUNDATIONS.

69. Concrete shall consist of the same quality as that provided for piers and abutments, except that no displacers shall be used in the walls.

TURNTABLE FOUNDATIONS.

70. Concrete shall consist of the same quality as that provided for piers and abutments.

ORDINARY BUILDING FOUNDATIONS

71. Concrete shall consist of one part cement, four parts sand, eight parts broken stone or gravel. The broken stone or gravel shall vary in size from two and one-half inches in diameter to pea size. The methods of mixing and depositing to be as heretofore described.

FILLING.

72. Filling over and around culverts shall not, in any case, be done before the concrete is set. The minimum time allowed will be two weeks, but may be extended if required.

HOW PAID FOR.

73. In all concrete work the schedule price shall cover the cost of all tools,
plant, labor and material incidental to the construction thereof, including forms and centres, where necessary, but the preparation of foundations will be paid for at the specified rate per cubic yard.

**Stone Masonry.**

**POINTING.**

74. Joints below the ground line shall be thoroughly pointed up with a trowel as the work progresses, but need not be raked out.

Joints above the ground line shall be carefully raked to a depth of one (1) inch and pointed up with fresh mortar consisting of one part Portland cement and two parts of sand.

If the structure is subject to the action of running water, or is unusually exposed, the pointing mortar shall consist of one (1) part of Portland cement to one (1) part of sand; and the joints shall be raked out to a depth of one and one-half (1 ½) inches.

Before filling the joints be careful that they are well cleaned by brushing out all loose matter, and thoroughly wet. Apply the mortar with the trowel and calk the joints so that they will be completely filled.

If pointing is done in very hot weather great care should be taken by wetting the stones, not to allow the mortar to dry too rapidly. No pointing shall be done in freezing weather.

**LAYING.**

75. All stone, whether face, coping or backing, shall be laid in full flush beds of mortar mixed fresh for the work in hand. In no case shall stone be allowed to touch stone; a good bed of mortar must intervene. Wedging up of stones with spalls or chips will not be allowed. No mortar shall be spread on any stone already laid until the latter has been swept off cleanly and then thoroughly wet. All stones must be free from scales. THOROUGHLY CLEANED by washing or otherwise, from sand and dirt, and thoroughly wet before laying. All rear joints shall be thoroughly filled with mortar and struck smooth as the wall is built up.

**QUALITY OF STONE.**

76. Bridge seats, coping, arch sheeting, ring stones and ashlar or face stones, shall be sound and durable, of neat quality, free from any defects, and acceptable to the Engineer.

The backing shall consist of sound, durable, well shaped stones, free from defects that will impair their durability or strength, and shall consist of large stones that in general require handling with a derrick.

**COPING AND BRIDGE SEATS.**

77. The bridge seat course shall include the cut stone course upon which the superstructure rests. Each stone of the bridge seats shall be set to the exact proper height to receive the bridge, shall not be less than (20) twenty inches in thickness, two feet and six inches (2’6”) in length, and of sufficient width to extend twelve (12) inches into the back or parapet wall. Piers of seven (7) feet, or less, under bridge seat, shall have bridge seats extend across top of pier in one piece. They shall be finely bush-hammered on top to true planes, free from hollows or “winds,” and shall be laid to joints not exceeding one-half (½) inch in thickness. They shall be laid in full beds of mortar, as grouting will not be allowed.
Copings shall include the top course of retaining walls. They shall not be less than twelve (12) inches in thickness, three (3) feet long, and of sufficient width to extend across the entire width of the wall. Top surfaces shall be bush-hammered, with edges neatly pitched to straight lines. Joints of copings shall not exceed one-half (½) inch.

ARCH SHEETING AND RING STONES.

78. Sheeting for arch-culverts shall consist of large sized stone, with radial beds and joints extending through the whole thickness of the arch, and hammer or point-dressed, so as to admit of one-half (½) inch joints. The sheeting shall be laid in continuous courses, care being taken to break joints not less than nine (9) inches, so that the arch will be thoroughly bonded. No stone shall be less than eight (8) inches wide on the intrados. Centres shall not be removed until so ordered by the Engineer.

Ring stones shall be dressed to the size and shape shown on the plans, or as directed by the Engineer, shall be laid with one-quarter inch joints, and shall bond thoroughly with the sheeting. The joints must be on truly radial lines. Faces shall be left rough and with one and one-half (1½) inch chiseled draft line on the curved margin.

The top of the third-class rubble masonry spandrel backing and arch shall have a coat at least one (1) inch thick of Portland cement mortar, one part of cement to four parts of sand (1:4) on top of which apply a coating of about one-quarter (¼) inch thick of straight run coal tar pitch. In case it is not practicable to secure the coal tar, then a richer mortar of one part cement to two parts sand (1:2) shall be used, the cost of which shall be included in the price for arch sheeting and ring stones.

FIRST-CLASS MASONRY.

79. General Description.—First-class masonry shall be used where directed by the Engineer for abutments, piers and retaining walls, and shall consist of rock-faced ashlar work, with rough backing. Edges shall be pitched to straight lines, beds shall be parallel and joints rectangular.

The face stones shall be arranged on their natural beds as headers and stretchers in regular continuous courses, not less than sixteen (16) inches nor more than thirty-six (36) inches in thickness, and the thickness of any course shall not exceed that of the course below it.

SIZE OF STONE.

80. Stretchers must not be less than two and one-half (2½) feet in length, and not less than one and one-half (1½) feet in width; nor in any case less in width than one and one-quarter (1¼) times their depth. Headers must not be less than four feet long where the wall is of sufficient thickness, and at least two (2) feet longer than the width of the adjacent stretchers not less than one and one-half (1½) feet in width, nor less in width than they are in depth of course. In walls of five feet or less in thickness, the headers shall extend entirely through the same.

Wing steps shall be of the full thickness of the course.

CUTTING.

81. Every stone must be laid on its natural bed. All face stones must have beds well dressed, parallel and true to proper line and made to extend the full length and width of the stone. The beds and sides of the face stones must be
cut before being placed in the work, so as to form joints not exceeding one-half (½) inch in width. No hammering on stone will be allowed after it is set; but if any inequalities occur, they must be pointed off. The vertical joints must not be less than ten (10) inches in from the face and as much more as the stone will admit. All corners and batter lines shall be run with a neat chisel draft one and one-half inches (1½) in width on each corner. The projections of the quarry face beyond the draft line shall not exceed four inches (4). The tops of wing steps shall be bush-hammered to a uniform surface.

**BOND.**

82. The masonry shall consist of headers and stretchers alternately arranged so as to thoroughly bond together the face stone and the backing; and every header shall be immediately over a stretcher of the underlying stone. The stones of each course of face stones shall be so arranged so as to form a bond of at least one foot (1) with the stone of the underlying course. Particular care must be taken that the stones in the course below the coping course, coming directly under the bridge seats, are large and well bedded.

**BACKING.**

83. The backing shall consist of large-sized, well-shaped stones, laid so as to break joints and thoroughly bond the work in all directions, and leave no spaces between them more than six inches in width, as nearly as possible, which space shall be filled with concrete. The courses may correspond with the face stones, but two (2) courses shall fill up one (1) of the face, providing no stone less than six (6) inches thick be used. The broadest shall be laid undermost, and must have a good bearing on the stone below. Two-thirds (⅔) of the upper bed shall be of the full thickness of the course.

**General Description.**

**SECOND CLASS.**

84. Second-class masonry shall consist of rock-faced ashlar work. It shall be used for such small arch-culverts, cattle passes, abutments, piers and retaining walls as the Engineer may direct, and shall include the portion of the structure above the concrete footing courses.

**FACE STONES.**

85. Face stones shall be of a superior quality, free from defects such as clay seams, dry-seams, weather cracks, etc., shall be rock-faced, with edges pitched to straight lines, with no projections exceeding four (4) inches; and shall have parallel beds and rectangular joints. The beds and end joints for six inches (6) back from the face line shall be point or hammer dressed to three-quarter (¾) inch joints. No face stone shall be less than eight (8) inches in thickness, nor be in breadth less than twelve (12) inches, nor less in length than its breadth. The wing steps shall be of the full thickness of the course and the steps thereof shall be bush-hammered to a smooth surface. All corners or batter lines are to be run with a neat chisel draft of one and one-half (1½) inches on each corner.
COURSES.

86. The stones need not be arranged in regular courses, but shall be laid level on their natural beds, arranged as headers and stretchers, with joints well broken.

BOND.

87. At least one-quarter (\(\frac{1}{4}\)) of the face stones shall be headers not less than three feet (3) six (6) inches long, except where the thickness of the wall is less and extending through the wall, where the same is four feet (4) thick or less, and at least two (2) feet longer than the width of the adjacent stretcher and so distributed so as to make the best bond. The stone of each course of face stone shall be so arranged so as to form a bond of at least one (1) foot with the stone of the underlying course, except in the case of “fillers” in broken range work.

BACKING.

88. The backing shall be well-shaped, sound, durable stone, not less than six (6) inches thick, at least one-half of which (\(\frac{1}{2}\)) shall measure three (3) cubic feet, to be laid close in full mortar beds and joints, well bonded with face stones, and with joints well broken. All spaces between backing and face stone are to be filled with concrete.

General Description.

THIRD CLASS.

89. Rubble masonry shall be used for such small culverts, depot foundations and piers, pipe ends, spandrel backing for arches, and other structures as the Engineer may direct.

GENERAL CONDITIONS.

90. All stones shall be sound and durable, with the face stones free from clay seams, dry seams, weather cracks, etc. They shall be laid on their natural beds, and shall be sufficiently large to make a good, well bonded, strong job; shall be laid in the most substantial manner, and with as much neatness as this description of work will permit.

DIMENSIONS OF STONE.

91. No stone shall be used in the face that has more height than breadth of bed. No spalls shall be permitted in the bed joints.

BOND.

92. The whole wall shall be bound together with headers occupying one-fifth (\(\frac{1}{5}\)) of the area of the face of the wall, front and rear, extending through walls three (3) feet or less in thickness.

COURSING.

93. The walls shall be levelled up and coursed longitudinally at least every four (4) feet in height.
94. Stone shall be roughly squared on joints, beds and faces laid so as to break joints, and in full mortar beds.

VERTICAL SPACES.

95. All inside vertical spaces shall be flushed with mortar and then packed full of spalls. No liquid grouting shall be allowed.

All rear joints shall be thoroughly filled and struck smooth as the wall is built up.

ANGLES.

96. Selected stone shall be used at all angles, and shall be neatly pitched to true lines, and laid on hammer-dressed beds.

BOX CULVERTS.

97. All stone box culverts shall have a water way at least $2 \frac{1}{2} \times 3$ feet. The side walls shall not be less than two (2) feet thick, and shall be built of sound, durable stones, not less than six (6) inches thick, laid in cement mortar (usually one part Portland cement to three parts sand.) The walls must be laid in true horizontal courses, but in case the thickness of the course is greater than twelve (12) inches, occasionally two (2) stones may be used to make up the thickness. The walls must be laid so as to be thoroughly bonded, and at least one-fourth (1/4) of the area of each course must be headers going entirely through the wall. The top course must have one-half (1/2) its area of through stones, and the remainder of this course must consist of stone going at least one-half of the way across the wall from the inside face. The face stones of each course must be dressed to a straight edge, and pitched off a true line. All of the coping stones of head walls must be troughs, and must have the upper surfaces hammer-dressed to a straight edge, and the face pitched off to a true line with margin draft.

COVER STONES.

Cover stones shall have a thickness of at least (12) twelve inches for opening of three feet, and at least fourteen inches for opening of four feet; and must be carefully selected, and must be of such length as to have a bearing of at least one (1) foot on either wall.

The beds and vertical joints of the face stones for a distance of six inches (6) from the face of the wall, shall be so dressed as to require a mortar joint not thicker than three-fourths of an inch (3/4). Joints between the covering stones must not be wider than three-fourths (3/4) of an inch, and the bearing surface of cover stones upon side walls must be so dressed as to require not more than one (1) inch mortar joint.

PAVING STONES.

The paving shall consist of flat stones, set on edge, at right angles with the line of the culvert, not less than twelve (12) inches deep, and shall be laid in cement mortar. This class of paving will be paid for under the schedule rates per cubic yard for third-class masonry.
TURNTABLE MASONRY.

98. Shall consist of second-class masonry as hereinbefore described.

FOUNDATION AND WALLS FOR WATER TANK WELLS.

99. Shall consist of third-class masonry as hereinbefore described.

100. The circular walls to be parallel and true to line and to consist of third-class masonry as hereinbefore described.

Cast Iron Culvert Pipe.

QUALITY CAST IRON CULVERTS.

101. They shall be cast vertically in dry sand moulds and dried cores and shall be coated with Dr. Smith's solution, or some other solution approved by the Engineer, while hot, and shall be of the highest quality of metal in use for pipe founding purposes.

DIMENSIONS.

102. The size, length, thickness and weight shall be as in the following table:

<table>

Salt Glazed Double Strength Vitrified Pipe.

SALT GLAZED PIPE CULVERTS—15 and 18 inches.

102a. Shall be of well burnt vitrified clay, with a smooth, salt glazed surface, true to diameter, straight, in three feet (3) lengths, with bell and spigot. The thickness of shells for 15 inch to be one and one-quarter inches, and for 18 inch one and one-half inches.

SUB-SOIL DRAINS.

103. Agricultural tile four inches (4) in diameter, shall be straight, well burnt, true in diameter, and free from cracks or checks.

REINFORCED CEMENT PIPE CULVERTS.

104. The concrete shall consist of one part cement, one and one-half parts
sand, three parts one and one-half inch diameter broken stone or screened gravel of same dimensions. The reinforcing metal to be in accordance with the best modern practice, and both the mixing of the concrete, the method of reinforcing, the size of the pipe, length and all other matters in connection therewith, to be approved by the Engineer.

MASONRY ENDS.

105. All to have concrete or masonry ends for protection walls.

FOUNDATIONS FOR PIPE.

106. Great care must be taken to get a firm and uniform bearing for pipe culverts, and material for bedding the pipe must be free from stone.

JOINTS.

107. The joints of all pipe, both iron and vitrified, shall be well and thoroughly packed, as shown on standard plans. Cast iron pipe of 30 inches diameter and over, shall be stayed and crowned by wedging in struts as shown on standard plans. The struts shall not be removed until sufficient settlement has taken place in the bank. In general, this will not be less than one year from the completion of the filling.

FOUNDATIONS FOR VITRIFIED PIPE.

108. Where vitrified pipe is laid in hard ground the bottom of the bench in which the pipe is to lay should be rounded to fit the pipe as nearly as possible, so that the pipe may rest easily and solidly in its bed. If the ground is soft, a foundation satisfactory to the Engineer shall be made.

Riprappping.

RIPRAP STONE TO BE ANGULAR.

109. When required by the special or general plans as ordered by the Engineer as protection against the action of water, hand laid or "Pierre Perdu Random" of angular stones shall be laid or placed on embankments, or about foundations, or at the ends of culverts or masonry or other places, as directed. Boulders shall not be used unless ordered in writing by the Engineer.

SIZE.

The largest procurable stones shall be used, and they shall in no case measure less than one cubic foot. The largest stone shall be placed at the bottom and where the current is the greatest. They shall be laid as closely together as possible so as to avoid large openings.

TRENCHES.

110. When required, a trench shall be excavated at the base of the slope to such a depth as will insure a solid foundation, and all sand or ice or other perishable matter will be removed.
GENERAL DIMENSIONS.

111. In general, the depth of the riprapping at the base shall measure three feet at right angles to the slope and shall gradually taper off to a depth of two feet; but shall, if ordered by the Engineer, be built of any required thickness.

HOW PAID FOR.

112. Riprapping shall be paid for at the specified rate per cubic yard in place, for each class.

Paving.

WHERE USED.

113. When required by the general or special plans, as ordered by the Engineer, the ends of masonry or concrete culverts, vitrified or iron pipe, the bottom of wooden culverts, and other places, shall be protected by paving.

DESCRIPTION.

114. Paving will be made of flat stones set upon their edges, the longest dimensions at right angles to the waterway in such manner as to leave the least possible space between them, and of such size as to reach through the entire depth of the pavement.

UNDERMINING.

115. Great care must be taken at the ends of any piece of paving to make it secure, so it cannot be undermined or cut by water flowing underneath it. The lower end must receive special care to prevent this undermining. A concrete apron shall be provided when required by the Engineer.

HOW PAID FOR.

116. Paving will be paid for at the specified rate per cubic yard in place, as per Item 17 in the schedule.

Tunnels.

HOW BUILT.

117. All tunnels must be built in strict accordance with the general or special plans.

LINING.

118. Tunnels which do not require lining shall be excavated to the section and dimensions shown on the standard plans for "Tunnels, Rock Section."

TIMBER, CONCRETE OR MASONRY LINING.

119. Tunnels which require lining with timber, masonry or concrete, shall be excavated to the section and dimensions as shown on the standard plans for "Tunnels, Timbered Section."
DANGEROUS ROCK.

120. The Contractor must take out, at his own expense all loose or shattered rock which is loose or likely to become so.

ROCK TUNNELS.

121. Rock tunnels shall be excavated to one foot below profile grade and refilled to such grade with rock spalls or other approved material.

EXPLOSIVES.

122. The contractor must limit the use of explosives to avoid unnecessarily shattering the roof or sides of the tunnel, or damaging the lining, and the Engineer shall have the right to restrict the use of such explosives.

SITUATION OF LINING.

123. Where lining is required, such lining must conform to the standard or special plans.

LINING

124. Lining will be made with timber, concrete or masonry, as ordered.

TIMBER LINING.

125. Where timber is used, it shall be red or yellow fir, cedar, oak, tamarac, or white or yellow pine, as may be designated, and must be of the best description of the kind required. It must be hewed or sawed square and to proper dimensions. It must be free from all loose, large or unsound knots, sap, sun cracks, shakes, wanes or other imperfections or defects what would lessen its durability.

LAGGING.

126. The lagging shall be in pieces 4 inches thick and 6 inches wide.

HOW PAID FOR.

127. Timber used for lining shall be paid for at the specified rate per thousand feet B.M. of timber left in completed structure.

TIMBER PRICE INCLUDES IRON REQUIRED.

The price paid per thousand feet will include the cost of the necessary iron and the total cost of all labor incidental to putting the timber and iron in place.

USE OF CONCRETE OR MASONRY.

128. Where concrete or masonry is used for lining, such concrete or masonry must be built in strict accordance with the section and dimensions as shown on the standard plans or special plans, and must conform strictly with the specifications for concrete or masonry.
PROTECTION OF LINING FROM BLASTING.

129. The Contractor will be required, at his own expense, to protect the lining when in place from the effects of blasting, by covering with slabs or otherwise as most convenient. He will also be required to replace, at his own expense, any lining shattered or crushed in any stage of the work by blasting or other operations of his own.

CAVITIES BEHIND THE LINING.

130. In lined tunnels the Contractor must, to his own expense, fill in any cavities behind the lining, resulting from any cause whatever, so that the roof and sides will in all cases have a firm bearing on the lagging or lining. In timbered tunnels this packing shall consist of timber or stones. When the lining is constructed of concrete or masonry the packing shall consist of stones closely packed together.

PORTALS.

131. Material in portals will be paid for at the same rate as lining in the tunnel.

NICHEs OR RECESSES.

132. Niches or recesses for the protection or convenience of railway employees shall be constructed when ordered.

DRAINAGE.

133. Drainage shall be carefully executed as shown upon the standard or special plans or as directed, and all drains or sources of water shall be treated as directed, the cost of which shall be included in the price per lineal foot of excavation.

SHAFTs.

134. The number, location and dimensions of all shafts shall be shown as on the plans, or as directed, and the specified price per cubic yard for shaft excavation shall cover all material contained between the surfaces of the ground and the cross section of the tunnel, as shown on the standard or special plans and the cost of all labor and material incidental to their construction.

WELLs OR SUMPS.

135. All wells or sumps necessary for the completed tunnel shall be made as directed and shall be paid for at the same rate per cubic yard as shaft excavation.

TUNNEL EXCAVATION.

136. Tunnel excavation shall be paid for at the specified rate per lineal foot under cover for "Tunnels, Rock Section" and "Tunnels, Timber Section." The specified rate per lineal foot shall cover the whole cost of labor and material incidental to the excavation of the tunnel and the haul and deposit of the material in the embankments at the ends of the tunnel, as directed.
NET SECTION.

137. No allowance shall be made for material taken out beyond the theoretical section shown on the standard or special plans.

DIMENSIONS.

138. The standard dimensions of the tunnel may be varied if found necessary or desired. If the area of the section be not thereby increased no extra allowance shall be made to the Contractor on account of such change. If the area of the section be thereby increased or diminished, the specified rate per lineal foot shall be increased or diminished in proportion.

Timber Structures.

TO BE BUILT TO PLANS.

139. All structures must be built in strict accordance with the general or special plans.

QUALITY.

140. All timber either sawed or hewed must be of the best description of the kind required. As directed by the Engineer, it must be sawn or hewn square and to proper dimensions. It must be free from all loose, large or unsound knots, sap, sun cracks, shakes, wanes or other imperfections or defects which would impair its strength or durability.

QUALITY AND DESCRIPTION.

141. The quality and description of timber used for each portion of the structure must be as specified. Stringers must be of long leaf yellow pine, douglas fir, white pine, or other timber approved by the Engineer.

CLEARING GROUND.

142. Before commencing work on any wooden structure, the ground must be entirely cleared of logs, brush and trees for the whole of the width of the right-of-way, and during the progress of the work all pile or timber ends, chips and brush, shall be cleared from around the structure and burnt, or otherwise disposed of as the Engineer may direct.

FRAMING.

143. No shimming will be permitted. Great care must be taken in framing all timber structures, to insure perfect fit at all joints. At the completion of the work they must be left in perfect line and surface.

ERECTION OF BRIDGES AHEAD OF TRACK.

144. Bridges must be erected ahead of the track in all cases, but the maximum distance beyond the end of track to which the Contractor shall be required to haul timber or other material without extra payment, shall not exceed four miles.
Piling for Foundations.

TIMBER.

145. Piles may be of oak, rock elm, douglas fir, tamarac, cedar, hemlock, jack pine and spruce, to be straight, or reasonably straight-grained, sound, live timber, free from all bad knots, wind shakes or other defects. All diameters must be measured inside the bark, which shall be removed before delivery.

DIMENSIONS.

146. Standard dimensions for piling are as follows:—Minimum lengths in feet 15, 20, 25, 30, 35, 40, 45, 50, over 50; Diameter in inches at small end, 10, 9, 9, 9, 9, 9, 8, 8, over $7\frac{1}{2}$. Butt diameter to be not less than 12 inches or more than 20 inches at five feet from butt.

LENGTHS.

147. Piles will only be accepted and paid for in lengths which are multiples of five.

HOW DRIVEN.

148. Unless otherwise directed, all piles shall be sharpened and driven small end down, capped with a suitable iron ring, as the Engineer may direct, to prevent spreading or brooming while driving, and, if required, shall be shod with an iron shoe of approved design.

DRIVING.

149. Piles shall be driven until the fall of a hammer weighing 2,000 pounds, with a clear fall of 25 feet or an equivalent blow, causes a penetration not to exceed 10 inches under the last blow, or to such further limit as directed.

BROKEN PILES.

150. Should any piling be broken in the driving, another sound pile shall be driven alongside to replace it.

BATTER PILES.

151. All piles must be driven vertically unless otherwise shown on the plan. Batter piles will be driven at the batter shown on the plan.

EXTRA LENGTHS—HOW ATTAINED.

152. When necessary to drive great depth, and piles of adequate length cannot be obtained, one shall be spliced on top of another. The first pile having been driven as far as practicable, it shall be cut off square to receive the following pile, which must also be squared and set on top of the one already driven, using a dowell pin 1 inch in diameter in the centre, extending 8 inches at least into each pile. The piles shall then be flatted on four sides and fastened together by spiking on pieces of scantling.
HOW PAID FOR.

153. Piling will be paid for under the headings of “Piles Delivered” and “Pile Driving.”

ENGINEER’S BILL OF LENGTHS ONLY WILL BE PAID FOR.

“Piles delivered” will include piling furnished by the Contractor at bridge site, as ordered by the Engineer, and will be paid for by the lineal foot, but any lengths in excess of those ordered by the Engineer will not be paid for.

“Pile Driving” will be paid for at the specified rate per net lineal foot in the finished structure, and will include all work of any kind in connection therewith, but will not include the material in the piles themselves.

RINGS AND SHOES—HOW PAID FOR.

154. Rings shall not be paid for, but shoes will be paid for at the specified rate per shoe.

Sheet Piling.

POINTS.

155. Sheet piles shall be cut at the end, so as to form a point at one side and not in the middle, and when driven this point shall be kept next to the pile previously driven to ensure contact, and when required by the Engineer the Wakefield type of piling shall be used.

BROKEN JOINTS.

156. Where there are two or more rows of sheet piles, they shall be driven with broken joints.

HOW PAID FOR.

157. Sheet piling will be paid for at the specified price per thousand feet B. M. left in the work.

Frame Trestles.

CEDAR FOR MUD SILLS.

158. Mud sills not less than ten inches thick, must, in all cases, be made of sound, live cedar, unless permitted in writing by the Engineer. The use of timber other than cedar for this purpose is objectionable, and will not be permitted only in case of necessity.

SILLS AND POSTS NOT TO BE BURIED.

159. Care must be taken not to bury with earth, any portion of the sills or posts. All pits for trestle foundations must have free drainage.

ADJUSTMENTS.

160. All adjustments in height of structures, due to settlement or other causes, must be rectified by jacking up from the bottom to the proper elevation.
TIMBER CULVERTS.

161. Timber culverts will be made of sound, hewed or sawn timber, and in accordance with standard plans. They shall be of such dimensions as shall allow the insertion of cast iron or other approved pipe and in accordance with the direction of the Engineer. They shall be estimated and paid for at the specified price per thousand feet B.M.

PAVING.

162. The bottom of timber culverts will be paved to the top of the mud sills with angular rock, when it can be obtained from the adjacent cuttings, otherwise with large boulders if the Engineer so elects, and will be paid for as per Item 17 of schedule.

Crib-Work.

TIMBER CRIBS.

163. Timber cribs used in support of trusses shall be built of timber in quality similar to that used in trestles and according to plans furnished by the Engineer and to his approval, both as to workmanship and material.

HOW PAID FOR.

They will be estimated and paid for by the thousand feet B.M., according to bills furnished by the Engineer. Iron contained in them will be paid for by the pound. They will be filled in with angular stones of a size and character satisfactory to the Engineer, which shall be placed in the cribs without damage to any portion of the structure, and as the Engineer may direct.

ROUND TIMBER CRIBS FOR PROTECTION WORK.

164. Round timber cribs shall be built in accordance with general plans furnished by the Engineer, under his direction and to his entire satisfaction, both as to size of material, quality and workmanship.

QUALITY.

165. Timber must be good, sound, live red or yellow fir, cedar, pine or tamarac, or other wood approved by the Engineer, free from wind shakes, loose or rotten knots, and all other kinds of decay.

HOW PAID FOR.

166. Timber in cribs will be paid for by the lineal foot, all pieces being estimated only as to length, the varying thickness not being taken into consideration, but only the best available timber must be used as directed by the Engineer.

HOW FILLED.

167. Timber crib-work required for sustaining or protecting embankments, or for deflecting or changing the channels of stream will, preferably, be filled with angular rock obtained from excavations adjacent, and care must be taken to work the largest stones to the face. If, however, no suitable material to fill them is found in the excavation, it will be obtained by borrowing.
TRENCHES.

168. When required, a trench shall be excavated at the base of the slope to such a depth as will insure a solid foundation, and all sand or ice or other perishable matter shall be removed.

CRIBS TO BE CLOSE-FITTING.

169. When cribs are built for protection against the action of the waves or the impinging of running streams, the Engineer may require the logs to be flattened on two sides, or he may resort to any other method of making the cribs tight and close-fitting, that in his judgment may be necessary.

QUALITY OF MATERIALS.

170. The materials for all timber structures must be such as are approved by the Engineer, and the workmanship must be of the best kind to secure the full bearing and strength of the materials, and must in all respects be satisfactory to the Engineer.

Specifications for Ties.

FIRST CLASS TIES.

171. Ties shall be made of the best description of timber tributary to the line of railway.

QUALITY AND DESCRIPTION OF TIMBER.

172. All timber shall be cut from live, sound trees, free from large or loose knots, wind shakes or other defects which would impair its durability or strength. The following kinds of timber will be accepted in the order named: oak, cedar, tamarac, douglas fir, pine, hemlock (black spruce only to be used under the approval of the District Engineer.)

SIZE.

173. They shall be hewn or sawn with two parallel straight faces, reasonably straight, exactly eight feet long, full seven inches thick and seven inches face. Sawn square at the ends.

SECOND-CLASS TIES.

174. They shall be of the same quality and description of timber, but the size may be as follows: Length, exactly eight feet; thickness, full six inches; face, six inches. These shall not be used in main tracks.

Track Laying.

TRACK LAYING.

175. Track laying will include all work of unloading, loading, piling and handling material; laying the main track, spurs, turnouts, wyes, and other permanent tracks, frogs, switches, rail braces, tie plates, crossings, etc.; laying and spiking plank of road crossings, setting all track markers or signs, and such necessary
light surfacing with material from the sides, cutting down or filling up the inequalities of the roadbed as will allow of the passage of trains, without damage to rail or rolling stock, until the proper ballasting is performed.

SECOND-CLASS TIES.

176. Second-class ties may be used in sidings and spurs if sound and otherwise fit for use.

BARK.

177. Bark must be removed from all ties before they are placed in the track.

NUMBER OF TIES.

178. Sixteen (16) ties will be used to each 30 foot rail length or eighteen (18) ties to a 33 foot rail on tangents and two additional ties on curves, as directed by the Engineer.

HOW SPACED.

179. Ties of full size and uniform standard should be used for joint and shoulder ties. Shoulder ties should be placed not more than 10 inches distant from joint ties; the remaining ties must be spaced evenly between shoulder ties. All ties must be laid at right angles to the track.

LINING.

180. The ends of cross ties in single track must be lined true on the south and east side of the track.

ADZING.

181. Cross ties must never be notched, but if necessary must be adzed, in order to maintain a true uniform bearing, for the tie plate or the base of the rail.

TIE PICKS.

182. In moving ties with a pick, the point should be stuck into the side of the tie and not into the face.

SWITCH TIES.

183. Swan ties must, except under written authority of the Engineer, be used for all permanent switch turnouts, cross-overs and railway crossings and acute angles; and placed, spaced and lined in exact conformance with the standard plans.

BOLTING AND DRILLING.

184. All joints must be full bolted and rails drilled, when necessary. Nuts must be tightened as required until entirely satisfactory to the Engineer.

COMPROMISE SPICES.

185. When rails of different weights or sections join each other it must be done with compromise splice bars made to fit the different rail sections and bolts holes.
SPIKING AND SLOTS.

186. A spike must be driven in each slot, inside and outside of rails and angle bars, except on bridges or trestles where spiking in slots, or against the ends of angle bars, or in any way anchoring the rails to the bridge, is prohibited.

NUTS.

187. The nuts of all track bolts shall be placed on the outside of the rails.

BROKEN JOINTS.

188. Track shall be laid with broken joints on the main line and important branches where the new steel is used; or minor branch lines where re-laying steel is used.

VARIATION OF JOINTS.

189. When track is laid with broken joints, they must not vary more than eighteen (18) inches from the middle of the opposite rail.

SHORT RAILS.

190. Short rail shall be used in inside line of rails on curves of large central angle, in order to maintain position of joints near centre of outer rail.

CROSS SPIKING.

191. Tracks must be fully spiked, using the system commonly known as "Cross Spiking," with the inside and outside spikes driven on opposite sides of the centre of the tie. They must be set as far apart as the face and character of the tie will permit.

VERTICAL SPIKING.

192. Spikes must be set one-half of their own width from edge of rail and driven vertically to full bearing on base of rail, and they must be kept in this position. Driving sloping spikes or giving them a final lateral blow to close the spikes against the rail, is forbidden.

USE OF GAUGE.

193. The track gauge must always be used when spiking.

194. Boat spikes 8 inches x \(\frac{3}{8}\) inch shall be used for spiking frog and switch blocking to ties.

ELEVATION.

195. The elevation of the outer rail will be ordered and great care must be used to keep the elevation uniform. The grade line must be maintained along the inner rail and the elevation obtained by raising the outes rail. The full elevation of the outer rail must be continued beyond the end of the central curve, but shall decrease uniformly, as the Engineer directs, generally one-half inch in 30 feet, along the easement curve to the tangent point, where both rails should be level.
ELEVATION ON NON-SPIRAL CURVES.

196. For curves not having ends eased the full elevation should be extended to the end of the curve where it should run out gradually on a tangent to a level with the inner rail, by reducing the elevation of the outer rail one-half inch to 30 feet length, except in cases where tangents are too short to permit.

LEVEL RAILS

197. On all tangents the tops of the rails must be level with each other, except the approaches of the curves that are not eased.

TRACK LEVEL.

198. The track level must be used when surfacing either curves or tangents.

GAUGE.

199. Gauge of track must be exactly and uniformly as prescribed.

STANDARD GAUGE.

200. The standard gauge is 4 feet 8⅜ inches. Extra width of gauge on account of curvature must be given as follows:

- On curves of 3 and 4 deg......................... ¼ inch
- " 5 and 6 deg................................. ⅛ inch

EXTRA WIDTH OF GAUGE.

201. The extra width of gauge should be given by the inside rail and uniformly decreased on the easement curve, from point of central curve to point of tangent.

HANDLING RAILS.

202. Rails must be handled carefully before being put in the track, and must be uniformly supported after being placed there. Skids will invariably be used whenever necessary to unload them into piles. In all cases the greatest care must be used to avoid injury to rails by dropping them on hard substances or uneven surfaces.

DRILLING.

203. When necessary to make holes in rails for bolts they must be drilled with proper tools furnished for that purpose.

BRAND.

204. The position of the brand on the rail is immaterial whether right or left, inside or outside, but its position must be uniform in the same line of rails. When new rails are being laid different brands must not be mixed.

CURVING.

205. All rails for curves over 3 deg. must be separately curved by an approved rail bender before being placed in the track. The sledging or dropping of rail on ties to curve them is forbidden.
INVESTIGATING COMMISSION

SESSIONAL PAPER No. 123

CARE IN CURVING.

206. Particular care must be given to insure uniform curvature of the rails throughout their length, in accordance with the following table:

<table>
<thead>
<tr>
<th>Degree of Curve</th>
<th>Expansion for 30 ft</th>
<th>Expansion for 33 ft</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 deg.</td>
<td>1/4 in.</td>
<td>5/32 in.</td>
</tr>
<tr>
<td>4 deg.</td>
<td>1/2 in.</td>
<td></td>
</tr>
<tr>
<td>5 deg.</td>
<td>1 1/4 in.</td>
<td>1 1/8 in.</td>
</tr>
</tbody>
</table>

EXPANSION.

207. Proper allowance must be made for expansion according to temperature of rail when being laid. When the average thermometer reading on 30 or 33 feet rails, is:

- 90 deg. Fah., give 0 in. expansion space
- 70 to 90 deg. Fah., give 1/16 in.
- 50 to 70 deg. Fah., give 1/8 in.
- 30 to 50 deg. Fah., give 3/16 in.
- 10 to 30 deg. Fah., give 1/4 in.
- 10 to 10 deg. Fah., give 5/16 in.

208. Rails must not be bumped together when being laid.

IRON SHIMS.

209. Proper expansion must be secured by using iron shims, according to the above specifications, except where track is laid on a steep grade, when sawn wooden shims of proper thickness will be provided. They must be left in place until track is fully spiked, bolted and anchored, and then removed.

THE PLATES.

210. Where tie plates are ordered they must be placed in pairs one on each end of the tie. The end with the widest margin must be placed on the outside of the rail.

SPIKING ON TIE PLATES.

211. On tangents only two spikes should be used in each plate; on curves use three or four as required. In general, on curves less than 6 degrees, three spikes should be used and on sharper curves, four spikes.

HOW PUT ON.

212. Tie plates must be forced into the ties before trains are allowed to run over them.

RAIL BRACES.

213. Rail braces must be used on guard rails and switches as shown on the standard plans, and on curves where ordered.
SWITCHES.

214. Switches must be put in track in accordance with the standard plans. No stub switches shall be allowed in main line or cross-overs.

STUB SWITCHES.

215. At all stub switches, bridle rods must be confined between two ties, placed six inches apart.

LEAD RAILS.

216. Lead rails in all turnouts must be curved separately with the rail bender before being laid. The narrow places between rails at frogs, guard rails and switches, must be filled with standard wooden blocks.

DIFFERENCE IN WEIGHT OF RAILS.

217. When rail of a heavier pattern is used in the main track than in the side track, the main track pattern must extend as far up the side track at least as far as the switch ties extend.

DERAILING SWITCHES.

218. A standard derailing switch, stop block or safety switch must be placed at the clearance point of all sidings when ordered.

GUARD RAILS.

219. Guard rails must be placed at frogs, switches, and when ordered, on sharp curves and bridges.

TRACK MARKERS.

220. All standard track markers and signs must be placed strictly in accordance with the standard plans.

LENGTHS PAID FOR.

221. Only such sidings, spurs, turnouts, wyes, and other track, and such lengths thereof as ordered, will be estimated and paid for.

SURFACING.

222. The track will be surfaced with material obtained from the side, or with train hauled material as directed by the Engineer, but in no case shall the bottom of the ties be raised more than 3 inches above sub-grade.

SURFACING FROM THE SIDE.

223. “Surfacing ‘A’” will include all work of procuring surfacing material from side ditches or other places where allowed, putting under the track, surfacing, lining and all other work incident to the preparation of the track for running work trains, where material for surfacing is obtained from the side.
SURFACING FROM TRAIN HAULED MATERIAL.

224. "Surfacing 'B'" will include the cost of all train hauled material under the track, surfacing, lining and all other work incident to the preparation of the track for running work trains where surfacing is done with train hauled material other than ballast. The surfacing must be kept up with the track laying as far as possible. All new tracks must be brought to surface and tamped up before it is run over. Rails that are damaged by reason of neglect on the part of the Contractor will be replaced at his expense.

TRAIN HAULED FILLING.

224 X. Where there is not sufficient material suitable for making embankments by men and teams within reasonable haul, of which the Engineer shall be judge, and it becomes necessary to make use of the track laid at the expense of the Commissioners to haul material for such purpose by train either for the widening of embankments to their full width or raising them to their full height, or for the purpose of filling temporary trestles, the Contractor will have the use of the Commissioners' rails, fastenings, and necessary switches for such purpose, it being understood that the track laying will only be paid for once by the Commissioners, and that any damage to rails, fastenings, or switches while in such service shall be paid for by such Contractor to the Commissioners, or the Commissioners may deduct it from the monthly or final estimate due, or to become due to the Contractor. The price given in the schedule for such train hauled filling shall include the cost of all temporary trestles which the Contractor may require, which he shall erect according to his own plans and at his own cost and risk, and all tools, plant, material and labor necessary for the loading, hauling, putting in place and trimming, as directed by the Engineer. The limit to which the contractor will be called upon to haul such train hauled filling at the price stated in this schedule will be five (5) miles; beyond such distance a price of one cent (.01) per yard per mile will be paid him, the measurement of such haul being made to the nearest mile, one-half mile or over counting as a full mile. Measurements of all train hauled filling will be made in excavation. No classification other than common excavation will be allowed on train hauled filling from borrow pits.

BALLASTING.

225. Ballasting will include the loading, hauling, unloading alongside of track, and transportation of all material hauled by train for the purpose of ballasting the track, said material to be duly accepted as ballast by the Engineer. Ballast shall consist of broken stone, gravel, or coarse sand, approved by the Engineer.

DITCHES.

226. All road and surface ditches will be left clear and free, so open and extended as to conduct water freely and quickly from the roadbed, and all side ditches must be left unobstructed.

SLOPES.

227. The side slopes and ditches must be left neat and smooth, and free from all rubbish, materials and obstructions. Material for ballasting must not be taken from the slopes of embankments.
LAND.

228. The land for ballast pits and approaches thereto will be furnished by the Commissioners and approved by the Engineer. In selecting land for this purpose, a preference will always be given to those points where the best material can be procured within a reasonable distance as determined by the Engineer. During the working of any pit, should the material be found unfit for ballasting, the Engineer shall compel the Contractor to close such pits and open others. The cost of clearing land for ballast pits outside the right-of-way and grading and laying the main branch track to pits (but not sidings in same), shall be paid for according to the general schedule of prices.

DISTRIBUTION OF BALLAST FOR EMBANKMENT.

229. The surface of the ballast pits shall be stripped of soil where such exists, and no material whatever shall be placed on the roadbed but good, clean gravel. The maximum size of gravel must not be greater in diameter than three (3) inches.

FIRST LIFT.

230. Material sufficient for the first lift of six inches shall be delivered along the track, the track must then be raised so that there will be an average depth of six inches below the ties and the ballast must be well packed and tamped under and around them. As the raising proceeds, the end of the lift shall extend on not less than three rail lengths, and before trains are allowed to pass over the inclined portion of the track it must be made solid to prevent bending the rails or twisting the joints.

SECOND LIFT.

231. Precisely the same method shall be followed in making the second lift, so as to secure a uniform thickness of twelve (12) inches under the ties. The ballast shall fill the space between the ties full and shall conform to the section shown in the standard drawing.

TAMPING.

232. Three feet at each end of each tie shall be thoroughly tamped, the centre of the tie to be loosely tamped. After this lift, the track shall be centred, lined, topped, surfaced, and trimmed off to the proper form and width.

BALLASTING TO BE KEPT UP TO TRACK LAYING.

233. The ballasting must be kept up to the track laying in so far as is possible. All new track must be brought to surface and tamped up before it is run over. Rails that are damaged by reason of neglect on the part of the Contractor to comply with these requirements will be replaced at his expense.

LINING.

234. When the surfacing and ballasting is completed, the track must be in perfect line, surface and gauge, and must be so maintained by the Contractor until it is accepted by the Commissioners for operation. This contemplates a second adjustment of track to line and grade after it is settled under traffic. The schedule price for ballasting will include all work mentioned in Clauses 225 to 234 inclusive, no over haul being allowed.
Specifications for Fences.

FENCE.

235. The fence shall consist of an approved wire fencing at least 4 feet 6 inches high properly fastened to cedar posts as hereinafter specified, with suitable staples, stretched and built in a workmanlike manner in every respect, and to the satisfaction of the Engineer. The posts shall be of sound, live cedar, 5 inches in diameter at the top, 8 feet long, reasonably straight, with limbs and knots dressed off smoothly, with the bark removed. Such posts shall be spaced sixteen and one-half feet centre to centre, placed three feet deep in the ground, and thoroughly tamped. At all road crossings, farm crossings, jogs in the line of the fence and at intervals not exceeding 20 rods braced panels shall be built, having the posts spaced eight feet apart and a diagonal brace piece at least five inches in diameter at the top shall run from a point about one foot below the top of the end post to a short distance above the ground line of the adjacent post. The diagonal piece shall be notched into the post and be thoroughly nailed thereto with 6-inch wire nails. The posts for brace panels shall be carefully selected, not less than 8 inches diameter at the top and ten feet long. They shall be set four feet in the ground and firmly tamped. After the wire is strung the top of the post shall be cut true to a line and at an angle of 45 degrees for the purpose of shedding rain.

POSTS IN SHALLOW SOIL.

236. When the depth of the soil will not admit of the post hole depth called for above, “T” or “A” frame posts as shown on the standard drawing will be required. The foot of such posts shall be loaded with stones to prevent overturning.

FENCES AT HIGHWAY CROSSINGS.

237. At all highway crossings the fence shall be turned into the cattle guard and the posts shall be spaced equally apart to enable a sixteen foot 1 inch x 8 inch board to be nailed at the end and the centre, to the top of the posts. Such board being on edge and the line of boards to run from the fence to the cattle guard.

GATES.

238. Gates shall be made of an approved pattern of gas pipe frame and strung with wire, and to include suitable hinges and fastenings.

CATTLE GUARDS.

239. Cattle guards shall be placed at all highway crossings. They shall be of an approved pattern, made in sections with provision for removal without injury to the guard. The form and section to be approved of by the Engineer.

Highway Crossings.

HOW GRADED.

240. The approaches to the rail level shall be graded on a slope not more than five (5) per cent. with width of roadway, of not less than 20 feet.
241. At each highway crossing at rail level, there shall be placed a signboard with the words "Railway Crossing" on both sides of the board, and in the Province of Quebec, in French also the words ("Chemin de Fer") in black letters on white ground, six inches in height. The board is to be framed into a cedar post firmly bedded at least four feet in the ground and at least 13 feet above the surface of the road.

PLANKING.

242. The highway at rail level shall be planked with three inch plank, packed up with 2 x 3 inches pieces resting on the ties. To have four planks 12 inches wide between the rails and two outside, one on either side level with the track. For single track crossing, to be 20 feet in length, at right angles to the direction of the highway.

FARM CROSSINGS, HOW GRADED.

243. The approaches shall be graded to insure a good roadway. When practicable, not to exceed a five (5) per cent. approach, the width of the finished road to be twelve feet. The crossing to be planked with four planks, two inside and two outside the rails. The interim space between the inner planks to be thoroughly packed with hard stones or gravel.

General.

CONTRACTOR TO PROVIDE WAGON ROADS, ETC.

244. The Contractor, at his own cost, must provide all wagon roads to reach and carry on the work; he must also provide all tools of every description and all supplies required for the prosecution of the work.

PRICES FOR BUILDINGS TO INCLUDE FOUNDATIONS.

245. The prices paid for buildings, water tanks, turntables, depots, section houses, and other standard structures, shall be as per schedule of prices.

MATERIAL TO BE FURNISHED BY THE COMMISSIONERS.

246. Unless otherwise provided, it shall be understood that the Commissioners are to furnish the Contractor all the rails, fastenings, tie plates, track bolts, spikes and steel bridges, either on board cars at the nearest accessible point by rail or at steamer landing, or at points along the line of road to be constructed, as may be directed by the Chief Engineer.

OTHER MATERIALS.

247. All other materials required for the construction of the Railway shall be supplied by the Contractor at the schedule price for same.

CONTRACTOR TO HANDLE ALL MATERIAL.

248. The Contractor will be required to handle all material at his own expense, including unloading and loading in cars, and all material must be unloaded
from cars within three days after its arrival, unless special authority to the contrary is given by the Engineer. Any violation of this rule will subject the Contractor to the usual demurrage.

HAULING.

249. Whenever cross-ties, piles, timber or other material is delivered along the line of the road, the Contractor must do the hauling to put in place, including the loading in cars when necessary.
Specifications for Standard Telegraph Line.

Poles

All poles shall be of live green cedar, sound, straight, cut square at both ends, all knots trimmed close, thoroughly peeled to within five feet of the butt and must not be less than seven (7) inches in diameter at small end, inside the bark.

Pole-line.

Shall be of twenty-five (25) foot poles for body of line and longer lengths at railway and highway crossings, through railway yards, and so proportioned to the contour of the country, that the wires may be strung without abrupt changes of level.

Poles shall be placed generally at six (6) feet inside of the right-of-way limit, except on such cuttings and embankments that the nature of the formation renders such position unsuitable, but no pole shall be set at a distance less than twelve (12) feet from the nearest rail. In wooded country, poles may be set thirty feet from the nearest rail.

Under no circumstances shall a pole or poles be set in a position that would interfere with a clear view of railway signals from station windows or engine cabs. In locating the line on straight sections, poles shall be placed at equal distances of one hundred and fifty (150) feet, and in curves at one hundred and thirty-five (135) feet.

Through station yards and at all railway and highway crossings poles not less than thirty (30) feet in length shall be set. All poles shall be set perpendicularly, except on curves or corners where they can be leaned slightly against the strain.

Holes shall be dug large enough to admit the poles without hewing, and shall be full size at the bottom, to permit of the use of iron tampers.

When the pole is placed in position, one shovel only shall be used in filling the hole, and two tampers used in packing the filling continuously until the hole is filled. The soil must be piled above the surface and firmly packed around the pole.

All poles shall be set beneath the surface of the ground as follows:

- 25 and 30 foot lengths ........................................... 5 feet
- 35 and 40 foot lengths ........................................... 6 feet
- 45, 50 ft. and longer lengths .................................... 7 feet

Where solid rock is encountered, deduct one foot from the above scale of depths. In wet or marshy locations, or where it is necessary to set poles on slopes, they should be set at a greater depth than previously indicated, to prevent the possibility of being blown over by wind or lifted by frost.
In soft or marshy ground, weather braces shall be framed with a foot to hold the poles from being pushed into the ground. The size of the foot shall be determined by the strain the brace is designed to hold.

Instead of the foot, it will be permitted, when the ground is so soft as to prevent proper tamping, to fill in with stone, and brace the pole in four directions.

Poles to be set in quicksand shall be tapered from a point eighteen (18) inches above the butt to the butt, by the use of an axe, as piling is pointed before being driven.

**FITTING OF POLES.**

The top of the pole shall be roofed, and shall have not less than two (2) gains four and a quarter (4¼) inches wide by three-quarters (¾) of an inch deep, spaced twenty-two (22) inches on centres. The centre of the upper gain shall be ten (10) inches from the apex of the pole roof.

The direction of the apex of the “roof” shall be at right angles with the cross-arm, or parallel to the wires.

**BRACES.**

All braces shall be of cedar and set at a uniform distance from the butt of the pole, at least six (6) feet wherever possible, the top of the pole brace shall be just below the bottom gain, and shall be fastened with lag bolts.
LINE PROPS.

Line props shall be used on every fifteenth (15th) pole, placed parallel to the line in alternate positions. Props shall be of cedar and not less than fifteen (15) feet in length, set in the ground from two to three feet, not less than six (6) feet from the butt of line pole, and shall be fastened with lag bolts.

ANCHORS.

Through station yards, and for one thousand (1,000) feet each side and beyond stations, braces must not be used; anchors only shall be used.

All excavations for anchor logs shall be five (5) feet deep wherever practicable. If impracticable to obtain this depth on account of the nature of the ground, the excavation may be made not less than three and one-half (3½) feet deep. Anchor logs must be of cedar.

CURVES.

All poles in curves shall be re-inforced by anchor guys or props.

CROSSINGS.

At all crossings, the poles on each side shall be double armed and of such height as to allow the arm in the bottom gain to carry the wires at least twenty-five (25) feet above the surface of the ground or rail level.

ANCHOR 5 FEET LONG, MADE OF CEDAR, DEPTH TO SUIT REQUIREMENTS.
CAPACITY OF LINE.

The line shall have an ultimate capacity for two (2) six (6) pin cross-arms and twelve (12) wires.

GUY WIRES.

Guy wires shall be of seven (7) strands No. thirteen (13) gauge steel rope. The ends of the guys shall be wrapped twice around the pole immediately under the lowest gain, and fastened to the guy rod. The ends of the wire shall be fastened by standard two bolt clamps. Under no circumstances shall guy wire be secured to the anchor beneath the surface of the ground.

In locating anchor guys, the distance from the butt of the pole shall not be less than one-fifth (1/5) the length of the pole. In exposed places, guy wires must be protected by a guard of wood or iron pipe.

MECHANICAL ANCHORS.

An approved mechanical device may be substituted for the anchor log and iron guy rod.

OFFICES POLES.

Office poles shall be securely guyed to keep the strain of the wires off the office fixtures and buildings.

PLACING CROSS ARMS.

When planting poles, the cross-arms must face each other on every alternate span between poles.

Cross arms must be secured by two (2) seven (7) inch lag bolts, and two (2) iron braces as required by standard specifications. Braces to be fastened to the back of the cross-arms.

LONG SPANS.

At all crossings with spans of two hundred (200) feet and over, poles on either side shall be equipped with double arms.

LIGHTNING ARRESTORS.

A lightning rod of number eight (8) iron wire shall be securely attached to every tenth (10th) pole, with one and one-half (1½) inch staples. The rod shall project three (3) inches above the top of the pole to within one (1) foot of the butt, where four (4) spiral turns will be made around the pole, and a hand coil of about (6) feet fastened to the bottom. All office and cable poles shall be equipped in the same manner, except that two (2) number eight (8) iron twisted wires shall be used.

WIRES.

The first wire erected shall be No. eight (8) gauge, iron, weight 400 pounds per mile. The second wire shall be No. 6 gauge, iron, weight 574 pounds per mile.
ERECION OF WIRES.

String wires so as to avoid kinking and other damage, and remove all tags. Wires shall be tied on the side of the insulator nearest the pole, except on curves or corners where it is necessary to place it on the opposite side so that the strain will be against the insulator. (See sketch).

The ties must have three (3) turns on each side of the insulator, and the ends bent in and pointed toward the groove in the insulator.

![Straight Line Location of Wires on Insulator](image)

![Curve or Corner Location of Wire on Insulator](image)

JOINTS.

When connecting iron wires, first clean the wire, then use pliers and connectors, giving not less than five (5) turns on each side of the joint. All joints must be soldered.

EQUIPMENT.

The contractor shall furnish all the batteries, instruments, switchboards and all necessary equipment, in every particular, to secure a first-class installation, having due regard to the requirements of the service, the whole to be done in a workmanlike manner, fully guaranteed, and to the satisfaction of the Chief Engineer.

COPPER WIRES.

Extraordinary care must be taken to prevent kinking or other damage. When stringing copper wire, draw out by a rope over the cross-arm the full length of the coil, then pull up with approved grips. The wire shall then be tied throughout, the Grips being left on until the next coil is strung, the joint made, wire pulled up, and Grips attached in the same manner.

No mechanical device except approved Grips shall be used in pulling up copper wire.

TYING.

Copper wire shall be tied by hand. One side of the tie shall pass over the line wire, making five (5) complete turns, the other side shall pass under the line wire, also making five (5) complete turns.
Ties shall be of annealed copper wire of the same gauge as line wire, not less than twenty (20) inches in length, and must be well stretched before being used. After making the full number of twists on the line wire, turn the ends back against the line wire toward the insulator. These ends shall not be cut.

**JOINTS.**

Copper wire shall be connected by approved sleeves. Each sleeve shall have three (3) complete twists. Two pairs of approved splicing clamps only shall be used in making the joints.

After the joint is made, the end of the wire shall be bent at right angles to the joint and cut close to the side of the sleeve.

String all wires so that the sag between the poles shall be as given in the following table, making the allowance indicated for the temperature and length of span.

**SAG IN ALL LINE WIRE.**

*Sag Expressed in Inches.*

SPECIFICATIONS FOR MATERIAL.

SPECIFICATIONS FOR GALVANIZED IRON TELEGRAPH WIRE.

1. The wire to be soft and pliable, and capable of elongating 15 per cent. without breaking, after being galvanized.

2. Extreme tensile strength is not required, but the wire must not break under a less strain than two and one-half times its weight in pounds per mile. Tests for tensile strength will be made by direct application of weight, or by means of a lever, at the option of the inspecting Officer.

3. Tests for ductility will be made as follows:—The pieces of wire will be gripped by two vises, six inches apart, and twisted. The full number of twists must be distinctly visible between the vises on the six inch piece. The number of twists in a piece of six inches in length must not be less than 15.

4. The weight per mile for different sizes of wire will be:—For No. 6 gauge, 574 lbs.; No. 8 gauge, 400 lbs.; No. 9 gauge, 330 lbs.; or, as near these figures as practicable. A variation of not more than two per cent. will be allowed.

5. The electrical resistance of the wire in Ohms per mile at a temperature of 68 degrees Farenheit, must not exceed the quotient arising from dividing the constant number 5000 by the weight of the wire in pounds per mile. Example:—The mileage resistance of a wire weighing 400 pounds per mile, should not exceed 5000 ÷ 400 = 12.50 Ohms.

6. The wire must be cylindrical and free from scales, inequalities, flaws, sand splits and other imperfections and defects. Each coil must be warranted not to contain any weld, joint or splice whatever in the rod before drawn. All wire to be "killed" or stretched about two per cent. before delivery.

7. It is desired to obtain the wire in coils, all of one piece. If this cannot be undertaken, the contractor may tender for a supply of wire with two pieces only to the coil, joined by the ordinary twist joint and carefully soldered or electrically welded. It should be stated in the tender whether there will be one or two pieces in each coil. The length of the wire in each coil shall be as follows:—No. 8 B.W.G., or smaller, one-half mile; No. 6 B.W.G., one-third mile. A variation of not more than three per cent. from the above will be allowed. The grade of iron wire to be used is that known as "Extra Best Best."

8. The wire must be well galvanized, and capable of standing the following tests:—The wire will be immersed in a saturated solution of sulphate of copper at 68 degrees Fahrenheit, and permitted to remain one minute, and then wiped clean. This process will be performed four times. If the wire appears black after the fourth immersion, it shows that the zinc has not all been removed and that the galvanizing is well done, but if it has a copper color, the iron is exposed, showing that the zinc is too thin.
SPECIFICATIONS FOR HARD-DRAWN COPPER LINE WIRE.

Each coil must be drawn in one continuous length without joints. The wire must be cylindrical and free from scales, flaws, inequalities and other imperfections. It must have a tensile strength to sustain three times its weight in pounds per mile; must withstand, without breaking, thirty twists in six inches, and must be capable of elongation 1\% per cent, before breaking; must permit of being wrapped a number of times about its own diameter, and unwrapped without showing signs of breaking.

Its electrical resistance per mile in international Ohms at 68 degrees Fahrenheit, must not exceed the quotient arising from dividing the constant 912 by its own weight in pounds per mile.

CROSS-ARMS.

The cross-arms to be perfectly sound, seasoned, straight grained, red pine or British Columbia Douglas Fir, free from knots or other defects, surfaced on all sides, rounded off on top edge to produce the full size of seven (7) foot lengths, four and one quarter (4\\frac{1}{4}) inches by three and one-quarter (3\\frac{1}{4}) inches, bored for six (6) one-half (\frac{1}{2}) inch holes to take standard steel pins, spaced as per sketch. Two (2) central lag screws holes nine-sixteenths (9-16) of an inch in diameter bored in each cross-arm, staggered vertically three (3) inches.

\[ \begin{array}{cccccccc}
3'' & 15'' & 15'' & 15'' & 16'' & 15'' & 15'' & 3'' \\
\end{array} \]

SIZE WHEN DRESSED \( 4\frac{1}{4}'' \times 3\frac{1}{4}'' \).

PINS.

To be of approved steel pattern.

INSULATORS.

Double petticoat design, weight twenty-five (25) ounces, to be manufactured of best glass used for the purpose, free from blow holes and other defects. The threading shall be neatly and fully formed and the whole shape made uniformly true throughout.

The initial "T.C.R." shall be blown on the outside surface of the glass on the margin below the tie line groove, in block letters one-half an inch in height.

CROSS-ARM LAG SCREWS.

These are to be of wrought iron or steel one-half an inch in diameter, full seven inches long under head, with full three inches of thread, six (6) threads per inch, gimlet pointed, with standard square heads with flat circular top, surface of five-eighths (\frac{5}{8}) inch in diameter with remaining surface and corner pressed to the standard rounding surface.
Washers: one and three-eighths (1¼) inch by nine-sixteenths (9-16) inch. No. twelve (12) gauge.

CROSS-ARM BRACES.

To be of wrought iron or steel, one inch wide, twenty-eight (28) inches long, seven-thirty-second (7-32) inch thick, with a hole punched at each end seven-sixteenths (7-16) of an inch in diameter, the centre of which shall be three-quarters (¾) of an inch from end of brace.

BRACE BOLTS.

To be one-half (½) by three and one-quarter (3¼) inches. Three-eighths (⅜) by two and one-quarter (2¼) inches. Gimlet pointed, flat head, standard make.

GUY RODS.

To be of wrought iron or steel, five-eighths, (⅝) inch diameter, five foot (5) six inches (6) in length, threaded for four (4) inch plate and nut, top end welded to form a loop.

Turntables.

Shall be of medium steel, plate girder type, seventy-five feet long, with a capacity of 200 tons.

Track Scales.

Shall be of 150 tons capacity, 50 feet long and shall be housed from the weather, and shall consist of the most approved pattern of railroad track scales, with concrete or masonry foundations, and all to the satisfaction of the Engineer.

Buildings.

Tool houses, outbuildings, section houses, passenger or combination freight and passenger station buildings, freight sheds, engine houses, car and locomotive repair shops and such other buildings as may be required, shall be built in accordance with the detailed plans and specifications which may be furnished from time to time by the Chief Engineer.

Water Station.

Water tanks shall be built frost proof. Minimum capacity of 50,000 gallons, resting on concrete or masonry foundations, in accordance with the detailed plans and specifications, and to the satisfaction of the Chief Engineer.

Steel Bridges.

Shall be designed and built in accordance with the provisions of the general specifications for railway bridges, issued by the Department of Railways and Canals, 1905 edition. The class of loading to be used for all bridges is that designated HEAVY.

N. T. R.
INVESTIGATING COMMISSION

Exhibit 11
Correspondence in connection with calling for Tenders.
(See Page 19 of Report)
The Commissioners of the Transcontinental Railway, 
Ottawa, Ont.

Dear Sirs:—

In accordance with your verbal instructions of to-day, I understand we may defer for a time the preparation of plans and profiles for filing with the Department in order to rush to completion by the 27th inst. a complete set of tracings from Winnipeg to Lake Superior Junction and from Quebec to point near La Tuque; without showing quantities on the profiles. I am putting on extra men and working the regular staff at night in order to insure this, and, in the meantime, would ask the Board to kindly instruct me definitely by what sections of the Act we are to be guided in preparing plans for filing and from whom I shall ask instructions as to whether plans and profiles have to be made in triplicate tracings or whether blue prints will answer. I have the printed regulations of the Permanent Railway Board in this regard but understand they do not apply.

Yours very truly, 
(Sgd.) D. MACPHERSON, 
Ass't. Chief Engineer.

Ottawa, Jan. 18th, 1906.

The Commissioners of the Transcontinental Railway, 
Ottawa, Ont.

Dear Sirs:—

In compliance with your request for a recommendation as to whether quantities and classification of material should be shown on our profiles on which tenders are based. It seems to me inadvisable to show quantities, as we are calling for tenders on first location profiles, which are likely to be modified by revision. It would, however, give tenderers some useful general information to mark on the different large cuttings the supposed classification, but it should distinctly be understood that this information is only given for what it is worth and cannot, under the circumstances, be accurate or in any way binding on the Commissioners.

Yours very truly, 
(Sgd.) D. MACPHERSON, 
Ass't. Chief Engineer.

Ottawa, Jan. 26th, 1906.

The Commissioners of the Transcontinental Railway, 
Ottawa, Ont.

Dear Sirs:—

I beg leave to report, for your information, that I have had all the plans and profiles retraced so as not to show quantities, and that the complete sets of blue prints, to show tenderers, which I promised to have ready for Saturday, were
completed Thursday night. I was enabled to do this by the employment of a few extra men and the hearty co-operation of the staff, who worked Saturday afternoon and every night since the order was given.

Yours very truly,

(Sgd.) D. MACPHERSON,
Acting Chief Engineer.

Ottawa, Jan. 27th, 1906.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Dear Sirs:—

In compliance with your request for my opinion as to the advisability of including the masonry substructures of bridges in the general contract and excluding the steel superstructures; I would beg leave to say that it is not an unusual thing to let masonry contracts separate from the general contract, when letting ordinary contracts for railways in settled districts, where the means of transporting material would not be largely under the control of the general contractor; but in such a large contract as you propose letting, through an unsettled country with restricted means of communication, any contractor capable of undertaking the work as a whole would necessarily have better facilities and could do the masonry work cheaper than anyone else. Having regard to all the circumstances, it seems therefore advisable to let masonry substructures in the general contract. Steel superstructures should, as a general rule, be let by separate contract and I would advise that the same Company or Companies who manufacture the bridges should erect them, otherwise it is difficult to fix the responsibility in case of any damage to the bridges during erection. This might make it necessary to modify clause 246 of the Specifications, in regard to delivery of steel bridges to contractors.

Yours very truly,

(Sgd.) D. MacPherson,
Acting Chief Engineer.

Hon. S. N. Parent,
Chairman of the Commissioners of the Transcontinental Railway,
Ottawa.

Ottawa, 30th January, 1906.

Dear Sir,—

Our Commission will be soon ready to call for tenders on two sections of the line. As work of this importance involves many questions which may give rise to differences of opinion, the Commissioners would like to have your opinion, as Government Consulting Engineer, on the following points, namely:—
1. Plans and profiles are to be submitted for the information of tenderers. Would it be advisable to have the quantities appear on the profiles, or on the contrary should not this source of information be withheld from the contractors.

2. Should tenders be called for the following work as one contract, viz:—
  the clearing, grubbing, grading, embankment protection, truss, pile and trestle bridging, masonry, concrete culverts, pipe culverts, piers, abutments, road crossings, cattle guards, tracklaying, surfacing, ballasting, water service, stream diversion, turntables, roundhouses, section houses, gates, telegraph lines, including such other work to complete and finish, ready for operation, a single track railway with side tracks, yards, terminal yards, depot grounds, spurs and other necessary and appurtenant tracks, extending from a point in District "F", designated on the said plans of the Commissioners, to a distance of about 245 miles, and from a point in District "B", also designated on the said plans of the Commissioners, to a distance of about 150 miles. The Commissioners furnishing all the rails and fastenings, tie plates, track bolts, spikes, and ties.

Depots, shops and steel bridges we think advisable to ask by separate tenders.
Do you consider advisable to take from the main contract fences, telegraph lines, masonry for steel bridges and ask separate tenders for these works?

Thanking you in advance, I remain,

Yours truly,

(Sgd.) S. N. Parent,
Chairman.

C. Schreiber, Esq.,
Gen'l Consulting Engineer, to the Government,
Ottawa.

Office of the General Consulting Engineer to the Government,
Room No. 150, Western Departmental Building,

Ottawa, Canada, January 31st, 1906.

My dear Sir.

I have to acknowledge the receipt of your communication of yesterday's date, requesting my opinion upon certain points in connection with the calling for tenders for two sections of the Eastern Division of the National Trans-Continental Railway.

In reply to your first question as to the advisability of having the quantities of work to be done appear on the profiles, I would say that, assuming that the profiles show the cuttings and embankments, and the structures to be built at each point, and that the Specification describes the work to be executed, no further information is needed by intending contractors on a schedule price contract. Especially would it be undesirable to exhibit quantities and classification, upon a location which is liable to be revised or changed. The Department of Railways and Canals has, for many years, refrained from exhibiting quantities or classification, as contractors have, subsequently, put forward claims, upon the ground that the details so given had misled them. There is no necessity for supplying such information, and I strongly advise that quantities be not exhibited.

With regard to the question of the extent of the works to be tendered for as one contract, I would say that I am firmly of opinion it would be in the interest of
the speedy prosecution of the work, and of economy in its cost, and therefore in the public interest to include in one contract, upon so large and important piece of work, the telegraph line, clearing, grubbing, road crossings, cattle guards, track-laying, surfacing, ballasting, water service, stream and road diversions, turntable sub-structures, engine houses, section houses, fences, gates, and all works below subgrade or formation level, in fact, all work necessary, when the bridge superstructures are in place, to complete, ready for operation, a single track railway, with side tracks, switches, yards, terminal yards, depot grounds, spurs and other needful appurtenant tracks. In fact, the contract should cover all materials and works, of every description, except the supply and erection of the bridge superstructures and steel turntables, and the supply of steel rails and fastenings, tie plates, track bolts, spikes, ties, which will be furnished by the Commissioners. There is no necessity for the inclusion of the passenger stations, freight houses, warehouses and fuel sheds in the contract, should another course be deemed desirable, and tenders could, in each case, be sought for them as separate and distinct works, apart from the general contract.

As to my reason for advising the inclusion of the telegraph in such general contract, it is this. The contractors are the parties chiefly interested in having the telegraph line in use at an early stage of the work, as it would materially assist them in directing the details of construction and the movement of supplies along their contract works. Hence it is natural to expect that the erection of the telegraph line, if in their hands, would follow close upon the work of clearing, thus ensuring its construction at an early stage.

My reason for recommending the fencing also being so covered, I may say, is that it is the custom in Government contracts to provide that the contractors shall be responsible for all damage done on adjoining land by cattle, etc., trespassing, and it has, therefore, been considered only reasonable that they should be able to protect themselves by the erection of fences along the line where such trespass might be looked for.

Faithfully yours,

(Sgd). COLLINGWOOD SCHREIBER,

Government Chief Engineer of the Western Division of the National Trans-Continental Railway.
N. T. R.

INVESTIGATING COMMISSION

Exhibit 12

Copy of Advertisement for Tenders for General Grading Contracts.
(See Page 19 of Report)
NOTICE TO CONTRACTORS.

Sealed Tenders addressed to the undersigned, marked on the envelope 'Tender for Construction,' will be received at the office of the Commissioners of the Transcontinental Railway, at Ottawa, until twelve o'clock noon of Thursday, the 26th day of August, 1908, for the work required for the construction, in accordance with the plans, profiles and specifications of the Commissioners, of the following sections of the Transcontinental Railway, viz:—

(1) District 'C.'—From a point designated on the plans of the Commissioners near Weymontachene, in the province of Quebec, 196.38 miles west of the north abutment of the Quebec bridge (such point being on the boundary between Districts 'C' and 'D') westerly for a distance of about 107 miles. Date of completion, 31st December, 1910.

(2) District 'C.'—From a point designated on the plans of the Commissioners, about 107 miles west of Weymontachene, in the Province of Quebec, westerly to the end of the Grand Trunk Pacific Railway Company's contract, a distance of about 114.97 miles. Date of completion, 31st December, 1910.

(3) Districts 'D' and 'E.'—From a point designated on the plans of the Commissioners, being at the western end of Fauquier Bros.' Abitibi contract, in the Province of Ontario, in a westerly direction for a distance of about 104.24 miles. Date of completion, 31st December, 1910.

(4) District 'E.'—From a point designated on the plans of the Commissioners, about sixty miles west of the easterly boundary of District 'E,' in the Province of Ontario, easterly to the end of Fauquier Bros. contract, north of Lake Neepigon, a distance of above 100 miles. Date of completion, 31st December, 1910.

(5) Districts 'E' and 'F.'—From a point designated on the plans of the Commissioners, at the western end of Fauquier Bros. contract north of Lake Neepigon, in the Province of Ontario, westerly to a point at or near Dog Lake, a distance of about 126 miles. Date of completion, 1st September, 1910.

(6) District 'F.'—From a point designated on the plans of the Commissioners at or near Dog Lake, in the Province of Ontario, to a point at or about mile 2.6 west of what is known as Peninsula Crossing, by alternative routes as shown on the plans, a distance of about 23.76 miles by the northerly route and 24.13 miles by the southerly route, the selection of the route to be at the option of the Commissioners. Date of completion, 1st September, 1909.

Plans, profiles and specifications may be seen in the office of the Chief Engineer of the Commissioners at Ottawa; also in the offices of the following District Engineers, viz:—John Ayley, Acting District Engineer, North Bay, Ont.; T.S. Armstrong, Neepigon, Ont.; and S. R. Poulin, St. Boniface, Man.

Persons tendering are notified that tenders will not be considered unless made in duplicate, and on the printed forms supplied by the Commissioners.

A separate tender must be submitted for each section.

Tenderers shall not be in any way entitled to rely upon the classification, or any other information given by any person on behalf of the Commissioners; and before submitting any tender, bidders should make a careful examination of the plans, profiles, drawings and specifications, and read the forms to be executed, and fully inform themselves as to the quality of materials, and character of workmanship required; and are understood to accept, and agree to be bound by, the
terms and conditions in the form of contract, specifications, &c., annexed to the form of tender.

Each tender must be signed and sealed by all the parties to the tender, and witnessed, and be accompanied by an accepted cheque on a chartered bank of the Dominion of Canada, payable to the order of the Commissioners of the Transcontinental Railway, as follows:

For Sec. No. 1, District

<table>

Any person whose tender is accepted shall within ten days after the acceptance thereof furnish such additional approved security as may be required by the Commissioners; sign the contract, specifications, and other documents required to be signed by the said Commissioners; and, in any case of refusal or failure on the part of the party whose tender is accepted to complete and execute a contract with the said Commissioners, and to furnish the additional approved security within ten days after the acceptance of the tender, the said cheque shall be forfeited to the Commissioners as liquidated damages for such refusal or failure and all contract rights acquired by the acceptance of the tender shall be forfeited. The cheques deposited by the parties whose tenders are accepted will be deposited to the credit of the Receiver General of Canada as part of the security for the due and faithful performance of the contract according to its terms. Cheques deposited by parties whose tenders are rejected will be returned within ten days after the signing of the contract.

Attention is called to the following clauses in the form of contract:

'This agreement is subject to the regulations now in force, or which may at any time hereafter be in force during the construction of the works hereby contracted for, made under the authority of the Department of Labour, and which are, or shall be, applicable to such works.' (The schedule of minimum wages determined upon by said Department will form part of the contract).

'The contractor shall in connection with the whole of the said work, as far as practicable, use only material, machinery, plant, supplies and rolling stock manufactured or produced in Canada, provided the same can be obtained as cheaply and upon as good terms, in Canada as elsewhere, having regard to quality and price.'

The contractor shall conform to the fire regulations adopted by the Commissioners, and also to the laws and regulations respecting fires in the different provinces wherein the work is being performed.

The right is reserved to reject any or all tenders.

By order,

P. E. RYAN,
Secretary.

The Commissioners of the Transcontinental Railway.
Ottawa, 18th July, 1908.

Newspapers inserting this advertisement without authority from the Commissioners, will not be paid for it.
N. T. R.
INVESTIGATING COMMISSION

Exhibit 13
Copy of Order in Council re Security on Contract.
(See Page 20 of Report)
Extract from a report of the Committee of the Honourable the Privy Council, approved by His Excellency on the 24th April, 1897.

On a memorandum dated 21st April, 1897, from the Minister of Railways and Canals, representing that whereas on the 24th of December, 1896, an Order in Council was passed amending the Order of the 23rd of March, 1880, in the matter of the amount of security to be required from Contractors for Public Works and increasing such amount from 5% to 10% of the estimated value of the contract, it appears, on further consideration, expedient that such increase should not apply to all contracts alike, but that a distinction should be drawn between those of minor importance and works of magnitude which involve the locking up of considerable sums of money.

The Minister accordingly recommends that the provisions of the said order of the 24th of December, 1896, be so far modified as to make them applicable to contracts the estimated value of which is under $250,000, and that in cases of contracts the estimated value of which is over that amount, the security to be taken thereunder be that contemplated by the previous Order referred to, namely, 5% of such estimated value.

The Committee submit the above recommendation for your Excellency's approval.

JOHN J. McGEE,
Clerk of the Privy Council.

The Honourable the Minister of Railways and Canals.
N. T. R.

INVESTIGATING COMMISSION

Exhibit 15

Letter from H. A. Woods re Classification.
(See Page 64 of Report)
COPY

Montreal, Que., October 7, 1907.

Mr. Hugh D. Lumsden,
Chief Engineer, Eastern Division,
National Transcontinental Railway,
Ottawa, Ont.

Dear Sir:—

Classification of Material, District "B"

At the request of District Engineer Armstrong he was furnished recently with a statement of classification for the heavier work on the above section which were, when given in detail, so different from his expectations that he requested the writer to visit the work.

During the past week we passed over portions of the work from the Batiscan River west for fifteen or twenty miles and later, from Miles 115 to 132.

With reference to the former portion, the classification was given in distances of from 3 to 5 miles, and, as we did not have total quantities of graduation, could not judge with reference to any particular cutting, although percentages for entire distance seemed excessively heavy in both loose and solid rock.

With the latter portion we had detailed percentage for each cut and were greatly surprised at the allowances made for solid and loose rock. In nearly every case, where the cutting was not entirely all ledge, the estimate given for solid rock is double, or more than double, what it should be. In fact, the specifications had been entirely ignored and an excessive allowance made, not by reason of an error in judgment, but, as I understand, by special instructions from the Assistant District Engineer:

Let me give you some illustrations:—

Take the cutting from Stations 5818 to 5826, estimated 71% solid rock and 29% loose rock. Slopes taken out 1 1/2 to 1. Very little ledge in this cut. Some large boulders but a very large percentage is common excavation.

Station 5842 to 5860. Classified 94% solid rock, 6% loose rock. Slopes taken out 1 1/2 to 1. Solid rock over classified at least. 100%.

Station 5866 to 5875. Estimated 80% solid rock, 20% loose rock. No rock in place in this cut. Many large boulders but a large amount of earth.

Station 5882 to 5901. Estimated 78% solid rock, 22% loose rock. A large amount of this cut wasted with slip scrapers and ploughing being done with two horses. There are hundreds of yards of earth here without a stone, large or small.

Station 6030 to 6046. Estimated 40% solid rock, 10% loose rock. This is the large sand cut west of O’Brien’s camp. Of the 95,000 yards moved to August 31st in this cut at least 80,000 yards were pure sand.

Station 6071 to 6078. Estimated 99% solid rock, 1% loose rock. Very little solid rock in place. Slopes taken out 1 1/2 to 1.

West of the St. Maurice River.

Station 6391 to 6394. Estimated 46% solid rock, 33% loose rock. Sand cut with few boulders and possibly 1,500 yards ledge in bottom of cut not yet taken out.

Station 6493 to 6504. Estimated 20% solid rock, 49% loose rock. No evidence of any ledge and very few large boulders. Nearly all sand.
Station 6506 to 6512. Estimated 16% solid rock, 44% loose rock. This is purely a sand cut, with very few boulders. Upper slope nearly 100' high, material washed into river. Certainly not 10% of this should be classified.

Station 6522 to 6548. Estimated 26% solid rock, 49% loose rock. This is borrowed material from the side. Very little solid rock shown, except what was used for blind drains, but some large boulders not placed in embankment.

On account of heavy rains we were not able to go west of station 6600 but we understand that classification is made about as noted above.

In every case where cuttings are not entirely in ledge we find the material over-classified very largely. Mr. Armstrong has been able to visit this work at different times, perhaps quite as often as the Assistant District Engineer. His estimate and my own are not very different as to the amount of classified material and until he received detailed quantities he had no intimation that such heavy classification had been given. In many cases, particularly in sand and gravel cuts, he had supposed that no classification would be given, except perhaps for a few boulders as loose rock.

I am informed also that on the work east of the St. Lawrence River heavy classification is being made in borrowed material where ploughing is done with one team and material moved in slip scrapers.

As before stated, these over-classifications are not made through error in judgment, nor upon the decision of the Resident or Division Engineers, who are fully acquainted with the character of the work, but by arbitrary orders from their superior. To such classification as mentioned above, increasing the cost of the work to such an alarming extent, we most seriously protest and respectfully request that either yourself or the Assistant Chief Engineer visit the work and pass judgment upon the classification as made. Please note that the percentages given above indicate the work done to August 31st. We are not advised what the September estimate will show.

Yours truly,

Sgd. H. A. Woods,
Assistant Chief Engineer.
N. T. R.

INVESTIGATING COMMISSION

Exhibit 16

INVESTIGATING COMMISSION

Exhibit 19

Correspondence in connection with use of Momentum Grades.
(See Page 71 of Report)
August 9th, 1905.

"H. A. Woods, Esq.,
"Asst. Chief Engineer,
"Grand Trunk Pacific Railway,
"Montreal, P. Q.

"Dear Sir:—
"Would you kindly send me a set of your speed and distance diagrams for calculating momentum grades, giving details of weights of engines used.

Yours very truly,

(Signed) D. MacPherson.

"Mr. D. MacPherson,
"Assistant Chief Engineer,
"Transcontinental Railway,
"Ottawa, Ont.

"Dear Sir,—

"Replying to your letter of Aug. 9th., asking for a set of our speed and distance diagrams for calculating momentum grades. I beg to say that we have not considered momentum grades, in any way, in our located lines, and I question the utility of doing so on grades as low as we are using.

"For details of weight and engines used, I have to say that we propose to use the new Government Specifications for Bridges, using the "Heavy" class of engines. This I understand gives the weight of engine and tender 355,440.

Yours truly,

(Signed) H. A. Woods,
Asst. Chief Engineer.

 Nov., 20th, 1905.

"H. D. Lumsden, Esq.,
"Chief Engineer,
"Ottawa.

"Dear Sir:—
"Attached is correspondence I have had with our District Engineers and with the Assistant Chief Engineer of the Grand Trunk Pacific Railway, on the subject of virtual grades.

"You will see that some of our Engineers are in favor of using same in certain places and some are not. Mr. Woods is not in favor of using them. They are, of course, only suitable for undulating country and not for long stretches of country on maximum grades.

"Engineering has been described as the art of making a dollar earn the most money and a judicious use of virtual grades at points where the Locomotive Engineer has a chance to "take a run at the grade," would undoubtedly save money in construction and admit of the line being operated with maximum
"virtual grades of 0.4 and 0.6 though the actual grades would appear on the "profile as steeper. Of course if we have actual grades of 0.4 in locations where "the engine can get a run at them, they can be operated as virtual grades of less "slope and the haulage capacity of the engine will be greater than on a virtual "grade of 0.4. Will you kindly let me have your ruling early as to whether or "not we shall use virtual grades where possible. Please return fyle.

Yours very truly,
(Sgd.)  D. MacPherson,
Asst. Chief Engineer.

File 3737.

"D. MacPherson, Esq.,
"Assistant Chief Engineer,

"Dear Sir:

"In reply to your letter of the 20th inst. re actual and virtual grades. I "am certainly of the opinion that we must adhere to actual grades so far as our "construction is concerned, and all District Engineers should be so instructed. "Should any exceptional cases arise they should be submitted to this office, but "you must bear in mind they must be approved by the Grand Trunk Pacific "Railway Company before they can be adopted. I return herewith all corres- "pondence.

Yours truly,
(Sgd.)  Hugh D. Lumsden.

"Enclos.

OTTAWA, November 22nd, 1905.

"Guy C. Dunn, Esq.,
A. E. Doucet, Esq.,
A. N. Molesworth, Esq.,
S. R. Poulin, Esq.,
C. E. Perry, Esq.,
A. E. Hodgins, Esq.,

DISTRICT ENGINEER.

"Dear Sir:

Re VIRTUAL GRADES

"Referring to previous correspondence on the subject of virtual grades I "have gone into the matter with all the District Engineers, and with the Assistant "Chief Engineer of the Grand Trunk Pacific Railway, after which I submitted "the correspondence to the Chief Engineer, who has given his ruling that we "must adhere to actual grades. You will please be governed accordingly. Should "any exceptional case arise where it seems impossible to get the actual grade, "with reasonable cost, such exceptional cases will be gone into on their merits, "but, on account of the wording of the Act, it may be necessary to submit such "cases for the approval of the Grand Trunk Pacific Company.

Yours truly,
(Sgd.)  D. MacPherson,
Asst. Chief Engineer.

Exhibit 20
Correspondence in connection with Train Filling.
(See Page 75 of Report)
Ottawa, March 8th, 1906.

To the Commissioners of the Transcontinental Railway,
Ottawa.

Sirs:—

I beg to suggest to the Commissioners that before the acceptance of any tender by them, the contractor should understand that his price for common excavation includes all train hauled material for the making up of embankments, and if the contractor finds it to his advantage to construct temporary trestles to enable him to make up such embankments by train hauled material, he may do so on obtaining the consent in writing of the engineers, but the contractor's price for common excavation must be understood to cover the cost of such temporary trestles, and the filling in of same by train hauled material, and such filling shall be completed as soon as practicable. No overhaul will be allowed for train hauled material.

The contractor must also understand that all temporary trestles erected for his own convenience in hauling by teams or dump cars (other than as stated under heading of 'Temporary Bridge or Haulway' in Clause 17 of the General Specifications) shall be erected at his own expense, and that in the schedule of prices to be paid for the various items for material and work finished or performed, the prices given by him in his tender are to be taken and considered to be the prices for such material in the finished work, except in cases of Items 10 and 21, and that the ties under 76, 77, and 78 of the said schedule are to be finished by the Commissioners and that his price for tracklaying is to cover the cost of handling and putting in all such ties.

Yours obedient servant,
(Sgd.) H. D. Lumsdon.

(Memo on Mr. Lumsdon's file in connection with letter of March 8th, 1906, to Commissioners.)

This letter is written for the information of the Commissioners and is instigated by the fact that several supposed intending tenderers have asked the question as to payment for temporary trestles and overhaul.

It is a common practice in railway construction through a rough and broken country where suitable material is scarce and costly to obtain that embankments might in the first instances be made narrow and low and afterwards filled out or made up to the full subgrade by train haul made from the best available pits, and in some cases it is preferable to put in temporary trestle rather than raise the track as the work progresses.

Contractors tendering, who had not been accustomed to such a country, may make their price with the idea that they would be paid 1d. per 100 feet, over the 500 ft. of free haul (provided for in the General Specifications, Clause 17) for all train hauled material, and also for the erection of temporary trestles. As for the latter part of the letter it is only to be certain before signing any contract that the tenderer understands that the prices given by him are for the material in the work and not for the material only.

(Sgd.) H. D. Lumsdon,
Ottawa, March 8th, 1906.
Kenora, June 9th, 1906.

H. D. Lumsden, Esq.,

Dear Sir:—

Mr. McArthur has raised the question who will pay for temporary trestles if train filling is ordered in heavy fills. *He is very anxious to do some train filling west of the C. P. R. crossing in place of permanent trestles.* He has not put in a price for temporary trestles and claims that his price per cubic yard for train filling does not include anything but the loading and off loading material for banks from flat cars.

Yours truly,
(Sgd.) A. E. Hodgins,
District Engineer.

Ottawa, June 12th, 1906.

A. E. Hodgins, Esq.,
District Engineer,
Kenora, Ont.

Dear Sir:—

In reply to yours of the 9th instant re Mr. McArthur’ raising the question as to who should pay for trestles where train filling was ordered in heavy filling, I may say that owing to the short time for the completion of this work, it was not the intention that the present contractors should be called upon to make up any *very heavy fills*, the material for which had to be hauled by train, but that we should put in standard trestle in such places. Of course, if the contractor prefers to make up a fill by train hauled material rather than put in our standard trestle, he can do so with your approval, but in such cases he must provide the necessary temporary trestle at his own cost (except under Clause 17, headed ‘Temporary Bridge or Haulway’). We have no special price for train hauled material but only for train hauled surfacing by which is meant that where the track is laid before ballasted it may be found advisable to haul a few car loads of sand or gravel in order to save the rails from permanent injury. I may also say that it is not the intention to use rock borrow except only when an order in writing has been given from this office.

Yours truly,
(Sgd.) H. D. Lumsden.
November, 5th, 1906.

H. D. Lumsden, Esq.,
Chief Engineer,
Transcontinental Railway.

Dear Sir:—

I have received the following letter from Mr. M. P. Davis.—‘Would you please instruct your engineers to give us bills of timber for temporary trestles required for fills at stations 237 to 261, 870 to 890, 1028 to 1033, 1515 to 1524, 1840 to 1865, 1935 to 1970, 2040 to 2055, 2465 to 2515. It is important that we get this information at the earliest possible date so that the material may be delivered during the winter months, and oblige,

(Sgd.) M. P. Davis.’

Now to supply this information opens up the question of temporary trestles, train hauled material, and you will, of course, recollect that no decision has as yet been come to with regard to this matter. As I pointed out with regard to this matter before it would have been easy to have included train hauled material in our specifications, but as matters stand now it seems to me that we are at the contractors’ mercy and that we will have to make the best we can of a bad bargain. I will await your further order before supplying this information.

Yours truly.
(Sgd.) A. E. Doucet,
District Engineer.

November 12th, 1906.

H. D. Lumsden, Esq.,
Chief Engineer,
Transcontinental Railway.

Dear Sir:—

I enclose herewith a letter which I have just received from Messrs. M. P. and J. T. Davis, concerning the price of train hauled material and for which you suggested that they should submit a price to the Commissioners.

Yours truly,
(Sgd.) A. E. Doucet.
File 4134.

A. E. Doucet, Esq.,
District Engineer,
Quebec, P. Q.

Dear Sir:—

In regard to Mr. Davis’ letter to you, dated the 12th ulto. attached, I may say that Clause 17 of our General Specifications only refers to material under the heading of grading, which the contractor handles entirely with his own equipment, appliances and labour, prior to the Commissioner’s track being laid, and should not be interpreted to cover cases where the contractor makes use of the rails, fastenings and ties furnished by the Commissioners, the latter also paying for the track laying. As to points at which suitable material for the making up of embankments is not obtainable within reasonable reach, and they are made up by train haul, it is found that where borrow pits of sand, gravel, or easily worked material are to be found, either on the line of railway or within short distances thereof, and within a few miles of the site of such embankments, that such embankments, up to say twenty-five feet in height, can be most economically constructed by, where practicable, dropping the grades at the end of the embankments and raising them by train to their full width and height, the cost of such raising of grades by train haul would be amply covered by an addition of 10c per yard to the ordinary earth work price. Where it is impracticable to do this, the additional cost per yard of material in embankments to cover the cost of the erection of temporary trestle; in embankments from ten to twenty-five feet in height an addition of 22c, and in embankments from twenty-five to forty-five feet in height an addition of 10c. per yard to the ordinary earth work price will amply cover this, and for greater heights, up to say sixty foot, 7½c. per yard added to the original earth work price. I may say that in general it is more profitable to contractors, where borrow of good sand, gravel, or easily worked material can be obtained within a few miles that can be loaded on cars by steam shovel, and unloaded by plough or unloaded, to make up fills in this way (when the track has been found for the contractor) at their original price, than to do so by men and horses where the haul exceeds the five hundred foot limit, and especially in this case where the ordinary material to be moved, by men or teams, is clay or stiff material. Mr. Davis makes an exception of material hauled from cuts, and asks 1c. per yard per 100 ft. on all such material. This should not be allowed if it is wasted and our track is used to take out such material. Mr. Davis also asks 2c. per yard per mile for haul over seven miles; this is just double what I consider it is worth. My opinion is that if the present contractors are allowed an addition to their ordinary earth work price (21c. per yard) of 15c. per yard for all train hauled material to make up embankments (other than ballast) such addition to cover all cost of lifting track, putting in temporary trestle and filling same up, to a haul of five miles, and an addition of 1c. per yard per mile for haul over five miles, such an arrangement would be a fair and equitable one as between the Commissioners and the contractors, it being understood that this extra price of 15c per yard does not apply to material wasted from cuttings or to material to make up embankments hauled by train for a less distance than 2,000 feet.

Yours truly,
(Sgd.) Hugh D. Lumsden.

Enclos.
January 22nd, 1907.

To the Commissioners of the Transcontinental Railway,
Ottawa.

Sirs:—

On the 14th December last at a meeting in Quebec with Messrs. Davis Bros.
and Messrs. Macdonell and O'Brien, the contractors for the 150 miles from the
Quebec Bridge westerly, the Chairman, Mr. Doucet and Messrs. Woods and Arm-
strong, the Grand Trunk Pacific Supervising Engineers being also present, the
question of haul over 2,600 feet and temporary trestle was taken up, the contractors
claiming 65c. per cubic yard and to cover such trestle and any length of haul over
2,600 ft. After a long discussion I eventually consented to a price of 55c. per
cubic yard, which in my opinion is a very good one. I also allowed the 20c. per
lineal foot for piles delivered as well as 40c. per foot for piles driven, having found
in making a comparison of the tenders that had been so computed except where
specially mentioned otherwise. As this arrangement may increase the cost of
construction I beg to call your attention to my letter of March 8th last, and to
strongly recommend that before other contracts are let the specifications may
be so amended as to make a number of the clauses clear, saving future trouble
and tend to the economical construction of the line.

Your obedient servant,
(Sgd.) H. D. LUMSDEN.

March 21st, 1907.

A. E. HODGINS, Esq.,
District Engineer,
Kenora, Ont.

Dear Sir:—

The many inquiries made by you for permission to use rock borrow in fills
leads me to send you a copy of our revised General Specifications, approved by
the Government, and on which contracts have already been awarded. You will
note in this on page 41, Clause 224x, a specification for train hauled material
including temporary trestle. I may say that out of nine tenders lately received
for such work, the average price was 51½c. varying from a minimum of 45c. to a
maximum of 60c.

I think it would be well for you to interview Mr. McArthur and see at what
rate you could arrange with him for similar work on his contract. This would
enable him to use round timber trestle or piles, in a number of places where under
such present conditions standard timber trestle would be required, but of course
you will have to be the judge as to where he could use such so as not to cause too
great a delay in the completion of the work. I should like you to take this matter
up at once and submit here for approval any offer Mr. McArthur may make as
soon as possible.

(Sgd.) H. D. LUMSDEN.
N. T. R.

INVESTIGATING COMMISSION

Exhibit 21

Correspondence in connection with the use of Wooden Trestles.
(See Page 74 of Report)
H. A. Woods, Esq.,
Asst. Chief Engineer,
Grand Trunk Pacific Railway,
Montreal, P.Q.

Jan. 9th, 1907.

Dear Sir,—

I have been endeavouring to settle the question of using standard timber trestles in a number of large fills as talked over with you, the intention being to allow these trestles to stand as long as they are safe, then to put in the permanent waterway where required and fill by train. I am told, however, that the Grand Trunk Pacific, who will then be operating the road, could charge anything they liked for such permanent waterway and filling. Though this seems to me absurd it would strengthen my position if I could have a letter from Mr. Kelliher and yourself stating that the maximum price that the G. T. P. would charge for the construction of the permanent bridge and waterway would not in any case exceed the price for similar work now, or hereafter, to be paid to the contractors on the section that such work may be situated, and the maximum price for train filling such trestles would not exceed say 25c. per cub. yard measured in borrow pits, or such other rate as you may consider fair.

Yours truly,

(Sgd.) HUGH D. LUMSDEN.

Mr. Hugh D. Lumsden,
Chief Engineer, Transcontinental Ry.,
Ottawa, Ont.

Montreal, Que., Jan. 11th, 1907.

Dear Sir:—

I have yours of the 9th inst., in which you state that you are endeavouring to settle the question of using standard timber trestles in a number of large fills, the intention being to allow these trestles to stand as long as they are safe and then put in permanent water-ways required and fill by train. In order to make an intelligent estimate of where this class of work would be economical and good engineering practice to substitute for steel structures and solid embankments you requested that Mr. Kelliher and myself would state a maximum price that the Grand Trunk Pacific would charge for the construction of permanent bridge and water-ways if the work was turned over by the Commission before it was completed. In reply to the above I have to say that, after a conference with Vice-President Morse and Chief Engineer Kelliher, they both state that the price you mentioned, 25 cents per cubic yard, measured in borrow pits, for train hauled filling and that the price for permanent bridge and water-ways would not exceed the price for similar work now or hereafter to be paid to the contractors, was eminently fair. Vice-President Morse desired me to say that, without fixing a price upon this train hauled material, that the price would not exceed 25 cents per cubic yard. It would seem to me that the above answers your inquiry fully and I trust it may be of some service
to you in giving instructions to your staff as to where this class of work should be placed.

I may say further that the use of standard timber trestles has been allowed by the Government on the Western Division and we see no reason why we should not accept the same character of work from the Transcontinental Commission.

Yours truly,

(Sgd.) H. A. WOODS,

Assistant Chief Engineer.

File-6190

Jan. 12th, 1907.

Dear Sir,—

RE WORK COVERED BY TENDERS NOW BEING CALLED FOR.

In order to insure the economical construction of the line in your district it may be found advisable to make use of standard timber trestle in many places where suitable material is not available in the vicinity for the making up of embankments, or where it may be impracticable during construction to put in the permanent structures required. If you have not already provided for such, will you please at once furnish me with a memo of points in your District where standard trestle may be required, giving approximate quantities in trestle and deductions to be made from common excavation covering same. Should tenderers enquire tell them that such trestles may be used.

Yours truly,

(Sgd.) HUGH D. LUMSDEN.

District Engineers: "A", "B", "C" and "D."

Quebec, 15th Jan, 1907.

HUGH D. LUMSDEN, Esq.,
Chief Engineer,
Ottawa.

Dear Sir:—

Acknowledging your circular of January 12th, file 6190. We will not need any standard timber trestles in my district, as suitable material can be found in the vicinity for the making up of embankments.

Yours very truly,

(Sgd.) A. E. DOUCET,
District Engineer.
SESSIONAL PAPER No. 123

HUGH D. LUMSDEN, Esq.,
Chief Engineer N. T. C. Ry.,
Ottawa, Ont.

Dear Sir:—

I beg to acknowledge receipt of your letter of the 16th inst., re work covered by tenders now being called for. Since receiving same I have gone carefully over our profiles and do not consider it would be advisable or economical to make use of standard timber trestles on either of the contracts. On Contract No. 1 there are two or three places where it would be advisable to use timber if material was difficult to procure, but we can make the fills up from side work to a height of ten or twelve feet and I feel confident of getting enough stuff to make up the balance from the cuts at each end. On Contract No. 2 there are one or two places where it was questionable if it would not be advisable to use 60 ft. trestles from grade as per suggestion made by Mr. Uniacke, but although the material in this vicinity is rock I think we can get sufficient earth to make up these fills, and I cannot figure out that there is very much economy in putting in sixty feet of timber to save a small end abutment.

Yours truly,

(Sgd.) GUY C. DUNN,
District Engineer

GUY C. DUNN, Esq.,
District Engineer,
St. John, N. B.

Dear Sir:—

Yours of the 17th inst. re use of standard timber trestle received. My Object in writing you was to call your attention to the fact that there are many cases in crossings of ravines, say 35 to 70 feet in depth and several hundred feet in length, whereby putting in standard timber trestle now, and when such becomes unsafe (say in 8 or 9 years) filling it by train at a cost of say 25c. or less, per yard, is in the end more economical than putting in expensive water-way, say 20 foot arch culvert, and filling at contractors' prices now, or putting in steel viaduct on concrete foundations. It is unquestionably more expensive to build concrete structures now than when the material can be landed at the site by train, and large railway corporations with all modern appliances can do trestle filling at their convenience at a less cost than contractors. As to steel viaducts; constant renewal of deck and painting of steel makes a considerable sum when capitalized and added to the first cost, whereas an embankment and say arch or box culverts may be said to be permanent. There is also a considerable saving of interest on the difference between the cost of permanent water-way and filling now, and the substitution of trestle for say 8 or 9 years.
I want to provide in our estimates for the work about to be let the use of timber in such places should we determine to make use of it, deducting an equivalent amount of earth.

Please let me hear from you again on this subject.

Yours truly,
(Sgd.) HUGH D. LUMSDEN.

File 6190.

Jan. 19th, 1907.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs:—

As I have about completed the estimates for the several sections on which we are now asking tenders, I should like to have your instructions as to whether I am to provide for the erection of standard timber trestle, in such places as I am satisfied that the final cost of its erection now and after a lapse of eight or nine years of construction of a permanent water-way and filling such trestle by train is less than the making up of such permanent water-way and embankment now. As the question of the subsequent cost of the construction of permanent water-ways and train filling was an important one and certain to be raised I wrote to Mr. H. A. Woods, Assistant Chief Engineer of the G. T. P., and attach a copy of his reply. I am satisfied that at a number of places, especially on the more inaccessible sections, it will be found that a considerable saving can be effected, both in time and money, by the use of this mode of construction. The only objection that I can see is the possibility of some of these trestles being destroyed by fire before being filled in, but by the use of cars in the clearing and keeping cleared of the ground at the sites of such trestles, and the maintaining of barrels of water at intervals on such trestles during the summer months this danger can be minimized.

St. John, N. B., January 21st, 1907.

Hugh D. Lumsden, Esq.,
Chief Engineer N. T. C. Ry.,
Ottawa, Ont.

Dear Sir:—

I beg to acknowledge receipt of your letter of the 19th inst., in regard to standard timber trestles for temporary purposes. I will go into this question more carefully, make some comparative estimates, and advise you in regard to same as soon as possible.

Yours truly,
(Sgd.) Guy C. Dunn,
District Engineer.
SESSIONAL PAPER No. 123

North Bay, January 22nd, 1907.

Mr. H. D. Lumsden,
Chief Engineer,
Ottawa, Ont.

Dear Sir:—

I beg to enclose a tableau giving an estimate of the cost of Permanent Structures at the different points at the Eastern Section of my district, together with the cost of embankment which would be saved by putting a wooden structure of a certain length at each of the respective places. I also give the difference in cost of Permanent Structures and Wooden Trestle which would amount to about $416,515.00. I have also a column at 4% interest on the money not expended for seven years, and the probable cost of the Permanent Structure after seven years. On the last the difference would be simply in the cost of the concrete or masonry. There is a column showing the probable total saving and also the surplus cost by using wooden structures. I would not advice the using of wooden structures at every one of the points where saving is shown, for instance at the Circle River, Low Bush River and Mistongo River, I think should have Permanent Structures at once, as the Mistongo River is a viaduct which is not taken into consideration in this matter, and probably it will depend on the character of the material at the end of the viaduct to see whether it would necessitate some 400 or 500 feet of wooden approaches. All structures which are under an embankment of less than 25 feet would cost less to have a Permanent Structure at once than to wait until the track is there.

I think that this table will put you in a position to judge very quickly of the places where will gain by putting temporary wooden structures. I did not compound the interest on the amount saved. The compounding of which, amounting to about one-third of the interest, would be offsetted by the necessary repairs to the wooden structures during the seven years of their existence.

Yours truly,
(Sgd.)  S. R. Poulin,
District Engineer, "D".

File 6196

Feb. 4th, 1907.

Dear Sir:—

Re use of Standard Timber Trestles on the Eastern Division. I received some time ago a letter from your Assistant Chief Engineer Mr. H. A. Woods, copy of which I attach, and I should like very much to have this letter confirmed by yourself and Mr. Kelliher.

Yours truly,
Enclos.

Frank W. Morse, Esq.,
Vice President Grand Trunk Pacific Ry.
Montreal, P. Q.
En route Montreal to Ottawa, February 13th. 1907.

1072
Mr. Hugh D. Lumsden,
Chief Engineer, Trans-Con. Ry. Commission,
Ottawa, Ont.

Dear Sir:

I have yours of the 4th. inst. subject standard timber trestles on the Eastern Division, and in reply thereto will say that I fully endorse and approve, and will be governed by Mr. Woods’ letter of January 11th to you, on this subject.

Yours truly,
(Sgd.) Frank W. Morse,
Vice President & Gen. Manager.

Ottawa, March 1st, 1907.

Hon. S. N. Parent,
Chairman.

Dear Sir,

In reply to yours of the 26th ult., accompanied with a copy from Mr. H. A. Woods, Asst. Chief Engineer of the G. T. R. wherein he states that the price for train hauled material to fill in wooden trestles by the Co., would not exceed 25 cents per cubic yard. To this you ask my opinion if Mr. Wood’s letter could legally be considered binding on their part. In my opinion it would not legally bind the Company.

To make this proposition binding would require a regular agreement applying to each particular point where the work is to be done, the whole to be confirmed by a resolution of the Board of Directors.

I am, Sir,
Your obedient servant,
(Sgd.) H. Atkinson,
Law Clerk.

Ottawa, March 1st, 1907.

Hugh D. Lumsden, Esq.,
Chief Engineer.

Re Filling in Timber Trestles.

Dear Sir:

After reading the letter of the 13th ult., to you from F. W. Morse, Esq., General Manager of the G. T. P. stating that he fully endorsed and approved of Mr. H. A. Woods letter of Jan’y 11th last on the above subject. I am to say
it does not change my opinion as expressed in my letter to the Hon. Mr. Parent of this date.

I am, Sir,

Your obedient servant,

(Sgd.) H. Atkinson,

Law Clerk.

H. A. /B.

File 6190.

March 1st. 1907.

H. A. Woods, Esq.,
Assistant Chief Engineer, G. T. R.
Montreal, P. Q.

Dear Sir,

Referring to our correspondence re use of Standard Timber Trestle in construction of the Eastern Division, I beg to hand you herewith copy of two letters from our Law Clerk in view of which opinions it will be incumbent on your Company to make formal application for the use of such structures in particular cases, supported by resolution by the Board of your Directors along the lines indicated in Mr. Atkinson's letters, such resolutions binding your Company to the maximum price of the subsequent filling of the structure, and for the construction of any permanent structure that may be necessitated thereby; and to replace any such structures as may be destroyed by fire after the road has been taken over by the Company; and in the event of destruction by fire of any such structures before the road has been taken over by your Company, agreeing that the cost of replacement will be included in "Cost of Construction."

Yours truly,

(Sgd.) Hugh D. Lumsden.

Enclos.

Montreal, Que., March 4, 1907.

Mr. Hugh D. Lumsden,
Chief Engineer, Nat. Transcontinental Ry.,
Ottawa, Ont.

Dear Sir:

I beg to acknowledge the receipt of your favor of March 1st, together with copies of two letters from Mr. H. Atkinson, Law Clerk, re use of standard timber trestles, construction of the Eastern Division. I have forwarded same to our General Manager for his action in the matter.

I may say, however, that to me it seems singular that an agreement of this kind should have to be made in each particular case and approved by the Board of Directors of this Company.
No action of approval by our Board is necessary in regard to our own work. The class of structure and kind of work is entirely within the jurisdiction of our Chief Engineer, if approved by the General Manager.

Yours truly,

(Sgd.) H. A. Woods,
Assistant Chief Engineer.

OTTAWA, April 2nd, 1907.

H. Atkinson, Esq.,
Law Clerk, Transcontinental Commission,
Ottawa, Ont.

Dear Sir:—

Standard Timber Trestles for Eastern Division.

Referring to this subject I have seen your several opinions relating thereto and have to say that I quite endorse the same. In accordance with the view expressed by you I have drawn a By-Law to be passed by the Directors of the Grand Trunk Pacific Railway, in pursuance of which a formal contract may be entered into along the lines suggested. Kindly say if the draft By-Law meets your approval, and I will have it passed at once, to be followed by the preparation of the necessary formal contract.

Yours truly,

D'Arcy Tate,
Asst. Solicitor.

Encl.

BY-LAW No.

WHEREAS, it is proposed by the Commissioners of the Transcontinental Railway to erect standard timber trestles in a number of large fills, on the Eastern Division, the intention being to allow these trestles to stand as long as they are safe, and afterwards put in permanent waterways, and fill by trains.

AND WHEREAS, the Grand Trunk Pacific Railway Company are agreeable to what is proposed in this respect, and are willing to do the filling hereafter required at 25 cents per cubic yard measured in borrow pits for train hauled filling, and to construct the necessary permanent bridges and waterways at a price not exceeding the maximum price now, or hereafter paid by the Commissioners to Contractors for similar work.

Therefore, it is
Moved by
Seconded by,

That the Vice President be, and he is hereby authorized to execute a formal contract with the Commissioners of the Transcontinental Railway in respect of the erection of standard timber trestles by the said Commissioners, wherever in the opinion of the Chief Engineer of the Transcontinental Railway Commission and the Chief Engineer of the Grand Trunk Pacific Railway Company it is consistent with economical and good engineering practice so to do, such timber trestles to be ultimately filled in by the Grand Trunk Pacific Railway Company for the Commissioners at the price of 25 cents per cubic yard measured in borrow pits for train hauled filling, and the permanent bridge and the waterways to be
constructed by the Grand Trunk Pacific Railway Company for the Commissioners at a price not exceeding the maximum price now, or hereafter paid by the Commissioners to Contractors for similar work.

Hugh D. Lumsden, Esq.,
Chief Engineer.

Dear Sir:— STANDARD TIMBER TRESTLES FOR EASTERN DIVISION

Herewith please find copy of a letter received from D'Arcy Tate, Esq., Asst. Solicitor, G. T. P. Railway, and also a draft By-Law relative to the above subject. Would you kindly examine the By-law, and have it submitted to the Board, and return to me and oblige.

I am, Sir,
Your obedient servant,
(Sgd.) H. Atkinson,
Law Clerk.

Hugh D. Lumsden, Esq.,
Chief Engineer.

Dear Sir:— STANDARD TIMBER TRESTLES FOR EASTERN DIVISION

Herewith I beg to hand you the proposed By-Law to be passed by the Directors of the G. T. P. concerning the above as corrected by you, and which is more in conformity with the letter from Mr. Woods to you of January 11th last, than the By-Law which was submitted by Mr. Tate to me.

I am, Sir,
Your obedient servant,
(Sgd.) H. Atkinson,
Law Clerk.

Hugh D. Lumsden, Esq.,
Chief Engineer.

Dear Sir:—

I beg to hand you herewith copy of a certified copy of resolution of the Executive Committee of the Grand Trunk Pacific Railway relating to the erection of standard timber trestles on the Eastern Division; also copy of a certified copy of a resolution of said Executive Committee approving specifications for:

1. Steel rails, marked “a”—being the specifications according to which the Dominion Iron & Steel Co., is now manufacturing rails for this Commission.
(2) Steel rails, marked "b"—being the specifications in accordance with which The Algoma Steel Company is now manufacturing rails for this Commission.

(3) Standard specifications for steel splice bars.

(4) Specifications for track bolts and nuts.

(5) Specifications for track spikes.

Yours truly,  
(Sgd.)  P. E. Ryan.

2 enclos.

---

Extract from Minutes of a Meeting of the Executive Committee of the Grand Trunk Pacific Railway Company, held in the President's Room No. 301 of the General Offices, McGill Street, Montreal, Thursday, May 9th, 1907, at Eleven o'clock, A.M.

Present:

Chas. M. Hays, Esq., Chairman.
Frank W. Morse, Esq.,
Wm. Wainwright, Esq.

Attended by Henry Philips, Secretary.

The following resolution re the erection of standard timber trestles on the Eastern Division was submitted:—

WHEREAS it may be found expedient by the Commissioners of the Transcontinental Railway to erect standard timber trestles in a number of large fills, on the Eastern Division, the intention being to allow these trestles to stand as long as they are safe and afterwards put in permanent waterways, and fill by train.

AND WHEREAS the Grand Trunk Pacific Railway Company approves of the erection of such Timber Trestles, and are willing to do the filling hereafter required at a price not to exceed 25c. per cubic yard measured in borrow pits for train hauled filling, and to construct the necessary permanent bridges and waterways at a price not to exceed the price now, or hereafter paid by the Commissioners to Contractors for similar work on the Section where the work may be required.

Now therefore upon motion of Mr. Frank W. Morse, seconded by Mr. Wm. Wainwright, it was unanimously

Resolved that the Vice-President be and he is hereby authorized to execute a formal contract with the Commissioners of the Transcontinental Railway in respect of the erection of standard timber trestles by the said Commissioners, wherever in the opinion of the Chief Engineer of the Transcontinental Railway Commission and the Chief Engineer of the Grand Trunk Pacific Railway Company, it is consistent with economical and good engineering practice so to do, such timber trestles to be ultimately filled in by the Grand Trunk Pacific Railway Company for the Commissioners at a price not to exceed 25c. per cubic yard measured in borrow pits for train hauled filling and the permanent bridge and the waterways to be constructed by the Grand Trunk Pacific Railway Company for the Commissioners at a price not exceeding the price now, or hereafter paid by the Commissioners to Contractors for similar work on the section where such work may be required.

Carried.

</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>1,853,804</strong></td>
<td><strong>$2,643,312.50</strong></td>
</tr>
</tbody>
</table>

701,654 cubic yards of the solid rock borrow used on District "A" was paid for at a special price of $1.10 per cubic yard under an arrangement with the contractors and by approval of an Order in Council.

The balance of the yardage on all three districts was paid for at the regular contract price for solid rock, varying from $1.45 to $1.70 per cubic yard.

INVESTIGATING COMMISSION

Exhibit 25

Correspondence in connection with use of Light Rails in Sidings.
(See Page 104 of Report)
GRAND TRUNK PACIFIC RAILWAY,

MONTREAL, QUE., MARCH 5TH, 1906.

Mr. D. MacPherson,
Ass't Chief Engineer, Transcontinental Ry.,
Ottawa, Ont.

Dear Sir:

Replying to your letter of March 2nd, subject use of 80 lb. rails on main line and sidings. I have to say that we do not expect to use the 80 lb. rail on either passing tracks or terminal yards. We shall probably draw largely from the Grand Trunk Railway for these purposes, using either a re-rolled rail of about 70 lb. per yard, or a 67 lb. rail. As the Transcontinental Commission will have no such opportunity to secure lighter rails, it may be well to use the 80 lb. rail entirely. This will be a matter for the Commissioners to decide upon. I may say, however, that it will be satisfactory to our Manager if they decide to use the 80 lb. rail throughout.

Yours truly,
(Sgd.) H. A. Woods,
Ass't Chief Engineer.

AT WINNIPEG, MARCH 20TH, 1908.

Dear Mr. Parent:

We are in our side tracks west, outside the lead rails to a point beyond the frog, using 65 to 70 lb. rail. We are doing this for the purpose of reducing cost. As I have always told you and your colleagues, we would be willing for you to adopt any practice which we had inaugurated.

I write you to suggest that it would be well to order a lighter rail for side tracks, as it would lessen our capital expenditure.

Yours truly,
(Sgd.) Frank W. Morse.

Hon. S. N. Parent,
Chairman, Transcontinental Ry. Com.,
Ottawa, Ont.

April 8th, 1910.

B. B. Kelliher, Esq.
Chief Engineer, G. T. P. Ry.,
Winnipeg, Man.

Dear Sir:

The other day in conversation with your Vice-President and General Manager, he suggested that we should use 60 lbs. rails in yards and sidings, instead of 80 lbs. as that was the practice west of Winnipeg. Since then I have had an estimate prepared which shows that about $142,000.00 can be saved by substituting 60 lbs. rails for 80 lbs. in all yards and sidings for which rails have not been ordered.
or laid. I would be glad to have a letter from you stating that, in your opinion, it would be advisable to use 60 lbs. rails in yards and sidings in future instead of 80 lbs. rails. On receipt of your letter I will recommend to the Commission that this plan be adopted and the above saving effected thereby.

Yours truly,
(Sgd.) Gordon Grant,
Chief Engineer.

Ottawa, April 15th, 1908.

Frank W. Morse, Esq.,
Vice President and General Manager,
Grand Trunk Pacific Railway,
Montreal, P. Q.

Dear Sir:—

Your letter of the 20th March ultimo to the Chairman suggesting that a lighter rail than an 80 lb. rail be used in sidings on the Eastern Division was duly received and submitted to the Board.

In reply, I am directed to say that our Chief Engineer reports that the question of using a lighter rail in the sidings than in the main line was taken up in March 1906 with the Assistant Chief Engineer of your Company, who replied under date of March 5th 1906 that either a re-rolled rail of about 70 lbs. per yard or a 67 lb. rail would probably be used in sidings on the Western Division, as you would be in a position to draw largely from the Grand Trunk Railway for this purpose; but that as the Transcontinental Commission would have no such opportunity to secure lighter rails, it might be well to use the 80 lb. rail entirely. It would be satisfactory to you, be stated, if the Commissioners decided to use the 80 lb. rail throughout. In consequence of this, contracts were awarded for 80 lb. rails for the main line, sidings and yards of the sections of the Eastern Division under contract previously to March last.

If it be now desired that a change be made, the Commissioners think that such should be requested by a resolution of your Board.

Our Chief Engineer thinks it an advantage to have a uniform rail throughout, and states that the substitution of a 70 lb. for an 80 lb. rail in the sidings would effect a saving for the whole Eastern Division of only about $120,000.

Yours very truly,
(Sgd.) P. E. Ryan.

April 19th, 1910.

Mr. Gordon Grant,
Chief Engineer, N. T. Rly.,
Ottawa, Ont.

Dear Sir:—

Referring to your letter of the 8th inst., File 10,601, relative to use of 60 lb. rails in yards and sidings instead of 80 lb.

Your suggestion to substitute 60 lb. rails for 80 lb. in all yards and sidings
for which rails have not been ordered or laid is fully approved by our Vice-President and General Manager and myself, and I would be glad if you will recommend the adoption of same to the Commission.

Yours truly,

(Sgd.) B. B. Kelliher,
Chief Engineer.

B.

OTTAWA, April 25th, 1910.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs,—

Re use of 60 lb. rails instead of 80 lb. rails in sidings and yards.

I attach herewith a copy of a letter dated the 8th of April which I wrote to Chief Engineer Kelliher of the Grand Trunk Pacific Railway, stating that, in conversation the other day with their General Manager Mr. Chamberlain, he suggested that 60 lb. rails should be used in both yards and sidings.

I may say in regard to this that I have always been of that opinion and discussed the matter several times with both the ex-Chief Engineer and the Assistant Chief Engineer, both of whom were opposed to the use of 60 lb. rails in yards and sidings. Why 80 lb. rails were used in yards and sidings I cannot say, as it is not the practice on other roads to use the same weight of rails in sidings as they do in the main line. Therefore, if we can effect a saving of about $150,000.00 by substituting 60 lb. rails in yards and sidings, I recommend that this be done.

I attach copy of a letter I have received from Mr. Kelliher in answer to mine of the 8th instant, in which he states that the Vice-President and General Manager as well as himself would be glad if I would recommend the adoption of the 60 lb. rails to the Commission. I would be glad to have your instructions in the matter.

Your obedient servant,

(Sgd.) GORDON GRANT,
Chief Engineer.

INVESTIGATING COMMISSION

Exhibit 28

Letter from Mr. D. MacPherson in connection with Contract No. 8.
(See Page 35 of Report)
THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY

D. MACPHERSON,
Assistant to the Chairman.

OTTAWA, December 26th, 1912.

GEO. LYNCH STAUNTON, ESQ.,
Chairman, Investigating Commission Transcontinental, Railway,
Ottawa.

Dear Sir,—

Replying to questions in yours of 20th inst:—

1. What date was the first engineer's estimate of the various quantities of work and material, necessary for the completion of this contract, drawn up?
Ans. The first engineer's estimate was made up about January 18th, 1907.

2. How many copies of this estimate were made?
Ans. Am unable to say; but it was made out on schedule Form 89, from which blue print copies could be made.

3. Did any member or officer of the Commission request to be supplied with a copy of this estimate?
Ans. The Chairman, on 21st January, asked for a statement of the engineers' estimated quantities for each item on the schedule Form 89, covering the five sections for which tenders closed on February 14th.

4. If such a request was made, was it complied with, and, if so, to whom and upon what date were copies of this estimate handed?
Ans. Yes; Chairman was, on 23rd January, handed a copy of above mentioned schedules, printed and bound in the general specifications and form of tender, on which the engineers' estimated quantities were filled in.

5. Upon what date was the second engineer's estimate made of the amount of work involved on the mileage covered by contract No. 8?
Ans. A second estimate was made only in so far as to add some estimated quantities of trestle timber which had been inadvertently omitted. I have no record of the exact date this was done, but am absolutely positive it was done before tenders closed on 14th February.

6. Upon what date were you handed the lists of prices contained in the various tenders for this work so that they might be monied out in accordance with the quantities contained in the engineers' estimates?
Ans. On the afternoon of 15th February.

7. In what items did the second engineer's estimate differ from the first engineer's estimate?
Ans. Items 24, 26 and 27 of general contract schedule, Form 89, had zero quantities in first estimate, and in the revised form the following estimated quantities of timber, in board measure, were inserted:

<table>
<thead>
<tr>
<th>ITEM 42</th>
<th>ITEM 26</th>
<th>ITEM 27</th>
</tr>
</thead>
<tbody>
<tr>
<td>732 190</td>
<td>166 600</td>
<td>192 780</td>
</tr>
</tbody>
</table>

8. Did you then, having received copies of the various tenders, proceed to money out these tenders according to the second engineer's estimate, and, if not, why?
Ans. Yes; but before the results were formally submitted to the Board by the Chief Engineer, the Chairman when he discovered the timber items, 24, 26 and 27, he ordered the quantities changed back to zero; which was done.

9. Was there a new engineer's estimate compiled in your office after you had received copies of the various tenders, and, if so, under whose instructions was this done?
Ans. No new estimates made, except to strike out timber quantities, as explained in answer to question 8.

10. Upon what date was this estimate signed, and upon what dates do your records show that Mr. Lumsden was absent in Winnipeg?
Ans. Estimate signed by Mr. Lumsden and myself, February 18th. The former left for Winnipeg on the 5th of February and returned February 13th.
You will find from the official Minute Book, that neither Mr. Lumsden nor I were present at the Board Meetings on February 14th and 15th when these tenders were being opened and dealt with, though we were both in the office, and one or the other was supposed to attend all Board Meetings. It was officially intimated to the Chief that he was not to attend the Board Meetings on the aforesaid dates. At the opening of such important tenders it would appear that the Chief Engineer should have been present.

The corrections made in estimated quantities by the Engineering Department before opening of tenders, was merely routine duty, and needs no defence. The deliberate order to change estimated quantities after tenders were opened and moneyed out, and it was evident that such change would eliminate the legitimately lowest tender, seems to call for considerable defence.

Yours truly,

D. MacPherson,

Ass't to the Chairman.

### REMARKS

- Insert notes and remarks related to the table entries.
March 26th, 1906.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs:—

Herewith please find comparative estimate showing cost of 150 miles of the Transcontinental Railway, from the North end of the Quebec Bridge Westerly based on quantities derived from the revised location, up to March 10th, 1906, and revised prices for certain minor items after consultation with the District Engineer, and also cost of same work calculated at prices submitted in tenders 5, 6, 7, 8, 9, 10.

Your obedient servant,

Enclos.

(Sgd.) H. D. L.

March 21st, 1906.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs:—

In regard to the attached estimate made by Mr. Doucet, it seems in every way to confirm the comparisons made in this office, when the decreases in quantities made by Mr. Doucet's revision are taken into consideration. Our comparative estimate included assumed quantities and prices for various items not given by Mr. Doucet, and were put in in case circumstances might arise necessitating the use of any of them, especially so in the case of trees cut outside of right of way (item No. 2), and cross logging (item No. 14). I note that Mr. Doucet has included sawn ties for bridges (No. 26) and sawn ties for switches (No. 78) with these tenders. My understanding was that No. 26 was to go with the contract for the steel bridge superstructure (with the exception of possibly a few ties required for short timber spans, and No. 78, to go with the contract for ties. Mr. Doucet's prices for stone filling for cribs (No. 18) seems to me high, and for concrete facing (No. 58) too low. I see no objection to these figures being submitted to the Consulting Engineer to the Government.

Your obedient servant,

(Sgd.) H. D. L.

P. E. Ryan, Esq.,
Secretary.

March 19th, 1906.

Dear Sir:—

I beg to hand you herewith duplicate copies of condensed profiles on a scale of 4 miles to one inch horizontal, and 400 feet to one inch vertical, to accompany maps of portions of Districts 'B', and 'F', which have been submitted to the Government for approval.

Yours truly,

(Sgd.) H. D. L.
March 16th, 1906.

The Commissioners of the Transcontinental Railway, Ottawa, Ont.

DISTRICT "F."

Sirs:—

Herewith I beg to hand you sheets showing the results of the moneying out of the quantities estimated by us, by the prices given in the various numbers designating tenders submitted to us, together with a summary of the same. The amount of the estimate made by me, using the same quantities, is $13,800,576.29, so it can be seen at once how the values under the respective numbers compare with the estimate made by me,

Your obedient servant,

March 16th, 1906.

The Commissioners of the Transcontinental Railway, Ottawa, Ont.

DISTRICT "B".

Sirs:—

Herewith I beg to hand you sheets showing the results of the moneying out of the quantities estimated by us, by the prices given in the various numbers designating tenders submitted to us, together with a summary of the same. The amount of the estimate made by me, using the same quantities, is $6,842,534.26, so it can be seen at once how the values under the respective numbers compare with the estimate made by me.

Your obedient servant,

March 16th, 1906.

The Commissioners of the Transcontinental Railway, Ottawa, Ont.

VIADUCT.

Sirs:—

Herewith please find quantities and prices for the various tenders made by Bridge Companies, for the Cap Rouge Viaduct, together with a summary of the same. All the designs submitted comply with our requirements.

Your obedient servant,

Enclos.
March 14th, 1906.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs:—

Herewith please find an estimate of the works now tendered on in Districts ‘B’, and ‘F’, exclusive of viaduct. This estimate, which was prepared before knowing any of the prices given by tenderers, I believe to be ample for the completion of the work, and leave a fair margin of profit for the contractor, but a variation of say 10% might be a reasonable price for a tenderer to make. If below this margin of 10%, it would, in my opinion, be too low to insure the completion of the work.

Your obedient servant,

Enclos.

I confirm the above.

(Sgd.) D. MacPherson,
Assistant Chief Engineer.

March 14th, 1906.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs:—

Herewith please find duplicate maps on a scale of 4 miles to 1 inch, of portions of Districts ‘B’ and ‘F’, showing the route of this railway as now being tendered on. You have already verbally approved of these, and I am now submitting these copies for the approval of the Government.

Your obedient servant,
Ottawa, March 16th, 1906.

INVESTIGATING COMMISSION

Exhibit 30

Correspondence in connection with La Tuque Pusher Grade.
(See Page 100 of Report)
CORRESPONDENCE referred to in the foregoing Report re La Tuque Pusher Grade.

File 4866.

OTTAWA, June 15th, 1906.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs,—

Herewith I beg to hand you a letter from the Assistant Chief Engineer, together with a sketch plan and profile of the lines run, in regard to the location of our line in the vicinity of La Tuque, and also as to securing land for a Divisional Yard at that point. It will be seen by the comparative estimate (also attached) made by the District Engineer, Mr. Doucet, of the three lines run in that vicinity that there is a large difference in cost in favour of the blue line, viz: $485,807.00 of a saving in a distance of say 10 miles; but on line "C" or blue line, it will be necessary to use a 0.65 grade compensated or curvature adverse to eastbound traffic, but if a divisional yard is established at this point it would not be a serious objection and I would beg to recommend that the matter be at once submitted to the Government for their approval as the contractors are now waiting at that point to start work. It would also be advisable in the event of determining to make a divisional point here to at once get options on the necessary land for such purpose.

Your obedient servant,

(Sgd.) HUGH D. LUMSDEN.

File 4960.

OTTAWA, July 4th, 1906.

The Commissioners of the Transcontinental Railway,
Ottawa, Ont.

Sirs,—

Herewith I beg to hand you plans and profiles of the alternative lines run in the vicinity of La Tuque, together with an estimate of cost of same, for the purpose of receiving the sanction of the Government to the use of a 0.65 compensated grade at this point, and would beg to recommend the adoption of the shortest line "C" with a 0.65 compensated grade adverse to east-bound traffic. My reasons for doing so are that La Tuque is likely to be a divisional point, and this grade will commence within a half mile of it, and is 4 4-5 miles long, and the cost of the construction of line "C" is $516,113.00 less than the best of the other two lines. When its operation value is taken into consideration it is still $485,807.00 less than either of the other lines, and it is also two miles shorter.

As construction has been delayed at this point pending a decision, it is important that such should be given as soon as possible.

Your obedient servant,

(Sgd.) HUGH D. LUMSDEN.
The Commissioners referred the whole matter to the Minister of Railways and Canals.

Ottawa, July 4th, 1906.

Sir,—

I have the honour by direction of the Board to hand you herewith plans and profiles of three alternative lines run in the vicinity of La Tuque, together with statements showing the estimated cost of each; also a letter from our Chief Engineer dated the 4th inst., recommending the adoption of the shortest line marked C with a 0.65 compensated grade adverse to eastbound traffic.

The Commissioners desire that you will have the kindness to submit the matter to His Excellency the Governor General in Council, for the approval of the adoption of Line "C" with a 0.65 compensated grade adverse to eastbound traffic for a distance of 4 4-5 miles.

You will note that the engineers of the Commission estimate that the saving in cost of construction of line "C" will be $516,113.00 over the best of the other two lines, and that the saving in construction and operation will be $485,807.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) P. E. Ryan,

Secretary.

The Honourable, The Minister of Railways and Canals,

Ottawa.

Encl.

This letter was referred to the Chief Engineer, M. J. Butler, who reported on July 8th, 1906, as follows:—

Ottawa, July 5th, 1906.

Sir,—

Under date of the 4th inst. the Commissioners of the Transcontinental Railway submit a report of the Chief Engineer, Mr. H. D. Lumsden, and of the District Engineer, Mr. A. E. Doucet, recommending that a pusher grade of 0.65 be adopted for a distance of four and four-fifths (4 4-5) miles, near La Tuque; and they allege that the adoption of this grade would save two (a) miles in distance, and four hundred and eighty-five thousand, eight hundred and seven ($485,807.00) dollars in money.

I have considered the matter and without attempting to go into the minutiae of the calculations submitted beg to report that in my judgment, permission ought not to be granted for any grade in excess of four tenths of one per cent, (0.4); for the reason that it has been stated over and over again by members of the Government that a four-tenths grade had been secured from Winnipeg to Quebec, and it seems to me that no circumstances should be permitted to interfere with the adoption of this grade between the points named.

East of Quebec the conditions are different and pusher grades may well be adopted between Quebec and Moncton; but that, however, is not now under discussion.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) M. J. BUTLER,

Deputy Minister and Chief Engineer.

Hon. H. R. Emmerson, K.C., P.C.,

Minister of Railways and Canals,

Ottawa.
The Government having approved Mr. Butler's report, he notified Mr. Parent of their decision in the following telegram:—

B65MO C G 13 DH

Ottawa, Ont., July 14–06.

Hon. S. N. Parent,  
Chairman Trans. Ry.  
Quebec.

Government will not approve any pusher grades in line between Quebec and Winnipeg.

M. J. Butler.

2.20 P.M.

and the Engineers in the field were advised that the pusher grade proposition had been rejected and they proceeded with the work of building the expensive and costly 0.4% grade line.

The following letter from District Engineer Doucet, dated June 21st, 1906, gives his arguments for the 0.65 grade line.

Hon. S. N. Parent  
Chairman,  
Ottawa,

Dear Sir,—

With reference to the Government's refusal to adopt the short pusher grade at LaTuque, I am very anxious to place myself on record as dissenting most emphatically from the decision arrived at of not countenancing pusher grades between Quebec and Winnipeg, as I am certain that a rigid adherence to such a ruling will cost the Government many millions of dollars. The Act says that the Eastern Division shall be constructed by the Government upon such location and according to such plans and specifications as it shall determine, having due regard to direction, easy gradients and favourable curves. The objection to the pusher grade, particularly at Divisional points, of which LaTuque will be one, is reduced to a minimum when one takes into account the immense sums of money saved at certain points by their use. It has been stated that the Transcontinental Railway would be built on a 4-10 grade eastbound, and the use of a few pusher grades at divisional points will not contradict this statement if provisions are made and allowances provided for overcoming the extra amount of power required for hauling trains loaded for a 4-10 grade up the pusher grade, without dividing them into sections.

The grades at the approaches of the Quebec Bridge are 1%, whereas what we intend putting in at La Tuque is but 65/100 of 1%. At Quebec where will always be spare engines for assisting trains up the 1% grade, and La Tuque being a divisional point will also have a spare engine or two always on hand.

Again, pusher grades are not contrary to good location, if such a saving in the cost of construction as will much more than compensate for the cost of pusher
engines can be made. It is rather the very contrary and I am certain American engineers will not be at all complimentary to our knowledge of railway location when the interest of the extra cost of construction in this one case at La Tuque is taken into account.

From our present knowledge of the ground at La Tuque we are convinced that there is but one line to build, and that is the line on the 0.65 pusher grade for the following reasons:

1st. It is the cheapest to construct, on a conservative estimate, by $508,000.
2nd. It is two miles shorter than the line located on a 4/10 grade.
3rd. It has 410° less curvature.
4th. It has 8 curves less.
5th. It has no tunnels, whereas, the 4/10 grade location has two.
6th. The pusher grade is but 4 8/10 miles long.
7th. It begins at the end of the Divisional Yard.
8th. It has but 0.65% grade, or plus 60% of the main line grade; therefore, any old yard engine can be used as a pusher.
9th. It is the most direct, has less curvature, two of the conditions required by the Act, and the increased gradient can be taken care of by the yard engine.
10th. It is so short and so close to the yard that no telegraph office at the head of the grade will be required.
11th. It will lessen the 70,000 c. yds. of solid rock at the head of the grade by one-half and thus save a considerable amount of time in construction.
12th. It will eliminate two serious difficulties in connection with the line of the Quebec & Lake St. John Ry.
13th. The use of a 4/10 grade will practically destroy our station ground, as we will be forced to continue the grade throughout its full length and for two miles north, thereby very materially increasing the heavy embankments at the Big Bostonnais River and the Bostonnais Bridge itself.

The comparative estimate of cost of construction and equating values of the two lines is as follows:

<table>
<thead>
<tr>
<th>Cost of Construction</th>
<th>4/10 grade</th>
<th>0.65 pusher g.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost of construction</td>
<td>$1,206,014</td>
<td>$698,192</td>
</tr>
<tr>

<tr>
<td></td>
<td>$51,482</td>
<td></td>
</tr>
<tr>
<td>Saving by adoption of pusher g</td>
<td>$485,616</td>
<td></td>
</tr>
</tbody>
</table>

It seems to me that if the Engineers responsible for the rejection of our proposition to use a pusher grade had taken the opportunity to visit La Tuque, their decision would have been far different, and I cannot help pointing out once again
SESSIONAL PAPER No. 123

that a grave error has been committed in laying down an arbitrary ruling that pusher grades will not be entertained between Quebec and Winnipeg. I hope it is not too late to revise this decision, but at all events I am most anxious, as I mentioned at the beginning of this letter, to place myself on record as strongly protesting in favour of a 0.65 pusher grade at the Divisional Point of La Tuque.

Yours very truly,
(Sgd.) A. E. Doucet,
District Engineer.

Mr. Butlers' telegram of July 14th does not appear to have closed the matter for on July 25th, 1906, Mr. S. N. Parent wrote to Mr. Hayes as follows:—

Ottawa, 25th July, 1906.

Dear Mr. Hayes:—

Herewith I am sending you for the information of your Company, copy of letters, plans and profiles, regarding the location of our line in the vicinity of La Tuque, Que.

With our engineers, I am of the opinion that pusher grades are not contrary to good location, if such a saving in the cost of construction as will much more than compensate for the cost of pusher engines can be made. It is rather the very contrary, and I am certain American engineers will not be at all complimentary to our knowledge of railway location when the interest of the extra cost of construction in this one case at La Tuque is taken into account, if any other line should be adopted.

From our present knowledge of the ground at La Tuque, we are convinced that there is but one line to build, and that is the line on the 0.65 pusher grade, for the following reasons:

1st. It is the cheapest to construct, on a conservative estimate, by $508,000.
2nd. It is two miles shorter than the line located on a 4/10 grade.
3rd. It has 419° less curvature.
4th. It has 8 curves less.
5th. It has no tunnels, whereas the 4/10 grade location has two.
6th. The Pusher Grade is but 4 8/10 miles long.
7th. It begins at the end of the Divisional Yard.
8th. It is but 0.65% grade, or plus 60% of the main line grade, therefore, any old yard engine can be used as a pusher.
9th. It is the most direct, has less curvature, two of the conditions required by the Act, and the increased gradient can be taken care of by the yard engine.
10th. It is so short and so close to the yard that no telegraph office at the head of the grade will be required.
11th. It will lessen the 70,000 c. yds. of solid rock at the head of the grade by one-half and thus save a considerable amount of time in construction.
12th. It will eliminate two serious difficulties in connection with the line of the Quebec & Lake St. John Railway.
13th. The use of a 4/10 grade will practically destroy our station ground throughout its full length and for two miles north, thereby very materially increasing the heavy embankments at the Big Bostonnais River and the Bostonnais Bridge itself.
The comparative estimate of cost of construction and equating values of the two lines it as follows:

<table>
<thead>
<tr>
<th>Cost of Construction</th>
<th>4/16 grade</th>
<th>0.65 pusher g.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost of construction</td>
<td>$1,206,014</td>
<td>$698,192</td>

Saving by adoption of pusher g. ........ $485,616

I must say that the Commissioners entirely agree with these conclusions; but before taking a decision on the matter the Government would like to have the opinion of your Company.

Will you kindly give this question your early consideration and advise me,

Yours very truly,

(Sgd.) S. N. Parent.

2 encl.
4 plans.

Which was replied to on August 27th, 1906, as follows:

Grand Trunk Pacific Railway, Montreal, Canada.

August 27th, 1906.

My dear Mr. Parent:

Your letter of July 25th, with copies of correspondence from your engineers, plans and profiles, regarding the location of the Transcontinental Railway in the vicinity of La Tuque, Que., duly received, and earlier reply thereto has been prevented by the absence in the West of Vice-President and General Manager Morse and his staff, Chief Engineer Kelliher, and Assistant Chief Engineer Woods.

These gentlemen having now returned and given careful consideration to the plans and profiles submitted with arguments bearing thereupon, concur with me in the opinion that under the circumstances set forth in the correspondence, we would not be justified in insisting at this time on the construction of the line on a four-tenths per cent grade, but that a 0.65 "pusher" grade should be adopted thereof in lieu thereof, because of the cheaper cost (estimated by your engineers at $508,000,) the two miles shorter distance, the 410 degrees less curvature, eight curves less and the absence of tunnels, (whereas the four-tenths grade location has two tunnels,) location of the pusher grade at the end of proposed Divisional yard, saving 70,000 cubic yards of solid rock excavation and interference with proposed station ground.

The foregoing are all practical reasons which may be very properly advanced for the adoption of a pusher grade.
In my opinion, however, the Commission should carefully consider with the Government the effect upon the minds of the public regarding this Transcontinental Railway, which has been widely advertised as being the only low grade line from the Atlantic to the Pacific, with definite statements to the effect that the maximum grade will be limited to four-tenths of one per cent east of the Rocky Mountains. If exception is made in this instance, will not the same arguments be used for adopting a 0.65 or even higher grade at other points, and would not then our proposed maximum of four-tenths have disappeared altogether?

Should you, after further consideration of the points I have raised, still feel that for the reasons given it is desirable to adopt the 0.65 pusher grade, you may consider the assent of this Company having been given thereto, provided it is understood, when the volume of traffic shall have reached a sufficient magnitude, to reduce the grade to four-tenths, then the cost of such expenditure shall be assumed by the Government and interest thereon at three per cent shall be paid by the lessors—the Grand Trunk Pacific Railway Company.

Yours truly,

(Sgd.) Chas. M. Hayes
President.

Hon. S. N. Parent,
Chairman, National Transcontinental Railway Commission,
Ottawa.

Mr. Parent then wrote to Sir Wilfrid Laurier as follows:

Ottawa, 28th August, 1906.

Dear Sir Wilfrid:—

In connection with the pusher grade question at La Tuque, you no doubt remember that during the course of our conversation in your office you stated that the Cabinet would be willing to reconsider the decision arrived at, asking me to communicate with the Grand Trunk Pacific Railway regarding this matter. I have without delay followed your suggestion, and after a long delay, for which reasons are given, I am now able to submit to you the answer of the Company. As there is no time to lose, I am forwarding you the original in case the Cabinet would desire to possess it in order to consider the subject. At our last conversation, Honourable Mr. Emmerson was present, and I would kindly ask you to pass it over to him before it shall be submitted to the Cabinet.

For our interest it would be desirable that the Government should not postpone its decision in the matter in order not to obstruct the progress of our work done at La Tuque, and if the Cabinet now thinks that the recommended Pusher Grade, favoured by all engineers, is preferable, we should be very happy to be informed of same without delay.

Awaiting for a definite decision, believe me,

Yours sincerely and truly,

(Signed) S. N. Parent.

Hon. Sir Wilfrid Laurier,
Prime Minister.

and a search of the records do not reveal any reply to this communication.

INVESTIGATING COMMISSION

Exhibit 32

(See Page 118 of Report)
Transl. C.R.D.

In the year one thousand nine hundred and eleven, on the nineteenth day of the month of August, before the undersigned Joseph G. Couture, Notary Public for the Province of Quebec, in Canada, residing and practising in the city of Quebec, has appeared Mrs. Laura Tousignant, wife, separated as to property by the marriage contract passed before Henri R. Dufresne, Notary, residing at St. Pierre-les-Becquets, on the tenth day of January in the year one thousand nine hundred and nine and registered at Quebec on May 14th of the same year under number 28563, of Mr. Napoleon Martineau, junior, merchant, of the said city of Quebec, duly authorized by her said husband also a party to the present deed and acting both to authorize his said wife and to contract for and his own personal name.

And the said Mrs. Laura Tousignant-Martineau has declared to have sold as by these presents she doth sell with guarantee against all mortgages and all troubles whatever, to Raoul Rene Bergevin, of the said city of Quebec, merchant, herewith present and accepting, that is to say:

The wooden buildings or structures used by her as an ice-house and a shed or stable, on their dependencies, erected on the lot and land known and designated under the number two thousand five hundred and twenty-five (2525) of the official cadastre for Champlain Ward of the City of Quebec; the said Mrs. Martineau declaring that this ice-house belongs to her by virtue of the terms of the marriage contract above quoted.

By these same presents the said Napoleon Martineau sells, makes over and transfers to the said Raoul R. Bergevin all the rights he may have as lessee of the part which he occupies of the said lot of land known under the number two thousand five hundred and twenty-five of the official cadastre for Champlain Ward, in virtue of a lease made in his favor by the Marchioness of Bassano, represented by Alfred C. Dobell, of Quebec, Advocate, dated at Quebec the twenty-fifth day of February, in the year one thousand nine hundred and eight, executed in the presence of witnesses, which lease is still of force up to the first day of May next 1912 by implied continued tenancy, and also in virtue of a lease in his favor by Adolphe Chevalier, executed in the presence of witnesses on the seventh day of December, in the year one thousand nine hundred and eight, for three years from the first day of May one thousand nine hundred and nine, the said Napoleon Martineau renouncing all his rights as lessee or occupant of the said piece of ground and pledging himself to give up its free possession and enjoyment to the said vender on or before the first day of May next. In consequence, the said Mrs. Martineau will be allowed to use the said ice-house until the first day of May next, without paying rent to the vender, but she shall pay all the municipal and school taxes imposable by the City of Quebec upon the said ice-house; in a like manner, the said Napoleon Martineau also pledges himself to pay the said taxes upon the other buildings erected on the lot of land which he thus occupies as lessee until the first of May next, the said Napoleon Martineau also pledging himself to pay to the proper person the rent for the land up to the first day of May next.

It is moreover agreed that if the said vendee should see fit to rent the said land after the first day of May next, the said Napoleon Martineau shall have the preference for renting it at the price which may be offered bona fide to the said vendee by any other person.

Lastly, this sale is made for the price of two thousand dollars, current money, which amount the said Napoleon Martineau and his said wife have declared to have received this day from the purchaser, for which receipt in full.
DONE AND PASSED AT QUEBEC under the number Twelve thousand and ninety of the minutes of the said Notary, and signed by the said parties with me the said Notary, after the same being read.

(Signed) "N. Martineau, Jr."
"Laura T. Martineau."
"Raoul R. Bergevin."
"J. G. Couture, N.P."

A true copy of the minute remaining in my office.

J. C. Couture.
On the 25th day of February in the year of Our Lord one thousand nine hundred and eight.

Before me the undersigned witness came and appeared Alfred C. Dobell, Advocate, in his capacity of Attorney for the Duchess of Bassano being so duly appointed by power of attorney signed before witnesses in the City of Paris in France on the 28th of March, 1906.

Who acknowledged and confessed to have demised and leased, and by these presents do hereby demise and lease, for the space of one year and seven months to be computed from the first day of the month of October, 1907, and which will end on the first day of May, 1909, unto Napoleon Martineau, Junior, of the City of Quebec, ice merchant, hereunto present and accepting thereof, that is to say a certain lot of land measuring 37 feet by 60 feet being part of that lot of land now known and designated upon the Cadastral plan and in the book of reference thereto for Champlain Ward in the City of Quebec under number two thousand five hundred and twenty-five (2525) no warranty as to exact measurement; whereof the Lessee is content and satisfied.

During all which time the said Lessor does hereby promise and engage to cause the said Lessee to enjoy the said premises peaceably and quietly, save and except by giving a six months’ notice at the expiration of which the lease shall expire.

And the said Lessee does hereby promise and engage to submit and conform to all regulations of Police in regard to the said premises, now in force or which be hereafter established by competent authority, for maintaining the cleanliness of the City, and of the Streets, Yards and Houses therein; not to make over or sub-let his right to the present lease without the consent in writing of the Lessor, and to surrender the said premises at the expiration of the present lease without any previous notice to quit being required, or to quit at the expiration of six months after receiving notice to that effect.

The present Lease is thus made for and in consideration of the sum of seventy-five dollars current money of this Province payable by the Lessee to the said Alfred C. Dobell in two equal payments of the sum of thirty-seven dollars and fifty cents each current money aforesaid each.

The first instalment of thirty seven dollars and fifty cents shall be paid on the first day of April, 1908, and the second instalment shall be paid on the first of September, 1908, or should the Lessor take advantage of her right to terminate the present lease before that date the said instalment shall be due and payable three months after the receipt of the notice to quit. The said Lessee binds himself to pay at the divers periods when the same is payable all taxes, water rates or other dues which now are or which may hereafter be imposed on the said property above leased by the City of Quebec.

And for the due execution of these presents, the said parties have made election of domicile irrevocable to wit: the Lessor at the office of the said Alfred C. Dobell in the City of Quebec where payment shall be made and the Lessee on the premises hereby leased.

DONE AND PASSED at the City of Quebec, and signed by the said parties these presents having been first duly read.

ALFRED DOBELL.

INVESTIGATING COMMISSION

Exhibit 33

(See Page 118 of Report)
Transl. C. R. D.

In the year one thousand nine hundred and eleven, on the thirtieth day of the month of September, before Charles Edward Taschereau, Notary Public for the Province of Quebec, residing in the City of Quebec,

Did appear:—

Mr. Raoul R. Bergevin, of the city of Quebec, merchant tailor,

Party of the one part,

And the Commissioners of the Transcontinental Railway, a body politic and duly incorporated, having its head office in the city of Ottawa, in the province of Ontario, and here represented by the Honourable Simon Napoleon Parent, its President, duly authorized to the purpose of the presents,

Parties of the other part.

And the said parties have made between themselves the following declarations and stipulations, that is to say:—

Whereas the said party of the one part is the owner of an ice-house built upon the consecutive number 96B and on the top number two thousand five hundred and twenty-five (2525) upon the official plan and book of reference of the cadastre for Champlain Ward of the said city of Quebec;

Whereas, further, that, on account of the construction of the Transcontinental Railway through the said lot, the said ice-house must be removed.

Whereas, lastly, that the said party of the one part is ready to accept an indemnity as a compensation for the damages which the demolition of the said ice-house will cause him;

Therefore the presents bear evidence that the said party of the one part, in consideration of the sum of three thousand and seven hundred dollars ($3,700.00) which he acknowledges to have received from the said parties of the other part, upon the execution of the presents, hereby gives the latter a full and final receipt for all the damages caused him by the demolition of the said ice-house.

Done and passed at Quebec, in the year and on the day above mentioned, under the number six thousand one hundred and fifty-five of the minutes of the said C. E. Taschereau.

In witness whereof the parties have signed with the said Notary after the same being read.

The twenty-second day of August, 1911.

In compliance with the demand now made me by C. E. Taschereau, N. P., I, the undersigned, registrar for the registration division of Quebec, do grant, by the presents, the following certificate of the registrations made in my office since the second day of October, 1871, date of the coming into force of the cadastre affecting the lot number two thousand five hundred and twenty five (2525) of the plan and reference book of the cadastre for Champlain Ward presently in the possession of J. B. Fradette.

1.—B94-452-42310.—Judiciary sale (par licitation) by the prothonotary of the District of Quebec to Marie-Anne Claire Symes of certain landed property situated near the St. Lawrence River, in the city of Quebec, described; subject to the payment of an annual rent of £57.10 to the Hotel-Dieu, and of another annual rent of £40, to the Harbour Commissioners. Sale price paid. The said sale dated December 4th, 1871.

Prothonotary's Title, April 9th, 1872.
Registered—April 12th, 1872.

2.—D1-403-252—Renewal by the above mentioned Marie-Anne Claire Symes of the registration of the real rights resulting from the sale mentioned in the preceding item, as affecting the said lot and other property,

Registered—August 14th, 1872.

3.—B 236-729-130216.—Guarantee sale (dotion) in payment by Jean-Baptiste Fradette to “Gagnon & Frère” for an ice-house built on part of the said lot. The said “dotion” granted as a collateral guarantee for the reimbursement of the sum of $400, with interest at 8%, which the said Fradette pledges himself to pay within 3 years from the present date.

Registered—November 3rd, 1909.

Remillard & Roy,
Deputy Registrar.

4.—B 251-137123.—Sale by Mrs. Laura Tousignant, wife of Napoleon Martineau, to Raoul Rene Bergiven, of the buildings erected on the said lot. Sale by Napoleon Martineau, aforesaid, of his rights as lessee of part of the said lot. Sale price paid.

INVESTIGATING COMMISSION

Exhibit 34

(See Pages 118 and 119 of Report)
On this day the First of October in the year one thousand nine hundred and eight.

Before me the undersigned William Noble Campbell, Notary Public for the province of Quebec in Canada, residing and practising in the City of Quebec.

Personally came and appeared Alfred Curzon Dobell of the said City of Quebec, Advocate, acting herein in his capacity of the duly appointed Attorney of the Duchess of Bassano of the City of Paris, in the Republic of France under her power of Attorney executed before witness at Paris aforesaid on the Twenty-eighth of March nineteen hundred and six, who in the presence of me the said Notary, did by these presents both lease and demise for the space and term of three years to begin and be computed from the first day of May next (1909) and fully to be completed and ended on the Thirtieth day of April in the year one thousand nine hundred and twelve, unto Adolphe Chevalier, of the said City of Quebec, Ship Carpenter, also present and accepting hereof for himself, his heirs and assigns, as follows, that is to say:

That certain lot of land or cove and premises now known and designated upon the plan and in the book of reference thereto of the Cadastre for Champlain Ward of the said City of Quebec under the number two thousand five hundred and twenty-five (2525) together with the buildings thereon circumstances and dependencies, save and except that portion of that said lot now occupied by N. Martineau, for an ice house measuring about thirty-seven feet by sixty feet, without any warranty as to the exact measurement of the property hereby leased.

All of which the said Lessee doth declare to have a perfect knowledge, having seen and visited the same, and is content and satisfied therewith.

To have and to hold the said premises hereby leased and demised, or intended so to be, unto the said Lessee his heirs, executors or curators, without let or hindrance for and during the said term, subject to his enjoyment thereof "en bon père de famille," and to the maintenance of the house on said lot in all small and internal repairs for which tenants are by law responsible, the said Lessor being holden to keep and maintain the house on said lots "clos et couverts" and in all "groses réparations" according to law, also subject by the said Lessee to the observance of the "voyerie" and all rules and regulations of the Police, the City of Quebec, the Board of Health, and other constituted authorities, which may in any manner concern the said premises; that he shall not sublease or underlet the said premises or any part thereof without written permission in writing from the said Lessor; and that he shall and will, on the end and expiration of the present lease, and without any previous notice to that end, peaceably and quietly surrender and deliver up the said premises in as good order and repairs as the same may have been at the commencement of the present lease, reasonable allowance being made for wear and accidents by fire, and other fortuitous causes and events excepted, notwithstanding any presumption in law in favour of the Lessor in relation thereto.

The present lease is thus made and granted for and in consideration of the following rents or annual amounts, that is to say, 1. The sum of Three hundred and fifty dollars for the first year (expiring on the Thirtieth of April 1910) of the present lease, one half of which or the sum of One hundred and seventy-five dollars, the said Lessee doth hereby bind himself to pay unto the said Alfred C. Dobell, acting as aforesaid or the bearer of these presents on the Second of July next (1909...
and the remaining half or a like sum on the Second of January following (1910), 2. The sum of Three hundred and seventy-five dollars for the second year of the present lease (expiring on the Thirtieth of April 1911) one half of which or the sum of one hundred and eighty seven dollars and fifty cents, the said Lessee doth hereby bind himself to pay unto the said Alfred C. Dobell acting as aforesaid or the bearer of these presents on the Second of July nineteen hundred and ten, and the remaining half or a like sum, on the second of January following (1911), 3. The sum of Four hundred dollars for the third year of the present lease (expiring on the Thirtieth of April 1912), one half of which or the sum of Two hundred dollars, the said Lessee doth hereby bind himself to pay unto the said Alfred C. Dobell acting as aforesaid or the bearer of these presents on the Second of July nineteen hundred and eleven, and the balance or a like sum, on the Second of January following (1912). The said rents shall include all taxes, dues and assessments in each of the current years thereot.

Should the said Lessee fail to pay the rent on any of the above stipulated dates when it shall become due as aforesaid, then and in that case the said Lessor shall have the right forthwith of cancelling and resiliating the present lease and of entering into and taking possession of the premises hereby leased.

It is further agreed that the said Lessor shall at all times have the right of cancelling the present lease by giving six months clear notice in writing unto the said Lessee, of his intention so to do, in which case the said Lessee hereby agrees to vacate the said premises so soon as the said period of six months shall have expired.

And it is further and lastly agreed by and between the said parties that the said Lessor shall and will have the right and liberty of causing to be made any repairs or ameliorations to the said premises that may be found necessary during the said term, without being liable to damages or any deduction from the rent aforesaid. And for any execution of these presents the said Lessee hath made election of domicile irrevocable at the premises above leased and the said Lessor at the office in Quebec of her said Attorney.

Thus done and passed at the said City of Quebec, these presents recorded in the office of me the said Notary, under the number Six thousand nine hundred and fourteen.

In witness whereof the said parties have signed these presents with me the said Notary, the same being first duly read according to law.

Signed) ALFRED C. DOBELL, Attorney

INVESTIGATING COMMISSION

Exhibit 35
(See Page 119 of Report)
In the year One Thousand nine hundred and eleven, on the twenty-sixth day of August, before the undersigned Joseph Allaire, Notary Public, for the Province of Quebec, residing in the City of Quebec, did appear:

Mr. Adolphe Chevalier, ship-carpenter, of the City of Quebec.

Who has, by these presents, sold with guarantee against all mortgages and all troubles whatever to Mr. Raoul Rene Bergevin, merchant of the said City of Quebec, herewith present and accepting, vendee, that is to say:

All his rights and interests whatsoever in the occupation of a certain lot of land and cove known and designated upon the official plan and book of reference for Champlain Ward of the City of Quebec under the number Two thousand five hundred and twenty-five (2525) and all the damages resulting and caused by the expropriation by the Transcontinental, save and except that portion of the said lot now occupied by N. Martineau, junior, for an ice-house, measuring about thirty-seven feet by sixty feet, without any warranty as to the exact measurement of the lot above mentioned.

The said rights and interests in the occupation of the said lot belong to the vendor in virtue of a lease to him consented by Alfred Curzon Dobell, acting in his capacity of attorney of the Duchess of Bassano, of the City of Paris, France under a power of attorney executed before witness at Paris aforesaid, on the Twenty-eighth day of March, nineteen hundred and six, and passed, the said lease, before W. Noble Campbell, notary, at Quebec, on the first of October, in the year One Thousand nine hundred and eight.

It is agreed that the said Vendor shall give possession of the said lot the First of May next to the said vendee, and that he, the said vendor, shall pay until the said first of May next, the municipal and school taxes and other public contributions affecting the property, as well as the rent to the lessor mentioned in the aforesaid lease, due and to become due or by reason of his occupation of the property up to the First of May next.

This sale is made for the price of four thousand dollars ($4,000.00) which the vendor has acknowledged to have received from the vendee, upon the execution of the presents, of which receipt in full.

Done and passed at Quebec, in the office of Joseph Allaire, Notary, on the day and in the month and year aforesaid, under the number fifteen thousand three hundred and fifteen of the minutes of the said Joseph Allaire and, after its reading, the parties have signed in the presence of the said notary.

INVESTIGATING COMMISSION

Exhibit 36

(See Page 119 of Report)
IN THE YEAR ONE THOUSAND NINE HUNDRED AND ELEVEN, on tenth day of the month of October.

BEFORE CHARLES EDMOND TASCHEREAU, Notary Public for the Province of Quebec, residing and practising in the City of Quebec.

APPEARED:—
MR. RAOU L R. BERGEVIN, of the City of Quebec, Merchant Tailor,
PARTY OF THE ONE PART, AND THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY, a body politic duly incorporated, having its head office in the city of Ottawa, in the Province of Ontario, and here represented by the Honourable S. N. Parent, its President, duly authorized,

PARTIES OF THE OTHER PART.

And the said parties have made between themselves the following stipulations and declarations, that is to say:—

Whereas the said parties of the other part, for the ends of their railway line, require the demolition of a Graving Dock belonging to the said party of the one part situate upon the lot number two thousand five hundred and twenty-five (2525) on the official plan and book of reference of the cadastre for Champlain Ward, in the City of Quebec, which is the property of the said R. R. Bergevin, he having purchased it from Adolphe Chevalier, by deed of the twenty-sixth day of August, 1911, before Jos. Allaire, N.P.;

Whereas, moreover, that the said party of the one part is ready, in consideration of a certain indemnity to remove the said Graving Dock;

Therefore the presents bear evidence that the said party of the one part in consideration of the sum of four thousand two hundred and fifty dollars ($4,250.00) which he acknowledges to have received from the said parties of the other part, upon the execution of the presents, gives the latter a full and final receipt for the damages caused him by the demolition of the said Graving Dock and by its removal. DONE AND PASSED at Quebec, on the day and in the year aforesaid, under the number six thousand one hundred and sixty-two of the minutes of the said C. E. Taschereau.

IN WITNESS WHEREOF, the parties have signed with the said Notary, after the same being read.

INVESTIGATING COMMISSION

Exhibit 37
(See Pages 551 to 598 of Report)
On the 17th of February, in the year of our Lord one thousand nine hundred and nine.

Before me Alfred C. Dobell the undersigned witness personally appeared, Adolph Chevalier, of the City of Quebec, laborer; who acknowledged and confessed to have demised and leased and by these presents do demise and lease for the space of three years to be computed from 1st January 1909 and which will end on the 1st day of January 1912 unto J. B. Fradette of the city of Quebec, ice Merchant, hereto present, that is to say a piece of land m asuring forty five by ninety-six feet together with a piece of land of thirty feet by sixteen feet on the property already leased by the said Adolphe Chevalier from Duchess Bassano, the whole of the land being a part of that lot known on the Cadastral plan and in the book of reference thereto for Champlain Ward in the City of Quebec under number two thousand five hundred and twenty five (2525) no warranty as to exact measurement, whereof the lessee is content and satisfied.

During all which the said lessor does hereby promise and engage to cause the said lessee to enjoy the said premises peaceably and quietly, save and except by giving a six months notice at the expiration of which the lease shall expire.

And the said lessee does hereby promise and engage to submit and conform to all regulations of Police in regard to the said premises, now in force or which be hereafter established by competent authority, for maintaining the cleanliness of the City, and of the streets, Lanes, Yards, and Houses built therein, not to make over or sub-let his right to the present lease without the consent in writing of the Lessor, and to surrender the said premises at the expiration of the present lease without any previous notice to quit being required, or to quit at the expiration of six months after receiving notice to that effect.

The present lease is thus made for and in consideration of the sum of ten hundred and twenty five dollars current money of this Province per year making a total of four hundred and twenty dollars current money as aforesaid, payable by the Lessee to the said Adolph Chevalier, the first instalment of seventy five dollars to be paid on the first of May 1909 and similar payments to be made on the same date of each year during the present lease and another instalment of fifty dollars current money as aforesaid to be paid on the 1st September 1909 and each subsequent year during the present lease, should the Lessor take advantage of his rights to terminate the present lease before the end of three years then the lessee shall pay the balance due within three months from the date of receiving notice to quit the premises.

And for the due execution of these presents, the said parties have made election of domicile irrevocable to wit the Lessor at his house in Champlain street in the City of Quebec where payment shall be made and the lessee on the premises hereby leased.

Done and passed at the city of Quebec, and signed by the said Parties, these presents having been first duly read.

Chas. J. Baillargeon, N. P.

---

Before Charles Jules Baillargeon, Notary Public, residing and practising at Quebec,

APPEARED:—

Mr. Jean Baptiste Fradet, of the City of Quebec, former Ice Dealer.

Who by these presents has sold with all guarantee of right to Mr. Jules Grenier, of the Parish of Beauport, Joiner, herewith present and acceptor.

A building erected of wood, covered with tar-paper and used as an ice-house, forty feet wide by ninety feet long, located on the old Denning Yard.

Champlain Ward, in the City of Quebec, on a part of lot No. Two thousand five hundred and twenty five (2525) in the Official Cadastre of the said Ward, with besides all tools to cut ice and others having served the said Fradet for the operation of said ice-house, as enumerated on the list annexed to the presents as being part of it after it has been acknowledged and signed by the parties.

In addition to this, the said Fradet gives to the said J. Grenier all his rights as lessor of the land on which is erected the said ice-house; the said rights are specified by private deed made between the said Fradet and Mr. Adolphe Chevalier, of the City of Quebec, Laborer, dated the seventeenth February 1909, signed in presence of Mr. Alfred C. Dobell; the said Grenier agreeing on his side to all conditions, restrictions and rent of the said lease. Copy of the said lease is also annexed to the minutes of the presents after it had been acknowledged and signed by the parties.

The present sale is made on the following conditions:—

1. The said Grenier will pay from date of the presents all taxes and costs which might be imposed on the said ice-house or to which he might be bound in consequence of the said lease and also, from the date of the presents, the rent agreed upon in the lease dated the seventeenth of February 1909.

2. In case that, during the first year of the presents, the said J. Grenier would abandon ice trade by selling or otherwise, he will be bound to remit to the said Fradet all the tools bought from him as indicated in the annexed list. After the first year is passed, whatever happens, the said J. Grenier will be released from this obligation.

The said J. B. Fradet also sells to the said J. Grenier, acceptant, the following vehicles:—A vehicle called express, two vehicles called ice wagons, and three sleighs.

The present sale is made for and in consideration of the price and sum of eight hundred and five dollars ($805.), six hundred dollars ($600.) for the ice-house and two hundred and five dollars ($205) for the said vehicles.

The said selling price is payable as follows:—One hundred and fifty dollars ($150.) cash, receipt whereof is hereby acknowledged; Four hundred dollars ($400.) to be applied to the payment of a note due by the said J. B. Fradet to Mr. Antoine Gagnon, of Quebec, that the said purchaser promises and acknowledges
to pay when due, and the balance Two hundred and fifty five dollars ($255) in four payments;—1, Fifty dollars ($50.00) on the fifteenth of July nineteen hundred and ten; 2, Fifty ($50) on the fifteenth of October nineteen hundred and ten; 3, Fifty ($50) on the fifteenth of January nineteen hundred and eleven; 4, Hundred and five dollars ($105) on the fifteenth of July 1911. The said purchaser has signed in favour of the said vendor four notes representing each one of the payments hereinbefore mentioned, the said notes bearing interest at three per cent per annum.

Messrs. Alfred C. Dobell, Advocate, and Adolphe Chevalier, Contractor, both of Quebec have agreed to these presents; both declare after perusal of these presents, one as owner of the hereinbefore mentioned land and the other as lessor, that they agree to accept the said J. Grenier as subtenant of the said land in the stead and place of the said Jean B. Fradet, and bind themselves to continue in favour of the said J. Grenier on the same conditions, restrictions and rent the lease dated the 17th February 1909.

Made and passed at Quebec for the said H. B. Fradet the thirty-first day of December one thousand nine hundred and nine, for the said Jules Grenier the seventh day of January one thousand nine hundred and ten and for the said Alfred C. Dobell the twelfth day of October one thousand nine hundred and ten under number four hundred and fifty of the minutes of said notary.

In testimony whereof, the parties herein concerned have signed with said Notary after due reading.

CHAS. J. BAILLARGEON.

IN THE YEAR ONE THOUSAND NINE HUNDRED AND ELEVEN, on the Thirtieth day of the month of September.

BEFORE CHARLES EDWARD TASCHEREAU, Notary Public for the Province of Quebec, residing and practising in the City of Quebec.

DID APPEAR:—

Mr. JULES GRENIER, of the city of Quebec, ice dealer

PARTY OF THE ONE PART

AND THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY, a body politic duly incorporated, having its head office in the city of Ottawa, in the Province of Ontario, and here represented by the Honourable Simon Napoleon Parent, its president, duly authorized to the purpose of these presents,

PARTIES OF THE OTHER PART.

AND THE said parties have made between themselves the following declarations and stipulations, that is to say:—

Whereas the said party of the one part is the owner of an Ice-House built upon the lot number Two thousand five hundred and twenty-five (2525) upon the official plan and book of reference of the cadastre for Champlain Ward of the city of Quebec;

Whereas, moreover, that on account of the construction of the Transcontinental railway through the said lot, the said ice-house must be removed;

Whereas, lastly, that the said party of the one part is ready to accept an indemnity as a compensation for the damages caused him by the demolition of the said ice-house;
Therefore, the presents bear evidence that the said party of the one part, in consideration of the sum of Two thousand five hundred dollars (2,500.00) which he acknowledges to have received from the said parties of the other part, upon the execution of the presents, hereby gives the latter a full and final receipt for all the damages caused him on account of the demolition of the said ice-house, and the said party of the one part further pledges himself to demolish the said ice-house at his own expense between now and the first day of December next, and he may keep the materials of the said building.

At these presents have also appeared:—

Mr. Thomas Gagnon, acting at the presents as sole representative of “Gagnon & Frère,”

Who, after having had communication of the present deed, declared himself satisfied and consented that it be executed according to its form and purport.

The present ratification is thus agreed by which the said Jules Grenier has agreed to a guarantee sale (dotière) in payment to the appearing for the said ice-house according to the terms of a deed passed before Jos. Allaire, Notary, on the second day of November, 1900, and registered at Quebec, under number 130216.

DONE AND PASSED at Quebec, on the day and in the year aforesaid, under number six thousand one hundred and fifty-four of the minutes of the said C. E. Taschereau.

In Witness Whereof, the parties have signed with the said Notary, after the same being read.

IN THE YEAR ONE THOUSAND NINE HUNDRED AND ELEVEN, on the second day of the month of October.

BEFORE CHARLES EDMUND TASCHEREAU, Notary Public for the Province of Quebec, residing and practising in the City of Quebec,

APPEARED:—

MR. RAOUl R. BERGEVIN, of the City of Quebec, merchant tailor,

PARTY OF THE ONE PART,

AND THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY, a body politic duly incorporated, having its head-office in the City of Ottawa, in the Province of Ontario, and here represented by the Honourable S. N. Parent, its President, duly authorized,

PARTIES OF THE OTHER PART.

And the said parties have made between themselves the following declarations and stipulations, that is to say:—

Whereas the said parties of the other part, for the ends of their railway line, require the demolition of a certain ice-house belonging to the said party of the one part, and situate on the lot number Two thousand four hundred and sixteen (2416) on the official plan and book of reference of the cadastre for Champlain Ward, in the City of Quebec;

Whereas, moreover, that the said party of the one part is ready, in consideration of a certain indemnity, to consent to the demolition of the said ice-house;

Therefore the presents bear evidence that the said party of the one part, in consideration of the sum of Two thousand five hundred dollars ($2,500.00) which he acknowledges to have received from the said parties of the other part, upon the execution of the presents, gives the latter a full and final receipt for the damages caused him by the demolition of the said Ice-House.

DONE AND PASSED at Quebec, on the day and in the year aforesaid, under the number six thousand one hundred and fifty-nine of the minutes of the said C. E. Taschereau.

IN WITNESS WHEREOF, the parties have signed with the said Notary, after the same being read.

No. 137,694. This deed of Acte d'Accord was entered and registered in the Registry Office for the Registration Division of Quebec, at forty minutes past two o'clock, p.m., on the twentieth day of the month of October, nineteen hundred and eleven, under the number One hundred and thirty-seven thousand six hundred and ninety-four, B. vol. 253, page 69.

REMILLARD & ROY,
Dep.-Registrar

On the seventh day of December in the year of Our Lord one thousand nine hundred and eight. Before me Alfred C. Dobell the undersigned witness personally appeared:

Adolph Chevalier of the City of Quebec, labourer:

Who acknowledged and confessed to have demised and leased, and by these presents do demise and lease for the space of three years, to be computed from the 1st May, 1909, and which will end on the 1st day of May, 1912, unto Napoleon Martineau, Junior, of the City of Quebec, ice merchant, hereto present, that is to say, a piece of land measuring forty five feet by fifty feet on the east side of the ice house built on the property already leased by the said Napoleon Martineau from Duchess Bassano, the whole of the land being part of that lot known on the Cadastral plan and in the book of reference thereto for Champlain Ward in the City of Quebec under number two thousand five hundred and twenty five (2525) no warranty as to exact measurement, whereof the Lessee is content and satisfied.
During all which the said Lessor does hereby promise and engage to cause the said Lessee to enjoy the said premises peaceably and quietly, save and except by giving a six months notice at the expiration of which the lease shall expire.

And the said Lessee does hereby promise and engage to submit and conform to all regulations of Police in regard to the said premises, now in force or which be hereafter established by competent authority, for maintaining the cleanliness of the City, and of the streets, lanes, yards and houses therein; not to make over or sub-let his right to the present lease without the consent in writing of the Lessor, and to surrender the said premises at the expiration of the present lease without any previous notice to quit being required, or to quit at the expiration of six months after receiving notice to that effect.

The present lease is thus made for and in consideration of the sum of one hundred and fifty dollars current money in three equal payments, the first payment to be made on the first of May, 1909, of the sum of fifty dollars, the other two payments to be made on the first of May, 1910 and 1911, of the sum of fifty dollars each; should the Lessor take advantage of his right to terminate the present lease before the end of three years then the Lessee shall pay the balance due within three months from the date of receiving notice to quit the premises.

And for the due execution of these presents, the said parties have made election of domicile irrevocable to wit: the Lessor at his house in Champlain Street in the City of Quebec, where payment shall be made and the Lessee on the premises hereby leased.

Done and passed at the City of Quebec, and signed by the said parties these presents having been first duly read.

Adolph Chevalier,
N. Martineau, Jr.
Witness.

On this day the first of October in the year one thousand nine hundred and eight.

Before me the undersigned William Noble Campbell, Notary Public for the Province of Quebec in Canada, residing and practising in the City of Quebec.

Personally came and appeared Alfred Curzon Dobell, of the said City of Quebec, Advocate, acting herein in his capacity of the duly appointed Attorney of the Duchess of Bassano of the City of Paris in the Republic of France under her Power of Attorney executed before witnesses at Paris aforesaid on the twenty-eighth of March nineteen hundred and six, who in the presence of me, the said Notary, did and by these presents doth lease and demise for the space and term of three years to begin and be computed from the first day of May next (1909) and fully to be completed and ended on the thirtieth day of April in the year one thousand nine hundred and twelve, unto Adolph Chevalier, of the said City of Quebec, ship carpenter, also present and accepting herof for himself, his heirs and assigns, as follows, that is to say:

That certain lot of land or eave and premises now known and designated upon the plan and in the book of reference thereto of the Cadastre for Champlain Ward of the said City of Quebec under the number two thousand five hundred and twenty-five (2525) together with the buildings thereon circumstances and dependencies, save and except that portion of the said lot now occupied by N. Martineau, Junior, for an ice-house measuring about thirty-seven feet by sixty feet, without any warranty as to the exact measurement of the property hereby leased.

And of all which the said Lessee doth declare to have a perfect knowledge, having seen and visited the same, and is content and satisfied therewith.
To have and to hold the said premises hereby leased and demised, or intended so to be, unto the said Lessee his heirs, executors or curators, without let or hindrance for and during the said term, subject to his enjoyment thereof “en bon père de famille,” and to the maintenance of the house on said lot in all small and internal repairs for which tenants are by law responsible, the said Lessor being helden to keep and maintain the house on said lot “clos et couverts” and in all “groses reparations” according to law, also subject by the said Lessee to the observance of the “voyerie” and all rules and regulations of the Police, the City of Quebec the Board of Health and other constituted authorities, which may in any manner concern the said premises; that he shall not sublease or underlet the said premises or any part thereof without permission in writing from the said Lessor; and that he shall and will, on the end and expiration of the present lease, and without any previous notice to that end, peaceably and quietly surrender and deliver up the said premises in as good order and repair as the same may have been at the commencement of the present lease, reasonable allowance being made for wear and accidents by fire, and other fortuitous causes and events excepted, notwithstanding any presumption in law in favour of the Lessor in relation thereto.

The present lease is thus made and granted for and in consideration of the following rents or annual amounts, that is to say, 1. The sum of three hundred and fifty dollars for the first year (expiring on the thirtieth of April (1910) of the present lease, one half of which or the sum of one hundred and seventy-five dollars, the said Lessee doth hereby bind himself to pay unto the said Alfred C. Dobell acting as aforesaid or the bearer of these presents on the second of July next (1909) and the remaining half or a like sum, on the second of January following (1910), 2. The sum of three hundred and seventy-five dollars for the second year of the present lease (expiring on the thirtieth of April, 1911) one half of which or the sum of one hundred and eighty-seven dollars and fifty cents, the said Lessee doth hereby bind himself to pay unto the said Alfred C. Dobell acting as aforesaid or the bearer of these presents on the second of July, nineteen hundred and ten, and the remaining half or a like sum, on the second of January following (1911). 3. The sum of four hundred dollars for the third year of the present lease (expiring on the thirtieth of April, 1912), one half of which or the sum of two hundred dollars, the said Lessee doth hereby bind himself to pay unto the said Alfred C. Dobell, acting as aforesaid or the bearer of these presents on the second of July, nineteen hundred and eleven, and the balance or a like sum, on the second of January following (1912). The said rents shall include all taxes, dues and assessments in each of the current years thereof.

Should the said Lessee fail to pay the rent on any of the above stipulated dates when it shall become due as aforesaid, then and in that case the said Lessor shall have the right forthwith of cancelling and resiliating the present lease and of entering into and taking possession of the premises hereby leased.

It is further agreed that the said Lessor shall at all times have the right of cancelling the present lease by giving six months clear notice in writing unto the said Lessee of his intention so to do, in which case the said Lessee hereby agrees to vacate the said premises so soon as the said period of six months shall have expired.

And it is further and lastly agreed by and between the said parties that the said Lessor shall and will have the right and liberty of causing to be made any repairs or ameliorations to the said premises that may be found necessary during the said term, without being liable to damages or any deduction from the rent aforesaid. And for any execution of these presents the said Lessee hath made election of domicile irrevocable at the premises above leased and the said Lessor at the office in Quebec of her said Attorney.

Thus done and passed at the said City of Quebec, these presents recorded in the office of me, the said Notary, under the number six thousand nine hundred and fourteen.
SESSIONAL PAPER No. 123

In witness whereof the said parties have signed these presents with me the said Notary, the same being first duly read according to law.

(Signed) ALFRED C. DOBELL, Attorney.
ADOLPHE CHEVALIER.

A TRUE COPY OF THE MINUTE REMAINING IN MY OFFICE.

JOS. ALLAIRE, N. P.
IN THE YEAR ONE THOUSAND NINE HUNDRED AND ELEVEN, on the Eleventh of October.

Before Louis Parant, Notary Public for the Province of Quebec, residing and practising at Quebec, undersigned:

Appeared Mr. Raoul Bergevin, merchant, of the city of Quebec;

Who has, by these presents, reconveyed, with warranty, to Mrs. Marguerite LeBel, of the said city of Quebec, widow of Thomas Chevalier, in his life time also of Quebec, boat-man, here present and accepting, transferee, that is to say:

All his rights of property, claims and interests which he has upon a slip and its appurtenances, presently situate on the lot of land known under the number Two thousand five hundred and twenty five (2525) of the official Cadastre of Champlain Ward of the city of Quebec.

The said slip and its appurtenances belong to the said Raoul R. Bergevin by his having purchased them from the said Mrs. Chevalier as shown by a deed of sale agreed to by the said Mrs. Chevalier in favour of the said Mr. Bergevin, before Joseph Allaire, Notary, at Quebec, on the twentieth day of September, one thousand nine hundred and eleven last.

For the said Mrs. Thomas Chevalier, widow, to enjoy, do and dispose of the said slip and its appurtenances in full and entire property from this day and always, just as if she had never sold them to the said Raoul R. Bergevin, and with immediate possession in favour of the said Mrs. Chevalier, the said vendor reconveying to her by these same presents the real delivery of the said slip and its appurtenances.

The present retrocession is made for the sum of five hundred dollars ($500.00) which the said Mrs. Bergevin acknowledges and confesses to have received, this day, from the said vendee to his entire satisfaction, receipt whereof.

Done and passed at Quebec, under the number one thousand two hundred and eighty-six of the minutes of the said Louis Parant.

In witness whereof, the said Mr. Bergevin has signed with the said Notary, the said Mrs. Chevalier, being required to do so, declared she could not sign, in the presence of Arthur Belanger, of Quebec, advocate, who has signed as a witness with the said Notary, after the same being read.

Louis Parant, N. P.

IN THE YEAR ONE THOUSAND NINE HUNDRED AND ELEVEN, on the Eleventh of October.

Before Louis Parant, Notary public for the Province of Quebec, residing and practising at Quebec, undersigned:

Appeared Mrs. Marguerite LeBel, of the city of Quebec, widow of Thomas Chevalier, in his life-time also of Quebec, Boatman.

Who has, by these presents, sold with all ordinary guarantees and of right, to Mr. Adolphe Chevalier, of the said city of Quebec, Contractor, here present and accepting, vendee, that is to say:

All her rights of property, claims and interests, which she has on a slip and its appurtenances, presently situated on the lot of land known under the number Two thousand five hundred and twenty-five (2525) of the official Cadastre of Champlain Ward of the City of Quebec.
The said slip and its appurtenances belonging to the said Mrs. Chevalier by virtue of good and legal titles.

For the said Mr. Adolphe Chevalier to enjoy, do and dispose of the said slip and its appurtenances in full and entire property from this day and always with immediate possession, the said Mrs. Chevalier transferring to him by these same presents the real delivery of the said slip and its appurtenances.

The present sale is made for the sum of four hundred dollars ($400.00) which the said Mrs. Chevalier acknowledges and confesses to have received, this day, from the said vendee to her full satisfaction, receipt whereof.

Done and passed at Quebec, under the number one thousand two hundred and eighty-seven of the minutes of the said Louis Parant.

In witness whereof the said Mr. Adolphe Chevalier has signed with the said notary, the said Mrs. Chevalier, required to do so, has declared that she could not sign, in the presence of Arthur Doré, of Quebec, labourer, who has signed as a witness, with the said notary, after the same thing being read.

Louis Parent, N. P.

Quebec, July 26th, 1911.

Adolphe Chevalier, Esq.,
Grand Union Hotel,
Ottawa.

Dear Sir:—

I send you to-night a telegram asking you to call me up by telephone; I have something important to tell you before you see your man. It is preferable to call me either at my private residence, 3083, or at my office, 1951. When you return to Quebec, please come and see me as I have a cheque for you and what I have to tell you is most important.

Yours truly,

O. Morency.

Mr. Scott, one of our valuators, is of opinion that the estimate of $3,000.00 for damages to Chevalier Ship repairing plant is insufficient. Chevalier repairs a great number of vessels there every year and he says that his profits amount to $4,500.00 per annum. This may be an exaggeration but he will be deprived of his business and $6,000.00 would not seem to be an excessive compensation.

O. Morency.

5.46 p.m.
On the seventh day of December in the year of Our Lord one thousand nine hundred and eight. Before me, Alfred C. Dobell the undersigned witness personally appeared

Adolph Chevalier of the City of Quebec, laborer.

Who acknowledged and confessed to have demised and leased, and by these presents do demise and lease for the space of three years may be computed from the 1st May, 1909, and which will end on the 1st day of May, 1912, until Napoleon Martineau, Junior, of the City of Quebec, Ice Merchant, hereto present, that is to say a piece of land measuring forty-five feet by fifty-five feet on the east side of the ice house built on the property already leased by the said Napoleon Martineau from Duchess Bassano, the whole of the land being part of that lot known on the Cadastral plan and in the book of reference thereto for Champlain Ward in the City of Quebec under number two thousand five hundred and twenty-five (2525) no warranty as to exact measurement, whereof the Lessee is content and satisfied.

During all which the said Lessor does hereby promise and engage to cause the said Lessee to enjoy the said premises peaceably and quietly, save and except by giving a six months notice at the expiration of which the lease shall expire.

And the said Lessee does hereby promise and engage to submit and conform to all regulations of Police in regard to the said premises, now in force or which be hereafter established by competent authority, for maintaining the cleanliness of the City, and of the streets, lanes yards and houses therein not to make over or sub-let his right to the present lease without the consent in writing of the Lessor, and to surrender the said premises at the expiration of the present lease without any previous notice to quit being required, or to quit at the expiration of six months after receiving notice to that effect.

The present lease is thus made for and in consideration of the sum of one hundred and fifty dollars current money in three equal payments, the first payment to be made on the first of May, 1909, of the sum of fifty dollars, the other two payments to be made on the first of May, 1910 and 1911 of the sum of fifty dollars each, should the Lessor take advantage of his right to terminate the present lease before the end of three years then the Lessee shall pay the balance due within three months from the date of receiving notice to quit the premises.

And for the due execution of these presents, the said parties have made election of domicile irrevocable, to wit: the Lessor at his house in Champlain Street, in the City of Quebec, where payment shall be made and the Lessee on the premises hereby leased.

DONE AND PASSED at the City of Quebec, and signed by the said parties, these presents having been first duly read.

Adolph Chevalier,
W. Martineau.

Alfred C. Dobell,
Witness.

This agreement witnessed that Dame Mary Ann Lampson, widow of the late William Godfrey Wurtele, Esquire, Merchant, now deceased, Miss Caroline Lampson, Spinster, and Frederick Lampson, Esquire, Advocate, all of the City of Quebec, did and by these presents do demise and lease for the term of four years, to commence and be computed from the first day of October, one thousand nine hundred and eight, and fully to be completed and ended on the last day of September, one thousand nine hundred and twelve, unto Mr. Alfred Miller of the City of Quebec,
Carter and Ship Laborer hereunto also present and accepting hereof for himself, his Heirs and Assigns. That is to say: A Lot of Ground situated on, and adjoining the river side of Champlain Street at the place called l’ans. dé des Mères, in the City of Quebec, being sixty feet, English measure in front on Champlain Street by forty feet also English measure in depth, said lot to commence from a point on Champlain Street forty five and a half feet from the south west corner of the house now occupied by Messrs. James O’Neill and A. P. Fortier (No. 555–57 Champlain Street) and to run thence in a south westerly direction along Champlain Street aforesaid, said lot of ground hereby leased forming part of Lot number Two thousand four hundred and sixteen (No. 2416) of the Cadastre for Champlain Ward of the City of Quebec, and with all which the said Lessee is content and satisfied, having seen and visited the same.

To have and to hold the premises above described and leased with all and every the rights, privileges and appurtenances thereof unto the said Lessee, his Heirs and Assigns for and during the aforesaid term thereof, during all which time the Lessors do hereby promise and bind themselves to cause the said Lessee to enjoy the premises hereby leased peaceably and quietly, it being specially agreed that the said Lessors shall not be bound to make or cause to be made, any repairs whatsoever either grosses or menues réparations to the said premises, nor to keep the same wind or water tight.

And on his part the Lessee doth hereby promise and bind himself to use and enjoy the said premises hereby leased peaceably and quietly, en bon père de famille, to maintain the same in all repairs, to submit and conform to all rules and regulations of police with respect to the said premises, to cause the chimneys in the said premises to be regularly swept during the said term at cost and expense, not to assign or make over his rights to the present lease to any person or persons whomsoever or to sublet the premises hereby leased without the actual consent in writing of the said Lessors under pain of all costs losses and damages and of nullity of the present lease at the option of the Lessors; And finally to surrender the said premises at the expiration of the present lease without notice in good order and condition (reasonable wear and tear always excepted). It is also expressly understood and agreed that should the said Lessors, their Heirs or Assigns, at any time before the expiration of the present Lease sell or let the wharf or Yard of which the Lot of ground hereby leased forms part, they the said Lessors, their Heirs or Assigns shall have the right to terminate the present Lease, by giving to the said Lessee his Heirs or Assigns one month’s notice in writing to that effect,—but without any indemnity whatever to be paid by the said Lessors, their Heirs or Assigns to the said Lessee his Heirs or Assigns, for any loss, damage or injury caused by such termination of the present Lease.

The present lease is thus made for and in consideration of the rent or sum of—sixty-six dollars and sixty-six cents (Assessments and Water Rates to be paid by the Lessee, including the proprietors’ portion thereof which the said Lessee doth bind and oblige himself to pay to the Lessors or to their order on the first day of September in each year. Said assessments and taxes, including the proprietors’ portion thereof as aforesaid, to be so paid by the said Lessee either to the City of Quebec, or to the Lessor, on or before the first day of December in each current Fiscal Year.

And for the due execution of these presents the said parties made election of their domiciles irrevocable, to wit, the Lessors at the actual residence of the said Frederick Lampson where, or at such other place in the City of Quebec as the said Lessors shall designate, the payments shall be made, and the Lessee on the premises hereby leased.

THUS DONE AND PASSED, in Duplicate, at the City of Quebec, on the twelfth day October one thousand nine hundred and eight.
In faith and testimony whereof the said parties have to these presents, first duly read according to Law, set and subscribed their names and signatures.

M. Wurtele.
Caroline Lampson
Fredk. Lampson.
Alfred Miller.

An additional piece of ground to enlarge the Ice House being 60 x 24 feet, was taken from the 1st December, 1909, at the same rent in proportion to size of ground making forty dollars a year payable on the 1st September each year.

Quebec, 23rd August, 1911.

Fredk. Lampson,
for Heirs Wm. Lampson.
Alfred Miller.

To..............................................................

of the........................................

and to all to whom these presents shall come or to whom the same may in any wise concern.

WHEREAS the lands shown upon and described in the annexed plan and description have under the provisions of The National Transcontinental Railway Act 3, Edward VII, Cap. 71, section 13, been taken by His Majesty the King, acting through "The Commissioners of the Transcontinental Railway" for the purposes of a public work known as the National Transcontinental Railway, the construction of which public work is under the charge and control of the said "The Commissioners of the Transcontinental Railway" by the depositing of record in the office of the Registrar of Deeds for the Province of Quebec on the day of ................................. 19................ of a duplicate of the said plan and description of the said lands.

AND WHEREAS no compensation money has yet been paid by or on behalf of His Majesty for the said lands.

AND WHEREAS the said lands have been found to be unnecessary for the purposes of the said public work and the undersigned have decided not to take the said lands for the purposes of the said Railway.

NOW, THEREFORE, pursuant to and by virtue of the provisions of section 23 of the Expropriation Act R. S. C. 1906, Cap. 143 and of section 207 of the Railway Act R. S. C. 1906, Cap. 37 and section 15 of the National Transcontinental Railway Act 3, Edward VII, Cap. 71 and in pursuance of any other authority in this behalf vested in the undersigned, the undersigned do hereby declare and notify you that the said lands are not required for the purposes of the said Railway and that the said lands and the proceedings aforesaid are hereby abandoned by the Crown and by the said "The Commissioners of the Transcontinental Railway."
IN WITNESS WHEREOF the Minister of Railways and Canals has hereunto set his hand and "The Commissioners of the Transcontinental Railway" have caused these presents to be executed and the corporate seal of the Commissioners to be affixed under the hand of the Commissioner and Secretary this ................ day of ......................... 1912.

Minister of Railways and Canals.

INTERNATIONAL CONVENTION

FOR THE

SAFETY OF HUMAN LIVES AT SEA
INTERNATIONAL CONVENTION FOR THE
SAFETY OF HUMAN LIFE AT SEA.

CONVENTION

INTRODUCTION.

His Majesty, the German Emperor, King of Prussia, on behalf of the German Empire; His Majesty the Emperor of Austria, King of Bohemia and Apostolic King of Hungary; His Majesty the King of Belgium; His Majesty the King of Denmark; His Majesty the King of Spain; the President of the United States of America; the President of the French Republic; His Majesty the King of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, Emperor of India; His Majesty the King of Italy; His Majesty the King of Norway; Her Majesty the Queen of Holland; His Majesty the Emperor of Russia; His Majesty the King of Sweden; having recognized the necessity for an agreement upon certain uniform rules to protect human life at sea, have decided to hold a Convention for this purpose, and have appointed the following parties as their Plenipotentiaries, viz:

His Majesty the Emperor of Germany, King of Prussia, on behalf of the German Empire:

His Excellency Dr. von Koerner, at present Privy Councillor, Chief of the Branch of Commerce at the Imperial Department of Foreign Affairs;

Dr. Seeliger, Privy Councillor of the Diplomatic Service, Councillor-Reporter at the Imperial Department of Foreign Affairs;

Mr. Schütz, Privy Councillor of the Government, Councillor-Reporter at the Imperial Department of the Interior;

Dr. Riess, Privy Councillor of the Government, member of the Imperial Department of Insurance;

Professor Pagel, Director of the Society of Classification "Germanischer Lloyd;"

Mr. Schrader, Superior Privy Councillor of the Post Office Department, Councillor-Reporter at the Imperial Post Office Department;

Mr. Behm, retired Rear Admiral, Editor of the "Deutsche Seewarte."

His Majesty the Emperor of Austria, King of Bohemia, etc., and Apostolic King of Hungary:

Baron G. de Frankenstein, Councillor of the Diplomatic Service, in charge of the Commercial Affairs at the Embassy of Austria and Hungary in London;

Mr. Paul Schreckenthal, Doctor at Law, Secretary to the Imperial and Royal Department of Commerce of Austria;

Mr. Ladislaus Dunay, Councillor of the Royal Hungarian Shipping Service at Fiume.

129—1½
His Majesty the King of Belgium:
Mr. E. A. Pierrard, General Director of Shipping, at the Department of Marine, Post Office and Telegraph;
Mr. Ch. Le Jeune, President of the International Committee of Shipping;
M. L. Franck, Barrister, Member of the Chamber of Representatives, Vice-President of the International Committee of Shipping.

His Majesty the King of Denmark:
Mr. A. H. M. Rasmussen, Superintendent of Instruction for the State Engineers;
Mr. Emil Krogh, Chief Clerk at the Department of Commerce and Navigation;
Mr. Host, Administrator of the “Société anonyme unifiée des vapeurs,”
Mr. V. Topsøe-Jensen, Deputy Chief Clerk and Secretary to the Department of Justice.

His Majesty the King of Spain:
Captain Don Rafael Bausa, R. N. Chief of the Naval Spanish Commission in London.

The President of the United States of America:
Mr. J. W. Alexander, member of the Congress;
Mr. T. E. Burton, member of the Senate;
Mr. J. Hamilton Lewis, member of the Senate;
Mr. E. T. Chamberlain, Director of Shipping;
Mr. E. P. Bertolf, Captain-Commander of the Customs Cutters Service;
Rear-Admiral Washington L. Capps, of Naval Engineering;
Captain George F. Cooper, hydrographer of the Marine Department;
Mr. Homer L. Ferguson, Administrator and Manager of the Company of “Newport News” for the building of ships and dry docks;
Mr. Alfred Gilbert Smith, Vice-President of the “New York and Cuba Mail Steamship Company.”
Captain W. H. C. Bullard, Superintendent of the Naval Service of Radio-telegraphy;
Mr. George Uhler, Inspector General of Steamboats.

The President of the French Republic:
Mr. Guernier, Professor of Political Economy at the University of Lille, Deputy Vice-President of the Commission on Shipping in the Chamber of Deputies, Vice-President of the Council Superior of Shipping.

His Majesty the King of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the seas, Emperor of India:
Lord Mersey, late President of Marine Affairs in the High Court of Justice, and President of the Court of Inquiry on the loss of the Steamship “Titanic.”
Mr. E. G. Moggridge, Assistant Secretary to the Board of Trade for the Department of Shipping;
Sir Archibald Denny, Bart., President of the Departmental Committee on bulkheads and watertight compartments;
Sir Norman Hill, President of the Advisory Committee on Shipping;
Sir John Biles, L.L.D., D.Sc., late President of the Departmental Committee on Life-Saving Boats and Davits;
Captain Acton Blake, Deputy Master of Trinity House;
Captain A. H. F. Young, Councillor to the Department of Shipping at the Board of Trade.
For the Safety of Human Life at Sea

Sessional Paper No. 129

Mr. C. Hipwood, of the Department of Shipping at the Board of Trade.
Mr. W. D. Archer, Chief Inspector of Vessels at the Board of Trade;

For Australia:
Captain R. Muirhead Collins, Official Secretary to the Confederation of the Australian States in London.

For Canada:
Mr. Alexander Johnston, Deputy Minister of Marine and Fisheries.

For New-Zealand:
Mr. Thomas Mackenzie, High Commissioner of the Government of New Zealand in London.

His Majesty the King of Italy:
Mr. Carlo Bruno, Director General of Shipping at the Department of Marine;
Major General Vittorio Ripa di Meana, Naval Engineering;
Mr. Gustavo Tosti, Doctor at Law, Consul General.

His Majesty the King of Norway:
Mr. Harald Pedersen, Superintendent of the Office of Shipping.
Dr. Johannes Bruhn, Superintendent of “Norske Veritas;”
Mr. Jens Evang, Secretary to the Department of Foreign Affairs.

Her Majesty the Queen of Holland:
Mr. J. V. Wierdsma, Director and Chairman of the Committee of Directors of the Company Hollando-American;
Mr. H. S. J. Maas, Consul General of Holland in London;
Mr. A. D. Muller, Inspector General of Navigation;
Mr. J. Wilmink, Superintendent of the Royal Lloyd of Holland;
Mr. J. W. G. Coops, Chief Clerk at the Department of Agriculture, Industry and Commerce.

His Majesty the Emperor of Russia:
Mr. Roman Mikhailovitch Loviaguin, Councillor of State, Inspector of Shipping and Ports.

His Majesty the King of Sweden:
Vice-Admiral Olsen, late Chief of the Naval Services;
Mr. N. G. Nilsson, Inspector of the life saving apparatus at the Department of Commerce.

These Plenipotentiaries being duly authorized met in London, and unanimously agreed upon the following Convention:
INTERNATIONAL CONVENTION ON SAFETY OF HUMAN LIFE AT SEA

CHAPTER I.—SAFETY OF LIFE AT SEA.

Article 1.

The High Contracting Parties undertake to give effect to the provisions of this Convention, for the purpose of securing safety of life at sea, to promulgate all regulations and to take all steps which may be necessary to render it fully and completely effective.

The provisions of this Convention are completed by Regulations which have the same force and take effect at the same time as the Convention. Every reference to the Convention implies at the same time a reference to the Regulations annexed thereto.

CHAPTER II.—SHIPS TO WHICH THE CONVENTION APPLIES.

Article 2.

Except where otherwise provided by the Convention, the merchant ships of each of the States of the High Contracting Parties which are mechanically propelled, which carry more than 12 passengers and which proceed from a port of one of the said States to a port situated outside that State, or inversely, are subject to the provisions of this Convention. Ports situated in the Colonies, Possessions or Protectorates of the High Contracting Parties are considered to be ports outside the States of the High Contracting Parties.

Persons who are on board by reason of force majeure or in consequence of the obligation laid upon the master to carry shipwrecked or other persons are not deemed to be passengers.

Article 3.

There are excepted from this Convention, save in the cases where the Convention otherwise provides, ships making voyages specified in a schedule to be communicated by each High Contracting Party to the British Government at the time of ratifying the Convention.

No schedule may include voyages in the course of which the ships go more than 200 sea miles from the nearest coast.

Each High Contracting Party has the right subsequently to modify its schedule of voyages in conformity with this article on condition that it notifies the British Government of such modification.

Each High Contracting Party has the right to claim from another Contracting Party the benefit of the advantages of the Convention for all of its ships which may be engaged in any one of the voyages mentioned in its own schedule. For this purpose the Party claiming such benefit shall impose on the said ships the obligations prescribed by the Convention in so far as, having regard to the nature of the voyage, these obligations would not be unreasonable or unnecessary.
Article 4.

No ship, not subject to the provisions of this Convention at the time of its departure, can be subjected to it in the course of its voyage, if stress of weather or any other cause of force majeure compels it to take refuge in a port of one of the States of the High Contracting Parties.

CHAPTER III.—SAFETY OF NAVIGATION.

Article 5.

When the expression 'every ship' is used in this Chapter and in the corresponding Part of the Regulations, it includes all merchant ships belonging to the Contracting States whether defined in Article 2 or not.

Article 6.

The High Contracting Parties undertake to take all steps to ensure the destruction of derelicts in the northern part of the Atlantic Ocean which lies to the east of a line drawn from Cape Sable to a point situated in latitude 34° north and longitude 70° west. Further, they will establish in the North Atlantic Ocean with the least possible delay a service for the study and observation of ice conditions and a service of ice patrol. For this purpose:

Two vessels shall be charged with these three services.

During the whole of the ice season, they shall be employed in ice patrol.

During the rest of the year the two vessels shall be employed both in the study and observation of ice conditions and in the destruction of derelicts; nevertheless the study and observation of ice conditions shall be effectively carried out, in particular from the beginning of February to the opening of the ice season.

When the two vessels are employed in ice patrol, the High Contracting Parties to the extent of their ability and so far as the exigencies of the Naval Service will permit, will send warships or other vessels to deal with the destruction of dangerous derelicts, if this destruction is considered necessary at that time.

Article 7.

The Government of the United States is invited to undertake the management of the three services of derelict destruction, study and observation of ice conditions, and ice patrol. The High Contracting Parties which are specially interested in these services, and whose names are given below, undertake to contribute to the expense of establishing and maintaining the said services in the following proportions:

<table>

SESSIONAL PAPER No. 129

Each of the High Contracting Parties has the right to discontinue its contribution to the expense of maintaining these services after the 1st September, 1916. Nevertheless the High Contracting Party which avails itself of this right will continue responsible with regard to the expenses of maintenance up to the 1st September following the date of denunciation of the Convention on this particular point. To take advantage of the said right, it must give notice to the other Contracting Parties at least six months before the said 1st September; so that, to be free from its obligations on the 1st September, 1916, it must give notice on the 1st March, 1916, at the latest, and similarly for each subsequent year.

In case the United States Government should not accept the proposal made to them, or in case one of the High Contracting Parties, for any reason, should not assume responsibility for the pecuniary contribution defined above, the High Contracting Parties shall settle the question in accordance with their mutual interests.

The Government of the High Contracting Party which undertakes the management of the service of derelict destruction is invited to devise means of granting, at the expense of the service, to merchant ships, which have contributed in an effective manner to the destruction of ocean derelicts, rewards to be fixed by the Government in accordance with the services rendered.

The High Contracting Parties which contribute to the cost of the three above-mentioned services shall have the right by common consent to make such alterations in the provisions of this Article and Article 6 as from time to time appear to them desirable.

Article 8.

The master of every ship which meets with dangerous ice or a dangerous derelict is bound to communicate the information by all means at his disposal to the ships in the vicinity, and also to the competent authorities at the first point of the coast with which he can communicate.

Every Administration which receives intelligence of dangerous ice or a dangerous derelict shall take all steps which it thinks necessary for distributing it to those concerned and for communicating it to other Administrations.

The transmission of messages respecting ice and derelicts is free of cost to the ships concerned.

It is desirable that the said information should be sent in a uniform manner. For this purpose, a code, the use of which is optional, appears in Article 1 of the Regulations annexed hereto.

Article 9.

Every ship fitted with radio-telegraphic installation becoming aware of the existence of an imminent and serious danger to navigation, shall report it immediately in the form prescribed by Article II of the Regulations annexed hereto.

Article 10.

When ice is reported on, or near, the route, the master of every ship propelled by machinery is bound to proceed at night at a moderate speed, or to alter his course so as to go well clear of the danger zone.

Article 11.

The ships defined by Article 2 shall be provided with a Morse signalling lamp of sufficient range.
The use of Morse signals is regulated by the Code appearing in Article II, 1, as well as by Article 14 of the Regulations annexed hereto.

**Article 12.**

The use of the international distress signals for any other purpose than that of signals of distress is prohibited on every ship.

The use of private signals which are liable to be mistaken for the international distress signals is prohibited on every ship.

**Article 13.**

The selection of the routes, both on the eastward and westward passages across the North Atlantic, is left to the responsibility of the steamship companies. Nevertheless the High Contracting Parties undertake to impose on these companies the obligation to give public notice of the regular routes which they propose for their vessels, and of any changes which they make in them.

The High Contracting Parties undertake further to use their influence to induce the owners of all vessels crossing the Atlantic, to follow as far as practicable the routes adopted by the principal companies.

**Article 14.**

The High Contracting Parties undertake to use all diligence to obtain from the Governments which are not parties to this Convention, their agreement to the revision of the International Regulations to Preventing Collisions at Sea as indicated below:

(A) The Regulations shall be completed or revised in regard to the following points:

1. The second white light.
2. The stern light.
3. A day signal for motor vessels.
4. A sound signal for a vessel towed.
5. The prohibition of signals similar to distress signals.

(B) Articles 2, 10, 14, 15, 31 of the said Regulations shall be amended in accordance with the following provisions:

Article 2. The second white mast head light to be compulsory.
Article 10. A permanent fixed stern light to be compulsory.
Article 14. A special day signal to be compulsory for motor vessels.
Article 15. A special sound signal to be established for use by a vessel in tow, or if the tow is composed of several vessels, by the last vessel of the tow.
Article 31. Article 31 to be modified in the following manner:

Add to the lists of both day and night signals "The international radiotelegraphic distress signal."

**Article 15.**

The Governments of the High Contracting Parties undertake to continue in force, or if it is necessary, to adopt, adequate measures for the purpose of insuring that, from the point of view of safety of life at sea, the ships defined in Article 2 shall be sufficiently and efficiently manned.
CHAPTER IV.—CONSTRUCTION.

ARTICLE 16.

New Vessels and existing vessels.

For the purpose of the Articles contained in this Chapter and in the corresponding part of the annexed Regulations, the vessels defined in Article 2 are divided into "new vessels" and "existing vessels."

New vessels are those the keel of which is laid after the 1st July, 1915. The following Articles 17 to 30 of this Chapter are applicable to them in full.

Other vessels are considered as existing vessels. Existing arrangements on these vessels shall be considered on their merits by the Administration of the country to which each vessel belongs, with a view to improvements providing increased safety where practicable and reasonable.

ARTICLE 17.

Subdivision of Vessels.

Vessels shall be as efficiently subdivided as is possible, having regard to the nature of the services for which they are intended. The minimum requirements respecting subdivision and arrangements affecting subdivision are given in the following articles and in the Regulations annexed to this Convention.

The degree of safety provided by these minimum requirements varies in a regular and continuous manner with the length of the vessel and with a certain "criterion of service." The requirements of the annexed Regulations are such that the highest degree of safety corresponds to the vessels of greatest length primarily engaged in the transportation of passengers.

Articles V to IX of the annexed Regulations state the method to be followed in order to determine the permissable length of compartments on the basis of the floodable length; prescribe a limit to the length of compartments; and fix the conditions governing certain special cases.

When the water-tight sub-division of a vessel is such as to provide a degree of safety over and above that provided by the sub-division rules prescribed by this Convention, the Administration of the country to which the vessel belongs shall, if so requested by the owner, record this fact on the Safety Certificate of the vessel in the manner and to the extent provided in Article X of the annexed Regulations.

ARTICLE 18.

Peak and Machinery Space Bulkheads.

Vessels shall be fitted with forward and after peak bulkheads and bulkheads at the extremities of the machinery space in accordance with the requirements of Article XI of the annexed Regulations.

ARTICLE 19.

Fireproof Bulkheads.

With a view to retarding the spread of fire, vessels shall be fitted with fireproof bulkheads in accordance with the requirements of Article XII of the annexed Regulations.
INTERNATIONAL CONVENTION

4 GEORGE V., A. 1914

Article 20.

Exits from Watertight Compartments.

The conditions under which means of escape from the various watertight compartments shall be provided are stated in Article XIII of the annexed Regulations.

Article 21.

Construction and Tests of Watertight Bulkheads.

In order to ensure their strength and watertightness, watertight bulkheads shall be constructed and tested in accordance with the requirements of Article XIV of the annexed Regulations.

Article 22.

Openings in Watertight Bulkheads.

The openings in watertight bulkheads shall be reduced to the smallest number, compatible with the design and proper working of the vessel, and satisfactory means shall be provided for closing them. Articles XV and XVII of the annexed Regulations state the requirements governing the number of openings, the character and use of the means of closing with which these openings shall be provided, and the tests to which watertight doors shall be subjected.

Article 23.

Openings in Ship's Side.

Side-sculltles and other openings in the side of the vessel, and the inboard openings of discharges through the shell, shall be provided with means of closing them, and shall be arranged in such manner as to prevent as far as possible the accidental admission of water into the vessel. Articles XVI and XVII of the annexed Regulations state the conditions under which openings may be made in the ship's side, the means which shall be provided for closing these openings and the requirements as to operating the closing appliances.

Article 24.

Construction and Test of Watertight Decks, &c.

In order to ensure their strength and watertightness, watertight decks, trunks, and ventilators, shall be constructed and tested in accordance with the requirements of Article XVIII of the annexed Regulations.

Article 25.

Periodical Operation and Inspection of Watertight Doors, &c.

The conditions under which inspections of watertight doors, &c., and drills for their operation, shall be periodically made during a voyage, are stated in Article XIX of the annexed Regulations.
Article 26.

Entries in Official Log.

A record of the closing and opening of watertight doors, &c., and of all inspections and drills, shall be entered in the official log as required by Article XX of the annexed Regulations.

Article 27.

Double Bottoms.

The conditions under which a double bottom shall be fitted in vessels of different lengths, and in particular the minimum extent of the double bottom longitudinally and transversely, are stated in Article XXI of the annexed Regulations.

Article 28.

Backing Power and Auxiliary Steering Apparatus.

Vessels shall comply, as regards backing power and the fitting of auxiliary steering apparatus, with the requirements of Articles XXII and XXIII of the annexed Regulations.

Article 29.

Initial and Subsequent Surveys of Vessels.

The general principles which shall govern the survey of the vessels, whether new or existing, defined in Article 2, as regards hull, boilers, main and auxiliary machinery, and equipments, are stated in Articles XXIV and XXVI of the annexed Regulations. The Government of each of the High Contracting Parties undertakes (1) to draw up detailed rules and regulations in accordance with these general principles, or to bring its existing rules and regulations into agreement with these principles; (2) to communicate these rules and regulations to each of the other contracting States; and (3) to secure that these rules and regulations shall be enforced.

The detailed rules and regulations referred to in the preceding paragraph shall be such in all respects as to secure, in the interest of safety of life at sea, that the vessel is fit for the service in which she will be employed.

Article 30.

Questions for further Study and Agreement—Exchange of Information.

The High Contracting Parties undertake to cause the study of the criterion of service referred to in Article 17 to be pressed forward, and to communicate to each other the results of that study. His Britannic Majesty’s Government is invited to undertake the duty of circulating this information, and, as soon as a definite result is attainable, of endeavouring to secure, through the diplomatic channel, the acceptance by the contracting States of the criterion; and upon its acceptance by each of the contracting States, as from a date and subject to the conditions to be agreed upon, such criterion shall have effect as if it were prescribed in the Convention.
The above procedure shall also be applied to the following items:—

1. The fitting of longitudinal watertight bulkheads, double skins and watertight decks and flats, and the question whether there may be allowed any increase in the length of transverse watertight compartments in way of which such longitudinal sub-division is fitted, and, if so, to what extent:

2. The method of sub-division for obtaining the highest practicable degree of safety to be applied to vessels of shorter length than those covered by Article VIII of the annexed Regulations; and

3. The results of experiments in regard to the proper margin of resistance above the pressure which watertight bulkheads are required to be capable of supporting, as referred to in Article XIV of the annexed Regulations.

The contracting States undertake to exchange in the freest manner practicable all information in regard to the application of the rules of this Convention in matters relating to safety of construction. They shall transmit to each other the methods or rules which each may adopt; information concerning any new fittings or appliances which they may sanction; the decisions which each may make in regard to specific points of principle not covered by the foregoing articles and the corresponding portion of the appended Regulations; and the final results of their further studies in the matters not definitely determined.

CHAPTER V.—RADIOTELEGRAPHY.

Article 31.

All merchant ships belonging to each of the Contracting States, whether they are propelled by machinery or by sails, and whether they carry passengers or not, shall, when engaged on the voyages specified in Article 2, be fitted with a radiotelegraph installation, if they have on board fifty or more persons in all. Advantage shall not be taken of the provisions of Articles 2 and 3 of this Convention to exempt a ship from the requirements of this Chapter.

Article 32.

Ships on which the number of persons on board is exceptionally and temporarily increased up to or beyond fifty as the result of force majeure, or because the master is obliged by the illness of certain members of the crew to engage substitutes or is required to carry shipwrecked or other persons, are exempted from the above obligation.

Moreover, the Governments of each of the Contracting States, if they consider that the route and the conditions of the voyage are such as to render a radiotelegraph installation unreasonable or unnecessary, may exempt from the above requirement the following ships—

1. Ships which in the course of their voyage do not go more than 150 sea miles from the nearest coast.

2. Ships on which the number of persons on board is exceptionally or temporarily increased up to or beyond fifty by the carriage of cargo hands for a part of the voyage, provided that the said ships are not going from one continent to another, and that, during that part of their voyage, they remain within the limits of latitude 30° N. and 30° S.

3. Sailing vessels of primitive build such as dhows, junks, &c., if it is practically impossible to install a radiotelegraph apparatus.
SESSIONAL PAPER No. 129

ARTICLE 33.

Ships which, in accordance with Article 31 above, are required to be fitted with a radiotelegraph installation are divided, for the purpose of radiotelegraph service, into three classes, in accordance with the classification established for ship stations in Article XIII (b) of the Regulations annexed to the Radiotelegraph Convention, signed in London on the 5th July, 1912, viz.:—

Class I.—Ships having a continuous service.

There shall be placed in the first class ships which are intended to carry twenty-five or more passengers:—

1. if they have an average speed in service of fifteen knots or more;
2. if they have average speed in service of more than thirteen knots, but only subject to the twofold condition that they have on board two hundred persons or more (passengers and crew) and that, in the course of their voyage, they go a distance of more than five hundred sea miles between any two consecutive ports, nevertheless these ships may be placed in the Second Class on condition that they have a continuous watch.

Class II.—Ships having a service of limited duration.

There shall be placed in the Second Class all ships which are intended to carry twenty-five or more passengers, if they are not, for other reasons, placed in the First Class.

Ships placed in the Second Class must, during navigation, maintain a continuous watch for at least seven hours a day, and a watch of ten minutes at the beginning of every other hour.

Class III.—Ships which have no fixed periods of service.

All ships which are placed neither in the First nor in the Second Class shall be placed in the Third Class.

The owner of a ship placed in the Second or in the Third Class has the right to require that, if the ship complied with all the requirements for a superior class, a statement to the effect that it belongs to that class shall be inserted in its Safety Certificate.

ARTICLE 34.

Ships which are required by Article 31 above to be fitted with a radiotelegraph installation shall be required, by the Governments of the countries to which they belong, to maintain a continuous watch during navigation as soon as the said Governments consider that it will be of service for the purpose of safety of life at sea.

Meanwhile, the High Contracting Parties undertake to require, from the date of the ratification of the present Convention, subject to the delays specified below, a continuous watch on the following ships —

1. Ships whose average speed in service exceeds 13 knots, which have on board 200 persons or more, and which, in the course of their voyage, go a distance of more than 500 sea miles between two consecutive ports, when these ships are placed in the Second Class.
2. Ships in the Second Class, for the whole of the time during which they are more than 500 sea miles from the nearest coast.
(3.) Other ships specified in Article 31, when they are engaged in the Trans-Atlantic trade, or when they are engaged in other trades if their route takes them more than 1,000 sea miles from the nearest coast.

Ships engaged in all kinds of fishing business, including whaling, which are required to be fitted with a radiotelegraph installation, shall not be required to maintain a continuous watch.

The continuous watch may be kept by one or more operators, holding certificates in accordance with Article X of the Regulations annexed to the International Radiotelegraph Convention, 1912, together, if necessary, with one or more certified watchers. Nevertheless, if an efficient automatic calling apparatus is invented, the continuous watch may be maintained by this means by agreement between the High Contracting Parties.

By "certified watcher" is meant any person holding a certificate issued under the authority of the Administration concerned. To obtain this certificate, the applicant must prove that he is capable of receiving and understanding the radiotelegraph distress signal and the safety signal described in the Regulations annexed hereto.

The High Contracting Parties undertake to take the proper steps to ensure that the certified watchers observe the secrecy of correspondence.

Article 35.

The radiotelegraph installations required by Article 31 above shall be capable of transmitting clearly perceptible signals from ship to ship over a range of at least 100 sea miles by day, under normal conditions and circumstances.

Every ship which is required, in conformity with the provisions of Article 31 above, to be fitted with a radiotelegraph installation, shall, whatever be the class in which it is placed, be provided in accordance with Article XI of the Regulations annexed to the International Radiotelegraph Convention, 1912, with an emergency installation, every part of which is placed in a position of the greatest possible safety, to be determined by the Government of the country to which the ship belongs. In all cases the emergency installation must be placed, in its entirety, in the upper part of the ship, as high as practically possible.

The emergency installation includes, as provided by Article XI of the Regulations annexed to the International Radiotelegraph Convention, 1912, an independent source of energy capable of being put into operation rapidly and of working for at least six hours with a minimum range of eighty sea miles for ships in the First Class and fifty sea miles for ships in the two other Classes.

If the normal installation, which in accordance with this Article has a range of at least one hundred sea miles, satisfies all the conditions prescribed above, an emergency installation is not required.

The license provided for in Article 9 of the Regulations annexed to the International Radiotelegraph Convention, 1912, shall not be issued unless the installation complies not only with the provisions of that Convention, but also with the provisions of this Convention.

Article 36.

The matters governed by the International Radiotelegraph Convention, 1912, and the Regulations annexed thereto, and in particular the radiotelegraph installations on ships, transmission of messages, and the certificates of the operators, remain and continue subject to the provisions:

(1) of that Convention and the Regulations annexed thereto, or of any other instruments which may in the future be substituted therefor;

(2) of this Convention, in regard to all the points in which it supplements the aforementioned documents.
Article 37.

Every master of a ship, who receives a call for assistance from a ship in distress, is bound to proceed to the assistance of the persons in distress.

Every master of a ship in distress has the right to requisition from among the vessels which answer his call for assistance, the vessel or vessels which he considers best able to render him assistance, but he must exercise this right only after consultation, so far as may be possible, with the masters of those vessels. Such vessels are then bound to comply immediately with the requisition and to proceed with all speed to the assistance of the persons in distress.

The masters of the ships which are required to render assistance are released from this obligation as soon as the master or masters which have been requisitioned have made known that they will comply with the requisition, or as soon as the master of one of the ships which has reached the scene of the casualty has made known to them that their assistance is no longer necessary.

If the master of a ship is unable, or considers it unreasonable or unnecessary, in the special circumstances of the case, to go to the assistance of the ship in distress, he must immediately inform the master of the ship in distress accordingly. Moreover he must enter in his log-book the reasons justifying his action.

The above provisions in no way prejudice the International Convention for the Unification of certain rules with respect to Assistance and Salvage at Sea, signed at Brussels on the 23rd September, 1910, and, in particular, the obligation to render assistance laid down in Article 11 of that Convention.

Article 38.

The High Contracting Parties undertake to take all steps necessary for giving effect to the provisions of this Chapter with the least possible delay. Nevertheless, they may allow:

A delay not exceeding one year, from the date of the ratification of this Convention, for the provision and training of operators and for the installation of the apparatus on ships placed in the First and Second Classes;

A delay not exceeding two years, from the date of the ratification of this Convention, for the provision and training of the operators and watchers, on the ships in the Third Class, for the installation of the apparatus on ships in the Third Class and for the establishment of a continuous watch on ships placed in the second and Third Class.

CHAPTER VI.—LIFE-SAVING APPLIANCES AND FIRE PROTECTION.

Article 39.

New Ships and Existing Ships.

For the purpose of applying the articles of this Chapter and of the corresponding Part of the Regulations the ships defined in Article 2 are divided into new ships and existing ships.

New ships are those of which the keel is laid after the 31st December, 1914. The other ships are considered existing ships.
Article 40.

Fundamental Principle.

At no moment of its voyage may a ship have on board a total number of persons greater than that for which accommodation is provided in the lifeboats and the pontoon life-rafts on board.

The number and arrangements of the boats, and (where they are allowed) of the pontoon rafts on a ship corresponds with the total number of persons which a ship is intended to carry; provided that there shall not be required on any voyage a total capacity in boats and (where they are allowed) pontoon-rafts greater than that necessary to provide accommodation for all the persons on board.

Article 41.

Standard types of boats—Pontoon rafts.

All the life-boats allowed for a ship shall comply with the conditions fixed by this convention and Articles XXVII to XXXII of the Regulations annexed hereto; the same articles described the standard types which are divided into two classes.

The conditions required for the pontoon-rafts are given in Article XXXIII of the same regulations.

Article 42.

Strength of boats.

Each boat must be of sufficient strength to enable it to be safely lowered when loaded with its full complement of persons and equipment.

Article 43.

Alternate types of boats and rafts.

Any type of boat may be accepted as equivalent to a boat of one of the prescribed classes and any type of raft as equivalent to an approved pontoon-raft, if the Administrations concerned are satisfied by suitable trials that it is as effective as the standard types of the class in question, or as the approved type of pontoon-raft, as the case may be.

The Government of the High Contracting Party which accepts a new type of boat or raft will communicate to the Governments of the other Contracting Parties particulars of the trials. It will also inform them of the class in which a new type of boat has been placed.

Article 44.

Embarkation of the passengers in the boats and rafts.

Suitable arrangements shall be made for embarking the passengers in the boats.

In ships which carry rafts there shall be a number of rope ladders always available for use in embarking the persons on to the rafts.
Article 45.

Capacity of boats and pontoon rafts.

The number of persons that a boat of one of the standard types or an approved pontoon raft can accommodate, is determined by the methods indicated in Articles XXXIV to XXXIX inclusive, of the Regulations annexed hereto.

Article 46.

Equipment of boats and pontoon rafts.

Article XL of the annexed Regulations prescribes the equipment for boats and pontoon-rafts.

All loose equipment must be securely attached to the boat or pontoon-raft to which it belongs.

Article 47.

Stowage of boats—Number of davits.

The arrangement to be made for the stowage of the boats and in particular the extent to which pontoon rafts may be accepted are specified in Articles XLI, XLII and XLIII of the annexed Regulations. The minimum number of sets of davits is fixed in relation to the length of the ship; provided that a number of sets of davits greater than the number of boats necessary for the accommodation of all the persons on board may not be required.

Article 48.

Handling of the boats and rafts.

All the boats and rafts must be stowed in such a way that they can be launched in the shortest possible time and that, even under unfavourable conditions of list and trim from the point of view of the handling of the boats and rafts, it may be possible to embark in them as large a number of persons as possible.

The arrangements must be such that it may be possible to launch on either side of the ship as large a number of boats and rafts as possible.

Supplementary instructions are given in Article XLIV of the annexed Regulations.

Article 49.

Strength and operation of the davits.

The davits shall be of such strength that the boats can be lowered with their full complement of persons and equipped when the ship is assumed to have a list of 15 degrees.

The davits must be fitted with a gear of sufficient power to ensure that the boat can be turned out against the maximum list under which the lowering of the boats is possible on the vessel in question.
INTERNATIONAL CONVENTION

4 GEORGE V., A. 1914

Article 50.

Other appliances equivalent to davits.

Any appliance or appliances may be accepted in lieu of davits or sets of davits if the Administration concerned is satisfied, after proper trials, that the appliance in question is as effective as davits for placing the boats in the water.

The Government of the High Contracting Party which accepts a new type of appliance or appliances, shall communicate to the other Contracting Parties particulars of the appliance or appliances, with details of the trials made.

Article 51.

Life jackets and life buoys.

(1) A life jacket of an approved type, or other appliance of equal buoyancy and capable of being fitted on the body, must be provided for every person on board, and, in addition, a sufficient number of life jackets, or other equivalent appliances, suitable for children.

(2) Article XLV of the annexed Regulations fixes, in accordance with the length of the ship, the number of life buoys of an approved type to be provided, and also the conditions with which life jackets and life buoys must comply, and in accordance with which they must be stowed.

Article 52.

Existing ships.

The Government of each of the High Contracting Parties undertakes to apply to existing ships, not later than the 1st July, 1915, all the provisions of the preceding articles of the present Chapter, viz., Articles 40 to 51 inclusive, requiring, in the first place, accommodation for all the persons on board in boats and rafts; provided that, in cases where the strict application of these principles would not be practicable or reasonable, the Government of each of the High Contracting Parties has the right to allow the exemptions specified in Article XLVI of the Regulations annexed hereto.

Article 53.

New or existing means of ingress and egress.—Emergency lighting.

(1) Proper arrangements shall be made for ingress to and egress from the different compartments, decks, &c.

(2) An electric or other system of lighting, sufficient for all requirements of safety, must be ensured in the different parts of both new and old ships, and particularly upon the decks on which the life-boats are stowed. On new ships there must be a self-contained source capable of supplying, when necessary, this safety lighting system, and placed in the upper parts of the ship, as high as practically possible.

(3) The exit from every compartment must always be lighted by an emergency lamp, which shall be kept locked, and which shall be independent of the ordinary lighting of the ship.
These emergency lamps may be supplied from the independent installation referred to in the preceding paragraph, if an independent circuit is employed for this purpose and if this installation works concurrently with the ordinary lighting of the ship.

**Article 54.**

*Certified Life-boat Men—Manning of the Boats.*

There must be for each boat or raft required a minimum number of certified life-boat men. The minimum total number of certified life-boat men is determined by the provisions of Article XLVII of the annexed Regulations.

The allocation of the certified life-boat men to each boat and raft remains within the discretion of the master, according to the circumstances.

By "certified life-boat man" is meant any member of the crew who holds a certificate of efficiency issued under the authority of the Administration concerned, in accordance with the conditions laid down in the aforementioned Article of the annexed Regulations.

Article XLVIII of the Regulations deals with the manning of the boats.

**Article 55.**

*Fire protection.*

(1) The carriage, either as cargo, or ballast, of goods, which by reason of their nature, quantity, or mode of stowage, are, either singly or collectively, likely to endanger the lives of the passengers or the safety of the ship, is forbidden.

This provision does not apply to the ship's distress signals, nor to the carriage of naval or military stores for the public service under authorized conditions.

(2) The Government of each High Contracting Party shall, from time to time by official notice, determine what goods are to be considered dangerous goods, and shall indicate the precautions which must be taken in the packing and stowage thereof.

(3) Article XLIX of the annexed Regulations indicates the arrangements to be made for the detection and extinction of fire.

**Article 56.**

*Muster Roll and Drills.*

Special duties for the event of an emergency shall be allotted to each member of the crew.

The muster list shows all these special duties, and indicates, in particular, the station to which each man must go, and the duties that he has to perform.

Before the vessel sails, the muster list shall be drawn up and exhibited, and the proper authority shall be satisfied that the muster list has been prepared for the ship. It shall be posted in several parts of the ship, and in particular in the crew's quarters.

Articles L and LI of the annexed Regulations indicate the conditions under which musters of the crew and drills shall take place.
CHAPTER VII.—SAFETY CERTIFICATES.

Article 57.

A certificate, called a "Safety Certificate," shall be issued, after survey, to every ship which complies in an efficient manner with the requirements of the Convention.

The inspection and survey of ships, so far as regards the enforcement of the provisions of the present Convention and the annexed Regulations, shall be carried out by officers of the State to which the ship belongs; provided always that the Government of each state may entrust the survey of vessels of its own country either to surveyors nominated by it for this purpose or to organizations recognized by it. In every case the Government concerned fully guarantees the completeness and efficiency of the survey.

The Safety Certificate shall be issued either by the officers of the State to which the ship belongs, or by any other person duly authorized by that State. In either case the State to which the ship belongs assumes full responsibility for the certificate.

Article 58.

The Safety Certificate shall be drawn up in the official language or languages of the State by which it is issued.

The form of the certificate shall be that of the standard certificate given in Article 52 of the Regulations annexed hereto. The arrangement of the printed part of this standard certificate shall be exactly reproduced and the particulars inserted by hand shall be inserted in Roman characters and Arabic figures.

The High Contracting parties undertake to communicate one to another a sufficient number of specimens of their Safety Certificates for the information of their officers. This exchange shall be made, so far as possible, before the 1st April, 1915.

Article 59.

The Safety Certificate shall not be issued for a period of more than twelve months.

If the ship is not in a port of the State to which it belongs at the time when the period of the validity of the Safety Certificate expires, a duly authorized officer of this State may extend this period; but such an extension shall be granted only for the purpose of allowing the ship to complete its return voyage to its own country, and then only in cases in which it appears proper and reasonable so to do.

The extension cannot have effect for more than five months and the ship shall not thereby be entitled to leave its own country again without having obtained a new certificate.

Article 60.

The Safety Certificate issued under the authority of a Contracting State shall be accepted by the Governments of the other Contracting States for all purposes covered by this Convention. It shall be regarded by the Governments of the other Contracting States as having the same force as the certificates issued by them to their own ships.
Article 61.

Every ship holding a Safety Certificate issued by the officers of the Contracting State to which it belongs, or by persons duly authorized by that State, is subject in the ports of the other Contracting States to control by officers duly authorized by their Governments in so far as this control is directed towards verifying that there is on board a valid Safety Certificate and, if necessary, that the conditions of the vessel's seaworthiness correspond substantially with the particulars of that certificate; that is to say, so that the ship can proceed to sea without danger to the passengers and the crew.

Article 62.

The privileges of the Convention cannot be claimed in favour of any ship unless it holds a valid Safety Certificate.

Article 63.

If, in the course of a particular voyage, the ship has on board a number of passengers less than the maximum number indicated in the Safety Certificate, and is, in consequence, in accordance with the provisions of this Convention free to carry a smaller number of life-boats and other life-saving appliances than that stated in the aforementioned Certificate, a memorandum may be issued by the officers or other authorized persons referred to in Articles 57, paragraph 3 and 59 above.

This memorandum shall state that in the circumstances there is no infringement of the provisions of the Convention. It shall be annexed to the Safety Certificate and shall be substituted for it in so far as the life-saving appliances are concerned. It shall be valid only for the particular voyage in regard to which it is issued.

CHAPTER VIII.—GENERAL.

Article 64.

The Governments of the High Contracting Parties undertake to communicate mutually, in addition to the documents which, in this Convention, are the subject of special provisions to that effect, all information which they possess affecting safety of life on those of their ships which are subject to the rules of this Convention, provided always that such information is not of a confidential nature.

They will communicate to each other in particular:

1. The text of Laws, Decrees and Regulations which shall have been promulgated on the various matters within the scope of the Convention.
2. The description of the characteristics of new appliances approved in conformity with the rules of the Convention.
3. All official reports, or official summaries of reports, in so far as they show the results of the provisions of this Convention.

Until other arrangements may be made, the British Government is invited to serve as intermediary for collecting all this information and for bringing it to the knowledge of the Governments of the Contracting Parties.
ARTICLE 65.

The High Contracting Parties undertake to take, or to propose to their respective legislatures, the measures necessary for the repress of infrusions of the requirements imposed by this Convention.

The High Contracting Parties will communicate mutually, as soon as possible, the laws and regulations which are issued for this purpose.

ARTICLE 66.

The High Contracting Parties which intend the Convention to apply to the whole of their Colonies, Possessions and Protectorates, or to one or to some of these countries, shall declare this intention either at the time of signing these presents or subsequently. To this effect they shall be able either to make a general declaration embracing the whole of their Colonies, Possessions, and Protectorates, or to enumerate by name the countries which they intend to come within the scope of the law of the Convention, or, alternatively, to enumerate by name those which they intend to be excepted.

This declaration, unless it be made at the time of signing these presents shall be made in writing to the Government of Great Britain, and by the latter Government to all the Governments of the other States parties to the Convention.

The High Contracting Parties may also in the same way, provided that they comply with the provisions of Article 69 hereafter, denounce this Convention as regards their Colonies, Possessions or Protectorates or one or some of those countries.

ARTICLE 67.

The States which are not Parties to this Convention shall be allowed to accede thereto at their request. Their accession shall be notified through the diplomatic channel to the Government of Great Britain, and by the latter to the Governments of the other States parties to the Convention.

This accession will carry the full acceptance of all the obligations imposed by this Convention and the full right to all the privileges specified therein. It will have full and complete effect two months after the date on which notification of the accession is sent by the Government of Great Britain to all the other Governments of the States which are parties to the Convention, unless a subsequent date had been proposed by the acceding State.

The Governments of the States which shall accede to the present Convention shall annex to their declaration of accession the Schedule provided for by Article 3 of this Convention. This Schedule shall be added to those already deposited by the other Governments. The British Government shall transmit a copy thereof to the other Governments.

ARTICLE 68.

The treaties, conventions and arrangements concluded prior to this Convention shall continue to have full and complete effect, as regards:

1. ships excepted from the Convention;
2. ships to which it applies, in respect of subjects for which the Convention has not expressly provided.

It is understood that, the subject of this Convention being safety of life at sea, questions relating to the well-being and health of passengers, and in particular of emigrants, as well as other matters relative to their transport, continue subject to the legislation of the different States.
Article 69.

This Convention shall come into force on the 1st July, 1915, and shall remain in force without any prescribed limit of time. Nevertheless, each High Contracting Party may denounce the Convention at any time after an interval of five years, which shall run from the date on which the Convention comes into force in that state.

This denunciation shall be notified through the diplomatic channel to the Government of Great Britain and by the latter to the Governments of the other Contracting Parties. It shall take effect twelve months after the day on which the notification is received by the Government of Great Britain.

A denunciation shall only affect the State which makes it, the Convention remaining fully completely operative as regards all the other States which have ratified it, or which have acceded thereto or which thereafter accede thereto.

Article 70.

This Convention with the Regulations annexed thereto shall be drawn up in a single copy, which shall be deposited in the archives of the Government of Great Britain. A true and certified copy shall be delivered by the latter to each of the Governments of the High Contracting Parties.

Article 71.

This Convention shall be ratified and the instruments of ratification, accompanied by the Schedules specified in Article 3, shall be deposited at London not later than the 31st December, 1914. The British Government shall give notice of the ratifications and shall furnish a copy of each Schedule to the Governments of the other Contracting Parties.

Notwithstanding failure to ratify on the part of a High Contracting Party, the Convention shall continue to have full and complete effect as regards the Contracting Parties which ratify it.

Article 72.

To render ratification easier for a Contracting State which, prior to the date of signature of this Convention, has laid down requirements in regard to any matter within the scope of this Convention, it is agreed that no ship which has complied with those requirements before the 1st July, 1915, may avail itself of the periods of grace allowed by the Convention in order to cease to comply with those requirements.

Article 73.

Where this convention provides that a measure may be taken after agreement between all or some of the Contracting States, the Government of His Britannic Majesty is invited to approach the said States with a view to ascertaining whether they accept the proposals made by one of these States for effecting such a measure. The Government of His Britannic Majesty will make known to the Contracting States the result of the enquiries which it thus makes.

A State from which observations on the proposals in question reach His Britannic Majesty's Government within six months from the communication of these proposals, will be presumed to acquiesce therein.
INTERNATIONAL CONVENTION

4 GEORGE V., A. 1914

 ARTICLE 74.

This Convention may be modified at subsequent Conferences, of which the first shall be held, if necessary in 1920. The time and place of these Conferences shall be fixed by common consent by the Governments of the High Contracting Parties.

The Governments may, through the diplomatic channel, introduce into this Convention, by common consent and at any time, improvements which may be judged useful or necessary.

SAFETY OF NAVIGATION.

Article 1.

REGULATIONS.

CODE FOR REPORTING INFORMATION RELATING TO ICE, DERELICTS, AND WEATHER BY RADIO TELEGRAPHY.

INSTRUCTIONS.

Reporting.—The reporting of information concerning ice and derelicts is compulsory. This information may be sent from ship to ship or to the Hydrographic Office, Washington, either in full or by means of Part I of this Code.

The reporting of information relating to weather is voluntary. Part II of this Code may be used for this purpose. The Code may be modified at any time by the Meteorological Congresses.

The information required:

Part I.—Ice and Derelicts.

1. The kind of ice or derelict observed.
2. The position of ice or derelict when last determined.

Part II.—Meteorological Information.

1. The direction and force of the wind.
2. The set and velocity of the current.
3. Weather or state of the sky at a fixed hour.
4. Height of barometer and air temperature.
5. Barometric tendency and sea-surface temperature.

The time to be adopted:

The time adopted in sending messages relating to ice or derelicts should be Greenwich mean time.

The Address:

Reports, when sent to the Hydrographic Office, Washington, should be addressed “Hydrographic”; reports to the Meteorological Office, London, should be addressed “Meteorology.”
The Message:

1. When sending information about ice or derelicts alone, two groups of five figures each are used, preceded by the word "ice"; these groups may be repeated as often as desired.

2. If meteorological information is to be sent in addition, a further four groups of five figures each are used, preceded by the word "weather." These groups are inserted at the end of the message after all the information relating to ice has been given.

N.B.—If the message contains the word "weather," all the code groups before that word give information relating to ice, and those after the word "weather" give meteorological information. If there is no word "weather" in the message, it only contains information about ice. See examples of the two kinds of message given in this Article.

PART I.

ICE AND DERELICTS.

Information respecting ice and derelicts is given by ten figures divided into two groups of five figures each. These groups are preceded by the word "ice."

Two figures... The day of the month (dd), according to Code I.

One figure... The time of observation (T), according to Code II.

One figure... The kind of ice observed (I), according to Code III.

Three figures... The latitude of the ice observed (ppp) correct to tenths of a degree (see table below).

Three figures... The longitude of the ice observed (p' p' p'') correct to tenths of a degree (see table below).

The first group consists of ddTIp.
The Second group consists of ppp' p' p'.

Codes.

Code I.—Day of the Month.

The day of the month is given by two figures, of which the first may be zero: 01 to 31.

Code II.—Time of Observation.

The time of observation is included between—

<table>
<thead>
<tr>
<th>Greenwich Mean Time</th>
<th>Code No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 a.m. and 4 a.m.</td>
<td>1</td>
</tr>
<tr>
<td>4 a.m. and 7 a.m.</td>
<td>2</td>
</tr>
<tr>
<td>7 a.m. and 10 a.m.</td>
<td>3</td>
</tr>
<tr>
<td>10 a.m. and 1 p.m.</td>
<td>4</td>
</tr>
<tr>
<td>1 p.m. and 4 p.m.</td>
<td>5</td>
</tr>
<tr>
<td>4 p.m. and 7 p.m.</td>
<td>6</td>
</tr>
<tr>
<td>7 p.m. and 10 p.m.</td>
<td>7</td>
</tr>
<tr>
<td>10 p.m. and 1 a.m.</td>
<td>8</td>
</tr>
</tbody>
</table>
Code III.—Nature of Ice or Derelict observed.

0. No ice observed.
2. Several icebergs.
3. Numerous icebergs.
4. Floeberg. Thick piece of salt-water ice like a small iceberg.
5. Field ice. Navigable flat ice, extending as far as the eye can reach.
6. Pack ice. Collection of pieces of ice broken from berg or floe, partly closed together.
7. Land ice. Ice attached to the shore since the winter.
8. Derelict.
9. (Not allotted.)

Example:

<table>
<thead>
<tr>
<th>Message sent from Ship to Ship.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date of observation...........</td>
</tr>
<tr>
<td>Time of observation...........</td>
</tr>
<tr>
<td>Nature of ice or derelict.....</td>
</tr>
<tr>
<td>Position of ice or derelict...</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

The code of the above message would thus be:

S.S. to S.S.
Ice, 15454, 57462: 15634, 61447: 15784, 64440: 16214, 73402.

PART II.

Meteorological Information.

Information respecting weather, &c., is given by four groups of five figures each. These groups are preceded by the word “weather.”

First Group (DDPPP):
The day of the month: two figures (DD), according to Code I.
The position of the ship when transmitting the message, indicated by three figures (PPP), representing the 1° squares in which the ship is situated, according to Code IV and the numbered chart.

Second Group (WWCCX):
Wind direction and force at 8 a.m. at the 75th meridian of west longitude: two figures (WW), according to Code V.
Set and velocity of current: two figures (CC), according to Code VI.
Weather or state of the sky at the same hour: one figure (X), according to Code VII.
Third Group (BBBAA):
Corrected reading of the barometer to tenths of a millimetre at 8 A.M. at the 75th meridian of west longitude: three figures (BBB), according to Code VIII.

Air temperature at the same hour: two figures (AA), according to Code IX.

Fourth Group (bbSSS):
Barometric tendency at 8 A.M. at the 75th meridian of west longitude: two figures (bb), according to Code X.

Sea surface temperature at the same hour: three figures (SSS), according to Code XI.

Codes.

Code IV. Position of Ship.

The chart annexed to this Article gives the numbers to be assigned to each degree square in the North Atlantic. The position of the ship, when the meteorological data given in Part II were observed, is indicated by the three figures representing the 1° square in which the ship is situated. For example:—A position 51° 55' N., 26° 49' W. would be reported as 561.

Code V.

Wind Direction (to 16 points) and Wind Force at 8 A.M. mean time at the 75th meridian of west longitude (WW).

N.B.—The current is to be referred to true bearings.
Code VII.

The State of the Sky at 8 A.M. mean time at the 75th meridian of west longitude:

0. Sky quite clear.
1. Sky quarter clouded.
2. Sky half clouded.
5. Rain falling.
6. Snow or hail falling.
7. Haze or mist.

Code VIII.—Height of Barometer.

The reading of the mercury barometer is to be corrected for index error, and reduced to 0° C. and sea level. A table of corrections is given below. The corrected reading is coded by omitting the first figure of the barometer reading in tenths of a millimetre; for example 761.2 mm. is coded as 612.

A table for converting hundredths of an inch to tenths of a millimetre is given below.

Code X.—Barometric Tendency.

By the "barometric tendency at a given hour" is meant the amount by which the barometer has changed during the preceding three hours. It is to be expressed in millimetres. For example, the barometric tendency at 8 A.M. could be obtained by comparing the reading taken at that hour, say 755.7 mm., with a reading taken at 5 A.M., say 759.3 mm. In this case the barometric tendency would be expressed by a fall of 3.6 millimetres. As a general rule the barometric tendency is to be determined from the trace of the barograph.
The barometric tendency is coded in two figures, according to the following table:

<table>
<thead>
<tr>

Code XI.—Sea Surface Temperature.

Sea surface temperature to tenths of a degree Centigrade, is coded by three figures, or, when necessary, by two figures preceded by zero. If the temperature is negative, the first of these three figures is 5.

For example:—

- 2.2° C. is coded as 522.
- + 1.0° C. " 010.  
- + 15.6° C " 156.
Table of Corrections for reducing Readings of Mercury Barometers to 0° C. and to Sea Level.

Note.—The barometric reading should first be corrected for index error. This error may be neglected if it is less than 0.3 mm. The + sign indicates that the correction is to be added to the barometric reading. The — sign indicates that the correction is to be subtracted.

| Temperature by the thermometer attached to the barometer. | 24.8°F. | 28.4°F. | 32°F. | 35.6°F. | 39.2°F. | 42.8°F. | 46.4°F. | 50°F. | 53.6°F. | 57.2°F. | 60.8°F. | 64.4°F. | 68°F. | 71.6°F. | 75.2°F. | 78.8°F. | 82.4°F. |

The Code of the above message sent to the Meteorological Office would thus be:

Meteorology: Ice; 21514, 46432, 22254, 30470; Weather; 21825, 26820, 65361, 02014; 22863, 55398, 53250, 56507. 129—3½
Article II.

SAFETY SIGNAL.

The radiotelegraph stations which have to transmit to ships information involving safety of navigation and being of an urgent character (icebergs, derelicts, cyclones, typhoons, sudden changes in the position or form of fixed obstructions or of landing marks) shall make use of the following signal, called the safety signal, repeated at short intervals ten times at full power:

— — — (T T T)

In principle, all wireless stations receiving the safety signal, shall, if the transmission of messages by them would interfere with the receipt by any other station of the safety signal and the following safety message, keep silence, in order to allow all interested stations to receive that message. This does not apply to cases of distress.

The safety message shall be transmitted one minute after the safety signal has been sent out, and shall be repeated thereafter three times at intervals of ten minutes.

The Governments of the Contracting States will select the stations which are to send out to mariners safety information of an urgent character.

When the information in question has been sent out by stations performing the time service, it shall be again sent out after the transmission of the time signal and the weather report.

Article III.

MORSE CODE.

INTERNATIONAL SIGNALS.

These signals may be made at night or in thick weather, either by long and short flashes of light, or by long and short sounds on a steam whistle, siren, fog-horn, &c., or during the day by flag waving.

1.—URGENT AND IMPORTANT SIGNALS.

You are standing into danger........................................... — — —
I want assistance; remain by me..................................... — — —
Have encountered ice.................................................. — — —
Your lights are out (or, want trimming)............................ — — —
The way is off my ship; you may feel your way past me........ — — —
Stop (or, heave to); I have something important to communicate. — — —
Am disabled; communicate with me.................................. — — —

4.—INSTRUCTIONS.

1. THE URGENT AND IMPORTANT SIGNALS may be made without the Preparative Signal being answered if it is supposed that the person addressed cannot reply, or in other special circumstances; but in this case a pause should be made between the Preparative Signal and the message.

2. THE SIGNAL — — — — (FF) is used previous to any letters which are intended to spell words.

3. THE SIGNAL — — — — — — (MMM) is used previous to any message sent by means of the International Code of Signals.

4. THE SIGNAL — — — — — (MM) means the Code Flag of the International Code of Signals, and is used as indicated in the Code Book.

5. THE BREAK SIGN is used between the address of the receiver and the text of the message, and after the message if the name of the sender is to be signalled.

6. THE STOP is used, where necessary, in the text of the signal.

7. THE ERASE is used to erase the last word or signal group, sent by mistake.

8. THE ANNUL is used to negative all the message.

9. METHOD OF ANSWERING. Each word or signal group, when understood, is to be answered by one long flash — — (T).

      If a word or signal group is not answered, the sender is to repeat it until answered by a long flash.

      At the end of the message, if understood, the receiver will make — — — — (RD).

      The Erase and Annul signs are to be answered by their own signs.

10. THE NATIONALITY SIGNAL is made immediately after the answer to the Preparatory Signal has been received, to indicate the nationality of the vessel making the signal. It is answered by the nationality signal of the vessel receiving the message.

Article IV.

A printed copy of the code of urgent and important signals shall be placed in a prominent position in the chart room of every ship.

CONSTRUCTION.

Article V.

Definitions.

The meaning of the Principal technical and other expressions contained in this Convention under the Title of Construction, and in these Regulations which are appended thereto, is as follows:

(1.) The load water line is that used in determining the sub-division of the vessel.

(2.) The length of the vessel is the extreme length at the load water line.

(3.) The breadth of the vessel is the extreme width from outside of frame to outside of frame at or below the load water line.
(4.) The bulkhead deck is the uppermost continuous deck to which all transverse water-tight bulkheads are carried.

(5.) The margin line is a line drawn parallel to the bulkhead deck at side line, and 76 millimetres (equivalent to three inches) below the upper surface of that deck at side.

(6.) The draught is the vertical distance from the top of keel amidships to the load water line.

(7.) The freeboard is the vertical distance from the load water line to the margin line amidships.

(8.) The depth of the vessel is the sum of the draught and freeboard as above defined.

(9.) The sheer of the bulkhead deck at any point is the vertical distance between the beam at side line at that point and a line drawn parallel to the load water line at the height of the beam at side line amidships.

(10.) If block coefficient of fineness of displacement to load water line is used, this coefficient shall be determined as follows:—

\[
\text{Volume of displacement to moulded lines} = \frac{\text{Length \times Breadth \times Draught}}{}.
\]

(11.) The permeability of a space is the percentage of that space which can be occupied by water.

The volume of a compartment which extends above the margin line shall be measured only to the height of that line. Volumes shall be understood as volumes to moulded lines.

(12.) The machinery space is to be taken as extending in length between the extreme main transverse watertight bulkheads bounding the spaces devoted to the main and auxiliary propelling machinery, including boilers when installed.

**Article VI.**

**Floodable Length.**

The floodable length at any point of the length of a vessel shall be determined taking into consideration form, draught, and other limiting characteristics of the vessel in question. This floodable length for a given point in a vessel with a continuous bulkhead deck is the maximum percentage of the length of the vessel (having its centre at the point in question) which can be flooded under the definite assumptions hereafter set forth in article VII without the ship being submerged beyond the margin line. In the case of vessels not having a continuous bulkhead deck, the floodable length must be such as to secure to the vessel in question, for each portion of its length, and for all conditions of trim after damage, a measure of safety at least equal in effectiveness to that laid down for the vessel with continuous bulkhead deck.

**Article VII.**

**Permeability.**

The definite assumptions referred to in article VI relate to the permeabilities of the spaces in question below the margin line. In determining the floodable length a uniform average permeability shall be used throughout the whole length of each of the three following portions of the vessel:—

(1.) The machinery space;

(2.) The portion forward of the machinery space; and

(3.) The portion abaft the machinery space.
SESSIONAL PAPER No. 129

For steam vessels the permeability of the machinery space, including the double bottom in wake thereof, shall be taken as eighty per cent. For vessels fitted with internal combustion engines the corresponding permeability shall be taken as eighty-five per cent, unless it is proved by actual calculation that a lower figure may be adopted, provided that in no case shall that figure be less than eighty per cent.

The permeabilities for space forward and aft of the machinery space shall be as follows:—

(a) Sixty per cent in cargo spaces, bunkers (permanent or reserve), store-rooms, baggage and mail rooms, chain-lockers, water-tight shaft or pipe tunnels, and fresh-water tanks above the double bottom. It must be proved that the spaces just enumerated are practicable for the purpose intended and that they are to be so used. Other spaces shall not be allowed to come under this section unless with the approval of the Administration.

(b) Ninety-five per cent in passenger and crew spaces, peaks, trimming-tanks exclusively so used, double bottoms, and all other spaces not specifically appropriated to one of the purposes indicated in the foregoing section. If in a 'tween deck space enclosed by complete transverse permanent steel bulkheads any portion thereof is appropriated to passengers, the whole of that space shall be regarded as passenger space; and, similarly, 'tween deck spaces appropriated for the carriage of either passengers or cargo shall be regarded as passenger spaces.

Where the spaces before or abaft the machinery space below the margin line consist partly of spaces mentioned in section (a) and partly of spaces mentioned in section (b), the average percentage of permeability shall be determined separately for each end from the formula 95—35 $r$, where $r$ is the ratio between the volume of the spaces mentioned in section (a) and the total volume of the space in the portion of the ship under consideration.

Article VIII.

Permissible Length of Compartments.

(1.) The maximum permissible length of one compartment having its centre at any point in the vessel's length is obtained from the floodable length (article VI) by multiplying that length by an appropriate factor, called the factor of sub-division.

(2.) This factor of sub-division depends on the length of the ship, and, for a given length, varies according to the nature of the service for which the ship is intended. This factor decreases in a regular and continuous manner—

(a) As the length of vessel increases; and

(b) As, for a given length, the vessel departs from the type of vessel engaged in a mixed cargo and passenger service, and approaches to the type of vessel primarily engaged in the transportation of passengers.

(3.) For each of the two types of vessels referred to in the previous paragraph (2) (b) the variation of the factor of sub-division may be expressed by a curve, of which the co-ordinates represent the length of the vessel and the value of the factor. The following table gives certain points on two curves the higher of which corresponds to the minimum requirements for the "mixed" type, and the lower to the minimum requirements for the "passenger" type.
Column (A) gives the maximum permissible values of the factor of subdivision for the length of vessels given in Columns (B) and (C).

Column (B) is applicable to vessels engaged in a mixed cargo and passenger service.

Column (C) is applicable to vessels primarily engaged in the transportation of passengers.

(4.) For a given length, the value of the factor of subdivision appropriate to a vessel between the two extreme limits will be between the values of the factors determined by the two curves before mentioned, and will be automatically fixed by a “criterion of service” which is to form the subject of further study.

**ARTICLE IX.**

(1.) When the factor of subdivision is equal to or less than .5, it may be doubled in order to give at any point of the vessel’s length the total length of two adjacent compartments; but, in that case, the length of the shorter compartment of any pair shall not be less than one-quarter of the total length so obtained. If one of the two adjacent compartments is situated inside the machinery space and the second is situated outside the machinery space, and the average permeability of the portion of the ship in which the second is situated differs from eighty per cent, the length of the pair of compartments shall be adjusted to the proper value by applying a suitable correction.

(2.) In no case whatever shall the length of any watertight compartment exceed 28 metres (equivalent to 92 feet).

(3.) When the factor of subdivision applicable to any vessel is less than .84, but more than .5, the combined length of the two foremost compartments shall not exceed the floodable length at the extreme forward end, provided also that the length of the second compartment is not greater than that permissible by Article VIII and not less than 3 metres (equivalent to 10 feet).

(4.) When the length of the vessel is more than 213 metres (equivalent to 699 feet) but less than 251 metres (equivalent to 823 feet) the floodable length at the forward end of the vessel shall be at least 20 per cent of the vessel’s length; and the vessel, forward of a bulkhead placed either at the distance of the actual floodable length abaft the stem or not nearer to the stem than 20 per cent of the vessel’s length, shall be divided into at least three compartments.

(5.) When the length of the vessel is equal to or greater than 251 metres (equivalent to 823 feet) the same method shall be adopted, but the floodable length shall be at least 28 per cent and the number of compartments at least four.

(6.) A bulkhead may be recessed transversely, provided the sides of the recess are at a sufficient distance from the sides of the vessel. Vertical steps are
inadmissible in the main transverse watertight bulkheads of vessels to which the sub-division rules of Article VIII apply where the factor of subdivision is greater than .5, unless such arrangements are made by additional sub-division as shall maintain the same measure of safety as that secured by bulkheads without steps. The total length of the steps in any bulkhead shall not exceed 2 per cent of the vessel's length, plus 3 metres (equivalent to 10 feet).

(7.) The existence of recesses or steps in a bulkhead shall in no case affect the permissible volumes of the compartments adjacent to such bulkhead, as determined by this and the preceding article.

**Article X.**

If the degree of safety of a vessel is greater than that prescribed by articles VIII and IX above, and if the owner requests that this fact be recorded on the Safety Certificate, in accordance with clause 4 of Article 17 of the Convention, this request shall be accompanied with all the data necessary to justify this claim.

In such case, the record shall state the fact that the subdivision is equal or superior to that provided for a vessel of equal length in Column (C) of the Table in article VIII, with an additional statement giving the length of the vessel in Column (C) whose factor of subdivision according to the rules would be exactly equal to that employed in determining the subdivision of the vessel in question.

Values of length and factors for lengths not specifically stated in Columns (C) and (A) respectively of the Table in Article VIII shall be obtained by interpolation.

**Article XI.**

*Peak and Machinery Space Bulkheads.*

A forepeak bulkhead shall be fitted in all vessels to extend to the bulkhead deck, and to the weather deck in ships having continuous super-structures. This bulkhead shall be placed at a distance of not less than 5 per cent of the vessel's length from the stem at the load water-line. An afterpeak bulkhead and bulkheads dividing the machinery space from the cargo and passenger spaces shall also be fitted and carried up to the bulkhead deck. The afterpeak bulkhead may, however, be stopped below the bulkhead deck, provided that it shall at least be carried to the first deck above the load water-line, and a watertight flat shall be fitted from the afterpeak bulkhead to the stern on the level of the deck at which it stops, and also provided that the degree of safety of the vessel as regards sub-division is maintained.

**Article XII.**

*Fireproof Bulkheads.*

In portions of a vessel above the margin line there shall be fitted fireproof bulkheads which will serve to retard the spread of fire. The mean distance between any two consecutive bulkheads of this description shall not be greater than 40 metres (equivalent to 131 feet). Recesses in these bulkheads shall be made fireproof, and the openings in these bulkheads shall be closed by fireproof doors.

**Article XIII.**

*Exits from Watertight Compartments.*

(1.) In passenger and crew spaces a practicable means of escape for the occupants shall be provided from each watertight compartment.

(2.) There shall be a means of escape for the crew from each engine room, shaft tunnel and stokehold compartment independent of the watertight doors.
Article XIV.

Construction and Initial Testing of Watertight Bulkheads.

(1.) Watertight bulkheads shall be constructed in such a manner that they shall be capable of supporting, with a proper margin of resistance, the pressure due to a head of water up to the margin line.

(2.) Steps and recesses in bulkheads shall be as watertight and as strong as the bulkhead at the place where each occurs. Where frames or beams pass through a watertight deck or bulkhead, the watertightness shall be obtained by caulked angle chocks, or cast iron or steel chocks efficiently secured and rust-jointed, and not by wood or cement.

(3.) Testing main compartments by filling them with water is not compulsory. A complete examination of all bulkheads shall be made by a surveyor; and, in addition, a hose test shall be made in all cases.

(4.) The foremost and aftermost compartments shall be tested with water to a head up to the margin line. Double bottoms, deep tanks, and all compartments intended to hold liquids shall be tested with water at least to a head 2.44 metres (eight feet) above the top of the tank or to the load water line, whichever is the greater.

(5.) No change shall be made in the structure of the bulkheads after the completion of the survey unless with the permission of the Administration.

(6.) All regulations made for main transverse watertight bulkheads shall apply to longitudinal bulkheads, so far as is practicable.

Article XV.

Openings in Watertight Bulkheads.

(1.) The openings in watertight bulkheads shall be reduced to the smallest number compatible with the design and proper working of the vessel, and satisfactory means shall be provided for closing them.

(2.) No doors, sluice valves, manholes, or access openings are permitted—

(a.) In the collision bulkhead below the margin line.

(b.) In watertight transverse bulkheads separating two cargo spaces from one another, or a cargo space from a reserve bunker, except as provided in paragraph (6) of this article.

(3.) In the machinery space and apart from bunker and shaft-tunnel doors, not more than one door may be fitted in each main transverse bulkhead within the machinery space for intercommunication, but where more than one separate shaft tunnel is fitted a door may be cut for each tunnel. If a tunnel is fitted forward either for the purpose of pipes or as a communication passage it must be fitted with a watertight door.

(4.) The only types of watertight doors permissible are hinged doors, sliding doors, and doors of any other equivalent pattern, excluding plate doors secured only by bolts. A hinged door shall be fitted with lever-operated catches workable from each side of the bulkhead. A sliding door may have a horizontal or vertical motion. If hand-operated only, it shall be fitted for operation at the door itself and also from an accessible position above the margin line. If operated by power it shall be fitted for operation by power from the bridge, and by hand at the door itself and from an accessible position above the margin line. A door dropping by its own weight, and fitted with a cataract cylinder or equivalent arrangement, may be considered as being operated by power, if capable of being released from the bridge.
(5.) In the case of watertight bunker doors, satisfactory arrangements shall be made by means of screens or otherwise, to prevent the coal from interfering with the closing of the doors.

(6.) Hinged watertight doors in passenger, crew, and working spaces are only permitted above a deck, the under side of which, at its lowest point at side, is at least 2.13 metres (7 feet) above the load water line, and they are not permitted in such spaces below that deck. Hinged watertight doors of especially heavy design may be fitted above the load water line in bulkheads between cargo 'tween-deck spaces, provided they are closed before the voyage commences, and are kept closed while at sea by efficient closing gear. None of these doors shall be fitted, even at the ends of the vessel, in a cargo 'tween-deck space in the amidship region of which 'tween-deck space it is not permissible to fit such doors.

(7.) All other watertight doors shall be sliding doors.

(8.)—(a.) When the number of watertight doors in the main transverse watertight bulkheads at or about the stokehold level in the machinery space exceeds five, excluding the watertight doors at the entrances of tunnels, all watertight doors situated below the load water line shall be capable of being simultaneously closed from a station situated on the bridge, and their opening and closing shall be indicated at that station. The simultaneous closing of these doors shall be preceded by a warning sound signal.

(b.) If watertight doors which have sometimes to be open at sea for the purpose of trimming coal are fitted between bunkers in the 'tween decks below the bulkhead deck, these shall be operated by power. The opening and closing of these doors shall be recorded in the official log.

(c.) When trunkways in connection with refrigerated cargo are carried through more than one main transverse watertight bulkhead, and the sills of the openings are less than 2.13 metres (7 feet) above the load water line, the watertight doors at such openings shall be operated by power.

(9.) Portable plates on bulkheads shall not be permitted except in machinery spaces. Such plates shall always be in place before the vessel proceeds to sea, and shall not be removed at sea except in case of urgent necessity. The greatest care shall be taken in replacing them to ensure that the joint shall be perfectly watertight.

(10.) All watertight doors shall be kept closed at sea except when necessarily opened for the working of the vessel, and shall always be ready to be immediately closed.

(11.) If trunkways for forced draught, for access from crew's accommodation to the stokehold or for any other purpose, are carried through the main transverse watertight bulkheads, the integrity of the watertight bulkheads shall be maintained by watertight doors or other equally effective means.

(12.) Where electric-light cables, pipes, &c., are carried through transverse watertight bulkheads below the margin line, arrangements shall be made to ensure the integrity of the watertightness of the bulkheads.

(13.) Sluice valves in watertight bulkheads shall be reduced to the smallest number possible, and shall not be allowed except in positions where they are sufficiently accessible at all times to allow of its being ascertained that they are in good order. They shall be strongly constructed, efficiently fitted, and regularly inspected. Satisfactory provision shall be made for operating them from an accessible position above the margin line. Means shall be provided for indicating when they are open or shut.
Article XVI.

Openings in Ship's Side.

(1.) (a.) Subject to clause (b) below, when side scuttles are fitted below a deck the under side of which at its lowest point at side is less than 2.13 metres (7 feet) above the load water line, they shall be permanently fixed.

(b.) Side scuttles which are capable of being opened may be fitted in the positions defined in clause (a), provided that—
they shall be closed watertight and locked before the vessel proceeds to sea;
they shall not be opened while the vessel is at sea;
the time of opening such scuttles in port and of closing and locking them before the vessel proceeds to sea shall be entered in the official log;
the construction of such scuttles shall be such as to effectually prevent any person opening them without the consent of the master.

(c.) Glass lights in scuttles, when fitted in the positions defined in clause (a), shall be provided with efficient metal shutters.

(2.) In 'tween decks above the deck mentioned in paragraph (1) (a) of this article, opening side scuttles may be fitted except in spaces exclusively devoted to the carriage of cargo or coal.

(3.) No side scuttles shall be fitted in any spaces which are exclusively devoted to the carriage of cargo or coal.

(4.) All side scuttles which are not accessible while at sea shall be fitted with efficient metal covers and both the glass and the cover shall be kept closed while at sea.

(5.) No automatic ventilating scuttles shall be permitted in the ship's side below the margin line.

(6.) All inlets and discharges in the side shall be arranged so as to prevent the accidental admission of water into the ship.

(7.) The number of scuppers, sanitary discharges, and other similar openings in the side shall be reduced to the smallest number possible, either by making each discharge serve for as many as possible of the sanitary and other pipes or in any other satisfactory manner.

(8.) Discharges led through the ship's skin from spaces below the margin line shall be fitted with efficient and accessible means to prevent water from passing inwards. It is permissible to have either one valve, fitted with a means of working it at a distance, or two valves without such gear, one of them being always accessible. In either case, the accessibility of the valves or of the means of working shall be assured by their being situated not lower than the deck referred to paragraph (1) (a) of this article.

(9.) Gangway, cargo, and coaling ports shall not be fitted below the load water line. None of these ports shall be fitted, even towards the ends of the vessel, in a space below the lowest 'tween deck space in the amidship region of which it is permissible to fit such ports.

(10.) Gangway, cargo, and coaling ports in the vessel's side below the margin line shall be effectively closed and made secure before the vessel puts to sea, and kept closed during the navigation of the ship.

(11.) The inboard openings of ash-shoots, rubbish-shoots, &c., shall not be lower than the deck referred to in paragraph (1) (a) of this article. They may be permitted above this level if fitted, to the satisfaction of the Administration, with efficient covers, which shall be watertight if below the margin line. Such covers shall be so arranged as to prevent their being clogged in any way, and shall be at least as easily and effectively closed as watertight doors and side scuttles.
Article XVII.

Construction and Tests of Watertight Doors, Side Scuttles, &c.

(1.) The design and the materials used in the construction of watertight doors, side scuttles, coaling, cargo, and gangway ports, valves, pipes, ash and rubbish shoots shall be to the satisfaction of the Administration.

(2.) Watertight doors shall be tested by a water pressure corresponding to the head prescribed for the bulkhead where the doors are located. The test shall be made before the vessel is put in service, and either before or after the door is fitted.

Article XVIII.

Construction and Initial Tests of Watertight Decks, Trunks, &c.

(1.) Watertight decks, trunks, and ventilators shall be of the same strength as the bulkhead at the place where they occur. The means used for making them watertight and the arrangements adopted for closing the various openings in them shall be satisfactory to the Administration. If watertight covers are used for closing these openings, they shall be fitted before the vessel goes to sea, and kept closed while the vessel is at sea.

(2.) A hose or flooding test shall be applied to watertight decks and a hose test to watertight trunks after completion. Watertight ventilators and trunks shall be carried to at least the margin line.

(3.) No change shall be made in the structure of watertight decks, trunks and ventilators after the completion of the survey unless with the permission of the Administration.

Article XIX.

Periodical Operation and Inspection of Watertight Doors, &c.

In all vessels defined in Article 2 of the Convention, drills for the operating of watertight doors, side scuttles, valves, and closing mechanisms of scuppers, ash-shoots and rubbish-shoots, shall take place periodically during the voyage. A complete drill shall take place before leaving port, a second as soon as practicable after leaving port, and others thereafter at least once a week during the voyage. Provided that all watertight power doors and hinged doors in main transverse bulkheads in use at sea shall be operated daily.

The watertight door system and all mechanisms and indicators connected therewith, and all valves the closing of which is necessary to maintain the watertightness of the compartment, shall be periodically inspected at sea at least once a week.

Article XX.

Entries in Official Log.

In all vessels defined in Article 2 of the Convention, hinged doors, portable plates, coaling, cargo and gangway ports, side scuttles, and other openings, which are required by the preceding rules to be kept closed while at sea, shall be closed before the vessel puts to sea. The time for closing, and time of opening (if permissible under these Regulations), shall be recorded in the official log.

A record of all drills and inspections required by Article XIX shall be entered in the official log, with an explicit record of any defects.
Article XXI.

Double Bottoms.

(1.) In vessels 61 metres (equivalent to 200 feet) and under 76 metres (equivalent to 249 feet) in length, a double bottom shall be fitted at least from the machinery space to the forepeak bulkhead, or as near thereto as practicable.

(2.) In vessels 76 metres (equivalent to 249 feet) and under 91.5 metres (equivalent to 300 feet) in length, a double bottom shall be fitted at least outside of the machinery space and shall extend to the fore and after peak bulkheads respectively, or as near thereto as practicable.

(3.) In vessels 91.5 metres (equivalent to 300 feet) and over in length, a double bottom shall be fitted amidship and shall extend to the fore and after peak bulkheads respectively, or as near thereto as practicable.

(4.) In vessels over 91.5 metres (equivalent to 300 feet) in length, the inner bottom shall be continued out to the ship's side in such manner as to protect the bilges.

(5.) In vessels over 213 metres (equivalent to 699 feet) in length, the double bottom, for at least half the vessel's length amidships and forward to the forepeak bulkhead, shall extend up the vessel's sides to a height above the top of the keel not less than 10 per cent of the vessel's moulded breadth.

(6.) Wells constructed in the double bottom in connection with drainage arrangements shall not be extended downwards from the inner bottom more than half the depth of the double bottom at that point. A well extending to the outer skin is, however, permitted at the after end of the shaft tunnels of screw vessels.

Article XXII.

Backing Power.

Vessels shall have sufficient backing power in order to secure proper control of the vessel under all conditions of navigability.

Article XXIII.

Auxiliary Steering Apparatus.

Vessels shall be provided with an auxiliary steering apparatus, which, however, may be of less power than the main apparatus, and need not be worked by steam or other mechanical power.

Article XXIV.

Initial and Subsequent Surveys of Vessels.

All vessels defined in Article 2 of the Convention shall be subjected at least to the following surveys, as specified in detail in Article XXV below:

(A) Before the vessel is put in service;

(B) Once each year; and

(C) Between the annual surveys, if required.
SESSIONAL PAPER No. 129

Article XXV.

The surveys referred to in the previous article shall be carried out as follows—

(A) The survey before the vessel is put in service shall include a complete inspection of the hull, machinery, and equipments, including the outside of the vessel's bottom, and the inside and outside of the boilers. The survey shall be such as to ensure that the arrangements, material, and scantlings of the hull, boilers, and their appurtenances, main and auxiliary machinery, life-saving appliances and other equipments, fully comply with the requirements of this Convention and of the detailed rules and regulations promulgated by the Government of the country to which the vessel belongs for vessels of the service in which she will be employed. The survey shall also be such as to ensure that the workmanship of all parts of the vessel and her equipments is in all respects satisfactory.

(B) The annual survey shall include an inspection of the whole of the hull, boilers, machinery, and equipments, including the outside of the vessel's bottom. The survey shall be such as to ensure that the vessel, as regards the hull, boilers, and their appurtenances, main and auxiliary machinery, life-saving appliances, and other equipments, is in satisfactory condition for the service in which she will be employed, and that she complies in all respects with the requirements of this Convention, and of the detailed rules and regulations promulgated as a result thereof by the Government of the country to which the vessel belongs.

(C) A survey or inspection, either general or partial, according to the circumstances, shall be made when any accident occurs or defect arises which affects the safety of the vessel or the efficiency or completeness of her life-saving appliances or other equipment, or when any important repairs or renewals are made; and the survey or inspection shall be such as to secure that the necessary repairs or renewals have been effectively made, that the material and workmanship of such repairs or renewals are in all respects satisfactory, and that the vessel complies in all respects with the requirements of this Convention and of the detailed rules and regulations promulgated as a result thereof by the Government of the country to which the vessel belongs.

Article XXVI.

The detailed rules and regulations referred to in Article XXV shall prescribe the requirements to be observed as to the initial and subsequent hydraulic tests to which the main and auxiliary boilers, connections, steam-pipes, reservoirs which are subjected to high pressure, and fuel tanks for oil motors are to be submitted, as regards the test pressure to be applied, and the intervals between the tests.

Main and auxiliary boilers, connections, tanks, reservoirs, and steam-piping more than 102 millimetres (four inches) in diameter shall be satisfactorily tested by hydraulic pressure when new and thereafter at fixed intervals.

The initial and subsequent test pressures of the boilers shall not be less than one-and-a-half times the working pressure, or five atmospheres above the working pressure, whichever is the less. If the initial test pressure does not exceed five atmospheres above the working pressure, the interval between the subsequent tests shall not exceed two years. With a higher initial test pressure, the interval may be increased, and if the initial test pressure is double the working pressure, the interval may be six years, but it shall in no case exceed that period.
LIFE SAVING APPLIANCES AND FIRE PROTECTION:

ARTICLE XXVII.

Standard Types of Boats.

The standard types of boats are classified as follows:

<table>
<thead>
<tr>
<th>Class</th>
<th>Section</th>
<th>Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>A</td>
<td>Open. Internal buoyancy only.</td>
</tr>
<tr>
<td></td>
<td>B</td>
<td>Open. Internal and external buoyancy.</td>
</tr>
<tr>
<td></td>
<td>C</td>
<td>Pontoon. Well deck; fixed watertight bulwarks.</td>
</tr>
<tr>
<td>II</td>
<td>A</td>
<td>Open. Upper part of sides collapsible.</td>
</tr>
<tr>
<td></td>
<td>B</td>
<td>Pontoon. Well deck; collapsible watertight bulwarks.</td>
</tr>
<tr>
<td></td>
<td>C</td>
<td>Pontoon. Flush deck; collapsible watertight bulwarks.</td>
</tr>
</tbody>
</table>

Motor boats may be accepted if they comply with the requirements laid down for boats of the first class, but only to a limited number, which number shall be determined by each Government in its own regulations.

No boat may be approved the buoyancy of which depends upon the previous adjustment of one of the principal parts of the hull, or which has not a cubic capacity of at least 3.5 cubic metres (equivalent to 125 cubic feet).

ARTICLE XVIII.

Boats of the First Class.

The standard types of boats of the first class must satisfy the following conditions:

1A. Open boats with internal buoyancy only.

The buoyancy of a wooden boat of this type shall be provided in the form of watertight air-cases, the total volume of which shall be at least equal to one-tenth of the cubic capacity of the boat.

The buoyancy of a metal boat of this type shall not be less than that required above for a wooden boat of the same cubic capacity, the volume of watertight air-cases being increased accordingly.

1B. Open boats with internal and external buoyancy.

The internal buoyancy of a wooden boat of this type shall be provided by watertight air-cases, the total volume of which is at least equal to seven and a half per cent. of the cubic capacity of the boat.

The external buoyancy may be of cork or of any other equally efficient material, but such buoyancy shall not be secured by the use of rushes, cork shavings, loose granulated cork or any other granulated substance, or by any means dependent upon inflation by air.

If the buoyancy is of cork, its volume, for a wooden boat, shall not be less than thirty-three thousandths of the cubic capacity of the boat; if of any material
other than cork, its volume and distribution shall be such that the buoyancy and stability of the boat are not less than that of a similar boat provided with buoyancy of cork.

The buoyancy of a metal boat shall be not less than that required above for a wooden boat of the same cubic capacity, the volume of air-cases and external buoyancy being increased accordingly.

1C. Pontoon boats, in which persons cannot be accommodated below the deck, having a well deck and fixed watertight bulwarks.

The area of the well deck of a boat of this type shall be at least 30 per cent of the total deck area. The height of the well deck above the water line at all points shall be at least equal to one-half per cent of the length of the boat, this height being increased to one and a half per cent of the length of the boat at the ends of the well.

The freeboard of a boat of this type shall be such as to give a reserve buoyancy of at least thirty-five per cent.

Article XXIX.

Boats of Second Class.

The standard types of boats of the second class must satisfy the following conditions:

2A. Open boats having the upper part of the sides collapsible.

A boat of this type shall be fitted with watertight air-cases and external buoyancy, the volume of which, for each person which the boat is able to accommodate, shall be at least equal to the following amounts:

<table>
<thead>
<tr>
<th>Cubic Decimeters</th>
<th>Square Feet</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air cases</td>
<td>43</td>
</tr>
<tr>
<td>External Buoyancy (if of cork)</td>
<td>6</td>
</tr>
</tbody>
</table>

The minimum freeboard of boats of this type varies in accordance with their length; it is measured vertically to the top of the solid hull at the side amidships, from the water level when the boat is loaded.

The freeboard in fresh water shall not be less than the following amounts:

<table>
<thead>
<tr>
<th>Length of the Boat</th>
<th>Minimum Freeboard</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metres.</td>
<td>Equivalent in feet to</td>
</tr>
<tr>
<td>7-99</td>
<td>26</td>
</tr>
<tr>
<td>8-50</td>
<td>28</td>
</tr>
<tr>
<td>9-15</td>
<td>30</td>
</tr>
</tbody>
</table>

The freeboard of the boats of intermediate lengths is to be found by interpolation.

129—4\(\frac{1}{2}\)
2B. Pontoon boats having a well deck and collapsible bulwarks.

All the conditions laid down for boats of type 1C are to be applied to boats of this type, which differ from those of type 1C only in regard to the bulwarks.

2C. Pontoon boats, in which the persons cannot be accommodated below deck, having a flush deck and collapsible bulwarks.

The minimum freeboard of boats of this type is independent of their lengths and depends only upon their depth. The depth of the boat is to be measured vertically from the underside of the garboard-strake to the top of the deck on the side amidships and the freeboard is to be measured from the top of the deck at the side amidships to the water line when the boat is loaded.

The freeboard in fresh water shall not be less than that given in the following table, which shall be applied without correction to boats having a mean sheer equal to three per cent of their length:

<table>
<thead>
<tr>
<th>Depth of Boat</th>
<th>Minimum Freeboard</th>
</tr>
</thead>
<tbody>
<tr>
<td>310</td>
<td>12</td>
</tr>
<tr>
<td>460</td>
<td>15</td>
</tr>
<tr>
<td>610</td>
<td>20</td>
</tr>
<tr>
<td>760</td>
<td>30</td>
</tr>
</tbody>
</table>

For intermediate depths the freeboard is obtained by interpolation.

If the sheer is less than the standard sheer defined above, the minimum freeboard is obtained by adding to the figures in the table one-seventh of the difference between the standard sheer and the actual mean sheer measured at the stem and stern post; no deduction is to be made from the freeboard on account of the sheer being greater than the standard sheer or on account of the camber of the deck.

Article XXX.

Motor Boats.

When motor boats are accepted, the volume of internal buoyancy and, when fitted, the external buoyancy, must be increased in accordance with the difference between the weight of the machinery and the weight of the additional persons which the boat could accommodate if the machinery were removed.

Article XXXI.

Arrangements for clearing Pontoon Lifeboats of Water.

All pontoon lifeboats shall be fitted with efficient means for quickly clearing the deck of water. The orifices for this purpose shall be such that the water cannot enter the boat through them when they are intermittently submerged. The number and size of the orifices shall be determined for each type of boat by a special test.
SESSIONAL PAPER No. 129

For the purpose of this test the pontoon boat shall be loaded with iron weights equal to all the persons the boat is deemed fit to carry and the weight of the equipment.

In the case of a boat 8.5 metres in length (equivalent to 28 feet) two tons of water shall be cleared from the boat in a time not exceeding the following:

<table>
<thead>
<tr>
<th>Type</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>1C</td>
<td>.60 seconds</td>
</tr>
<tr>
<td>2B</td>
<td>.60 &quot;</td>
</tr>
<tr>
<td>2C</td>
<td>.20 &quot;</td>
</tr>
</tbody>
</table>

In the case of a boat having a length greater or less than 8.5 metres (equivalent to 28 feet) the weight of water to be cleared in the same time shall be, for each type, directly proportional to the length of the boat.

**Article XXXII.**

**Construction of Boats.**

Open lifeboats of the first class (types 1A and 1B) must have a mean sheer at least equal to four per cent of their length.

The air-cases of open boats of the first class shall be placed along the sides of the boat; they may also be placed at the ends of the boat, but not in the bottom of the boat.

Pontoon lifeboats may be built of wood or metal. If constructed of wood, they shall have the bottom and deck made of two thicknesses with textile material between; if of metal, they shall be divided into watertight compartments with means of access to each compartment.

All boats shall be fitted for the use of a steering oar.

**Article XXXIII.**

**Pontoon Rafts.**

No type of pontoon raft may be approved unless it satisfies the following conditions:

1. It should be reversible and fitted with bulwarks of wood, canvas or other suitable material on both sides. These bulwarks may be collapsible.
2. It should be of such size, strength and weight that it can be handled without mechanical appliances, and, if necessary, be thrown from the vessel's deck.
3. It should have not less than 85 cubic decimetres (equivalent to three cubic feet) of air-cases or equivalent buoyancy for each person whom it can accommodate.
4. It should have a deck area of not less than 3,720 square centimetres (equivalent to four square feet) for each person which it can accommodate and the platform should not be less than 15 centimetres (equivalent to six inches) above the water level when the raft is loaded.
5. The air-cases or equivalent buoyancy should be placed as near as possible to the sides of the raft.

**Article XXXIV.**

**Capacity of Boats and Pontoon Rafts.**

1. The number of persons which a boat of one of the standard types or a pontoon raft can accommodate is equal to the greatest whole number obtained
by dividing the capacity in cubic metres (or cubic feet), or the surface in square metres (or square feet), of the boat or of the raft by the standard unit of capacity, or unit of surface (according to circumstances), defined below for each type.

2. The cubic capacity in metres of a boat in which the number of persons is determined by the surface shall be assumed to be 0.283 time the number of persons which it is authorized to carry.

3. The standard units of capacity and surface are as follows:

<table>
<thead>
<tr>
<th>Unit of Capacity</th>
<th>Cubic Metres</th>
<th>Equivalent in Cubic feet</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open boats, Type 1A</td>
<td>0.283</td>
<td>10</td>
</tr>
<tr>
<td>Open boats, Type 1B</td>
<td>0.255</td>
<td>9</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Unit of Surface</th>
<th>Square Metres</th>
<th>Equivalent in Square Feet</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open boats, Type 2 A</td>
<td>0.325</td>
<td>3</td>
</tr>
<tr>
<td>Pontoon boats, Type 2 C</td>
<td>0.325</td>
<td>3</td>
</tr>
<tr>
<td>&quot; &quot; Type 1C</td>
<td>0.302</td>
<td>3</td>
</tr>
<tr>
<td>&quot; &quot; Type 2B</td>
<td>0.302</td>
<td>3</td>
</tr>
</tbody>
</table>

4. The Government of each High Contracting Party has the right to accept in place of the figure 0.302 (3), a smaller figure, if it is satisfied after trial that the number of persons for whom there is seating accommodation in the pontoon boat in question is greater than the number obtained by applying the above figure, provided always that the figure adopted in place of 0.302 may never be less than 0.279 (3).

The Government which accepts a lower figure in this way should communicate to the Governments of the other Contracting Parties particulars of the trial and drawings of the pontoon-boat in question.

**Article XXXV.**

Pontoon boats and pontoon rafts shall never be marked with a number of persons greater than that obtained in the manner specified in the present regulations.

This number shall be reduced:

1. When it is greater than the number of persons for which there is proper seating accommodation, this number being determined in such a way that the persons when seated do not interfere in any way with the use of the oars.

2. When, in the case of boats other than those of the first two sections of the first class, the freeboard when the boat is loaded is less than the freeboard laid down for each type respectively. In such circumstances the number shall be reduced until the freeboard when the boat is loaded is at least equal to the standard freeboard laid down above.

In boats for types 1C and 2B the raised part of the deck at the sides of the well may be regarded as affording seating accommodation.
ARTICLE XXXVI.

Equivalents for and Weight of the Persons.

In the tests for determining the number of persons which a boat or pontoon raft can accommodate each person shall be an adult person wearing a life-jacket.

In the verifications of the freeboard the pontoon-boats shall be loaded with a weight of at least 75 kilogrammes (165 lbs. for each adult person that the boat or pontoon raft is allowed to carry.

In all cases two children under 12 years of age shall be reckoned as one person.

ARTICLE XXXVII.

Cubic capacity of Boats of the First Section of the First Class.

1. The cubic capacity of an open boat of type 1A or 1B shall be determined by Stirling's (Simpson's) Rule or by any other method giving the same degree of accuracy. The capacity of a square-sterned boat shall be calculated as if the boat has a pointed stern.

2. For example, the capacity in cubic metres (or cubic feet) of a boat, calculated by the aid of Stirling's Rule may be considered as given by the following formula:

\[ \text{Capacity} = \frac{l}{12} \left(4A + 2B + 4C\right) \]

\( l \) being the length of the boat in metres (or feet) from the inside of the planking or plating at the stem to the corresponding point at the stern post; in the case of a boat with square stern the length is measured to the inside of the transom. \( A, B, C \) equal respectively the areas of the cross-sections at the quarter length forward, amidships, and the quarter length aft, which correspond to the three points obtained by dividing \( l \) into four equal parts. (The areas corresponding to the two ends of the boat are considered negligible.)

The areas \( A, B, C \) shall be deemed to be given in square metres (or square feet) by the successive application of the following formula to each of the three cross-sections:

\[ \text{Area} = \frac{h}{12} \left(a + 4b + 2c + 4d + e\right) \]

\( h \) being the depth measured in metres (or in feet) inside the planking or plating from the keel to the level of the gunwhale, or, in certain cases, to a lower level as determined hereafter.

\( a, b, c, d, e \) equal the horizontal breadths of the boat measured in metres (or in feet) at the upper and lower points of the depth and at the three points obtained by dividing \( h \) into four equal parts (\( a \) and \( e \) being the extreme points, and \( c \) the middle point, of \( h \)).

3. If the sheer of the gunwhale, measured at the two points situated at a quarter of the length of the boat from the ends, exceeds 1 per cent of the length of the boat, the depth employed in calculating the area of the cross-sections \( A \) or \( C \) shall be deemed to be the depth amidships plus 1 per cent of the length of the boat.

4. If the depth of the boat amidship exceeds 45 per cent. of the breadth, the depth employed in calculating the area of the amidship cross-section \( B \) shall be deemed to be equal to the latter figure, and the depth employed in calculating the areas of the quarter length sections \( A \) and \( C \) is obtained by increasing this
last figure by an amount equal to 1 per cent of the length of the boat, provided that in no case shall the depth employed in the calculation exceed the actual depths at these points.

5. If the depth of the boat is greater than 122 centimetres (equivalent to 4 feet) the number of persons given by the application of this rule shall be reduced in proportion to the ratio of that limit to the actual depth, until the boat has been tested afloat with that number of persons on board all wearing their life jackets.

6. Each Administration shall impose, by suitable formulae, a limit for the number of persons allowed in boats with very fine ends and in boats very full in form.

7. Each Administration reserves the right to assign to a boat a capacity equal to the product of the length, the breadth and the depth multiplied to 0.6 (if it is satisfied that this formula does not give a greater capacity than that obtained by the above method.) The dimensions shall then be measured in the following manner:

   Length: From the inter-section of the outside of the planking or plating with the stem to the corresponding point at the stern post or, in the case of a square sterned boat, to the after side of the transom.

   Breadth: From the outside of the planking at the point where the width of the boat is greatest.

   Depth: Amidships inside the planking from the keel to the level of the gunwhale. But the depth used in calculating the cubic capacity may not in any case exceed 45 per cent of the breadth.

In all cases the ship owner has the right to require that the cubic capacity of the boat shall be determined by exact measurement.

8. The cubic capacity of a motor-boat is obtained from the gross capacity by deducting a volume equal to that occupied by the machinery.

Article XXXVIII.

The area of the deck of pontoon boats and open boats of the Second Class.

1. The area of the deck of a pontoon boat of type 1c, 2b, or 2c shall be determined by the method indicated below or by any other method giving the same degree of accuracy. The same rule is to be applied in determining the area within the fixed bulwarks of a boat of type 2a.

2. For example, the surface in square metres (or square feet) of a boat may be deemed to be given by the following formula:

   \[ \text{Area} = \frac{l}{12} (2a + 1.5b + 4c + 1.5d + 2e). \]

\( l \) being the length in metres (or in feet) from the intersection of the outside of the planking or plating with the stem to the corresponding point at the stern post.

\( a, b, c, d, e \) equal the horizontal breadths in metres (or in feet) outside the planking at the points obtained by dividing \( l \) into four equal parts and subdividing the foremost and aftermost parts into two equal parts (\( a \) and \( c \) correspond to the extreme sub-divisions, \( e \) to the middle point of the length, and \( b \) and \( d \) to the intermediate points).
Article XXXIX.

Marking of Boats and Pontoon Rafts.

The dimensions of the boat, together with the number of persons which it is allowed to carry, shall be marked on it in clear permanent characters. These marks shall be specifically approved by the officers appointed to inspect the ship. Pontoon raft shall be marked with the number of persons in the same manner.

Article XL.

Equipment of Boats and Pontoon Rafts.

1. The normal equipment of every boat consists of:
   (a) A single banked complement of oars and two spare oars; one set and a half of those pins or crutches; a boat hook.
   (b) Two plugs for each plug-hole (plugs are not required when proper automatic valves are fitted); a bailer and a galvanised iron bucket.
   (c) A tiller or yoke and yoke lines.
   (d) Two hatchets.
   (e) A lamp filled with oil and trimmed.
   (f) A mast or masts with at least one good sail, and proper gear for each.
       (This does not apply to motor lifeboats.)
   (g) An efficient compass.
   Pontoon lifeboats should have no plug-hole, but should be provided with at least two bilge-pumps.

   In the case of a ship defined in Article 2 of the Convention, which carries passengers in the North Atlantic all the boats need not be equipped with masts, sails, and compasses, if the ship is provided with a radio-telegraph installation.

2. The normal equipment of every approved pontoon-raft consists of:
   (a) Four oars.
   (b) Five rowlocks.
   (c) A self-igniting lifebuoy light.

3. In addition every boat and pontoon-raft shall be equipped with:
   (a) A life-line securely becketted round the outside.
   (b) A sea-anchor.
   (c) A painter.
   (d) A vessel containing five litres (equivalent to one gallon) of vegetable or animal oil. The vessel shall be so constructed that the oil can be easily distributed on the water, so arranged that it can be attached to the sea-anchor.
   (e) A watertight receptacle containing one kilogram (equivalent to two pounds avoirdupois) of provisions for each person.
   (f) A watertight receptacle containing one litre (equivalent to one quart) for each person.
   (g) A number of self-igniting "red lights" and a watertight box of matches.

Article XLII.

Davits.

Each set of davits shall have a boat of the first class attached to it, provided that the number of open boats of the first class attached to davits shall not be less than the minimum number fixed by the Table which follows.

If it is neither practicable nor reasonable to place on a ship the minimum number of sets of davits required, the Government of the country to which the
ship belongs may authorise a smaller number of sets of davits to be fitted, provided always that this number shall never be less than the minimum number of open boats of the first class required by the rules.

If a large proportion of the persons on board are accommodated in boats whose length is greater than 15 metres (equivalent to 50 feet) a further reduction in the number of sets of davits may be allowed as a special concession, if the Administration concerned is satisfied that the arrangements are in all respects satisfactory.

In all cases in which a reduction on the minimum number of sets of davits required by the rules is allowed, the owner of the ship in question shall be required to prove, by a test made in the presence of a surveyor appointed by the Government, that all the boats can be efficiently launched in a minimum time.

The conditions of this test shall be as follows:
1. The ship is to be upright and in smooth water;
2. The time is the time required from the beginning of the removal of the boat covers, or any other operation necessary to prepare the boats for lowering, until the last boat or pontoon raft is afloat;
3. The number of men employed in the whole operation must not exceed the total number of boat hands that will be carried on the vessel under normal service conditions;
4. Each boat when being lowered must have on board at least two men and its full equipment as required by the rules.

The time allowed for putting all the boats into the water shall be fixed by a formula to be determined by the Government of each High Contracting Party, each Government undertaking to communicate its decision to the Governments of the other Contracting Parties.

Article XLII.

Additional Boats and Pontoon Rafts.

If the lifeboats attached to davits do not provide sufficient accommodation for all the persons on board, additional lifeboats of one of the standard types shall be provided. This addition shall bring the total capacity of the boats on the ship at least up to the greater of the two following amounts:
(a) The minimum capacity required by the present Regulations;
(b) A capacity sufficient to accommodate seventy-five per cent of the persons on board.

The remainder of the accommodation required shall be provided either in boats of Class 1 or 2, or in pontoon rafts of an approved type.

Article XLIII.

Minimum Number of Davits and of Open Boats of the First Class.—Minimum Boat Capacity.

The following table fixes, according to the length of the ship:
(a) The minimum number of sets of davits to be provided, to each of which must be attached a boat of the first class in accordance with Chapter VI, Life Saving Appliances, Article 47 of the Convention, and Article XLI above.
(b) The minimum total number of open boats of the first class, which must be attached to davits, in accordance with Article XLI above.
(c) The minimum boat capacity required, including the boats attached to davits, and the additional boats, in accordance with Article XLII above.

</table>

When the length of the ship exceeds 314 metres (equivalent to 1,030 feet) the Government of the country to which the ship belongs shall determine the minimum number of sets of davits and of open boats of the first class of that ship; full particulars of its decision shall be communicated to the Governments of the other Contracting Parties.

**Article XLIV.**

*Launching of Boats and Rafts.*

The arrangements for launching boats on either side of the ship may be made either by means of appliances for transferring the boats or rafts from one side of the deck to the other, or by stowing some of the boats not under davits, or rafts, in rows across the deck or by any other equally efficient means.
The davits and other appliances for lowering the boats shall be placed on one or more decks in such positions that the handling of the boats can be efficiently carried out. They shall not be placed in the bows of the ships or in places where the close proximity of the propellers might constitute a danger to the boats at the time of launching. Boats may be stowed on one or more decks provided that proper measures are taken to prevent boats on an upper deck damaging those stowed below them.

If more than one boat is served by the same set of davits arrangements shall be made to prevent the falls fouling when they are recovered.

**Article XLIV.**

*Life-Jackets and Life-Buoys.*

1. A life-jacket shall satisfy the following conditions:—
   (a) It shall be of approved material and construction;
   (b) It shall be capable of supporting in fresh water for 24 hours 6.8 kilogrammes of iron (equivalent to 15 pounds). Life-jackets the buoyancy of which depends on air compartments are not allowed.

2. A life-buoy shall satisfy the following conditions:—
   (a) It shall be of solid cork or any other equivalent material;
   (b) It shall be capable of supporting in fresh water for 24 hours at least 14 kilogrammes (equivalent to 31 pounds) of iron.

   Life-buoys filled with rushes, cork shavings or granulated cork, or any other loose granulated material, or whose buoyancy depends upon air compartments which require to be inflated, are prohibited.

3. The minimum number of life-buoys to be provided is fixed by the following table:

<table>
<thead>
<tr>
<th>Length of the Ship</th>
<th>Number of Buoys</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metres.</td>
<td>Equivalent in Feet.</td>

<td>24</td>
</tr>
<tr>
<td></td>
<td>30</td>
</tr>
</tbody>
</table>

4. All the buoys shall be fitted with becket securely seized. At least one buoy on each side shall be fitted with a life-line of at least 27.5 metres (15 fathoms) in length. The number of luminous buoys shall not be less than one-half of the total number of life-buoys carried, and in no case less than six. The lights shall be efficient self-igniting lights which cannot be extinguished in the water, and they shall be kept near the buoys to which they belong with the necessary means of attachment. The life-buoys must always be ready to be cast loose, and must not be permanently secured in any way.

5. All the life-buoys and life-jackets shall be so placed as to be readily accessible to all the persons on board; their position shall be plainly indicated so as to be known to the persons concerned.

The life-buoys shall always be capable of being cast loose, and shall not be permanently secured in any way.
FOR THE SAFETY OF HUMAN LIFE AT SEA

SESSIONAL PAPER No. 129

ARTICLE XLVI.

Exemptions for Existing Ships.

The exemptions allowed in the case of existing ships, as provided by Article 52 of the Convention are as follows:

(a) Until the 1st January, 1920, boats and rafts which have been accepted by the Administration of a Contracting State on board an existing ship may be accepted, respectively, in lieu of the lifeboats and life-crafts prescribed by the present Convention.

(b) Until the 1st January, 1920, the requirements that pontoon lifeboats should have the bottom and deck made in two thicknesses with textile material between, and that they should have the minimum freeboard specified need not be insisted upon in the case of pontoon boats accepted in accordance with the preceding paragraph (a).

(c) In the case of ships between 75 metres (245 feet) and 140 metres (460 feet) in length, the minimum number of sets of davits may be reduced by one, and in the case of ships of more than 140 metres (460 feet) in length, the minimum number of sets of davits may be reduced by one set on each side of the ship, below the figure given in Column B of the Table in Article XLIII above. These reductions shall only be allowed if ample provision is made for launching the boats:

(d) The provisions of Articles 42 and 49 of the Convention, respecting the launching of boats, shall not be applied to existing ships.

ARTICLE XLVII.

Certified Life-boatmen.

In order to obtain the special certificate provided for in Chapter VI Life Saving Appliances, Article 54 of the Convention, the applicant must prove that he has been trained in all the operations connected with launching lifeboats, the use of oars; that he is acquainted with the practical handling of the boats themselves; and, further, that he is capable of understanding and answering the orders relative to life-boat service.

There shall be for each boat or pontoon raft a number of certified life-boatmen at least equal to that specified in the following table:

<table>
<thead>
<tr>
<th>If the boat or raft carries:</th>
<th>The minimum number of certified life-boatmen shall be:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 61 persons</td>
<td>3</td>
</tr>
<tr>
<td>From 61 to 85 persons</td>
<td>4</td>
</tr>
<tr>
<td>From 86 to 110 persons</td>
<td>5</td>
</tr>
<tr>
<td>From 111 to 160 persons</td>
<td>6</td>
</tr>
<tr>
<td>From 161 to 210 persons</td>
<td>7</td>
</tr>
</tbody>
</table>

and, thereafter, one additional certified life-boatman for each additional 50 persons.
Article XLVIII.

Manning of Boats.

An officer, petty officer, or seaman shall be placed in charge of each boat or pontoon raft; he shall have a list of its crew, and shall see that the men placed under his orders are acquainted with their respective duties and stations.

A man capable of working the machinery shall be assigned to each motor boat.

One or more officers shall be told off for seeing that the boats, pontoon-rafts, and other life-saving appliances are at all times ready for use.

Article XLIX.

Fire Detection and Extinction.

1. A continuous patrol system shall be organized so that an outbreak of fire may be promptly detected.

2. Every ship shall be provided with powerful steam or equivalent pumps. On ships of less than 4,000 tons gross there shall be two, and on ships of 4,000 tons and over, three of these pumps. The pumps shall be capable of delivering a sufficient quantity of water in two powerful jets simultaneously in any part of the vessel, and shall be available for immediate use prior to leaving port.

3. The service pipes shall permit of two powerful jets of water being simultaneously directed on any part of a deck occupied by passengers and crew, when the watertight and fire doors are closed. The service pipes and hoses shall be of ample size and made of suitable material. The branches of the pipes shall be so placed on each deck that the fire hose can be easily coupled to them.

4. Provision shall be made whereby at least two powerful jets of water and an ample supply of steam may be simultaneously conveyed to every space filled with cargo. Provision for the supply of steam is not required in ships of less than 1,000 tons gross.

5. A sufficient number of portable fluid fire extinguishers shall be provided, at least two being carried in each machinery space.

The Governments of the High Contracting Parties may accept other types of extinguishers provided that the Government concerned is satisfied by actual trial that such extinguishers are as effective as the type referred to above. A Government which accepts a new type of extinguisher will send particulars of the apparatus and details of the trial to the Governments of the other Contracting Parties.

6. Two equipments consisting of a smoke helmet and a safety lamp shall be carried on board and kept in two different places.

7. The fire-extinguishing appliances shall be thoroughly examined at least once each year by a surveyor appointed by the Government.

Article L.

Muster List.

The muster list shall assign duties to the different members of the crew in connection with:

(a) The closing of the watertight doors, valves, &c.
(b) The equipment of the boats and pontoon rafts generally.
(c) The launching of the boats attached to davits.
(d) The general preparation of the other boats and the pontoon rafts.
(e) The muster of the passengers.
(f) The extinction of fire.

The muster list shall assign to the members of the Stewards' Department their several duties in relation to the passengers at a time of emergency. These duties shall include:—

(a) Warning the passengers.
(b) Seeing that they are dressed and have put on their life-jackets in a proper manner.
(c) Assembling the passengers.
(d) Keeping order in the passages and on the stairways, and, generally controlling the movements of the passengers.

The muster list shall specify definite alarm signals for calling all the crew to their boat and fire stations and shall give full particulars of these signals.

**Article LI.**

*Muster and Drills.*

Musters of the crew at their boat and fire stations followed by boat and fire drills respectively, shall be held at least once a fortnight, either in port or at sea. An entry shall be made in the log book in respect of each drill, or of the reasons why they could not be held.

Different groups of boats shall be used in turn at each successive boat drill. The drills and inspections shall be so arranged that the crew thoroughly understand and are practised in the duties they have to perform, and that all the boats and pontoon-rafts on the ship with the gear appertaining to them are always ready for immediate use.

**SAFETY CERTIFICATES.**

**Article LII.**

(Official Seal) (Country)

**SAFETY CERTIFICATE.**

*Issued under the provisions of the* **INTERNATIONAL CONVENTION FOR SAFETY OF LIFE AT SEA.**

INTERNATIONAL CONVENTION

4 GEORGE V., A. 1914

I, the undersigned certify:
I. that the above mentioned vessel has been duly surveyed in accordance with the provisions of the International Convention referred to above;
II. that the survey showed that the vessel complied with the requirements of the said Convention as regards:
(1) the hull, watertight subdivision, main and auxiliary boilers and machinery:

<table>
<thead>

<td></td>
</tr>
</tbody>
</table>

III. That in all other respects the vessel complies with the requirements of the said Convention, so far as those requirements apply.

This certificate is issued under the authority of the Government. It will remain in force until
The undersigned declares that he is duly authorised by the said Government to issue this certificate.

(Signature)

Issued at the day of
The undersigned Plenipotentiaries at the moment of signing the Convention for the safety of human life at sea, concluded under this date, have agreed as follows:—

I.

The voyages referred to in Article 2 of this Convention are those made from a port of a Colony, Dominion or Protectorate, where the Convention is in force to a port outside of the said country and vice versa.

II.

A special extension of time for the ratification of the Convention has been granted to the Danish Government, namely: to the first day of April, 1915.

III.

This Convention does not apply to vessels registered in a Colony, Dominion or Protectorate where the Convention is not in force.

In witness whereof the Plenipotentiaries have drawn this final Protocol, which will have the same force and effect as if its provisions were embodied in the text itself of the Convention it refers to, and they have signed a copy of it to be deposited in the archives of the British Government, a copy of which will be given to each one of the respective parties.

Drawn up at London, January, 1914.

The Conference expresses the wish:

As to what concerns the safety of ships at sea:

1.

That recommendation be made to the Government of the United States and to the Directors of the Suez Canal Company, that every four hours they publish notices in Colon, Panama and Suez, giving the barometric pressure with the necessary corrections as to the temperature and the height above sea level;

2.

That the attention of the Governments which have adopted the regulations enacted to prevent collisions at sea, be called to the necessity of revising the same, especially in reference to:—

1. Lights of sailing vessels.
2. Signals for indicating direction of vessel in fog.
3. Regulations for men-of-war without lights.
5. Rules relating to submarine vessels.
6. The adaptation of lights and fog signals to the size and the speed of modern ships.

129—5
3.

That the Governments interested in this matter continue to see that the power of lights and fog signals used on board ships, comply fully with the requirements of the International regulations to prevent collisions at sea.

4.

That in view of the various practices followed, and opinions held in the different countries in respect to the words of command used at the wheel, a uniform system of command be devised concurrently with the modifications of the rules laid down to avoid collisions at sea.

5.

That in those latitudes where thick weather is common, all the lightships anchored at important points off the coasts be provided with submarine bells.

6.

That any large vessel referred to in Article 2 of this Convention, be provided with search-lights for life-saving or any other emergency.

7.

That no binoculars be given to the lookout men.

8.

That the usual tests made to ascertain if the officers and lookout men have sharp sight and are in possession of the faculty of distinguishing colours, be generalized.

9.

That the question of making the port and tide signals more uniform be taken into consideration by the different Governments.

10.

That the Governments of the High Contracting Parties consider the advisability of approaching the shipping companies and the ship owners, in view of preventing their vessels, in crossing the northern parts of the Atlantic Ocean, from passing over the Newfoundland Banks, when fishing operations are most active.

11.

That the International services referred to in Articles 6 and 7 of this Convention, be, if possible, established in proper time to be useful during the season 1914 and 1915.

12.

That the International Conference re free-board, which the British Government intends to call as soon as the preparatory studies will be complete, may at the same time, deal, if possible, with the deck loads of lumber or timber.
WIRELESS METEOROLOGICAL INFORMATION

The classification of squares corresponding to 1 degree indicate the position of the ship at the moment of observation.

RENSEIGNEMENTS MÉTÉOROLOGIQUE PAR TÉLÉGRAPHIE SANS FIL.

Classification des carrés correspondants à 1 degré par indiquer la position du navire à l'instant de l'observation.
That the Government of India has power of lights and signals to meet the requirements of the

That in view of the different countries adopting different uniform systems of the rules laid down,

That in the event of a ship anchored at an anchorage, the ship may be provided with signal stations.

That any law may be provided with signal stations.

That no bird, fish, or any other creature in the water may be killed.

That the use of signal stations may be generalized.

That the consideration of the capability of approaching and preventing the passage of ships in the same vicinity.

That the Government of India, in order to prevent the passage of ships in the vicinity of the anchorage at the same time as the

That the Government intends to allow the use of signal stations in the vicinity of the anchorage if necessary.
As to what concerns Radiotelegraphy.

13.

That the Governments of the Contracting Parties take the necessary steps with the International Meteorological Commission to have it consider the question of increasing the number of stations capable of sending meteorological notices to vessels at sea, and of locating these stations in the most suitable places.

14.

That in compliance with the wishes of the International Conference relating to standard time, held at Paris in 1912:

1. A meteorological service of radiotelegraphy be organized according to the provisions of Article 45 of the Regulation annexed to the London Convention on radiotelegraphy.
2. Foreign-going steamers and sailing ships be provided with apparatus enabling them to receive horary and meteorological signals.

15.

That the attention of the Governments of the Contracting States be called to the advantage that would result from their efforts to reduce the loss of time referred to in Article 38 of this Convention, regarding the installation of radiotelegraphic apparatus and the recruiting of operators for vessels of the first and second classes, as well as those referred to in the same Article for the installation of the said apparatus, the recruiting of operators and the appointment of a permanent man to listen to radiotelegraphic calls on board each vessel of the second and third classes.

As to what concerns Life-saving Apparatus.

16.

That the attention of each one of the Governments of the Contracting States be called to the advantage that would accrue from insuring as soon as possible the application of the provisions of this Convention, concerning the life-boat drills and fire drills, as well as the means to prevent, discover and distinguish fires on board ships.

In witness whereof the Plenipotentiaries have decided that the wishes here above expressed be annexed to the final Protocol, in order that they may be properly considered.
REPORT

OF

THE COMMISSION

TO INVESTIGATE THE MATTER OF THE

TRENT VALLEY CANAL

PRINTED BY ORDER OF PARLIAMENT.

OTTAWA
PRINTED BY J. de L. TACHÉ, PRINTER TO THE KING'S MOST
EXCELLENT MAJESTY
1914
Honourable Frank Cochrane,

Minister of Railways and Canals,

Ottawa, Ont.

Under authority of the Commission issued to me in that behalf, I proceeded to investigate the general administration of the Trent Valley Canal and the conduct of the employees and now beg to report as follows:—

Alexander J. Grant is styled Superintending Engineer and has under his jurisdiction all new construction work on the Canal.

Joseph H. McClellan is known as Superintendent and is in charge of the maintenance of the Canal.

I found it convenient to deal with the two branches separately and first proceeded to investigate the complaints referred to me in connection with Mr. McClellan’s branch.

It is charged that grave irregularities occurred during the season of 1912 in connection with the purchase of certain explosives for use on the Canal.

For some years previous to 1912 Superintendent McClellan had purchased the explosives required from the Kingan Hardware Company of Peterboro. In 1912 he shifted his patronage to Daniel Cinnamon, a hardware merchant of Lindsay. The particular explosive in question here, is known as ‘Blasters Friend’ and is manufactured by Dominion Explosives, Limited. This is put up in sticks or cartridges of different strengths, 1$\frac{1}{4}$ and 1$\frac{1}{2}$ inches thick and 8 and 12 inches in length. A case of the eight inch sticks weighs fifty pounds, which from the evidence appears to be the usual weight of a box of explosives. The same sized case of twelve inch goods seems to average only about 25 to 37 pounds.

Robert G. Kingan, the President and Manager of the Kingan Hardware Company, who seems to be a very close friend of McClellan’s, persuaded the latter to use a special make of Blasters Friend, known as ‘Submarine Special’, which is put up in sizes 1$\frac{1}{4}$ x 12.

During 1912 three purchases were made as follows:—

- May, 1912: 1 ton
- July, 1912: 2 tons
- September, 1912: 1 ton

In the May shipment only forty cases went forward, the balance of the ton being retained in Kingan’s magazine at Peterboro.

In the July order 112 cases should have been delivered, but only eighty cases were sent the Department. The remaining thirty-two cases were taken to the Hardware Company’s magazine.

All these explosives were for use at Lindsay and were checked on arriving there by Robert Hamilton, the foreman who had charge of the storehouse. Hamilton had weighed some sticks from a box of the May shipment and by counting the sticks had satisfied himself that there was a shortage in the order. He reported this to Overseer Samuel Clegg who was his superior officer, but the latter apparently did nothing about it.

When the eighty cases reached him on August 5, he weighed some of the boxes and checked up the weights and found a shortage of upwards of one thousand pounds. He reported this to Overseer Clegg and to Cinnamon and the following Saturday, August 10, told Accountant Bardett about it.

The result of this discovery was that the Kingan Hardware Company delivered up forty two cases more to cover the ten cases short in May and thirty-two cases short in July. All dealings with the Kingan people were conducted in a remarkable manner and are shrouded in a most suspicious atmosphere.

190—1$\frac{1}{2}$
Kigan accounts for the shortage in both lots by saying he believed there was fifty pounds in each case. His evidence is that every time anything was added to or taken from the stock in the magazine it is noted in the magazine stock book, so that the stock book constantly shows a complete inventory of all explosives on hand. I file with this report this stock book marked exhibit 20. The entry of May 6th, 1912, shows that he had just put in stock fifty cases (presumably a ton) of special submarine. He knew that was all he had purchased. He purchased it purposely to sell to the Canal office because he says they were his only customers for it. Notwithstanding this, when a ton is ordered he ships out only forty cases and the ten cases improperly retained appear in his book at each stock taking thereafter.

Moreover, when the forty two cases are turned over to the Canal authorities the stock book shows that Kigan did not follow his rule of taking stock of the balance on that date, but, simply crosses out the entry of forty two cases where it appears under date of August 8th. He gave no reason for adopting this unusual method. The only reason I can conceive of is a desire to conceal the date of delivery.

Kigan secured an order from McClellan in the latter part of July for two tons of Submarine Special. It was shipped from the factory at Sand Point on July 29th as a part of a car lot. On August 1st Kigan wrote Cinnamon enclosing invoice, dated July 30 for 4,018 pounds and requested Cinnamon to bill the Department at once, dating his invoice 30th July and he intimates that an arrangement had been made to have the account certified and put through in the office at Peterboro. The bill dated July 30 is certified by Hamilton and Clegg and by McClellan, and sent to Ottawa by the latter with his monthly return. As a fact the goods were not shipped from Peterboro until August 2nd and were received by Hamilton on August 5th.

When the car of explosives reached Peterboro, Kigan gave his man orders to unload everything but eighty cases of Special Submarine which were to go to Lindsay and that was done. Thirty two cases belonging to the two ton lot ordered by McClellan were put into Kigan's magazine and remained there until August 28, when as a result of Hamilton's report of the shortage, McClellan spoke to Kigan and the latter turned these thirty-two cases along with the ten cases short in May over to Farein the Department storeman, and the Government subsequently paid seventeen dollars ($17.00) to have it hauled to Lindsay where the vendor should have delivered it.

A cheque for 4,018 pounds, the full amount of the purchase, was delivered Cinnamon, but, at the instance of Hamilton and Bartlett he refused to pay Kigan until the matter of shortage was straightened out. Cinnamon was absent from home for a time but on his return he took the matter up with Kigan. On August 26th the latter wrote Cinnamon stating that the shortage on the order was in the Government storehouse. This statement he knew to be untrue as it was only turned over to Farein on August 28th. He further states in that letter that the officials at Peterboro knew all about the storage before they certified to the invoice for the full amount. Despite this assurance Cinnamon refused to pay until he knew the proper quantity had been delivered and my finding is that it was only on account of this refusal that the balance of the explosive was delivered. McClellan writes Cinnamon under date of 29th August advising him that "the balance of Blasters Friend was received here and placed in our magazine." The letter is purposely worded to give the impression that the shortage had been made good immediately it was discovered. Kigan’s letter of 30th August to Cinnamon stating that the departmental officials purposely retained the balance of the order in Peterboro is contradicted by his own evidence under oath and is undoubtedly false. It was obviously written with the purpose of allaying suspicion against himself and heading off any investigation that might be serious in its consequences to him. McClellan’s statement under oath that a part of the explosive had been taken off at Peterboro to be used at Balsover is in the same category. There was no work being done at Balsover and none in contemplation.
SESSIONAL PAPER No. 190

On September 13, Cinnamon called upon the Superintendent and solicited a further order for Blasters Friend. McClellan refused him the order upon the ground that he didn't need any more. My conclusion is that at this very time he had an understanding with Kingan to take another ton which was afterwards delivered and billed through Cinnamon.

From a careful perusal of the correspondence filed herewith, the evidence taken under oath and the demeanor of the witnesses, I am forced to the conclusion that there was collusion between McClellan and Kingan. I am convinced that the explosive withheld by Kingan in May and in July was purposely retained. I am satisfied that if McClellan was not actively a party to it he at least knew of it and acquiesced in it. There can be no question but that an attempt was made to defraud the Government which would have succeeded except for the discovery made by Hamilton.

One is at a loss to understand why the Department should pay such a high price for explosives. Kingan buys it for nineteen cents F. O. B. at the mill. The freight rate is eighty-eight cents. He sells to Cinnamon for twenty-two cents and he in turn charges the Department twenty-seven cents. Either some ulterior motive or gross incompetency is responsible for such business methods.

Moreover, Cinnamon avers the goods were ordered and sent forward as a rule without his knowledge. His part in the transaction merely consisted of making out an invoice; adding five cents per pound to Kingan's price and taking this rake off as a profit for himself.

When undertaking to widen my field of enquiry into the general affairs of the maintenance department, I found on every hand insurmountable difficulties due to lack of complete records and confusion of those in existence. Until the present accountant, Mr. E. H. Bartlett took charge, there was absolutely no office system in existence; practically no pretense made of scrutinizing accounts, time slips, or pay sheets; no proper cash account and a woeful lack of records of any kind in connection with the business of the office.

This chaotic condition rendered it impossible to make anything like a full and complete examination of the affairs of the department.

This report sets forth a comparatively few of the irregularities and fraudulent practices in vogue in the office under Superintendent McClellan's supervision. He has not only practiced deception and dishonesty himself, but, has condoned it and winked at others and has proven himself hopelessly incompetent for the position he holds.

At the outset of the enquiry he expresses surprise when I point out to him that W. F. Nelson, who conducts a typewriting office in Peterboro, has been carried on the pay roll as a laborer and he says that it is an exceptional case and he know of no others.

As the enquiry proceeds and these deceptions are unearthed and it is shown that bankers, lawyers, doctors, dentists, undertakers, barbers, merchants and almost every class of business and profession is represented on his pay sheets in a similar way, he confessed to such methods being an ordinary practice in the office over which he nominally presides. So far as superintending the Canal and safeguarding the public interests is concerned it is amply proven that there has been no serious attempt to do so. McClellan seems to have engaged himself largely with matters of political patronage and pleasure seeking jaunts at the public expense, and the bills for liquor and other refreshments and meals on the boat eloquently testify to his popularity as an entertainer. The evidence shows that these entertainments have ceased since the fall of 1911. The last bill for liquors and cigars to regale the guests of the Superintendent aboard the Bessie Butler is paid in October, 1911. The confectioners and grocers accounts have ceased since that date. The carnival of corrupt padding of pay-lists came to an end. But so far as control and management is concerned there is no improvement and cannot be under the present incumbent.
Mr. E. H. Bartlett, the present accountant, has done a great deal to systematise the business of the office during the short time he has been there. He has inaugurated many reforms and evidently has a high sense of his responsibility as an officer of the department, and, had he more latitude could do much more to improve the efficiency of the work of the office.

It is impossible in this report to give a resume of all the eight hundred pages of evidence. The following, however, are a few cases of the deception continually practiced upon the Government and these are characteristic of the business methods followed and the reckless disregard of public interests displayed by the officials of this Department, and, particularly by Overseer Gordon and Accountant Clarry, former officials of the Department, and Superintendent McClellan and Overseer Clegg.

W. Burgoyne who is a grocer at Fenelon Falls had his accounts for goods supplied the cooperies paid by being put on the time sheet as a laborer.  

B. Young, a grocer at Young's Point appears as a laborer on the time sheet for the amount of his grocery bill.

D. McKercher, a veterinary surgeon and liveryman of Peterboro figures on the pay sheet several times as a laborer.

A. B. Spillman drew a number of cheques as a laborer for work in and about Peterboro. Mr. Spillman is a hotel keeper at Hastings and never did a day's work on the canal. He was put on the pay roll to secure payment of board bills.

A. G. Lawless, the proprietor of hotel at Lakefield and Bobcaygeon, received cheques in a similar way as a laborer to meet his accounts for board against the Department.

W. W. Darcy, a Burleigh hotelkeeper figures on the pay roll for a team and teamster to meet the amount of his board bill.

Hector Campell, a hotelman of Kirkfield had a bill paid in a similar way.

Mr. Blade, a florist of Peterboro, furnished flowers for decorative purposes about the locks. He furnished a wreath for the funeral of a deceased employee, and he furnished also a rather expensive bouquet presented to the Superintendent's daughter at the christening of the Bossie Butler. To pay for these flowers Mr. Blade is put on the pay roll as a laborer.

W. H. Hamilton, a Peterboro grocer, had an account which was paid by putting him down a laborer on Gull River.

T. Lane, the Superintendent, bought some pillows for one of the boats from Mr. T. Lane, a furniture dealer of Peterboro in 1910. These were paid for by putting Mr. Lane down on the pay roll as a laborer.

O. R. Nixon, boarded Mr. Charles Calcutt, the captain of a Government tug during part of 1910. The accounts are sent in to the Department and Mr. Nixon is put down as a laborer on the pay roll for sufficient time to cover the amount of the account.

A. Gibson, a jeweller in Peterboro, figures as a laborer. The Superintendent says that this was to pay for badges for the lockmen, alarm clocks on the boats and such things as that.

William F. Nelson, who styles himself as a broker and runs a typewriting office in Peterboro, figures almost monthly on the pay roll for years back as a laborer. He admits never having worked as a laborer. The cheques received by him were really to pay for typewriter supplies and typewriting in connection with an illustrated booklet on the subject of the canal published by Clarry, the former accountant.

F. A. Fitzgerald, a coal merchant of Peterboro, gets a cheque for team work in June, 1911. This was really to pay an account for oil and paint and included no labor.

Geoffrey O'Brien, who runs a grocery and fruit store in Peterboro for the past five or six years says he has been selling supplies to the 'Trent Valley Canal ordered by Overseer Gordon, Superintendent McClellan or Farein, the storekeeper. Most of
SESSIONAL PAPER No. 190

the goods went to the Bessie Butler to supply parties going up on her. O'Brien's account runs from fifteen to fifty dollars a month. Orders given by Farein were upon McClellan's instructions.

G. N. GRAHAM, proprietor of the Oriental Hotel, Peterboro, according to the pay sheet for October, 1907, is paid $9.50 for six days labor.

This was to pay for meals at the hotel.

W. H. ROBINSON, the proprietor of The Times newspaper, Peterboro, had an account of $3.60 in March, 1909. He is put on the pay sheet as a laborer and his account paid in that way.

E. SINGER. A pay sheet for August, 1910, shows E. Singer, laborer, 17 days at $1.50, $25.50.

Singer runs a second hand store in Peterboro and never worked on the Canal. The entry is put through to pay sundry small accounts,—$2.50 to Gus Hay, an employee in Hall's Law Office; $3.00 to John Gibson, an occasional canal employee; $2.00 to Superintendent McClellan and the balance for parcels.

D. DENHAM. The pay sheet for July, 1911, shows D. Denham, laborer, 6½ days, $10.00.

This young man was a student at Cornell University. In taking his summer holidays up the Canal he took some photographs and the Superintendent agreed to pay him ten dollars for some of them. It was paid under the guise of labor.

VINCENT EASTWOOD, manager of the Royal Bank at Peterboro, appears on the pay roll as a laborer at $1.50 a day. There is no explanation forthcoming for this.

F. SANDY got a Government cheque for $28.00 for alleged services as a carpenter in August, 1908.

Mr. Sandy is the Grand Trunk Station Agent at Peterboro and the account of $28.00 was for a special train to Fenelon Falls to a meeting that was held there on August 22, by the Hon. Geo. P. Graham.

A. HOLLINGSHEAD. Nov., 1907, pay sheet A. Hollingshead is paid for 15 days labor at $1.50... $22.50

Mr. Hollingshead was Manager of The Bank of Ottawa at Peterboro at that time and of course was not an employee of the Government.

OZIAS LAPLANTE, a lawyer of Peterboro, figures a number of times on the pay sheet as a laborer.

H. S. MCDONALD is a druggist. He apparently sold hair brushes and combs to the value of $4.00 for use on the Bessie Butler. His account was paid by putting him down as a laborer on the pay sheet.

L. DEYMAN, a furniture dealer, got a cheque for a day's labor in July, 1909, at $1.75 to pay for a feather pillow.

S. ORRE is a fruit merchant and grocer. He supplied goods to the Bessie Butler on occasions and was put on the pay sheet to cover his account. For instance in July, 1909, he is paid for a team and teamster for three and a half days at $3.50 making a total of $12.25.

J. H. STAUNTON appears on the pay sheet as a laborer in 1900 and 1910. He is a photographer at Fenelon Falls and never worked on the Canal.

HARRY LONG who used to keep a confectionery store in Peterboro and supplied sandwiches and other refreshments for some excursion parties up the canal, instead of having his account sent in the regular way is put on the pay sheet as working at the removal of stumps at Kirkfield and is paid as a laborer.

H. GAINEY was paid for work as a laborer on a number of occasions during the year 1907. Mr. Gainey is a barber in Peterboro and never worked in the Government service.

W. J. O'BRIEN, a grocer of Peterboro, appears as a laborer.
M. Hoover is a cabinet maker and picture framer in Peterboro. Throughout the years 1908, 1909, 1910 and 1911 he has been paid a considerable sum of money as a laborer on the canal works. This was to pay accounts for picture framing, etc.

F. W. Doan. In October, 1907, thirty nine dollars ($39.00) rental due the Bell Telephone Company for telephone at Superintendent McClellan’s residence was paid by cheque to F. W. Doan an employee of the Bell Telephone Company and charged against repairs to booms, slides and dams. A similar account was paid in the same way in October, 1907, and again in June, 1908. There is no explanation of this. If, as McClellan says, the Government was to pay for a telephone in his house one can conceive of no reason for putting the accounts through in this way.

R. M. Roy. Charged against improving and clearing drowned lands on Balsam Lake in November, 1908, is one dollar paid to R. M. Roy, a photographer of Peterboro for photographs. In December there is a similar item of two dollars. In fact, Mr. Roy appears frequently for several years on the pay roll. In 1909, Mr. Roy was paid $15.65 as a laborer which was really for photographs.

A. Carr is undoubtedly an assumed name for some one who drew pay regularly as a laborer during 1906, 1907, 1908 and 1909. After exhaustive inquiry I was unable to find any one of that name who had ever been in Peterboro. The Superintendent himself admitted that he could not see where the Government ever got value for some three hundred dollars paid to A. Carr in this way. It is certainly a most glaring piece of fraud practised upon the Government.

The Peterboro Examiner appears to have had frequent accounts put through as labor in the name of some of the Company's employees.

In Jan., 1907, J. Clark is paid for 6 days work as a laborer at $1.50......... $ 9.00
In March, 1907, 7 days as laborer at Gull River at $1.50.... 10 50
In May, 1907, J. Clark, 6 days at $1.75, repair booms, slides and dams........... 10 50
In June, 1907, 7 days at $1.50........ 10 50
In August, 1908, J. Clark, 10 days, laborer at $1.75.... 17 50
In September, 1908, J. Clark, laborer, 10 days at $1.75.... 17 50

Clark was an employee of the Examiner Office and never did any work on the Canal. The Superintendent swears that Clark did not labor for this money, nor, did the Department owe these accounts to the Examiner.

Pat. Hogan. In the years 1905 and 1906 Pat. Hogan was paid as a laborer on several occasions. Hogan is a hotelkeeper in Peterboro and never worked on the Canal. Presumably this was to pay board bills, but there is no record to show this.

Mrs. Kearney. It is shown in evidence that McClellan built a verandah for Mrs. Kearney and the Government paid and boarded the men while doing it. He says that she still owes for this work, but, there is no record in the office and he admits that she has never been billed with any account. (Page 165).

George Wilson (Page 670) who is called a walking boss, does work that the Superintendent says is a part of Overseer Clegg’s duties, and should be done by Clegg himself. He draws $75.00 a month although McClellan says he is unnecessary and his services should be dispensed with.

Jackson’s Meal Account, July, 1908. Pay sheet shows there were 146½ days at three meals a day, making 439 meals Jackson gave for the month of July at 14 cents, making $61.46 due him for that month. He was paid $120.54, although McClellan certified for this, he admits that he has no explanation. (Page 469 and 470).

In the month of May Jackson served 643 meals at 14 cents which would amount to $90.02. He was paid for 929 meals totalling $130.06. There is no explanation for this. These accounts with many similar ones were made out in the Superintendent’s office and certified by him and sent to Ottawa for payment.
WILLIAM HEWITT is caretaker of some small dams at Hawke Lake. He is paid $1.75 a day and board and the free use of a house and fuel owned by the Department at Hawke Lake. He has been permitted to buy provisions and furnish his house. For June, 1910, his grocery bill at one store was $10.20; July $34.40; August $73.54; September and October $77.02. It is obvious that no attempt was made to control this expenditure and from the nature of the goods purchased. Mr. Hewitt lived both luxuriously and extravagantly. It is costing the Government at least twelve hundred dollars a year to maintain Mr. Hewitt at a job that should not cost half that. As a result of the disclosures elicited in my investigation McClellan cancelled this imprudent arrangement with Hewitt and engaged him at $60.00 per month, and even this rate of wages is in my view excessive.

B. A. ROSE, a Grand Trunk Ticket Agent at Peterboro, appears constantly throughout the pay rolls for several years until 1911 as a laborer. In many cases this is for tickets purchased by employees outside of the regular monthly tickets given for proper transportation on Government business. In some cases Mr. Rose denies receipt of the money put through in his name. It was impossible to trace the parties who got either these tickets or the money.

PACITRICK J. KENNY, who conducts a liquor store in Peterboro, is almost constantly on the pay roll as a carpenter from December, 1908, to the fall of 1911. I have filed with this report a verified copy of Kenny’s account showing that he was paid nearly six hundred dollars ($600) for liquors and cigars in about three years. As far as I can trace it, practically all of these refreshments were to equip the Bessie Butler for numerous pleasure parties, some of which were conducted under the guise of official inspections. McClellan denies that any of these goods went to his house, although Kenny says that a substantial order was delivered there for Xmas 1908. The evidence shows that some twenty-five or thirty dollars worth of liquors was purchased and paid for each winter when the boats were out of commission. I was unable to trace the delivery of the winter supply. Kenny testified that all these goods were ordered by McClellan and Farenin. The latter says that he ordered only upon instructions from the Superintendent and McClellan acknowledges this and admits his full responsibility in the matter.

J. YOUNG. Time sheet September, 1905, shows J. Young, laborer 26 days at $1.50. ........................................... $39.00
Time sheet November, 1905, shows J. Young, laborer 24 days work at $1.50. . 36.00

The evidence shows that J. Young was not a laborer and never worked on the Canal. He is a steamboat man at Young’s Point. Superintendent McClellan engaged the boat for an excursion to Fenelon Falls at $125.00 and says that it was for the use of departmental officials and their friends. Young says the party was largely made up of Peterboro people.

If there was nothing to conceal one cannot understand why Young’s account should not be paid regularly as an account instead of his name being falsely entered on the pay roll as a laborer.

In December, 1908, fire did some small amount of damage to the kitchen on the Bessie Butler. McClellan reported to the Department that it would take some two or three hundred dollars to put her in repair. Apparently without authority from anybody, except that he says he spoke to Mr. Butler about it, he expended upwards of $2,200 in rebuilding the boat on an extravagant scale entirely unnecessary and unwarranted.

ROBERT PINETT has been employed as a cook on one of the Government boats for a number of years. In 1909 he was paid a monthly salary and twenty cents a meal for the crew and workmen, and thirty five cents a meal for officials’ guests, etc. He kept track of the number of meals and sent a statement to the office monthly. The account for meals run into very large figures. There had been a great many excursion parties up the canal. When the season closed there was seventy dollars due
Pinett, much of which was for McClellan’s family, relatives and guests. Pinett worked for the Department until the middle of January, 1911, but was idle from that until the 10th of March. He was kept on the pay roll, however, at $1.50 per day throughout January until the seventy dollars was paid. In March, 1911, McClellan hired Pinett at sixty dollars a month to cook for a gang of men at Lakefield. Pinett was directed to keep track of the number of meals and send in a statement to the office. He did this and this statement was sent to Ottawa and a cheque for the amount at fifteen cents a meal was forwarded to the Peterboro Office in Pinett’s name. Pinett was required to endorse this and the Peterboro Office paid the accounts and somebody, not entitled to it, retained the balance. For instance, in April, 1911, the account for meals sent to Ottawa and paid was $156.00. Out of this Pinett was paid fifteen dollars to make up the difference between his regular salary of $45.00 and the amount promised him by McClellan. The account for supplies was $101.00 so that there was forty dollars rake off in that month’s business for somebody. In other words some one stole forty dollars from the Government.

This arrangement with Pinett was made by the Superintendent himself and he must have been cognizant of the facts.

In the year 1912 a small boat called the Manita was rented by McClellan from William Robinson for use on the canal at $8.00 a day; McClellan agreeing to do whatever repairs were necessary for this purpose. Rent was paid for her from 26th of May to the 12th of June while she was being repaired. Rent was paid for her also for six days while she was being laid up in the fall. The spring repairs cost $259.12. She worked twenty-six days for the Engineer’s Department for which they paid McClellan’s Department $208.00. She worked for McClellan’s Department twenty-seven days during that season. The balance of the time she worked for Sir William Mackenzie who paid Robinson $8.00 a day for her. McClellan sent the whole outfit on to Mackenzie’s work and Mackenzie paid rental, wages and maintenance while actually on the work. McClellan’s Department paid for delivering her at Mackenzie’s work and paid for her while returning from the work. Robinson complained that the boat had been badly used and seriously damaged and McClellan in the spring of 1913 spent $331.00 on repairs. The result of operations with this boat is that she cost in repairs 1912,—$259.00; 1913,—$331.00; rent,—$504.00; total, $1,094.00, received from the Engineers $208.00. The net cost of the boat to the Government was $886.00 for twenty-seven days work or about $33.00 a day. (Page 451.)

C. C. Huycke. The name of C. C. Huycke appears regularly on the pay roll in McClellan’s office for the past seven or eight years at $25.00 a month as caretaker at Healey’s Dam. He lives two or three miles out of Hastings and eight miles from the dam he is supposed to have had charge of. When required to do work at the dam it was necessary to telephone to Hastings and send a message with a liveryman out to his house. Then he drove the eight miles to fulfill his orders. The Government paid the telephone and the livery. In November, 1909, Deputy Minister Butler instructed McClellan that Mr. Grant would have control of the waters between Healey’s Falls and Hastings during the construction work there. McClellan wrote Grant enclosing a copy of Butler’s letter and told him that he had notified Huycke that instructions would be given him from the Engineer’s Department thereafter. Mr. Grant did not even acknowledge McClellan’s letter. He gives as his reason for ignoring the letter that he did not consider he was in any way under McClellan’s direction. He admits that there is a bitter feeling between the two offices and went so far as to forbid his men having anything to do with Huycke. He knew that Huycke was a Government employee and must have known that he would continue to draw a salary for doing nothing. In my opinion his duty was to have written McClellan telling him that he did not require Huycke’s services and the country would have been saved $300.00 a year. In his actions Grant appears to be actuated more by enmity towards McClellan and his own vanity than the safeguarding of the public funds. The result was that.
Huycke remained on the Government pay roll and was paid through McClellan's office. Grant paid no attention to him; McClellan gave him no instructions. He has been drawing $300.00 a year for which he has done nothing but sent to Peterboro weekly reports of water levels taken from a stake placed in the water at the foot of his farm. His position is a sinecure and he should be discharged.

Rental.—While under examination in September 18th, McClellan admitted having in his possession $15,000 belonging to the Department which he had received by registered letter on April 25 previous from one Grylls as rent. Written demand was twice made upon Grylls while McClellan had the money.

On another occasion he admitted having received ten dollars from the Provincial Treasurer for the storage of a patrol boat. This never reached the public Treasury although the cheque is endorsed by McClellan. Nor are these the only instances of this kind as a perusal of the evidence will show.

There is a large amount of rentals for power and lands paid into the Superintendent's office each year. No attempt was ever made to keep a separate account of these. The Superintendent deposited everything to his private credit and cheque money out on his personal cheque. When public moneys were received by him instead of remitting direct to Ottawa he deposited the money to his own credit and had the use of it for months sometimes, before he remitted to the Receiver General. Examination of his various bank accounts shows that had it not been for the deposit of Government funds he would have had almost constant overdrafts and would have been unable to issue cheques against his own account. In other words he improperly diverted to his own use the public funds.

McClellan never had any official or office account but carried private accounts at different times with the Ontario Bank, the Bank of Montreal, the Royal Bank, the Bank of Ottawa and the Bank of Commerce. All these accounts appear to have been conducted on the same principle. (Page 427).

In 1910 his deposits in the Bank of Commerce amounted to $12,452.00. Had he deposited his whole salary, which he did not do, it would only account for $2,000.00 of this deposit. The balance of his deposit amounting to $10,452.00 is made up of at least $3,349.71 of Government funds and moneys received by him in connection with the winding up of some companies in which he and his son were interested. A large part of the amount he admits was money belonging to the Government.

W. H. Dunsford, manager of the Bank of Commerce (Page 472) says McClellan would not have been able to issue cheques against his own account if it had not been that he was depositing public funds to his own credit.

In the summer of 1910 McClellan sent a dredge to Lindsay to do work for John Ritchie & Company for which they paid to McClellan $550. This money was never paid to the Government and McClellan is unable to account for it. His statement is that he may have drawn the cash for it and left it with Clarry the accountant to hand over to one Davidson for the Liberal Campaign Fund. (Evidence page 393, 394, 469 and 470). He admits that large sums of money that should have been remitted to Ottawa were contributed to the Liberal Election Fund. In a short investigation in the hopelessly muddled account I was able to trace about $2,000 which he says went in that way made up as follows:—

Three cheques of $514.00, $480.00 and $482.00 respectively received for empty cement sacks, and a cheque of $550.00 received from John Ritchie for dredging. He says when he went on the canal he was told by Hon. J. R. Stratton that there should be an election fund of from five to seven thousand dollars a year from the canal office and that he proceeded on that basis.

George A. Mothersill, Auditing Engineer, and Superintendent McClellan appear to be very close friends and considerable correspondence concerning official matters but marked "private" have passed between them. Some of these are in my view highly improper, even if they are not to be characterized more seriously. For
instance a pay sheet reaches Mothersill for audit in December, 1909. Amongst the accounts is one from Wm. Jackson, a cook, for 444 meals at fifteen cents, making a total of $66.16 to be charged to a wharf at Juniper Island. Mothersill writes a "private" letter to McClellan returning the account, pointing out that the Juniper Island appropriation "will not stand" that amount and tells him there is only a balance of $39.59 in that account "or about 219 meals". A new account dated the same is immediately returned for 219 meals and was put through.

Again in October 15th, 1912, Mothersill writes privately to McClellan returning some irregular voucher and warns him that there may be persons on the lookout for any such irregularity. To my mind these are most remarkable letters to go from an auditor to the man whose accounts he audits. They throw some light on the reprehensible departmental methods that have obtained.

SAM. CLEGG. An overseer on McClellan's staff signs time slips and pay sheets including the name of persons who have never worked on the Canal, but some of whom have accounts of various kinds. He admits that this was a very general practice and that it was entirely wrong to do it.

Mrs. BURRETT is the wife of the Lockmaster at number three lock. She was paid several sums as a laborer on the canal during the years 1905 and 1906. The Superintendent thinks some of these payments were to pay accounts for boarding canal employees when working in the vicinity during the summer. There are a number of payments made to her as a laborer during the winter. McClellan suggests that this was probably to cover work done by her husband who is a lockmaster, so that he could be paid not only his regular salary as lockmaster, but draw double pay in this way. I find this same Mrs. Burrett on the March, 1910, pay roll in the engineer's department.

L. McFARLAND is a daughter of the Lockmaster at Lovesick. During the years 1906 and 1907 she was paid substantial sums as a laborer. Her time being certified to by her father Wm. McFarland the lockmaster at Lovesick.

After delving into the affairs of the maintenance department sufficiently to satisfy myself as to the necessity of a complete reorganization and the elimination of a number of the present staff, I visited the office of the Superintendent Engineer. The result of my enquiry there is as follows:

GEORGE H. GIROUX, of the Superintending Engineer's office is styled clerk of works. His duties, according to his own statement, consist of checking over accounts pertaining to the staff, looking after the letters coming through the office and taking care of office plans and making blue prints. There are some eight or nine branch offices along the canal each in charge of a district engineer and all under the Engineer's Department. Pay sheets are made up at each branch and certified by the engineer in charge and sent in once a month to Grant's office. Giroux takes these along with the Peterboro office pay roll and sends them to Ottawa and when the cheques come back he sees that they are sent out. This embodies all his duties as accountant. The plans for the different works are taken care of by him; he makes whatever blue prints are required. Information was given me that in August, 1912, Mr. Giroux had improperly charged to the Department some items of expense that were purely personal. On the 22nd August, 1912, he drove his family to Chamong Lake to a regatta. The livery was four dollars and he put it through and had it paid for by the Government. A few days afterwards he made a trip to Campbellford. As he puts it, it was purely a pleasure trip to see the work there and the expense of this trip was put through on Government account. Mr. Giroux says that the Superintending Engineer knew of these things and approved of them and Mr. Grant admits this. Of course, such charges, however trifling in amount, are entirely irregular and improper. Mr. Giroux admits that he made and sold during the past seven or eight years blue prints for every one who brought him plans and asked him to do such work. The paper used for the purpose belonged to the Government and they were made on Government machine and Giroux's time belonged to the Government. Mr. Grant knew of this and permitted it.
ALBERT JAMES RADDON, who styles himself Cement Test Clerk and Photographer, has been in the employ of the Department since August, 1896. His duty is to make tests of the cement used on the works. He not only tests the cement for the Government, but made a business of testing cement for others. He admits having done this and says it was with Mr. Grant's permission he did it. In the years 1907, 1908 and 1909 he tested in the Government office with the Government apparatus, one hundred and sixteen cars for outside parties, for which he charged for his own use three and four dollars a car. Even as late as November last year he made tests for outside parties and was paid for them. That sort of thing is highly reprehensible and should not be permitted.

ROBERT FRANK RADDON was a sort of handy man around the premises. He was originally taken on as a helper to his brother, A. J. Raddon, in the cement room. He says, and his brother corroborates him, and Mr. Grant admits, that he worked a great deal about Grant's house. In fact my conclusion from the evidence is that his duties about the office were very light; a good deal of his time was spent looking after Mr. Grant's private requirements. He was discharged by Grant as a result of a quarrel with Mrs. Grant and it has not been found necessary to replace him. This fact alone would lead one to the conclusion that he was retained largely for Mr. Grant's private service. Mr. Grant says that at the request of Hon. J. R. Stratton he found him a different position at Healey's Falls after dispensing with him at the Peterboro office.

JAMES ANDREW HADCOCK has been in the employ of the Government under Mr. Grant since 1909. He says that he has not any regular engagement but is paid five dollars a day when working. His salary was fixed by Mr. Grant. In the summer of 1913 he was employed at dredge work until the 15th of November. From the 15th to the 24th he was idle. On the 24th he went to Trenton as inspector of lockgate construction. He was paid for the week he was idle on Mr. Grant's instructions. Hadcock acted as timekeeper on the dredge work. He made up his time book showing that all the men ceased work on November 15. He was totaled up and certified to by Mr. Cameron the engineer in charge of that work. Hadcock afterwards altered his time book to make it appear that he had worked that week, although as a matter of fact, he was not working. This alteration cost the Government thirty dollars ($30.00). Mr. Grant takes the responsibility for this and approves of it upon the ground that he has the right to give a man a few days when he sees fit.

Roger, Miller and Company, the contractors who are building the lock gates at Trenton, shut down their work on December 20. Hadcock says they were shut down for eight days during which time he was at his home in Peterboro.

Mr. J. B. Brophy, who is the engineer in charge of the division where Hadcock was working, had to certify to his time. In making out his December pay sheet he left Hadcock's time and salary blank as he had no instructions from Mr. Grant in the matter. When he brought his pay roll to head office Grant instructed him to give Hadcock full time. In January, 1913, Mr. Hadcock took a trip to Buffalo to buy a motorcycle for himself and was gone, accordingly to his own story, not less than three days. He signed his own time sheet certifying that he was on the works during that three days and was paid his regular wage. He says Mr. Grant knew of this and approved of it. Hadcock, according to his time book certified by himself, spent from November 14, 1912, to February 15, 1913, in all 81 days at five dollars a day, building three ordinary flat bottom punts worth, at his own estimate, thirty five or forty dollars a piece. These punts cost in labor four hundred and five dollars ($405) besides the material used. Hadcock says he did this under Grant's instructions and in fact Mr. Grant assumes full responsibility and says that he was simply finding something for Hadcock to do so that he would not leave Peterboro and would be available for the spring's work. Mr. Hadcock admits that every other winter he was idle for some months and still he has always been available at the opening of the season. And even during 1913 he was idle from February 15 until June according to his own statement.
ALEXANDER JOSEPH GRANT has been Superintending Engineer of the Trent Canal since the first of April, 1906.

Although not a civil engineer Mr. Grant lays claim to long experience in engineering work. One of his first works on the Trent was the designing and construction of the dam at Buckhorn which was built in 1907 and 1908 at a very large cost. In 1913 alterations to the amount of $4,229.00 were necessary to make the dam conform to the requirements for which it was originally constructed.

I discussed with Mr. Grant at considerable length the organization of his office and the staff. Although in my view there is a lamentable lack of system he appears to think it satisfactory.

Although there is a very large amount of valuable plant belonging to the Government in the hands of this Department there never has been any inventory of it made or maintained. There is a dredge, a couple of houseboats, gasoline boats, row boats, canoes, stoves and tents and all varied equipment, amounting to a very large sum in value, necessary to carry on the work along the whole length of the Canal. No record of this is kept and nobody seems to be responsible for its care. Some few articles are kept in a storehouse. The storehouse man says that he has no instructions to keep track of things. When anything is brought to him he puts it in the storehouse; when any one asks for anything he hands it out. This seems to me to be a serious defect in management and must inevitably result in loss and waste.

There is no office organization of any kind in existence; absolutely no books are kept and there is no attempt at accounting of any kind. The only records in existence are copies of the accounts and pay sheets that are sent to Ottawa. One would expect to be able to turn to some book or record and find a summary of the cost of any particular work, or, the year's accounts with any particular firm. To get such information at present the individual accounts and pay sheets have to be gone over and the facts gleaned from them.

Mr. Grant should have closer supervision over the office and his staff and the reprehensible practices permitted should never have been allowed. He is aware and has permitted Raddon to make a profit from his position by testing cement for outside parties. He has been aware and approved of Giroux making a business of furnishing blue prints to the public for his private gain. He kept no man about his own residence, but made use of the services of Robert Frank Raddon, an employee of the Department, as a man of all work about his own premises. He certified to expenditures made by Giroux on his private account and had them paid by the Department. He has certified to Hadcock's time on a number of occasions when Hadcock was not working and he takes the ground that he has the right to do that.

It is little short of scandalous that without any justification whatever an employee should be retained at five dollars a day for eighty one days building three rough board punts which, as a matter of common knowledge we all know, can be bought for from fifteen to twenty dollars each.

A large item of expense in connection with the engineer's office is livery account. This office expends in this way from four to five hundred dollars a year. My attention was directed from complaint I had received, to an investigation of the account of Jones' Bros. This account shows an expenditure as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1910</td>
<td>$171.25</td>
</tr>
<tr>
<td>1911</td>
<td>255.25</td>
</tr>
<tr>
<td>1912</td>
<td>152.50</td>
</tr>
<tr>
<td>1913</td>
<td>83.25</td>
</tr>
</tbody>
</table>

The substantial falling off in 1913 is due to the use of automobiles instead of horses.

This account is exclusively Mr. Grant's. The evidence shows, and Mr. Grant admits, that a considerable part of this expenditure was incurred by Mrs. Grant. He attempts to justify it in many cases by explaining if he were going away she had a
livery go for her an hour or two before the train and she drove about until train time and then drove him to the train. If he were coming home the livery came early for her and she used it until time to meet him at the train. He apparently does not regard seriously the fact that the extra driving by Mrs. Grant costs the country just the difference between a fifty cent hack which would take him to or from the train, and a charge of from two to five dollars according to the length of the time Mrs. Grant used the rig. Moreover, if it were only an occasional occurrence one might overlook it. But it has been the common practice and runs into a very substantial amount of money. But even this explanation does not apply to all the livery rigs made use of by Mrs. Grant. There are on his own statement a number of occasions when Mrs. Grant made use of the livery that was charged to and paid for by the Department when Mr. Grant was away from home entirely.

In the year 1911 the dredge Holland was purchased by the Department on the recommendation of the engineer at the cost of upwards of $16,000.00. She is a combination of orange peel and suction dredge. She originally belonged to a firm of contractors who were working on the construction of the Newmarket Canal. The contractors made default in their work and the dredge might have been confiscated by the Government at that time. She was transferred by the owners to the Standard Bank from whom the Government purchased her. Mr. Grant informs me that the original purpose was to use her on the Hollan River where the excavation consisted of loose earth and silt. She was brought to Peterboro and tied up on the bank of the canal where she still lies. Mr. Grant says that she was never made use of because the Newmarket Canal was abandoned subsequently to the purchase. The evidence of every one whom I questioned upon the subject is that her machinery is a splendid type and in excellent condition.

In the storehouse in connection with the maintenance department there is almost a complete outfit of dredging machinery, bought some years ago with the alleged purpose of constructing a dredge.

Notwithstanding the fact that these two dredge outfits were available and could surely have been utilized, a new dredge called the Auburn was built by Mr. Grant in 1912. His original estimate was about $19,000.00 while the cost amounted up to $26,000.00. The engineers seem to have taken upon themselves to build this dredge without any appropriation being made therefor. The Auburn is what is known as a clam shell dredge and the material that she is best adapted to handle is much the same as the class of work for which the Holland was intended.

What strikes one as most remarkable is that the Government should have locked up not less than $25,000.00 or $30,000.00 in two dredge outfits and a third dredge is built without any attempt at utilizing any of the splendid machinery or parts already on hand. In other words the Government has invested from fifty to fifty-five thousand dollars in dredge plant and have but one operating dredge costing $26,000.00.

My observation together with the strongly expressed opinion of all the officials, convinces me that the system of administration of the affairs of the Trent Valley Canal is entirely wrong. There should be one supreme head in control of everything connected with the Canal. Under this central authority it might he well to maintain a construction department and a maintenance department, but the control of affairs should be vested in one official. Experience has amply demonstrated the failure and folly of the present system. With the offices divided, as they are to-day, with a separate official at the head of each branch, there is constant conflict of jurisdiction, overlapping of authority, frequent disputes and continuous friction. This has been productive of such marked enmity between the two offices that the official heads make no attempt to conceal their ill will towards each other. Such a condition, of course, is subversive of all discipline and inevitably militates against efficiency.
By putting the whole Canal service under one capable man (and if possible houseing the staff in one premises) a very substantial reduction of rentals could be made; the number of the staff could be largely reduced; much duplication of plant would be avoided and more economical, efficient and businesslike administration would result.

Appended to this report is the notes of evidence and the exhibits referred to therein.

All of which is respectfully submitted.

(Signed)  G. HOWARD FERGUSON,
Commissioner.

Dated at Kemptville, Ont.,
February 18, 1914.
RETURN

[246]

To an Order of the House of Commons, dated March 2, 1914, giving the following information, as far as may be available, respecting the constitution of Upper Chambers or Senates within the British Empire and in foreign countries, and especially such information in respect of the self-governing Dominions and of foreign countries possessing a federal system of government:—

1. As to the method of appointment, whether by executive authority or by election by the people, or otherwise.

2. As to the term of appointment, whether for life or for a term of years, or otherwise.

3. As to a reappointment or re-election, and generally as to the filling of vacancies occasioned by death or otherwise.

4. As to qualifications, whether by age, residence, possession of real or personal property or otherwise.

5. As to limitation of the membership, and as to the numerical relation of the membership to that of the Lower House.

6. As to provisions for dissolution, appeal to the electorate, conferences or additional appointments in case of disagreement between the Upper and Lower Houses.

7. As to the operation of the various systems in the several Dominions and countries mentioned, and in what respect defects or difficulties have made themselves manifest.

8. All other relevant information respecting the constitution and status and such Upper Chambers.

LOUIS CODERRE,
Secretary of State.

April 7, 1914.
REPORTS FROM HIS MAJESTY'S REPRESENTATIVES ABROAD RESPECTING THE COMPOSITION AND FUNCTIONS OF THE SECOND OR UPPER CHAMBER IN FOREIGN STATES.

RETURN

To an Address of the Honourable the House of Commons, dated July 8, 1907, for "A Copenhagen, Lisbon, Madrid, Paris, Rome, Darmstadt, Dresden, Stockholm, The their functions."

FOREIGN OFFICE, July 10, 1907.

Sir,—I have to request that you will furnish me with a report, in a form suitable for presentation to Parliament, on the composition and functions of the Second or Upper Chamber in the country to which you are accredited.

Your report should also contain a short account of any constitutional disputes which may have arisen during the last ten years between the Upper and Lower Houses, and of the means by which these have been adjusted.

I am, etc.,

E. GREY.

REPLIES TO PRECEDING CIRCULAR.

AUSTRIA.

No. 1

Sir E. Goschen to Sir Edward Grey.—(Received August 12.)

VIENNA, August 7, 1907.

Sir,—With reference to your Circular despatch of the 10th ultimo, I have the honour to transmit herewith a memorandum which has been drawn up by Mr. Crackanthorpe upon the composition and functions of the Upper House of the Austrian Reichsrath.

I have, etc.,

W. E. GOSCHEN.

Inclosure in No. 1.

MEMORANDUM BY MR. CRACKANTHORPE ON THE UPPER CHAMBER OR "HERRENHAUS" OF THE AUSTRIAN REICHSRATH.

Composition.

The Upper House of the Austrian Reichsrath consists of from 248 to 268 members, their number varying according to the number of life members.

It is composed of:

1. The Princes of the Imperial family who are of age.
2. A number of nobles possessing large landed property, in whose families the dignity is hereditary.
3. Ten archbishops and seven bishops.
4. A number of life members nominated by the Emperor who have distinguished themselves in politics, art, or science, or rendered any signal service to Church or State. A law passed in January, 1907, lays down that the number of life members shall not be less than 150 or exceed 170.

Also to Berlin for information as to Prussia, and to Munich for Bavaria and Würtemberg.
CONSTITUTION OF UPPER CHAMBERS

Functions.

Government Bills and motions can be introduced in the Upper House, with the exception of Money Bills and the Recruiting Bill, which must originate in the Lower House. Government Bills have precedence of all other Orders of the Day, with the exception of motions which are recognized by the House as urgent. Every member of the Upper House has the right to introduce private motions, which must be presented to the President in writing, and signed by ten members, including the mover. Motions duly seconded are placed among the Orders of the Day for a first reading. All Bills are subjected to three readings. When a Bill is down for its first reading, the mover may open the debate and explain its general principles. Government Bills are referred to a committee after the first reading. When the Bill is read for the second time, the general debate is opened by the reporter of the committee. This is followed by a special debate, in which the different clauses of the measure are considered and voted upon. Amendments may be referred to the committee, and the debate can be suspended until a report has been received upon them. After the Bill has passed the second reading, the third reading is usually taken at the next sitting. A vote is then taken on the whole Bill without debate. If passed, it is then sent to the Lower House, and, if it passes the Lower House without amendment, it is forwarded for the Imperial sanction. If amended, it returns to the Upper House, and, if the two Houses are unable to agree, a joint committee is formed.

At the sitting of the Upper House, held on the 24th July last, the President, Prince Windischgratz, made an important announcement as to the result of the discussions which had recently taken place between the Prime Minister, Baron von Beck, and himself, with a view to increasing the field of usefulness of the Upper House. From his statement, and from the speech afterwards made by Baron von Beck, it appears that an arrangement has been come to whereby a greater proportion of legislative measures than formerly will henceforward be initiated in the Upper House. Among such Bills indicated for early introduction are Bills relating to the reform of the Penal Code, the revision of the Civil Code, the Sanitation Regulations, and Lunacy System. It has also been arranged that the sittings of the Upper House shall be held as far as possible consecutively, at stated periods, instead of, as formerly, at irregular intervals. It is thereby intended to facilitate the attendance of a greater proportion of peers who do not wish to reside permanently in Vienna. Efforts will also be made to send up Bills from the Lower to the Upper House in good time, so that the deliberations of the latter Assembly may not be unduly hurried. By these means it is hoped to draw additional advantages from the ripe experience and technical knowledge possessed by many members of the House of Peers, and to give greater scope to their activity in furthering the interests of the country.

Conflicts between two Houses.

Legislation in the Austrian Parliament has been impeded by continued conflicts between the various racial parties, and practically no friction had arisen between the two Houses prior to the passing of the Electoral Reform Bill at the beginning of this year. The attitude of the Upper House towards this Bill threatened at one time to produce a complete deadlock. The Bill in its final stage had been referred to the Electoral Reform Committee of the Upper House. The result of its deliberations was that it threatened to delay and indeed to practically wreck the Bill by recommending that two clauses should be added to it, one providing for "plural voting," i.e., for the granting of two votes to every voter on his reaching the age of 35, and the other establishing the "numerus clausus" in the Upper House, i.e., providing that the number of life members should not be less than 150 nor more than 170. The object aimed at by the establishment of the "numerus clausus" was to prevent the Govern-
ment from allowing the number of life members of the Upper House to be reduced to a low point, and then creating a pliable majority through the appointment of a large number of new life peers, most of whom, as civil servants, would be subservient to the wishes of the Government. As the result, however, of pressure brought to bear by the Prime Minister on the leaders of the three parties in the Upper House, a compromise was arrived at whereby the plural voting clause was rejected in return for the assurance that the Lower Chamber should pass the measure known as the "numerus clausus," recommended by the Electoral Reform Committee. Thus the subsequent passing of the Bill in the Upper House was practically assured, in spite of the continued opposition of certain peers connected with the German Constitutional party.

It may be here mentioned that an interesting feature of the Universal Suffrage law is the creation of an option for members of the Herrenhaus to seek election to the Lower Chamber, their functions in the Upper House being, in case of election, temporarily suspended for the whole duration of their mandates as deputies. Under the system in force, membership of the Upper House is automatically revived on resignation of his seat in the Lower Chamber by a life member. A provision of the Electoral Reform law, however, precludes the possibility of any member of the Upper House, who may have obtained a seat in the Lower Chamber, recording his vote in the Upper Chamber upon any measure on which he may already have voted in the Lower House.

Control over Public Finances.

Money Bills must, as has already been seen, originate in the Lower House, and the estimates must receive the assent of the Upper House. Beyond this constitutional division of functions, the control of the two Houses of the Austrian Reichsrath over public finances may be said to be absolutely equal. Clause (c) of article ii of the constitution lays down the following as among the attributes of the Reichsrath as a whole, i.e., of both Herren- and Abgeordnetenhaus:

"The fixing of the Budgetary Estimates, and, in particular, the annual authorization of the collection of taxes, duties, and revenues; the examination and adoption of the closed returns of the State, and of the results of the financial year; the issue of new loans, conversion of existing public debts, the sale, transformation, or mortgaging of State property (real estate); legislation concerning monopolies and State enterprises ("régies"), and, in general, concerning all financial matters which are common to the kingdoms and lands represented in the Reichsrath."

In order to appreciate correctly the degree of control exercised by the Upper House, in conjunction with the Lower, over public finances, it is necessary to give a brief account of the important part played in recent years by paragraph 14 of the constitution in connection with parliamentary obstruction. Paragraph 14 lays down that when there is urgent need of some legislative measure being passed at a time when Parliament is not sitting, such measure may be enacted by way of Imperial Decree, so long as it does not involve a change in the constitution, impose a permanent charge on the State revenues, or alienate State property.

The original object aimed at, when paragraph 14 was framed, was to meet cases of sudden emergency, and it was not at the time contemplated that it would be mainly employed in order to overcome the systematic obstruction of racial parties. Its employment for this object was the consequence of Count Badeni's Language Ordinance of 1897, placing Czech and German on an equal footing throughout Bohemia. With the object of securing the withdrawal of this ordinance, obstructionist methods were adopted by the Germans, and it became impossible to pass the annual Budget. Count Badeni fell, his Language Ordinance was withdrawn, with the only result that German was converted into Czech obstruction. From this date, until Dr. von Koeber's accession to office in 1900, it became necessary to apply paragraph 14 in
order to meet the financial needs of the country. Dr. Von Koerber succeeded in obtaining the assent of Parliament to his first Budget by means of promises of large public works in various parts of the country, the expenditure of as much as 80,000,000l. being contemplated for this purpose. In 1902, however, Czech obstruction, taking the form of a constant flow of urgency motions, again impeded the passing of the annual Budget, and both in 1903 and 1904 recourse was had to paragraph 14.

This period of obstruction was closed, and the fall of Dr. von Koerber occasioned, by the necessity of issuing a loan for military purposes. The Austrian banks were, however, unwilling to advance money upon the security of article 14, even upon advantageous terms, on the ground that paragraph 14, while expressly contemplating emergencies, lays down that no permanent charge is thereby to be made on the public revenues. Thus while the paragraph would cover the contraction of a temporary floating debt, it can provide no sanction for any addition to the permanent indebtedness of the State, and is the less valid as security in that decrees promulgated under paragraph 14 are liable to subsequent revocation by either House of Parliament.

It results from the foregoing that, under stress of unforeseen contingencies during the era of racial obstruction in Parliament, paragraph 14 of the Austrian constitution received an interpretation such as practically to deprive the two Chambers of the Reichsrath of their control of the Budget; and that in Austria this interpretation may prevail for an indefinite period, provided no permanent loan has to be issued, no old loan to be converted, and no State property to be sold. When these latter contingencies become imperative the Government has to choose between the alternatives of resignation, compliance with the demands of the obstructive elements in Parliament (a matter often difficult since, as in the years 1897-1900, compliance with the demands of one racial group may engender fresh obstruction on the part of a hostile group), or of recommending the Crown to suspend motu proprio the constitution, and modify it in such a manner as to meet the peculiar exigencies of Austrian parliamentary life.

DAYRELL CRACKANTHORPE.

August 6, 1907

BAVARIA AND WURTENBURG.

No. 2.

Mr. Cartwright to Sir Edward Grey.—(Received September 2.)

MUNICH, August 30, 1907.

Sir,—With reference to your Circular of the 10th ultimo, I have the honour to inclose herein short reports on the constitution and powers of the Upper Chambers of the kingdoms of Bavaria and Würtenburg.

I have, etc.,

FAIRFAX L. CARTWRIGHT.

Inclosure in No. 2.

Constitution of the Upper Chamber.

The Bavarian Parliament, created in 1818, and then called “Ständerversammlung,” was reorganized in 1848, after the revolutionary movement of that year, and since then it has been called the “Landtag.” This “Landtag” consist of two Chambers, the Upper Chamber (“Kammer der Reichsräte”) and the Lower Chamber (“Kammer der Abgeordneten.”)
SESSIONAL PAPER No. 246

The Upper Chamber is composed of:—

1. The Royal Princes who are of age.
2. The Princes of Ottingen-Ottingen and Thurn and Taxis, as holders of hereditary Offices of State.
3. The two Bavarian Archbishops.
4. The representatives of certain great noble families who still possess within the kingdom certain manorial estates. If they lose these they lose their seat in the Chamber. At present they number forty-six.
5. A Bavarian Bishop nominated by the King.
6. The President of the Protestant Upper Consistory.
7. Persons called to a seat in the Upper Chamber by the Crown. This honour may be either hereditary or conferred only for life. At present there are seventeen of such Members.

In 1907 the Bavarian Upper Chamber consisted of eighty members. The Royal Princes are allowed to vote at the age of 21, other hereditary members of the Chamber at the age of 25.

The number of hereditary members which the Crown can create is unlimited, but the number of life members is limited to one-third of the total number of members of the Upper Chamber, excluding the Royal Princes and the Princes of Ottingen-Ottingen and Thurn and Taxis.

Persons who aspire to be called to the Upper Chamber for life must either have rendered great services to the State, or they must be of noble birth or be persons of great private means.

Persons who aspire to enter the ranks of the nobility who possess hereditary seats in the Upper Chamber must have held Bavarian nationality for six years, or belong to the Bavarian nobility and have acquired entailed estates ("Fideicommiss").

The President of the Upper Chamber is named by the King for the period of one session.

The Chamber is divided into seven Standing Committees, to which all Bills are referred for a report. One of these committees deals with financial questions.

Constitution of the Lower Chamber.

The Bavarian Lower Chamber is composed of 163 members, that is, one deputy for about 38,000 of the population. Candidates must be Germans possessed of Bavarian nationality for at least one year, and be 25 years of age.

The Lower Chamber is divided into five Standing Committees to report on Bills.

Finances.

The Government introduce the Budget into the Lower Chamber, and it lasts for a period of two years. It becomes law when it has been sanctioned by the two Chambers. If disputes arise with regard to certain points between the two Chambers, the disputed matter is sent backwards and forwards till finally settled. No increase in the national debt can be made without the approval of the two Chambers.

Disputes between the two Chambers.

In 1902 a slight friction arose between the two Chambers. The President of the Lower Chamber, Dr. von Orterer, took public exception to the language used by Count Töring, member of the Upper Chamber, who had asserted in a speech that the Lower Chamber was wasting its time in idle discussions and not getting on with its work. President von Orterer declared that language of this kind was intended to discredit the Lower Chamber, and would lead to friction between the two Chambers.

At the time of the introduction of the new Bavarian Electoral Reform Bill (1904), a good deal of friction arose between the representatives of the various poli-
tical parties, and Count Lerchenfeld, President of the Upper Chamber, advised that members of the two Chambers should avoid, as far as possible, criticizing the proceedings of the other Chamber. The Prime Minister, Baron von Podewils, expressed his regret at the attacks made by one Chamber upon the other, as they contributed to disturb the harmonious working of the two Chambers, a harmony which was so necessary if they were to accomplish good work.

The dispute over the amendments made by the Upper Chamber in the proposed electoral law led to considerable friction with the Lower Chamber, and, finally, to adjust matters, the Presidents of the two Chambers met, and, after conferences restored harmony, and the Bill in its present form was finally passed.

Composition of the Chambers.

The law altering the constitution of Würtemburg passed both Chambers on the 16th July, 1906, and became effective on the 1st December of that year.

The reasons why a new law altering the constitution had become necessary was owing to the fact that the number of hereditary members of the Upper Chamber had been gradually diminishing in consequence of the extinction of noble families possessing hereditary rights. The Upper Chamber required strengthening in numbers, and a law for that purpose was, after much discussion, eventually passed.

At present the Upper Chamber consists of:

1. The Princes of the Royal House who are of age.
2. The nineteen heads of certain great noble houses who are in possession of landed estates within the kingdom enjoying feudal rights.
3. Six life members appointed by the King.
4. Eight representatives of the lower nobility.
5. Six ecclesiastical representatives—two Catholic and four Protestant.
6. Two representatives of the universities.
7. Five representatives of industrial interests—two chosen by traders, two by agriculturists, and one by the artisan ("Gewerbe") class.

The Wurtemburg Upper Chamber at present consists of fifty members.

The Upper Chamber is limited in numbers, except as regards the Princes of the Royal House. In the event of the extinction of any of the great hereditary noble families, the King can in their place appoint a life member to the Upper Chamber.

Constitution of the Lower Chamber.

The lower Chamber consists of:

1. Sixty-three deputies from provincial districts.
2. Six deputies from six other towns.
3. Nine deputies from the Neckar and Jagst districts.
4. Eight deputies from the Black Forest district and that of the Danube.
5. One deputy from the University of Tübingen.

The Lower Chamber consists of ninety-three members.

Finances.

All Bills have to be agreed to by both Chambers before they can become law.

The Budget is introduced into the Lower Chamber, and when voted in its entirety it is sent to the Upper Chamber, which has the power either of rejecting it or of mak-
SESSIONAL PAPER No. 246

ing amendments. The Budget then returns to the Lower Chamber, which discusses it anew, and the decision it comes to with regard to details is final. The Upper Chamber then has only the power of rejecting the Budget in its entirety. In the event of its becoming impossible for the two Chambers to agree as to the Budget, the votes cast in both Chambers for or against it are added together, and the resulting majority decides the issue. Should the votes be equal, the President of the Lower Chamber has the casting vote.

Disputes between the two Chambers.

In the year 1904 an Elementary School Bill was introduced, clause 4 of which gave the control of the schools to the teaching board and taking it away from ecclesiastical control. The Bill was passed by the Lower Chamber by a substantial majority, but met with much opposition in the Upper Chamber, which eventually rejected clause 4.

This gave rise to a storm of indignation against the Upper Chamber throughout the country, and on the 16th June the Lower Chamber passed a resolution by 62 to 17 calling upon the Government to introduce a Bill for altering the constitution of 1810. Meetings were held throughout the kingdom threatening the Upper Chamber with extinction. In the autumn of 1904 the Speech from the Throne promised the introduction of a Bill revising the constitution of the Upper Chamber, and on the 15th June, 1905, it was laid before the Lower Chamber, and, after long debates, it was approved by the Upper Chamber, and became law on the 16th July, 1906.

By the alteration introduced into the constitution of the Upper Chamber its influence in the country has been increased.

BELGIUM.

No. 3

Sir A. Hardinge to Sir Edward Grey.—(Received September 10.)

BRUSSELS, September 12, 1907.

Sir,—I have the honour to transmit herewith, as desired in your Circular despatch of the 10th July last, a report by Mr. Wyndham, First Secretary of this Legation, on the Senate or Second Chamber of the Kingdom of Belgium.

I have, etc.,

ARTHUR H. HARDINGE.

Inclosure in No. 3.

Report by Mr. Wyndham on the Senate or Second Chamber of the Kingdom of Belgium.

Constitution of 1831.

When Belgium separated from Holland, and when the constitution of 1831, which, with certain modifications, still remains in force to-day, was framed, there was considerable hesitation as to the nature and position of the Second Chamber. The doubts which existed in the minds of those who drew up the constitution can be traced in the altered draft of particular clauses and in the slightly anomalous position, which will afterwards be touched upon, finally given to the Second Chamber. Some members of the Constituent Assembly were in favour of only one single Chamber, while others wished that there should be a Second Chamber with members appointed by the King.
As is usually the case in Belgian history, a compromise was effected, and a middle course was steered between these extreme views. The Parliament as finally established, consisted of two elective Chambers. This solution was all the more natural since the French rule under the Revolution and the Empire had so completely swept away the ancient orders or estates of the realm that a revival of the old representative Assemblies based upon them was impossible, whilst the traditional Belgian jealousy of the authority of the Crown, intensified by the recent experience of Dutch rule, militated against the creation of a House of Peers as that of the French Restoration or even of the July Monarchy.

Two Elective Chambers.

The two Chambers being elective, it will be necessary to consider briefly the condition under which they were originally chosen and to examine the more important modifications which have regulated the franchise since the constitution was originally established.

The franchise under which the House of Representatives was elected was for eighteen years a very restricted one, and the electorate consisted of about 45,000 electors out of a population of 4,000,000. The constituencies were, and still remain, the "arrondissements" or administrative subdivisions of the nine provinces into which Belgium is divided. These "arrondissements" may for electoral purposes be redistributed, and at present out of the thirty-one electoral divisions six are formed by the union of two, and two by that of three "arrondissements." There is no distinction between urban and rural constituencies, but the number of members is based on population in the ratio of one member to every 40,000 electors, whether possessing one or several votes. It follows that some electoral divisions return many more members than others; thus the Brussels division returns twenty-one, the Antwerp division fourteen, and the Liège division twelve, while the thinly-populated Luxembourg division of Neufchateau-Viron is only represented by two. There is a decennial redistribution of seats, new ones having to be created to meet the increase of population shown by each decennial census. The same constituencies elected the Senate, but as every senator required, under the Electoral law of 1831, to pay taxes equal to 1,000 florins a year, the choice of the electorate was confined to the wealthy classes. It has been calculated that before the reforms of 1892 and 1893 less than 500 persons for the whole of Belgium were actually eligible for the Senate.

Electoral Reform.

Under the new Electoral law, passed in April, 1893, which, although its effects were subsequently modified by proportional representation, still remains in force, the vote was given after a year's residence to every citizen 25 years old, and not disqualified either permanently or temporarily by conviction of crime or the receipt of public charity. Every citizen over 35 years of age, and married or a widower with legitimate issue, paying at least 5 fr. a year in house tax, or owning real property worth 500 lfl., or having derived for two years previously 4l. a year from Belgian funds, became entitled to a supplementary vote. Two supplementary votes were bestowed on electors who had received a diploma of higher or secondary education, or who filled, or had previously filled, any appointment implying a superior education. No person could have more than three votes, or vote in more than one constituency, and the exercise of the franchise was rendered obligatory under penalty of a fine.

Proportional Representation

Succeeding elections conducted under this law made it more and more evident that its effect, given the growth of Socialism and the rise of a third party in addition
SESSIONAL PAPER No. 246

to the Catholic and Liberal parties which had hitherto practically occupied the whole of the political area, was to make Parliament a very inaccurate reflection of the national opinion or of the real relative strength of opposing views, and many moderate men became convinced that the maintenance of the electoral system established in 1893 might be fraught with grave dangers to the future working of parliamentary institutions. Of these dangers the most serious was the prospect of the eventual disappearance of the old Liberal party, which was being crushed out of parliamentary existence between the Clerical and the Socialist organizations. To remedy these dangers the systems of proportional representation was introduced and finally carried, after various vicissitudes, in 1899. Inasmuch as the mode of election to the Chambers is not explicitly laid down by the articles in the constitution which deal with the qualifications of electors, the measure did not, like the introduction of universal suffrage and of plural voting, require the two-thirds majority in both Houses necessary for carrying a change in the constitution and it can therefore be repealed or modified without them. Sir Arthur Hardinge has fully reported upon the system and the political results of proportional representation in his despatch of the 28th June, 1906, which was published in the same year as a parliamentary paper, and it is thus hardly necessary to enter into details upon the subject.

Present Constitution of the Senate.

The Senate as at present constituted consists of 110 members, elected for eight years, one half of these members being subject to re-election every four years, instead of every two, as is the case with the members of the Lower House. Of these members eighty-three are chosen by direct elections by the votes of the same electors as elect the House of Representatives, with this single difference, that electors for the Senate must be 30 instead of 25 years of age. The same system of representation according to population holds good with regard to the Senate as with the Lower House, but in the case of the Senate, every 80,000 persons are represented by one senator, whereas in the Chamber a Deputy represents 49,000 electors. According to the electoral lists of 1901-2 there were 701,003 persons qualified to vote for the Senate having one vote, 317,669 persons with two votes, and 236,627 with three votes, a total of 1,255,899 electors with 2,046,822 votes. The remaining twenty-seven senators are elected by the County Councils ("Conseils Provinciaux") which are themselves elected by all citizens qualified to vote directly for the Senate, the electoral division in the case of these Councils being, however, not the "arrondissement," but a division of it called the "canton," and standing in the same relation to the "arrondissement" as the latter does to the province. The electoral divisions returning senators by direct election are, as has been already shown, the same as those returning members for the House of representatives; but two or three such divisions are more frequently fused into one for the purposes of senatorial elections, the number of electors being a good deal smaller on account of the difference of the age limit. The Senate is thus the product of almost universal suffrage tempered by the plural vote, and, in the case of twenty-seven of its members, to whom the system of proportional representation is not applied, by the substitution of indirect for direct election. Its otherwise democratic character is qualified by the provision in the Constitution of 1831, which the Reform Acts have preserved in an altered form, and which obliges every candidate for the Senate, besides being at least 40 years of age, to be the owner or occupier of real estate valued at 12,000 fr. (£480) a year, or to pay 1,200 fr. (£48) a year in direct taxes. The Senators directly elected by the democracy must, therefore, be middle-aged men, with a substantial stake in the country. Those elected by the Provincial Councils are not required to possess this property qualification, and this circumstance, joined to the fact that these local bodies are occasionally very radical in complexion, accounts for the presence among the provincial senators of several ultra-democratic politicians.
Its general character.

The Senate as at present constituted, and excluding the Heir Apparent to the Throne, who, by an exception in the constitution, has an ex officio seat in it, but is not of course identified with any political party, contains sixty Catholic members, forty-two Liberals, one Independent, and seven Socialists. It is not easy to classify with accuracy the professions or occupations of the various members, as the divisions would necessitate a large number of cross classifications. There is but one ecclesiastic, some forty-three members are lawyers and persons representing Liberal professions, and about the same number are drawn from the business and commercial classes, from bankers, owners of or partners in large industrial works, and merchants. There is a considerable sprinkling of the representatives of the aristocratic families, more so than in the Lower House, where the large majority consists of lawyers, while the landed interests are represented by all the categories above mentioned. On the whole, the Senate represents not so much the aristocracy as the business classes of the country. The position of senator hardly appeals to a young and ambitious man; there is not within the walls of the Senate the same scope as in the Lower House or in the law courts, nor does its membership carry with it the same prestige as that of belonging to an hereditary House. But the position of senator is one of dignity, and, compared with the duties of membership of the Lower House of comparative ease. Both Houses being elective, there is no social or class distinction between the two, and a senator will occasionally, on leaving the Upper House, seek election in the Lower. The property qualification insures that the members of the Senate should be drawn from classes of a certain financial position—or, at all events, in easy circumstances—while the age qualifications of the electors and of the candidates, together with the system of the plural vote and proportional representation, insure the existence of a stable and conservative element, counterbalancing the elective character of the Senate and the low franchise under which it is chosen. These qualifications have so far kept from the Second Chamber any Socialist or Labour element sufficient to affect its general character; its debates are usually conducted with greater calm than those of the Lower House, and, if anything, attain a higher order of merit. No popular feeling exists in the country against the Senate, and no party, not excluding the Socialists, are in favour of entirely doing away with a Second Chamber, though the more extreme members of the Left advocate the abolition of the property qualification and the plural vote.

Limitations to Powers of Senate.—Money Bills.

As has been pointed out at the beginning of this report, there existed considerable doubt in the minds of the framers of the constitution as to the position of the Second Chamber. In the original draft article xxvii ran as follows:

"L'initiative appartient aux trois branches du pouvoir législatif. Néanmoins toute loi relative aux recettes on aux dépenses de l'Etat ou au contingent de l'armée doit d'abord être votée par la Chambre électorale."

This limitation was evidently inserted in imitation of the privileges enjoyed by the House of Commons under the British constitution, and though it was ultimately decided that the two Chambers should be elective the limitation was preserved. In the constitution, as finally adopted, Article xxvii, after declaring that the right of initiating legislation belongs to each of the three branches of the legislative power, states that "néanmoins toute loi relative aux recettes et aux dépenses de l'Etat ou au contingent de l'armée doit d'abord être votée par la Chambre des Représentants." Thus the original clause, though altered in wording, remained substantially the same. It was apparently adopted without discussion, and continues an anomaly in a constitution where both Chambers are elective. In 1902 the Senate proposed to repeal this clause, but the suggestion was thrown out in the Chamber.
Disputes between the two Chambers.

As was inevitable, various questions have from time to time arisen between the two Chambers as to the interpretation of Article xxvii, but the disputes have never assumed the proportions of a serious struggle, and have either been allowed to drop or have ended in an amicable compromise. Thus, in 1834, the Senate proposed to create a Council of State, and the question arose as to the payment of the councillors. It was decided that the Senate was not deprived of the right of voting expenditure, but that it could not make any definite stipulation as how the funds should be provided. Again, in 1841 a motion was introduced in the Senate making definite provision for additional expenditure on the improvement of country roads. A point of order was raised and the motion was withdrawn, and another motion couched in more general terms substituted, to the effect that the additional expense should be borne partly by the State and partly by the various communes. In 1845 the question of increasing duties on agricultural produce was raised in the Senate, but it was particularly pointed out that this increase was not for revenue but purely for protection. On the Bill being sent down to the Chamber of Representatives a fresh Bill was substituted, and the new Bill, after being passed in the Chamber, was accepted by the Senate.

The most serious question that has arisen regarding Money Bills was in 1869, when the Senate threw out by a catch vote the Budget of the Ministry of Justice, and returned it without discussion to the Chamber of Representatives. A vigorous protest was made by the Prime Minister, M. Frère-Orban who was also Minister of Finance, and the Budget was voted again by the House of Representatives by a majority of 62 to 42. The incident was not, however, so much a constitutional difference between the two Houses as a vote of confidence in the Government, and especially in the Minister of Justice, M. Bara. The question did not assume an acute form as between the two Chambers, and dropped with the fall of the Liberal Ministry in the following summer.

Spirit of Compromise.

From the above examples it will be seen that neither House has in the course of Belgian history ever attempted to push its claims to extremes, and the temporary disputes have been settled by compromise and the exercise of common sense. Any permanent estrangement would, moreover, be rendered impossible through the constant renewal of the Chambers by the electorate, one-half of the Senate being subject to re-election every four years, and the whole body in the event of a parliamentary dissolution.

The general opinion of constitutional writers, so far as I can gather, is to the effect that, the restriction with regard to the initiation of Money Bills being an anomaly, its interpretation should be liberal, and that the Senate not only has the right to accept or reject a Money Bill, but also to amend it.

Gradual Diminution of Control of the Senate over the Budgets.

As a matter of fact, the control of the House of Representatives over the Budget has become practically greater than was contemplated under the theory of the constitution. Of recent years, and especially since the introduction of universal suffrage, the debates on the various Budgets—and it should be remarked that the ordinary Budget in Belgium is made up of fifteen distinct Bills—have been extended to an inordinate length, and the Budgets have been only sent up to the Senate towards the close of the parliamentary session. The time necessary for the full discussion of these various Bills has been thus of necessity curtailed, and the Senate
has by the force of circumstances been obliged to restrict its right of amendment, and
even to limit its duty of criticism and control. This condition, the result of the
prolonged debates in the Lower House, has been the cause of frequent, though hitherto
of ineffectual protest.

*General Spirit of Harmony between the two Chambers.—Possibility of approaching
Conflict.*

The right of the Senate to amend or reject measures other than Money Bills has
never been called in question, but as both Chambers are elected by similar constitu-
encies, their political complexion and the balance of parties within them are so
similar that its exercise has been infrequent. It must further be remarked that the
Catholic or Conservative party has for twenty-three years had a majority in both
Houses of Parliament, and that its legislation has rarely been of a character to pro-
voke a conflict between the popular and revising Chambers. It appears, however,
likely that the Mining Bill, which was carried last spring by a coalition between the
Extreme Left and the Young or Democratic Catholics, and which brought about the
fall of the De Smet de Naeyer Cabinet, will be amended if not rejected in the Senate,
and that though the Government and the majority of the House of Representatives
will acquiesce in the decision of the Second Chamber, or accept some compromise on
the subject, the Labour party will violently denounce it, and demand, not indeed its
abolition, but its reform on more democratic lines.

PERCY C. WYNDHAM.

September 12, 1907.

DENMARK.

No. 4.

Sir A. Johnstone to Sir Edward Grey.—(Received October 21.)

COPENHAGEN, October 17, 1907.

Sir,—In accordance with the instructions contained in your Circular despatch
of the 10th July last, I have the honour to transmit a report by Mr. Vaughan on the
composition and functions of the Danish Upper House, as well as an account of the
disputes which have arisen of late years between the two Houses and the means by
which these have been adjusted.

The efforts of the party of reform are more directed towards obtaining an Upper
Chamber of increased Liberal tendency than towards curtailing its powers; and not
but a few Extremists have shown any wish to do away with the double Chamber
system, which all the leading men in this country appear to consider the wisest form
of parliamentary Government.

I have, etc.,

ALAN JOHNSTONE.

_Inclusion in No. 4._

_Report by Mr. Vaughan on the Danish "Landsting," or Upper House._

The Danish Rigsdag, or Parliament, is composed of two Chambers: the Lower
House, known as the Folketing, and the Upper House, known as the Landsting.

The Landsting is invariably composed of sixty-six members, of whom twelve are
nominated by the King for life and the remaining fifty-four are elected for eight years, seven representing the town of Copenhagen, forty-five the other districts, town and county, and one each the islands of Bornholm and the Faroes. Half of the number of elected members retire by rotation every four years. A member of the Landsting may only be elected for a constituency in which he resides, whereas a member of the Folketing may be elected for any constituency.

The preliminary process of election, which in its final stage is conducted in accordance with the rules for proportional representation, is somewhat complicated.

By section 49 of Law No. 16 of the 7th February, 1901, the Danish representative area is divided into twelve electoral circles, each with a specially determined number of representatives.

These electoral circles, or districts, are subdivided into "parishes," whose smaller individuality is retained for certain purposes, while for others it is merged in the larger division of the "circle."

In each circle there are two classes of electors:

Firstly, those who are direct electors and themselves vote for the candidate; and

Secondly, those who are chosen as deputy electors by a majority vote of such persons as enjoy the franchise for elections to the Folketing.

But this does not apply in the case of Copenhagen, where the system of election differs from that in the rest of the country, the final elections in that city being made entirely by deputy electors, who are chosen as follows:

All those who enjoy the franchise for elections to the Folketing vote also for a certain number of these deputy electors. Voters who are taxed on a yearly income of 4,000 kroner (£222 4s. 6d.) also choose an equal number of them, and the deputy electors in turn choose seven members for the Landsting.

In places other than Copenhagen the final elections are made by electors, half of whom are deputy electors having been chosen by a majority vote of those who enjoy the franchise for elections to the Folketing, and the other half of whom are direct electors in virtue of their being the most highly assessed taxpayers in the respective circles.

The former half are chosen, one for each parish, but in the case of the latter half (or direct voter in virtue of assessment) the parishes in the respective circles are "pooled" as it were, and the circle as a whole furnishes such a number of direct voters as corresponds to the number of parishes in that circle, these voters being the most highly assessed taxpayers in the circle as a whole, irrespective of the parishes, except in so far that their numbers correspond, as already explained.

The "commercial towns" in a circle, and also the towns of Frederiksberg and Marstal, furnish half the number of final electors corresponding to the number of parishes in the circle, these final electors consisting of the two classes above mentioned (half direct and half deputy), the assessment qualification in these cases, however, is based on a yearly income of 2,000 kroner (£111 2s. 3d.), or an annual payment to the State in direct taxation of 150 kroner (£6 6s. 8d.)

The Landsting enjoys exactly the same privileges in regard to legislation, including finance, as the Folketing, although the latter exercises a predominant influence on the Budget in virtue of section 48 of the constitution, which enacts that this must be first dealt with by the Lower House. As the Budget, which is presented in October, must be passed by both Chambers before the end of the financial year on the 31st March, if most of the time available for its discussion is monopolized by the Folketing, the Landsting, although in theory equally entitled to discuss details, is in practice precluded from doing so owing to lack of opportunity.

In case of either Chamber not accepting the amendments of the other to any measure, provision is made by section 53 of the constitution for the appointment of a
Joint Committee, consisting of an equal number of members from each Ting, who are to meet together with a view to effecting an agreement.

The section reads as follows:—

(Translation.)

Section 53. "When a Bill has been passed in one Ting it must, in the form in which it has been passed, be submitted to the other Ting; if it is altered there, it goes back to the first; if it again undergoes alterations here, the Bill goes back once more to the other Ting. If no agreement is reached, each Ting shall, if one of them demands it, appoint an equal number of members to form a committee, which studies the points of disagreement and furnishes a report to the Tings. A final decision with reference to the Committee's report is taken in each Ting separately."

It need scarcely be stated that, in endeavouring to describe the recent relations between the two Chambers, strict impartiality has been one of the chief objects in view.

An expression of thanks is due to Dr. (Juris) Knud Berlín, author of "Oplosningsretten overfor Lovgivende Forsamlinger" ("The Right of Dissolution with regard to Legislative Assemblies") Copenhagen, 1906; for much valuable assistance in the attempt to elucidate the rather delicate problem.

During the last ten years no serious constitutional disputes between the Landsting and the Folketing have taken place, at least none that can compare with the great constitutional conflict of the years 1873-94.

Latterly, however, the relations between the two Chambers have been of a nature which threatens to entail a fresh conflict, or, what is perhaps more probable, a fresh political compromise.

It would be next to impossible to enumerate the points of difference which stand out pre-eminently from the rest, as the disagreement would appear to be rather of a general than of a special character, owing to the conflicting interests of the largely democratic Folketing and the necessarily conservative Landsting.

On the conclusion of the great political compromise in 1894, which terminated the long and keenly-waged war between the two Houses, the Landsting and the Conservative Government ("Højre"), which it supported, may, on essential points, claim to have emerged as victors. The Government, which be it remembered had a minority in the Folketing, did not, it is true, succeed in obtaining legislative recognition of the fortification of Copenhagen by land, which had been effected on the strength of "provisional" budgets and without legal supplies, nor in securing indemnity in repect of the numerous "provisional" laws promulgated during the years of conflict. The "provisional" land fortification, however, received a tacit acknowledgment in that supplies were granted for their upkeep, and, while the Folketing reserved their right of impeaching the Ministers before the "Rigsret" (a special political court provided for in sections 14, 68 and 69 of the constitution, and composed of members of the Supreme Court and an equal number of members of the Landsting), such a step was never considered practicable nor seriously entertained. This victory once achieved, the power of the Landsting commenced to decline. At the compromise the Government had been obliged to agree, either directly or tacitly, not to issue any more "provisional" budgets, and consequently when they were again forced to obtain the consent of the Folketing to fresh supplies and new laws the Second (Lower) Chamber necessarily became the dominant partner.

The new Moderate Liberal party ("Venstre Reform parti") under the leadership of Herr J. C. Christensen, knew how to make the most of their opportunities. They (the Opposition) apparently showed themselves very ready to negotiate with the Government, and a few of the more important laws of a non-political nature were passed, e.g., the law concerning workmen's compensation, 1898; the law regulat-
ing economic conditions of marriage, April, 1899; and the law respecting allotments for farm labourers, 1899, but they managed to block all the important measures, especially those effecting reforms in taxation and in the tariff, and those relating to the payment of officials, while laying the blame at the door of the Government, whom they reproached with retaining their portfolios year by year, although they could not carry any of the great reforms desired by the country.

The successive Conservative ("Højre") Cabinets gradually lost the confidence of the electorate, who demanded that government by the Landsting should be replaced by government by the Folketing.

Owing to the predominant advantage enjoyed by the Lower House through the right to discuss the Budget first, as already explained, with the consequent power of restricting its discussion by the Upper House to a few weeks just before the close of the financial year, the Folketing was virtually possessed of the key of the Exchequer. The Financial Committee of the Folketing, in which the Liberals ("Venstre") formed the majority, thus in reality proved more powerful in all matters relating to supply than the actual Government, and when the Sehested Cabinet had come to the end of their resources, much of the money having been expended in the fortification of Copenhagen, and were obliged to ask the Folketing for a public loan, their request was refused. They thereupon resigned, and a Liberal ("Venstre") Cabinet under Herr Deuntzer took office on the 24th July, 1901. The appointment of the Deuntzer Cabinet marked an epoch in Danish constitutional history, in that it was an acknowledgment of the parliamentary system, and this change of Government is consequently known as the "change of system."

At first the new government met with no small measure of success, and managed to pass many of the Bills which they had resisted when in Opposition, but when they endeavoured to give effect to the programme to which they were pledged, the Landsting once more proved that it was a power to be reckoned with, and the Government had to shape their measures accordingly, if these were to stand any chance of being carried through the Upper House.

Many of the items in the original programme of the Liberals ("Venstre") have from time to time met with disaster at the hands of the Landsting. For instance, between the years 1902 and 1906 the Bill presented by the Government in regard to obligatory civil marriage was rejected three times in succession by the Landsting (which desired that it should not be obligatory but optional), although in 1902-3 it was unanimously agreed to by the Folketing. This measure has now been abandoned.

In like manner the Bill relating to reform in criminal and civil procedure, aiming at the introduction of public and oral proceedings and the prosecution and jury systems in the law courts, has for many years (1901-2 to 1906-7) been wandering backwards and forwards between the two Chambers without any compromise being effected. The bone of contention in this case being the class from which jurymen are to be drawn.

But perhaps the main source of conflict has been the Communal Voting Reform Bill, by which it is proposed to introduce equal and universal suffrage at communal elections. This Bill has been under discussion since 1903, and the Landsting has, so far, offered strong opposition to it.

The Bill deals with elections for the "Amtsraad" (Communal or County Council), the "Byraad" (Town Council), and the "Sogneraad" (Parish Council).

By the present system, members, exclusive of the "Amtmand," or Chief Magistrate, who is Chairman of the Council, are elected to the Communal Council, ("Amtsraad")—the number composing which is always uneven—partly, i.e., the larger "half," by deputy electors, chosen one by each Parish Council ("Sogneraad), and partly, i.e., the lesser "half," by the most highly assessed taxpayers in the commune who vote direct, and to the Parish Council, the number of whose members is also

246—2
uneven, partly, i.e., the larger "half," by the highest taxed fifth of the inhabitants, and partly, i.e., the lesser "half," by all the taxpayers over 25 years of age, both parties being direct voters in this case.

The same system applies to the Town Council ("Byraad") as to the Parish Council, except that for the Town Council the lesser "half" of the deputy electors are chosen by the highest taxed fifth of the inhabitants. For all three councils elections are at present decided by a majority of votes.

Before reviewing the Bill it is necessary to explain that the balance of power in the Landsting is virtually in the hands of a party which practically does not exist in the Folketing, viz., the Free Conservatives, consisting of nine members under the leadership of Count Frijs, as their nine votes are at present sufficient to decide the fate of any measure. It was consequently between this party and the Government that negotiations took place in regard to the Bill.

In the new measure the Government's, or, in other words, the Folketing's principal proposals were roughly as follows:—

1. For the Parish and Town Councils, one man one vote among the taxpayers, including servants and women, with a residential qualification of one year.
2. Abolition of the assessment qualification for the Communal Council ("Amtsraad").
3. The system of proportional representation to be applied to all three Councils.
4. Members of the Communal Council to be elected by deputy electors, who (two from each Parish Council) must be elected by and from amongst members of the Parish Council.

The counter-proposals put forward by the Landsting were:—

(a.) By the old Conservative Right ("Højre"):—

1. For the Parish and Town Councils the principle of one man one vote, etc., including women, but not servants (though, finally, this point was ceded), to be accepted, but only as regards "half" of the Council, and with a two years' residential qualification, while the other "half" must be chosen by voters over 40 years of age.
2. The assessment qualification for electors of deputy electors to the Communal Council to entail a higher number of votes than at present, viz., three from each Parish Council, and as many from the most highly assessed taxpayers, instead of one and one respectively.
3. Proportional representation to be adopted.
4. Voting to be compulsory.

(b.) By the Free Conservatives, and these proposals were more important as the negotiations turned on them:—

1. For the Parish and Town Councils, the principle of one man one vote, etc., including women and servants, to be accepted, but with a residential qualification of two years. (It was stated, however, that the Bill would not be sacrificed on this point.)
2. The assessment qualification for the electors of deputy electors to the Communal Council to entail two votes, i.e., two from each Parish Council and two from the most highly assessed taxpayers.
3. For the Parish and Town Councils every voter over 40 years of age to have two votes—half of the members of the Councils to be elected by those
voters over 40 years, and the other half by those over 40 years and the rest
of the voters conjointly.
4. Proportional representation to be adopted.
5. The Parish Council to be restricted from raising the existing taxation
beyond specified limits.

This last condition of the Free Conservatives was answered by a proposal of the
Government that previous to the imposition of higher taxation a referendum to all the
voters i.e., taxpayers should be necessary.

6. Municipal trading to be limited to certain specified undertakings, such
as tramways, telephones, etc. Information as to how far this point was
insisted on is not forthcoming.

Protracted negotiations took place in regard to the Bill between a member of the
Government and Count Frijs during the session 1906-7, with a view to effecting a
compromise, but unfortunately they led to no definite results, and the Rigsdag
adjourned, both Houses maintaining their original ground.

The results of the negotiations, so far as they went, were roughly that:-

1. The principle of proportional representation was accepted by both
parties.
2. Womens' suffrage was accepted by both parties for the two Lower
Councils.
3. Both parties also agreed that there should be no assessment qualification
for the two Lower Councils, while there were to be restrictions as regards
increased taxation. On the point of restrictions the Government would only
grant a referendum, while the Free Conservatives insisted that any increased
taxation proposed by the Parish Council must have the previous approval of
the Communal Council, and by the Town Council of the Ministry of the
Interior.

They also insisted on an age qualification for both the Lower Councils.
4. The Government are believed to have agreed that an assessment quali-
fi cation should be maintained for the Communal Council, but it is not known
what view the Folketing would take of such a concession to the Landsting.

Other measures of political interest have also been proposed by the Folketing
and rejected by the Landsting, such as the enlargement of the Folketing constituencies
and the revision of section 32 of the constitution, which enacts that the Folketing
shall consist of approximately one member for every 16,000 inhabitants. This has
always been a dead letter, as the present Chamber consists of 114 members, while
for compliance with the section about 160 would be necessary. The Government
proposal was to increase the present number to a fixed total of not less than 124 nad
not more that 132.

Again, a Bill relative to Ministerial responsibility has been under discussion since
1904-5. Section 12 of the constitution merely states that the Ministers are responsible,
and that their responsibility is to be more closely defined by law.

On the other hand, Bills which have originated in the Landsting have been
rejected by the Folketing, as, for instance, that proposing an increase in the excise
duty on alcohol in 1899. This proposal the Folketing dismissed in March, 1900, it
being considered that such an impost would weigh heavily on the working classes,
who, in Denmark, consume a large quantity of alcohol in the form of "Akvavit."

It is commonly supposed that the Landsting and Folketing are not altogether at
one on the subject of tariff matters, the Landsting being credited with protectionist,
CONSTITUTION OF UPPER CHAMBERS

4-5 GEORGE V., A. 1914

and the Folketing with free trade, prodigities. It is believed that the Upper House would not be averse to a duty on corn.

The apparent impotence of the Folketing to enforce its will in the Landsting has naturally given rise to much bitter comment from the Social-Democratic and Radical parties, and many strong threats have been used both at political gatherings and in the press of waging war against the Landsting, but the responsible Ministers have so far always counselled patience, especially as the means at the disposal of any Government for such a campaign are necessarily limited.

It is true that the Crown can at any time dissolve the Landsting, but it is a much-debated question whether such a dissolution would embrace the whole Landsting, or only the elected members. As already stated, of the sixty-six members of the Landsting, twelve are appointed by the King for life, while fifty-four are popularly elected for eight years and the question in dispute, which is peculiar to Denmark, is whether the twelve members appointed for life must vacate their seats at a dissolution—which would enable the Crown to appoint twelve new ones to fill their places—or not.

The Liberals ("Venstre") maintain that they must, relying on the fact that by the former constitutions of 1855 and 1863, they were appointed for twelve years only, while the Conservatives ("Højre") maintain the opposite view, and interpret appointment "for life" as exempting them from the effects of a dissolution.

Section 23 of the present constitution, on which the Liberals further rely, merely states that the King has the right to dissolve either Chamber, and contains no reservations.

Section 30, on which the Conservatives again rely, states that the appointment of the nominated members is for life, and, in specifying the cases in which such members may, or must, vacate their seats, makes no mention of a dissolution.

Unless the Government can dissolve the whole Landsting, including the twelve nominated members, most of whom were appointed whilst a Conservative ("Højre") Government were in office, they cannot embark on a campaign against that Chamber with any certainty of success, in view of the peculiar conditions attending its composition. The fact that a large number of votes are allotted to the highest taxpayers in the country, and consequently to the large landed proprietors, renders it very unlikely that an election, consequent on a dissolution, would result in much change among the parties returned, unless the present system of suffrage were radically altered.

While many persons, no doubt, are of opinion that, if no other means can be found to enforce the will of the Folketing, then the twelve life members must at any cost be deprived of their seats at a dissolution, yet there would appear to be no general desire among the masses to raise a new constitutional conflict, if such can be avoided; and it is intelligible that a Government should shrink from applying to the constitution an interpretation which many people refuse to accept, especially as the issue of a dissolution itself cannot be otherwise than doubtful. Moreover, a precedent created by one Government may be applied by another.

The fact that most of the Conservative nominated members are well advanced in years no doubt exercises a moderating influence with those who would lead a campaign against the Upper House, as in the natural course of events their places will be filled by Liberal nominees—always provided the present Government remain in office—with the ultimate result that the Liberals will obtain the necessary majority. This is also adduced as an argument why the Landsting, as at present constituted, should be anxious to effect a compromise with the Folketing in regard to matters of high political importance, before it loses the majority in the Upper House. Four Liberal life members have already been nominated by the Crown since the present party came into power.

Prophecy with regard to the fate of the twelve nominated members of the Landsting would be idle at this juncture, but the advent of a fresh political compromise of a general nature would undoubtedly be welcomed by many as the most efficacious means of preventing a more acute development of existing disagreements.
The nature of the relations between the two Chambers during the last ten years will be more readily appreciated if the events which led to the great political compromise of April, 1894, are briefly passed in review, and if the main points of the compromise itself are explained.

In 1864, on the conclusion of the war, and after the loss of the Duchies, Denmark was faced by the problem as to which of her two constitutions should be definitely adopted. That of 1849 had in 1853 been specially restricted to Denmark alone, whilst that of 1863 applied to Denmark and Schleswig jointly. The Left demanded that the country should revert to the former while the Right considered that under it Conservative interests, especially as regards the Landsting, were not sufficiently safeguarded, and the National Liberal party supported them, as they considered the provisions of the constitution in question too democratic.

An alternative proposal was finally agreed upon between Count Frijs (the father of the present leader of the Free Conservative party), representing the Landsting, and Herr Hansen, the leader of the Left, which resulted in the present constitution of the 28th July, 1866. This understanding between Count Frijs and the Left (which is generally known as the "understanding between the great and the small farmers") lasted till his retirement from the Presidency of the Council in 1870, when the new Cabinet, under Count Holstein-Holsteinborg, effected a compromise between the landed interests of the Landsting and the official and business interests of the National Liberal party. This led to a new party, known as the United Left, being formed in opposition to the Government, with the maintenance of the parliamentary system as the chief item in its programme. In 1872 the United Left obtained a majority in the Folketing, and that Chamber agreed to petition the King with a view to the formation of a Left Cabinet, representative of the majority in the Folketing, but without result. The Folketing next threw out the Budget (1873), and the Government replied by dissolving the Ting. The long war between the Landsting, which formed the Government, and maintained that according to the constitution it had equal rights with the Folketing, and that the King could act independently of this Chamber had now begun.

In 1875 Herr Estrup formed a new Government, who retained their portfolios until 1894. The chief items in their programme were the fortification of Copenhagen and the equal rights of the Landsting. The Left and the Folketing were willing to vote 30,000,000 kroner (1,666,666l.) for defence purposes, but not for the fortification of Copenhagen, and they desired that the necessary funds should be raised by an income and property tax. This question of defence led to the Folketing being dissolved in 1876. Subsequently, when the Tings could not come to an understanding about the Budget, the first "provisional" Budget was issued in April, 1877, on the strength of section 25 of the constitution of 1866, which enacts that, "in extremely urgent cases the King can, when the Rigsdag is not in session, issue provisional laws, which must not, however, conflict with the constitution, and must always be submitted to the following Rigsdag."

For the next few years the Folketing voted such extremely limited Budgets (known as the "shorn poodles") that the Government again resorted to the system of provisional Budgets from 1885 to 1894, and under them money was devoted to services which the Folketing had expressly vetoed, especially the fortifications of Copenhagen.

Feeling in the country ran very high, but people were weary of a conflict which prevented the necessary laws being passed, and in April, 1894, the Moderate Left and the Right in the Folketing made the famous "compromise," to which the Landsting agreed.

Allusion has already been made in the body of this report to the results emanating from the compromise, the main object of which was to prevent, in the future, political conflicts such as existed at the moment, and to put an end to the system of "provisional"
Budgets. The Rigsdag passed a resolution amongst others to the effect that, in future, if the discussion of the Budget for the ensuing financial year had not been completed by the end of the current financial year, the Government ought to propose, and the Rigsdag ought to agree, to an "interim" Budget, framed on lines which they indicated and for a period not exceeding two months.

This arrangement, which it must be borne in mind was neither part of the constitution nor even a law, and could be denounced by either Ting at any time, received important recognition in 1902, in that the Liberal Reform party, who were then in office, but who had been the opponents of the compromise in 1894, availed themselves of this form of "interim" Budget, the two Chambers not having completed the discussion of Estimates by the end of the then financial year.

COPENHAGEN, October 10, 1907.

FRANCE.

No. 5.

Sir F. Berti to Sir Edward Grey.—(Received August 9.)

PARIS, August 5, 1907.

Sir,—I have the honour to transmit to you herewith a report drawn up by Mr. George Grahame, Second Secretary at His Majesty’s Embassy, on the Senate in France, in accordance with the instructions conveyed to me in your Circular despatch of the 10th ultimo.

I have, etc.,

FRANCIS BERTIE.

Inclosure in No. 5.

REPORT BY MR. GRAHAME.

Part I.—Composition and Functions of the French Senate.

The French Senate is the creation of the National Assembly, which body, elected in 1871, voted in 1875 a series of laws which form the basis of the present constitution. The law organizing the Senate bears the date of the 24th February, 1875. It provided for the creation of a Chamber to consist of 300 members, of whom seventy-five were to be nominated by the National Assembly for life. The remaining 225 were to be elected by the departments and certain colonies, the number of senators to be allotted to each being exactly laid down; seven seats were given to Algeria and the colonies.

2. The members of the Senate are elected for nine years, "au scrutin de liste" (the system by which each elector in the department is entitled to vote for as many candidates as there are seats to fill); a third part of the Senate has to be renewed every three years. A candidate for election must be 40 years of age, and in full enjoyment of civil and political rights.

3. Senators are elected by an Electoral College, meeting in the chief town of the department or colony, and composed of (a) the parliamentary deputies; (b) the members of the Departmental Council ("Conseil Général"); (c) members of the District Councils ("Conseils d’Arrondissement"); (d) delegates elected from among the electors of the Commune by each Municipal Council.
4. The Electoral College is thus composed of "electors by right" and "elected electors." The term "municipal council" in France applies equally to rural and to urban districts, the whole country being mapped out into communes each with its municipal council.

5. A modification in the position of the Senate was effected in 1884, after considerable agitation and discussion between political parties on the question of a reform of the Second chamber. By the constitution the Chamber of Deputies had no means of obliging the Senate to join it in congress, and so to form a National Assembly by which alone a change could constitutionally be effected. The constitution establishes that: "The Chambers have the right by separate deliberations, passed in each House by an absolute majority of votes, either on their own initiative or on that of the President of the Republic, to declare the necessity of revising the constitutional laws. After each chamber shall have passed this resolution, they shall meet as a National Assembly to proceed to this revision."

6. The reform of the Senate, undertaken in 1884 by the Ministry of M. Jules Ferry, had thus to be accomplished with the consent of that body. After considerable negotiations the Senate finally agreed to meet the Chamber in congress in order to discuss the question of reform, but on the understanding that its rights over financial questions should not be subjected to discussion. The Chamber, at the instance of the Prime Minister, accepted this arrangement, and the two Houses met as a National Assembly. The result was certain changes in the constitutional law respecting the composition and election of the Senate, the most important of which was the abandonment of the system of nominated life senators. According to the original constitution, the vacancies which occurred among the seventy-five senators nominated by the National Assembly in 1875 were to be filled by the Senate itself. It was decided in 1884 that henceforth the entire Senate should be an elected body; the existing life senators retained their seats, but at their death they were to be given by lot to certain departments to which it was agreed to assign extra seats. The Electoral Colleges were constituted in the same manner as before, except that the number of the delegates of the municipal councils was increased in proportion to the population of the communes. Hitherto each municipal council named one delegate to the Electoral College; it was provided that henceforward municipal councils composed of ten members should elect one delegate, those of twelve members two delegates, those of sixteen members three delegates, those of twenty-one members six delegates, up to councils of thirty-six members and over, which would elect twenty-four delegates. The Paris Municipal Council with its eight members was, however, placed on a special footing, and given thirty delegates to the Electoral College.

7. The 300 senatorial seats were distributed in the following manner (article 2, law of the 9th December, 1884): 10 seats were given to one department (Seine), 8 seats to one department (Nord), 5 seats to ten departments, 4 seats to twelve departments, 3 seats to fifty-two departments, 2 seats to ten departments. The territory of Belfort (Haut-Rhin), the three departments of Algeria, and the four colonies of Martinique, Guadeloupe, Réunion, and French India were each given one seat.

8. The legislative power is exercised equally by the Senate and the Chamber of Deputies; the former has, however, certain special attributes which will be mentioned later on. The Executive and the Legislative have both the right of introducing Bills; those emanating from the Executive are styled "Projets de loi," and those from either Chamber "Propositions de loi." Bills can be voted first by the Senate or the Chamber indifferently, except in the case of financial measures, with regard to which it is laid down in the constitution that "all financial legislation shall be in the first instance submitted to the Chamber of Deputies and voted by it." There is apparently nothing in the constitution which prescribes for the Senate a position of legislative inferiority to the Chamber, unless the above stipulation be so regarded.

9. In the absence of any precise means of settling constitutionally any disagreement between the Senate and the Chamber, Rules of Procedure bearing on the
matter have been drawn up by each House. There is a slight difference in the rules, which are here given:

"(A.) Senate.—Rules of Procedure ("Règlement").

"Article 130. When a Bill voted by the Senate has been modified by the Chamber of Deputies, the Senate may either deliberate again on the Bill or submit it to the 'bureaux' of the House, or send it back to the committee which has already considered it. The Senate may also, on the proposal of one of its members, determine that a committee be appointed to confer with a committee of the Chamber of Deputies with the object of agreeing on a text.

"Article 131. If the two committees come to an agreement, the Senate committee reports to that body, which takes the new text into consideration. If the Senate refuses to accept the proposal for a conference, the Bill may not be again placed on the order of the day until two months have elapsed, except on the initiative of the Government.

"The same will occur in cases where the committee of the two chambers fail to agree, or if the Senate persists in its original resolution."

"Article 144. When a Bill voted by the Chamber of Deputies has been modified by the Senate, the Chamber of Deputies may determine, on the approval of one of its members, that a committee be appointed to meet a committee from the Senate with the object of agreeing upon a text.

"The Chamber shall decide if powers to this effect shall be conferred on the committee which has already reported on the Bill, or on a new committee elected from among the 'bureaux' of the House.

"Article 145. If the two committees agree on a text, the committee named by the Chamber of Deputies reports to that Assembly, which thereupon deliberates again on the matter.

"Article 146. If the Chamber of Deputies refuses to agree to the proposal for a conference, the Bill may not be again placed on the order of the day until two months have elapsed, except on the initiative of the Government. The same will occur in cases where the two committees fail to agree on a text, or if the Chamber persist in its original resolution."

10. The Senate cannot be dissolved, whereas the Chamber of Deputies may be before the legal expiration of its mandate by the President of the Republic, but only with the previous consent of the Senate. It thus happens that, in a case of conflict between the two chambers and a deadlock resulting, an appeal to the country as a way out of it cannot be made unless the Senate gives its consent.

11. The Senate possesses also judicial functions. It may be constituted as a High Court of Justice to try the President of the Republic or the Ministers; to take cognizance of attempts or conspiracies against the safety of the State, and to try the persons implicated.

12. The sessions of both Chambers must begin and end at the same time, except that the Senate may meet—

(a.) If the Chamber of Deputies is dissolved at a moment when the Presidency of the Republic becomes vacant;

(b.) When the Senate is constituted as a High Court of Justice.

13. The Senate and the Chamber of Deputies must give their consent before the President of the Republic may declare war. The same applies, with certain reservations, to a declaration of a state of siege.
SESSIONAL PAPER No. 246

14. The following passage from the Constitutional Law of 1875 applies to the treaty-making power in France:

"The President of the Republic negotiates and ratifies treaties, but he must inform the Chambers of such treaties as soon as the interest and safety of the State permits. Treaties of peace and commerce, those engaging the finances of the State, or relating to the personal status or rights of property of French citizens abroad, are not definitive until they have been passed by the two Chambers. No cession, exchange or increase of territory can take place except by virtue of a law."

15. While the President of the Republic may grant individual pardons by decree, he may not proclaim an amnesty unless the Senate and Chamber approve.

Part II.—Control of the Senate over Public Finances.

1. Article 8 of the Constitutional Law of the 24th February, 1875, states: "The Senate has, equally with the Chamber of Deputies, the right of proposing and making laws. But financial measures must in the first instance be submitted to, and voted by, the Chamber of Deputies."

2. The interpretation of this article has occasioned numerous disagreements between the two Chambers, which have only been settled by the exercise of moderation and a spirit of conciliation. The question arose immediately after the new regime was established in connection with the first Budget presented to Parliament. It was then seen that the rights of the Senate might become a subject of controversy with the other House. Questions were raised as to how the Senate’s right of introducing legislation was to be harmonized with the stipulation as regards finance made in favour of the Chamber by the Constitutional Law. Was there merely a right of priority? Had the Senate the right of replacing in the Budget credits disallowed by the other Chamber? If such a course were permissible, and if the Chamber of Deputies persisted in its original resolution, how was the difference of opinion to be settled? If a financial law were promulgated after the amendments made in it by the Senate had been definitively rejected by the Chamber, the Senate might rightly protest that the constitution had been violated, seeing that it was therein laid down that both Chambers must vote a law before it was promulgated.

3. It may be said that in theory the exact rights of the Senate have never been settled. It has been asserted that the question is settled in practice by what has been called “the system of the last word,” which must rest with the Chamber of Deputies. But it, perhaps, more accurate to say that disagreements between the two Houses on financial matters have usually been arranged by a compromise on the actual questions at issue, without the principle being made the subject of conflict, and that when the Senate has yielded it has been under the express understanding that its full rights in financial matters are reserved.

4. The manner in which this important question of constitutional right is regarded in France may possibly be best shown by some quotations from the speeches of leading public men at different times when the rights of the Senate in financial matters have been challenged.

5. In 1876, the Senate having voted an increase of credit over and above that sanctioned by the Chamber, M. Gambetta, president of the Budget Committee of the latter Assembly, made the following declaration: "It is our view that, in accordance with article 8” (of the Constitutional Law), “when the Government has submitted to you a financial proposal, and if this proposal is rejected by you, nothing remains of it when the Budget is sent to the Senate. To hold another view is tantamount to suggesting that the Senate has an initiative of its own. A financial proposal made by
the Minister of Finance to the Chamber only receives a legal existence when you have approved it. If it be not brought into legal existence by your action, it is nothing more than a piece of paper. If the Upper Chamber has no right of initiative in such matters, it follows that it may only examine and vote a credit after such credit has been voted by the Chamber of Deputies. Whence can the Senate derive its right of initiative? Neither from article 8 nor from precedent. It can only be found in its own will.”

6. The Prime Minister, M. Jules Simon, answered M. Gambetta in these words: “The question is this: Has the Senate the right of examining credits voted by the Chamber—to reject some and to replace others? It is the meaning and not the validity of article 8 which is at issue. I find this article perfectly clear. It states that financial laws must in the first instance be submitted to, and voted by, the Chamber of Deputies. It follows that in the second place they must be submitted to, and voted by the Senate. Where is the difficulty? You may say it lies in the word ‘voted,’ But this expression is clear. The Senate must vote as the Chamber votes. . . . I have heard it said that this means that the Senate will thus have the initiative in matters of expenditure, and that it can therefore dispose of the taxpayers’ money. No; that is not so. The Senate has the right of replacing credits in the Budget, but in so doing it does not oblige an expenditure to be made. When the Senate has passed a vote, what have you before you? A proposal on the part of the Senate; it is not a law until you have approved it.”

7. In 1881 the Cabinet of M. Gambetta expressed the following views with regard to the control of the Senate over financial matters in the preface to its proposal for constitutional revision: “It must be clearly laid down, beyond all possibility of discussion, that when the Chamber of Deputies has shown its intentions with regard to the Budget, the Senate has the right of making remonstrances to the Chamber, to point out that this or that tax, this or that credit or suppression of credit, is unjust or inopportune, or to suggest a modification of the whole of the Budget. But the right of the Senate ends there. The Chamber of Deputies must have the last word, and its decision must be final.

8. The proposal made in 1881 for constitutional revision was not carried into effect, and the two Chambers found themselves again in disagreement respecting the Budget of 1883. The Senate voted considerably increased credits on some heads, and reduced them on others. The Chamber accepted the reductions and rejected the increases, and the Senate thereupon voted the Budget; but the reporter of the Budget Committee, in recommending its adoption, read a declaration protesting against any attempts on the part of the other Chamber to interfere with the rights of the Senate, and recording again the prerogatives of the latter in financial matters.

9. The question was raised once more in connection with the Budget of 1885, in which the Senate had introduced a large increase of credit. M. Jules Roche, the reporter of the Budget Committee of the Chamber of Deputies, made a speech at the sitting of the 7th March, 1885, showing that the last word in financial measures must remain with the Chamber. He states that the Senate had the constitutional right of discussing, approving or disapproving the decisions of the Chamber, and consequently of provoking a second consideration of the matter on the part of that Assembly. The Senate, however, had in no way the right of initiative, nor the last word in the case of the suppression or diminution of credits, which were the essential attributes of the Chamber of Deputies directly elected by universal suffrage. It was essential, if the national sovereignty were to be properly exercised, that, when it was a question of an increase of credit, the last word should rest with the Chamber, seeing that such a course was the natural and necessary consequence of the priority given to it in voting financial measures, and of the absence of any right of initiative on the part of the Senate.

10. The following is an extract from a speech by M. Ribot in favour of conciliation made during the debate which ensued: “The two Chambers should be allowed to
pursue their negotiations, which may frequently be laborious, but which are the necessary conditions of a parliamentary regime. An agreement will be the more easily found seeing that the constitution has rendered conciliation an every-day political necessity. It is, indeed, the basis of a parliamentary regime, and one of the inevitable conditions of the existence of two Chambers.”

11. In the case of this dispute, as of previous ones, a compromise was found, and a conflict between the two Chambers on the question of principle averted.

12. A speech, made in the Senate on the 9th April, 1895, by M. Loubet, when president of the Budget Committee of that House, may also be noticed as bearing on the question. He said: “The Chamber of Deputies has, by the terms of the constitution, the initiative of financial laws. We, like you, are concerned in preserving for the Senate all its prerogatives, but the very fact of this should make us scrupulous in respecting the special prerogative of the Chamber of Deputies. . . . We have the right of examining the Budget law, and we do each year with scrupulous attention. We can introduce amendments in it—now is not the moment for discussing the conditions under which this right may be exercised—but it is impossible to entertain a complete new set of Budget proposals; they must first be passed by the Chamber of Deputies before they are submitted to the Senate.”

13. No disagreement respecting finance has occurred of recent years between the two Chambers of such a kind as to give rise to anything amounting to a conflict between them.

Part III.—Recent Constitutional Disputes between the two Houses.

1. There cannot be said to have been any constitutional conflict during the last ten years between the Senate and Chamber. Just before this period, however, in 1896, a serious conflict took place between the Senate and the Ministry of M. Bourgeois, which brought about the retirement of the Cabinet, in spite of the fact that it retained the confidence of the Chamber of Deputies. In this way there may be said to have been incidentally a conflict between the two Houses, but on M. Bourgeois’ resignation the grounds of dispute were removed, and the matter soon dropped.

2. An account of the relations between the Senate and M. Bourgeois’ Ministry may be of interest, as showing the very real power possessed by the Second Chamber when it is determined to make its will effective.

3. M. Bourgeois formed his Cabinet at the beginning of November, 1895. For the first time since the establishment of the Third Republic, a Ministry came into power which could claim to be exclusively Radical. The ministerial declaration mentioned various measures which had formed part of the programme of the Radical party, among others a graduated income tax and succession duties, and workmen’s pensions, while a general determination was evinced to recast the whole financial system in a more democratic spirit. No mention was made of a reform of the Senate, though a curtailment of its powers had long formed one of the measures demanded by the Radicals, as being a necessary preliminary to the full accomplishment of democratic reforms.

4. Speculation was rife from the outset as to the attitude which the Senate would take up towards the Ministry, and especially towards the financial proposals, and early in 1896 a certain hostility to the Ministry began to be apparent. The Senate persisted, in the face of the Prime Minister’s expressed wishes, in adopting a proposal affecting the right of strike on the part of railway employees. This action was soon followed by an adverse vote respecting the action taken by the Minister of Justice in removing an examining magistrate (“juge d’instruction”), who was conducting an investigation into alleged scandals connected with the Southern Railway Administration. On the 11th February the Senate passed an Order of the Day, objected to by the Prime Minister, by a majority of ninety-four. The Ministry thereupon (13th February) made the question into one of confidence in the Chamber of Deputies, and obtained an approval of its general policy by 326 votes to 42. On the 15th February the
Senate replied by adopting a resolution confirming its vote of the 11th February, although M. Bourgeois had stated that the Government was absolutely opposed to it. A fresh debate took place in the Chamber of Deputies a few days later, and the Ministry again obtained a majority, this time of only forty-five votes.

5. From this moment the conflict was definitely opened, but the Senate did not yet push matters to extremities. M. Denôle read a declaration on behalf of the three Republican groups of the Senate, protesting against the attempt on the part of the Ministry to govern without taking the Senate into account. The declaration continued: "The Ministry has considered that it could appeal from one Chamber to the other. It pretends that ministerial responsibility cannot be made a question in the Senate. . . . We affirm anew our right of control, and the responsibility of Ministers to both Chambers. One answer to the words and acts of the Cabinet might have been an absolute refusal to co-operate; but the Senate does not desire to suspend the legislative life of the country or to renounce its duties, in spite of the attitude of the Ministry. It is determined to maintain all its rights and independence without other preoccupation than the interests of the country, and it intends that the Ministry shall give an account to the Senate of its proceedings. The country will decide the issue between Ministers who have not hesitated to raise so grave a crisis and an Assembly which, in the interests of the public peace, does not wish to aggravate further a constitutional conflict."

6. This declaration was approved by 175 votes to 59. The Radical organs declared that the Senate had, in fact, given in to the Cabinet, and that Assembly was charged with raising difficulties for the Government on account of its dislike of their financial proposals, which were by this time under consideration by the Chamber of Deputies.

7. On the 29th February the Prime Minister accompanied the President of the Republic on a tour in the south of France, and on several occasions manifestations in favour of M. Bourgeois took place, to which the conflict with the Senate gave especial significance. The presidential cortège was at various times greeted with cries of "A bas le Sénat!" and utterances which were held to have an offensive character towards that Chamber. Considerable indignation was shown in the Senate that such manifestations should have been tolerated under the eyes of the President of the Republic and Prime Minister, and an intention was expressed of interpellating the Government on the subject. The Minister of Commerce, however, gave some explanations as to what had occurred, and no interpellation took place. A senator remarked, "We accept your excuses," to which the Minister replied: "It is not a question of excuses, but of facts." These incidents were obviously not of a nature to improve the relations between the Senate and the Cabinet.

8. At the beginning of April the Chamber of Deputies voted supplies in connection with the military expedition in Madagascar, and adopted the unusual course of adjourning till the 13th May without previous agreement with the Senate. The latter had only voted supplies up till the 30th April, and the Chamber had arisen without waiting for the Senate to pass further ones after that date. The circumstances of the adjournment of the House were the more marked as it had taken place on the initiative of the supporters of the Ministry, and the Ministers who were deputies had voted for it. The proceeding was interpreted as a further manifestation of disregard for the other House.

9. In the meantime an interpellation had been announced in the Senate respecting foreign policy. M. Bourgeois, having failed to obtain an adjournment of the discussion, stated that he had nothing to add to his former declarations, and that the Government could not reply to the interpellation. The Senate thereupon passed by 155 votes to 85 the following resolution: "The Senate, taking note of the declaration of the Government, and judging the explanation insufficient, cannot accord them its confidence, and passes to the Order of the Day."
10. The Senate then adjourned till the 21st April without having voted the Madagascar supplies. A Cabinet Council was held, and the Government decided not to resign in consequence of the attitude of the Senate. Everything, however, pointed to the imminence of a crisis.

11. An event occurred at this juncture outside Parliament, which was universally recognized to be of great importance. The Departmental Councils ("Conseils Généraux") had been solicited to express their views on the question of the proposal of the Government for an income tax. The significance of an expression of the views held by these Assemblies, elected by universal suffrage, and themselves forming a considerable part of the electorate of the Senate, was obvious at a moment when that House and the Ministry were involved in so grave a dispute, and one which, it was freely asserted, had its predisposing cause in the antagonism felt in the Senate to the financial policy of M. Bourgeois' Cabinet.

12. Sixty Departmental Councils pronounced against the principle of the income tax; eleven accepted the principle, but with reservations which amounted to a condemnation of the Government plan; some others abstained from expressing an opinion, and only about sixteen could be said to favour it entirely.

13. On the 21st April the Senate met again. Three courses appeared to be open to it. It could either vote the supplies as they stood, or vote them with a reduction on some heading, which would have rendered it necessary to convokes the Chamber, or refuse them altogether. In the last case the Ministry would be placed in the position of being unable to carry on legally the government of the country as the expenditure concerned could not be incurred without special sanction. As soon as the Senate met, M. Demôle read a declaration in the name of the three Republican groups, to the effect that the Government had remained in power in violation of the constitutional law after the Senate had on three occasions by considerable majorities withdrawn from them its confidence. The groups in whose name he spoke did not, he said, refuse the Madagascar supplies, but they would not vote them while M. Bourgeois' Cabinet remained in power, and they accordingly proposed that the vote should be adjourned till the Senate had before it "a constitutional Ministry having the confidence of the two Chambers."

14. This declaration was approved by 168 votes against 91. The Cabinet then determined to resign, but declared that it wished the Chamber to be first convoked. The Chamber was immediately summoned, and met on the 23rd April, when the Prime Minister made a statement of the circumstances which, in the opinion of the Cabinet, rendered its resignation inevitable. The action of the Senate had, he said, rendered it impossible for the Government to obtain supplies for the French troops in Madagascar, and they resigned on the patriotic ground that no action of theirs should delay the voting of the expenditure required for the defence of French interests in Madagascar.

15. The members of the Government then withdrew from the Chamber, and the Prime Minister placed the resignation of the Cabinet in the hands of the President of the Republic. The Chamber continued a discussion amidst considerable agitation, and finally voted a resolution affirming the "preponderance of universal suffrage and the determination to pursue democratic reforms." Only 257 Members recorded their votes in favour of this resolution; 324 either abstained from voting or were absent.

16. The Senate at once voted the Madagascar supplies on learning of the resignation of the Ministry, and before a new one was constituted. The supporters of the late Ministry inside and outside of Parliament made use of threatening language respecting the Senate's proceedings, and some slight disturbance of order took place in connection with a public manifestation in Paris against the action of that Assembly.

17. A Moderate Republican Ministry, under the presidency of M. Méline, was quickly formed, and presented itself on the 30th April, to the Chamber, which then
passed a resolution by a majority of 34 affirming the sovereignty of universal suffrage, and approving the declaration of the new Government. In the debate which took place on this occasion M. Bourgeois intervened, and explained in full the course of events which had forced his Cabinet to resign. He pointed out that when a Government and the Senate were united against a majority in the Chamber, they had always the possibility of bringing about a dissolution. But this was not the case when a Government and the Chamber found themselves in opposition to the Senate. In the latter case, he asked, what resource had the Chamber? He denied that the Senate had a right to overthrow a Ministry supported by a majority in the Chamber. The Senate had only the right of examination and appeal; it could not have the right of substituting its policy for that of the Chamber by overthrowing the Ministry which represented that policy. The recent struggle was not merely one between the Senate and a Ministry; it was a conflict on a fundamental question between the two Chambers, and he declared that the question of the rights and attributes of the Senate was now definitely raised.

18. After, however, the crisis above described was ended by the appointment of a new Ministry, the question of the constitutional rights of the Senate was not pressed to an issue, and since that date no similar conflict involving the relations of the two Chambers has arisen. The reason usually ascribed to the absence of disputes between them is that the political composition of the Senate has tended during recent years to become more and more similar to that of the Chamber of Deputies.

GEORGE GRAHAME.

HESSE’S DARMSTADT AND BADEN.

No. 6.

Mr. Harford to Sir Edward Grey.—(Received October 28.)

DARMSTADT, October 20, 1907.

SIR,—With reference to the Foreign Office Circular of the 10th July, I have the honour to inclose reports, as requested, on the composition and functions of the Upper Chamber in the Grand Duchies of Hesse and Baden.

In both these States, the Upper Chamber is styled the First Chamber in the constitution on which each is respectively based.

As the constitutional struggles which have taken place in South Germany during recent years for electoral reforms are so closely connected with the revision of the powers and composition of the Upper Chambers in those States, some allusion to this subject was hardly to be avoided. Everywhere, except in Hesse, more Liberal ideas have triumphed, and the system of election to the Diet or Landtag is now, with that one exception, everywhere closely assimilated to the system for election to the Reichstag.

The three Bills now before the Hessian Chambers form the third attempt in recent years to revise the constitution on the lines of the reforms already adopted by Baden, Bavaria and Württemburg.

I have, etc.,

FREDERIC D. HARFORD.
CONSTITUTION OF UPPER CHAMBERS

SESSIONAL PAPER No. 246

Inclosure in No. 6.

REPORT ON THE GRAND DUCHY OF HESSE DARMSTADT.

Upper Chamber based on the Constitution of 1820.

The present composition and functions of the Upper or First Chamber in the Grand Duchy of Hesse are defined by the constitution of the Grand Duchy of Hesse promulgated on the 17th December, 1820, and by the Hessian Electoral law of the 8th November, 1872, and the law of the 17th June, 1875, governing the procedure of the Hessian diet, but, speaking generally, the British parliamentary system is the basis of the relations of the Upper and Lower Chambers.

Bill to revise Constitution before the Diet.

A Bill was introduced by the Government into the Hessian Diet on the 29th April, 1907, to alter the electoral system in conjunction with an alteration of certain prescriptions of the Constitution. On two former occasions, as, for example, in 1905, Bills have been introduced for a reform of the electoral system, but were not adopted owing to divergencies of opinion between both Chambers as to their existing constitutional rights in enacting laws and in fixing the Budget. Otherwise no important differences of opinion, especially as regards constitutional questions, have so far arisen between the two chambers.

Bill proposes to increase Powers of Upper Chamber.

The Government proposals of the 29th April, 1907, alluded to above, comprise the following three Bills: Bill (1) proposes alterations in articles 67 and 75 of the constitution, with a view, firstly, to allowing the Upper Chamber to discuss the Budget independently, and to accept or reject it en bloc, or in detail; and secondly, that if one of the Chambers rejects a Bill, the Bill shall remain adjourned, and then if it is submitted by the Government to the next Diet, and is again rejected by one of the Chambers, but is adopted by one of the Chambers, the Government can summon both Chambers to discuss the measure jointly under the presidency of the President of the Upper Chamber, and if a two-thirds majority is obtained the Bill becomes law. In the case of a disagreement between the two Chambers on some single item included in the Budget law, the lower amount voted by either of the Chambers is considered as adopted. In case of a dispute over the whole Budget, the Government could convene a meeting of the two Chambers, and the absolute majority would decide.

New Elective Members proposed to be added to Upper Chamber.

Bill (2) proposes to add to the Upper House a representative of the Technical High School at Darmstadt, to be summoned by the Grand Duke on the proposal of the Council of that institution, and also two representatives of trade and industry, two representatives of agriculture, and one of handicraft, to be summoned by the Grand Duke on the proposal of the legally constituted bodies connected with those professions. These six new members would thus be added to the Upper Chamber by special elective process. (The existing Upper Chamber consists of thirty-four members.)

It is further proposed that if one of the mediatized families dies out the Grand Duke shall, on the recommendation of the heads of the existing mediatized families, appoint for life a member of one of those families, so that the vote may not be lost.
Electoral Reform: Basis of Compromise for Conceding New Powers to Upper Chamber.

In the same Bill is found the compromise offered in return for the larger powers proposed to be given to the Upper Chamber, namely, that in place of the present system of indirect election to the Lower Chamber, by means of electing delegates who again elect the deputies, the system of direct election is to be substituted. The system of voting by secret ballot already exists.

**Lower Chamber to be increased by eight Members.**

Bill (3) is namely a Redistribution Bill, and proposes to add eight members to the Lower Chamber, which now consists of fifty members. Of the eight new members five would be members for town constituencies, and three for country constituencies.

These three Bills are being studied by committees of the two Chambers, and as a large part of next year's spring session will be taken up in discussing the Budget, the time available during the spring and autumn sessions of 1908, for adequate discussion of so important and thorny a subject, is barely sufficient to allow of an agreement between the two Chambers being reached by the latter part of 1908, that is to say, before the close of the present Diet, unless some mutual concessions are made. The result would be that the attempted revision of the Hessian constitution would once again have proved abortive.

**Present Composition of Upper Chamber.**

In the Grand Duchy of Hesse the Upper or First Chamber, as it is called, is at present composed:—

1. Of the Princes of the Grand Ducal House.
2. Of the heads of mediatized families who own one or more entailed estates in the Grand Duchy.
3. Of the head of the Baron von Riedesel family.
4. Of the Catholic Bishop of the State, or, in case of impediment, of a Catholic priest named by the bishop with the consent of the Grand Duke for the duration of the Diet.
5. Of a Protestant clergyman, named by the Grand Duke for life with the rank of a prelate. In case of a vacancy or of any impediment, the Grand Duke can name another Protestant clergyman in his place for the duration of the Diet.
6. Of the Chancellor of the University of Giessen, or, if his place is vacant or in case of impediment, a member of the Academical Senate of the University named by the Grand Duke for the duration of the Diet.
7. Of two members of the nobility elected by members of the domiciled nobility who own sufficient real estate to be entitled to vote. They are elected for six years.
8. Of distinguished Burgers of the State, who may be summoned for life by the Grand Duke, not exceeding twelve.

**Members cannot Vote in Elections.**

Members of the Upper Chamber cannot exercise the suffrage, and must have completed their 25th year before they can exercise their privileges, and then only if no rights of the State stand in the way, and they cannot be elected to the Lower or Second Chamber, as it is styled in Hesse, nor can they vote in elections for the Lower Chamber.

**President appointed by the Grand Duke.**

The President of the Upper Chamber is appointed by the Grand Duke for the duration of the Diet; the Upper Chamber then elects its second and third presidents and two secretaries.
Number which constitutes quorum.

At least twelve members must vote in the Upper Chamber to validate a vote, but if this quorum is not present the vote is considered as carried; but this is not allowed in the case of a proposal to revise the constitution.

Majority needed to revise Constitution.

Alterations and additions to the constitution can only take place with the consent of both Chambers, and for this purpose at least twelve of the Upper Chamber must vote in favour of any such change; but if the number of members taking part in the voting is so large that two-thirds of this number exceeds twelve, then two-thirds majority is necessary.

Budget proposals first submitted to Lower Chamber.

Article 67 of the constitution lays down that the Budget law must be first submitted to the Lower Chamber, which arrives at its decision after a previous confidential discussion with the Upper Chamber by means of the Finance Committees. The Upper Chamber can only accept or reject the financial proposals of the Lower Chamber en bloc. If the Upper Chamber rejects the proposals the Budget Bill is discussed in a sitting of both Chambers together, under the presidency of the President of the Upper Chamber, and a decision is taken by the absolute majority.

Introduction of Bills.

Government Bills are submitted to the Chambers or to that which has to deliberate on them, either by members of the Ministries or by special Commissioners of the Diet, or in writing; but every member of the Diet, and therefore of the Upper Chamber, has the right to bring forward motions or interpellations in the Chamber to which he belongs. Bills must be presented by at least ten members.

Rejected Bills.

Proposals which have been rejected by either Chamber, whether emanating from the other Chamber or from a member of the Chamber itself, cannot be reintroduced during the duration of the same Diet.

Appointment of Committees.

Each Chamber elects four permanent committees, one of which deals with the budget, the public debt, and other financial proposals, but other special committees can be appointed by either Chamber.

Upper Chamber based on Constitution of 1818, as revised in 1904.

The constitution of the Grand Duchy of Baden promulgated on the 22nd August, 1818, was considerably modified by the Baden law of the 24th August, 1904, on which date a new electoral law was promulgated, which also defines the manner in which the elective members of the Upper Chamber (called the First Chamber) are to be elected, as well as those of the Lower or Second Chamber. These measures marked the termination of a long struggle for the direct as opposed to the indirect system of voting, which still obtains in the Grand Duchy of Hesse. Similar measures of electoral reform have also been adopted in Bavaria and Württemberg in recent years. No constitutional disputes have, however, arisen between the two Chambers of the Baden Diet during the past ten years.
Composition of Upper Chamber.

Under the revised Baden constitution the Upper Chamber consists of:

2. The heads of the mediatised families who own estates in Baden on attaining the age of 21.
3. The Catholic Bishop and Evangelical Prelate.
4. Eight members elected by the landed nobility.
5. A representative for each of the Universities of Heidelberg and Freiburg, and for the Karlsruhe Technical High School.
6. Six representatives elected by legally organized corporations, namely, three by the Chambers of Commerce, two by the Chamber of Agriculture, and one by the Chambers of Handicraftsmen.
7. Two mayors of the larger cities, a mayor of one of the smaller towns, but exceeding 3,000 inhabitants, and a member of a District Council.
8. Members appointed by the Grand Duke. Of those two must be high judicial authorities, while for the others (not exceeding six) there is no restriction as regards profession or birth.

At the time of the revision of 1904 there were forty members of the Upper Chamber, of whom twenty-one were elected.

Grand Duke can create new Hereditary Members.

The Grand Duke can create as hereditary members of the Upper Chamber the heads of noble families who own real estates and a family seat in Baden of the net value of 50,000£., but if the qualification ceases to exist, the right to the hereditary seat in the Upper Chamber ceases also.

Guardian or Relative can Vote on Behalf of Minors or Absentees.

The guardian of a minor or lunatic mediatised member of the Chamber can, if he is a relative, sit in his place in the Chamber, and if the head of a mediatised family is unable for other reasons than the above to attend a session he can nominate a relative in his place for that period.

Duration of Appointment of Elective Members.

The two high judicial authorities are appointed for the duration of their office, the other members appointed by the Grand Duke, and the other elective members hold office for the duration of the Diet, that is, for four years.

A Member cannot sit in both Chambers.

A member of the Lower Chamber cannot enter the Upper Chamber, and if a member of the Upper Chamber accepts election to the Lower Chamber he ceases to belong to the Upper Chamber.

Validity of Elections decided by the Chamber concerned.

Each Chamber decides as to the validity of its own elections.

Appointment of President.

The Grand Duke appoints the President of the Upper Chamber.
CONSTITUTION OF UPPER CHAMBERS

SESSIONAL PAPER No. 246

Measures which must first be submitted to Lower Chamber.

Article 60 of the constitution, as amended by the law of the 24th August, 1904, thus defines the Bills or measures which must first be submitted to the Lower Chamber in Baden:

The following Bills are presented first to the Lower Chamber:

1. Reports as to Budget revenue or expenditure, and comparative statements showing Budget Estimates and actual receipts.
2. Bills which deal with permanent arrangements respecting the administration of the State revenue and expenditure, or with direct or indirect taxation.
3. The Finance Bill, together with the Budget Estimates, as well as other Bills fixing taxation for a Budget period, or for the sale, mortgage, or application of the State property or domains, the contracting of loans, the acceptance of State citizenship, or other State obligations of a similar nature.

Procedure followed in dealing with Finance Bills, etc.

The procedure to be followed in the case of the above three categories is thus laid down in article 61 of the constitution, as amended by the law of the 24th August, 1904:

1. The measures described in section 1 of article 60 are discussed in the Upper Chamber after the Lower Chamber has voted them.
2. The Bills described in sections 2 and 3 of article 60 are only voted on in the Upper Chamber after they have been adopted by the Lower Chamber, without prejudice to the right of the Upper Chamber to vote on the different items of the Budget proposals separately, as soon as they have been voted by the Lower Chamber.
3. If the votes of the Upper Chamber with respect to the various items of the Budget Estimates differ from those of the Lower Chamber, and if after the repeated votes of both Chambers, and a previous attempt to arrive at an understanding in accordance with article 75, section 2, a compromise of the differences cannot be arrived at, these items will be inserted in the Budget proposals annexed to the Finance Bill in the form decided on by the Lower Chamber at its final vote.
4. If the Upper Chamber rejects altogether a Bill of the nature described in article 60, section 3 which has been adopted by the Lower Chamber, then, at the request of the Government or of the Lower Chamber, a vote will be taken in the matter on account of the total votes given in both Chambers, whether the Bill is to be adopted in the form proposed by the Lower Chamber.

Quorum needed for passing Finance Bills, &c.

In subsequent articles 71, 72, and 74 of the constitution, it is explained that a quorum of both Chambers must vote in such cases, and that if the number of votes for and against are equal, the President of the Lower Chamber has a casting vote, in other words, his vote counts twice.

Majority needed to change Constitution.

Article 64 of the constitution declares that no law amplifying, defining, or altering the constitution can be adopted except by a majority of two-thirds of the members of the Diet who may be present at each of the two Chambers. In article 73 it is added that three-quarters of the members of both Chambers must take part in the vote.

246—31
And in cases affecting freedom of Persons.

Article 65 declares that the vote of the absolute majority of each of the two Chambers is necessary in all new laws of the country which affect the freedom of the person or the property of subjects of the State generally, or alter or define existing laws of that nature.

Right to initiate Legislation.

Article 65A declares that either Chamber, as well as the Grand Duke, has the right to initiate legislation.

Power to Appeal to the Grand Duke.

Article 67 empowers the Upper Chamber to address a complaint to the Grand Duke in case of any prejudice to its constitutional rights, but complaints respecting other constitutional rights can only be dealt with by the Lower Chamber. Representations to the Grand Duke on other matters may be made by either Chamber, jointly or separately. A request for the introduction of a Bill may be only addressed to the Grand Duke by a Chamber, if the request has been previously communicated to the other Chamber, and the latter has had an opportunity of expressing an opinion thereon.

Rejection of Bills.

Bills can be accepted or rejected by either Chamber, and a Bill or proposal introduced from one Chamber to the other can be returned to the other Chamber with amendments.

Quorum needed in Upper Chamber.

The Upper Chamber requires fifteen members present to constitute a quorum.

Committees of both Chambers can confer together in case of Disagreement.

Article 75, section 2, stipulates that if the votes of both Chambers differ from one another, a meeting of the committees of both Chambers may take place with a view to arriving at an understanding on the initiative of either Chamber by the intermediary of the president. Each Chamber restricts itself in its relation to the other to the mutual communication of their votes.

Ministers can attend all Sittings.

The Ministers and certain other officials have access to all public and private sittings of the Chambers, and must be heard when they desire it.

HUNGARY.

No. 7.

Consul-General Clarke to Sir E. Goschen.—(Received at Foreign Office, August 31.)

BUDA-PESTH, August 27, 1907.

Sir,—I have the honour to inclose herewith a report which I have drawn up on the composition, functions, etc., of the Hungarian Second or Upper Chamber (House of Magnates).

I have, etc.,

F. S. CLARKE.
CONSTITUTION OF UPPER CHAMBERS

SESSIONAL PAPER No. 246

Inclosure in No. 7.

REPORT ON THE HUNGARIAN SECOND OR UPPER CHAMBER (HOUSE OF MAGNATES).

The Hungarian Upper Chamber or House of Magnates, was reorganized in the year 1885. It is now composed:

(a.) Of hereditary members;
(b.) Of members who sit by right of office or dignity;
(c.) Of those who sit by right of Royal appointment; and
(d.) Of those who sit by virtue of election.

The hereditary members are the Archdukes of the reigning House (who have attained their majority); the male members of Hungarian families having the title of Prince, Count, or Baron who are 24 years old, who enjoy the rights of majority, and who are the usufructuary possessors (by themselves, or in conjunction with their wives or their legitimate children living under their roof) of landed property within the territory of the Hungarian state, paying, in accordance with the cadastral survey of 1855, an annual tax of at least 6,000 crowns (£250), such tax including that levied on dwelling-houses, farm buildings, etc.

Persons on whom new titles are conferred only have the right to sit in the Upper House if the King specially grants them such privilege. The members who sit by right of office or dignity are:

1. The Bannerets of the Crown ("Regni Barones"), the Count of Pressburg,¹ the two custodians of the Crown, the Governor of Fiume, the Presidents and Vice-Presidents of the High Court of Justice and of the High Court of Administrative Matters respectively, and the President of the Budapest Court of Appeal.
2. The Hungarian Prelates of the Roman Catholic Church (Latin and Greek rites), that is, the Primate, the Archbishops, the Diocesan Bishops, the two consecrated Bishops of Nandor-Fejér and Tinnin (appointed by the King), the Grand Abbots of Pannonhalma, the Provost of Tászo, and the Prior of Aurania.
3. The Prelates of the Greek Orthodox Church—that is, the Servian Patriarch and the Roumanian Metropolitan, as well as their Suffragan Bishops.
4. The three Bishops (who have held office longest) and three lay dignitaries of the two Protestant Evangelical Churches, and the senior Head, Bishop, or layman of the Unitarian Church.

The members who sit by right of Royal appointment are the life members, whose number cannot exceed fifty, and more than five of whom cannot be appointed by the King in one and the same year. The members who sit by virtue of election are the representatives of former members of the House of Magnates excluded in consequence of the reorganization effected in 1885. The number of these representatives, which was originally fifty, is gradually decreasing, the vacancies as they occur not being filled up. The Diet of Croatia-Slavonia also sends three delegates to the House of Magnates.

The right to sit in the Upper Chamber is not affected by the fact that a member thereof is serving in the army or is fulfilling ecclesiastical or civil duties. Exceptions to this rule are, however, made in the cases of the president and of the functionaries of the Court of Accounts. Naturalized Hungarian citizens can only become members of the House of Magnates ten years after naturalization. The members of the Upper House lose their right to sit:

¹A dignity hereditary in the Pálffy family.
1. If, sitting there in virtue of office or dignity, they cease to fill such office or such dignity.
2. If, having been appointed, or elected, they resign.
3. If, being the delegates of Croatia-Salvonia, their mandates have expired.
4. If they have been condemned by a regular tribunal to prison or banishment for a crime or for an offence committed for "lucre."
5. If they lose their Hungarian nationality.

The right to sit may, in some instances, be not altogether lost, but only temporarily suspended. Such is the case in condemnations involving suspension of political rights, in cases of bankruptcy, and in those of being placed under guardianship ("sous curatello."). In this last case, however, exception is made when "spendthrift habits" or "absence abroad" has led to the restrictive measure in question. Hereditary members, again, who cannot comply with the necessary conditions as to payment of taxes have their rights suspended from the time of the expiration of the session during which the non-compliance took place. A magnate may be elected as a deputy, losing, while representing an electorate, his right to sit in the Upper House.

Cabinet Ministers have seats in both Houses of Parliament, and may therefore make declarations in either Chamber. They can, however, only vote in the Upper Chamber if they are members thereof and are not deputies. Cabinet Ministers may be represented at sittings of the House of Magnates by proxies (usually by their Parliamentary Under-Secretaries of State) if notice thereof is given beforehand to the President of the House.

The two Houses of Parliament hold their sittings separately, communicating to each other in writing the resolutions come to. The members of the House of Magnates (like the deputies) have the right of immunity. The resolutions come to in the Upper House are only valid if at least fifty members have been present. (In the Lower Chamber the number of deputies must be at least 100.) The initiative with regard to legislation belongs to both Houses, but by the Law of Reorganization (1855) the custom by which Bills are always first introduced into the Chamber of Deputies remains in force for the present. Bills rejected by the Lower Chamber cannot be again discussed by that Chamber during the same session, but Bills thrown out by the Upper Chamber can again form the subject of debate in the Lower Chamber, and can again be sent up to the House of Magnates. Although the members of the two chambers do not meet together for the adoption of legislative measures, they do so for the election of a Palatine or of a Custodian of the Crown ("Kronhütter"), and it is before such common assembly and in the presence of His Majesty the King that the dignitaries elected have to take the oath of fealty. The opening and closing of Parliament, as well as the act of coronation itself, have all to take place in the presence of the members of both Houses.

Functions of the House of Magnates.

The functions of this House are of a legislative character. All Bills, including those referring to financial matters, such as budgets, loans, etc., must, after passing the Lower Chamber, be submitted to the Upper Chamber. When voted, the Bills are laid before the King for the Royal sanction.

The functions of the House of Magnates are also of a judicial character, and extend over certain disciplinary matters with regard to higher judicial functionaries, such as the Presidents and Vice-Presidents of the Courts of Appeal, the President, Vice-President, and Judges of the High Court of Justice, and the Crown Attorney-General ("Kronanwalt"). The tribunal before which these functionaries are tried
SESSIONAL PAPER No. 246

consists of thirty-six members, half of whom are elected by the House of Magnates (from amongst its members) and half of whom are composed of the Vice-Presidents and Judges of the High Court of Justice. Only twelve (exclusive of the president) of these members form the tribunal.

A law passed in 1896 for the formation of a High Court for administrative Affairs ("Verwaltungsgerichtshof") prescribes that, in cases of disciplinary matters (in which the judges of that court are concerned), the tribunal before which the trial takes place has to be composed of twenty-four members, half of whom are magnates and half are judges of the Court of Administrative Affairs. Eight members of this tribunal (exclusive of the president) have to sit at the hearing of a case.

Although the impeachment of Cabinet Ministers has to be voted by the Chamber of Deputies, yet the tribunal before which such Ministers must appear is composed solely of members of the Upper House. This latter House elects for the purpose (by secret ballot) thirty-six magnates, twelve of whom can be challenged by the Commissioners (charged by the Chamber of Deputies with the conduct of the proceedings) and twelve by the Ministers impeached. The remaining twelve then constitute the Tribunal.

The control of the public finances is vested in the Chief Accountant's Office ("Staatsrechnungshof"), which has almost complete independence of action. The different departments of State have annually to submit to it their accounts accompanied by vouchers. In the event of there being objections to any items of expenditure, the Office sends an inquiry paper to the Minister concerned. The final accounts are every year laid before both Houses of Parliament, and Ministers can be asked for explanations, and can be made responsible in either Chamber for defraudation or for illegal use of moneys. (The impeachment of Ministers can, however, as already stated, only be voted by the Chamber of Deputies).

During the last ten years no constitutional disputes have arisen in Hungary between the two Houses of Parliament. F. S. CLARKE.

BUDA-PESTH, August 27, 1907.

ITALY

No. 8.

Mr. des Graz to Sir Edward Grey.—(Received August 9).

Rome, August 6, 1907.

Sir,—In accordance with the instructions contained in your Circular despatch of the 10th ultimo, I have the honour to transmit herewith a report on the composition and functions of the Italian Senate.

I have, etc.,

C. DES GRAZ.

Inclosure in No. 8.

Report on the Composition and Functions of the Italian Senate.

The Constitution.

The "Statuto," or constitution, granted by King Charles Albert of Sardinia to his subjects in 1848 was gradually extended to the other parts of Italy, and is now the constitution of the whole kingdom.
Composition of the Senate.

The Senate is composed of members appointed for life by the King on the proposition of his Ministers. The number of Senators is not limited. They must be over 40 years of age, and must belong to one or other of twenty-one categories enumerated in the "statuto":—

1. Archbishops and Bishops. No Senators have been appointed under this category since 1866.
2. The President of the Chamber of Deputies.
3. Deputies after three Parliaments or six years discharge of their duties. Parliament is elected for a period of five years.
4. Persons having the rank of Minister of State.
5. Ministers-Secretaries of State.
6. Ambassadors.
7. Envoys Extraordinary after three years' service.
8. The President of the Supreme Court of Justice and the presidents of its several divisions.
9. The President of the Court of Audit of State Accounts ("Camera dei Conti") and the Presidents of its various sections.
10. The President of the Council of State and the presidents of its several Departments are now also included in this category.
11. The Presidents of the Courts of Appeal.
12. The Advocate-General and the Crown Prosecutor of the Supreme Court of Justice after five years' service.
13. The Presidents of the divisions of the Courts of Appeal after three years' service.
14. Councillors of the Supreme Court of Justice and of the Court of Audit after five years' service.
15. The Advocates-General and Prosecutors-General of the Courts of Appeal after five years' service.
16. General officers of the army and navy. Major-Generals and Rear-Admirals must have had five years' active service in that rank.
17. Councillors of State of five years' standing.
18. Members of the Councils of the Provinces after their third election as President of their Council.
19. Intendants-General. This is now interpreted to mean prefects and ex-prefects.
20. Members of the Royal Academy of Sciences after seven years' membership. This qualification now applies equally to seven other distinguished scientific and literary societies throughout the kingdom.
21. Ordinary members of the Superior Council of Education after seven years' service.
22. Persons who by their eminent services or merits have added to the country's fame.
23. Persons who have for the last three years paid a sum equivalent to £120 in direct taxes in respect of their property or in income tax.

Princes of the Royal Family are senators by right, they enter the Senate at 21 and have the right to vote at 25 years of age.

The Presidents and four Vice-Presidents of the Senate are nominated by the King on the recommendation of his Ministers.

The number of Senators in March, 1907, was 541.

By the Constitution the Senate has the sole right of judging the validity of the qualifications for admission to that body. The nominations are referred to a special permanent committee of the Senate. There have been several cases in which the Senate has rejected a decree of nomination, which in consequence became inoperative.
**Legislative Functions of the Senate.**

According to article 3 of the constitution, the legislative power shall be collectively exercised by the King (represented by his Ministers) and the two Chambers—the Senate and the Chamber of Deputies.¹

The two Chambers have an equal right to approve, amend, or reject Bills. When a Bill, introduced in one Chamber, is amended by the other, the Bill with the amendments is submitted afresh to the Chamber in which it was originally presented. It then returns to the amending Chamber, and this procedure is repeated when there are differences of opinion between the two houses until an agreement is reached.

There have been differences of opinion between the two Chambers, but they have never yet resulted in a conflict.

There is no provision in the "statutes" for the settlement of disputes between the Chambers.

**Control of the Senate over Public Finances.**

The pre-eminence of the Chamber of Deputies in the control of the public finances is recognized in article 10 of the constitution, which reads as follows:

"The right of proposing laws shall belong to the King or to either Chamber, but any law for the imposition of taxation or the approval of the Budgets and State accounts shall be presented first in the Chamber of Deputies."

The exact interpretation of this article, and the precise nature of the Senate's rights in dealing with financial Bills, has given rise at different times to numerous discussions, and to the expression of widely differing views in both Houses.

Whilst maintaining, subject to the limitations of article 10, its constitutional rights to amend or reject the above measures, the Senate has in practice shown great tact and moderation by making the most sparing use of those rights.

**Judicial Functions of the Senate.**

The Senate is invested with judicial functions in the three following cases, when it constitutes itself into a High Court of Justice:

Firstly, to judge of crimes and offences of which its members are accused, Senators as Supreme Judges of the State not being subject to the ordinary courts;

Secondly, to judge Ministers accused by the Chamber of Deputies and brought before the Senate for trial; and

Thirdly, to judge persons accused of acts of high treason and of attempts against the safety of the State.

When exercising its judicial functions, the Senate cannot concurrently exercise its legislative functions.

Rome, August 5, 1907.

¹ To become law, every Bill has to pass both Houses, and then to obtain the Royal sanction.
Sir H. Howard to Sir Edward Grey.—(Received August 6.)

THE HAGUE, July 29, 1907.

Sir,—In obedience to the instructions conveyed in your Circular despatch of the 10th instant, I have the honour to transmit herewith a report by Lord Acton upon the composition, powers, and functions of the Upper or First Chamber of the Netherland States-General, and upon its relations with the Lower or Second Chamber.

I have, &c.,

HENRY HOWARD.

Inclosure in No. 9.

Report by Lord Acton on the Composition and Functions of the Netherland First Chamber.

General Remarks.

The Netherland Upper House or First Chamber, in accordance, perhaps, with the spirit of Netherland history, is modelled on lines republican rather than monarchical, and bears a strong outward resemblance to the senatorial bodies of the great democracies. It is formed by process of indirect election, none of its members, with the exception of the President (vide infra), being appointed by the Crown. Its powers are more limited than those of the House of Lords, in that it possesses no power of amendment, nor any initiative faculty in respect of Bills proper. The prevailing tendency, however, as explained below, is to increase the powers of the Upper House by granting to it the right of amendment, and to democratize its composition by abolishing the present restrictive qualifications.

Parliamentary procedure.

According to the terms of the constitution the Legislature or States-General represent the entire Dutch nation. They are composed of a First and a Second Chamber. The legislative power is exercised jointly by the Queen and the States-General. Parliamentary procedure and the distribution of legislative power are as follows:—

The Queen submits Bills to the States-General, and also any other proposals which she may consider necessary. She has the right either to approve or to reject measures which have been adopted by the States-General. The Sovereign, on the advice of the Ministers of the Crown, sends all legislative projects to the Second (Lower) Chamber. If the latter decide to approve the measure, whether amended or unaltered, they send it up to the First Chamber. If, on the other hand, the Second Chamber decide against the adoption of the Bill, they address a request to the Queen that she should again give the matter her earnest consideration.

Powers of First Chamber.

The First Chamber deliberate upon measures in the form in which they are passed by the Second Chamber, and they communicate their decisions both to the
Queen and to the Second Chamber. Pending the decision of the First Chamber in regard to a Bill, the Sovereign retains the power to withdraw the Bill submitted by her. The States-General have the right to submit Bills to the Queen; the right of initiative can, however, alone be exercised by the Second Chamber, which sends the Bill when passed to the First Chamber, and has the power to intrust one or more of its members with the duty of defending the Bill, either verbally or in writing, in the First Chamber. If the First Chamber approve the measure, they apply for the Sovereign's sanction and inform the Second Chamber accordingly; if they fail to pass the Bill, they return it to the Second Chamber with an intimation that they have not found sufficient reason for applying for the Sovereign's assent. Proposals other than Bills proper may be submitted independently to the Crown by either Chamber. Both Chambers, whether sitting in separate or united session, possess the right of "enquête" and of appointing commissions of members, with power to take evidence. The Second Chamber has the power to amend, as have also the States-General, when sitting as one Chamber.

Provisions common to both Chambers.

A member of one Chamber cannot also be a member of the other Chamber. The heads of ministerial departments (Ministers) have the right to sit in both Chambers, but they only possess advisory powers, unless they have been elected private members of the Assembly in which they sit. Members of the Chambers cannot be prosecuted for anything said by them in debate or for any written communication made by them in the Chamber.

The Sovereign has the right to dissolve the Chambers of the States-General either separately or simultaneously.

Constitution of First Chamber.

The First Chamber consists of fifty members elected by the Provincial States (vide infra). The qualifications for eligibility for the First Chamber are that the candidate should be of Dutch nationality and of thirty years complete; that he shall not have lost control or possession of his property, nor have been otherwise disqualified for election by sentence of a Court of Justice; and, further, that he either is included in the category of those who are assessed the highest for direct taxation, or that he holds or has held one or more of the high public offices specified in the law of the 12th August, 1890 (see Appendix). Members are elected for nine years, one-third retiring every three years, and the retiring members being eligible for immediate re-election. (When this rule was first adopted one-third of the House were elected for three years, one-third for six years, and one-third for nine years. This procedure is also observed after a dissolution). In the event of a vacancy occurring by death or otherwise, the new member is only elected for the period still unexhausted by the late member. Joint sittings of both Houses take place at the commencement and close of the session and on the demise of the Crown.

Mode of Election to First Chamber.

In every province of the kingdom there sits an Assembly termed Provincial States, which is elected on the same franchise as the Second Chamber of the States General, and the members of which elect the members of the First Chamber.

Constitutional and Dynastic changes.

Any proposal for a change in the constitution is embodied in a Bill, upon the passage of which both Chambers are dissolved. The newly-elected Chambers proceed to examine the modifications proposed, but the measure cannot become law unless it

1 The Second Chamber is elected for four years.
has been passed by a majority of two-thirds of the newly-elected members. In the case of a proposal for a revision of the constitution in regard to the dynasty, a dissolution takes place, the new Chambers, elected ad hoc, being composed of double the normal number of members, i.e., each constituency or electoral college electing two members to every one elected under ordinary conditions.

State of Parties.

The present (Liberal) Government have a majority of two votes in the Second Chamber, while in the First Chamber they are in a minority of twelve (July, 1907.)

Disagreement between two Chambers.

Several examples have occurred in recent years of Ministerial crises brought about by the action of the Upper Chamber in rejecting Government measures after their passage through the Lower House. In February last the Army Estimates were rejected by the First Chamber. The Government thereupon proffered their resignations, and after several months' negotiation these were withdrawn, the Minister of War alone retiring. The Army Estimates, subject to certain alterations, were subsequently reintroduced and adopted by both Chambers, but the reduction proposals, which had caused their former rejection by the First Chamber, were reserved for embodiment in a special Bill to be brought in by the new Minister of War in the coming autumn session. This incident, which is still pending, while illustrative of the procedure adopted by the Government in a given case when confronted by defeat in the Upper Chamber, can scarcely be cited as an example of disagreement or conflict between the two Houses, since in the present instance, according to statements in the press, the original Government majority in the Lower Chamber was only consequent upon a Ministerial assurance that further explanations of the proposed reduction would be given at an early date.

A different solution of a similar crisis was resorted to by the former (Clerical) Premier, Dr. Kuyper, in July, 1904, upon the rejection of his University Bill by the First Chamber. On that occasion Dr. Kuyper advised the Queen to dissolve the Upper Chamber, and the ensuing elections resulted in a majority for the Right, and therefore in the desired victory for the then Government.

Proposals for increasing Efficiency of First Chamber.

As stated above, the First Chamber does not possess the right of amendment. A modification of the constitution in regard to this question was, however, included among the recommendations of a Royal Commission appointed in the autumn of 1905 to examine certain articles of the Fundamental Law (constitution) of the Netherlands with a view to their revision, and which issued its report at the commencement of the present year. The report observes that the denial of the right of amendment to the First Chamber places the latter in a dilemma, since it can only accept or reject a measure, and cannot pronounce itself in respect of any modifications which it may deem desirable to introduce into it. By the concession of the right of amendment, on the other hand, the danger is averted of the inclusion by the Government of several separate measures in one Bill, with the object of ensuring the passage of the whole through the Upper House. No doubt, proceeds the report, the acquisition by the First Chamber of the said right would result in an increase of its direct influence upon legislation; but, on the other hand, the very exercise of the new right may pave the way for an understanding between the two Chambers. According to the recommend-
SESSIONAL PAPER No. 246

ations of the commission, the procedure would be as follows: The First Chamber having amended a Bill, the President sends it back to the Second Chamber, which may only deliberate upon the amended clauses, but is unable to propose fresh amendments. In the event of the Second Chamber approving the amendments, the Bill would be sent direct from that Chamber to the Sovereign to receive the Royal assent. Should the amendments be rejected, the Second Chamber will return the Bill to the First Chamber with whom the final decision will rest. The First Chamber will, however, not be granted the right of amendment in regard to Bills originating in the Second Chamber (vide supra) nor in respect of Money Bills (cf. England and Prussia). The report further recommends that the President of the First Chamber should be elected by the Chamber itself, as in the case of the President of the Second Chamber; and it proposes to abolish the qualifications required of candidates for election to the First Chamber, placing them on an equal footing with candidates for the Second Chamber in this respect.

Although the recommendations of this commission have not yet been submitted to the Legislature, and their adoption or rejection are therefore not questions of immediate constitutional interest, its proposals in regard to the First Chamber are nevertheless worthy of notice, as indicative of the trend of Dutch parliamentary opinion on this subject.

THE HAGUE, July 29, 1907.

APPENDIX.

Public offices specified in the Law of August 12, 1890.

President or member of one of the Chambers of the States-General.
Vice-President or member of the Council of State.
State-Counsellor in extraordinary service.
President or member of the General Audit-Chamber.
Director of the Cabinet of the Queen.
Cabinet Minister.
Envoy Extraordinary and Minister Plenipotentiary.
Minister-Resident.
Consul-General in Dutch service.
President, Vice-President, or member of the Supreme Council.
Solicitor-General and Attorney-General at the Supreme Court of Justice.
President, Vice-President, or member of a Court of Justice.
Solicitor-General or Attorney-General at a Court of Justice.
President or member of the Supreme Military Court of Justice.
Attorney-Fiscal for the Queen’s army and navy.
Queen’s Commissioner in a Province.
Member of the Provincial Governments.
Burgomaster of a commune which consists of more than 20,000 inhabitants, according to the last public census.
Curator of a State University.
Curator of the Municipal University of Amsterdam.
Professor at a State University or Professor at the Municipal University of Amsterdam.
Professor-Director or Professor at the Polytechnical School.
President and member of the Royal Academy of Sciences.
Lieutenant-Admiral, Vice-Admiral, Rear-Admiral, Naval Captain, General of Infantry, Lieutenant-General, Major-General, Colonel in the Netherlands or Netherlands East India army.
President of the Board of Mintage.
Chief Engineer-Adviser or Chief Engineer of Shipbuilding.
Chief Inspector, Inspector, or Chief Engineer of State Waterways, &c.
President of the Council of Supervision of Railway Services.
President of the Board Sea Fishery.

President of the Chamber of Commerce in a commune, or in a group of communes, which consists of more than 20,000 inhabitants, according to the last public census.

Governor-General of the Netherland East Indies.
Lieutenant-Governor-General of the Netherland East Indies.
Vice-President or member of the Council of the Netherland East Indies.
President or member of the General Audit-Chamber of the Netherland East Indies.
General Secretary to the Government in the Netherland East Indies.
Head of a Department of General Administration in the Netherland East Indies.
President, Vice-President or member of the Supreme Court of Justice of the Netherland East Indies.
Solicitor-General at the Supreme Court of Justice of the Netherland East Indies.
President, Vice-President, or member of the Supreme Military Court of Justice of the Netherland East Indies.
Attorney-Fiscal for the Army and Navy of the Netherland East Indies.
Governor of Celebes and Dependencies, of the West Coast of Sumatra or of Atjeh and Dependencies.
Resident of Batavia, Surabaya, Djokjokarta, Surakarta, or Samarang.
Governor of Surinam.
Governor of Curacao.
President of or Solicitor-General at the Court of Justice in Surinam.

---

NORWAY.

No. 10.

Sir A. Herbert to Sir Edward Grey.—(Received August 6.)

Christiansia, July 31, 1907.

Sir,—I have received your Circular despatch of the 10th instant, instructing me to forward a report on the composition and functions of the Second or Upper Chamber of the Norwegian Parliament.

Strictly speaking, there is no Second Chamber in Norway, though in some respects the Lagthing fulfils the functions of such a Chamber in the Norwegian Storthing. I would rather apply the term of "revising committee" to the Lagthing. No special qualifications are required in order to sit in the Lagthing, the members of which are merely selected from among and by, the members of the Storthing, and do not sit in virtue of any independent right conferred either by the electorate, or by official appointment, or by hereditary privilege.

It would perhaps have been sufficient to say that there was no Upper Chamber in the Norwegian Parliament, but as the Lagthing acts as a revisory body in the Storthing, though its powers even as such are very limited, its decisions being liable to reversal when they are submitted to the whole Storthing, I have asked Mr. Dick, translator to His Majesty’s Legation, to draw up a short report on the working of the Lagthing, which I now have the honour to inclose.

I have, etc.

(For Sir A. Herbert),

W. G. MAX MÜLLER.
In the Norwegian Parliament there is, strictly speaking, no Upper House, the entire legislative power is vested in a body of 123 representatives elected triennially to form the Storthing. The electors are, subject to certain very limited income qualifications, all Norwegians, both male and female, over 25 years of age. The suffrage was extended to women by a law passed last month, and will be exercised at the next election two years hence.

As soon as a newly-elected Storthing meets, the members proceed to elect one quarter of their number to form the Lagthing, the remaining three-quarters constituting the Odelsthing. A list of names is proposed by a "selection committee," but it is open to any member to suggest alterations in the same, the election being practically a party question.

The Lagthing, as thus constituted, remains unchanged during all the ordinary and extraordinary sessions of the same Storthing, except that vacancies are filled, by special elections, from among the members of the Storthing.

The Lagthing together with the Supreme Court of Justice, constitutes the Rigsret, the court before which members of the Government ("Statsraad") can be impeached.

Members of the Government cannot be elected to the Storthing; they may attend and take part in debates in either of its divisions, or when it sits as a whole, but have not the right of voting.

Every Bill, except such as regard finance, is discussed by the two divisions ("Things") separately. It must be introduced into the Odelsthing first, either by one of its members or by the Government, and if accepted, either with or without amendment of the original proposal, it is sent on to the Lagthing. This latter body either accepts it—in which case the Bill is laid before the King for sanction and becomes law—or returns it to the Odelsthing with suggestions for amendments. There proposed amendments are then considered by the Odelsthing. If accepted, the Bill is considered passed; if, on the contrary, the Odelsthing considers the suggestions of the Lagthing inadmissible, the Bill can be dropped, or it can again be sent to the Lagthing, with or without further alterations. Should the Lagthing again refuse to accept the Bill as sent to it from the Odelsthing, the whole Storthing sits as one House to vote on the proposed measure, and in this case it requires a two-thirds majority of all the members of the Storthing to enable the Bill to become law.

All Bills involving questions of finance, motions criticizing Government action, the naturalization of foreigners, concessions for works of public utility, come straight before the whole Storthing, and are decided by a bare majority of votes.

It will be seen from the above that the danger of "constitutional disputes" between the two divisions of the Norwegian Parliament does not exist. the constitution expressly providing a remedy in cases of disagreement.

---

PORTUGAL.

No. 11.

Mr. Beaumont to Sir Edward Grey.—(Received August 19.)

Lisbon, August 9, 1907.

Sir,—With reference to your Circular despatch of the 10th ultimo, I have the honour to transmit herewith a report, prepared by Sir Somerville Head, on the composition and functions of the Upper Chamber in Portugal.

I have, etc.,

H. D. BEAUMONT.
Coxstitution of Upper Chambers

Inclorure in No. 11.

The constitutional charter of the Kingdom of Portugal, as granted in 1826 and re-established in 1842, made provision for the composition and functions of the House of Peers. Modifications have since been introduced by various acts of the Cortes.

The Chamber is now composed:—

1. Of peers appointed by the King, the number of whom may not exceed ninety.
2. Of peers in their own right. These are:

   (a) The Princes of the blood Royal on attaining the age of 25;
   (b) The Patriarch of Lisbon and the Archbishops and Bishops of the continental kingdom.

3. Hereditary Peers. The hereditary principle, which for some time prevailed, was restricted by laws passed in 1845 and in 1878, and provision was made for its gradual abolition by the law of the 24th July, 1885. Hereditary Peers now consist only of those who were already peers in July, 1885, and their immediate successors, if born before that date. On the death of the last of these hereditary peers the Chamber will consist entirely of life peers nominated by the Crown, and of the peers in their own right referred to above. The present King has consistently nominated peers recommended by the ministry in power at the time of a vacancy occurring, but there is nothing in the constitution to prevent the King from filling up vacancies in the Upper House without consultation with his ministers.

No person may be nominated a peer until he has reached the age of 40, and unless he has received a secondary education or is in possession of an annual income of 400,000 reis (£90).

The following functions pertain exclusively to the Chamber of Peers:—

1. Trial of offences committed by members of the Royal Family, Secretaries of State, Peers, and by Deputies while the Cortes is in session.
2. Investigation into the responsibility of Secretaries of State and certain other functionaries.
3. Convocation of the Cortes on the death of the Sovereign for the appointment, if necessary, of a Regent.

The peers, as well as the deputies, are required to take an oath of allegiance to the King, Prince Royal, or Regent.

All purely legislative functions are common to both Chambers, including the control over the public finances, but the initiative of financial measures and of Bills for the recruitment of the army and navy rests solely with the Chamber of Deputies.

The duration of each Parliament is fixed at three years. The legal period for sessions is three months in each year, but provision is made for prolonging ordinary sessions and for calling extraordinary sessions.

The sittings of the Upper Chamber are public, except when reasons of State require that they should be secret; all questions are decided by an absolute majority of votes. The President and Vice-President of the Chamber are appointed by Royal decree.

Peers are inviolable for the opinions they express in the performance of their functions.

No person may be at the same time a member of the Upper and Lower Chamber, members of the Upper Chamber may be appointed Secretary of State or Councillor.

1 Up to 1896 the Chamber included fifty Peers elected by Electoral Colleges, forty-five of whom represented administrative districts and five of whom were returned by scientific establishments.
and may hold appointments as diplomatic representative, high commissioner of any colony, or court official. Ministers of the Crown sit and take part in the debates in both Chambers, but only vote in that Chamber of which they are members.

The Act of April, 1896, on which the present composition and functions of the Upper Chamber are principally based, also provides for the appointment of high Government officials as special delegates to take part in the Legislative Chambers in the discussion of particular Bills. The same Act further lays down that when one of the Legislative Chambers does not approve in whole or in part any Bill issuing from the other Chamber, or does not approve the amendments or additions made by the other Chamber to any Bill, a Committee of an equal number of peers and deputies shall be appointed, and, in accordance with the decision of the majority of the committee, the Bill shall either become law or shall be rejected. If there be an equality of votes on the Bill or on any of its articles, or on any amendments or additions, or if the committee can come to no agreement on the question submitted to them, either of the Chambers may petition the Crown for the reassembly of the Cortes with a special mandate to deal finally with the matter.

No constitutional disputes have arisen during the last ten years between the Upper and Lower Chambers.

PRUSSIA.

No. 12.

Count de Salis to Sir Edward Grey.—(Received August 6.)

BERLIN, July 31, 1907.

Sir,—In obedience to the instructions conveyed to me in your circular despatch of the 10th instant, I requested Lord Cranley to draw up a memorandum regarding the constitution and functions of the Upper House of Parliament in Prussia, copy of which I have the honour to inclose herewith.

I have, etc.,

J. DE SALIS.

Inclosure in No. 12.

MEMORANDUM BY LORD CRANLEY ON THE COMPOSITION AND FUNCTIONS OF THE PRUSSIAN UPPER HOUSES OF PARLIAMENT.

Short Historical Sketch of Events leading to the grant of a Constitution and the establishment of a Parliament.

The Prussian Herrenhaus is largely based on the constitution of the former provincial estates, and in order therefore to fully comprehend the complicated nature of its construction it is necessary to give a short sketch of the constitutional history of the country which lead to the grant of the constitution of 1850.

Until the year 1848 Prussia was an absolute monarchy governed in conjunction with the estates of the realm. The development of the estates was regulated by the conditions of the time prevailing in the Empire. Their power gradually increased. Under Joachim II scarcely anything could be done without their consent, and without them no tax could be levied or altered. The Great Elector curtailed their influence, and gathered gradually all power into his own hands. In this policy he was followed by his successor, and in 1727 Frederick William I was able to declare that the privileges of the estates were "antiquated and long-forgotten." Prussia thus
became an absolute monarchy. During the Napoleonic wars ideas of freedom and constitutional representation permeated into Germany from France. The first official pronouncement regarding national representation in Prussia was the edict of Frederick William III of the 27th October, 1810, in which the King declared himself willing to grant a system of representation both for the provinces and for the whole country.

At the Congress of Vienna, 22nd May, 1815, the King announced his intention of granting a constitution to Prussia, and a scheme for a Parliament was laid down. This scheme for national representation, which was based on a united Assembly drawn from representatives of the provincial estates, came to nothing, and during the whole of the remainder of the reign of Frederick William III the tendency of the policy of the Government was much more towards reaction than towards constitutional freedom. In 1840 Frederick William III died, and was succeeded by his son Frederick William IV. At the outset of the reign a more liberal regime was confidently expected, but it soon became clear that, although the King wished to rule in a more enlightened fashion than his father, he did not intend to abate any of his claims to govern by divine right, or to divest himself of his father's absolute power. The agitation for constitutional reform grew in strength during the first seven years of the reign, and in 1847 the King summoned a Diet, composed of representatives of the provincial estates, consisting of two Houses. The Upper House was formed of the princes, counts, and lords who possessed votes in the provincial Diets, and numbered eighty members. This concession, however, did not suffice to allay the agitation. Disturbances took place in Berlin on the 18th and 19th March, 1848, and it became clear to the King that it was no longer possible to combat the popular demand. Frederick William therefore gave way completely. He declared that he would place himself at the head of the popular movement, changed his Ministry, and commanded the Diet to pass an electoral law to enable a constituent assembly to be chosen. The Diet was then abolished, and the constituent Assembly began to discuss the new constitution. The Assembly met in May, 1848, but their debates came to nothing. On the 5th December the King dissolved the Assembly and published a constitution which had not been laid before the Chamber. This constitution provided for two Houses, the members of the Upper House being elected by all Prussians over 30 years of age who paid at least 8 thalers in direct taxation yearly, or who possessed real property to the amount of 5,000 thalers. This is the first measure which really admitted Prussia to the rank of a constitutional State, since thereby the King by his own prerogative abrogated his absolute power, and was only enabled to make or repeal laws in accordance with the limits of the constitution. The 1848 constitution provided for its revision by the Chambers, and in a Message, dated the 31st January, 1850, the King published a new constitution with the approval of both Houses.

It is this constitution that has become the fundamental law of the Prussian State. By the original draft the Upper House, called in German "Herrenhaus," or "House of Lords," consisted of 240 members of five classes:—

(a) Princes of the Royal House of Prussia of the age of 18 and upwards.
(b) Mediatized princes and the heads of families appointed by Royal Ordinance to seats in the House according to the rights of primogeniture and lineal descent.

The Members comprised in classes (a) and (b) might not exceed 120.
(c) Ninety deputies directly elected by electoral districts comprised of electors paying the highest taxes to the State.
(d) Thirty members elected by the Municipal Councils of the large towns.

The composition of the "House of Lords" was largely changed by a law, dated the 12th October, 1854, which regulates—
The present Composition of the "Herrenhaus."1

Members of the House may be divided into three classes:—

I. Territorial nobility:—
   (a) Hereditary representatives.
   (b) Representatives of the lesser landowners and ecclesiastical chapters elected by them, and presented to the King for nomination as life members.

II. Representatives of the universities and larger towns, selected by the Senates or Town Council, and presented to the King for nomination as life members or for a term of years in case of the representatives of the towns.2

III. Life peers nominated by the King.

I. The territorial representatives are divided into nine classes, four of which are composed of hereditary members and five selected by the King:—

1. The head of the House of Hohenzollern Sigmaringen.
2. The twenty-two princes mediatised at the Congress of Vienna who are Prussian subjects.
3. The representatives of the nobility summoned to the Upper House by the Diet of 1847, i.e., the Princes and Lords of Silesia, and those princes, counts, and lords who are hereditary members of the eight provincial Diets. There are at present fifty-two such families.
4. Representatives of families to whom a hereditary seat has been granted by patent, of which there are at present thirty-two.
   Selected members representing the land-owning class.
5. The four great territorial officers of Prussia:—
   The Landhofmeister.
   The Chancellor.
   The Obermarschall.
   The Oberburggraf.

6. Representatives of the three Cathedral chapters. Members of the chapters elected by their colleagues for presentation to the King for selection.
7. Representatives of the "Unions of the Counts of the eight provinces" in each of the eight provinces the assembly of Counts holding Knights' estates have the right to elect one representative for presentation to the King for selection.3
8. The fifty-six "Unions of ancient and assured landed properties." These Unions together present ninety members for selection.4
   A Knight's estate, in order to be able to send an elector to the Union, must have been in the same family for at least fifty years, and must be entailed in the direct line.
9. Representatives of families holding large estates which have been granted the right to present one of their members for selection by the King. There are at present sixteen such families.

II. Selected members representing the towns and universities:—
1. The Senate of each of the Prussian Universities chooses a member of their body to present to the King for selection.
2. Forty-eight towns have been accorded the right to choose a member of the town magistracy to present to the King for selection, either as life members or for a fixed period.

1 See Annex 2.
2 By a law of March 23, 1872, members of the Audit Department cannot be elected to the Landtag.
3 See Annex 3.
4 See Annex 4.
III. Life members:—

1. Princes of the House of Prussia summoned to attend by the King. No prince has, however, received a summons to attend since the constitution was granted.

2. Persons specially selected by the King on account of their services to the country. At present the life peers number sixty-two persons, and consist of landowners, civil officials, diplomatists, clergymen, military and naval officers, university professors, merchants, mincowners, manufacturers, and bankers.

Qualifications for Membership of the "Herrenhaus."

1. No person can be a member of the Upper and Lower House at the same time.
2. All members of the Herrenhaus must be Prussian subjects domiciled in Prussia. They must be in full exercise of their civil rights, and not in the active service of a foreign State.

Princes of the Royal House must be at least 18 years of age; representatives of the "Unions of Counts" and the "Unions of ancient and assured landed properties" must be at least 25 years of age, and all other members at least 30 years of age.

3. The qualification of the members is to be proved by the House.

Disqualifications of Members of the House and the Methods by which the place of a Member who has been unseated is refilled.

Should a member be considered by the King, with the consent of the House, to have forfeited his honour, or to be living or behaving in a manner derogatory to the House, he may be deprived of his seat. The same penalty is inflicted on him if he loses his honour in accordance with 33 or 34 of the Penal Code.3

Should a member be charged with a crime, or should there be any other weighty ground for suspending him temporarily from his seat, the House may so suspend him with the Royal consent.

Should an hereditary member of the Chamber be deprived of his seat, his family must obtain the Royal consent to the election of a person to be presented for Royal selection in his place.

Should a life member be deprived of his seat the Sovereign will decree a fresh presentation.

Rights, Duties, and Privileges of the "Herrenhaus," as laid down by the Constitution.

1. The Landtag must be regularly convoked during the month of November.
2. The Herrenhaus must be convoked, adjourned, and prorogued at the same time as the Lower House.
3. The Herrenhaus possesses an equal right to propose legislation with the King and the "Abgeordnetenhaus," but Money Bills must be introduced in the Lower House, and they must be accepted or rejected en bloc by the Herrenhaus. No Bill can become law without the consent of the Crown and of both Houses.
4. The proceedings of the Herrenhaus are public, but a secret debate may be ordered on the proposition of the President or of ten members.
5. No resolution is valid unless a quorum (sixty) of the House be present.

1 See Annex 1.  
2 See Annex 1.  
3 See Annex 4.  
4 See Annex 1.
SESSIONAL PAPER No. 246

6. The Herrenhaus can demand the presence of Ministers to give explanations or to reply to questions. Ministers or their representatives have the right to speak in the House, but not to vote unless they are regular members thereof.
7. The Herrenhaus has the right to present addresses to the King.
8. No one may deliver a petition or address to the House in person.
9. The Herrenhaus may appoint Commissions of Investigation, which present their reports to it.
10. The Herrenhaus settles its own procedure and elects its own officers.
11. The Herrenhaus may impeach Ministers for breach of the constitution, corruption, or treason, and the matter is then tried by the highest court in the realm.
12. The decisions of the House are by a majority.

Rights, Duties, and Privileges of Members, as laid down by the Constitution:

1. All members must take the oath of loyalty to King and constitution in the prescribed form.
2. The members of the House are considered to be representatives of the whole nation. They are to vote according to their convictions, and are not bound by previous instructions. They cannot be called to account either for votes or opinions given by them in the House.
3. No member of the Herrenhaus can be arrested without the consent of the House, unless the arrest be effected in flagrante delicto or within twenty-four hours of the committal of the crime. This also applies to arrest for debt.
4. Should the Chamber demand it, all criminal proceedings against one of its members, and all judicial examination or civil arrest must be suspended during the session.
5. Civil officials do not require leave of absence from their duties to attend the sittings of the House.
6. No member can have two votes or vote by proxy. In the case of a member becoming entitled to two votes, one of them lapses (e.g., the present "Oberburggraf" and "Obermarschall" were already qualified members of the House when they were appointed to these offices, and their votes in the latter capacity consequently lapsed.)

CRANLEY.

ANNEX 1.

BERLIN, JULY 17, 1907.

Extracts from the Provisions of the Constitution of 1850 regulating the Constitution and Functions of the Upper House.

XLVIII. The King has the right of declaring war and concluding peace, as also of entering into other treaties with foreign Governments. The latter, in order to be valid, require the concurrence of the Chambers, if they are commercial treaties, or if burthens are thereby imposed upon the State or obligations upon individual citizens of the State.

XLIX. The King has the right of granting pardons and mitigating punishments. This right can only be exercised in favour of a Minister who is condemned in consequence of his official acts on the motion of the Chamber from which the accusation proceeded.

The King can only quash an inquiry already commenced by virtue of a special law.

\(^1\) See Annex 1.
LI. The King convokes the Chambers and closes their sittings. He can either dissolve both at once or only one. But in such a case the electors must be assembled within a period of sixty days after the dissolution, and the Chambers within a period of ninety days after the dissolution.

LII. The King can prorogue the Chambers. Without their consent this prorogation cannot exceed the term of thirty days, and cannot be repeated during the same session.

LVII. If there be no agnate of age, and if this case have not already been legally provided for, the Ministry of State has to convoke the Chambers, which are to elect a Regent in a united sitting. Until this entry upon the Regency, the Ministry of State conducts the Government.

LX. The Ministers, as well as the officers of the State appointed to represent them, have access to each Chamber, and must at all times be heard at their desire. Each Chamber can desire the presence of the Ministers. The Ministers have only a right of voting in the Chamber in which they are members.

LXI. The Ministers may be impeached by the resolution of a Chamber for the crime of violating the constitution, of corruption, and of treason. The Supreme Court of Judicature of the Monarchy decides upon such an impeachment in united debates. So long as two Supreme Courts of Judicature still exist, they assemble together for the above object.

LXII. The legislative power is exercised in common by the King and the two Chambers.

The agreement of the King and both Chambers is requisite for every law.

Projects of financial laws and Budgets will first be submitted to the Second Chamber. The latter will be wholly adopted or rejected by the First Chamber.

LXIV. To the King, as well as to each Chamber, belongs the right of proposing laws.

Proposed laws which have been rejected by one of the Chambers or by the King cannot be brought forward again during the same session.

LXXVIII, paragraph 1. Each Chamber examines and decides upon the legitimation of its members. Each regulates the course of its proceedings and its discipline by an Order of Proceeding, and elects its president, vice-presidents, and secretaries.

Paragraph 2. Government officials require no leave of absence in order to attend the Chambers.

LXXIX. The sittings of the Chambers are public. Each Chamber may proceed on the motion of its president or of ten members, to a secret sitting, in which the first thing to be decided upon is this motion.

LXXX. Neither of the two Chambers can pass a resolution, if the majority of the legal number of its members be not present.

Each chamber passes its resolutions according to the absolute majority of votes, with a reservation of any exceptions which may be decided upon for elections, by the regulations for the Order of Proceedings.

LXXXI. Each Chamber has the right of sending addresses to the King.

Nobody shall present in person a petition or an address to the Chamber, or to either of them.

Each Chamber can refer to the Ministers the papers addressed to it, and ask them for information relative to the complaints received.

LXXXII. Each Chamber has the power of appointing committees in order to inquire into facts for its information.

LXXXIII. The members of both Chambers are representatives of the whole people. They vote according to their free conviction, and are not bound by commissions or instructions.

LXXXIV. They can never be called to account for their votes in the Chamber, and for the opinions expressed in it, only within the Chamber by reason of the regulations for the Order of Proceedings (article lxxviii).
SESSIONAL PAPER No. 246

No member can be proceeded against or arrested for a penal act without the consent of the Chamber to which he belongs during the period of a session, except when he is taken in the act, or in the course of the day following its commission.

A similar consent is necessary in case of an arrest for debt.

Every penal proceeding against a member of the Chambers, and every preliminary or civil arrest is removed for the period of the sitting, if the Chamber concerned demands it.

CVII. The constitution may be altered by the usual way of legislative proceeding, in which case the ordinary absolute majority of votes in each Chamber, on two divisions between a period of at least twenty-one days must intervene, is sufficient.

CVIII. The members of both Chambers and all functionaries of the State take the oath of allegiance and obedience to the King, and swear the conscientious observance of the constitution. The army is not sworn to the constitution.

CXIX, paragraph 1. The oath of the King, mentioned in article liv, as well as the oath prescribed to be taken by both Chambers and by all functionaries of the State, are to be taken immediately after the present revision of this Constitution has been completed by legislative proceeding (articles lxii and xviii).

ANNEX 2.

1. The Upper House consists of:—
   1. Princes of the Royal House of full age, as established by the Prussian Royal Family law, who are summoned to attend by the King.
   2. Hereditary members.
   3. Life members.

II. Hereditary members are as follows:—
   1. The head of the Princely House of Hohenzollern Sigmaringen.
   2. The head of those mediatised families recognized by the Congress of Vienna who are Prussian subjects.
   3. Those princes, counts, and lords who were summoned to the Upper House of the United Landtag of 1847.

N.B.—The princes and lords of Silesia, and those princes, counts, and lords who are members of the eight provincial Landtags.

Besides the above-mentioned persons, those having a hereditary right to a seat and vote in the Upper Chamber comprise persons who have been summoned to a seat in the Herrenhaus by a Special Royal Ordinance or Patent.

The manner in which the succession to the seat is determined on the death of the holder is laid down in each individual Patent.

III. Life members are selected from the following categories:—
   1. The holders of the four great offices of Prussia.
   2. Persons specially chosen by the King for selection.

IV. The right of presentation for selection belongs to:—
   1. The chapters who are represented in the Upper House of the United Landtag of 1847.
   2. A representative of the nobles possessing Knight's estates in each of the eight provinces.
3. A representative of those families who possess large landed estates to whom the right to present a member to the King for selection has been granted.
4. The Unions of ancient and assured properties.
5. A member of the Universities.
6. A member of each of the towns to whom the right has been conceded.

V. The representatives presented by the chapters must be chosen by each chapter from among its members. Those presented by the universities must be chosen from among the professors of the university by the academic Senate, and those chosen by the towns by the town council, or, in default of a collegiate assembly, by the constitutional representatives of the town from among the members of the magistracy.

VI. The rules as to the constitution of Unions of ancient landed properties, and those as to the exercise of the right of presentation, are laid down by the Crown.

VII. Only Prussian subjects 30 years old, in full exercise of their civil rights, domiciled in Prussia, and not in the active service of a non-German State, can be members of the Herrenhaus.

VIII. Members of the Upper House chosen under paragraphs 4, 5 and 6, lose their seats should they lose their qualification for presentation to the King for selection.

IX. If a Royal decision is communicated to the House to the effect that one of the members has lost his honour, or that he is living or behaving in a manner derogatory to the House, he may, with the consent of the House, be deprived of his seat.

X. With the Royal consent a member of the House may be suspended from his functions while an investigation as to his proceedings is in process, or for any other important cause.

XI. If a member be deprived of his seat, the Royal consent must be obtained, in the case of an hereditary member, to select another member of the same family to fill his seat; and in the case of a member selected for presentation, as provided in paragraphs 4, 5 and 6, a Royal command will be issued for another presentation to be made for selection.

ANNEX 3.

1. Representatives of the Unions of ancient landed properties are chosen in the following proportions:

<table>
<thead>
<tr>
<th>Province</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prussia</td>
<td>18</td>
</tr>
<tr>
<td>&quot;Brandenburg&quot;</td>
<td>15</td>
</tr>
<tr>
<td>&quot;Pomerania&quot;</td>
<td>13</td>
</tr>
<tr>
<td>&quot;Silesia&quot;</td>
<td>18</td>
</tr>
<tr>
<td>&quot;Posen&quot;</td>
<td>7</td>
</tr>
<tr>
<td>&quot;Saxony&quot;</td>
<td>10</td>
</tr>
<tr>
<td>&quot;Westphalia&quot;</td>
<td>4</td>
</tr>
<tr>
<td>&quot;Rhine&quot;</td>
<td>5</td>
</tr>
</tbody>
</table>

2. A Knight's estate, in order to be considered "an ancient landed property," must have been in the same family for at least fifty years. (The family changes, if the daughter being an heiress marries a man owning real property.)

3. To be considered "an assured landed property" the succession must be entailed in the male line.
4. Persons presented for selection either by the “Unions of ancient and assured landed properties” or by the provincial Unions of nobility, must be Prussian subjects 25 years of age, in full possession of civil rights, not in the active service of a non-German State, and must be domiciled in Prussia.

5. Hereditary members of the Herrenhaus cannot take part in the election, either of persons to be presented for selection by the “Unions of ancient and assured landed properties,” or of persons to be presented for selection by the provincial Unions of nobility; but members of the latter Unions, who are qualified by their Knights' estates as members of the “Unions of ancient and assured landed properties,” are entitled to vote in both categories.

6. If a Knight's estate is in possession of several persons, only one is entitled to vote, though that vote may be exercised by any one of the proprietors.

7. A land owner possessing property in several Unions can exercise his vote in each.

8. The elections of persons to be selected for presentation must be arranged by the members of the Union.

9. The process of election is governed by the regulation for the election of the estates of the 22nd June, 1842, but no election is valid unless at least ten electors exercise their votes.

10. The register of voters and the appointment of a polling day is in the hands of the chief Government official of the district.

11. Should there be less than ten qualified voters in one Union, they must vote together with the nearest Union, which numbers at least ten qualified voters.

Annex 4.

Extracts from Sections 32, 33 and 34, of the German Penal Code, May 15, 1871.

32. The penalty of death, and penal servitude entails loss of honourable civil rights; in the case of condemnation to prison, only for sentences exceeding three months.

33. The rights formerly enjoyed by a person who loses his honourable civil rights lapse altogether, and he thus loses the right to take part in public elections or to fill any public office or dignity.

34. During the course of his sentence any person who has lost his honourable civil rights is unable:—

(1) To be nominated to any office or dignity;
(2) To take part in public affairs, to elect representatives, or to be elected as a representative, or to exercise any other political right.

SAXONY.

No. 13.

Mr. Findlay to Sir Edward Grey.—(Received August 27.)

Dresden, August 21, 1907.

Sir,—In reply to your Circular of the 10th ultimo, I have the honour to inclose herewith a report on the composition and functions of the First or Upper Chamber of the Saxon Landtag, together with a short account of two differences of opinion which have arisen between the First and Second Chambers during the last six years.

I have, etc.,

M. DE C. FINDLAY.
Inclosure in No. 13.

Report on the Composition and Functions of the First or Upper Chamber of the Saxon Landtag, and respecting recent disputes between the two Chambers.

The Upper Chamber comprises princes of the Royal Family who are of age, one deputy of the Lutheran Archbishopric of Meissen, one deputy of the Herrschaft of Wildenfels, one of the proprietors of the mediatised domains (which are now held by five owners), one deputy of the University of Leipzig, the two proprietors of "Standesherrschaften," the Lutheran "Oberhofprediger" in Dresden, the Roman Catholic Dean of Bautzen, the Superintendent at Leipzig, one deputy of the Collegiate Institution of Durzen, one of the owners of four estates in fee, twelve deputies elected by the owners of other nobiliar estates for life, ten proprietors and five other members elected by the King for life and the mayors of eight towns.

The qualification for a seat in the Upper House is the possession of a landed estate worth at least 4,000 marks a year, and for the right to elect a member to the same the possession of a landed estate valued at least at 3,000 marks a year.

Each member (except the hereditary members) receives 12 marks per diem, or 6 marks if he usually resides in Dresden, and travelling expenses.

The Upper House may propose new laws, even of a financial nature, and may amend financial Bills passed by the Second Chamber; but no taxes can be levied, nor laws passed, except by the common consent of both Chambers.

The parliamentary system in Saxony is very different from ours. The Chambers are only convoked once every two years, and it is not necessary or even customary for Ministers to resign because they have been defeated in Parliament. Ministers are, in fact, responsible to the King, and not to the Chambers, though it would probably be impossible for a Minister who had lost the confidence of the Chambers to maintain his position for any length of time unless supported by the public opinion of the country at large.

In case of a difference between the two Chambers, i.e., the rejection by the one of a Bill passed by the other, the matter is referred to deputations of both Chambers, who meet and endeavour to arrive at an agreement.

Of recent years there have been two differences of opinion between the First and Second Chambers of the Landtag:—

1. In 1901 the Second Chamber passed a Bill subjecting agricultural stock and plant, (machinery, buildings, draught horses, and cattle) to taxation on their estimated value, from which they had hitherto been exempted. This Bill was rejected by the First Chamber, in which the landed and agricultural interests are strongly represented. The Bill was discussed in every session up till 1906, when it was finally accepted by the First Chamber.

2. In 1905, Minister von Metzsch introduced a Bill altering the constitution of the First Chamber by the introduction of various university, municipal, and commercial representatives appointed by the King, but chosen, at any rate indirectly, by election. The First Chamber rejected this Bill. Deputations of both Chambers were appointed, and discussed the proposed reform at length, but without result, and finally separated "in a friendly manner." Minister von Metzsch resigned not long after the rejection of his proposed reforms.

Dresden, August 21, 1907.

M. De C. FINDLAY.
SIR M. de Bunsen to Sir Edward Grey.—(Received August 6.)

SAN ILDEFONSO, August 2, 1907.

SIR,—In obedience to the instructions contained in your Circular of the 10th ultimo, I have the honour to forward herewith a report which I have drawn up on the Spanish Senate.

I have, etc.,

MAURICE DE BUNSEN.

Inclosure in No. 14.

REPORT ON THE SPANISH SENATE.

In its present form the Senate dates from the constitution drawn up in 1876, a year after the Bourbon restoration in the person of King Alfonso XII. Article 18 declares that the power to make laws resides in the Cortes with the King. The Cortes are described in article 19 as two "co-legislative" bodies of equal power, namely the Senate and the "Congresso," of Chamber of Deputies. Article 20 gives in outline the composition of the Senate, namely:

1. Senators in their own right.
2. Life senators named by the Crown.
3. Senators elected, in the manner to be determined by law, by the "Corporations of the State, and the highest taxpayers."

Non-elected senators not to exceed in number the 180 elected senators.

The constitution itself gives in articles 21 and 22 the qualifications for the above three categories of senators.

The following are senators in their own right:

1. Sons, being of full age, of the King and heir to the Crown.
2. Grandees in their own right, being Spaniards, and having an income of 60,000 pesetas (2,400l. at par) a year derived from real property, or from such as is held to be legally equivalent.
3. Captains-General of the Army (i.e., Field Marshals) and the admiral of the Fleet. There are at present two Captains-General out of a possible four. The office of Admiral of the Fleet, vacant by the recent death of Admiral Beranger, has not been filled up.
4. Patriarch of the Indies (an extinct dignity) and Archbishops.
5. Presidents of Council of State, Supreme Court, Court of Accounts, Supreme Council of War and Marine after two years' office.

The following, being Spaniards, may be nominated or elected senators:

1. Presidents of Senate and Chamber of Deputies.
2. Deputies who have sat in three different Parliaments, or in eight parliamentary sessions.
5. Grandees of Spain.
6. Lieutenant-Generals and Vice-Admirals after two years' employment.
7. Ambassadors after two, and Ministers Pleni potentiaries after three
years' active service.
8. Members of Council of State, Supreme Council of War and Marine, and
various other officers of the law and military orders.
9. Presidents of the six Academies, viz., Royal Academy of Spain, and
Academies of History, Fine Arts, Exact Sciences, Moral and Political Sciences,
and Medicine.
10. Senior members of the above Academies, Inspectors-General of Civil
Engineers, University Professors of four years' seniority. They must have an
income of 7,500 pesetas (300L. at par) a year.
11. All persons of title, ex-deputies to Cortes or provincial Assemblies, ex-
mayors of provincial capitals and towns of over 20,000 inhabitants. These must
have an income of 20,000 pesetas (800L.) a year, or pay 4,000 pesetas (180L.)
in direct taxes.
12. Ex-senators under former constitutions.

Royal decrees nominating life senators must specify which of the above twelve
categories is the one to which the nominee belongs.

It is further required (article 26) that senators be over 35 years of age, that no
criminal action be pending against them, that they be in full enjoyment of their
political rights and that there be no embargo on their property. Senators may accept
no office (except that of Minister of the Crown), promotion, title, or decoration while
the Cortes are sitting (article 25).

The election of senators is regulated by the law of the 8th February, 1877. It enumerates
in the first place the "Corporations of the State," who elect senators
under article 20 of the constitution, viz:—

1. Archbishop, Bishops, and Chapter of Archi-episcopal See of Toledo,
Total, 9 Senators.
2. The six academies enumerated above. Total, 6.
3. Universities of Madrid, Barcelona, Granada, Oviedo, Salamanca, San-
tiago, Seville, Valencia, Valladolid, Zaragoza. Total, 10.
4. The so-called "Economic Societies of Friends of the Country" elect one
senator for each of the five districts which centre in Madrid, Barcelona, Leon,
Seville, and Valencia. Total, 5.

Thus the "corporations" elect in all 30 out of the entire body of 180 elected
senators.

The remaining 150 are elected by the 49 provinces, each returning 3 senators,
except Madrid, Barcelona, and Seville, which return 4 each.

The electoral body in each province consists of:—

1. The provincial deputies (corresponding to "Conseillers-Généraux" in
France, and, roughly, to County Councillors in England); and
2. Representatives of the Town Councils and highest taxpayers of the pro-
vince.

The law of the 8th February, 1877, also lays down in detail the procedure to be
followed by the "corporations" and provinces in electing their representative senators,
and the manner in which the representatives of the town councillors and highest tax-
payers are selected for the purpose of taking part in the senatorial elections at the
provincial capital.

By article 32 of the constitution the King is invested with authority to summon
the Cortes, which must meet every year, to suspend or close their sittings, and to
dissolve, either simultaneously or separately, the elective portion of the Senate and
the Chamber of Deputies. After dissolution, the new Chamber (or Chambers, as the
case may be) must meet within a period of three months.
In the event of the King dissolving only the Chamber of Deputies, the elected portion of the Senate is automatically renewable as to half of its members every five years (article 24 of the constitution). In practice, however, the foregoing provision is absolute, dissolutions including always the elected portion of the Senate, as well as the Chamber of Deputies.

The Senate draws up its own internal regulations, and pronounces on the qualification of its members and the validity of their elections (article 34). The King appoints the President and Vice-President of the Senate from amongst its members (article 30). Except when the Senate exercises judicial functions, one Chamber of the Cortes may not sit without the other being also in session (article 38). Laws initiate with the King, and with either of the two Chambers composing the Cortes (article 41), but laws relating to taxes and the public credit must be first presented in the Chamber of Deputies (article 42). The power of the Senate to reject or modify Money Bills is unquestioned. In practice, however, they exercise this right sparingly, and the amendments introduced into the Money Bills sent up from the Chamber of Deputies are such as the mixed committees described below always find it possible to cast into a form which will make them acceptable to both Chambers, and so secure the passage of the Bill. At the present moment the Senate is engaged in amending an important Government Bill relating to the taxation of sugar. But it is confidently predicted that there will be eventual agreement with the other Chamber, as indeed always happens in Money Bills as well as others.

Such agreement is secured by the operation of the law of relations between the two Chambers of the 12th July, 1837 (article 10), of which prescribes that "if one of the Chambers modify or disapprove in any of its parts a Bill already passed in the other Chamber, a committee shall be formed, composed in equal numbers of senators and deputies for the purpose of conferring on the mode of conciliating the conflicting opinions. The report of this committee shall be discussed without any alteration, by the Senate and the Chamber; and, if accepted by both, the Bill shall be held as passed."

Thus no amendment may be introduced into the Bill as finally submitted to the Chamber, by the mixed committee.

These mixed committees consist of the committees in either Chamber which examined the Bill in question, and which consist usually of seven members, elected by the seven sections into which both Houses are respectively divided for the purpose of considering Bills. Should the deputies appointed by the Chamber to take part in the mixed committee fall short of or exceed seven in number, the Senate Committee is reduced by lot, or increased by additional committeemen appointed by the sections, in such a manner as to secure numerical equality with the representatives of the other Chamber. (Article 89 of the Senate regulations.)

It may here be explained that, both in the Senate and Chamber of Deputies, Government Bills and Bills which have passed the other House are at once referred to the seven sections, which proceed to appoint the committee whose report is the foundation of the ensuing discussion. Bills originating with a private member (Senate or deputy, as the case may be) are also referred to the sections, but before a committee is appointed to consider them at least one section, and in the case of a proposed constitutional charge a majority of the seven sections must first decide by majority, that the Bill may be read, and it is only after such first reading in open session that, the Chamber approving, the sections are called upon to appoint the requisite committee.

In the Senate (as in the Chamber of Deputies) decisions are taken by majority of votes, but to pass a law half the full number of Senators plus one must be present. This point, however, is not as a rule enforced, except on the demand of one or more senators. (Constitution, article 43.)
Apart from their legislative powers, the Cortes are required by article 45 of the
constitution:—

1. To receive the constitutional oath from the King, from the Heir Apparent,
and from the Regent;
2. To elect the Regent or Regency when the constitution directs, that is, in
the absence of near relatives qualified under the constitution to take over the
Regency automatically; and
3. To hear impeachments brought against Ministers of the Crown by the
Chamber of Deputies.

The Law of Relations between the two Houses of the Cortes, already referred to,
lays down the procedure to be followed when the two Houses meet as a single body,
that is to say:—

1. To witness the opening or closing of the session by King or Regent in
person;
2. To receive the King's oath to the constitution, or that of the Heir
Apparent or Regent; and
3. To appoint a Regent or the guardian to a King in his minority.

The latter function seems, however, to be now reserved to the Senate alone, under
the above-quoted article 45 of the constitution.

The functions of the Senate as a Court of Justice are defined in a law of the
11th May, 1849. The Senate sits as a Court of Justice, in virtue of a Royal decree
based on a decision of the Council of Ministers, for the three following purposes:—

1. To hear impeachments brought against Ministers by the Chamber of
Deputies.
2. To hear actions in respect of grave offences ("delitos graves") against
the person or dignity of the Crown, or against the internal or external security
of the State.
3. To hear cases of misdemeanour ("delitos") committed by Senators.

But actions brought against senators are now governed by the constitution of
1876, which lays down (article 47) that, except when caught in flagranti, no Senator
may be proceeded against or arrested without the previous permission of the Senate,
and that the Supreme Tribunal is the Court having jurisdiction over senators accused
of criminal offences.

In point of fact, there has been no instance of the Senate sitting as a Court of
Justice since the impeachment of Senor Esteban Collantes half a century ago.

The present party aspect of the Senate, as a whole, is approximately as follows:

<table>
<thead>
<tr>
<th>Party</th>
<th>Seats</th>

SESSIONAL PAPER No. 246

It cannot be said that any constitutional disputes have arisen within the last ten years, or indeed, previously, between the two Chambers of the Cortes. The provision made by the Law of Relations between the Chambers, as quoted above, and which provides the machinery for adjusting differences between them, is found in most cases to be capable of bringing about an agreement. When it is obvious that the two Chambers are irreconcilably opposed to each other on a point of importance, the practice is for the Government to procure from the Crown a dissolution. In the new Chambers resulting from the consequent general election the majority in the two Houses may or may not permit the Bill to be reintroduced and carried, and the Government takes its measures accordingly. It is not customary to press controversial questions to an issue between the two Houses. Such questions are either quietly dropped or taken up again when the parliamentary situation permits.

It may be mentioned that in July, 1906, Señor Moret, being then Liberal Prime Minister, pressed for a dissolution on the ground that the state of parties in the Chambers would not permit him to pass the Liberal measures which he held to be necessary. These measures were aimed at the modification of two articles of the constitution of 1876, viz., article 2, which places certain disabilities in the way of religious services not being those of the State Church, and article 20, which prescribes the composition of the Senate, and as to which latter article Señor Moret desired to introduce a reform increasing the existing proportion of the elected members of the Senate in relation to the non-elected portion. His object was to bring the Senate into greater harmony with the Chamber of Deputies, as regards more especially the religious question, in which it was not certain that the Senate, even after a general election, would be willing to follow the Chamber of Deputies if the latter should adopt the anti-Church legislation advocated by the extreme sections of the Liberal party.

Failing, however, to secure the support of the other Liberal leaders, who declared themselves ready to carry on the Government with the existing Chambers, Señor Moret resigned office, and it was in consequence of the vain endeavours of his Radical successors, who were divided among themselves, to carry their Bills that the present Conservative Administration took office in January last. The legislation which Señor Moret desired to pass found no support in public opinion, and the conflict to which he looked forward between the Chambers, and which he hoped to avert by a constitutional change, has, in point of fact, never come to a head.

It is, of course, constitutionally quite possible that the institution of the mixed committee might fail to secure agreement, and that a conflict might arise on a vital point. This is, however, rendered improbable by the differential treatment which is habitually extended by one House to the other; by the constitutional description of the two Houses as being co-equal in power; and by the absence hitherto in Spain of a powerful public opinion, rendering imperative the passage of a particular measure, even if it should be uncompromisingly opposed by the Senate, which is in itself an unlikely contingency in view of the manner in which the Senate is composed. The elected portion tends in the long run to coincide in opinion with the majority of the popular Chamber, and this tendency is encouraged by the prevailing practice which requires members of the Royal household (some six of whom are at present sitting in the Senate) to vote with the Government of the day, which they regard as the King's Government, and therefore commanding their support. It is, further, customary for the ecclesiastical senators to support the Government, or to abstain altogether from voting if they are not able to do so.
Sir R. Rodd to Sir Edward Grey.—(Received August 10.)

STOCKHOLM, August 6, 1907.

Sir,—With reference to your Circular despatch of the 10th ultimo, I have the honour to transmit herewith in execution of your instructions, a report on the composition and functions of the Upper Chamber in Sweden. I observe that in this circular I am directed to report on the Second or Upper Chamber. The Upper House of the Swedish Diet is the First Chamber, and the popularly-elected House is known as the Second Chamber. To avoid confusion I have therefore spoken of the Chamber which forms the subject of my report throughout as the "Upper Chamber," though it would have been more correct to use the appellation "First Chamber."

I have, etc.,

RENNELL RODD.

Inclosure in No. 15.

REPORT ON THE COMPOSITION AND FUNCTIONS OF THE UPPER CHAMBER IN SWEDEN.

The Swedish Upper or First Chamber.

The Upper Chamber in Sweden is generally known as the "First Chamber." The popularly-elected House with a triennial legislative period is called the "Second Chamber." To avoid confusion it will therefore be safest to speak throughout of the Chamber, as to whose composition and functions a report is required, as the Upper Chamber.

Constitution and Mode of Election hitherto.

The Upper Chamber consists of 150 members, contrasted with 230 members in the second or popularly-elected Chamber. These 150 members are elected by the county councils and the municipal councils of the city of Stockholm, of Gothenburg, Malmö, Norrköping, and Göteborg, which are not represented on the county councils. The distribution of members depends on the population in electoral districts, which is reviewed by census every tenth year. To be eligible to the Upper Chamber candidates must be 35 years of age, and must for three years have been rated for income tax at least 4,000 crowns (£220). As, however, members of the Upper Chamber have hitherto received no salary, they have in practice always been selected from candidates enjoying a far more considerable income. They sit in each individual case for nine years from the day of their election, and they are replaced, as vacancies occur through resignation, death, or extinction of the mandate, by others who again sit for a term of nine years. The Upper Chamber has thus in practice a permanent character. It can be dissolved, but such a step has never been taken since the Organic Law of 1866 came into operation.

Election of County and Municipal Councillors.

The mode of election of county and municipal councillors who return the members of the Upper Chamber will now be briefly described. Cities or towns which have more than one one-hundred and fiftieth of the total population are not prepa

1 The term 'County Council' must not be assumed to be the equivalent of County Council in England. The Swedish Landsting might also be rendered by Provincial Assembly, but a province in Sweden is distinct from a län, which comes nearer to our country.
sent on the county councils, but have their own municipal representation performing corresponding functions. Such cities or towns are, as has been mentioned, Stockholm, Gothenburg, Malmö, Norrköping and Gefle.

Every town and every parish practically in Sweden constitutes a commune, but the larger towns are divided into more than one. The right to vote in the commune is enjoyed by both men and women of full age owning or renting certain real property, or contributing by direct taxation to the State. The apparently democratic basis is modified by the fact that the suffrage is a graduated one, additional votes being accumulated in proportion to the total amount paid in taxes on real property and income up to a maximum limit of 5,000 votes or one-tenth of the total voting power accruing to any one individual in the county communes, and 100 votes, or one-fifth of the total voting power, in the towns. The city of Stockholm has 100 municipal councillors. No other town has more than sixty, elected for four years, half of them retiring every second year.

In urban communes returning members to a county council, the latter are elected by the communal assembly, one for every complete total of 2,500 inhabitants. In the country communes members of the county councils are returned by indirect election, the electors being chosen by the communal assemblies, and one representative elected for every 5,000 inhabitants. County councillors must be 25 years of age, domiciled in the county, and must themselves possess the suffrage. They are elected for two years.

The return of members to the Upper Chamber thus rests fundamentally on the graduated property suffrage which determines the election of county and municipal councillors.

Reform in Constitution of Upper Chamber, and method of Election therefor passed by present Diet, but awaiting confirmation by a new Diet after General Election.

A proposal for the reform of methods of election to both Chambers is now before the country, and was carried through both Chambers of the Legislature in the session of the current year. As, however, any modification of the constitutional law of Sweden must be passed by two successive Diets, this reform cannot become law until it has also been approved by a new Diet, after the next general election for the popular or Second Chamber. The new measure, besides establishing universal suffrage and the proportional method for elections to the popular Chamber, also provides that members of the Upper Chamber shall be elected as before by the county and municipal councils, but subject to the proportional system, which is also adopted for the elections to the Second or popular Chamber. The mandate of members of the Upper House is to run in future for six years instead of for nine as hitherto. The county and municipal councils returning the members are divided into six groups. One of these groups in prescribed order will each successive year elect representatives to sit for the ensuing period of six years. The Upper Chamber will thus remain permanent in character, one-sixth of its members only being subject to re-election every year. The county councillors will be returned by proportional election in constituencies distinct in town and country. A "political district" containing population amounting to 30,000 or upwards, will be divided into constituencies returning each at least three, at most six councillors. Boroughs will return one councillor for every 3,000 inhabitants, and where their population amounts to at least 6,000 they are to compose independent constituencies. Where the population falls below 6,000 they are to be grouped with other boroughs, so as to compose a single constituency with not less than 6,000 and not more than 12,000 inhabitants. In the communal suffrage a sweeping reform is contemplated, reducing the preponderating influence now attaching to the larger taxpayers, and giving the smaller contributors a much greater influence in the return of the Councillors who constitute the electors of the Upper Chamber. The property qualification established
by the Reform Bill for the indirect electors of the Upper Chamber is real estate of a value of 50,000 crowns (about £2,800), or an annual income of 3,000 crowns (about £105). In the country communies the electors are to have ten votes for every 1,000 crowns of rateable income, and an additional vote for every complete total of 500 crowns in excess of 1,000. Real estate is rated as producing 6 per cent on the estimated value. In the boroughs the electors are to record one vote for every 100 crowns of income up to a total of 2,000, after which total has been reached they are accorded one additional vote for each additional total of 500 crowns. In no case can the total of accumulated votes exceed forty, or one-tenth of the total voting power. The maximum income conferring votes will thus be 16,000 crowns in the country districts and 12,000 in the urban.

The proportional system is henceforth to be applied to all elections, both to those of the Upper and Second Chambers and those of the county and borough councils. The measure also contemplates the payment of members of the Upper Chamber on the same scale as prevails for members of the Second Chamber (12,000 crowns i.e., £66, or 10 crowns a day), which is not increased if the session is prolonged beyond the statutory four months.

Equal Competence for both Chambers under Constitution.

The Swedish constitution accords perfectly equal competence both in financial and other questions to both Chambers, which share the legislative authority with the King. Legislation requires the assent of both Chambers, voting independently, except in financial questions, where, under certain circumstances, a common vote is taken, but parliamentary practice allows, when the decision of the Houses shows only a slight divergence, arising from the adoption in one Chamber of an amendment not accepted by the other, that the matter in hand should be referred back to committee, with a view to effecting a compromise acceptable to both.

Financial Issues when Conflict arises decided by Joint Vote.

Financial questions on which the decisions of the two Chambers are in conflict are submitted to a common vote of both Houses voting as one body, when the absolute majority is decisive. As the Upper Chamber consists of only 150 members, whereas there are 230 in the popular Chamber, it is clear that the latter has numerically the stronger voice, but in practice, inasmuch as the Upper Chamber has generally been found homogeneous in character, while in the popular Chamber parties are more evenly balanced, the influence of the former has been somewhat preponderating.

The principle of common voting on financial questions has undoubtedly contributed to counteract constitutional conflicts between the two Houses. But in questions of internal legislation such conflicts have of late years tended to increase owing to the essentially conservative character which its composition has given to the Upper Chamber and the rapid development of progressive ideas in the country.

Conflict between the two Chambers.

In illustration of such conflicts may be mentioned the process of legislation with regard to the insurance of workmen. The first Bills introduced to deal with a portion of this problem were rejected by the Diet in 1890 and 1891. A Bill submitted by the Government in 1885 for compulsory insurance against any permanent incapacitation from work, from whatever cause, age, accident, etc., was also rejected, and further investigation demanded. A new Bill for insurance against invalidity was introduced in 1898, and here a conflict of opinion arose between the two Houses, the measure being accepted in principle, with certain provisos, in the popular Chamber, but rejected
by the Upper Chamber, which apprehended the heavy burden with which it threatened to saddle the State. The problem of old age insurance was accordingly for the time abandoned, and in 1901 both Chambers united in approving a measure dealing with the insurance of workmen against accident only.

In contrast with its action in thus retarding legislation, the Upper Chamber in 1905 showed itself zealous to promote legislation which the popular Chamber hesitated to consent to. It had been proposed to organize an universal strike as a protest against the restrictions of the Reform Bill then before the Diet. A Bill was introduced by the Government, and modified in Committee, proposing certain modifications in the Criminal Code, by which severe penalties were to be imposed on workmen who, by breaking their contracts of engagement and going on strike, caused actual injury to life, health, or property, as well as on employees in the public service who without reasonable cause abstained from the execution of their duties, and assimilating to public servants persons employed by municipalities, railway men, and others. The Bill was carried by acclamation in the Upper Chamber, while in the popular Chamber the first part of the proposal was rejected by a majority of two, and the second by a majority of nineteen.

These cases are referred to rather as typical of the different tendencies of the two Houses than because the conflict of opinion led to any grave result. Many more instances might no doubt be offered in illustration of the charge so frequently brought against the Upper Chamber of obstructiveness to popular legislation, but all other conflicts between the two Houses have been completely thrown into the shade by the battle which arose over the larger issue of electoral reform, especially since the general election of 1905, when a Liberal majority was returned to the popular Chamber with a significant increase in Socialist representation.

The popular voice in Sweden has long demanded an extension of the suffrage tantamount to universal suffrage, and the demand has gathered strength each time a settlement has been deferred. For the purposes of the present report, however, it will not be necessary to take the history of the movement further back than the Reform Bill of 1905, by which date the necessity for an extension of the suffrage had, it may be said, been universally recognized, though a large party in the country adhered to the view that with its extension the adequate representation of minorities should be safeguarded by the introduction of the proportional method in elections.

Reform Bill of 1905.

A measure uniting these two objects was introduced by the late M. Bostrom's Government during the session of 1905. The suffrage proposed in this Bill was practically a manhood one, but restricted to Swedish subjects who had reached the age of 25 years, and the method of applying the proportional system was in many ways open to criticism. It was carried through the Upper Chamber, where many Conservatives who might have been opposed to the extension of the suffrage in principle recognized that it was inevitable, and held that proportional elections would serve to return to their party a group numerically sufficient to enable them to dominate in joint votes on financial questions. It was rejected in the Lower Chamber, where the Conservatives were divided on the merits of the proportional system, while the Liberal groups were opposed to a measure which seemed to imperil the future action of the party, and the Extreme Left protested energetically against the raising of the age of electors to 25.

In the autumn of 1905 a general election took place, and in the new elective Chamber the Liberals secured a slight majority, which was forfeited by a largely increased return of Socialist members. A Liberal Government was formed and a new Reform Bill framed in accordance with the views of their supporters.

1 The property qualification which it was sought to abolish was income to the amount of 800 kronor (44½s.), or real property valued at least 1,000 kronor (55½s.), or a lease of an agricultural estate of a value of at least 6,000 kronor.

246—54
Reform Bill of 1906.

The Bill submitted to the Diet in 1906 made no reference to the proportional method, and proposed representation by single-member constituencies with extension of the suffrage to all male Swedes who had completed their 24th year. It did not satisfy the partisans of the Extreme Left, but it was evidently hoped that the raising of the age from 21 to 24 would capture the support of moderate politicians. The Bill was entirely remodelled by a majority in the Standing Constitutional committee to which it was referred. The condition of proportional representation was restored, and the age of electors was once more fixed at 25. The majority in the committee of twenty-four, twelve from either House, consisted of all the members of the Upper Chamber and only one from the other. The Government Bill was rejected in the Upper Chamber by 126 to 18 votes, and the recommendations of the committee were adopted, with a supplementary resolution proposing to limit the mandate of members of that House to six years instead of nine. It was, however, carried in the popular Chamber by 134 votes to 94. The Prime Minister, who had addressed a solemn warning to the Upper Chamber not to oppose the national will, and had sustained in that Assembly that in political issues the two Chambers could not be considered of equal authority, recommended an immediate dissolution, in order to afford the country an opportunity of expressing its opinion on the attitude of the Upper Chamber. The Crown, however, dissented, on the strictly constitutional grounds that it would not be correct to dissolve a Chamber which had given its assent to a Royal Bill, i.e., a Government Bill, which has been approved by the Sovereign.

The Liberal Ministry then resigned, with the exception of the Minister for War and the Minister for Foreign Affairs, who had previously tendered their resignations in consequence of the attitude adopted towards the Upper Chamber by the Prime Minister and their colleagues, and these two were included in a new Administration of moderate politicians formed by the present Prime Minister, Commodore Lindman, who accepted office with a mandate from the Crown to frame a fresh Reform Bill on broad and popular lines, which should, however, not only apply the principle of proportional representation to the popular Chamber, but should also extend it to the Upper Chamber, the mode of election to which was to be completely revised with a view to giving it a more elastic character.

"Reform Bill of 1907.

The reforms proposed by this Bill in the composition and constitution of the Upper Chamber itself have already been described in the earlier part of this report. As regards the popular Chamber, the proposals submitted were practically the same as those in the Bill of the Liberal Administration put forward in 1906, with the addition of proportional representation on lines which were generally admitted to be an improvement on those submitted in 1905.

The Government Bill underwent some modifications in committee, one of which had reference to the application of the proportional system, which was now amended so as to prevent the exclusion of party leaders by disloyal voting on the part of their opponents, and the other two were concerned with the communal and municipal Administrations, and thus with the basis for the electorate of the Upper Chamber. The first involved a small reduction in the property qualification of the voters, and the second threw open to women the candidature for communal appointments, but not for membership of the county councils. The committee rejected an amendment proposing a substantial reduction of the property qualification of electors to the county councils, fixed at 4,000 kronor (220£.) of income, or 80,000 kronor (444L.) of
real property, and another in favour of assigning a stipend to members of the Upper Chamber. The Government accepted without reserve the amendments adopted by the committee, and went a step further by acknowledging their readiness to adopt the amendment of the minority group in committee in favour of payment of members of the Upper Chamber.

This last concession on the part of the Government to the views of the Liberal Opposition was not popular in the Upper Chamber, but, after hearing the able and cogent exposition of the Government's policy made by the Prime Minister, the Bill, as thus modified, was adopted by 93 votes to 53 registered against it. The decision of so large a majority of the Upper Chamber, which had in a sense initiated the policy of its own reform, was a refutation of the charges of invincible obstinacy so frequently directed against that Assembly, and was probably not without its effect on the result in the popular Chamber, which divided subsequently. The Bill as amended by committee was rejected there without ballot. The Bill as amended by committee, with an addition of an amendment reducing the property qualification of the indirect electors of the Upper Chamber from 4,000 kronor (220l.) to 2,000 (110l.) of income, or real property to a value of 40,000 kronor, and assigning to members of that House a payment during session similar to that accorded to members of the other House, was carried by 122 to 105.

By this decision the views of the two Houses were brought so nearly into harmony that there was good reason to hope that a compromise would be found acceptable to both parties on the one issue, that of the property qualification, on which they were not in agreement.

The majority of the committee, to which the question was referred back, proposed to fix the property qualification at 3,000 kronor (185l.) of income, or real property at a value of 50,000 kronor.

The Upper Chamber then once more belied its untractable reputation, and adopted the proposal of the committee by 110 to 29 voices, while the popular Chamber recorded a larger majority in its favour, namely, 128 votes to 98, that had been secured by the amended Bill in the first ballot.

The Bill, which involves an alteration in the fundamental constitutional law, must now stand over until it has been confirmed or rejected in the first session of a new Diet after a general election. But the battle would seem to have been practically won, and there is good hope that the long-standing conflict has been thus disposed of.

By a curious irony the first Reform Bill of 1905 was carried through the Upper Chamber, but rejected by the Chamber whose electorate it was purposed to reform; while the Bill which was eventually adopted, and which included a far-reaching constitutional reform of the Upper Chamber itself, was introduced by a Conservative, though in no respects a partisan, Government, and successfully carried through an elective Chamber with a well-defined Liberal majority.

SWITZERLAND.

No. 16.

Sir G. Bonham to Sir Edward Grey.—(Received July 24.)

BERNE, July 20, 1907.

SIR,—In compliance with the instructions contained in your circular of the 10th instant, I have the honour to transmit herewith a report on the relations between the two Chambers of the Swiss Legislature.
It will be seen that, according to the constitution and a law specially passed to define their relations to each other, they are absolutely equal, and I am informed positively that there has not been any constitutional dispute between them during the last ten years.

I have, etc.,

G. F. BONHAM.

Inclosure in No. 16.

Report on the Relations between the Two Chambers of the Swiss Legislature.

The Swiss constitution does not admit of the existence of an Upper or Second Chamber in the sense in which the expression is generally used, namely, one for revising or remodelling or on occasion rejecting the decisions of the Lower. There are however, two Chambers, the relations between which are carefully defined (1) by the constitution of 1874; (2) by the law of the 9th October, 1902, revising a previous one of 1849 respecting the relations between the National Council, the Council of States, and the Federal Council, which, it may be here stated, is the Executive Government composed of seven members, the president, elected from among its members for one year, being also president of the Confederation.

The two other Councils, which for the purpose of this report it will be convenient to allude to as Chambers, constitute the Federal Assembly when they sit together, and their absolute equality is very carefully laid down.

By article 72 of the constitution, the National Council or Chamber, is elected directly by the people in the proportion of one deputy for every 20,000 electors, any fraction above 10,000 being counted as 20,000, and therefore represents the people. It consists of 167 members.

The members of the Council or Chamber of States are elected by the cantons, two members for each canton, and therefore consists of forty-four members.

By article 89 of the constitution all federal laws and decrees must be voted by both Chambers, although they have still to be subjected to the popular vote, or referendum, should 30,000 voters desire it. It is further enacted that the Chambers sit separately, except on certain occasions when they sit together, as for the election of the Federal Council, or Executive Government, the Federal Tribunal, and the Chief of the Federal Army.

At the commencement of each session the Presidents of the two Chambers meet and make arrangements for the distribution of the work of the session between the two Chambers. This work, it may be observed, having been decided on by the Federal Council.

At the first or second sitting each President lays before the Chamber over which he presides the apportionment of the work agreed upon. When, before the two Chambers meet, the Federal Council declares a particular question to be of extreme urgency, the Presidents of the two Chambers, without consulting the Chambers, decide as to priority being given to it, in which case the Presidents are authorized to appoint committees (which is done by means of "bureaux," special parliamentary officials) and to start them on their work.

The absolute equality of the two Chambers is shown by the next article (3), which provides that if the Chambers or if their Presidents, as in the case mentioned in the previous paragraph, cannot agree on the question of priority the Presidents shall decide by drawing lots.

Article 4. When a law or a decree has been discussed by one of the two Chambers, the decision arrived at, signed by the President and Secretary, is communicated to the other Chamber in writing.

If either Chamber at its first meeting decides not to discuss a proposal submitted by the Federal Council, or transmitted by the other Chamber, it must inform the latter of its decision.
SESSIONAL PAPER No. 246

If one of the Chambers decides not to take into consideration any Bill or decree submitted to it in the form of a motion, or if after discussion it rejects it, no further action is taken, and the decision is not communicated to the other Chamber.

Article 5. If the decisions of one Chamber do not correspond with those already taken by the other, they are returned to the latter in order that the points at issue may be discussed.

The fresh discussion is confined to these points, unless, as a result of amendments adopted, another discussion becomes necessary, or unless the representatives of the two Chambers mutually propose one.

The two Chambers follow this course until an agreement is established between them, or until each Chamber decides to abide by its resolutions.

Article 6. When this occurs the differences between them are submitted to a conference at which the united committees of the two Chambers must endeavour to arrive at an understanding. Should the committee of one Chamber be smaller than that of the other, it must be made up to the same number of members.

The conference is presided over by the president of the committee, representing the Chamber which had the priority in the discussion of the measure.

Article 7. The proposal formulated by this conference with the object of eliminating the divergences of opinion is communicated in the first instance to the Chamber which has had the priority with regard to the measure in question.

If the conference does not succeed in formulating a proposal, or if an agreement cannot be come to in the Chambers on the proposal, the project is considered to be thrown out, and can only be considered again by having recourse to the forms laid down by statute for further legislation.

Article 8. When the deliberations are concluded in the two Chambers, laws and decrees of general interest are referred to a revising committee to be drawn up in their final form, and to make any purely formal corrections in accordance with the existing law, the primary object being to secure conformity in the French and German texts. The committee has no power to modify the decisions of the Chambers.

The amended text is returned to the Chambers, and, if approved by them, each Chamber proceeds to the final vote.

This final vote is indispensable even if the project has not been submitted to the revising committee.

If on this final vote the project is rejected by the two Chambers, or by one of them, it is considered abortive, and can only be reconsidered if brought forward in the manner prescribed by statute for further legislation.

It is therefore clear that, both according to the Swiss constitution and the law regulating the position of the two Chambers, there is no Upper Chamber in the sense employed in other countries, and their footing of absolute equality apparently works well, as there is no record of constitutional disputes within the last ten years. The consent of both Chambers is indispensable for the passing of a measure, and in case of disagreement ample opportunity is given for arriving at an understanding. If they nevertheless disagree, the measure has to be abandoned.

The same procedure as that described above is applied to the Budget, which is prepared by the members of the Federal Council in charge of the Finance Department, and is then submitted to both Chambers. Although there is no written rule to that effect, priority is given to each Chamber in alternate sessions, absolute equality between both Chambers being thus maintained. A Budget, however, is never thrown out entirely, as an agreement between the two Chambers is either arrived at or the figures in the Budget are accepted.
SIR,—I have the honour to transmit to you herewith a report on the United States' Senate, which has been compiled by Mr. Seeds, Third Secretary in His Majesty's Embassy, in accordance with the instructions contained in your circular of the 10th July last.

I have, etc.,

JAMES BRYCE.

Inclosure in No. 17.

REPORT BY MR. SEEDS ON THE UNITED STATES' SENATE.

In creating a Senate, or Upper Chamber, the framers of the United States' constitution had two main objects in view. It was felt that in a federation of states theretofore sovereign it was necessary to provide a means by which each state could exert its influence as a separate Commonwealth in the National Legislature and enjoy equal representation with any other state, without discrimination in favour of area, wealth, or population. Secondly, the leaders of the convention of 1787 realized the need for creating a legislative body which would be less affected by sudden, and perhaps unreasonable, changes of public opinion than might be a House of Representatives elected directly by the people.

The former of these objects was attained by providing that every state, irrespective of size or population, should send two representatives to the Senate, each of whom was to possess one vote.

In the second place, the constitution laid down that the term of office of senators should be six years (as opposed to the two years' term of members of the House of Representatives), and that the elections for the Second House should be indirect—or, rather, that they should be in the hands of the Legislatures as representing the State Governments.

There being at present forty-five states in the Union, the Senate consists of ninety persons, and is presided over by the Vice-President of the United States. This official is not chosen by the Senate, but is elected at the general presidential election. He does not participate in the debates, but directs the order of business, and casts a vote only when the Senate is equally divided.

The Senate, unlike the House of Representatives, all the members of which are elected at the same time every two years, is a permanent body, and has existed continuously since its first creation, one-third of it only being renewed every two years. This was effected by the division of the whole body of senators into three classes in the first Congress. The term of those in the first class, beginning in 1789, expired in 1791, and the term of their successors expired six years afterwards. The term of the second class beginning in 1789, expired in 1793, and that of their successors six years later. The members of the original third class were appointed for six years. This classification is still kept up. At present there are thirty senators in each class, the term of those in the first class expiring on the 3rd March, 1909; in the second, on the 3rd March, 1911; and in the third, who will make their first appearance in the Senate at the opening of the Sixtieth Congress in December of this year, on the 4th March, 1913. When a new state is added to the Union, senators first appointed by it cannot be sure of a full term of six years, as they must be assigned by two of
the three classes, in order to keep them as nearly equal as possible, the class to which each of such senators shall belong being settled by ballot; but after the first assignment the full term of six years is granted to senators coming from a new state.

It is worth nothing that the biennial renewal of a third of the Senate coincides with the meeting of a newly-elected House of Representatives.

**Senators' Qualifications.**

The qualifications required by the constitution from a candidate for the post of senator are that he has attained the age of 30, has been a citizen of the United States for nine years, and, at the time of election, is an inhabitant of that state for which he is standing.

**Election of Senators.**

As regards the election of senators, the constitution lays down that the senators from each state shall be “chosen by the Legislature thereof.” The actual method of such elections is formulated in the Revised Statutes (Title II, chapter I, section 15) as follows:—

“Each House shall openly, by a *viva voce* vote of each member present, name a person for senator in Congress, and the name of the person so voted for who receives a majority of the whole number of votes cast shall be entered on the Journal of that House. . . On the day following . . . the members of the two Houses shall convene in Joint Assembly, and the Journal of each House shall then be read, and if the same person has received a majority of all the votes in each House, he shall be declared duly elected senator; but if the same person has not received a majority of the votes in each House . . . the Joint Assembly shall then proceed to choose, by *viva voce* vote of each member present, a person for senator, and the person, who receives a majority of all the votes. . . shall be declared duly elected. If no person receives such majority on the first day, the Joint Assembly shall meet . . . each succeeding day during the session of the Legislature, and shall take at least one vote until a senator is elected.

Should a vacancy occur at any time when the State Legislature is not in session, the Governor of the state has the power to fill it up until the next meeting of the Legislature.

The aim of the framers of the constitution in providing that the Legislatures, and not the people, should choose the members of the Senate was not only to create a Chamber less directly dependent on the popular vote than the House of Representatives, but also to ensure that the Senate should represent the various State Governments. The plan adopted used to excite the admiration of foreign observers. It is doubtful, however, whether the object aimed at has been perfectly attained, and much criticism has been directed of late years against the mode of senatorial elections. Certainly in some states this method of indirect election has become almost as much a formality as the provisions of the constitution regarding the presidential election. So much so is this the case that there has existed for some time a movement, which would seem to be growing in strength of late, that has for its object the amending of the constitution so as to provide for the direct election of senators by the people. Whether this movement will become strong enough to bring about a change, it is, of course, impossible to foretell. Amendments to the federal constitution for this purpose have, it is true, at various times been submitted to one or other of the Houses of Congress, but the difficulties of carrying any constitutional amendment are
recognized to be almost insuperable. It should be noted, however, that petitions have been addressed to Congress from thirty-one, if not more, states—more than the two-thirds required by the constitution for the sanctioning of an amendment—asking for the submission of an amendment to secure the election of senators by direct vote of the people.

There are, or have been, two different systems by which it has been attempted to render the power of the States Legislatures to elect senators merely nominal. In earlier years the will of the people was often expressed by party state conventions. A notable instance was in 1858, when the Illinois State Democratic convention endorsed Mr. Douglas, and the Republican convention endorsed Abraham Lincoln, for the position of United States' senator. The more modern system is that of primary elections, in which the opinion of the voters of each political party is directly expressed in favour of aspirants previously nominated by party meetings, the State Legislatures simply registering the result of the elections. This system is now in vogue in at least eighteen states, Nevada having been the pioneer, by the enactment, in 1899, of an Act entitled "An Act to secure the election of United States' senators, in accordance with the will of the people ...". In some states, particularly in the Southern States, where one political party is in almost complete control, the system has been put into force through the state committees of the party; in others, recourse has been had to legislation, as in Oregon, the two Dakotas, Missouri, Illinois and others where primary elections are provided for by statute. Mississippi, by an Act of 1903, abolished all nominating conventions, and provided for the nomination of all elective officials, including United States' senators, by direct primaries. In some states, South Carolina and North Dakota for instance, legislators are subjected by statute to a pledge to abide by the primary elections. By the Oregon law of 1904 candidates for the Legislature are required to sign a pledge that they will, or will not, vote for the senatorial candidate who receives the highest popular vote in the primary. That this system is the most favoured at present is shown by the fact that the last House of Representativess of Pennsylvania passed a Bill to that effect by unanimous vote (though this Bill has not been adopted by the Senate of that state), and by the inclusion of a provision for primary elections in the as yet unratified constitution of the proposed new state of Oklahoma.

In all these cases, of course, candidates are the official selections of the political parties. The state of Nebraska, by its constitution of 1875, endeavoured to put the initiative directly into the hands of the electors, by providing that "the electors may, by ballot, express their preference for some person for the office of United States' senator." This system has, however, not proved satisfactory in the working, and has not been followed by any other state. It may be that the electors, while ready to vote for candidates put forward by their respective parties, and whose names appear on the ballot papers, are reluctant to take upon themselves the responsibility of writing on the ballot paper their own personal selection for the post of senator.

In those states, where the method above described is not in vogue, the "caucus" system prevails. Under this system, which accords more with the provisions of the constitution than does that of primary elections, the political party controlling a majority of the two Houses of the State Legislature meets in joint caucus and selects a candidate whom the whole party is pledged to support.

The necessity for a senatorial candidate to obtain a majority of all the votes in the State Legislature has, it should be added, led to many a delay in cases where there have been several aspirants, none of whom commanded the necessary number of votes. It is not unusual for a state to remain unrepresented for a very considerable time, until the deadlock is removed by the partisans of one or more of the candidates finally throwing in their lot with one of the other parties.
Salaries, etc.

The salary paid to senators has varied from time to time, and stands now at 7,500 dollars (£1,500 approximately) a year. They receive in addition a compensation for travelling expenses to and from their constituencies, calculated on the mileage covered.

No senator may hold any public office under the United States during his term in the Chamber. Under this provision the Administration is not represented in the Senate by Cabinet Ministers or other responsible officials; there are, however, generally one or more senators, standing in intimate though unofficial relations with the Executive, through whom the Administration can express its views.

Powers of the Senate.

The powers of the Senate fall under three heads:—

1. Executive.
2. Judicial.
3. Legislative.

1. The constitution lays down that the President may conclude treaties with other nations only "by and with the advice and consent of the Senate," a majority of two-thirds being necessary. The advice and consent of the Senate are also required as regards appointments of ambassadors, consuls, judges of the Supreme Court, and the higher officials of the United States.

The powers of the Senate in respect to the ratification of all treaties proposed by the Chief Executive have always been important, and have increased in importance since the United States has to a certain extent abandoned its former policy of complete abstention from international politics in other continents but America, and they constitute an effective check on the actions of the Executive Department of the Government, which is concerned with the management of foreign affairs. It is no light task to insure that, in a House divided into two strong parties, and in which the majority is not necessarily on the side of the Executive the principle of any treaty may so recommend itself generally as to obtain ratification by a majority of two-thirds. The determined opposition of but a few senators is all that is required for the formation of a group whose action will lead either to the complete wrecking of a proposed treaty or to the addition of such emendatory articles as may materially alter the scope of the agreement, and render it unacceptable to the other Contracting Power. The chief factor in the situation is the Committee on Foreign Relations, before which all measures relating to foreign affairs must first come up for discussion, and that body, which generally includes some of the ablest members of the Senate, may almost be considered a sort of Second Department of State, or Foreign Office.

The control of the foreign policy of the United States is therefore effectively in the hands of the Senate, which is, it may be added, not less jealous than heretofore of anything which it regards as an attempted curtailment of its rights by the Executive. As an instance of this, one may quote the attitude taken up by the Senate in regard to the proposed Arbitration Treaties during the closing decade of last century; opposition to those measures was defended on the ground that the Senate could not abnegate a power given it by the constitution, and may have been largely prompted by the idea that, by consenting to such treaties, the Senate would cede a certain portion of its rights to the Executive.

The right of approving appointments, vested in the Senate by the constitution is highly valued by that body, which now exerts an effective control over the action of the Executive in selecting persons for the higher federal offices, and not infrequently prevents the President from choosing those whom he may personally prefer.
All discussions respecting treaties and appointments are carried on in secret, so-called executive sessions.

2. "The Senate shall have the sole power to try all impeachments" (section 3 of the constitution). In such cases the accusing party is the House of Representatives, in whom is invested the sole power of impeachment, and for the conviction of the accused a vote of two-thirds of the senators present is necessary. When sitting for such a purpose, they are "on oath of affirmation," and should the impeached person be the President of the United States, the Chamber is under the presidency of the Chief Justice. Judgment in such cases does not extend further than to removal from, and disqualification to hold, office under the United States, but the convicted person is liable to indictment before a legal tribunal.

Resort has but rarely been had to this method of proceeding, the most notable case being that of the impeachment of President Andrew Johnson, which resulted in an acquittal, less than two-thirds having voted to convict.

3. In respect of their legislative functions, the Senate and the House of Representatives are inter-dependent and possess equal powers. Bills may originate in either chamber, but acquire the force of the law only upon obtaining the assent of the other House, and the approval of the President.

Where each chamber has equal legislative powers, and may either reject in its entirety a Bill proposed by the other, or add to it amendments which may not be acceptable to the House where the measure originated, frequent disagreements must be expected. No provision is laid down in the constitution to govern such cases, but the practice of Congress is to settle differences by conferences between members representing each House. The system adopted is, briefly, the following:

The House of Representatives has, for instance, passed up to the Senate a Bill, which is returned by the latter Chamber with amendments attached. The House may then either approve the Bill in its amended state, or else send it back to the Senate, disagreeing with the proposed amendments, and adhering to its own view. Should the Senate not alter its decision and accept the view of the House, the former will proceed to insist upon its amendments and propose a conference. Each House then appoints three of its members, and these six constitute a conference committee. Should the committee fail to agree, another conference is usually asked for and arranged; should it, however, reach an agreement, a report is drawn up, which is presented by the conference to their respective Houses. The committee's report, which, as might be expected, generally takes the form of a compromise, is then discussed by each House, and may be either approved or rejected, but not amended.

Continued disagreement leads to the extinction of the measure at the end of the Congress.

It may safely be said that this has so worked in practice as not to involve the loss of any large percentage of Bills, the two Houses usually sinking their minor differences when an important measure is at stake. The criticism is, however, often made that the numerous debates, unavoidable under this system, are apt to entail annoying delays. On the other hand, it would be hard to find a plan which could more effectively safeguard the rights of both Houses and obviate the dangers of deadlocks, so often an unfortunate feature of the bi-cameral system.

It should be noted that constitutional disputes between the two Houses of Congress are avoided by the fact that all questions relating to the interpretation of the Constitution are, whenever they arise in legal proceedings, determined by the national courts of law, with the Supreme Court of the United States as the final Court of Appeal, and that neither House of Congress would think of contesting the soundness of a judgment pronounced by the courts. The powers of Congress are strictly defined by the constitution, an instrument in virtue of which alone Congress exists, and whose provisions may not be contested or exceeded by the Legislature. That body has not, therefore, the right to claim to determine the interpretation of the Constitution, which is a matter for the judicial tribunals of the land to decide. One House may, of course,
propose a measure which, in the opinion of the other Chamber, in unconstitutional; the ensuing disagreement is then referred to a conference between the two Houses in the manner above described, when the question at issue may either be amicably settled or dropped entirely. Should the measure be passed by Congress and approved by the President, it is yet liable to be declared unconstitutional by a federal court on any particular case arising under the Act being brought up for legal adjudication.

Financial Powers.

It has been stated above that Bills may originate in either House of Congress. One exception is, however, made in the constitution, namely, that “all Bills for raising revenue shall originate in the House of Representatives, but the Senate may propose or concur with amendments as on other Bills.”

In considering the question as to what control the Senate is able, under this provision, to exert over the national finances, the general powers of Congress in this respect, as opposed to those of the Executive Departments, must not be forgotten. The Secretary of the Treasury does, it is true, furnish Congress annually with a statement of the national revenue and expenditure, and he also lays before the Legislature estimates for the coming year. The great power of Congress, however, arises from the fact that the Cabinet Minister’s estimates are not necessarily taken as a guide in fixing the sums to be raised and to be allotted to the different Government Departments. Congress, or rather its Finance Committees, can summon the Secretary of the Treasury to give evidence, but the Legislature is unfettered by the presence in its Assembly of a Cabinet Minister armed by the Government with definite financial proposals. The national finances being thus under the sole control of Congress, and, of the two Chambers which compose that body, the House of Representatives having the privilege of originating all Bills for raising revenue, the actual powers of the Senate in this connection remain to be considered.

Of the right to propose amendments to financial Bills received from the House, the Senate avails itself freely. The procedure followed with regard to such Bills is that adopted in respect to all other measures; as soon as they are received by the Senate they are immediately referred to the Finance Committees for consideration, whence they emerge with the addition of amendments, and come up for general discussion. The committees’ amendments may be accepted or not; in any event, further amendments may be added, and the Bills are returned to the House of Representatives bearing effectively the imprint of the Senate. Then follow generally disagreement on the part of the House, a conference, and the final passing of a compromise measure.

The following tables are interesting in this connection, as showing, with regard to each of the regular Appropriation Bills passed by the last two Congresses, the amount of each Bill as it passed the House of Representatives, the amount as it passed the Senate, and the amount as it became a law.

</table>
A glance at these tables will show that nearly every Appropriation Bill was returned to the House of Representatives with considerable amendments by the Senate, the amount proposed by the House remaining unaltered in only five cases.

Secondly, it will be seen that the Senate amendments in the overwhelming majority of cases were directed towards increasing the amount of appropriations.

Thirdly, a comparison of the amounts finally approved and those originally voted by the two Houses is distinctly in favour of the Senate, the amount voted by compromise measure being in most cases nearer to the figure proposed by the Senate than to that fixed by the House.

Lastly, the many Deficiency Bills which were found to be necessary might seem to prove the wisdom of the higher appropriations proposed by the Senate, but it may be presumed that, in some cases at least, the deficiency was due to expenditure which could not be foreseen.

It is clear, therefore, that the advantage resting with the House of Representatives, in virtue of its privilege of originating financial Bills, is effectively counterbalanced by the free exercise of the Senate's right to amend such measures. That the two Houses of Congress jointly have supreme control over the national finances, and are less fettered in that respect by the policy of the Administration than most European Legislatures, is certain. The question as to which House of the two has the greater power is not so easily decided, and must be considered in connection with the larger question as to the relations between the two Houses generally.

Relations between the two Houses of Congress.

The constitution undoubtedly aimed at the creation of a bi-cameral Legislature, which the two Houses, except for the executive and judicial rights vested in the Senate, and for the privilege of initiating financial measures given to the House of Representatives, should enjoy equal powers in every respect, and the question naturally arises how far this aim has been attained in practice. Granted that the constitutional powers of the two Houses are equal, it remains to be considered whether either Chamber possesses advantages over the other such as are conferred by a longer term of office, a more convenient size, or the presence in its ranks of more experienced and influential legislator.

On examining the constitution and actual composition of the two Houses it will be seen that all these three advantages rest with the Senate:—

Firstly, the House of Representatives, with its short life of two years, is at a disadvantage when opposed to a comparatively permanent body like the Senate. The effect produced by this disparity in length of term is particularly noticeable towards the end of a session, when Congress stands face to face with disagreements between the two Houses in respect of contentious measures, including, perhaps, Appropriation Bills, the passage of which is necessary for the due carrying on of Government. Persistence in disagreement would lead to the extinction of the measure at the close of the Congress. This eventuality is, however, not contemplated by senators and members of the House of Representatives from the same point of view. The Senate as a body can face with comparative equanimity the temporary failure of a Bill, knowing that it will shortly have to deal with a newly elected House of Represenatives, which may prove more amenable; also, the great majority of senators, whose terms of office have yet two or four more years to run after the close of the actual Congress, are not affected, as are the members of the House at the end of the first session of a Congress, by the prospect of facing new elections. In this connection, therefore, the Senate possesses a distinct advantage over the House, and even were all other conditions equal, the former body would, in the very nature of things, be generally able to wear out the latter.

In the second place, the difference in numbers between the two Houses—90 senators as against 386 representatives—is a factor in favour of the Senate, the
SESSIONAL PAPER No. 246

House of Representatives being a more weakly-organized body as compared with the other Chamber whose smaller size gives it a certain compactness and solidarity, Senators have greater opportunities of debate, and are able to devote more attention, both individually and as a body, to the measures coming before them, as compared with the representatives, in whose Chamber most of the work is done by the numerous committees and not by the House as a whole. The gain to the Senate in this respect is, perhaps, not so much practical as moral, but it is none the less real, and lends a certain weight to its decisions.

Lastly, the Senate does largely attract into its ranks the best political talent that the nation produces. The leading members of the State Legislatures, State Governors, and prominent politicians generally, all look to a seat in the United States Senate as their ultimate goal. Nor does the Senate exercise any less attraction on members of the House of Representatives, nearly forty of those composing the Senate in the recently expired fifty-ninth Congress having once been members of the other Chamber. A glance at the biographical notices of senators in the “Congressional Directory” is sufficient to show the great range of experience in public affairs possessed by the members of that body, the number of those who have neither sat in State Legislatures nor held state or federal office being exceedingly small.

That the office of senator should be greatly sought after is the natural consequence of the more extensive constitutional powers of that Chamber, and the personal prestige which the longer term of office and the greater opportunities of individual distinction confer, as compared with the House of Representatives. The House does not enjoy the executive rights so highly prized by senators; the ascent of representatives is not necessary to the ratification of a treaty, nor are their powers of patronage as great as those exercised by members of the other House. Secondly, personal pre-eminence, both in Congress and in the eyes of the nation, is not easily attained in a House of nearly 400, especially under a system by which the individual members are fully occupied by their work in the committees, whose proceedings, besides being limited to one particular branch of business, are private and are not published in the press. A senator, on the other hand, is only one among ninety; he is better able to know and to be known by his colleagues. If a novice, he has at the very least six years before him in which to gain parliamentary experience and to make his mark, as against the two years of the representative; his committee work, though considerable, yet leaves him time to avail himself of the greater opportunities of distinguishing himself in debate, afforded by the smaller size of the House and the absence of the time restriction on speeches which has necessarily to be imposed on the more numerous representatives. The greater personal distinction that the senator enjoys, as compared with the representative, makes it generally easier for him to secure re-election at the end of his term. More than half of the senators who sat in the fifty-ninth Congress were, according to the “Directory,” serving their second term of office, and even allowing for those whose first term did not extend to the full six years, owing to their having been primarily elected to fill vacancies, it may be said that on an average nearly half of the senators serve at least two terms, that is, twelve years. A representative’s term, being two years, it would be necessary for him to be elected six times in order to attain to the same length of service; only sixty-three representatives, however, out of the 386 composing the last House, had succeeded in doing so. The parliamentary experience which senators bring with them on joining that Chamber is shown by the fact that, out of the forty senators who were serving their first term in the last Congress, nineteen had been formerly members of the House of Representatives, and had sat in that House for periods varying from one to nine Congresses.

For these reasons, then, the Senate may be considered to be a more powerful body than the House of Representatives, its comparative permanence enabling it to hold out by its opinions longer than the more ephemeral House, and the recognized political experience of its members lending it superior prestige with the people at large. This
superiority does not, however, by any means allow the Senate entirely to override the other Chamber, nor is it so marked as to have made the House at any time undertake what may be called a political campaign to have the powers of the other House reduced. The present system under which senators are elected being ultimately, though indirectly, popular, makes it difficult to accuse them of being a non-representative body, much of their strength lying in the fact that they are so elected and have the weight of great communities behind them.

Such attacks as are made upon that body—and these have of late years been numerous—come from outside, and are prompted by a feeling of dislike to the position it holds, and a distrust of the motives by which many of its members are alleged to be actuated. To express an opinion, however, upon the merits of the changes proposed, to discuss the question whether the Senate has, or has not, encroached upon the powers of the Executive, to examine the charges now frequently brought against the Senate of being affected by plutocratic tendencies, all of these matters are of a nature too controversial and too much involved with current politics to be proper for a report of this nature.

WILLIAM SEEDS.

October 5, 1907.

BRITISH COLONIES (LEGISLATURE).

Return showing for each Legislature in the Self-governing Dominions:—

(1) The composition of the Second Chamber and the method of nomination or election; (2) to powers or disabilities with regard to:—

(a) Finance, and
(b) General legislation.

(3) The provisions, if any, for the adjustment of the differences which may arise between the two Chambers with regard to:—

(a) Finance, and
(b) General legislation.

THE DOMINION OF CANADA.

Under the British North America Act, 1867, and amending legislation, the Senate of the Dominion of Canada consists of 87 members, of whom 24 represent Ontario, 24 represent Quebec, 10 represent Nova Scotia, 10 represent New Brunswick, 4 represent Prince Edward Island, 3 represent British Columbia, 4 represent Manitoba, 4 represent Saskatchewan, and 4 represent Alberta.

The senators are summoned by the Governor-General in the King’s name by instrument under the Great Seal of Canada and hold their places for life.

The qualifications of a senator are as follows:—

(1) He shall be of the full age of 30 years;
(2) He shall be either a natural-born subject of the King or a subject of the King naturalized by an Act of the Parliament of Great Britain, or of the Parliament of the United Kingdom of Great Britain and Ireland, or of the Legislature of one of the provinces of Upper Canada, Lower Canada, Canada, Nova Scotia, or New Brunswick, before the Union, or of the Parliament of Canada after the Union;
(3) He shall be legally or equitably seized as of freehold for his own use and benefit of lands or tenements held in free and common socage, or seized or possessed for his own use and benefit of lands or tenements held in Franc-alleu or in Roture, within the province for which he is appointed, of the value of four thousand dollars over and above all rents, dues, debts, charges, mortgages, and incumbrances due or payable out of or charged on or affecting, the same;

(4) His real and personal property shall be together worth four thousand dollars over and above his debts and liabilities;

(5) He shall be resident in the province for which he is appointed;

(6) In the case of Quebec he shall have his real property qualification in the electoral division for which he is appointed, or shall be resident in that division.

A senator may, however, resign; and his place shall be become vacant in any of the following cases:—

(1) If for two consecutive sessions of the Parliament he fails to give his attendance in the Senate;

(2) If he takes an oath or makes a declaration or acknowledgment of allegiance, obedience or adherence to a foreign Power or does an act whereby he becomes a subject or citizen, or entitled to the rights or privileges of a subject or citizen, of a foreign Power;

(3) If he is adjudged bankrupt or insolvent, or applies for the benefit of any law relating to insolvent debtors, or becomes a public defaulter;

(4) If he is attainted of treason or convicted of felony or of any infamous crime;

(5) If he ceases to be qualified in respect of property or of residence; provided, that a senator shall not be deemed to have ceased to be qualified in respect of residence by reason only of his residing at the seat of the Government of Canada while holding an office under that Government requiring his presence there.

2. It is provided by section 53 of the British North America Act that "Bills for appropriating any part of the public revenue, or for imposing any tax or impost, shall originate in the House of Commons." There is no other provision limiting the power of the Senate with regard either to finance or to general legislation.

3. The British North America Act does not contain any provision expressly stated to be intended to be for the adjustment of differences between the Senate and the House of Commons whether with regard to finance or to general legislation. But it is provided by section 26 that "if at any time, on the recommendation of the Governor General, the King thinks fit to direct that three or six members to be added to the Senate, the Governor General may, by summons to three or six qualified persons, as the case may be, representing equally the three divisions of Canada, add to the Senate accordingly." The three divisions referred to are Ontario; Quebec; the Maritime Provinces, viz., Nova Scotia, New Brunswick, and Prince Edward Island. Section 27 provides that "in the case of such addition being at any time made, the Governor General shall not summon any person to the Senate except on a further like direction by the King on the like recommendation, until each of the three divisions of Canada is represented by twenty-four senators and no more."
CONSTITUTION OF UPPER CHAMBERS

QUEBEC.

Under the Provincial Constitution Acts the Legislative Council of Quebec consists of 24 members who hold their seats for life, and who are appointed by the Lieutenant-Governor by instrument under the Great Seal of the province, one for each of the 24 divisions of the province.

No person can be a Legislative Councillor who holds an office of profit under the Crown in the province, except a ministerial office, or who undertakes or executes or has directly or indirectly any contract with the Provincial Government under which money is to be paid. This does not apply to a man who is merely a shareholder in an incorporated company, with the exception of a company having the execution of any public works.

2. The only provision affecting the powers of the Legislative Council is that contained in section 53 of the British North America Act, which is applied by section 90 to the provinces, and which provided that “Bills for appropriating any part of the public revenue or for imposing any tax or impost shall originate” in the Lower House.

3. No provision exists for the adjustment of differences between the two Chambers of the Legislature of Quebec.

NOVA SCOTIA.

Under the Provincial Constitution Acts the Legislative Council of Nova Scotia consists of 21 members nominated for life by the Lieutenant-Governor in Council. No person can be appointed who is a member of the Federal Parliament, or holds certain specified offices under the Provincial Government, or is declared by the judgment of a court of competent jurisdiction to be disqualified from being elected to or sitting in the House of Commons of Canada by reason of any violation of the law of Canada relating to elections or to the trial of controverted elections, so long as such disqualification lasts. A seat is vacated by two sessions’ consecutive absence from the Council without the consent of the Lieutenant-Governor in Council.

2. The only provision affecting the powers of the Legislative Council is that contained in section 53 of the British North America Act, which is applied by section 90 to the provinces, and which provides that Bills for appropriating any part of the public revenue or for imposing any tax or impost shall originate in the Lower House.

3. No provision exists for the adjustment of differences between the two Chambers of the Legislature of Nova Scotia.1

NEWFOUNDLAND.

The Legislative Council of Newfoundland consists of members nominated and appointed by the King under the Sign Manual and Signet, or provisionally appointed by the Governor and afterwards confirmed by His Majesty. The total number of the said Legislative Council for the time being resident within Newfoundland shall not at any time by such provisional appointments be raised to a greater number on the whole than 15. The number of members who can be appointed by His Majesty is not limited in any way, and at present the Council contains 21 members. Every member holds his place during the King’s pleasure and may be removed by any instruction or warrant issued by His Majesty under the Sign Manual and Signet, and with the advice of the Privy Council.

1 NOTE.—There are no second Chambers in the other Canadian Provinces.
2. By No. 249 of the Rules of the House of Assembly adopted at the first session of the 16th Assembly and amended in the fifth session of the said Assembly, it is provided that "all aids and supplies and aids to His Excellency in Legislature are the sole gifts of the Assembly; and all Bills for the granting of any such aids and supplies ought to begin with the Assembly; and it is the undoubted and sole right of the Assembly to direct, limit, and appoint in such Bills the ends, purposes, considerations, conditions, limitations, and qualifications of such grants; which ought not to be changed or altered by the Legislative Council." But the House will not insist on its privileges in the following cases of Bills brought to the House from the Legislative Council, or returned to the House by the Legislative Council with amendments, whereby any pecuniary penalty, forfeiture, or fee shall be authorized, imposed, appropriated, regulated, varied, or extinguished:

(1) When the object of such pecuniary penalty or forfeiture is to secure the execution of the Act, or the punishment or prevention of offences;

(2) Where such fees are imposed in respect of benefit taken or service rendered under the Act, and in order to the execution of the Act, and are not made payable into the treasury or exchequer, or in aid of the public revenue, and do not form a ground of public accounting by the parties receiving the same, either in respect of deficit or surplus; or

(3) When such a Bill shall be a private Bill. Nor will the House insist on its privileges with regard to any clauses in Private Bills sent down from the Legislative Council which relate to tolls or charges for services performed and are not in the nature of a tax.

3. There is no legislative provision for the settlement of disagreements between the two Houses, whether with regard to matters of finance or other questions. But there is no limitation on the power of the Crown to add to the numbers of the Upper House.

COMMONWEALTH OF AUSTRALIA.

Under the constitution of the Commonwealth the Senate of the Commonwealth of Australia is composed of senators for each state directly chosen by the people of the state voting as one electorate.

Until the Parliament otherwise provides, there shall be six senators for each original state. The Parliament may make laws increasing or diminishing the number of senators for each state, but so that equal representation of the several original states shall be maintained, and that no original state shall have less than six senators. The senators are chosen for a term of six years.

The senator must be of the full age of 21 years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at least a resident within the limits of the Commonwealth as existing at the time that he is chosen. He must be a subject of the King, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a colony which has become or becomes a State, or of the Commonwealth, or of a State.

Any person who—

(i) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign Power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign Power; or

(ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer; or
“(iii) Is an undischarged bankrupt or insolvent; or
“(iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth; or
“(v) Has any direct or indirect pecuniary interest in any agreement with the public service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than 25 persons;

“shall be incapable of being chosen or of sitting as a senator.”

“But subsection iv does not apply to the office of any of the King’s Ministers of State for the Commonwealth, or of any of the King’s Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the King’s navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.”

The qualification of electors is extended to adult British subjects of either sex who have lived in Australia for six months continuously. Aboriginal natives of Australia, Asia, Africa, or the islands of the Pacific except New Zealand, cannot vote at Federal elections unless they have acquired a right to vote at elections for the Lower House of a State Parliament. Each elector has only one vote.

2. The powers of the Senate with regard to finance are restricted by section 53 of the constitution as follows:

“Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate, but a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law.

“The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

“The Senate may not amend any propose law so as to increase any proposed charge or burden on the people.

“The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein; and the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

It is also provided that laws which appropriate revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation; that laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of Customs or of Excise, shall deal with one subject of taxation only; but laws imposing duties of Customs shall deal with duties of Customs only, and laws imposing duties of Excise shall deal with duties of Excise only.

In all other matters except those mentioned in section 53 of the constitution, the Senate has equal power with the House of Representatives.

3. There are no special provisions for the adjustment of differences which may arise between the Senate and the House of Representatives with regard to Finance. In any case of difference, the procedure laid down in section 57 of the constitution applies.
SESSIONAL PAPER No. 246

"If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

"If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor General may convene a joint sitting of the members of the Senate and of the House of Representatives.1

"The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried; and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor General for the King's assent.2

Special provision is made for the case of differences between the two Houses, with regard to the amendment of the Constitution, by section 128 of the Constitution, which is as follows:—

"This Constitution shall not be altered except in the following manner:—

"The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses, the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

"But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it, or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it, or passes it with any amendment to which the first-mentioned House will not agree, the Governor General may submit the proposed law as last proposed by the first-mentioned House, and, either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.2

"When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of

1 Under the constitution, the number of members of the House of Representatives, must be as nearly as possible, double that of the Senate. At present the Senate has 36, the House of Representatives 75 members.
2 At present the electorate for the Senate and the House of Representatives is the same; but if there is any difference, the electorate for the Lower House will be that to which the law is referred.
electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any state in which adult suffrage prevails.

"And if in a majority of the states a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor General for the Queen’s assent.

"No alteration diminishing the proportionate representation of any state in either House of the Parliament, or of the minimum number of representatives of a state in the House of Representatives, or, increasing, diminishing, or otherwise altering the limits of the state, or in any manner affecting the provisions of the constitution in relation thereto, shall become law, unless the majority of the electors voting in that state approve the proposed law."

NEW SOUTH WALES.

Under the Constitution Act of 1855, and amending Acts, the Legislative Council of New South Wales consists of persons unlimited in number—at present under 60—summoned by the Governor by instrument under the Great Seal of the State.

A legislative councillor must be of the full age of 21, and a natural-born subject of His Majesty, or naturalized in Great Britain or in New South Wales, and must not be a public contractor except as member of a company exceeding twenty persons in number, or a member of either House of the Federal Parliament. No less than four-fifths of the members so summoned shall consist of persons not holding any office of emolument under the Crown; but officers of His Majesty’s sea and land forces on full or half-pay, and retired officers on pensions, shall not be deemed to be persons holding an office of emolument under the Crown within the meaning of this section.

Members of the Legislative Council hold their seats for the term of their natural lives, but they may resign their seats, and their seats become vacant in the following cases:

"If any Legislative Councillor:—

(a) Fails for two successive sessions of the Legislature to give his attendance in the Legislative Council, unless excused in that behalf by the permission of His Majesty or of the Governor, signified by the Governor to the Legislative Council; or

(b) Takes any oath or makes any declaration or acknowledgment of allegiance, obedience, or adherence to any foreign prince or Power; or

(c) Does, concurs in, or adopts any act whereby he may become a subject or citizen of any foreign State or Power, or whereby he may become entitled to the rights, privileges, or immunities of a subject or citizen of any foreign State or Power; or

(d) Becomes bankrupt, or takes the benefit of any law relating to insolvent debtors; or

(e) Becomes a public contractor or defaulter; or

(f) Is attainted of treason, or convicted of felony or infamous crime."

2. The only provision restricting the power of the Legislative Council with regard to legislation is the proviso contained in section 5 of the New South Wales Act, No. 32 of 1902, under which all Bills "for appropriating any part of the public revenue,
or for imposing any new rate, tax, or impost shall originate in the Legislative Assembly.

3. There are no legal provisions for the adjustment of differences which may arise between the Legislative Council and the Legislative Assembly, whether with regard to matters of finance or to general legislation, but the number of the Upper House is not limited, and the Governor has power to add members to such extent as he thinks fit.

VICTORIA.

The Legislative Council of Victoria consists of 34 members who are elected for 17 provinces, two for each province. Members hold office for six years, but one member for each province retires every third year, unless there is a dissolution of the Council, in which case one-half of the members hold their seats for three years only.

A member must be of the full age of 30 years and a natural-born subject of His Majesty, or who has naturalized for ten years previous to election, and has resided during that period in Victoria. He must also for one year previous to the election have been legally or equitably seized of or entitled to an estate of freehold in possession for his own use and benefit of lands and tenements in Victoria of the annual value of 50l. above all charges and incumbrances affecting the same, other than any public or parliamentary tax, or municipal, or other rate or assessment. No person can become a member who is—

1. A judge of any court of Victoria;
2. A minister of religion;
3. Attainted of any treason, or convicted of any felony or infamous offence within any part of His Majesty's dominions;
4. An uncertificated bankrupt or insolvent;
5. A public contractor, except in a partnership of more than twenty persons;
6. A member of the Legislative Assembly; or
7. Of the Commonwealth Parliament; or
8. Who is insane; or
9. A Government officer other than a Minister.

A member may resign his seat, and his seat becomes vacant if he—

1. Ceases to be possessed of the property qualification; or
2. Is absent for one entire session without the leave of the Council;
3. Takes an oath of allegiance to any foreign Power;
4. Becomes insolvent, attainted of treason, or a public defaulter, or commits a felony;
5. Becomes insane;
6. Becomes concerned in a public contract, except as a member of a partnership of more than twenty persons; or
7. Accepts an office of profit under the Crown, except as Minister or as President of the Council, or Chairman of Committees.

Electors are qualified—

1. By owning the freehold or being mortgagor or mortgagee in possession, or in the receipt of the rents or profits of property situate in one and the same province rated at not less than 10l. a year;
(2) Being lessee or assignee for the unexpired residue of any term originally created for a period of not less than five years, or occupier of property, in one and the same province rated at not less than 15l a year.

(3) Being joint owner, lessee, assignee, or occupier of property sufficient to give each the foregoing qualification;

(4) Being resident in Victoria and a graduate of any university in the British dominions, a matriculated student of Melbourne University, a qualified legal or medical practitioner, a minister of religion, a certificated school-master, or a naval or military officer.

All voters not being natural-born subjects of His Majesty, must have resided in the state for twelve months previous to the 1st of January or the 1st of July in any year, and shall have been naturalized at least three years previously.

The suffrage is possessed by both men and women, but no person is entitled to more than one vote in the same province.

2. It is provided by section 56 of the Bill scheduled to the Imperial Act 18 and 19 Vict., c. 55, that all Bills for appropriating any part of the revenue of Victoria, and for imposing any rate, tax, duty, rent, return, or impost, shall originate in the Assembly, and may be rejected but not altered by the Legislative Council. By section 30 of the amending Victorian Act, No. 1864 of 1903, it is provided as follows:—

(1) A Bill shall not be taken to be a Bill for appropriating any part of the revenue of Victoria or for imposing any duty, rate, tax, rent, return, or impost, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand, or payment, or appropriation of fees for licences, or fees for services under such Bill.

(2) The Council may once at each of the undermentioned stages, of a Bill which the Council cannot alter, return such Bills to the Assembly suggesting by message the omission or amendment of any items or provisions therein. And the Assembly may, if it thinks fit, make any of such omissions or amendments with or without modifications. Provided that the Council may not suggest any omission or amendment the effect of which will be to increase any proposed charge or burden on the people.

(3) The stages of a Bill at which the Council may return the Bill with a message as aforesaid shall be—

(a) The consideration of the Bill in committee;

(b) The consideration of the report of the committee; and

(c) The consideration of the question that the Bill be read a third time.''

3. The following provision is made for disagreements between the two Houses with regard to matters of finance or general legislation by section 31 of the Act, 1864, of 1903:—

“(1) If the Assembly passes any Bill and the Council rejects or fails to pass it, or passes it with amendments to which the Assembly will not agree, and, if not later than six months before the date of the expiry of the Assembly by effluxion of time, the Assembly is dissolved by the Governor by a proclamation declaring such dissolution to be granted in consequence of the disagreement between the two Houses as to such Bill, and the Assembly again passes the Bill with or without any amendments which have been made, suggested, or agreed to by the Council, and the Council rejects or fails to pass it or passes it with amendments to which the Assembly will not agree, the Governor at any time, not being less than nine months nor more than twelve months after the said dissolution, may, notwithstanding anything contained in the Constitution Act, dissolve the Council and the Assembly simultaneously.
"(2) The Council shall be deemed to have failed to pass a Bill if the Bill is not returned to the Assembly within three months after its transmission to the Council and the session continue during such period.

"(3) Any Bill by which an alteration may be made in the constitution of the Council or Assembly or in Schedule D to the Constitution Act (other than such alterations as are referred to in section 61 of the said Act) shall not be within the operation of the foregoing provisions of this section.

"(4) In section 61 of the Constitution Act, after the words 'or increase' there shall be inserted the words 'or decrease.'"

QUEENSLAND.

The Legislative Council of Queensland consists of members unlimited in number—usually between 40 and 50—summoned by the Governor in His Majesty's name by an instrument under the Great Seal of the State.

No person can be summoned who is not of the full age of 21 years and a natural-born subject of His Majesty, or naturalized by an Act of the Imperial Parliament or by an Act of the Legislature of New South Wales before 1859, or by an Act of Queensland. Not less than four-fifths of the members so summoned to the Legislative Council shall consist of persons not holding any office of emolument under the Crown, except officers of His Majesty's sea and land forces on full or half pay or retired officers on pensions. No person who shall directly or indirectly himself, or by any person whatsoever in trust for him or for his use or benefit or on his account, undertake, execute, hold and enjoy in the whole or in part any contract or agreement for or on account of the public service shall be capable of being summoned to the Legislative Council. This does not extend to any contract or agreement made by an incorporated company or trading company consisting of more than twenty members.

Members of Council hold office for life, but a legislative councillor may resign his seat by letter to the Governor, and his seat is vacated if he (1) shall fail for ten successive sessions of the Council to give his attendance without the permission of His Majesty or the Governor; or (2) shall take any oath, or make any declaration or acknowledgment of allegiance, obedience, or adherence to any foreign prince or Power, or shall do, concur in, or adopt any act whereby he may become a subject or citizen of any foreign State or Power, or whereby he may become entitled to the rights, privileges, or immunities of a subject or citizen of any foreign State or Power; or (3) shall become bankrupt or take the benefit of any law relating to insolvent debtors; or (4) become a public contractor or defaulter; or (5) be attainted of treason or convicted of felony or of any infamous crime.

"2. It is provided by section 2 of the Constitution Act, 1867, that all Bills for appropriating any part of the public revenue or for imposing any new rate, tax, or impost shall originate in the Legislative Assembly." The exact force of this clause has formed the subject of a report of the Privy Council on reference from the two Houses in 1866."

3. By an Act, No. 16 of 1908, provision is made for the submission of certain Bills to the electors in the case of differences between the two Houses:

"3.—(1) For the purposes of this Act a Bill shall be deemed to have been rejected a first time whenever such Bill has, during a session of Parliament, not less than one month before the close of the session been passed by the Legislative Assembly and transmitted to the Legislative Council for its concurrence therein, and the Legislative Council before the close of the session has either—

1 See (C. 4794).
"(a) Rejected or failed to pass such Bill; or
(b) Passed such Bill with any amendment or amendments in which the Legislative Assembly does not concur;

and by reason thereof the Bill has been lost.

"(2) For the purposes of this Act such Bill shall be deemed to have been rejected a second time when the Legislative Assembly in the next session of Parliament has, after an interval of not less than three months from the first rejection of the Bill as defined by the last preceding subsection, again passed such Bill (or a Bill substantially the same) and transmitted it to the Legislative Council for its concurrence therein, not less than one week before the close of the session, and the Legislative Council before the close of the session has either—

"(c) Rejected or failed to pass such Bill; or
"(d) Passed such Bill with any amendment or amendments in which the Legislative Assembly does not concur;

and by reason thereof the Bill has again been lost.

"4.—(1) Whenever a Bill has been twice rejected by the Legislative Council, the Governor in Council may, by proclamation published in the Gazette after the close of the session in which the Bill was rejected a second time, direct that the Bill so rejected shall be submitted by referendum to the electors; and a referendum poll shall accordingly be taken thereon under this Act at the time appointed in that behalf. The publication in the Gazette of such proclamation shall be conclusive evidence that the Bill as last rejected is the same Bill or substantially the same Bill as the Bill rejected in the session last but one preceding, and has been twice rejected by the Legislative Council.

2. When a Bill is so directed to be submitted to a referendum, a copy of the Bill, in the form in which it was finally agreed to by the Legislative Assembly, certified as correct by the Speaker of the Legislative Assembly, shall, within twenty-one days after the issue of the said proclamation, be transmitted by the Clerk of the Legislative Assembly to the Home Secretary. Forthwith upon receipt of such copy the Home Secretary shall cause the same to be published in the Gazette, together with such amendments as have been made by the Legislative Council and which the Legislative Council may by resolution request to be annexed thereto.

5. The persons entitled to vote at the taking of the referendum poll shall be the electors and no other persons.

6.—(1) The Governor in Council may appoint, by commission under his hand and seal, a fit person to be the returning officer for taking the referendum poll under this Act.

In case of sickness or other cause preventing the returning officer from acting, the Governor in Council may in like manner appoint some other person to act as returning officer in his stead. Notification of the appointment of the returning officer shall be published in the Gazette.

(2) The returning officer, in addition to the powers and duties vested in and imposed upon him by this Act, shall have such of the powers and shall perform such of the duties of a returning officer appointed under the Elections Act as are necessary for carrying this Act into effect.

(3) Every returning officer appointed under the Elections Act shall be an assistant returning officer for the purposes of this Act, and, in addition to the powers and duties vested in and imposed upon him by this Act, shall have such of the powers and shall perform such of the duties vested in and imposed upon
SESSIONAL PAPER No. 246

a returning officer under the Elections Act as are necessary for carrying this Act into effect.

"(4) The writ for the referendum poll shall be directed by the Governor in Council to the returning officer.

"A copy of the writ shall be published in the Gazette.

"7.—(1) The mode of exercising the right to vote at a referendum poll and of ascertaining such right shall be the same as at elections of members of the Legislative Assembly.

"And generally (except as may otherwise be provided in this Act, or any regulation made thereunder) every enactment contained in the Elections Act regulating and making provision for the holding and conduct of elections, the proceedings before and at and subsequent to such elections, and all incidental matters shall, so far as applicable thereto, apply mutatis mutandis to the referendum poll to be taken under this Act: Provided that the provisions (if any) of the Elections Act for securing the absolute majority of votes shall not apply.

"(2) Every act or omission which would be punishable by law, if the same had occurred in connection with the holding of an election, shall be held to constitute the like offence, cognizable in the like manner, and punishable by the like punishment, if the same occurs in connection with a referendum poll.

"8. Every assistant returning officer shall, in manner provided by the Elections Act, ascertain the number of votes respectively recorded at the referendum poll in favour of and in opposition to the Bill at the various polling places within the electoral district for which he is the returning officer, for which purpose the presiding officer at each such polling place shall make a return (certified by him to be correct) to the assistant returning officer of the number of votes so given respectively at such polling place; and the assistant returning officer shall thereupon forthwith make out and furnish a return for such district (certified by him to be correct) to the returning officer appointed under this Act.

"Every return to be made under this section may be transmitted by telegraphic message or messages under "The Telegraphic Messages Act of 1872."

"9. The total number of votes respectively recorded at the referendum poll in favour of and in opposition to the Bill shall be endorsed upon the writ by the returning officer, who shall forthwith return the writ so endorsed to the Governor.

"The result of the referendum poll so endorsed shall be published by the Home Secretary in the Gazette within twenty-eight days from the return of the writ.

"Such publication shall be conclusive evidence of the result of the referendum poll.

"10. If the referendum poll is decided in favour of the Bill, the Bill shall be presented to the Governor for His Majesty's assent, and upon receiving such assent the Bill shall become an Act of Parliament in the same manner as if it had been passed by both Houses of Parliament, and notwithstanding any law to the contrary."
CONSTITUTION OF UPPER CHAMBERS

SOUTH AUSTRALIA.

The Legislative Council of South Australia consists of eighteen elected members. The State is divided into four Council Districts, of which one returns six members and the other three return four members each to the Legislative Council. The period of their service is regulated by sections 10, 11, and 12 of the South Australian Constitution Amendment Act, No. 959, 1908, which are as follows:

"10. Subject to the provisions hereinafter contained as to the dissolution of the Legislative Council, every member of the said Council, except a member elected to fill a casual vacancy, shall occupy his seat for the term of six years at least, calculated as from the first day of March of the year in which he was last elected, and for such further period as is provided for in the next succeeding section. Provided nevertheless, if the seat of any member of the Legislative Council becomes vacant by death, resignation, or otherwise before the expiration of his term of service, and a member is returned from the electoral district in which the vacancy occurred, he shall hold office only for the unexpired term of the member whose seat has been vacated as aforesaid, and shall, for the purpose of retirement, be deemed to have been elected at the time when such last-mentioned member was or was deemed to be elected: Provided also that where two or more members are so returned at the same time to fill vacated seats of unequal terms, such terms shall be deemed to be held by the said members according to their position on the poll at their election, and that he who receives the greatest number of votes shall hold the seat which has the longest term to run, and in the event of a tie the matter shall be determined by lot.

"11. Whenever the House of Assembly is dissolved by the Governor, or expires by effluxion of time, so many members of the Legislative Council, not exceeding three for the Central District and two for each of the other districts, as have completed the minimum term of service provided by section 10 shall retire and vacate their seats, and, subject to section 21, an election to supply the vacancies so created shall take place on the day of the next general election of the House of Assembly.

"12. The periodical retirement of members of the Legislative Council under the provisions of the last preceding section shall be determined as follows:

"(i) The members retiring in each Council District shall be those who have represented such district for the longest time, calculated from the date of their last election:

"(ii) If two or more members have represented the same Council District for an equal time, calculated as aforesaid, the order of retirement as between them shall be determined by their position on the poll at their election, and he or they who had the least number of votes shall retire first. If their position is equal in this respect, or if no poll was taken, the order of retirement between them shall be determined by lot;

"(iii) The Legislative Council shall keep a roll of its members, containing all particulars necessary for the application of the foregoing rules as to their periodical retirement."

A Legislative Councillor must be a man of the full age of 30 years, and a natural-born or a naturalized subject of His Majesty, who has resided within the State for the full period of three years. No person can be elected a member if he owes allegiance to a foreign Power, is a Government contractor, is insane, or has been attainted of treason or convicted of felony or an infamous crime, is an uncertified bankrupt, or is a member of the Federal Parliament.
A seat may be resigned, and the seat is vacated by absence without leave for one month, by bankruptcy, or conviction for treason or felony, and by lunacy.

The franchise for elections to the Legislative Council is possessed by adult British subjects of either sex who are—

(a) Owners of freehold of the clear value of 50l.
(b) Owners of leasehold of the clear annual value of 20l. with at least three years to run or containing a right to purchase;
(c) Occupiers of a dwelling-house of a clear annual value of 17l. . . . . . . . . . . .
(d) Registered proprietors of a Crown lease on which there are improvements to the value of at least 50l. Postmasters and postmistresses, police officers in charge of a police station, railway stationmasters, head school teachers who reside in official premises, and officiating ministers of religion are also qualified.

Voters must have been residents for six months prior to being placed on the rolls of the Council.

2. The only provision limiting the power of the Legislative Council with regard to legislation is that contained in the first section of the South Australian Constitution Act, No. 2 of 1855-56, which provides that all Bills for "appropriating any part of the revenue of the said province, or for imposing, altering, or repealing any rate, tax, duty, or impost, shall originate in the House of Assembly."

3. The following provision is made by Act No. 959 of 1908 for the settlement of differences between the two Houses:

(1) Whenever any Bill for an Act has been passed by the House of Assembly during any session of Parliament, and the same Bill, or a similar Bill with substantially the same objects and having the same title, has been passed by the House of Assembly during the next ensuing Parliament, a general election of the House of Assembly having taken place between such two Parliaments, and the second and third readings of such Bill having been passed in the second instance by an absolute majority of the whole number of members of the said House of Assembly, and both such Bills have been rejected by or fail to become law in consequence of any amendments made therein by the Legislative Council, it shall be lawful for but not obligatory upon the Governor of the said State, within six months after the last rejection or failure, by proclamation to be published in the Government Gazette, to dissolve the Legislative Council and House of Assembly, and thereupon all the members of both Houses of Parliament shall vacate their seats, and members shall be elected to supply the vacancies so created; or for the Governor, within six months after such rejection or failure, to issue writs for the election of three additional members for the Central District and of two additional members for each of the other districts of the Legislative Council.

(2) After the issue of such writs no vacancy, whether arising before or after the issue thereof, shall be filled, except as may be necessary to bring the representation of the district in which such vacancy occurs to its proper number as set forth in First Schedule hereto. Whenever there are more seats vacated by members returned for the same district than are to be filled, and such members' seats were of unequal tenure, the seats of those members the unexpired portions of whose terms are the shorter shall be first filled.

(3) Upon every such dissolution of the Legislative Council the order of retirement, as between the members elected after such dissolution, shall be as provided in section 12 of this Act; and one half of such members shall retire after three years' service, calculated from the first day of March of the year of their election, or after such further period as is provided for in section 11."
The Legislative Council of Western Australia consists of 30 elected members, who are elected for six years. They are returned for 10 electorates, each returning three members. At the expiration of two years from the date of election, and every two years thereafter, the senior member for the time being retires. Seniority is determined—

(a) By date of election;
(b) If two or more members are elected on the same day, then the senior is the one who polled the greatest number of votes;
(c) If the election be uncontested or in the case of an equality of votes, then the seniority is determined by the alphabetical precedence of surnames and, if necessary, of Christian names.

A legislative councillor must be a male natural-born or naturalized British subject of the age of 30 years or upwards, and—

(a) In the case of a natural-born subject, resident in the State for two years; and
(b) In the case of naturalized subjects, if naturalized for five years previous to the election and resident in the State during that period. He must not be a Judge of the Supreme Court, Sheriff of Western Australia, a clergyman, an undischarged bankrupt, under attainder of treason or conviction of felony in any part of His Majesty's dominions, or directly or indirectly concerned in any public contracts, save as a member of an incorporated trading society.

Seats in the Legislative Council are vacated in the following instances:

"If any member of the Legislative Council after his election—
(1) Ceases to be qualified or becomes disqualified as aforesaid; or
(2) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors; or
(3) Becomes of unsound mind; or
(4) Takes any oath or makes any declaration or acknowledgment of allegiance, obedience, or adherence to any foreign prince or Power, or does, concurs in, or adopts any act whereby he may become a subject or citizen of any foreign State or Power, or whereby he may become entitled to the rights, privileges, or immunities of a subject or citizen of any foreign State or Power; or
(5) Fails to give his attendance in the Legislative Council for two consecutive months of any session thereof without the permission of the Council entered upon its journals; or
(6) Accepts any pension during pleasure or for term of years other than an allowance under section 71 of "The Constitution Act, 1859," or any office of profit from the Crown, other than that of an officer of His Majesty's sea or land forces on full, half, or retired pay; his seat shall thereupon become vacant: Provided that members accepting offices liable to be vacated on political grounds shall be eligible for re-election."
The franchise is held by adult British subjects of either sex who have resided in the State for six months, and who either—

(a) Own a freehold estate to the value of 100l.;
(b) Occupy a house or own leasehold property rated at 25l.;
(c) Hold Crown leases or licenses to the value of not less than 10l. per annum; or
(d) Are on the electoral list of any municipality or road board district in respect of property of the annual rateable value of 25l.

2. It is provided by the Constitution Act of 1890 that all Bills for appropriating any part of the consolidated revenue fund or for imposing, altering, or repealing any rate, tax, duty, or impost shall originate in the Legislative Assembly. In the amending Act of 1899 the following provision is made:

"In the case of a proposed Bill, which, according to law, must have originated in the Legislative Assembly, the Legislative Council may at any stage return it to the Legislative Assembly with a message requesting the omission or amendment of any items or provisions therein; and the Legislative Assembly may, if it thinks fit, make such omissions or amendments, or any of them, with or without modifications."

3. There is no legal provision for the case of differences between the two Houses, whether in matters of finance or of general legislation.

TASMANIA.

The Legislative Council of Tasmania consists of 15 members returned from 15 districts, Hobart returning 3, Launceston 2, and the remaining 13 districts sending 1 member each. Each member of the Council holds his seat for six years from the date of his election. Three members retire the first Monday in May every year, except in 1905, and every sixth year thereafter, when four retire.

Members of Council must be male natural-born or five years naturalized British subjects of the age of 30 years or upwards, and must have resided continuously for five years in Tasmania or for at least two years immediately preceding the election. No person is qualified to be a member who has a pension payable during pleasure or holds any office of profit under the Government, except that of a Minister, or who is a Government contractor, unless as a member of an incorporated company of more than six persons, or who owes allegiance to any foreign Power, holds the office of Judge of the Supreme Court, is insane, attainted or convicted of treason, felony, or other infamous offence, or is a member of the Commonwealth Parliament. The following are not deemed offices of profit or emolument: Wardens of Marine Boards, returning officers under the Electoral Act, officers of the Defence Forces of the Commonwealth whose services are entirely employed by the Commonwealth Government, and members of the Board of Land Purchase Commissioners.

A member may resign his seat, and his seat is vacated if he becomes a subject of a foreign Power, is bankrupt or insolvent, becomes a public defaulter, is attainted of treason, or convicted of felony, or of any infamous crime, becomes insane, is absent without leave for an entire session, accepts any office or profit from the Government except a Ministerial office or pension, or contracts for the public service unless a member of an incorporated company of more than six persons.

The electors of the Legislative Council are qualified by being adult subjects, natural born or naturalized of either sex of 21 years of age and upwards, having freehold estate in the electoral district of £10 a year or being the occupier of property of the value of £30 a year, or being a graduate of any university in the British Dominions, a qualified legal or medical practitioner, an officiating minister of religion,
an officer or retired officer of His Majesty's Army or Navy on actual service, or a
retired officer of the Volunteer Force of Tasmania.

2. It is provided by section 33 of the Constitution Act, 1855, that all Bills for
appropriating any part of the revenue or for imposing any tax, rate, duty, or impost
shall originate in the House of Assembly.

3. There is no legal provision for removing differences which may arise between
the two Houses of Parliament in Tasmania, whether with regard to financial matters
or to general legislation.

NEW ZEALAND.

Under the Legislature Act, 1908, the Legislative Council of New Zealand consists
of members unlimited in number summoned for life in the case of persons sum-
moned before 1891, or for seven years, in other cases, by the Governor from time to
time in His Majesty's name by instrument under the Public Seal of New Zealand.

No person shall be summoned or shall hold a seat in the Council who is not a male—

(a) of the full age of 21 years and either a natural-born subject of His
Majesty or a subject of His Majesty naturalized by or under any Act of the
Imperial Parliament, or by an Act of the General Assembly of New Zealand, or

(b) Who at any time theretofore has been bankrupt and has not received
his discharge, or who has been attainted or convicted of any treason, any
crime formerly known as felony, or any infamous offence within any part of
His Majesty's Dominions, or as a public defaulter in New Zealand, unless he
received a free pardon, or has undergone the sentence or punishment to which
he was adjudged in respect thereof, or

(c) Is a member of Parliament, or

(d) Who is a contractor, or

(e) Who is, or within the next preceding six months was, a Civil Servant.

This term does not include the persons who are members of the Executive
Council, provided that such members do not exceed ten in all, two of which
members must be Maories or half-castes), nor the Speaker or Chairman of
Committees of the Council, nor officers of His Majesty's Army or Navy, or
Militia or Volunteers, except officers of the Militia and Volunteers receiving
annual or permanent salaries, nor any persons as members only of any Senate
or Council or any University, nor members of a Commission issued by the
Governor or Governor in Council.

"Contractor" is a person who either by himself or directly or indirectly
by or with others, but not as a member of a registered or incorporated com-
pany or any incorporated body, is interested in the execution or enjoyment
of any contract or agreement entered into with His Majesty or with any
officer or department of the Government of New Zealand, or with any person
for or on account of the public service of New Zealand under which any public
money above the sum of £50 is payable directly or indirectly to such person
in any one financial year, but does not extend to persons on whom the com-
pletion of any contract or agreement devolves by marriage, or as devisee,
legatee, executor or administrator until twelve months after he has been in
possession of the same; any sale, purchase, or agreement for taking of land
or of or for any interest, estate, or easement therein under any law or statute
empowering the King or the Governor or any person on his behalf to take,
purchase or acquire any lands, or any estate, interest, or easement therein
for any public works or for any other public purposes whatsoever; contracts
for the loan of money or securities given for the payment of money only; contracts for advertising by which a sum of over £50 is payable, if the contract is entered into after public tender.

"A 'public defaulter' means a person convicted of wrongfully spending, taking, or using any moneys the property of the Crown or of any local authority or of any corporation represented by a local authority."

Members of the Council appointed since the passing of the Act of 1891 hold office for seven years only, to be reckoned from the date of the instrument of appointment, but they may be reappointed. In the case of any member of the Council, his seat shall ipso facto be vacated—

"(a) If he takes any oath or makes any declaration or acknowledgment of allegiance, obedience, or adherence, to any foreign Prince or Power; or

"(b) If he does, or concurs in, or adopts any act whereby he may become a subject or citizen of any foreign State or Power, or entitled to the rights, privileges or immunities of a subject of any foreign State or Power; or

"(c) If he is bankrupt, or compounds with his creditors under any Act for the time being in force; or

"(d) If he is a public defaulter, or is convicted of any crime punishable by death or by imprisonment with hard labour for a term of three years or upwards; or

"(e) If he resigns his seat by writing under his hand addressed to and accepted by the Governor; or

"(f) If for more than one whole session of the General Assembly he fails, without permission of the Governor notified to the Council, to give his attendance in the Council."

2. It is provided by section 54 of the Imperial Act (15 and 16 Vict., c. 72) that it shall not be lawful for the House of Representatives or the Legislative Council to pass, or for the Governor to assent to, any Bill appropriating to the public service any sum of money from or out of His Majesty's revenue within New Zealand unless the Governor, on His Majesty's behalf, shall first have recommended the House of Representatives to make provision for the specific public purpose towards which such money is to be appropriated. The provisions of this section render it necessary for any Appropriation Bill to be initiated in the Lower House.

3. There is no legal provision for a settlement of differences between the two Houses. The question of the relations between the two Houses with regard to Money Bills was submitted in 1872 to the law officers of the Crown, who gave an opinion on the question on the 18th of June, 1872, to the effect that the Legislative Council was not entitled to amend a Money Bill which the House of Lords in England would not have amended. (See Appendix to Journals of Legislative Council of New Zealand for 1872, No. 3.)

The question of the relations of the two Houses in general legislation was discussed in 1892, and papers were laid before Parliament. (See House of Commons Paper 198, 1893-4.)

CAPE OF GOOD HOPE.

The Legislative Council of the Cape of Good Hope consists of twenty-six elected members, presided over ex officio by the Chief Justice. The members are elected four for the Western, the South-eastern and the Eastern provinces, three for the North-western, South-western, Midland and North-eastern provinces, and one each for British Bechuanaoland and Griqualand West. They keep their seats for seven years unless the Council is sooner dissolved.
No person is qualified to be elected a member of the Council who is incapacitated to be registered as a voter, is under the age of 30 years, is not the owner for his own use and benefit of immovable property situate within the colony of the value of 2,000l. over and above all special conventional mortgages affecting the same or who is not, being the owner of such property to such value but under mortgage, at the same time possessed of property movable and immovable in the Colony to the value of not less than 4,000l. over and above his just debts. A married man for the purposes of this provision is deemed and taken to own or occupy the whole of the property belonging to his wife. But no person holding an office of profit under the Crown within the colony, and no uncertificated insolvent, and no alien who shall be registered as a voter by virtue merely of having obtained a deed of burghership shall be eligible to be elected a member of the Council. From this proviso are excepted the offices of Colonial Secretary, Treasurer, Attorney-General, Commissioner of Public Works, and Secretary for Agriculture, and of Prime Minister even if not holding one of these offices.

A member of the Legislative Council can resign his seat by writing under his hand or by telegraph message addressed to the president of the Council, and his seat is vacated if for one whole session of the Parliament he fails to give his attendance in the Council without the permission of the Council, or shall take any oath or make any declaration or acknowledgment of allegiance, obedience, or adherence to any foreign Prince or Power, or shall do, concur in, or adopt any act whereby he may become a subject or citizen of any foreign State or Power, or if his estate shall be sequestrated as insolvent. A seat is also vacated if the member shall accept or be the holder of any office of profit under the Crown save and except the office of Colonial Secretary and other offices specified above.

The qualifications for electors are the age of 21 years or upwards, possession of property worth 75l., or receipt of salary or wages of not less than 50l. a year, but no person can be newly registered as a voter since the Ballot and Franchise Act of 1892 unless he can sign his name and write his address and occupation. Voters for the Legislative Council have as many votes as there are seats to be filled, and they may give two or three votes to one candidate or divide them between two or more candidates.

2. The following provision is made by section 88 of the Constitution Ordinance approved by Order in Council of the 11th March, 1853:—

"And be it enacted, that in regard to all Bills relative to the granting of supplies to Her Majesty, or the imposition of any impost, rate, or pecuniary burden upon the inhabitants, and which Bills shall be of such a nature that if Bills similar to them should be proposed to the Imperial Parliament of Great Britain and Ireland, such Bills would, by the law and custom of Parliament, be required to originate in the House of Commons, that all such Bills shall originate in, or be by the Governor of the Cape of Good Hope introduced into, the House of Assembly of the said Colony: Provided that the Legislative Council of the said Colony and the Governor thereof shall, respectively, have full power and authority to make, in all such Bills, such amendments as the said Council and the said Governor shall, respectively, regard as needful or expedient; and the said Council and the said Governor may, respectively, return such Bills, so amended, to the House of Assembly or the Legislative Council."

3. No special provision is made by law for the settlement of differences between the Legislative Council and the House of Assembly, but by section 74 of the Constitution Ordinance it is provided that the Governor may whenever he shall see fit so to do, either by speech or proclamation dissolve the Legislative Council and the House of Assembly, or dissolve the House of Assembly without dissolving the Legislative Council.
The Legislative Council of Natal consists of thirteen members summoned by the Governor in Council in the name of His Majesty by instrument under the Public Seal of the Colony.

Each person so summoned holds his seat for ten years from the date of his summons, but five of the members of the Legislative Council first summoned vacate their seats at the end of five years, the particular members who are so to vacate their seats being decided by lot within the first week of the first session of the Legislative Council. The members are summoned from the following districts of the colony: Five from within the counties of Durban, Victoria, Alexandria, and Alfred; three from within the counties of Pietersmaritzburg and Umvoti, and three from within the counties of Weenen and Klip River, one from the Province of Zululand, and one from the new territory (Utrecht); but not more than two members may be chosen within any one county.

A legislative councillor must be of the age of 30 years or upwards, must not be subject to any disqualification which would vacate his seat if it occurred after his appointment, have resided in the colony for ten years, and be the registered proprietor of immovable property within the Colony of the value of 500l. in net value, after deduction of the amount of all registered mortgages.

A seat in the Legislative Council is vacated if any member of the Council shall fail for a whole ordinary annual session to give his attendance in the House, or shall cease to hold his qualification, or shall take any oath or make any declaration or acknowledgment of allegiance, obedience, or adherence to any foreign State or Power, or shall do, concur in, or adopt any act whereby he may become the subject or citizen of any such State or Power, or shall become an insolvent, or take advantage of any Act for the relief of insolvent debtors, or shall become a public defaulter, or shall be attainted of treason, or be sentenced to imprisonment for any infamous crime, or shall become of unsound mind, or shall accept any office of profit under the Crown other than a political office, or that of an officer of His Majesty's sea or land forces on full, retired, or half pay. The disqualification does not apply in the case of persons in receipt of pensions from the Colonial Government, or who were granted pensions under the Constitution Act of 1893 on their retirement on political grounds. A seat is also vacated if any member of the Legislative Council shall for the period of one month remain a party to any contract with the Government; but this does not apply to a purchaser of land at public auction from the Government, or to any lessee of Government land. A member of the Council may also resign his seat by writing under his hand addressed to the Governor. A member is eligible for re-appointment by the Governor.

2. It is provided by section 48 of the Constitution Act of 1893 that all Bills for appropriating any part of the consolidated revenue fund, or for imposing, altering, or repealing any rate, tax, duty, or impost, shall originate in the Legislative Assembly. By section 49 it is provided that "The Legislative Council may either accept or reject any Money Bill passed by the Legislative Assembly, but may not alter it."

3. There is no express provision for the settlement of differences between the two Houses of Parliament, whether with regard to finance or to general legislation.

---

TRANSVAAL.

By section 2 of the Letters Patent of the 6th of December 1906 it is provided that the Legislative Council shall consist of fifteen members, who shall be summoned in the case of the first Council by the Governor, and if any vacancy shall occur in the first or in any subsequent Council a member shall be appointed to fill the said vacancy.
by the Governor in Council until the completion of the period for which the person
in whose place he is appointed would have held office. Members of the Council are
appointed in the name of His Majesty by instrument under the Public Seal of the
Colony.

A member of the Council must be of the age of 30 years or upwards, have resided
in the colony for three years, and be qualified to be registered as a voter for
some electoral division of the colony. Members of the first Council hold office for
five years, but at any time after four years of the date of the first meeting of the
Council the Legislature may pass a law providing for the election of members of the
Legislative Council, whereupon, subject to the provisions of any such law, the then
existing Legislative Council shall be dissolved and all members of the Legislative
Council shall thereafter be elected as prescribed in the law.

Any member of the Legislative Council may resign his seat by writing under his
hand addressed to the Governor, and a seat is vacated if any member of the Legislative
Council shall—

“(1) Fail for a whole ordinary annual session to give his attendance in
the Legislative Council; or

“(2) Shall take any oath, or make any declaration or acknowledgment of
allegiance, obedience, or adherence to any foreign State or Power; or

“(3) Shall do, or cause to be done, any act whereby he may become the
subject or citizen of any such State or Power; or

“(4) Shall become an insolvent or take advantage of any law for the
relief of insolvent debtors; or

“(5) Shall be a public defaulter, or be attainted of treason, or be sentenced
to imprisonment for any infamous crime; or

“(6) Shall become of unsound mind; or

“(7) Shall accept any office of profit under the Crown other than that of
a Minister or that of an officer of our naval and military forces on retired or
half-pay.”

Provided that a person in receipt of pension from the Crown shall not be deemed
to hold an office of profit under the Crown within the meaning of this section.

2. It is provided by sections 55 and 56 of the Letters Patent that all Bills for
appropriating any part of the consolidated revenue fund or for imposing, altering, or
repealing any rate, tax, duty, or impost, shall originate in the Legislative Assembly,
and that “The Legislative Council may either accept or reject any Money Bill passed
by the Legislative Assembly, but may not alter it.”

3. The following provision is made by section 37 for the case of disagreement
between the Legislative Council and the Legislative Assembly:—

“(1) If the Legislative Assembly passes any proposed law and the Legis-
lative Council rejects or fails to pass it, or passes it with amendments to
which the Legislative Assembly will not agree, and if the Legislative Assem-
bley, in the next session, again passes the proposed law with or without any
amendments which have been made, suggested, or agreed to by the Legislative
Council, and the Legislative Council rejects, or fails to pass it, or passes it
with amendments to which the Legislative Assembly will not agree, the Gover-
nor may during that session convene a joint sitting of the members of the
Legislative Council and Legislative Assembly in the manner hereinafter pro-
vided, or may dissolve the Legislative Assembly, and may simultaneously dis-
solve both the Legislative Council and Legislative Assembly if the Legislative
Council shall then be an elected Council. But such dissolution shall not take
place within six months before the date of the expiry of the Legislative Assem-
bly by effluxion of time.
"(2) If after such dissolution the Legislative Assembly again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Legislative Council, and the Legislative Council rejects or fails to pass it, or passes it with amendments to which the Legislative Assembly will not agree, the Governor may convene a joint sitting of the members of the Legislative Council and of the Legislative Assembly, at which the Speaker of the Legislative Assembly shall preside.

"(3) The members present at any joint sitting convened under either of the preceding subsections, may deliberate and shall vote together upon the proposed law, as last proposed by the Legislative Assembly, and upon amendments, if any, which have been made therein by the one House of the Legislature and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Legislative Council and the Legislative Assembly shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried, is affirmed by an absolute majority of the total number of the members of the Legislative Council and Legislative Assembly, it shall be taken to have been duly passed by the Legislature."

——

ORANGE RIVER COLONY.

1. The Legislative Council of the Orange River Colony as constituted by the Letters Patent of the 5th of June, 1907, consists of eleven members, to be summoned by the Governor by an Instrument under the Public Seal of the Colony in the name of His Majesty.

It is provided by the Letters Patent that three of the members of the Legislative Council, as first constituted, should vacate their seats at the expiration of the third year from the date of the issue of the first summons of any members thereto; four at the end of the fifth year and four at the end of the seventh year; the members who retire at the end of the third, fifth, and seventh years to be decided by lot, and fresh members to be appointed in their place by the Governor in Council; such members to hold office for five years from the date of their summons. But members can be reappointed by the Governor in Council.

Power was given in the Letters Patent for the Legislature, at any time after four years from the date of the first Order of the Council, to pass a law providing for the election of members of the Legislative Council, and thereupon, subject to the provisions of such law, the then existing Legislative Council would be dissolved and the new Council would be elected on such conditions as were laid down in the law.

No person can be summoned unless he is of the age of 30 years or upwards, has resided in the colony for three years, and is qualified to be registered as a voter for some electoral division of the colony.

Any member of the Legislative Council may resign his seat by writing under his hand addressed to the Governor.

A member of the Legislative Council vacates his seat if he—

"(1) Shall fail for a whole ordinary annual session to give his attendance in the Legislative Council; or

"(2) Shall take any oath, or make any declaration or acknowledgment of allegiance, obedience, or adherence to any foreign State or Power; or

"(3) Shall do, concur in, or adopt any act whereby he may become the subject or citizen of any such State or Power; or

"(4) Shall become an insolvent or take advantage of any law for the relief of insolvent debtors; or
"(5) Shall be a public defaulter, or be attainted of treason, or be sentenced to imprisonment for any infamous crime; or
"(6) Shall become of unsound mind; or
"(7) Shall accept any office of profit under the Crown other than that of a Minister, that of a member of the Inter-Colonial Council, of the Liquor Licensing Court, or of any Commission appointed by the Governor in Council, or under any law to make any public inquiry, or that of an officer of Our naval and military forces on retired or half-pay,"

Provided that a person in receipt of pension from the Crown shall not be deemed to hold an office of profit under the Crown within the meaning of this section.

2. By section 56 of the Letters Patent, all Bills for appropriating any part of the consolidated revenue fund, or for imposing, altering or repealing any rate, tax, duty or impost were to originate in the Legislative Assembly. And by section 57, "The Legislative Council may either accept or reject any Money Bill passed by the Legislative Assembly, but may not alter it."

3. The following provision is made by section 39 for the case of disagreements between the Legislative Council and the Legislative Assembly:

"(1) If the Legislative Assembly passes any proposed law and the Legislative Council rejects or fails to pass it, or passes it with amendments to which the Legislative Assembly will not agree, and if the Legislative Assembly, in the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Legislative Council, and the Legislative Council reject, or fails to pass it, or passes it with amendments to which the Legislative Assembly will not agree, the Governor may during that session convene a joint sitting of the members of the Legislative Council and Legislative Assembly, and may simultaneously provided, or may dissolve the Legislative Assembly, and may simultaneously dissolve both the Legislative Council and Legislative Assembly if the Legislative Council shall then be an elected Council. But such dissolution shall not take place within six months before the date of the expiry of the Legislative Assembly by effluxion of time.

"(2) If after such dissolution the Legislative Assembly again passes the proposed law, with or without any amendments, which have been made, suggested, or agreed to by the Legislative Council, and the Legislative Council rejects or fails to pass it, or passes it with amendments to which the Legislative Assembly will not agree, the Governor may convene a joint sitting of the Members of the Legislative Council and of the Legislative Assembly, at which the Speaker of the Legislative Assembly shall preside.

"(3) The members present at any joint sitting convened under either of the preceding subsections may deliberate and shall vote together upon the proposed law, as last proposed by the Legislative Assembly, and upon amendments, if any, which have been made therein by the one House of the Legislature and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the Members of the Legislative Council and Legislative Assembly shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried, is affirmed by an absolute majority of the total number of the members of the Legislative Council and Legislative Assembly, it shall be taken to have been duly passed by the Legislature."
SESSIONAL PAPER No. 246

UNION OF SOUTH AFRICA.

The Senate of South Africa under the South Africa Act, 1909, which will take effect from the 31st of May, 1910, is constituted as follows:—

24. For ten years after the establishment of the Union, the constitution of the Senate shall, in respect of the original provinces, be as follows:—

"(1) Eight senators shall be nominated by the Governor General in Council and for each original province eight senators shall be elected in the manner hereinafter provided;

"(2) The senators to be nominated by the Governor General in Council shall hold their seats for ten years. One-half of their number shall be selected on the ground mainly of their thorough acquaintance, by reason of their official experience or otherwise, with the reasonable wants and wishes of the coloured races in South Africa. If the seat of a senator so nominated shall become vacant, the Governor-General in Council shall nominate another person to be a senator, who shall hold his seat for ten years;

"(3) After the passing of this Act, and before the day appointed for the establishment of the Union, the Governor of each of the Colonies shall summon a special sitting of both Houses of the Legislature, and the two Houses sitting together as one body, and presided over by the Speaker of the Legislative Assembly, shall elect eight persons to be senators for the province. Such senators shall hold their seats for ten years. If the seat of a senator so elected shall become vacant, the provincial council of the province for which such senator has been selected shall choose a person to hold the seat until the completion of the period for which the person in whose stead he is elected would have held his seat.

25. Parliament may provide for the manner in which the Senate shall be constituted after the expiration of ten years, and unless and until such provision shall have been made:—

"(1) The provisions of the last preceding section with regard to nominated senators shall continue to have effect;

"(2) Eight senators for each province shall be elected by the members of the provincial council of such province together with the members of the House of Assembly elected for such province. Such senators shall hold their seats for ten years unless the Senate be sooner dissolved. If the seat of an elected senator shall become vacant, the members of the provincial council of the province, together with the members of the House of Assembly elected for such province, shall choose a person to hold the seat until the completion of the period for which the person in whose stead he is elected would have held his seat. The Governor-General in Council shall make regulations for the joint election of senators prescribed in this section.

26. The qualifications of a senator shall be as follows:—

He must—

(a) Be not less than 30 years of age;
(b) Be qualified to be registered as a voter for the election of members of the House of Assembly in one of the provinces;
(c) Have resided for five years within the limits of the Union as existing at the time when he is elected or nominated, as the case may be;
(d) Be a British subject of European descent;
(e) In the case of an elected senator, be the registered owner of immovable property within the Union of the value of not less than £500 over and above any special mortgages thereon.

"For the purposes of this section, residence in, and property situated within, a colony before its incorporation in the Union shall be treated as residence in and property situated within the Union.

"No person shall be capable of being chosen or of sitting as a senator who—

"(a) Has been at any time convicted of any crime or offence for which he shall have been sentenced to imprisonment without the option of a fine for a term of not less than twelve months, unless he shall have received a grant of amnesty or a free pardon, or unless such imprisonment shall have expired at least five years before the date of his election; or

"(b) Is an unrehabilitated insolvent; or

"(c) Is of unsound mind, and has been so declared by a competent court; or

"(d) Holds any office of profit under the Crown within the Union:

Provided that the following persons shall not be deemed to hold an office of profit under the Crown for the purposes of this subsection:

"(1) A Minister of State for the Union;

"(2) A person in receipt of a pension from the Crown;

"(3) An officer or member of His Majesty’s naval or military forces on retired or half pay, or an officer or member of the naval or military forces of the Union whose services are not wholly employed by the Union.

"If a senator—

"(a) Becomes subject to any of the disabilities mentioned in the last preceding section; or

"(b) Ceases to be qualified as required by law; or

"(c) Fails for a whole ordinary session to attend without the special leave of the Senate,

"his seat thereupon becomes vacant.

2. The provisions of the South Africa Act as to the powers of the Senate are as follows:

"60.—(1) Bills appropriating revenue or moneys or imposing taxation shall originate only in the House of Assembly. But a Bill shall not be taken to appropriate revenue or moneys or to impose taxation by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties.

"(2) The Senate may not amend any Bills so far as they impose taxation or appropriate revenue or moneys for the services of the Government.

"(3) The Senate may not amend any Bill so as to increase any proposed charges or burden on the people.

"61. Any Bill which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.”

3. The following provision is made in section 63 of the South Africa Act for the cases of disagreement between the two Houses:

"63. If the House of Assembly passes any Bill and the Senate rejects or fails to pass it or passes it with amendments to which the House of Assembly will not agree, and if the House of Assembly in the next session again passes
the Bill with or without any amendments which have been made or agreed to by the Senate and the Senate rejects or fails to pass it or passes it with amendments to which the House of Assembly will not agree, the Governor General may during that session convene a joint sitting of the members of the Senate and House of Assembly. The members present at any such joint sitting may deliberate and shall vote together upon the Bill as last proposed by the House of Assembly and upon amendments, if any, which have been made therein by one House of Parliament and not agreed to by the other; and any such amendments which are affirmed by a majority of the total number of members of the Senate and House of Assembly present at such sitting shall be taken to have been carried, and if the Bill with the amendments, if any, is affirmed by a majority of the members of the Senate and House of Assembly present at such sitting, it shall be taken to have been duly passed by both Houses of Parliament: Provided that, if the Senate shall reject or fail to pass any Bill dealing with the appropriation of revenue or moneys for the public service, such joint sitting may be convened during the same session in which the Senate so rejects or fails to pass such Bill.
SUPPLEMENTARY RETURN

[246a]

To an Order of the House of Commons, dated 2nd March, 1914, giving the following information, as far as may be available, respecting the constitution of Upper Chambers or Senates within the British Empire and in foreign countries, and especially such information in respect of the self-governing Dominions and of foreign countries possessing a federal system of Government:—

1. As to the method of appointment, whether by Executive authority or by election by the people, or otherwise.

2. As to the term of appointment, whether for life or for a term of years, or otherwise.

3. As to a re-appointment or re-election, and generally as to the filling of vacancies occasioned by death or otherwise.

4. As to qualifications, whether by age, residence, possession of real or personal property or otherwise.

5. As to limitation of the membership, and as to the numerical relation of the membership to that of the Lower House.

6. As to provisions for dissolution, appeal to the electorate, conferences or additional appointments in case of disagreement between the Upper and Lower Houses.

7. As to the operation of the various systems in the several Dominions and countries mentioned, and in what respect defects or difficulties have made themselves manifest.

8. All other relevant information respecting the constitution and status of such Upper Chambers.

LOUIS P. PELLETIER,
for Secretary of State.

June 10, 1914.

THE SECOND CHAMBER.

An Abstract showing certain aspects of the constitution of various Upper Houses of the Legislature in the British Empire and foreign countries.

GREAT BRITAIN.

Number.—The number of the House of Lords is not limited by law. To-day it numbers about 650.

Method of Appointment and Election—Tenure—Qualifications.—The House of Lords comprises at least five distinct groups:—

246a—1
CONSTITUTION OF UPPER CHAMBERS

4-5 GEORGE V., A. 1914

(1) Peers with hereditary seats.—These are the peers of England created before the union with Scotland in 1707; the peers of Great Britain created between that date and the union with Ireland in 1801; and the peers of the United Kingdom created since. The Crown, that is, the Ministry of the day, has unlimited power to create hereditary peerages, and this is now the only channel for an increase in the membership of the House.

(2) The Representative Peers of Scotland.—Under the Act of Union of 1707, when a new Parliament is summoned, the whole body of Scottish peers elect sixteen of their number to sit as their representatives in the House of Lords. Their tenure expires with the termination of a Parliament.

(3) The Representative Peers of Ireland.—Under the Act of Union of 1800 twenty-eight of the Irish peerage are elected by the whole body as representatives and each representative peer enjoys his right as a Lord of Parliament for the term of his life.

(4) The Lords Spiritual.—The number of these is restricted under statutory regulation to twenty-six. Five English ecclesiastics are entitled by statute invariably to seats—the Archbishops of Canterbury and York and the Bishops of London, Durham and Winchester. Among the remaining bishops, seats are allowed to twenty-one in the order of seniority. The Lords Spiritual retain their seats in virtue of, and only during, tenure of their several Sees.

Appointment to the ecclesiastical office is controlled by the Crown, that is, by the Ministry of the day. There are no Scottish or Irish Lords Spiritual.

(5) The Lords of Appeal in Ordinary.—These number four and are created by virtue of high legal qualification, primarily to assist in the judicial function of the House of Lords. They are also entitled to the dignity of Baron for life and to a writ of summons to attend and vote as other peers. This right lasts for life although the discharge of judicial duties may have ceased.

Infants, aliens, bankrupts, and persons under sentence for grave offences, are incapable of sitting in the House of Lords. On the other hand, a peer cannot renounce his inheritance of rank.

Adjustment of Disagreements between the Houses—The Parliament Act, 1911:—

(a) As to Money Bills.—The Act (1-2 Geo. V. c. 13) provides in substance that if a Money Bill, having been passed by the House of Commons and sent to the House of Lords at least a month before the end of the session, is not passed by that House without amendment within one month it shall become an Act on the Royal Assent being signified. A Money Bill is defined as a public Bill which in the opinion of the Speaker deals only with the imposition, repeal or regulation of taxation; with the imposition or repeal of charges on the Consolidated Fund or on money provided by Parliament; with supply; with the appropriation, receipt, issue or audit of public money; with the raising, guarantee or payment of a loan; or with matters incidental to these subjects. Provisions dealing with the taxation, money or loans of local authorities for local purposes are expressly excluded.

(b) As to Other Bills.—In regard to other bills the Act provides that if any public Bill (other than a Money Bill or one to extend the term of Parliament beyond five years) is passed by the House of Commons in three successive sessions (whether of the same Parliament or not) and is not passed by the House of Lords without amendment or with such amendments only as the Commons accept, it shall become an Act on the Royal assent being signified; provided two years have elapsed between the second reading in the House of
SESSIONAL PAPER No. 246a

Commons at the first session and the final passage by that House in the third session. The Bill must be passed by the Commons each time in identical form, save for the alterations made necessary by the lapse of time, and for amendments agreed to by both Houses. The certificate of the Speaker that the provisions of the Act have been complied with is made conclusive. The Act does not affect legislation by private Bill or provisional order. It provides special words of enactment for legislation passed under its provisions.

(c) This Act does not purport to represent a final scheme for the reform of the relations between the two Houses; for its preamble recites that “it is intended to substitute for the House of Lords as it at present exists a Second Chamber constituted on a popular instead of hereditary basis, but such substitution cannot be immediately brought into operation,” and further that “provision will require hereafter to be made by Parliament, in a measure affecting such substitution, for limiting and defining the powers of the new Second Chamber, but it is expedient to make such provision as in this Act appears for restricting the existing powers of the House of Lords.” In other words, the Parliament Act touches only the powers of the Second Chamber; it does not affect the composition or method of appointment, and it recognizes that when a newly-constituted Second Chamber has been provided, other rules than are now provided may be necessary to define the powers of the new House and the relations between the two Houses. And the Government responsible for the Act expressly emphasizes its temporary character throughout the debate. Mr. Asquith, on February 28, 1910, in a careful statement respecting the preliminary resolutions then about to be introduced, said: “They will affirm the necessity for excluding the House of Lords altogether from the domain of finance. They will ask this House to declare that in the sphere of legislation the power of veto, at present possessed by the House of Lords, should be so limited in its exercise as to secure the predominance of the deliberate and considered will of this House within the lifetime of a single Parliament. Further, it will be made plain that these constitutional changes are without prejudice to, and contemplate in a subsequent year, the substitution in our Second Chamber of a democratic for an hereditary basis.” (Hansard, 1910, vol. 14, p. 595.)

This was later repeated both in exact terms (Hansard, 1910, vol. 15, p. 959) and in substance: “We put them forward to deal with the emergency which confronts us, not as purporting to be a full or adequate solution of the whole problem, or as exhausting the policy of the Government.” (Hansard, 1910, vol. 15, p. 1180.) See also Hansard, 1911, vol. 21, p. 1752. As to what was conceived as the proper character or attributes of a Second Chamber should be, Mr. Asquith merely indicated his views. (Hansard, 1910, vol. 15, pp. 1165-6.)

QUEBEC.

(See Bourinot, Manual of Constitutional History of Canada, p. 65; British North America Act, secs. 23, 72-79).

Number.—The Legislative Council numbers twenty-four members.

Method of appointment.—Members are appointed by the Lieutenant-Governor in the King’s name, and represent the same electoral districts from which senators are chosen.

Term of office.—The term is for life.

Qualifications.—The qualifications are the same as those of the senators from the province and vacancies arise for the same reasons as in the case of senators.

246a—1_{f}
Other provisions.—The Governor appoints a Speaker from among the members. Ten constitute a quorum. The Council has legislative functions co-ordinate with those of the Assembly except with regard to Money Bills. Its constitution may be amended by the Legislature of the province. There is no provision for the adjustment of differences between the two Houses.

NOVA SCOTIA.

Number.—The Legislative Council numbers twenty-one ordinarily, though it varies to eighteen.

Method of appointment.—Members are appointed by the Lieutenant-Governor in the name of the Crown.

Term of office.—The term is for life.

Qualifications.—There is a property qualification. Seats are vacated for bankruptcy or insolvency, conviction of crime, or for absence for two sessions without the consent of the Governor in Council.

The Legislative Council has legislative functions co-ordinate with those of the Assembly except with regard to Money Bills.

The constitution of Nova Scotia, and therefore of the Council, is considered "as derived from terms of the Royal Commissions to the Governors and Lieutenant Governors, and from the instructions accompanying the same, moulded from time to time by despatches from Secretaries of State, conveying the will of the Sovereign, and by Acts of the Local Legislature, assented to by the Crown; the whole to some extent interpreted by uniform usage and custom in the colony" (memorandum by Governor Archibald in answer to an address of Parliament, Can. Sess. p. 1883, No. 70, pp. 8, 39) After 1867 the Council remained constituted as before, but subject to the power of amendment vested by the British North America Act in the Legislature of the province.

There is no provision for the adjustment of differences between the two Houses; and it would seem that the number of the Legislative Council is limited and that therefore disagreements cannot be overcome by appointments to the Council. (See Transactions of Royal Society of Canada, new series, vol. 2, article on "The Constitution of the Legislative Council of Nova Scotia").

NEWFOUNDLAND.

(See Letters Patent of March 28, 1876, to the Governor of Newfoundland; Instructions of same date; to be found in Consolidated Statutes of Newfoundland, 2nd series, 1892, pp. 1107 et seq.)

Number.—The number of the Legislative Council is not fixed, though the total number for the time being resident within the colony may not be raised by means of appointments by the Governor (see below) to more than fifteen. The number now stands at twenty-four.

Method of appointment.—Members are nominated and appointed from time to time by the King under the Sign Manual and Signet, or provisionally by the Governor subject to the pleasure of the Crown and to the restriction above noted.
SESSIONAL PAPER No. 246a

**Term of office.**—Members hold office during the King’s pleasure and are removable by warrant issued by the King on advice of the Privy Council. This is now understood to mean that members hold office at the will of the Government of Newfoundland.

**Other provisions.**—The Governor appoints from time to time a President of the Council from among the members. Five constitute a quorum. There is by rule of the House of Assembly the usual distinction of powers between the two Houses with respect to Money Bills.

**Adjustment of disagreements between the Houses.**—There is no provision of law for the adjustment of disagreements between the two Houses; but as seen there is no limitation on the power of the Crown to add to the number of the Legislative Council.

**NEW ZEALAND.**

(See New Zealand Constitution Act, 1852, 15 and 16 Vict., c. 72; Legislative Council Act, 1891; Legislative Council Act, 1908.)

**Number.**—The number of the Legislative Council may not be less than 10; otherwise it is unlimited. At present the number is 42. (See New Zealand Year Book, 1913.) It is said by one authority that the members represent certain provincial districts (Analysis of the System of Government throughout the British Empire, Macmillan & Co., p. 90). There seems to be no provision of law to this effect.

**Method of appointment.**—Members are appointed by the Governor from time to time.

**Term of office.**—The term is seven years, but a member may be reappointed. There are a few remaining life members appointed before the term of office was changed by the Act of 1891. (See Douglas, The Dominion of New Zealand.) It is interesting to note that that Act, in order to induce life members to resign, made a standing offer of a free railway pass throughout the Dominion and the use of the Parliamentary Library, both for life.

**Other provisions.**—As to qualification, a member must be 21 years old, a British subject, free from taint of bankruptcy, treason, infamous offence and public defalcation, and may not be the holder of certain named public offices. There is the usual distinction of powers between the two Houses with respect to Money Bills.

**Adjustment of disagreements between the Houses.**—While there is no legislative provision for the adjustment of disagreements between the two Houses, there is no limitation as seen, on the power of appointment to the Legislative Council.

**Proposed reform.**—The present Government proposes to reform the Legislative Council. A Bill to that end has already been put forward. Up till now the majority in the Council itself have been against it and it has twice been rejected.

The scheme generally is a division of the Dominion into four large electorates to choose members under the Tasmanian system of proportional representation. Two of the electorates are to choose eleven members each, and the other two nine members each. The suffrage will be universal and the elected Councillors will sit for six years. The scheme cannot be in full operation for five or six years, as time is allowed for the gradual disappearance of the present nominee members. The Bill contains the English provision for passing Money Bills over the Upper Chamber's head if necessary, and the Australian provision for “suggested” amendments and for dealing with deadlocks.
AUSTRALIA.

References are to the Commonwealth of Australia Constitution Act, July 9, 1900, 63 and 64 Vict., c. 12.)

Number.—There are six senators from each original state (sec. 7).

Method of Election.—“Senators are directly chosen by the people of the State . . . as one electorate” (except that Queensland is entitled to divide itself into senatorial districts), sec. 7.

Term of Office.—Senators are elected for six years. One-half retire every three years. (Sec. 7; sec. 13, as amended by the Constitution Alteration, Senate Elections, 1906, Law 1 of 1907.)

Qualifications.—These are the same as for members of the House of Representatives (sec. 16); that is, a member must be a British subject, 21 years old, an elector, and a resident for three years within the Commonwealth (sec. 34).

Qualifications of Electors.—These are the same as in the case of the Lower House (sec. 8).

Vacancies.—Vacancies are filled by the Houses of Parliament of the State sitting together, the person so chosen holding office till the end of the term, unless a regular general election (either for the House or Senate) occurs in the meantime, in which event a successor is chosen in the usual manner to hold till the end of the term. If the State Parliament is not in session the Governor in Council of the State may choose a successor to hold until the expiration of fourteen days after the beginning of the next session or until the election of a successor as above, whichever happens first (sec. 15).

Regulation of method.—The method of election and number may be changed by the Federal Parliament; but no original state may be deprived of equality nor have less than six senators; and subject to the foregoing, the states may regulate the method, time and place (secs. 7, 9).

Powers.—There is the usual distinction of powers between the two Houses with respect to Money Bills (see. 53).

Adjustment of Disagreements between the Houses.—Section 57 provides for the adjustment of disagreements between the two Houses. If the House of Representatives passes any Bill and the Senate rejects it or fails to pass it, or passes it with amendments to which the House will not agree, and if after three months the House in the same or next session again passes it, with or without amendments made or suggested by the Senate, and the Senate rejects or fails to pass it or passes it with amendments unacceptable to the House, the Governor General may dissolve the Senate and House simultaneously. If after such dissolution the House again passes the Bill with or without any amendments made or suggested by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments unacceptable to the House, the Governor General may convene a joint sitting of the members of the Senate and House. The members at the joint sitting may deliberate upon the Bill as last proposed by the House and upon any amendments which have been the cause of difference, and the Bill, with or without amendments, may be carried by an absolute majority of the total number of members of the Senate and House, and shall then be taken to have passed both Houses.

There is special provision for amendments to the constitution. Amendments proposed by an absolute majority of each House shall be submitted to the electors, or those twice proposed by one House with an interval of three months, though disagreed to by the other House, may be submitted to the electors by the Governor General. It must be approved by a majority of the electors in each of a majority of the states, and by a majority of all the electors voting (sec. 128).
CONSTITUTION OF UPPER CHAMBERS

SESSIONAL PAPER No. 246a

SOUTH AFRICA.

(References are to the South Africa Act. 1909, 9 Ed. VII, c. 9).

Number.—There are eight senators at large and eight from each original province. (Sec. 24.)

Method of appointment and election.—The senators at large are nominated by the Governor General in Council; the others were elected for each province before the establishment of the Union by the two Houses of the Colony sitting together (sec. 24). After ten years from the establishment of the Union, if Parliament does not make other provision, the method as to nominated senators is to remain unchanged, while the eight senators from each province are to be elected by the Provincial Council and House of Assembly sitting together and are to hold their seats for ten years unless the Senate is sooner dissolved. (Sec. 25.)

Term of office.—The term is ten years. (Sec. 24.)

Qualification.—A senator must be 30 years old, an elector, a resident for five years within the limits of the Union, a British subject of European descent, and in addition an elected senator must own immovable property within the Union to the value of £500 (sec. 26). One-half of the nominated senators must be selected on the ground mainly of their thorough acquaintance, by reason of their official experience, with the reasonable wants and wishes of the coloured races in South Africa. ((Sec. 24.)

Vacancies.—In the case of a nominated senator the Governor General in Council nominated a successor who holds for ten years. In the case of an elected senator the vacancy is filled by the Provincial Council, though after ten years from the establishment of the Union, by the Provincial Council and House of Assembly sitting together, and the successor holds simply for the balance of the term. (Secs. 24, 25.)

Regulation of Method of Election.—After ten years from the establishment of the Union, Parliament may provide for the manner in which the Senate may be constituted. (Sec. 25.)

Dissolution.—The Governor General may dissolve the Senate and House of Assembly or the House alone, though the Senate may not be dissolved within ten years of the establishment of the Union and dissolution cannot affect nominated Senators. (Sec. 20.)

Adjustment of Disagreement between the Houses.—The provision for the contingency of disagreement between the House of Assembly and Senate is section 63, and it reads as follows—

"If the House of Assembly passes any Bill and the Senate rejects or fails to pass it or passes it with amendments to which the House of Assembly will not agree, and if the House of Assembly in the next session again passes the Bill with or without any amendments which have been made or agreed to by the Senate and the Senate rejects or fails to pass it or passes it with amendments to which the House of Assembly will not agree, the Governor General may during that session convene a joint sitting of the members of the Senate and House of Assembly. The members present at any such joint sitting may deliberate and shall vote together upon the Bill as last proposed by the House of Assembly and upon amendments, if any, which have been made therein by one House of Parliament and not agreed to by the other; and any such amendments which are affirmed by a majority of the total number of members of the Senate and House of Assembly present at such sitting shall be taken to have been carried, and if the Bill with the amendments, if any, is affirmed by a majority of the
members of the Senate and House of Assembly present at such sitting, it shall be taken to have been duly passed by both Houses of Parliament; Provided that, if the Senate shall reject or fail to pass any Bill dealing with the appropriation of revenue or moneys for the public service, such joint sitting may be convened during the same session in which the Senate so rejects or fails to pass such Bill."

UNITED STATES.

(References are to the Constitution of the United States).

Number.—Two senators are chosen from each state. (Art. 1, sec. 3, par. 1; 17th amendment.)

Method of Election.—Formerly chosen by the State Legislatures, senators are now elected directly by the people of their respective states. (17th amendment, ratified May, 1913.)

Term of Office.—The term is six years. One-third of the senators are retired and their successors chosen every two years. (Art. 1, sec. 3, par. 1-2; 17th amendment.)

Qualification.—A senator must be 30 years old, a citizen of the United States for nine years, and an inhabitant, when elected, of the state for which he is chosen. (Art. 1, sec. 3, par. 3.)

Qualification of electors.—The electors of senators in each state must have the qualifications requisite for electors of the most numerous branch of the State Legislature. (17th amendment.)

Vacancies.—These are filled by popular election, though the legislature of any state may empower its executive to make a temporary appointment until the people fill the vacancy by election as the legislature may direct. (17th amendment.)

Regulation.—The times, places and manner of election are prescribed by the various State Legislatures, but Congress may at any time alter such regulations except as to the places of election. (Art. 1, sec. 4, par. 1.)

Adjustment of Disagreements between the Houses.—There is no provision of law for the adjustment of disagreements between the House of Representatives and the Senate. In practice, however, such disagreements are referred by each House to a conference committee, appointed specially for the Bill in hand from among its own members. The two committees meet informally on the Bill. While in theory each is usually supposed to act under instructions from its own House, yet in practice they frequently report back what amounts to a new Bill, and this compromise is often passed by both Houses. It should be borne in mind that if the Senate disagrees with the House it is merely a disagreement between two Legislative Chambers and does not concern the Executive directly or at all necessarily, whereas under the parliamentary system a deadlock is in reality a matter between the Upper House and the Government of the day.

FRANCE.

(References are to the Law of Dec. 9, 1884—to be found in Dodd, Modern Constitutions, vol. 1, p. 310 et seq.)

Number.—The Senate consists of 300 members (art. 1); the number from each department or colony varying from ten to one (art. 2).

Method of Election.—Senators are elected by an electoral college meeting at the capital of the department or colony concerned and composed of (1) the deputies from
SESSIONAL PAPER No. 246a

the department, (2) the general councillors of the department, (3) the councillors of the arrondissement (a subdivision of the department), and (4) delegates elected by each municipal council from among the voters of the commune (a smaller subdivision of the arrondissement). The number of delegates from each municipal council is according to the number of the council, varying from a council of ten electing one delegate to a council of thirty-six electing twenty-four, while the city of Paris elects thirty (art. 6). The mode of election is that of scrutin de liste, that is, each elector has as many votes as there are senators to be elected, but can give only one vote to any candidate.

Term of Office.—Senators are chosen for nine years. One-third are retired and their successors chosen every three years. (Art. 7.)

Qualifications.—A senator must be a French citizen, 40 years of age, enjoy civil and political rights, and have complied with the law regarding military service. (Art. 4; see also law of July 20, 1893.)

One writer has the following to say of the French Senate:

"Few of the life members survive to-day. When they have disappeared the French Senate will be a compact body of three hundred men apportioned among the departments in approximate accordance with population, and chosen in all cases by bodies of electors all of whom have themselves been elected directly by the people. . . . From having long been viewed by republicans with suspicion, the Senate has become to be regarded by Frenchmen generally as perhaps the most perfect work of the Republic (citing J. C. Braeq. France under the Republic, New York, 1910, p. 8.). In these days its membership is recruited very largely from the deputies, so that it includes not only many men of distinction in letters and science but an unusual proportion of experienced debaters and parliamentarians. A leading American authority has said that it is composed of as impressive a body of men as can be found in any legislative chamber the world over" (citing Lowell, Governments and Parties, vol. 1, p. 22); from Ogg, The Governments of Europe, pp. 316-317).

Adjustment of Disagreements between the Houses.—There is no constitutional provision for the case of disagreements between the two Houses of Parliament. By their respective regulations a mixed committee of both Houses may be appointed in such cases to propose terms of agreement or compromise.

GERMANY.

Number.—The number of delegates to the Bundesrath varies. By the Imperial constitution the fifty-eight votes to which the twenty-five states of the federation are entitled are apportioned among the states. This is not completely according to population, wealth, etc., but is rather arbitrary. Thus, Prussia, with two-thirds of the population has a scant one-third of the votes (Ogg Governments of Europe, pp. 217-18; art. 6 of Imperial constitution; Dodd, Modern Constitutions, p. 328). Each state is authorized, though not required, to send to the Bundesrath a number of delegates equal to the number of votes to which the state is entitled. (Art. 6.)

Method of Appointment.—The delegates are appointed by the princes of the monarchical states and by the Senators of the free cities. (Art. 6.)

Term of Office.—Delegates are appointed fresh for each session, and they may be recalled or replaced at any time.

Ogg, in his book on the Governments of Europe, points out that the German Bundesrath "is not 'an Upper House' nor even in the ordinary sense a deliber-
ative chamber at all. On the contrary it is the central institution of the whole Imperial system and as such it is possessed of a broad combination of functions which are not only legislative but administrative, consultative, judicial, and diplomatic."

"Legally, and to a large extent, practically, the status of a delegate is that of a senator but of a diplomat. They are very commonly officials, frequently ministers, of the states which they represent."

The members speak and act and vote regularly not at their own discretion but under specific instructions of the governing authorities by whom they are accredited. Only rarely do their instructions allow them any considerable measure of independence.

The votes cast are not votes of the individual members but of the states, and they are cast indivisible blocks by the delegation of the state regardless of the number of members in attendance. A single delegate may cast the entire quota of votes to which his state is entitled.

The Bundesrath may be convened by the Emperor at any time and there must be at least one session per year.

The work of the Bundesrath consists largely in the preparation of business for the Reichstag. Usually all bills originate in the Bundesrath and, strictly speaking, it is that body which makes the law, with merely the assent of the Reichstag.

The Bundesrath has (1) Executive functions: it takes action on administrative provisions for carrying out laws; issues ordinances; exercises control with the Emperor over the declaration of war and making of treaties; with the consent of the Emperor it may dissolve the Reichstag and its members may be heard on the floor of the Reichstag; it prepares the annual budget and participates in appointment of officials; (2) Judicial powers: it sits as a Supreme Court of Appeal in certain cases from state tribunals; is the court of last resort for disputes between the Imperial Government and the states, or between two states in certain cases. (Ogg, pp. 217-223.)

ALSACE-LOthRAINE.

(References are to the constitution of Alsace-Lorraine of May 31, 1911—in Revue du Droit Public, 1911, vol. 28, pp. 465-471; to Annual Register, 1911; and to Ogg, The Governments of Europe.)

Number.—There are thirty-six members.

Method of Election and Appointment.—One-half are appointed ex-officio or as the nominees of public bodies; the other half are nominated by the Emperor. The first-mentioned class is constituted as follows: The Roman Catholic Bishops of Strassburg and Metz; the Presidents of the controlling bodies of the two branches of the Evangelical Church; the President of the highest provincial court; a professor of the University of Strassburg, chosen by the professors of the University; a representative of the Jewish faith, chosen by their body; four members elected by the municipal councils of Strassburg, Metz, Colmar and Mulhausen from among their number; three by Chambers of Commerce; three by the Agricultural Council; and one by the Strassburg Handwerkskammer, or League of Guilds. The second class, who are not to exceed in number the first, are nominated by the Emperor upon the advice of the (Imperial) Federal Council. (Const., sec. 6; Annual Register, 1911, p. 329.)

Term of Office.—Membership in the Upper House of the Diet expires in five years, or upon a dissolution of the Upper House. (Const., sec. 6; Annual Register, 1911, p. 329.)

Qualifications.—In addition to the qualifications indicated above, all members must reside in Alsace-Lorraine and be not less than 30 years of age. (Const., sec. 6; Annual Register, 1911, p. 329.)
SESSIONAL PAPER No. 246a

All laws require the assent of the Emperor and the two Chambers of the Diet, and the budget of the year must be laid first before the Lower Chamber and must be accepted or rejected in its entirety by the upper one. (Const., sec. 5.) The Emperor has the right to summon, to adjourn, and to dissolve, the chambers simultaneously. (Const., sec. 11; Ogg, p. 286.)

SWITZERLAND.

(References are to the constitution of the Swiss Federation of May 29, 1874; Dodd, Modern Constitutions; Ogg, The Governments of Europe.)

Number The Council of States consists of forty-four members. Each canton appoints two representatives; each half-canton in the case of divided cantons choosing one. (Const., art. 80; Dodd, vol. 2, p. 278.)

Method of Election; Term of Office; Qualifications; Qualification of Electors; Vacancies; Regulation of Method.—For these matters as well as for the remuneration of members of the Council of the States there is no provision either in the constitution or in federal law. They are left wholly to the determination of the individual cantons. There is, in fact, no uniformity of law in these respects; in some cantons members are elected by popular vote; in others by the legislative assembly; in some they are chosen for one year; in others for two; in still others for three.

Adjustment of Disagreements between the Houses.—Cases of disagreement are referred to a joint committee of both Houses, but if the conference does not agree, or if either House does not accept the proposal made, the measure has to be abandoned.

It should also be noted that the two Houses, representing respectively the federal and national principles, are nominally co-ordinate in power; that Switzerland does not have the parliamentary system; and that the “initiative” and “referendum” are part of the constitutional system, possibly affecting the relations between the Houses.

AUSTRIA-HUNGARY.

For the combined empire-kingdom there is a joint ministry dealing simply with foreign affairs, war, and finance and a joint meeting in one body of two “delegations,” one from the Parliament of Austria; the other from that of Hungary. Thus for Austria-Hungary there is no bicameral legislature nor in reality a legislature at all. But each member of the dual monarchy has its own legislative system.

AUSTRIA.

Number.—The Herrenhaus, or House of Lords, is variable in number. At the close of 1910 there were 266 (Ogg, The Governments of Europe, p. 465).

Method of Appointment.—The members hold office in part by ex-officio right, in part by hereditary status, and in part by special Imperial appointment. (Law of December 21, 1867; see Dodd, Modern Constitutions, vol. 1, p. 75.) The various elements, with their respective numbers in 1910 (from Ogg, p. 465), are as follows—

(1) Princes of the Imperial family who are of age 15. (Sec. 2);
(2) Nobles of high rank qualified by the possession of large estates and nominated to an hereditary seat by the Emperor, 74. (Sec. 3);
(3) Ecclesiastics of princely title inherent in their episcopal seats, 10 archbishops and 8 bishops. (Sec. 4); and
(4) Persons nominated by the Emperor for life in recognition of special service rendered to the State or Church or unusual distinction attained in literature or science, 169. (Sec. 5.) By the law of January 26, 1907, the number of members in the last-mentioned group may not exceed 170 nor be less than 150. Within these limits the power of the Emperor to create life peers is absolute. The prerogative has been used several times to facilitate the passage of measures the Government was bent on. (Ogg, p. 466.)

The privileges and powers of the Herrenhaus are co-ordinate with those of the Abgeordnetenhaus, save that Money Bills and Bills fixing the number of military recruits must be presented first in the Lower Chamber. (Ogg, p. 465.)

HUNGARY.

Number.—The Table of Magnates (Förendihaz) is variable in number. At the session of 1910-11 it had 387 members. (Ogg, The Governments of Europe, p. 492.)

Method of Appointment.—The membership is exceedingly complex, resting on the various principles of hereditary right, ex-officio qualification, royal nomination, and election. It is essentially a perpetuation of the ancient Table of Magnates which in the 16th century began to sit separately as an aristocratic body. Law VII of 1885, altering the organization of the Table of Magnates (see Dodd, Modern Constitutions, vol. 1, pp. 100-104), embodies with slight modifications the traditional composition of the Chamber. (Ogg, p. 492.) Under this law the members (with their respective numbers in 1910-11 as given by Ogg) are those who sit by virtue:

1. Of hereditary right; archdukes of the royal family of full age, 18; and male members of the Hungarian nobility of 24 years of age with property qualification, that is, paying a land tax of 6,000 crowns annually, 236 (secs. 1, 2);
2. Of their rank or office; curators of the Crown, standard bearers of the Kingdom, 15; presidents of the Supreme Court, 2; dignitaries of the Roman Catholic and Oriental Greek Churches, 42; representatives of the Protestant Churches, 13 (secs. 1, 4);
3. Of their appointment for life by the King, made on the proposal of the Council of Ministers in recognition of merit, 60. The number appointed for life hereafter is not to exceed 30 (secs. 1, 5);
4. Of election by the Diet of Croatia-Slavonia, 3 (sec. 1).

Hungary has what amounts to the parliamentary system, with responsible government. Its constitution like the English is embodied in a maze of ancient statutes and customs and is the distinctive creation of a people possessed of a rare genius for politics and government.

In practice the Upper House is distinctly subordinate to the Lower, to which alone the Ministers are responsible. Any member may acquire by due process of election a seat in the Lower Chamber and the privilege is one of which many peers are not reluctant to avail themselves. Upon election to the Lower House a peer's right to sit in the Upper Chamber is of course suspended, but when the term of service in the popular branch has expired the prior rank is revived automatically. (Ogg, 489-493.)
ITALY.

(References are to the constitution, or statuto fondamentale del Regno, granted March 4, 1848, by King Charles Albert to his Piedmontese subjects and continued through the Italian union and down to the present without change; Dodd, Modern Constitutions; Ogg, The Governments of Europe.)

Number.—There is no limit to the number of members who may be appointed to the Senate (Senato). In 1910 there were 383.

Term of Office.—The term is for life. (Const., art. 33.)

Method of Appointment; Qualification.—Senators are appointed by the King. He is restricted by the necessity of taking all appointees from twenty-one stipulated classes of citizens, which may be reduced broadly to three

(1) High officials of Church and State;
(2) Persons of fame, in science or literature, or who by any kind of services or merit have brought distinction to the country; and
(3) Persons who for at least three years have paid direct property or business taxes to the amount of $600.

Adjustment of Disagreements between the Houses.—There is no provision for the settlement of disputes between the Chambers. But, as seen, there is no limitation on the number who may be appointed to the Senate, and it said that on several occasions the prerogative of appointment has been exercised for the specific purpose of influencing the political complexion of the upper chamber. (Ogg, p. 369.)

The same writer observes that Italy has the Parliamentary system—perhaps nearer to the English than any other European country.

Proposed Reform of the Senate.—A commission appointed to study reform of the Senate reported in 1910. It proposed a carefully-considered scheme for the popularizing and strengthening of the senatorial body. The substance of the plan was in brief:

(1) That the chamber should henceforth be composed of 350 members;
(2) That the membership should be divided into three categories, designated respectively as officials, men of science and education, and men of political or economic status; and
(3) That members of the first category, not to exceed 120, should be appointed, as are all members at present, by the Crown; but members of the other two should be elected by fifteen special colleges so constituted that their membership would represent actual and varied groups of interests throughout the nation. The professors of the universities, for example, organized for the purpose as an electoral college, should be authorized to choose a contingent of thirty representatives. Other elements to be admitted to a definite participation in the elections should include former deputies, large taxpayers, provincial and communal assemblies, chambers of commerce, agricultural societies and working men's associations. The primary idea of those who proposed the scheme was that through its adoption there would be established a vital contact between the Senate and the varied forces that contribute to the life of the nation.

The Senate voted not to approve the commission's report. It is said to be not improbable, however, that some such plan of modernization as was prepared by the Commission of 1910 eventually will be reached. (Ogg, pp. 373-4.)
NORWAY.

(References are to the Eidsvold Constitution of Nov. 4, 1814, which may be found in Dodd, Modern Constitutions, vol. 2, p. 123; and to Ogg, the Governments of Europe.)

Number.—The Lagthing, or Upper House, consists of one-fourth of the total number of members elected to the Storthing (i.e., Parliament as a whole). The whole number is 123; the number of the Lagthing therefore 31. (Const., art. 73; Ogg, p. 581.)

Method of Election.—Members are chosen simply to the Storthing, or Parliament, as a whole. There are forty-one urban and eighty-two rural districts and each district returns one member. (Art. 57-59.) At its first regular session following a general election the Storthing divides itself into two chambers. A fourth of its membership is selected by the Storthing to constitute the Lagthing (the remaining three-fourths compromise the Odelsting). This division holds until the succeeding election. (Const., art. 73; Ogg, p. 581-3.)

Elections to the Storthing are direct. Each political unit having a municipal government of its own comprises a voting precinct. If at the first ballot no candidate in the district receives a majority of all the votes cast, a second ballot is taken, when a simple plurality is decisive. (Art. 59; Ogg, 582.)

Term of Office.—Elections take place every third year. (Art. 54.)

Qualifications.—A representative must be 30 years old, a resident within the kingdom for ten years, and, unless he has been a Minister or Councillor of State, a qualified voter in the election district for which he is chosen. (Art. 61.)

Qualifications of Electors.—There is universal manhood suffrage and a large measure of female suffrage. (Art. 50; Ogg, p. 581.)

Adjustment of Disagreements between the Houses.—The structure of this legislature, comprising essentially a single body, which, however, for purely legislative purposes is divided into two chambers or sections, is unique and it represents a curious cross between the principles of unicameral and bicameral organization. All Bills are presented first in the Odelsting. Only in the event that a measure passes the Odelsthing is it presented at all in the Lagthing, the sole function of the latter being to act as a check upon the larger chamber. The Lagthing may either approve or reject but may not amend Bills. A measure rejected is returned with reasons for rejection. Three courses are then open to the Odelsting: to drop the measure, to submit it in amended form, or to re-submit it unchanged. When a Bill has been twice presented to the Lagthing and twice rejected the two chambers are convened in joint session and in this consolidated body proposals are carried by a two-thirds vote.

Norway has the parliamentary system.

SWEDEN.

Number.—The Upper House of the Riksdag consists of 150 members. (Ogg, p. 59; Dodd, vol. 2, p. 232.)

Method of Election.—The members are chosen by ballot after the principle of proportional representation, by the twenty-five Landstings or provincial assemblies, and by the corporations of live of the largest towns. These electoral bodies are arranged in six groups, in one of which an election takes place in September of every year. Their own election to office is direct, and on the proportional system. (Ogg, p. 591-592; Dodd, vol. 2, p. 232.)
SESSIONAL PAPER No. 246a

Term of Office.—The term is six years, part of the Chamber being elected every year as shown above. (Ogg, p. 591.)

Qualifications.—A member must be of Swedish birth, 35 years old, and during the three years prior to his election must have owned taxable property valued at 50,000 kroner or paid taxes on an annual income of at least 3,000 kroner.

Adjustment of Disagreements between the Houses.—Both Houses have an equal competence in legislation and finance, but financial disputes are submitted to a common vote of both Houses sitting together, and in this joint sitting the 250 members of the Lower Chamber have the majority.

It is said that the responsibility of ministers lies so much more directly to the King than to the legislature that what is commonly understood as the parliamentary system can hardly be said to exist in Sweden. (Ogg, p. 591.)

THE SECOND CHAMBER PROBLEM IN GENERAL.

A more exhaustive survey of the constitution and practice of Second Chambers than is within the scope of this paper may be had by reference to the appended bibliography. This list of authorities will be found also to comprehend the best critical consideration of the general Second Chamber problem, showing the operation of the various systems and in what respects defects and difficulties have made themselves manifest.

"The most striking general fact," one observer says, "is that practically everywhere there is a recognized Second Chamber problem, and nowhere has that problem been solved. Everywhere there is dissatisfaction and irritation, a feeling that the secret of combining constitutional stability with legislative efficiency has not yet been discovered. A large number of experiments have been and are being tried, but the most that can be said for the best of them is that they give a little less general dissatisfaction than the rest." But to undertake to state the defects and difficulties that have manifested themselves is in reality to go about an inquiry into what constitutes the ideal Second Chamber. This is to enter a field that is peculiarly one of opinion, and one moreover in which political temper and theories of the social union play a large part. Nor is opinion on the subject susceptible of statement or summarization in general, universal propositions; for each system, for each country, the question is conditioned by its own setting of tradition, of habit, of political thinking and so on. For these reasons it would seem of extremely doubtful value to attempt to recapitulate here what has been written on the subject. Reference is therefore made to the following works as affording opportunity for an independent and thorough survey of the question:

REPORT OF ROYAL COMMISSION ON PENITENTIARIES.

HONOURABLE C. J. DOHERTY,
Minister of Justice,
Ottawa, Ont.

Sir,—Your Commissioners, appointed by Order in Council, August 25, 1913, to investigate the state and management of the Kingston Penitentiary, &c., have the honour to present their report.

The terms of the commission, as set forth in the report of the Committee of the Privy Council, are as follows:—

The Committee of the Privy Council, on the recommendation of the Minister of Justice, advise that GEORGE MILNES MACDONNELL, K.C., of Kingston; FREDERICK ETHERINGTON, M.D., of Kingston, and JOSEPH PATRICK DOWNEY, of Orillia, be appointed Commissioners under the provisions of Part 11 of the Inquiries Act, to investigate and report upon the following matter:—

(a) The state and management of the Kingston Penitentiary;
(b) The conduct of the officers and employees of said penitentiary, so far as the same relates to their official duties, and
(c) Generally, the subject of the conduct and administration of penitentiaries, including such methods as may conducive to the permanent reformation of the convicts, and, without prejudice to the punishment which convicts should properly undergo and without undue burden upon the public funds, tend to mitigate as far as may be found possible the sufferings entailed by their confinement upon those dependent upon them.

Provided that the inquiries under paragraphs (a) and (b) shall not extend back over a longer period than five years, except insofar as the commissioners may deem it desirable, in the public interest, to inquire into any particular matter or matters antecedent to such period.

Pursuant to the foregoing instructions, we began our sittings at Kingston on September 19, 1913, and continued them at intervals until March 27, 1914. The witnesses examined included the Inspectors of Penitentiaries, officers and guards and ex-employees of the Kingston Penitentiary and several inmates of the prison. Sessions were also held at Toronto, where evidence on the general question of prison management was adduced.

To acquaint themselves with the methods employed in other prisons, your Commissioners visited some of the leading penal institutions of the United States. These included the State Prison at Stillwater, Minnesota; Farm Colony, Cleveland, Ohio; State Reformatory, Mansfield, Ohio; House of Correction, Detroit, Michigan; State Reformatory, Concord, Mass.; State Prison, Charlestown, Mass.; Women’s Reformatory, Framingham, Mass.; State Prison, Auburn, N.Y.; and State Reformatory, Elmira, N.Y. We also had the privilege of inspecting the Provincial Reformatory at Guelph. At all these institutions, your Commissioners were treated by the wardens and other officials with the greatest kindness and courtesy and every facility was cheerfully afforded them for prosecuting their investigation. Profitable interviews were also had with leading authorities not actually engaged in prison administration. Among these, we may mention Dr. Charles R. Henderson, Esq., American
Representative at the International Prison Congress; Dr. Healy of the Juvenile Psychiatric Clinic, Chicago; Hon. Harris B. Cooley, Commissioner of Public Welfare, Cleveland; Frank M. Randall, Chairman of Prison Commission, T. M. Osborne, Chairman of New York Prison Commission, Dr. E. Stagg Whitin, Secretary New York Prison Commission; Hon. W. J. Hanna, Provincial Secretary, Ontario; S. A. Armstrong, Esq., Assistant Provincial Secretary; Dr. Bruce Smith, Inspector of Prisons and Hospitals; Dr. C. K. Clarke, Superintendent, Toronto General Hospital; Major Fraser of the Prisoners' Aid Department of the Salvation Army, and Colonel Irvine, Warden of the Kingston Penitentiary.

The views of organized labour on the industrial phase of the question were ably presented by J. C. Watters, Esq., President of the Dominion Trades and Labour Congress; James Watt, Esq., President, and R. J. Stephenson, Esq., delegate of the Trades and Labour Council of Toronto. To all these gentlemen, your Commissioners desire to return sincere thanks for their valued information and assistance.

THE PURPOSE OF KINGSTON PENITENTIARY.

On the 6th of March, 1834, the Parliament of Upper Canada passed an Act "for the maintenance and government of the Provincial Penitentiary opened near Kingston." An extract from the preamble of this Act reads as follows:—

"Whereas, if many offenders convicted of crimes were ordered to solitary imprisonment, accompanied by well-regulated labour and religious instruction, it might be a means, under Providence, not only of deterring others from the commission of like crimes but also of reforming the individual and inuring them to habits of industry, etc., etc."

The institution remained under the control of the old Provincial Parliament until Confederation, when it was assumed by the Federal Government and became a prison for long-term offenders. From the date of its establishment down to the present time, the terms of the Act, as far as the treatment of the inmates is concerned, appear to have been fairly well carried out. Solitary imprisonment, labour and religious instructions have been the only agencies employed for the reclamation of the unfortunates. The first of these three has always been a prominent feature of the discipline. Probably in no prison on the continent do the working population spend as many hours alone in their cells as they do in our Dominion penitentiaries. They leave their cells to work and they return to them to eat and meditate and sleep. On Sundays the single break in the monotony of life in the cell is the hour of Divine service, and when a holiday falls on Monday that hour is the only relief enjoyed for two whole days and two nights. We feel, therefore, we are justified in saying that the theory of "solitary imprisonment" as a deterrent and a reformative agency has been given a thorough trial in our penitentiaries.

Labour, the second corrective influence stipulated in the Act, has also been rigidly insisted upon. Years ago, when there was a system of productive industries in the penitentiaries, the intention of the Act to provide "well-regulated labour" was, no doubt, fairly carried out. The abandonment of these industries has made it physically impossible to employ the population at "well-regulated labour." The only excuse for the stone pile, for the product of which there is no pressing need, is that there is no other way of keeping the men at work. The idea that the prisoners must work at hard labour all the time they are outside their cells, even if the product of their labour is of no value, has been carried to the extreme. It was urged by one of the inspectors, as an excuse for not giving a reasonable period to the education of the illiterate during the day time, that the school would interfere with the labour of the prison. If an hour
or two every day were given up to school for some and exercise in the yard for others, less stones would be broken, 'tis true. But some men, whose spirits are being crushed, and whose manhood is being debased, might be saved to future good citizenship if a civilizing help in the way of a school or a breath of the open air each day could be introduced to brighten their lives.

The religious instruction contemplated by the Act has been faithfully given by a Protestant and a Roman Catholic chaplain. Worthy and devoted men have been and now are in charge of this work, and insofar as spiritual ministrations can have a good effect amid conditions calculated largely to develop moroseness and resentment, they are doing good work.

THE BUILDINGS.

The buildings of the Kingston Penitentiary are of limestone, taken from the institutional quarries. The main building, which is situated in the centre of the plot, has three cell blocks—east, west, and south wings—completed. The north wing, now occupied as officers' quarters, is to be reconstructed for a cell block. The east and west blocks have 152 cells each; the south, 144. Attached to the east wing is an hospital with 36 cells. On the extremity of the west wing are the kitchen and bake-room, and above the latter the Protestant and Roman Catholic chapels. The female prison is in an enclosure west of the main entrance, and is well isolated from the other buildings. South of the main building are the workshops, built in the form of a cross. These comprise, in the west wing, a stone-cutting shop on ground floor, tailorshop and shoe shop above. In the east wing is the blacksmith shop with the carpenters, tinsmiths and painters on the second floor. The boiler-house and dynamo rooms occupy the north wing; and the laundry and change rooms the south. On the west of the rectangle separating the cell houses from the shops is the hospital of the insane, with 46 cells; while the prison of isolation, with a capacity of 114, is on the opposite side of the yard. Behind the prison of isolation the stone-breaking shed is situated.

In the interior construction, what is known as the Auburn system has been closely followed. The cell blocks are in the centre, with the corridors on the outside. The chief argument in favour of the inside cell is the added security which two walls, or sets of bars, afford. From the hygienic standpoint, outside cells are to be preferred, as they are more easily ventilated and have direct sunlight instead of being lighted from the corridor. The only example of the outside cell construction that your Commissioners were privileged to observe was at the Provincial Reformatory at Guelph, which promises to become the model prison of this continent.

The cells throughout the institution have, under the direction of Inspector Stewart, been enlarged, proper sanitary equipment installed, and the lighting and ventilation improved. With the exception of the hospital and asylum divisions, which are dealt with elsewhere, the cells blocks are as good as the structural character of the building will permit. All the cells were clean and the bedding properly looked after. The cells in the prison of isolation are superior to those in the central cell house.

The conditions in the workshops were found to be fairly satisfactory. Like the rest of the buildings they are old style structure and their lighting and ventilation could be improved. The ceilings are high and there was no evidence of congestion of workers in any particular shop. To this statement, exception must be made in the case of the stone-breaking shop. Every feature of that department was bad. The atmosphere was charged with stone dust and there was apparently no adequate provision for carrying it away. The closets, situated at one end of the buildings, were poorly constructed and foul-smelling. Over seventy prisoners, some of them mere boys, were at work in this department when the Commissioners made their visits. They were arranged in rows, facing each other, and the stone to be broken was piled in a long heap between them. As the raw material was reduced to the required size, fresh supplies were wheeled in by tenders from the yard. There was perfect order
among the men. Not a word was spoken. But the monotonous raps of the hammers, the sullen, whitened faces of the forms, half crouching over their unhealthy, unprofitable, degrading tasks, were a mute but powerful denunciation of the system that permitted, or rendered necessary, such an outrage. Nothing has been said, nothing can be said, in defence of this twentieth century reproduction of the unceasing toil of the galley-slave.

**A Convict’s Experience.**

To give an idea of the regulations of a Canadian penitentiary, it might be well to follow a convict through some phases of his experience. When he arrives at the prison, he is taken before the warden for an interview and then handed over to the chief keeper. That officer records his measurements and other physical characteristics in a book kept for the purpose. The personal belongings, jewelry, money, etc., of the prisoner are inventoried. Then he is put in charge of the chief keeper’s officer for a bath, hair crop and shave. Finally he is dressed in the prison garb with his number on the back of his coat.

Assigned his cell, the convict takes his place in the routine of the prison. He rises at six-thirty in the morning, washes himself, makes his bed, and at seven marches out for breakfast. This he receives in a tin vessel as he moves with the line past the serving boards in the kitchen. Returning to the cell, he eats his meal with a spoon. Knives and forks are not allowed. As he goes out to work, he deposits his dish and spoon in the kitchen. At noon he takes up his dinner as he passes to his cell. There he pulls the meat apart with his fingers, eats it, and carries back the empty vessel to the kitchen as he goes to work. When he quits his labours at night, the performance is repeated. He snatches his supper on his way to the cell and there remains until the following morning. Silence is the rule throughout the day. He must not speak to an officer or fellow convict while at work “except from necessity or with respect to the work.” He must not speak nor look around while in line and of course he has no one to speak to in his cell. Thus the man’s life in prison is divided between the cell and work shop or stone pile, with not even a break in the monotony at meal time. In his cell he is not allowed pictures or photographs of his relatives; he is not allowed to have or read a newspaper, but he is furnished books from the prison library. If he is unable to read, he must put in fourteen hours of each day alone, sleeping or meditating. On Sunday, the whole day—with the exception of one hour for Divine service—is spent in the cell, and when a holiday falls on Monday, he celebrates it with an additional twenty-four hours of solitary confinement.

A convict whose conduct is satisfactory may receive visits from members of his family once in three months and may write to members of his family once in two months. He may “receive letters from relatives or friends, but such letters must be short and devoted exclusively to family or business matters.” No enclosure such as newspaper clippings, pictures, cards, stamps, etc., are delivered. Christmas boxes, hampers or packages of fruit, food, or confectionery are not permitted to be sent to the prison.”

Thus it will be seen the daily round of the penitentiary offers little to stimulate or encourage the well-disposed convict. On the contrary, its silence and solitude must breed moroseness and resentfulness. One convict said to us (page ) : “If a man is battered down until he feels that he is nothing much more above the beast, how can you expect him to go out feeling better? It requires a very strong will to keep you from feeling that you are finished.”

The remission of sentence for good conduct offers some encouragement. This is determined by the warden, and is not allowed until after the expiry of the first six months of imprisonment. A report for any infringement of the regulations may lose the prisoner his remission.

**The Department for Women.**

The dozen women prisoners are housed in a new and suitable building, separate and distinct from all other buildings. It appears that this department is conducted
in a satisfactory manner. Yet it should be stated that the interests of all concerned would be best served if these few inmates were transferred to an institution for women. It may be possible that, as has been suggested elsewhere in this report, in connection with certain other classes, arrangements might be made with the provincial authorities for the custody of all female offenders.

THE SCHOOL.

The indifferent attempt to improve the illiterate at Kingston Penitentiary can scarcely be dignified by the name of school. On four days in the week, the convicts who are disposed to attend class are lined up, when they have finished their dinner at 12.15, and marched to the school. They have to be back in their cells at one o’clock, so that half an hour, or at most not more than forty minutes, is available for their instruction each day. The reasons given why the time for school is taken from the noon rest hour are: (1) That the judge who commits a man to the penitentiary ‘condemns him to hard labour and sentences him not to go to school,’ and (2) that it would be discrimination to send some convicts to school during working hours and leave the others at their regular labour (Inspector Stewart, page 10). This view is supported on the theory that it is not the duty of the State to give education to the illiterate who find their way into prison; they are sent to prison to labour and they must put in the regular hours of work, whether there is any value in the product of their labour or not. From this view our Commissioners emphatically dissent. The lack of elementary education may have been a contributing factor to the downfall of many prisoners. At any rate, it is a serious handicap in life and must be felt with particular severity by the man who, quitting prison and weighted with the burden that incarceration has left upon him, is anxious to make an honest living. What we have said elsewhere must be repeated here: The State’s duty to the prisoner does not end with his punishment; it should employ all reasonable means to reform him and make him an honest contributor to the wealth of the nation, instead of continuing a charge upon its financial resources. On no higher ground than the material interests of the State, the education of illiterate young prisoners is, therefore, desirable. But the humanitarian side of the question cannot be ignored. If we are to maintain our penitentiaries as schools of crime, all education—intellectual and industrial—should be barred. Ignorance and inefficiency and a penitentiary experience must broaden the way that leads to a confirmed criminal career. On the other hand, the school in prison has opened the door of hope to many a convict. When he learns to read and write he is laying the foundation of a self dependence that, strengthened by honest resolves, will be a strong inspiration to him to live a better life. Fail he may, and fail many of them do, but it is our duty to give him a fair chance in the hard struggle for rehabilitation.

There does not appear to be much force in the objection that a school during working hours means discrimination against those who do not require education. The prejudice against special treatment for any prisoner or class of prisoners has existed since the days of the treadmill. Then all went through the same monotonous daily grind. The inauguration of diversified prison industries began the era of discrimination, for it became necessary that some men should do disagreeable work while others were engaged at attractive occupations. There is discrimination in every one of our penitentiaries to-day, and this discrimination becomes more pronounced if we are to offer any encouragement to the man who is anxious to improve himself and adjust his future life to the requirements of law and order.

A school during the afternoon, taking two classes each day, would meet the situation. The teacher’s time might be occupied with other duties during the morning. These are details, however, that can be easily worked out, once it is decided to establish a proper school in each penitentiary.
THE DEPARTMENT FOR THE INSANE.

On the occasion of their first visit to the Insane Ward, your Commissioners were surprised to find, on a beautiful September afternoon, some forty patients congregated in one room. When the guards were asked why these men were not taken out for exercise, no satisfactory reply was forthcoming. This and subsequent evidence seemed to indicate that in relation to the care of the insane, the course followed was the one which gave the least amount of trouble to those in charge. Indeed, a cursory inspection and inquiry were sufficient to show that in regard to accommodation, medical oversight and general care and treatment, a thorough investigation was needed. In order to obtain an expert opinion upon these matters, Dr. E. H. Young, Assistant Superintendent of Rockwood Hospital for the Insane, was engaged to make a special report. From this report, we quote:

"Condition of Insane Ward.

"The building in which the insane are at present housed is, in my opinion, entirely unsuited to the purpose for which it is used. It is defective in structural arrangement, lacking in nursing and medical facilities and devoid of means of providing occupation. The physical condition of the patients shows the effect of improper diet, insufficient exercise and fresh air. Each patient is locked in his cell, without proper sanitary conveniences from 4 p.m. to 7 a.m.; the door of each cell is simply a grating, and there is no provision for the isolation and care of noisy and filthy patients. There is no provision for the proper classification of patients, all of whom are gathered together in a large day room, the acute with the chronic, the old and helpless with the impulsive and violent, the lucid with the demented."

As long ago as 1886, a British alienist, Dr. Hack Tuke, made the observation that "for criminals of the worst class this building is no doubt admirably suited, but it is astonishing that it should have been constructed for lunatics in recent times."

The Warden, in his annual report for 1908, described the conditions in these words: "To this miserable abode, the most antiquated of our prison structures, are consigned the irresponsible unfortunate whose crimes led to insanity or whose insanity led to crime. The cells remain as they were originally constructed, while every other cell-block has been demolished and rebuilt with compartments twice the size of the old one and equipped according to modern ideas of sanitation and comfort. This ward for the insane runs parallel with the prison wall between which and the buildings runs the exercise yard allotted to the inmates. Stone wall to the right of them, stone wall to the left of them, stone wall in any direction they may look unless they look upward to the sky. In winter and during inclement weather, the few hours they are released from their cells they spend in one large, dingy, unsanitary room where they mingle promiscuously, with no entertainment except reading and playing checkers. They have no hospital oversight, no trained attendants, nothing in fact but prison police who lock and unlock the doors and follow them into the yard and back again to their cells in endless, monotonous routine. The medical superintendent, who is prison surgeon, makes a hurried call once a day (Sundays excepted), this constituting the whole care and treatment of the criminal insane."

There was no attempt made in any quarter to question the truth of these statements.

From Dr. Phelan’s examination re Dr. Young’s report. Page : 

"Q. To the substance of this report you have no objection?—A. To the main substance I have no objection."
And in a communication to the Commission the surgeon states:—

"I also agree with the remarks in reference to the unsuitable character of the present building and its surroundings and the impossibility it presents to the proper housing, segregation and treatment of the insane convicts."

Further, he says:—

"It must be admitted that the system and conditions at present existing in the Kingston Penitentiary generally are in a great measure behind the times, and that such reformation must necessarily be made as will be in consonance with improved methods."

Inspector Stewart tacitly admits the correctness of these views:—

"Q. The building in which the insane are housed is entirely unsuited for the purpose for which it is used?—A. I did not think it was suitable and I believe suitable provision cannot be made within the walls of the penitentiary."

"Q. Don't you think you should have urged more strongly the improvement of these conditions?—A. I do not think insane men should be kept in there."

And again he says:—

"I admit they (i.e., the conditions) are not right, but I do not believe the men (i.e., insane should be here at all.)"

There is admittedly a close relationship between mental deficiency and insanity and crime. The proportion of defectives shown by an investigation reported by the Russell Sage Foundation in the Reformatory of New York, New Jersey and Illinois, is thirty per cent. In the Bedford Reformatory for women, the Industrial Schools of Lancaster, etc., and Baltimore, one-half the number of inmates is found to be defective. In our country, this aspect of the question of crime has received no consideration. No care is taken to ensure the detection of defectives and no provision is made for their custody or training. They are not understood by the court or prison officers. They are sentenced, discharged and resentenced, at great expense to the country. When free they reproduce their kind, often in large numbers — in prison they prove a source of constant worry and render the maintenance of prison discipline difficult or impossible.

As a result of the findings of a Royal Commission, the British Parliament has enacted legislation which provides for the custody of this class. See Mental Deficiency Act, 1913, sections 8 and 9, which provide:—

"that in the case a convicted criminal is found, on medical evidence, to be a defective within the meaning of the Act, the Court may order him to be detained in an institution for defectives, and in the case of criminals undergoing penal servitude, who are found on medical evidence to be defective, they may be placed in an institution for defectives."

These questions press for consideration and the first step should be the employment of a physician trained in psychiatry, who could advise the Government in regard to these and associated questions.

Your Commissioners unreservedly condemn the provisions made for the care and treatment of the insane at this institution, the only one in the country which is supposed to be especially equipped for such a class. The conditions are primitive, indeed. "It is defective in structural arrangements, lacking in nursing and medical facilities, and devoid of any means of providing occupation." This is a bald statement of fact, and many an unfortunate must have been deprived of a fair chance of recovery by reason of the State's unpardonable neglect.

Further, we find that the insane inmates have not received the attention which their state demanded, and, in some instances, they have been subjected to unjustifiable punishments.

Proof of the first particular is given by the warden in his report of 1908, quoted above, and in the evidence of the surgeon (page ...) :—
"Q. What special treatment are the insane convicts in the prison receiving?—A. They are not receiving any special treatment.

Q. Are they receiving any different treatment from other convicts?—A. They are receiving just about the same treatment.

Q. And any different treatment they receive would be from a disciplinary, rather than from a medical standpoint?—A. Yes."

Page :

"Q. Do you only see those who report for the sick parade?—A. I ask for the others, and ask about their symptoms and anything to inform me.

Q. What is the average number a day that you see?—A. I could not tell you.

Q. We could tell from the book?—A. Yes.

Q. Two or three a day seems to be the average?—A. Yes.

Q. How often do you see every man?—A. I do not see them very often.

Q. How do you keep in touch with the progress of the disease?—A. I inquire regarding their symptoms.

Q. From whom?—A. The keeper.

Q. What does he know?—A. He knows their conduct and it is by conduct that we judge the insane condition of any man, and only by conduct."

From this evidence, it is obvious that the forty odd insane patients have not been receiving the care and attention which their condition demanded. In this connection it must be noted that for the added duty of treating the insane the surgeon receives the sum of $1,000 yearly. On the other hand, it may be said in extenuation that this system has been in operation many years, and throughout the whole period had been accepted, with apparent approval, by the Department of Justice and its inspectors.

There was evidence to show that insane patients had been punished by tubbing. "Tubbing" consists of forcibly placing a convict in a bath filled with cold water, and holding him there at the discretion of the operators. An attempt was made to explain away the tubbing as a necessity, where the victims were in a filthy condition and refused to bathe; also as a substitute for the continuous bath used in hospitals for the insane to quiet excited cases. It was made abundantly clear to your Commissioners that the tubbing at Kingston was resorted to neither for sanitary nor therapeutic reasons, but as a punishment. There was no evidence to show that the tubbing had official sanction. The guards said they acted without instruction and on their own responsibility. The only official act pertaining to the practice appears to have been a notice from the surgeon, prohibiting it. Explaining this, the surgeon stated that he had heard rumours of tubbing and had thought well to issue the warning.

Apart from the inhumanity of the punishment, this tubbing performance reveals the management of the department for the insane in an unenviable light. Poor creatures, bereft of their reason, are surely entitled, even if they are criminals, to be left to the guardianship of men with some instincts of humanity.

It being generally agreed that the condition of the insane is and has been for years altogether unsatisfactory, the question "Who are responsible?" demands an answer. The responsibility falls primarily upon two men, the surgeon and the inspector. The former, in his annual reports, should have given expression to views such as he presented in his evidence before the commission. This was clearly his duty and would have relieved him of responsibility, but unfortunately a perusal of his reports leaves one with the impression that the state of the insane left nothing to be desired.

Year after year, Inspector Stewart accepted, without adverse comment, the existing conditions. When questioned upon this matter his answer is unsatisfactory. (Page )—

"If it were in my report it would not receive any attention. If you show me any report they paid attention to, then I will take the blame."
SESSIONAL PAPER No. 252

It may be fairly said that the manner of dealing with the insane is a striking criticism, not only of the individuals concerned, but also of the system of administration which has permitted such abuses to go unchallenged all these years.

The Government should employ forthwith a competent alienist, in order that he may undertake the immediate amelioration of the conditions at Kingston Penitentiary and that he may advise the Government in regard to these technical matters.

Steps should be taken to make suitable and permanent arrangements for the care and treatment of the insane, according to modern practice.

Two plans are available: It is possible that arrangements may be made with the Provincial Governments for the care of the criminal insane. This is already done in Western Canada. The practicability of such a plan does not come within the scope of our investigation. In favour of this scheme, it may be pointed out that the provinces have the entire equipment necessary for the care of the insane. Transportation difficulties would be eliminated if this plan were adopted. On the other hand, the heads of the provincial institutions would probably oppose this suggestion. In recent years, the public has come to regard the institutions for the insane as hospitals and there would be a decided sentimental objection to the admittance of those who had been convicted of crime. In reality there is no valid objection. In practice the mentally unbalanced citizen, who commits a crime, is sent to the provincial hospital if his derangement happens to be detected before he is sentenced—and to the insane ward at Kingston if his disease be not recognized until he has been for a time incarcerated.

The alternative plan which has been followed in other countries and which we think must be adopted here, is for the Dominion to build, equip, and man an institution exclusively for the criminal insane, separate from a general prison both in site and administration. It may be thought that there is not a sufficient number of criminal insane, coming under the purview of the Federal authorities, to warrant such an undertaking, but there is not the least doubt that scattered through the prison population, is a large number whose mental state warrants their removal to an institution such as is proposed. That this is the case at Kingston, we have ample proof.

THE HOSPITAL AND MEDICAL MATTERS GENERALLY.

The examination of the newcomer, both on the mental and physical sides, is conducted in a most superficial manner. There are practically no records. An individual who is to be incarcerated for a term of years should receive a thorough examination, the details of which must be carefully recorded if the labour is not to be lost. This is necessary for two reasons: First, in order that the present or subsequent illness may be treated intelligently; and, second, that the general prison population be protected against communicable disease.

For many reasons, the examination of the prisoners mentally, should be a searching one. If this had been the practice, a deal of trouble would have been avoided. As an example of what is meant, the following case may be cited:—

Convict No. P. 108. Age, 50 years.
First sentence in 1906 for rape—4 years and 25 lashes.
Discharged in 1910 and was recommitted for a similar offence within three months, with a sentence of 20 years and lashes.

Between November, 1910, and September, 1913, there were made against this man no less than sixty-seven reports for breaches of regulations. Many of these offences were visited with severe punishment, even to hosing with cold water at 60 pounds pressure. A good deal of his time has been spent in the punishment cells and in the prison of isolation.

An examination by one competent would have disclosed the fact that this was an unfortunate imbecile (page ) and as such not responsible for his actions, and that any endeavour to make him conform to ordinary prison discipline by the inflicted
tion of punishment was futile—and much worse. It may be added that this is by no means an isolated case.

Further, we find that the medical service has not been sufficient. If the health of 500 inmates is to receive adequate consideration more than one or two hours' daily attendance is necessary.

HOSPITAL.

It is difficult to conceive what characteristics of the building set apart for the care of the sick at the Kingston Penitentiary warrant it being designated "hospital." There is nothing in the building or equipment which justifies the name. Some 36 inside cells, inferior in their arrangements to the cells occupied by the healthy prisoners, house those whose illness is serious enough to make necessary their admission. In these cells there is not effective ventilation, and save for an obsolete bucket for the excreta, sanitary appliances are absent. The two baths and water-closets are hopelessly out of date. Under no conditions are the patients permitted to have exercise in the fresh air, nor indeed to leave their cells for any purpose.

The operating room (so-called), where serious cases have been, and must be dealt with as they arise, has an old wooden table but no other equipment. When your Commissioners visited this room, many old books lay about the floor and the place was not clean. In all, there was a condition of affairs which should not have been tolerated. Again, there is to be noted an almost complete absence of satisfactory records. Inspector Stewart's commendation of the existing conditions can only mean that he is not competent to express an opinion upon this aspect of prison management. Although his annual reports give a different impression, the surgeon in his evidence before the Commission stated that many changes were necessary to make the hospital what it should be.

The personnel of the hospital staff does not meet with approval. There are two dispensers (called hospital overseers) who are responsible to the surgeon for the management of this department. These men do little or no nursing, this very important work being left to the convict orderlies, a practice to be entirely condemned.

We have no hesitation in reaching the following conclusions:

The hospital, in building, equipment, and sanitation is inadequate and out of date, and the personnel is not adapted to proper hospital administration.

There should be provided a new hospital, modern in plan and equipment, and the hospital staff should be reorganized, the members to consist of: A visiting surgeon, a resident physician, two trained male nurses, and convict orderlies.

There are many reasons for such changes. It is manifestly impossible to obtain the services of a competent physician on full time at the salary fixed by the regulations. It is taken for granted that the insane will be otherwise provided for, so that the present salary would be considerably reduced. Further, a physician in active practice will the more likely be abreast of modern methods and will be disposed to treat the prisoner inside and the patient outside with the same care and consideration. The enervating effects of a purely institutional practice are well known. The visiting surgeon would be responsible for the sick. He should visit the prison daily and attend the members of the staff at their homes.

For the office of resident physician, there should be employed a recent graduate who has a psychiatric training. His duties may be outlined thus: He should carry out the directions of the visiting surgeon: conduct and keep records of thorough mental and physical examinations of all prisoners: do laboratory work and deal with emergencies and minor ailments.
SESSIONAL PAPER No. 252

There is absolutely no need of two qualified dispensers, as at present, but there is real need of men to do the actual nursing. The nurses under the direction of the resident surgeon could do all the necessary compounding of medicines. The convict orderlies should have no part in the actual treatment of the sick. Their duties should be confined to the performance of menial work.

PUNITIVE FEATURES OF PENITENTIARY REGULATIONS.

Reference has already been made to some of the regulations of Canadian penitentiaries that stamp them as purely punitive. A more detailed analysis of this feature of the system may be in order. The cellular system of feeding is defended on two grounds: (1) To remove the danger of organized revolt; and (2) it is preferred by the majority of the prisoners.

Of all the prisons that your Commissioners visited, in only one did they find the cellular system of feeding in operation. That was the old State prison at Charlestown, Mass. In no prison where the congregate system is in vogue, was the danger of mutiny considered a serious possibility. And this too in face of the fact that in some of those prisons the proportion of guards to population was one to ten, while at Kingston it is about one to six. The fact is, that the more closely the treatment of the prisoner approximates the treatment of the free man, the less likelihood is there of individual or organized outbreaks of violence. When men are allowed to sit down to a table and eat with knife and fork like civilized beings, they are in a more equable frame of mind than if they are made to carry their food to their cells and tear it to pieces with their fingers.

The second argument in favour of the cellular system would seem to have more justification. One or two convicts, testifying before the Commission, said they preferred eating in their cells to sitting down with the others at a table. The reason they gave was the possibly disgusting conduct of a prisoner seated beside them. Here again comes the question of classification. It has not been urged that in a dining room the prisoners should be arranged without regard to their conduct. The privilege of a dining room should be denied men who are under the ban for bad conduct or who will not comport themselves with reasonable propriety at the table. In other words, a place in the dining room should be made a reward for good behaviour.

A weak feature of the cellular system of feeding is its wastefulness. The portions of food allotted are too generous for some men and possibly not sufficient for others. We saw a great deal of food brought back in the pans from the cells after dinner. A convict who had worked in the kitchen said that it looked to him "as though about half of everything came back on certain days." He placed the average waste at from 25 to 30 per cent. This view was concurred in by Dr. Platt, though he did not offer any estimate as to the proportion of waste.

The close cropping of prisoners' hair is a regulation as old as the oldest prison. Originally, it was designed as a mark of disgrace. Now it is defended for sanitary reasons. Undeniably, in some cases, it is necessary to crop prisoners' hair on admission and keep it cropped probably during the whole period of confinement. Such cases, we are inclined to believe, form a small minority of any of our prison populations. The cleanly, well-ordered prisoner should surely not be subjected to the indignity of hair-cropping, just because there are some fellows in prison who must be so treated for sanitary reasons. In prisons where close cropping of the hair as a regulation has been abandoned, the personal cleanliness of the prisoners is as efficiently maintained as it is in our penitentiaries. One convict was asked (Page ) what was the greatest humiliation that he suffered since he entered the prison and his reply was: "I think cropping my hair was the worst."
The prison garb is made of a red checked material as distinctive and almost as conspicuous as the stripes formerly worn. Though it has been represented to us that women had “expressed the wish on the street that they could get a golf suit made like it” (page 105) and that it is “no more degrading than the costume of any huntsman or football player or oarsman (page 105), your Commissioners are of the opinion that the present uniform is unnecessarily conspicuous. The colours in it may be as pronounced as in a football uniform, but the humiliation lies in the fact that these colours are not the insignia of membership in an athletic organization, but are the brand of the convict’s shame. The one costume represents honour; the other, dishonour. “I think the uniform is terrible” said one of the convicts to your Commissioners. Any prison uniform must be terrible to the man who appreciate his position, but the question is: Is it necessary to lay it on in flaring colours? A one tone material, grey or blue, such as is being used in all the prisons we visited in the United States and at the Provincial Reformatory at Guelph, should meet the disciplinary requirements of our penitentiaries. Stripes or checks are not considered necessary there to aid in identification and recapture. Why should they be necessary in our Federal prisons?

The regulation that no newspaper shall be allowed within the prison walls has been adopted, we are told, to prevent convicts getting information about the movements of their pals outside. This rule is in harmony with the avowed policy of the administration that the regulations of the penitentiaries are designed solely for the confirmed criminal. Because there are some men in prison who are determined to resume a life of lawlessness, and because these men might obtain from a newspaper information that would aid them in their evil designs, the entire population is debarred from reading any news of the doings of the outside world. That this deprivation heavily handicaps a man when he tries to resume the ordinary activities of life, is beyond question. The world into which he is thrown has been a sealed book to him for years. He knows nothing of its political changes, of the progress that has been made in social, industrial, or scientific development. He has been “as a deaf man who heard not, as a dumb man not opening his mouth.” His very ignorance must intensify his fear of exposure and the ostracism that inevitably follows. Had he been allowed, while in prison, an occasional glance at a weekly newspaper, he would not now be such an utter stranger to world events. He could move among and converse with his fellows, with some confidence and intelligence.

The danger of allowing a weekly newspaper into the penitentiary appears to have been greatly exaggerated in the official mind. It should be possible, without much trouble, to censor the criminal news which occupies a very insignificant space in the family newspaper. But if there is danger of valuable news to the professional criminal leaking in, there is a more than compensating benefit to the man who is longing for another chance to make good in the world. What a comfort the newspaper would be to many an unfortunate fellow in the solitude of his cell, can scarcely be comprehended. It would break the gloom of his isolation, keep him in healthful relations with the life, that through his weakness or wilfulness he has forfeited, and, no doubt, strengthen his desire to restore to good standing in society.

The prohibition of tobacco is, to many prisoners, a severe punishment. Those who have been life-long users of the weed would, it is said, preferably undergo almost any other privation. Certainly the absolute prohibition of tobacco is likely to make them morose and resentful, and more difficult to manage than they otherwise would be. Apart from the effects of a moderate issue of tobacco in producing a better spirit among the prisoners who use it, your Commissioners are convinced the illicit traffic is a greater evil than the one it displaced. One convict testified that he had received from friends, through a guard, $160 in tobacco money in two years; that the guard had retained for his own use half the money and had charged 20 per cent commission for purchasing tobacco with the balance. In only two instances were your Commissioners
SESSIONAL PAPER No. 252

enabled to bring home to the dishonest guards proof of their guilt. These cases were reported to the warden to deal with. That other guards have been extensively engaging in the tobacco graft, is beyond question, but it was impossible to get direct evidence of their guilt. Much may be said in support of the prohibition of tobacco to prisoners, but your Commissioners believe a moderate allowance to those who are already addicted to the habit and who observe the regulations, would result in conditions more wholesome than exist at present.

PUNISHMENTS.

According to rule 179 the following punishments may be inflicted upon male convicts:—

(a) Diet of bread and water not exceeding twenty-one consecutive meals.
(b) Hard bed with blankets according to the season, not exceeding one month.
(c) Ball and chain, Oregon boot.
(d) Confinement in the isolated cells with such diet as the surgeon shall pronounce sufficient.
(e) Flogging with a leather paddle, under the restrictions set forth in the Penitentiary Act regarding corporal punishment.
(f) Shackled to the cell gate during working hours.
(g) The application of water from the hose, in the presence of Warden.
(h) Forfeiture of remission of sentence.

In addition to the foregoing, flogging, imposed as part of the court sentence, has to be inflicted. Usually the flogging is ordered to be given a short time after the prisoner is admitted and again before his release. With much reason, ex-Warden Platt urged that the flogging of a prisoner near the expiry of his term was calculated to nullify the good effects of any reformatory treatment by the officials, and send the fellow out vengeful and embittered. The flogging, if it must be administered, should be given at the place of sentence and the prison authorities would then have some chance of consistently dealing with the criminal. To try to reform a man and then, whether he responds or not, lash his bare back before he leaves the prison, would appear to be an unscientific course of treatment.

The dark cell or dungeon is not mentioned in rule 179. It is used in some, if not all of our penitentiaries. At St. Vincent de Paul your Commissioners found a man in a dark cell shackled by a chain. There was little ventilation in the place, and the food, drink, and bucket of the unfortunate were all placed in the circle of his tether. The dark cell is a cruel means of punishment. The most degraded human being, if he is to be allowed to live, is entitled to light and air.

The Oregon boot and flogging with a leather paddle are no longer used as punishment. Evidence tended to show that the leather paddle was more humiliating than severe. There are on record several cases of application of water from the hose. One was nine years ago when Dr. Platt was Warden. In his evidence the doctor said he did not like the hosing and he never ordered it again. Mr. Douglas Stewart, when he was acting Warden in 1912, used the hose pretty freely. The convicts who were hosed described the punishment as terrible. The officials and guards seemed to consider it effective and not cruel. Inspector Douglas Stewart expressed himself strongly in favour of the hosing. His evidence on the point, page is as follows:

"Q. Do I understand that you are responsible for recommending this method of punishment, the hosing?—A. I am responsible for the regulations. I introduced it after consultation with Sir Oliver Mowat, who was not a cruel man, as a substitute for the cat.

"Q. You described it nicely to Sir Oliver?—A. Yes, as it really is.

"Q. And you think it is a good thing?—A. As a substitute for the cat it is a remarkable improvement, both in effectiveness—

252—2
"Q. The cat is the triangle?—A. Yes, the lashes; that is the previous one; the one was substituted for the other.
"Q. You find this more efficient?—A. More effective.
"Q. What is it that makes it so effective with these convicts?—A. It takes the defiance out of them.
"Q. How?—A. If you get the hose you would know.
"Q. What is it?—A. I suppose it is the impact of the hose against the body, knocks the wind out of them.
"Q. And it seems to succeed where nothing else will?—A. Yes, it never failed yet.
"Q. To beat an incorrigible convict into submission?—A. Yes.
"Q. And therefore you rush for it in all cases?—A. Not in all cases.
"Q. How many times did you administer it yourself?—A. My recollection is seven times on six convicts.
"Q. How long was the longest?—A. Three minutes. It made a record. It is usually thirty seconds to a minute. Very few men who will not give in in that time. They can give up whenever they like; they can make it ten seconds if they like.
"Q. Men will surrender under this who will not under any other punishment?—A. Yes.
"Q. Is that the most severe punishment?—A. No, I think shooting is more severe.
"Q. You mean killing a man outright?—A. Yes.
"Q. That is the only thing more severe?—A. No, I think the cat is more severe and dangerous.
"Q. Why do you not use it?—A. Because I think it is not effective. This is the quickest and most effective method."

Your Commissioners had a practical demonstration of the hosing in the cell assigned for that purpose. The front corners of the cell have been rounded out to prevent the prisoner from getting out of range of the stream. A circular opening in the bars permits of the entrance and ready manipulation of the nozzle. When the water was fully turned on, the stream through the three-quarter inch nozzle struck the opposite wall almost unbroken. From what your Commissioners have seen and heard they readily agree that hosing as a punishment is effective. The victim must cry out for mercy or suffer physical collapse. But as a disciplinary agency, it should be ranked with the rack and the thumb-screw, cruel and inhuman.

**IMMORALITY AMONG PRISONERS.**

The charge has been made that the crime of sodomy is prevalent in Kingston Penitentiary. Three convicts gave sensational and disgusting evidence in support of the charge. In two or three instances the circumstances were described in detail. Other evidence was given of a more or less circumstantial character, and some of it was based on hearsay or conversations overheard on the stone pile. The officials and guards, without exception, either denied the existence of the practice or declared they knew nothing about it.

Your Commissioners believe that while some of the statements made by convicts were greatly exaggerated the evidence indicated the occasional commission of the offence. It is scarcely necessary to urge greater vigilance on the part of officials and guards wherever it is possible for such offences to occur.

**THE CONDUCT OF OFFICERS AND EMPLOYEES.**

**The Five Year Limit.**—The terms of our commission called for the investigation of:—

"(a) The state and management of the Kingston Penitentiary;
SESSIONAL PAPER No. 252

"(b) The conduct of the officers and employees of the said penitentiary so far as the same relates to their official duties—

"Provided that the inquiries should not extend back for a longer period than five years except in so far as the commission may deem it desirable in the public interest to inquire into any particular matter or matters antecedent to such period."

The construction to be placed upon this limitation of the inquiry came up for discussion at the beginning of our investigations and is dealt with by the Commissioners at page in the report of the evidence, in the following terms:—

"The intention of the Commission is to have an investigation of present conditions in the prison. The charges that were made refer to the present state and management of the penitentiary, and that, primarily, is the subject to be investigated. That goes without saying. The Commission is not charged with investigating what was a past condition of things, five or ten or twenty years ago; we are to investigate the condition of things to-day, it may be necessary to go beyond the time limit of five years, and that the Commission has power to do. The terms of the Commission express that quite clearly, and I do not think it could be better expressed, that where, in any particular matter, the Commission deem it in the public interest to pursue the inquiry beyond the five year limit they are to do so."

The matter came up several times in the course of our proceedings, see pages

A charge was made against the Deputy Warden of "testifying falsely at investigations held at the prison;" the matter referred to occurred in the year 1898. Objection was taken by counsel for the Deputy Warden, page "How could we answer a charge fifteen years old with witnesses dead and hard to find? Surely the provisions of the Commission were intended to protect us from that." The Commission considered that if they proceeded to investigate this matter it would be in substance a trial upon a charge of perjury alleged to have been committed fifteen years ago and necessarily depending on the present recollection of the surviving witnesses as to statements made so long ago. The matter had been the subject of investigation at the time it occurred and we did not deem it desirable in the public interest to inquire into it again. For similar reasons we declined to entertain charge (d) "With consorting with ex-convicts." This matter is dealt with by rule 142:—

"No officer shall without authority recognize any convict after his discharge or make him known to others, to his injury."

The matter is discussed at page:—

The five-year limit came up again in connection with a charge against Dr. Phelan of:—

"Conniving at the absence of a guard at an election trial where said guard was wanted as a material witness."

The occurrence involved took place in the year 1898. Saunders, the guard in question, got a certificate of sick leave from the doctor. It is said improperly. The certificate bears date September 2, 1898. Saunders, the principal witness, is long since dead. At this date, and considering that the matter was not one bearing upon or affecting the present condition of things, we declined to entertain this charge. A number of matters were dealt with, extending back much beyond five years when it was deemed desirable in the public interest to do so, and the only instances in which evidence was excluded have been referred to above. The matter was fully discussed at the final sitting of the Commission, see pages .
THE EDWARDS CHARGES.

The charges made by Dr. Edwards against Deputy Warden O'Leary, are as follows:—

I charge Deputy Warden O'Leary:
(a) With petty and persistent persecution of guards and keepers;
(b) With political partisanship;
(c) With testifying falsely at investigation held at the prison;
(d) With consorting with ex-convicts;
(e) With gross neglect of his duty resulting in attempts at escape.

The charges, as Dr. Edwards himself says, were based mainly upon information furnished him by Major Hughes (page 321-4):

“I took the action I did in regard to this matter principally because of what was said to me by Major Hughes himself in regard to every one of the charges which I have placed on the paper, that the information came primarily from him, and it was added to by complaints made from time to time in writing and verbally by different guards and ex-guards of the institution.”

Mr. Stewart, Government counsel, at page 1914, also mentions Major Hughes, as the chief witness.

Major Hughes himself (page 321-4): “In my day as Chief Keeper I did not think the men had an awful lot to complain of in that kind of thing, but latterly there has been a great deal of gossip. I cannot give you that, but the rosters will show.”

Of the guards and ex-guards referred to by Major Hughes in his evidence, the following were called, and a summary of their evidence on the charge of petty and persistent persecution of guards is given below:—

SESSIONAL PAPER No. 252

We are referred by counsel quite properly on this charge to the evidence of Major Hughes, page 258, to the rosters prepared by the Deputy, as "the best evidence in support of this charge"; also to the evidence of Dr. Platt.

The evidence of Major Hughes, thus cited, deals almost entirely with what was called "favouritism." To quote the argument of the Government counsel, "the Deputy either consciously or unconsciously has preferred guards of the same religious persuasion as himself—in giving the preference to Roman Catholics over Protestants, in assigning officers to the different posts in the prison."

After a careful examination of the roster, we cannot find that this charge is sustained.

The evidence is conflicting as to whether there are any favourite posts and what they are—Guard Fegg is the first witness named by Major Hughes, who would testify to "favouritism." Fegg's evidence is at page 257 and is read to Major Hughes at page 258:—

"Q. You do not know that he showed any favouritism to any particular guard?—A. I could not say that any man was persecuted or that any man was shown favouritism. I cannot say that he is really shown favours."

Major Hughes says, referring to Fegg, "this man thought he was the most imposed upon man in the world."

Other guards, whom Major Hughes expected to testify to favouritism, gave evidence similar to Fegg's. For some reason, they had talked to Major Hughes in a way they could not support on the witness stand.

The evidence of Dr. Platt on this subject should have more weight than that of any other witness, as he was in a position to know the facts. His evidence shows that he himself was determined to know nothing about a guard's religion in the assignment of duties, and that he believed that his deputy was equally conscientious in the conduct of his office.

Dr. Platt was warden from 1890 to 1913. (He had ample experience to speak with authority upon this charge.) It is scarcely conceivable that he should not have discovered it, if any favouritism had been practised.

We make the following extracts from his evidence bearing upon this charge:—

"For the assignment of positions," he says (page 259), "the deputy is responsible, under the Warden."

"Q. And if complaints were made it would come up to you and you would deal with matters?—A. If we thought it was advisable we asked the Deputy to reconsider."

Page 538:—

"Whenever the Deputy thought a change could be made to advantage he would mention it to me during the month previous, or if I noticed where I thought a man would be better in some position I would mention it to the Deputy."

"Q. So that both you and he were trying to do what you thought best in the interests of the Institution?—A. I was and I thought he was."

"Q. Then when the roster was made out towards the end of the month it was submitted for your consideration?—A. Yes, I may say invariably my signature is on every roster."

Page 539:—

"Q. Were there complaints of this character?—A. I do not think I could dignify it by the name of complaints."

"Q. How many times?—A. I don't know, if it occurred three or four times in my thirteen years it would be all."

Page 540:—

"If I heard a complaint of that kind, even heard it casually, I would speak to the Deputy about it and advise him whenever it was practicable to avoid even
the appearance of anything of that kind, and I do not think he ever made any change. I do not think a change was ever suggested. He would simply reply by saying: 'Well, what am I to do?—Place a man according as I think he ought to be on the roll.' I said: 'Your duty is to the prison and not to the church, pay no attention to it.'

The rule governing this matter is in these words:—

"42. Subject to the Warden's concurrence, he (the Deputy Warden) shall assign to every police officer the duty to be performed by him during the day, a record of which shall be kept in the roster."

Dr. Platt says there were three of four complaints on this subject in his thirteen years of office, and he refused to interfere. The Warden considered these complaints unfounded, and there is nothing in the evidence heard by us to warrant us in saying that his judgment was erroneous.

The unfriendly relations existing between Major Hughes and the Deputy Warden were a matter of common knowledge in the prison, and some officials appear to have used this knowledge mischievously.

Major Hughes seems to have been misled by the gossip of the guards—he was recalled at the close of the investigation, and at page 22 he says:—

"I have read in the papers. I do not know whether it is true or not, the evidence of officers that they had no complaints to make; and there is only one expression to describe it, and that is for months here they simply pawed the air with regard to complaints of the indignities that were heaped upon them and the discrimination in favour of others to their detriment, and they came up, according to the newspapers I have read in the west, and said there was no discrimination."

The charges made seem in great part the outcome of the unhappy spirit of distrust and suspicion which seems to pervade the institution, resulting apparently from the system of administration, especially in regard to appointments, political influence, religious antagonisms, and political jealousies.

Some guards have alleged grievances, imagining that they are not dealt justly with in the distribution of posts, whilst other guards say that there are no good posts, that men differ as to what posts are to be preferred. One guard complains of the Deputy "spying" upon him, when the Deputy was watching him to see if he was doing his duty. A guard, who was discharged, makes a charge of perjury arising out of a dispute in the year 1898. The evidence adduced to sustain this charge was this witness's uncorroborated recollection of a verbal statement made by the Deputy in the course of a prison investigation conducted by the Warden fifteen years ago.

Charge (b) Political Partisanship.

In support of this charge, the only contention of the counsel for the Crown was that Guard Aikins testified that "the Deputy spoke disrespectfully of Dr. Edwards, a candidate at the last Dominion election." The Deputy emphatically states that he never interfered in politics and we find that he has not been guilty of political partisanship.

Charges (c) and (d) were excluded under the five-year limit, as we have elsewhere explained.

Charge (e): That the Deputy was guilty of gross neglect of duty resulting in attempts to escape.

The particular case cited was that of Chartrand, a convict, who cut through the bars of his cell and got into the yard of the prison, and the charge is that an inex-
SESSIONAL PAPER No. 252

perceived guard and inefficient guard had been placed in supervision of this convict. This case was fully investigated at the time by the Minister, and Guards Smith and McConville were suspended for their conduct in the matter. There is nothing in the record of that investigation to indicate that the Deputy Warden was to blame and nothing was adduced before us to warrant our arriving at a different conclusion.

On April 10, 1912, Dr. Platt says, in referring to this escape, after the matter had been investigated: “A convict designated as dangerous and marked for special care escaped under circumstances which force one to the conclusion that well-known, important and imperative duties were either neglected or performed in a culpably perfunctory manner.” Dr. Platt also reports the suspension of McConville and Smith in this connection, but throughout his report there is not any hint or reflection touching the conduct of the Deputy Warden in the affair.

The record of the case contains thirty pages of reports and testimony on this escape, of the warden, deputy warden, guards and keepers, etc.

The inspector's report, dated April 12, 1912, does not mention the Deputy Warden or reflect on him personally.

The Minister's judgment reflects on “the insufficiency of the right surveillance provided” and “concurs in the suggestion” that the Warden and Deputy Warden be censured for neglect to profit by the attempted escape from an adjoining cell last year,” etc., etc. There is no suggestion of such censure in the inspector's report, it does not appear in the record, so that we are unable to attach to it the correct significance, but considering that this whole matter was fully dealt with and adjudicated on by the Minister at the time of this occurrence, it should not again be made the subject of a charge before this Commission. In any case, the whole record is on file and can be referred to, if, in the opinion of the Minister, the matter should be reopened.

The Grier Charge.

Comment is made by the Crown counsel on an incident mentioned in the evidence of Ex-Guard Grier, (page ) who says he was on duty in the Asylum in 1906 and found Convict Bishop “trying to hang himself” and cut him down. He was then asked by the Deputy Warden why he was late in winding his clock. He explained, he says, and the Deputy Warden told him: “If I came across a convict hanging, to let him hang and attend to my clock first,” Ex-Guard Marsh testifies, (page ) to a similar expression from the Deputy Warden in reference to the attempted hanging of the same convict, Bishop; he (the Deputy Warden) said: “I did right to wind my clock first, it would clear me.” Marsh gives no date for this occurrence, but the records show that he cut down Bishop on March 22, 1899.

These statements might indicate a callous disregard of human life on the part of the Deputy Warden—that he set discipline on high and subordinated the instincts of humanity. The statements, however, stand alone; they are not consistent with the conduct of the charged official, as shown by the evidence before us. In support of the charges against the Deputy Warden, with which we have already dealt, twenty or more guards and ex-guards gave evidence and no instance was disclosed of cruelty or inhumanity towards prisoners. The evidence of Grier is not corroborated by the prison records. The records show that Bishop attempted to hang himself on two occasions; on July 9, 1898, and March 22, 1899. On the former occasion he was cut down by Guard Davis; on the latter, by Guard Marsh. Grier does not appear in either case. There is no record of any other attempt at suicide by Bishop. If any occurred it should be in the record. Grier says he “cut down” Bishop in 1906. The records show that Bishop died of tuberculosis in 1904. Whatever the actual incident was, it must have occurred fifteen years ago, and the memory of witnesses as to the date or the actual words used is liable to be at fault. What we ourselves have seen and heard must guide us as to the value that should be attached to the alleged state-
ment of the Deputy Warden; he was for three months in this inquiry subjected to the closest scrutiny and in the light of that scrutiny, no act of his revealed that indicated he was either cruel or inhuman.

Other Charges.

The charges made by Dr. Edwards against Overseer Wilson, are as follows:

"I hereby charge R. W. Wilson, druggist at Portsmouth Penitentiary, with wilful and repeated neglect of duty. In connection with the aforesaid charge, I ask that the following persons be called to give evidence, viz.:—

"H. S. Begg, Assistant Hospital Overseer.
"D. Godkin, Night Watchman.
"F. Ingledew."

The charges against Overseer Wilson are of the same indefinite character as the others, and have to be gathered from the evidence and the argument. He is, in substance, accused of not getting up at night to attend to dying patients, in several instances. Guard Ingledew testifies to this effect at pages . Guard Godkin at pages . Wilson’s evidence in defence is found at pages.

Wilson was called for patients Bunyan, Lottridge, Eastlake and Huckle; Doctor Phelan says Huckle was a malinger, and Colonel Irvine says he is one of the worst men in the prison, entirely unreliable; the other patients are dead. Dr. Phelan’s evidence exonerates Wilson from this charge, pages

Your Commissioners are of the opinion that these patients were practically beyond human aid and that in their cases no hardship was inflicted by Wilson’s failure to get up to see them, yet we feel that the physician or his representative should be present on such occasions, and that there should be a regulation to this effect.

Charges were made by Overseer Wilson against Ingledew, page :

That he repeatedly failed to make his rounds of the ward, and that he slept or rested during long periods of the night, while the convicts’ night-orderly was permitted the use of the watchman’s keys and continued the periodical winding of the electric clock, so that it might show the proper marking when inspected by the Deputy Warden.

That he repeatedly brought into the hospital outside articles and special food, which were given to and used by convicts, and that he also supplied pipes and tobacco to convicts.

There is evidence to support the first charge given by Convicts Watson, Diehn and Mitchell, but it is denied by Ingledew, and we do not feel warranted in giving effect to the evidence of the convicts under the circumstances disclosed. The same remarks apply to the second charge.

Dr. Edwards’ charges against Dr. Phelan are as follows:

"I charge the surgeon, Dr. Phelan

"(a) With gross political partisanship.

"(b) With using violent and indecent language to a guard in the presence of others.

"(c) With conniving at the absence of a guard at an election trial where said guard was wanted as a material witness.

"(d) With grafting, by asking for and receiving money from guards, to which he had no just or honest claim."

The counsel for the Government properly says: “I do not propose to argue that the evidence adduced supports the charge of political partisanship.” Vide discussion on five-year limit.
SESSIONAL PAPER No. 252

Charge (b).—The charge of "using violent and indecent language to a guard in the presence of others" is established, but it is claimed that it was used in jest; the evidence leaves this uncertain. In any case, the surgeon entirely forgot the dignity of his position and the discipline of the prison in making use of the language in question; and the incident discloses an unhealthy state of things. Vide evidence pages

Charge (c).—The Commission did not consider this charge to be within the limits of their commission. It occurred thirteen years ago. Some of the parties are dead. It has no bearing on the present state of the prison.

Charge (d).—With grafting, by asking for and receiving money from guards, to which he had no just or honest claim.

Dr. Phelan admits that in four cases he asked and received a small fee from an applicant for a guard's position as to his physical fitness, and this is a contravention of the statute, as he is not to practice his profession. He says he has not done so for several years. The amount wrongfully taken by him was $4.

The foregoing are the only charges made against Dr. Phelan by Dr. Edwards

Counsel for the Government commented on the evidence of convicts that the surgeon had been careless and unkind in his treatment of them. No charge of this tenor was made against Dr. Phelan and he was not called on to meet it. The evidence of the convicts was conflicting. Some testified that he had treated them well, others directly the reverse. The matter was left in an unsatisfactory position, and we are not able to come to any finding upon it.

The charges against H. S. Begg are:

1. Gross carelessness in making and compounding preparations and more especially in connection with an ointment containing opium.
2. Neglect of duty in omitting to carry out orders and especially in failing to give special supplies to a convict named Lawrence on the night of his death; in contravening the orders on the diet sheet in the case of a convict named Laird; and in refusing and neglecting to give out supplies ordered to be kept under key.
3. Neglect of duty in failing to leave out food for patients called for by the diet sheet, and in leaving the building with the keys while the supplies were locked up and inaccessible until other keys were procured.
4. Insolence and insubordination with reference to the overseer, both in language and bearing to him, and to others with reference to him, and in refusing and neglecting to carry out his instructions.
5. Falsifying the records contained in the sick-officers' book.

The evidence shows that from the time of Wilson's appointment there was friction between Begg and Wilson. Begg was guilty of several minor acts of insubordination and neglect of duty.

Alterations were made in the sick-officers' book in several places, which had the effect of lessening the record of Begg's absences on account of illness. He denies having made them, and it was not shown that any advantage could accrue to him from making them. No experts in handwriting were called to testify to the handwriting of these alterations, (page ). Mr. Begg had been suspended by the Department once and reprimanded several times. He did not get along very well with Mr. Gunn. His attitude towards Wilson was improper and subversive of discipline.

The antagonism between Wilson and Begg is partly an expression of personal animosity and partly an expression of the general internal dissensions. The result is a state of affairs entirely prejudicial to the best interests of the Institution. The most satisfactory solution of these difficulties will be found in the reorganization of the hospital staff, which is recommended.
If the punishment of the offender is the only object society should have in view, the Penitentiaries of Canada fully meet the requirements. They are old-time prisons dominated by the idea that, not only should the offender be punished by being deprived of his liberty and confined by iron bars and stone walls, but that the avenging hand of the law he has violated should continue to bear heavily upon him in his place of incarceration. This policy is defended on the ground that the treatment of the prisoner in prison should be so ordered as to be a constant deterrent against his relapsing into crime, when he regains his liberty. It is a policy founded upon revenge, mistrust and fear.

Undeniably, the trend of prison administration the world over is away from the purely punitive and towards the reformatory. It is realized that justice to society does not involve injustice to its moral delinquents; that while society must protect itself by imprisoning misdemeanants and felons, it is not necessary to inflict humiliation and torture upon them, while they are in prison. This policy recognizes that the prisoner has certain rights which it is the duty of society to respect. He is entitled to productive work under proper sanitary conditions, to a reasonable measure of education, if he requires it, to moral training and discipline; in fine, to every rational assistance towards his restoration to good relations with society. Viewed from the economic standpoint, the reformation of the convict is a matter of prime importance to the State. The prison of punishment is the most expensive prison to maintain. It keeps the inmates in idleness or employs them at work neither helpful to them nor profitable to the State.

The population of the six penitentiaries of the Dominion at the present time is about 2,000, and the maintenance of these institutions involves a net annual cost of $632,000. It should be possible, by the inauguration of a proper industrial system, to reduce very materially this heavy burden and ultimately make the prisons self-sustaining. But on higher grounds, it is surely the duty of society to adopt humanitarian methods within its prisons and give every possible encouragement to the man who is disposed to reform. The contrary attitude is out of harmony with the basic principles of Christianity and civilization. The church and its manifold agencies are bending all their energies to the reclamation of the moral offender who is enjoying his liberty. Why should the probably equally deserving delinquent, who has the misfortune to get into prison, be left to discover the light of the divine message to fallen man in his cropped hair and striped suit; through the solitude and darkness of his cell, in labour that demeans, discourages and brutalizes? Some justification may be found for the purely punitive system in the theory that the prisoner is a creature apart, differing from other human beings, not amenable to the same influences, hardened by kindness, discouraged and made restful by cruelty. That this theory is recognized in the present administration of our penitentiaries, there is reason to believe. The following is an extract from the evidence of Inspector Stewart:

"Q. Getting back to the congregate dining-room, one reason was the danger of mutiny, and the other was the objection the higher class convicts had to eating with the others?—A. Yes.

"Q. Would the latter objection not be removable by a classification?—A. No, the classification would be making a distinguishing class, which would be looked upon with distrust and jealousy.

"Q. No such thing as emulation among them, to follow in the footsteps of those who are rewarded for good conduct?—A. The emulation amongst convicts—nine-tenths of those who do behave do so because it pays them.

"Q. Are they different from other men?—A. They are very different or they would not be here."
SESSIONAL PAPER No. 252

"Q. My dear sir, I disagree with you?—A. Well, the judge must be wrong.

"Q. It is idle to say that humanity is divided into two classes and that all the bad men are in prison and all the good fellows are out of it?—A. I do not believe that. There are a great many outside who ought to be in.

"Q. I say there are men here amenable to the same influences as if they were enjoying their liberty and appreciative of fair treatment?—A. I am afraid it is because you do not understand their character that you say that."

Further on (page ) the question of occasional entertainments for the convicts was being discussed with Inspector Stewart. He was asked:—

"Q. What is the objection to the entertainment?—A. In the first place, it causes quarreling and jealousy as to who shall be the chief men and who shall be the performers.

"Q. I would not say entertainments given by themselves, but supposing you had some people in Kingston kind enough to come out and give some entertainments?—A. I think they would be more bored than they would appreciate it.

"Q. Life in this institution must have a mighty depressing effect on the human mind?—A. It may possibly. Generally they prefer their own company rather than being crowded together. If they are crowded together there is the trouble of their passing notes and complaining of irregularities.

"Q. To what do you ascribe the attitude of these men towards things the men outside enjoy?—A. The real criminal is usually the worst kind of egotist. He has a contempt for the clergyman who preaches, and the warden, and a contempt for anybody else’s opinion but his own.

"Q. And your policy is designed and carried through with regard to the treatment of the real criminal and the real criminal only?—A. Yes.

"Q. And without reference to the fellow who is not a criminal and never will be?—A. That is his misfortune to be in here, but we have to adapt our rules and regulations to the possibilities of the worst criminals in here. We have to do it, because we cannot read human nature when a man comes through the gate and tell what class he is."

In the Deputy Warden’s evidence (page ) it is stated that only twenty-five per cent of the five hundred prisoners have reports against them; that many of the men reported are not punished but merely admonished; and many others subjected to trivial punishment. The number of serious offenders against the regulations, "difficult men to get on with", the Deputy Warden placed at thirty-five to forty, or about eight per cent. It will be urged that there are hardened criminals, who for their own comfort conform strictly to the regulations of the prison. No doubt there are cases of that character, but the general experience of prison administrators is that the hopelessly bad man cannot act the good man in prison, and that he who obeys the prison regulations can be made obey the regulations outside the prison. Again, it must not be concluded that a prisoner who has reports against him is devoid of the elements of good citizenship and impossible of reclamation. Where any departure from a monotonous daily round may be set down as an offence, it is certain that many good fellows must occasionally fall foul of the regulations. Allowing, then, the make-believe good to balance the well-disposed convict who now and then violates the rules, we are justified in assuming that at least seventy-five per cent of the population at Portsmouth offer some hope for reformation. That being the case, is it a wise policy to maintain for all a system designed, as Inspector Stewart puts it, solely for "the worst criminals."
ORIGIN OF PRISON REFORM.

The opinion obtains in some quarters that prison reform is a fad, promoted by well meaning but impracticable people, out of mistaken sympathy for the criminal class. Also, that it is a modern innovation originated and developed in the Republic to the South, and attended there with indifferent results. A cursory glance at the history of prison administration the world over, shows that the reformatory system is very old and is the product of no particular people. Nearly every nation in western and southern Europe can lay claim to some contribution to the store of practical experience on the question. Howard, the Englishman, and Beccaria, the Italian, in the latter part of the eighteenth century, aroused public opinion to an appreciation of the cruelties of the penal system. About the same time, Vilain was giving a practical demonstration of the then new penology in the prison of Ghent. This prison, we are told, had for its avowed aim the reformation of those committed to it. It made labour the foundation of its system—not the crank or the treadmill, or picking oakum, or breaking stones, but purposeful, productive employment. Dr. F. H. Wines' description of what Vilain did in his prison at Ghent, nearly a century and a half ago, may be read with profit to-day:—

"Vilain believed in industry as the primary agency for the reformation of the criminal character. He recognized and insisted upon the importance of trade instruction with a view to putting the prisoner in condition to earn an honest living, when discharged. He appreciated the importance, in the selection of prison industries, of choosing, as far as practicable, such as would come least into competition with free labour on the outside. He sought to find trades not followed in Flanders, but which, if adopted, might prove profitable to the Flemish people. In fact, there was a great diversity of avocations followed in the prison, among which may be mentioned: Carding, spinning, weaving, shoemaking, tailoring, carpenter-work, and the manufacture of wool and cotton cords. To encourage prisoners to work, he allowed them a percentage of their earnings, and the opportunity to do overwork. Part of their earnings was there own, to spend in the prison; part was retained, to be given to them at their discharge, so that they might not be penniless and on that account relapse into crime. Every prisoner had a cell to himself at night; the workshops were in common, and meals were served at a common table. He provided a resident physician and a resident chaplain. Proper attention was paid to the classification of prisoners. Felons were separated from misdemeanants and vagabonds, there was a distinct quarter for women, and he designed to make special provision for children also."

But the prison at Ghent was not permitted to continue its works. A "few interested parties" got the ear of the Emperor, and the industries were abandoned. Howard, who visited the institution in 1753, says: "I found great alterations for the worse; the flourishing and useful manufactury destroyed and the looms and utensils all sold. That which ought to be the leading view in all such houses is now lost in this house."

So we find that the problem with which we are attempting to deal is a very old and a very practical one. The principles underlying it have not changed with the years; nor have the influences which make for its success or failure. Its advocates are still heartened by the faith in their fellowmen that Vilain had, still hampered by the belief of many that all those behind prison bars are hopeless criminals. The successors of "the few interested parties" who got the ear of the Emperor and closed the industries at Ghent are still crying out that they are willing that convicts shall work, so long as they do not make anything.
CLASSIFICATION.

The segregation or classification of our penitentiary population is a problem of considerable difficulty. That population is made up of all classes and conditions of offenders—the first offender and the recidivist; the accidental and the hardened criminal; boys and old men; the physically rugged and the invalid; the highly intellectual and the imbecile. The present division of responsibility between the Federal and Provincial authorities for the custody of criminals is unscientific. The province looks after all those sentenced to a term less than two years. Those committed for two years or over pass into the control of the Federal Government. Hence we have at Kingston boys from sixteen to twenty-one, who are serving their first term in prison, under conditions that cannot possibly make for their betterment, while in the Provincial Reformatory at Guelph, there are men doing life imprisonment by installments. This feature of the situation was dealt with by a Special Committee of the Ontario Legislature in 1908. The conclusions arrived at by that committee apply with still greater force to-day. It says:—

"The returns for last year show that seventy per cent of those committed to the Central Prison were first offenders, whilst fifty-seven per cent were under thirty years of age. The indiscriminate association of these first offenders and the hardened and dissolute type is a deplorable feature of our present system. To put it mildly, the State is not giving a fair chance to the erring boy when it herds him with those who have decided on pursuing a life of crime.

"At present time there are between thirty and forty young men, seventeen to twenty-two years of age, in the Kingston Penitentiary, from Ontario, who might be successfully dealt with in a modern reformatory. The officials of the penitentiary in their last report stated that the prospects for these youths being reformed were not more than one in a thousand.

"Instead of having the two-year sentence arbitrarily fixed as the boundary line between the Central Prison and the Penitentiary, it would be much better were the provincial institution devoted solely to first offenders, regardless of the length of the term for which they are committed."

It would appear to your Commissioners that a readjustment of the present arrangement on the basis suggested would not involve a serious shifting of the burden of maintenance as between the Provincial and Federal authorities. However that may be, there can scarcely be two opinions as to the wisdom of a classified prison system. England, France, Switzerland, and Germany long since abandoned the plan of herding all criminals, great and small, in one house. The Reformatory and the State Prison represent the practical working of the more scientific system in the Republic to the south. The reformatory population is confined: (1) to men under thirty years of age; and (2) to first offenders. To the State Prison go all the older and more hardened offenders.

The necessity of providing a separate prison for young offenders was recognized by the late Sir John Thompson, who, as Minister of Justice, purchased land and had plans partially prepared for a new reformatory at Alexandria. Why that project was not carried through, no explanation is forthcoming, but your Commissioners are of the opinion that it offered substantial improvement of a situation that has gone on through the years from bad to worse.

But granted that it is impossible to have segregation through separate prisons, it should be possible to have some measure of classification within each prison. It is solely with the object of classifying prisoners that separate prisons are advocated. It has been urged that to make any attempt at classification is to discriminate and discrimination is an evil that must at all cost be barred from our penitentiaries. Why
should the natural law of discrimination between the good and the bad not be operative in a prison? The scientific treatment of moral delinquents means differentiation and discrimination at every turn. Possibly some day there may be a prison in which each inmate will have his particular case analyzed by experts, with a view to special treatment, aiming at his readjustment to the proper standard of living. Such a development may seem visionary and impracticable. But surely we can, with reason and justice, move a little in advance of our present policy, which may be expressed in the words: "All is grist that comes to our punishment mill"—the old and the young, the bad and the well-disposed, the hopeless and the hopeful, all treated as so much human waste in a common heap.

There is discrimination under existing conditions. The stone pile at Kingston is, by long odds, the worst department in the institution, while the carpenter shop and blacksmith shop are probably the best. But there are some good conduct men on the stone pile, placed there, we are told, because there is no other work for them. Compared with their fellows in the carpenter shop and blacksmith shop, these men are being discriminated against; and there is no logical basis for the discrimination. If there were classification in the prison the operations of the stone pile might be confined exclusively to prisoners of the third or lowest grade. This classification would mean discrimination for cause—reward for good conduct, punishment for bad—instead of the present discrimination which sometimes assigns the decent fellow to the most brutalizing labour.

Admittedly there are obstacles in the way of scientific classification, in any of our penitentiaries. The buildings were not planned with that object in view. But even with conditions as they are, it should be possible to devise a simple grading that would be just to all and encouraging to the well disposed. In some prisons, much like our penitentiaries, the three grade system has worked well. A prisoner on arrival is placed in the second grade. On his conduct depends promotion to the first grade, his remaining in the second grade, or reduction to the third. First grade men get the best positions; third grade men are assigned to the most disagreeable labour. Remission is credited to first and second grade men only, and a prisoner must be in the first grade for a certain period before he is eligible for parole. Third grade men may earn promotion to second grade, and from second to first, by good conduct and industry. If the honour system is established, the trusties are selected solely from the first grade. On this basis a modified or elaborate system of classification may be established according to the character of the population and the success of the experiment. There may be weaknesses in such a system of classification, but its basic virtue is that it offers some encouragement to the prisoner who desires to conform to the regulations of the prison and fit himself for a decent life when his term of incarceration ends.

A true classification requires careful and scientific study of the individual. As things are, this can only be done in prison by obtaining a complete history of the prisoner. The study of the individual prisoner is also necessary to find out his aptitude for some particular trade and in the classification of prisoners regard should be had for their proper training for life outside.

A resolution was moved by the Hon. Mr. Monk in the Dominion Parliament in 1909, and unanimously carried. That resolution read as follows:—

'To ascertain......what means could be adopted in Canada to insure a judicious classification and segregation of the convicts in our penal institutions and reformatories.'

In response to this resolution the wardens and chaplains of all the penitentiaries of the Dominion sent in reports which are to be found in the annual report of 1909-10, pages 280-330. These officials with one exception urged on the Government the necessity of classification of prisoners.

The inspectors who had called for these reports, in pursuance of Mr. Monk's resolution, made no recommendation to the Minister of Justice to take any action regarding
SESSIONAL PAPER No. 252

They dismissed the proposal to classify prisons and segregate first offenders in a separate prison or reformatory on the ground of expense, and they reported that the classification of prisoners should be left to the 'judicial criminologist.'

THE FIRST OFFENDER.

From sixteen to twenty-one the man is in the making. These years are peculiarly liable to criminal temptations, "the crucial years in the formation of the character."

The virile animal propensities are asserting themselves without the self-control, balance, and mature judgment of adult years. The adolescent period is recognized by psychologists as the most critical time of human life, and the State has no adequate means of dealing with it. When this youth falls into the hands of the law for some offence, he should be placed under proper treatment of a corrective kind, with such opportunities of education and industrial training as may enable him to become a useful citizen.

The thief, the murderer, the burglar, have their own fixed standards of life, which are those of their associates; to reform such persons, you must persuade them to drop their own standards and accept yours, a difficult thing to do.

In the case of the youth, his standards are not fixed and he is much more likely to be responsive to the right influence. To say that he cannot be reformed, is to despair of human nature. If he can be reformed, a grave responsibility rests somewhere.

Placing him in association with old criminals and offering no help to reform 'is sure to hasten his downfall.' For want of proper treatment 'large numbers of these young men develop into thugs, burglars, gamblers, etc.

It has come to be realized by penologists that to fulfill the obligations of society to this class of prisoners, personal, individual treatment is needful, the scientific study of the individual, otherwise you allow officials, well meaning but ignorant, to handle him as they please.

What to do about it is the problem. Chicago has its Juvenile Protection Society, for the purpose of grappling with this question. Dr. Healy spends his time studying defective boys and girls who have got into trouble in the Juvenile Court or otherwise, and finding out what treatment they require. It means the study of each individual case, but Dr. Healy truly says its costs less to take it up at that end than to take care of the same case when it has become a fully developed criminal. 'The public would find its reward in later years in a reduced crime rate.'

It may be that children and youth should not be sent to prison or dealt with under the forms of criminal procedure, but as delinquents, until their sense of moral responsibility has been fully developed.

'The absolute exclusion of young persons from the prisons, the Borstal system for dealing with juvenile adults, the elimination of weak-minded persons, are essential to a satisfactory reform of penal systems. They constitute a new sifting out process, whereby persons who have hitherto flocked to our prisons in thousands will in future be excluded and dealt with according to their needs.' (Dr. Quinton, late Governor of Holloway Prison.)

INDUSTRIES IN PRISON.

The character of a prison may be judged from its industries. If the industries are of the right kind and rightly managed, the tone and discipline of the institution are certain to be satisfactory. Busy shops, healthful, purposeful, profitable work, make abuses almost impossible. The prisoner who is engaged in interesting, improving work, is not hard to manage. He has not the time nor the inclination to conjure up 'treasons, stratagems and spoils.' Idle and dissolute he may have been when he enjoyed his
liberty, and now for the first time in his life, probably, he is made to appreciate the blessedness of labour. Increasing efficiency brings him fresh encouragement. He finds himself moving steadily towards a position of economic independence. When he goes out, he will face the world with a new heart, for his mind has become attuned to the habit of industry and he has discovered that he can do things and that in the doing of them there is satisfaction. If, in addition to all this, a wage allowance, based upon efficiency, be given the prisoner, every incentive is present to make him work faithfully, and pave the way for a new and a better start in the outside world.

The industrial conditions in the penitentiaries of Canada are a disgrace to the Dominion. An honest attempt is made by the officials to keep all the prisoners employed at something, but it is only an attempt. As far as your Commissioners could learn, there is not a single well-equipped, well-managed, continuously busy shop in the whole circle of prisons. The reason is not far to seek: There are no goods to make and if goods were made there is no place to market them. The blacksmith shop at Kingston was running nicely when the Commission made its visits. Steel gates for a new prison in the West were being turned out. When that order is completed the management will be hard put to find employment for the men in the blacksmith shop. The tailor shop, carpenter shop, painters and tinsmith's shops are operated merely to meet the requirements of the institution.

There is unanimity of opinion as to the necessity of labour in prisons. No one has had the cruelty to suggest that the prisoners should be sentenced to enforced idleness; that, deprived of his liberty for society's protection, the prisoner should also be deprived of the right to work. Not only should the prisoner be given work but all prison administrators agree that it should be purposeful, productive work—work calculated to make him a more efficient citizen when he regains his liberty.

The agitation against the competition of convict labour with free labour has been generally successful on this continent. That agitation was justified on both economic and moral grounds. The contract system of prison labour proved not only oppressively competitive in some of the states of the Union, but was the cause of abuses that barred the way to the betterment of convicts. But in removing this evil no thought seems to have been given in some instances to the possibly greater evil that might succeed it. To abolish the system of contract labour in prisons was justifiable; to leave unfortunate prisoners to hammer out their term on a stone pile, or become mental and physical wrecks in the solitary idleness of their cells, was a crime against humanity.

The possible solution of the labour difficulty in the penitentiaries naturally groups itself under two headings:—

(a) Outside work—General farming operations, clearing land, quarrying stone, making brick, building roads, etc.
(b) Inside work—Employment in the various departments for the proper upkeep and management of the prison. Employment in the making of goods for the State.

As far as the natural resources and facilities of the prison will permit, any or all of these activities may be profitably entered into. Outside employment has come to be regarded as a powerful reclamatory agency. Men who have lived their lives in narrowly circumscribed areas and have fallen into crime are likely to receive needed moral and physical stimulus from the open air and sunshine. Old mother nature is a kind nurse to the fellow who is at all disposed to get back to his better self. Hence, farming operations of any kind make ideal work for improvable prisoners. Quarrying stone and making brick, while not so attractive, as farm work, are healthful and interesting occupations. The Provincial Reformatory quarries at Guelph and the brickmaking plant of the same institution at Mimico have been remarkably successful from the productive standpoint. Better still, the men like the work and go from it to their regained freedom, rugged and hopeful.
SESSIONAL PAPER No. 252

Roadmaking has been urged as an ideal employment for prisoners, for two reasons: (1) because there is such a crying need for good roads, and (2) because work of that character affects very slightly the interests of organized labour. Of all outside work, roadmaking is the least desirable for prisoners. In the first place, the constant exposure to the public that such work inevitably involves is scarcely fair to the prisoner. Certainly it is not an aid to his rehabilitation. The convicts in the penal settlements of Botany Bay, Tasmania and Western Australia, working in chain gangs, built long stretches of stone roads that remain good to this day. But society’s attitude towards its delinquents has surely become more humane since Port Arthur furnished Marcus Clarke with the material for his gruesome story. No prison management would now be allowed to march convicts out to work on the roads in chains. The physical difficulties to successful road operations are not easily surmountable. To work within nightly reach of the prison would mean a rather narrow area of operation. For a movable camp only well-conducted, trustworthy fellows could be selected, and these trusts could probably be employed more advantageously to themselves and the State on the institutional farm.

At Kingston, the farms should afford a means for the employment in summer of a great deal more of the surplus prison labour than it now uses. From twenty to twenty-four is the maximum number engaged on the farm, even in the busy season. It is idle to say that from fifty to one hundred men could not be profitably engaged on the land. There are market gardens all around the prison farm and all kinds of vegetables, with the exception of potatoes, can be grown in abundance. It might be even possible to treat the land as to make it produce a good yield of potatoes. The difficulty on the farm appears to be not in the land but in the prison management. More men are not at work on the farm because of the officials’ fear of escape and the trouble of looking after the workers. At Ohio State reformatory, where they have many long term prisoners, even lifers, twelve hundred acres are being farmed and the net profit runs as high as $20,000 per year. In ten years, 2,600 prisoners have been trusted outside of the walls of the Ohio prison without armed guard, and only seventeen attempted to escape.

There is such a thing as emphasizing too much the necessity of keeping a loaded rifle within easy range of every prisoner. There are some men at Kingston to-day who would not run away if they had a chance. There are others who, under present conditions, would make an escape, if they saw a favourable opportunity. But repose a little confidence in these same men, put them on their honour, and they might prove faithful to their trust. The success of prison management should not be measured in inverse ratio to the number of yearly escapes. It is possible to have absolute security and a horrible prison. No escapes from the prison at the further end of the Bridge of Sighs are recorded, nor did many get away from the Bastile, until that memorable day in July.

The trusty system is essential to the success of outside operations. The continual menace of an armed guard stifles the development of co-operative interest in the convict, hampers him in his labour, and makes that labour costly to the State. Nor is it necessary to run great risks of escapes in developing the system. A trusty gang can be recruited from almost any prison. It must be very carefully selected at first: (1) From men whose terms of incarceration have nearly expired and whose self interest makes it unwise to run away; (2) From those whose antecedents and conduct give strong assurance that they will not violate the confidence reposed in them. Of course, there will be occasional escapes, but if from a wisely selected trusty gang one does get away, the safety of the community is not necessarily imperiled. The chances are the defaulter will be recaptured and his added punishment will impart the wholesome lesson to his fellows that it pays to play fair with the prison management.

Let us turn now to a consideration of the other branch of prison labour—Inside industries. On these, as we have already urged, depends in a large measure the success of prison management. Where outside operations are limited in scope and where the climatic conditions make it impossible to work men in the open for a considerable
period of the year, workshops within the walls are an absolute necessity. Given a free hand in the establishment and management of industries and the sale of their products, the progressive administrator can make an ideal prison. The greatest industrial prison on the continent is situated at Stillwater, Minnesota. A glance at the operations of that institution may be interesting. It has two basic industries: binder twine and agricultural implements. The prisoners are paid according to merit or efficiency, some of them receiving as high as $20 per month. In addition, a fund is set apart from the prison earnings to relieve special cases of distress in the homes of prisoners. Last year the net revenue—over and above the maintenance of the prison and the wages of the inmates—was $362,000. This sum was handed over to the State for the general service. Giving full credit to the unique genius of Mr. Henry Wolfer as a business man and a prison administrator, the result must still appear astounding unless the peculiar situation in Minnesota is explained. Within the borders of that state there are no binder twine factories or agricultural implement works, and it has become the settled policy of the State that the farmers purchase all their requirements in those lines from the Stillwater prison. If outside firms invade the Minnesota market the price of the prison product is lowered sufficiently to crowd them out. It is not necessary to make any comment upon the principle underlying the operation of Minnesota’s penal industries. We merely state the facts. May we add that it is a far cry from the prosperous monopoly in two lines of manufacture that the Minnesota prison enjoys, to the strangled industrial conditions that one meets in a Canadian penitentiary—from the net revenue of $362,000 at Stillwater to a net cost of $300 per year for maintaining each convict in this Dominion.

THE STATE-USE SYSTEM.

The State-use system has been generally accepted as the most satisfactory solution of the prison labour system. True, objection is offered to it in some quarters because of the fact that under its operation, while the element of competition is removed, the product of prison labour displaces what free labour would otherwise supply. This objection is unreasonable. Its acceptance can only mean one thing: the enforced idleness of prisoners, which, as we have already pointed out, is a crime against the prisoner and society as well. Since prisoners must be given productive employment, surely it is only just that, in as much as they must be maintained by the State, the State should receive the product of their labour. In this view, the leaders of the labour movement on this continent heartily concur. Mr. John Mitchell, Vice-president of the American Federation of Labour, in a recent article says:—

"Organized labour is the strongest and most persistent advocate of the employment of convicts in the prisons upon those commodities which are needed by the state and its subdivisions for consumption in its several institutions and departments. The charge that the labour unions are opposed to convict labour is a malicious attempt to prejudice the public against unionism by shifting upon the unions the responsibility for the evil conditions existing in the penal institutions."

Further on, Mr. Mitchell approvingly quotes an extract from the report of the proceedings of the National Committee on Prison Labour, as follows:—

"After one year of study the National Committee on Prison Labour found the preponderance of evidence to be in favour of the State-use system; after a second year of study and further investigation, the Committee is in a position to declare as prejudicial to the welfare of the prisoner, the prisoner’s family and the public, the contract system of prison labour. The Committee therefore declares itself opposed to the contract system of prison labour and to every other system which exploits his labour to the detriment of the prisoner."
In a contribution to the Annals of the American Academy, Mr. John P. Frey, editor of the International Moulders' Journal, defines the position of organized labour on the question in these words:—

"It is not the work of the convicts as producers which meets with trade union opposition, nor is it that by working they may keep some free men idle. It is, instead, the methods by which prison labour, when performed for the benefit of private contractors, places the product of the convicts' labour on the market and thereby forces reductions in wages upon large numbers of free workmen, thereby lowering their standard of living."

Proceeding, Mr. Frey gives an illustration of the attitude of labour. If the State decide to "build an addition to one of its prisons or erect a new public building by convict labour" there could be no objection. But if the State "allowed building contractors the privileges of contracting for convict labour and these convicts were placed to work erecting buildings for private individuals in competition with contractors employing free labour—to this form of competition the trade unions object." Further on, Mr. Frey advocates the doing in prison of all work necessary for the maintenance of State and eleemosynary institutions, building highways, raising farm produce, etc., "and the convict can work on all of these with a minimum of competition with free labour and with no injury to the farmer." More emphatic still is the pronouncement of Mr. Collis Lovely, General Vice-president of the Boot and Shoe Workers' Union, Boston, in favour of the State-use system. He says:—

"The system has proved an unqualified success and merits extension to all penal institutions in the state and country. No institution supported wholly or partially by the State should be allowed to purchase a single article in the open market that can be supplied in prisons. This would give employment to diversified prison industries and occupations and fit the prisoners to procure and perform lucrative labour at the expiration of their prison terms. Hence the value of diversified prison industries and occupations conducted under the most improved methods and with up-to-date machinery."

Your Commissioners had the privilege of hearing statements from representatives of organized labour in Canada. With the views already quoted from United States Labour leaders these statements generally agree. Mr. James Watt, president of the Toronto Trades and Labour Council, did not see any serious objection to prisoners being employed on work for the State, but urged strongly that the State should pay them wages. The president of the Dominion Trades and Labour Congress, Mr. J. C. Watters, said it did not matter what class of work prisoners are engaged in, there is competition to a greater or less degree. But the State-use system offers least competition to outside labour, and he was most emphatically in favour of it.

It is needless to quote the opinion of prison administrators on the State-use system. They all favour it. Wherever it has been adopted it has settled the perplexing question of productive employment in prisons. Let it be remembered, however, that the field for the operation of such a system in any of the States of the Union is much wider than it is in Canada. "State Institution" there covers nearly every institution within the borders of the State, educational, charitable, and corrective. In other respects, what with us is a strictly municipal service is with them under State control. Dr. E. Stagg Whittle, secretary of the New York Prison Board, told your Commissioners that the entire population of the penal institutions of the State could not possibly manufacture all the goods required for its various institutions. A similar situation is said to exist in Ohio, Massachusetts, and other states.

Wherever the State-use system has been successfully inaugurated it has been found necessary to pass an Act making it compulsory for the State's institutions and services to purchase their supplies from the penal institutions. If the purchase of
goods from prison industries is left optional, it is found that private interests exercise a sufficiently powerful influence to hold the trade or the major portion of it. There does not appear to be any doubt that a full application of the State-use system in Canada would mean a welcome revival of the industries of the penitentiaries. More, it would mean the development of industries admirably adapted to the needs of the prisoners. On this point, there is a hearty agreement among the penitentiary officials who have been before us. Ex-Warden Platt tells us on pages of the abandonment of the one-time thriving industries at Kingston; how the conditions that followed have "seriously operated against the reformation of the convicts;" the efforts that have been put forth to fill orders for supplies for the Post Office and Military services of the Government, and his own conviction that the public use plan would give the penitentiaries "all the work they would require." Equally confident is Inspector Douglas Stewart that the Government has within its own hands the means of reviving on a sound basis the penal industries. On page he says:—

Speaking about the better employment of prisoners in penitentiaries, Inspector William Hughes (page ) declared that:—

"What I have recommended, and what I think is absolutely suited, from every point of view, is that the Government should utilize the labour of its wards to meet its own requirements as far as possible. I think it (the State-use system) would give employment to every man in the prisons of Canada."

"Those men (those on the stone pile), not only those men, but all the men in the institution that we cannot employ on the farm and works, which are necessary for ourselves and the maintenance of the place, should be employed on State work. We are at the present time prosecuting operations here that will enable us to obtain possession of two shops in addition to the binder twine shops. With these shops at our disposal the prosecution of some industry for the manufacture of State goods could be taken up immediately. Let the Government give us an idea of what they want done and we can make it for them immediately."

From what your Commissioners have seen and heard during their investigations, they are forced to the conclusion that the State has been grossly negligent in not providing proper work for its prisoners in the penitentiaries. Public opinion forced the abandonment of the contract system and the closing down of the shops operated under it; but public opinion did not bar the way to the employment of prisoners in work for the State. The lack of proper employment at Kingston has been the cause, we believe, of the institution's chief troubles.

Under the State-use system many lines of industry might be profitably entered into. One of the most suitable for the prisoners and the most profitable to the State would be a furniture factory, for the making of all kinds of office furniture, filing cabinets, desks, tables, chairs, etc. The efficiency that can be developed, even among short term prisoners, in this line of work is remarkable. In one reformatory in the United States, your Commissioners were shown a magnificent line of furniture for the Governor's residence, made entirely by the inmates.

Other industries will naturally suggest themselves: clothing, boots and shoes, blankets, tents, etc., for the Mounted Police; tents, blankets, uniforms and harness for the Militia; tinware utensils for all services requiring them; mail-bags and repairing same, rural mail boxes, etc., hospital beds and tables.

As the industries grow, it will be found that other lines of manufacture for the Government can be successfully carried out. The system should be given not a stinted but a generous application. Private interests have made it impossible for the Government to allow its prisoners to labour for the open market. Private interest should not be allowed to interfere with the Government setting apart for prison industries
every dollar's worth of those lines of goods that it requires and that prison shops can turn out.

That course marks the only sure way to the reform of the penitentiary system in Canada. Once a diversified circle of industries is established, abuses will disappear. A kindlier attitude and a better spirit will develop amongst the prisoners; officials and guards will realize more fully that their duty is to help as well as to hold the convict; and that to make men better is one of the prime purposes of the Prison System.

PAYMENT OF PRISONERS.

It has been strongly urged upon your Commissioners that prisoners should be paid wages or that a portion of their earnings be devoted to the maintenance of their families. At the present time, the prison population of Canada, far from earning anything for the State, costs the Government for maintenance over $300 per head per year. Even if a well-selected circle of State-use industries were established and successfully operated, it is not likely they will ever make our prisons self-sustaining. They should, however, very materially reduce the annual burden on the country and at the same time provide a fund for the remuneration of prisoners or assistance to prisoners' families.

Any wages' system must include all prisoners in its operations. If married men, or men with relatives dependent upon them, alone were paid, other prisoners, equally skilled and equally industrious, would justly complain. Even the fact that the earnings were given, not to the prisoner, but to his family, would not lessen the discrimination. The only prisoners who can fairly be left off the wages or reward sheet, are those under the ban for bad conduct.

The system of rewards or payments to prisoners, according to their efficiency and industry, has been adopted in many of the Institutions of the United States and in a few houses in Europe. As an incentive to labour and good conduct, it is invaluable. Men work with much more heart when they know they will be sharers, even to a small degree, in the product of their labour. In fact, their increased output under such a stimulus, it has been shown, goes a long way towards covering the wages fund. An idea of the outlay which the wages or reward system involves, may be gleaned from a survey of the pay sheet at Stillwater, Minn. Stillwater, as we have already seen, returned to the State, $362,000 profit on its industries last year. The money paid the prisoners at Stillwater is termed 'over-work allowance.' In the month of October, 1913, 24 hands working full time, 27 days, received an 'over-work allowance' of $282.57, or an average of $11.77. There was quite a disparity in the amounts received by the men. One bench hand got $22.89 for his month's work. The earnings of four others were between $15 and $20, and seven were under $10.

The payment of prisoners, under the industrial conditions that at present obtain in our penitentiaries, would be a question of charity rather than administration. The question is: Should the distress that exists in the homes of many of these men and the sufferings entailed upon their innocent families, be left as at present to the care of local charities, or should their relief be made an additional charge upon the penitentiary appropriation?

The family, as a rule, is not to blame for the offence of its bread-winner, yet wife and children, crushed under the disgrace of the crime, have physical privation added to their mental tortures. The prisoner must bear the burden of his crime, but he is not responsible for the fact that he does not earn anything in prison. He would, no doubt, welcome the opportunity to engage in profitable labour, especially if he knew that part of his earnings would be devoted to the sustenance of his dependent ones. But the State will not let him earn anything. He is a non-producer and society has to support him as well as his family. The Government is to blame for this condition of affairs, and we believe until it places its prison population in the way of engaging
in productive labour, it should set aside a fund for the relief of distress in prisoners' homes.

**THE INDETERMINATE SENTENCE.**

The indeterminate sentence is regarded by penologists as essential to the effective operation of any reformatory system. It is at once a scientific and a common-sense proposal. It presupposes the necessity of the cure or reclamation of the man as well as his punishment. The definite sentence, on the other hand, is punitive in its purpose. The prisoner must remain in prison for a stated number of years, no matter how well fitted he may be, before the expiry of his sentence, to take his place in the outside world. And he must be discharged when his time is up even if he is still an unrepentant criminal and determined to resume his war upon society.

The chief objections to the indeterminate sentence are: (1) the judge who tries a man is in the best position to fix justly his sentence; (2) the trained criminal may so conduct himself in prison as to deceive the officials and thus earn good reports and early liberty.

To the first of these objections there is only one answer: If the sole object of the judge's sentence is to punish, and make the punishment fit the crime, the judge is certainly the best qualified to measure out the law's revenge. But, if the other side of the question is to receive consideration; if society desires to reform as well as punish the convicted felon, then the judge is no more in a position to fix definitely the period of incarceration than the doctor is to say beforehand how long a patient should remain under treatment.

The second objection, based upon the fear that clever, designing criminals, by good conduct, may work a short course through prison, has not revealed itself in the practical operations of the system. Under the indeterminate sentence law, the average term of detention in prison is invariably longer than it was under the fixed sentence.

After years of experience with the operations of the system in the Commonwealth of Massachusetts, Mr. Fred. G. Pettigrove, of Boston, gives this as his matured opinion:

"The indeterminate form of sentence is an indispensable adjunct to every reformatory scheme, because it is the only one that affords an opportunity to adjust the term of detention to the varying needs and capacities of the prisoner. When a prisoner is under the necessity of making a constant effort at self-improvement in order to secure release, he must in some cases be deriving a benefit from the discipline. The deterrent effect of penalties depends upon certainty more than upon severity; and the certainty of a commitment on an indeterminate sentence is quite as useful as if the court should fix the term."

The view that in corresponding to the efforts for his rehabilitation within the prison, even if his sole object is early freedom, a prisoner is developing the good that is in him, is also well expressed by another experienced penologist:

"The prisoner's government resolves itself into a mutual or cooperative relation between himself and keeper or guard. Both are anxious to win—the prisoner for his earlier freedom—his keeper because it is easier to manage him under the stimulating influence or reward. The general character of the prisoner is improved by his own discipline of self control, and I say it advisedly, the prison officer is also improved by the response in his ward. The rigours of prison commands are softened, infractions are adjusted with better spirit and penalties are imposed more thoughtfully. They feed the heart beats of each other more easily and readily, and I firmly believe that by this form of sentence we are more likely to recognize that which is too often unrecognized, that whether we wear official robe or prison garb, both are children of one living God."

The late Chief Justice McMahan was a strong advocate of the indefinite sentence. As indicating the position of an eminent Canadian Jurist on the question, a quarter of
a century ago, we may quote from Justice McMahon's charge to the Grand Jury at Toronto Assizes in June, 1889:

"Were the law changed and the judge's duty made simply to commit the prisoner to a named prison, the prisoner's duration therein would depend on himself, from the evidence afforded by his daily life and conduct as evincing his fitness for a return to liberty.

"A convict is imprisoned because it is not safe for the community that he should be at large. His imprisonment is demanded for the same reasons that require that a lunatic should be detained in an asylum. It follows that the imprisonment should continue as long as the danger lasts. A lunatic is not discharged from an asylum until in the opinion of those intrusted with his keeping he has recovered his mental balance. So it is urged to discharge a convict while he remains unchanged in character and purpose is to precipitate upon the public a terror which it is the duty of the state to hold in leash.

"As it is the aim of the indeterminate sentence to retain the convict in prison until he is fitted for freedom, making such fitness the condition precedent to his release, the sentence therefore presupposes a system of prison discipline that shall tend to fit the convict for freedom. Mere imprisonment does not have such effect; on the contrary the punitive system has the opposite tendency."

Dr. Bruce Smith, Inspector of Prisons for Ontario, has made an exhaustive study of the indeterminate sentence as an essential feature of any system of prison reform. Doctor Smith speaks not only from many years practical experience, but also from a wide knowledge gained through a personal investigation and study of the prison systems of the United States and European countries. He puts the case very concisely when he says:

"The indeterminate sentence embodies as one of its basic principles that the individual-offender, and not the crime, shall finally determine the length of confinement or detention that is necessary to reform him, and to secure the greatest protection to society. This means a careful analysis of his physical, mental and moral status in order to determine how long it is necessary for him to remain in prison, rather than the measuring out so much punishment for a given amount of crime. The indeterminate sentence seeks to regenerate the criminal and readjust him to the requirements of society's laws and customs, so that he may be safely released on probation. It affirms that the crime shall not be considered except for the purpose of determining the culprit's natural depravity. Emphasis is placed upon the saving qualities of the individual—the man, or what is left of him. The scientific application of the principles of the indeterminate sentence means or implies that the offender shall some day be released on probation or parole, and that such tentative release shall come to him gradually, and only after he has given reasonable evidence of his desire and purpose to live honestly and obey the law. It means that his treatment in prison shall tend to break down and eradicate the vicious and criminal traits of his character and build up and strengthen the best elements of his nature. The principles involved in the indeterminate sentence and the probation or parole system are one and the same, and are inseparable."

Carried to its logical development, the indeterminate sentence should have neither minimum or maximum limits. It should mean liberty for the reformed prisoner to take his place in society and bear his share of its burdens, but it also should secure the continued incarceration of the incurable criminal. Any system that shortens the term of imprisonment of the man who becomes an honest contributor to the wealth of the community, and holds in leash for a longer period the habitual criminal, is in the economic interest of the State. Society is the gainer by the earlier freedom of the one and the longer confinement of the other. This principle is recognized in the
Borstal system in England where a separate institution has been established for cases that offer little or no hope of reform. New South Wales has a law that places a criminal, three times convicted, on what is known as the "habitual list." The habitual is kept in custody until he has given substantial evidence of a desire to live an honest and orderly life. Then he is allowed out on probation on condition that he report regularly to the probation officer and if he again violates the law he is returned to prison for an indefinite period. Switzerland has a special institution for the recidivist called the House of Seclusion. The minimum term is ten years; the maximum twenty.

The indeterminate sentence is now in operation in the province of Ontario. The Ontario Reformatory Act provides that every person sentenced directly to the Reformatory shall be sentenced to imprisonment there for a period of not less than three months and for an indeterminate period thereafter of not more than two years, less one day. An application of the same principle to the treatment of indubriates is to be found in the Ontario Municipal Act, 1912, a section of which reads as follows:

"Where a person is convicted of being found drunk or disorderly in a public place, contrary to a municipal by-law, within three months after a prior conviction for a like offence, he may be committed by the Police Magistrate or Justice of the Peace, before whom he is convicted, to an Industrial Farm, of the locality, in which the order for committal is made for an indeterminate period, not exceeding two years."

Not the least of the merits of the indeterminate sentence is that it would place all prisoners on an equal footing. The disparity in judges' sentences is very pronounced. One judge appears to have a particular aversion for a certain class of offence. Another judge is notoriously lenient in some cases. Hence we have men meeting in prison, found guilty of a similar offence, with one undergoing a penalty much more severe than the other. The long termer, already smarting under a feeling of resentfulness, is likely to grow more morose and vindictive when he meets other prisoners who are getting off much lighter than he. If a minimum and maximum period of imprisonment were fixed in each case and each convict allowed to work out his own salvation between those limits, there would be an end to all feeling of judicial wrong and a friendlier attitude by the prisoner, from the beginning, towards the agencies that are working for his rehabilitation.

PAROLE.

A natural corollary of the indeterminate sentence is a properly organized and efficiently administered system of parole. To one officer is assigned the duty with the assistance of the police of looking after the men during their probation. The physical impossibility of any one man—no matter how efficient and zealous he may be—discharging these duties for the whole Dominion, is obvious. True, invaluable service is voluntarily rendered the Department by the Prison Gate Branch of the Salvation Army, and many a paroled prisoner owes his thanks to this worthy organization, for the assistance and encouragement that gave him a new start in life. If the administration of a parole system is one of the duties of the State, then the proper working out of that system should not be dependent upon the efforts of any church or charitable society. It should be organized and officered to promote and protect adequately the interests of every paroled convict. That would still leave a large field for the independent exercise of Christian sympathy and helpfulness.

According to the present regulations, the paroled men report to a police officer in the district. This is a very bad feature of the system. The average policeman is neither temperamentally nor by training fitted to be the guide and guardian of an ex-convict. Not infrequently, police persecution has driven the honestly working convict away from his employment and back again to a life of crime. The parole system should
be absolutely independent of the police. It should be administered by strict but sympathetic men, who will see to it that the paroled convict gets a fair chance. Employment is the first requisite to a new start in life. It is not fair to the prisoner to set him at liberty in a world which has been a closed book to him for a number of years, without anything to do. If the man is weak at all, he will surely go down under the continuous pressure of enforced idleness. It is not desirable in the vast majority of cases to send the man back to his former home. The prospects of his success are generally much better if a position is secured for him in a strange place. Only his employer and the local parole officer need know of his prison experience. This secret between employer and employee often develops a feeling of fellowship and gives the paroled man a surer grip of himself.

Your Commissioners have been impressed with the idea that a parole system can best be administered with the assistance of a small board appointed at each institution. That board could meet monthly and consider the application for parole, see and interrogate the applicants, hear the reports from the warden and other officials, and advise the Minister of Justice on each case. Membership on the board would be of a purely honorary character, as public spirited men may be found at every prison willing to give their time to the work.

**MANAGEMENT OF PENITENTIARIES.**

The unsatisfactory conditions at Kingston Penitentiary are the outcome of the system of administration. The place is pervaded by a spirit of distrust and suspicion amongst the subordinate officers. Political jealousies and religious animosities prevail to such an extent that they have seriously affected the welfare of the inmates. It is difficult to see how any reformatory work can be carried on where such a spirit prevails. When officers are quarreling, nursing personal grievances and imaginary wrongs, and making them the subject of prison gossip from day to day, their influence on the prisoners cannot be good.

Many of the guards are not qualified by education or character for the positions they fill. Guards who obtain their appointments by misrepresenting their age and other sinister means, are not men whose influence will tend to uplift those in their charge. When they carry on illicit traffic in tobacco and rob the convicts in doing so, they cannot help to make the prisoners honest men. Their influence must have an evil effect which nothing can overcome. The possible effects of the petty tyranny over prisoners of ignorant and brutal guards are painful to think of. The moral standards pervading the prison are to be estimated from these facts.

These conditions result in great measure from: (1) The present mode of appointing guards through political influence; and (2) from the Warden's hands being tied, so that he is practically impotent to control or dismiss an official who has political influence, no matter what his offence may be. Formerly, it appears the Warden was invested with full authority to employ and dismiss guards. Some fifteen years ago, this power was taken from him, and the result has been the lessening of his influence as an administrator; the employment of men utterly unsuitable for the work, and the consequent demoralization of the penitentiary service. As to the conditions we are dealing with and the causes that produce them, there is a concurrence of opinion among prison officials. Warden Platt was questioned on this point (page 252):

"Q. How does the present system affect discipline in so far as the authority of the warden is concerned?—A. Inimically; that is the whole tendency—to lessen the authority of the warden and lead the officials to think that the warden has less to do with them than he used to have—and that they are dependent on their friends in the city or friends in Ottawa more than they are on the warden.

"Q. That must undermine discipline?—A. It undermines the authority of the warden."
Inspector Hughes (page ) condemned the system of placing a man who is inferior in every way to the convict who is under him, in charge of that convict. Where you get men shut in from the outer world and the only person from the outer world they are meeting is the man who instructs and controls them practically, body and soul, that man’s example before them is much more than you can appreciate, unless you have been there to see it.

Equally emphatic was Inspector Stewart in his denunciation of the method of appointing guards. Speaking of a convict who had been using dope, he was asked, (page ): “Where would he get the dope?” and the answer was: “From officers appointed by political parties outside, without an examination.” Further on, (page ) Mr. Stewart deals more fully with the question. He says:

“The mode of selection is such that the Warden is absolutely relieved of the responsibility or the influence a man so selected has over the convicts. The process of selection is and has been for the last fifteen or twenty years, fifteen years at least, that when a vacancy occurs a man is taken from those recommended by prominent politicians and members of Parliament, and the Warden is notified to employ him. The Warden, it is true, has then three months before the appointment is made permanent, if he sees fit to report against that man’s permanent appointment, but it is very, very rarely that the Warden has backbone enough to do it, because he antagonizes the politician who recommends him.”

Your Commissioners believe that no lasting improvement in the condition of our penitentiaries can be looked for, so long as the present system of management is adhered to. It is impossible, apparently, to fix the responsibility for many of the evils complained of. The Warden disclaims responsibility and the Inspectors say that they are not responsible, in many cases. What is needed is a management, unhampered by political influence, vested with full power to reorganize the system and held strictly responsible for the conduct of all our penitentiaries. The importance of the work can scarcely be overestimated. At the very outset a line of industries must be established. To place each of these industries in the most suitable institution and fully equip and officer them are important undertakings. More important still is the better adjustment of the routine and discipline of the prisons to the moral and intellectual improvement of the prisoners. Responsibility there must be and in the final analysis that responsibility must rest on the Department and the Government. But in the working out of a reorganization and the subsequent management of each prison those charged with the duty should be given a free hand. To no other department of the public service is the Commission system so well adapted. Wherever it has been tried the results have been gratifying. A penitentiary Commission of three members would meet every requirement of the situation. To that Commission should be given full power to reorganize the prisons, industrially and otherwise, make regulations for their management, select men for the administrative officers and then hold these men responsible for results. As a body, the Commission would control the whole circle of penitentiaries. Individually, they would perform the duties of an inspectorate. The Department of Justice, while exercising supreme authority over the Commission, would be relieved of the details of management and the pressure for political appointments.

RECOMMENDATIONS.

Your Commissioners beg to make the following recommendations:—

Management.

(1) That the control of the penitentiaries be placed in the hands of a permanent Commission of three members, with power to appoint staff officers and heads of depart-
ments, make regulations for the government of the institutions and generally direct their management.

(2) That under such commission the Warden of each prison be given full authority to employ and dismiss keepers, guards, etc., in addition to the powers he now enjoys.

(3) That a Parole Board of not less than three members be appointed for each penitentiary, to sit once a month and to hear and consider applications for parole, and make recommendations on the same to the Minister of Justice.

(4) That the field staff of the parole organization be increased to three officers to be directly under the charge of the Department of Justice and work in conjunction with the local parole boards.

Classification.

(5) That an arrangement be entered into with the provinces of the Dominion to take over the custody of first offenders and prisoners under twenty-five years of age.

(6) That should it be found impracticable to carry out recommendation No. 5, two reformatories for young prisoners and first offenders be established—one in the East and the other in the West.

(7) That within the present penitentiaries a system of classification be inaugurated, based upon the conduct of the prisoners, and operated with a view to encourage them to habits of order, industry, and a better appreciation of the duties of citizenship.

Industrial Employment.

(8) That what is known as the State-use or Public-use system of prison labour be adopted throughout the penitentiaries and that industries be established to supply the requirements of the Government, its institutions and services, with all goods that can be made in prison.

(9) That outside labour be developed to the fullest possible extent at each prison, in farming operations and, where raw material can be conveniently obtained, in quarrying stone, making brick, etc.

Treatment of Prisoners.

(10) That a through physical and mental examination be made of each prisoner on his admission, and as far as possible his antecedents and family history be obtained and put on record; and

That a proper filing system be installed at each penitentiary, so that the history, physical and mental condition of the prisoner on admission and his record in prison may be kept in one envelope.

(11) That the close cropping of prisoners' hair be abolished, except in cases where it is necessary to preserve cleanliness.

(12) That in place of the present prison uniform a suit and cap of one tone material, blue or grey, be adopted.

(13) That a few copies of a carefully censored weekly newspaper be provided in each prison for the use of good-conduct prisoners.

(14) That a moderate issue of tobacco be made to good conduct prisoners who had contracted the habit before entering prison.

(15) That as soon as space can be provided a dining-room equipped with proper service be established at each prison for all good conduct prisoners, and that meanwhile the tinware utensils in use be discarded and enamel-ware substituted.

(16) That hosing of convicts and confining them in a dark cell or dungeon and shackling with ball and chain be abolished.

The Hospital and Insane Ward.

(17) That a hospital, modern in plan and equipment, be provided.

(18) That the hospital staff be reorganized so that it comprise a visiting surgeon, a resident physician, and two trained male nurses.
(19) That a separate institution for the criminal insane be established or that arrangements be made with the provincial Governments for taking over this class.

The School.

(20) That a school of letters be established at each prison, and for three hours at least each day instruction be given by a head teacher and inmate monitors.

(21) That drill exercises be held every Saturday afternoon when the weather is suitable, and on the afternoon of every holiday; and that an occasional entertainment be given.

Disciplinary Officers.

(22) That in the employment of guards more regard be had to the character and education of the applicant, with a view that the official should exercise the best possible influence over the prisoner.

Indeterminate Sentence.

(23) That the criminal code be so amended as to empower judges to impose a maximum and minimum term of sentence on all persons committed to a penitentiary, the period of detention to be fixed by the Parole Board.

RELATIVE TO THE

GOVERNMENT GUARANTEE

OF THE

BONDS OF THE CANADIAN NORTHERN RAILWAY

PRINTED BY ORDER OF PARLIAMENT

OTTAWA
PRINTED BY J. DE L. TACHÉ, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY

1914
Canadian Northern Railway System.

1.—Correspondence, including official application.

2.—Detailed statements showing particulars of capitalization, earnings, cost to complete, &c.
To the Right Honourable

R. L. Borden,
Premier of Canada.

Dear Sir,—For the reasons mentioned in the memoranda and statements respecting the Canadian Northern Railway System, submitted, it is essential that the Company should receive further Government aid. The amount required is Forty-two Million Dollars ($42,000,000).

Recognizing the difficulties in the way of a cash loan, I beg to apply for a guarantee of securities to the extent of Forty-five Million Dollars ($45,000,000), par value. The discount on the disposal of these securities would probably reduce the proceeds below the Forty-two Million Dollars ($42,000,000).

I have the honour to be,

Your obedient servant,

Wm. Mackenzie,
President.

Ottawa, March 5th, 1914.

To the Right Honourable R. L. Borden,
Premier of Canada,
Ottawa, Ont.

Dear Sir,—It has been suggested that an agreement should be made between the Canadian Northern Railway and the Government in connection with the Company's application for assistance, providing for an exchange of traffic between the Company's lines of railway and the Intercolonial Railway at Quebec. To an arrangement of this kind, the Company is agreeable, and it is suggested that the arrangement should be of such nature that the Intercolonial would secure all the benefits, from traffic originating on the Company's lines and consigned to points on the Intercolonial Railway, that it would have were it the eastern part of the Canadian Northern Railway System. Naturally, the Canadian Northern would expect the same benefits from traffic originating on the lines of the Intercolonial Railway.

I am convinced that an arrangement of this kind is practical and would result in benefit to the two railway systems affected, and if the members of your Government are of the same opinion, I would suggest that provision be made in such legislation as may be passed in connection with the Company's application for aid, empowering the interested parties to enter into the necessary agreements.

Yours very truly,

Wm. Mackenzie,
President.
INFORMATION REQUIRED FROM THE CANADIAN NORTHERN RAILWAY.

Required—A Tabular Statement Showing:

1. The Charters of the various Companies constituting the C. N. R. System, with dates and appropriate references.

2. The length of each line and the Provinces within which it is situate and its termini.

3. Its present or proposed connection with the whole system.

4. Its capitalization showing both authorized and issued capital.

5. Its cost up to the present time.

6. The amount, if any, required to complete.

7. The aid received therefor in (a) cash, or (b) lands, from (a) the Federal Government, (b) any Provincial Government or Governments, and (c) any municipality.

8. The aid received therefor in guarantee of securities by (a) the Federal Government, or (b) any Provincial Government.

9. The fixed charges thereon with particulars of the date when (a) the principal and (b) the interest is due.

10. The present earnings both (a) gross and (b) net.

11. The estimated earnings both (a) gross and (b) net, during the years 1914-15-16-17-18 respectively.

Deduct fixed charges on Outstanding Securities.  

Surplus  

1,510,718

**Note.**—Surplus available to pay interest on 5% Income Charge Convertible Stock amounting to $1,250,000.00.

As to the traffic future of the Canadian Northern Railway Company, it is difficult to forecast the earning power of the completed line with certainty, but Mr. D. B. Hanna, the Company's third Vice-President, who has had long experience in the operation of railways in Western and Eastern Canada, submits the following statement as an estimate of the results during the first three years after the System has been operating in accordance with present plans.

The estimate of gross earnings is on the very conservative basis of the percentage increases for the past five years of the lines of the System in actual operation and inasmuch as a part of the mileage has been disconnected and confined to a local short haul business, operation as a united trunk system should result in much greater per mile revenue.

<table>

*When issued will be issued to Canadian Northern Railway Company.

**Owned by the Canadian Northern Railway Express Company, Ltd.

***None issued at present;—when issued will be issued to the Canadian Northern Railway Company.
Ottawa, March 31st, 1914.

Sir,—The undersigned have the honour to transmit you herewith certain statements as of December 31st, 1913, bearing on the financing of the Canadian Northern Railway System; namely:—

(Partially printed.)

1. Grouping and Mileage Statement.
2. Statement showing total receipts and expenditure on Construction, Betterments and Equipments.
3. Statement showing expenditure on Construction and Equipment through the Contractors, Messrs. Mackenzie, Mann & Company.
4. Statement showing expenditure on Betterments and Equipment, chargeable to Capital.
5. Statement of Capital Stock, authorized and issued.
6. Statement of Securities issued, showing:—
   (a) Line.
   (b) Class of Security, and rate of interest carried.
   (c) Par value.
   (d) Fixed charges.
   (e) Proceeds.
   (f) Bank interest on balances.
   (g) Rate of interest on balances.
   (h) Total proceeds.
   (j) Withdrawals through Canadian Northern Railway Co.
   (k) Total withdrawals.
   (l) Balances on hand in bank.
   Also supporting statements as follows:—
   (a1) Statement showing amount of securities deposited as collateral.
   (a2) Statement showing authority for various issues.
   (a3) Statement showing charters of various Companies.
   (a4) Memorandum re Bonding Powers.
   (a5) Statement showing reconciliation of expenditure through Contractors, Messrs. Mackenzie, Mann & Company.
   (a6) Statement showing due dates of principal and interest.
7. Statement showing Cash Subsidies from all sources.
8. Land Statement.
10. Due Dates of Principal and interest of Equipment Securities.

The undersigned have verified these statements from the entries in the ledgers of the Head Office of the Company at Toronto, and of the Contractors, Messrs. Mackenzie, Mann & Company of the same place.

With regard to the lines west of Port Arthur, the books of the construction of the lines in British Columbia are kept in Vancouver, and the books of the construction of the lines between Port Arthur and Yellowhead Pass are kept in Winnipeg. From these offices, monthly statements are forwarded to the Head Office in Toronto, and from these statements, we have verified the expenditure on construction relative to that portion of the System.

23
We would direct attention to the fact that the Railway Company have received any benefits accruing from such subsidiary Companies, as the Express and Telegraph Companies, Steamship Companies, and certain benefits from the Townsite Companies.

Our work in Toronto was greatly facilitated by the evident desire on the part of the officials of the Canadian Northern Railway and of the Contractors, Messrs. MacKenzie, Mann & Company to place in our hands all the books, memoranda, etc. pertaining to our work.

We have the honour to be,

Sir,

Your obedient servants,

G. A. Bell,

Financial Comptroller, Department of Railways and Canals.

S. L. Shannon,

Comptroller & Treasurer, Canadian Government Railways.

J. C. Saunders,

Chief Accountant & Dominion Bookkeeper, Department of Finance.

The Right Honourable
R. L. Borden, M.P.,
Prime Minister of Canada,
Ottawa, Ont.

$23,746,000.00 $4,383,027.50

Office of the Solicitor General of Canada.

Ottawa, April 4th, 1914.

Dear Sir,—Referring to the audit made by yourself and Messrs Shannon and Saunders, relative to the expenditure for construction of the Canadian Northern Railway and its allied lines by the Canadian Northern Railway and the Mackenzie & Mann Company, Limited, the Government would like to have certain further information relative thereto.

Statement 3 submitted with your report shows a balance due on construction and equipment account of $21,262,527.26 and since the receipt of your report the officials of the Mackenzie & Mann Company, Limited, have submitted a statement showing how this is made up; a certain portion being due contractors and others and the balance, some $10,000,000.00 being shown as presumably due banks.

The Government would like to investigate and report upon this statement with the object of obtaining your certificate that it is correct and would particularly instruct that you investigate the amount owing to the banks with the object of ascertaining yourself that the Canadian Northern Railway are in no way liable by way of endorsement of the use of any of their assets as collateral to the loans.

I would further like you to make an audit of the Canadian Northern Railway bank account and to submit a certified statement of their standing.

My desire is to obtain from you an independent certificate of direct and indirect and contingent liabilities of the Canadian Northern Railway Company and of all allied lines.

You are hereby authorized to call in such experts as may be thought necessary to assist you in obtaining the necessary information.

Mr. Graham A. Bell

Financial Comptroller,

Department of Railways and Canals

Ottawa.

Yours very truly,

Arthur Meighen.
Mr. Graham A. Bell,  
Financial Comptroller.  
Ottawa, Ont.

DEAR SIR,—Supplementary to my letter of the 4th inst., I would like you further to investigate and report on the following:—

1. Re capital stock issues of the following companies lodged with the National Trust Company Limited as trustees and if so what is the nature of the trust and did they automatically revert back to the Canadian Northern Railway upon discharge of certain obligations, and if so, what obligations.

   (a) Canadian Northern Railway Express Co., Limited.  
   (b) Canadian Northern Transfer Company.  
   (c) Canadian Northern Telegraph Company.  
   (d) Canadian Northern Steamships Limited.  
   (e) Lake Superior Terminals Co., Limited.  
   (f) Minnesota & Ontario Bridge Company.  
   (g) Marmora Railway & Mining Company.  
   (h) St. Boniface & Western Land Co.  

2. Report upon Canadian Northern Systems Terminals, Limited, Canadian Northern Manitoba Railway, and Qu’Appelle, Long Lake & Saskatchewan Railway, such particulars as would have been given in your report of March 31st last had these Companies appeared in Statement 1 and such subsequent statements as referred to the Companies named in Statement 1.

3. Are the Manitoba leased lines taken by the Canadian Northern from the Manitoba Government by assignment of lease still the property of the C. N. R. in same way as they were after such assignment was taken.

4. Give tabular statement showing,
   (a) Securities pledged as collateral only, not directly realized on.  
   (b) Balance of securities not yet issued but issued without further legislation of Governmental authority.

5. Give further particulars as to the item of $4,429,433.06 mentioned in statement eight (8) as handed over to trustees giving the obligation thus reduced.

You are authorized to employ in respect of any legal work which is included in the above, Mr. C. A. Masten, Barrister, of Toronto.

Very truly yours,  
Arthur Meighen.
SIR:—Pursuant to instructions contained in your letter of the 4th instant, and of your letter of the 6th instant in respect to further information required as to the financing of the Canadian Northern Railway System, the undersigned have the honour to report that they have obtained the information asked for, which is set out in the following statements, viz:

(Partially printed.)

I.—Particulars of accounts and loans of the Contractors on Construction, outstanding 31st December 1913, amounting to $21,262,527.26

III.—"A" Statement of the floating liabilities of the Railway Companies embraced in the General Title of the Canadian Northern Railway System.

"B" Statement of balances due by Station Agents, etc, as of December 31st, 1913.

IV.—Declaration of D. B. Hanna, third Vice-President of the Canadian Northern Railway Company, as to the correctness of No. 3 "A"

V.—Memorandum bearing on certain acquired securities deposited with the Trustees under Trust Deed.

VI.—"A" Certified copy of Trust Deed to secure first Mortgage 4 per cent consolidated debenture stock and bonds, dated June 30th, 1903.

"B" Letter from National Trust Company, Limited, Toronto, re Canadian Northern Railway Company 4 per cent perpetual consolidated debenture Mortgage.

VII.—Memorandum relating to Marmora Railway and Mining Company, Brockville, Westport & Western Railway Central Ontario Railway, Bay of Quinte Railway, Irondale, Bancroft & Ottawa Railway, Canadian Northern Manitoba Railway, Qu'Appelle, Long Lake & Saskatchewan Railway, and the Canadian Northern System Terminals Limited.

VIII.—Certified copy of Trust Deed to secure an issue of first Mortgage 99—year debenture stock and / or bonds.

IX.—Memorandum by Mr. Ruel re lines in Manitoba leased from the Northern Pacific Railway Company.

X.—Statutory declaration by Mr. L. W. Mitchell re Manitoba leased lines.

XI.—Statement marked Schedule "A" showing securities pledged as collateral only, not directly realized on.

XII.—Statement marked Schedule "B" showing securities pledged as collateral to temporary loans.

XIII.—Certificate re Canadian Northern Railway four per cent consolidated debenture stock.

XIV.—Certificate re Canadian Northern Ontario Railway 4 per cent perpetual consolidated debenture stock.

XV.—Certificate re Duluth, Winnipeg, Pacific Railway Company, four per cent first Mortgage debenture stock.

XVI.—Certificate re certain securities held pending sale.

XVII.—Certificate re certain securities issuable.

XVIII.—Memorandum from Mr. L. W. Mitchell dated April 8th, 1914, re Canadian Northern Land Department.
SESSIONAL PAPERS Nos. 269b, j, j, l, m.

XIX.—Letter of National Trust Company confirming No. 18, dated April 11th, 1914.

XX.—Certified copies of:

“A” Trust Deed of February 1st, 1899.
“B” Trust Deed of February 15th, 1909.
“C” Trust Deed of November 19th, 1913.

XXI.—Declaration by R. P. Ormsby, Assistant Secretary, Canadian Northern Railway, as to Capital Stock of certain subsidiary Companies.

Certain of the above statements have been further verified by sworn declarations, and by certificates from the National Trust Company as Trustees, the Canadian Bank of Commerce as to the bank accounts and Mr. C. A. Masten, K.C., Barrister, etc.

We would particularly draw attention to statement No. 2 being a declaration from the Comptroller of the Contractors. Messrs Mackenzie, Mann & Company, Limited, that the Contractors have made no profit on their work for the Canadian Northern Railway, other than certain fully paid Common Stock, which is set out in a statement in our previous report. This declaration is borne out to our satisfaction, from our investigation of the books of said Contractors, and also of those of the Company.

We have the honour to be, Sir,
Your obedient servants,

G. A. BELL.
Financial Comptroller, Department of Railways and Canals.

J. C. SAUNDERS.
Chief Accountant and Dominion Book-keeper Department of Finance.

ARTHUR MEIGHEN, Esq., K.C.,
Solicitor General of Canada, Ottawa, Ont.

[277]

Report in the matter of a Formal Investigation into the Causes which led to the British Steamer Saturnia touching the ground in the Lower Traverse, River St. Lawrence, on Tuesday, April 28, 1914, held in the Wreck Commissioner’s Court, Montreal, on the 4th and 5th days of May, 1914, before Commander Henry St. George Lindsay, R.D., R.N.R., Dominion Wreck Commissioner, assisted by Captain Francis Nash and Captain Joseph Ostens Grey, acting as Assessors.

The British steamship Saturnia, official No. 129,489; gross tonnage, 8,611; and owned by the Saturnia Steamship Company, Limited, of Glasgow, and engaged in trading between Glasgow and Canadian ports, appears to have been well found and equipped in every respect, and sailed from Glasgow on April 18, 1914, with 300 passengers and a general cargo, and a crew of about 148 all told, and arrived at Father Point, in the gulf of St. Lawrence, on Monday, April 27, about 9.08 p.m., the vessel drawing 18 feet forward and 23 feet 6 inches aft. At 9.24 p.m. the vessel was boarded by Jules Lachance, a special Quebec pilot, and proceeded towards Quebec.

Everything seems to have gone well during the night, the weather being fine and clear, and the ship apparently making good the courses steered, which courses were given by the pilot from time to time. The master was informed by the pilot on his coming on board, that, as the Lower Traverse light vessel was not on her station, he intended to wait for daylight before taking the ship through that channel, to which the master agreed, and shortly after this the latter appears to have left the deck, leaving the pilot in charge. The weather continued fine, and the wind light from southwest, and at 4 a.m. the speed of the ship was reduced. Cape Goose being abeam at 4.08 a.m., and a S. 45 W. course, by compass, was then set. At 4.18 a.m. the engines were ordered full speed ahead by the pilot, and the vessel proceeded towards the Lower Traverse, the tide being flood, and running strong to the south and west, the vessel’s speed must have been approximately from 18 to 19 knots over the ground. At 4.40 a.m. the vessel touched the ground, but did not stop, and it was found shortly after the stranding that Nos. 6 and 7 ballast tanks were leaking.

The vessel continued her voyage to Montreal via Quebec, without further incident, and after being discharged, was placed on the floating dock at Montreal, where it was found necessary to make temporary repairs to her bottom plates; the port propeller blades were also found to be bent, and also one blade on starboard propeller.

FINDING.

After carefully considering and reviewing the evidence adduced, the court is of opinion that the stranding of the Steamship Saturnia, in the Lower Traverse, river St. Lawrence, on the morning of the 28th of April, was caused by the action of Jules Lachance, the pilot, inasmuch as he appears to have had no confidence in himself as to the manner of navigating the vessel through this channel, and apparently did not make proper use of the usual day marks for safe navigation, and it is the unanimous opinion of the court that the vessel touched the ground on the south side of the channel, and close to the old Lower Traverse block, and this probably accounts for the pilot not seeing the buoy moored off the block, as the vessel must have passed almost over it just before or after striking the ground.
The court also considers that when in doubt as to his position, and lacking confidence in his ability as a pilot, he should have sent for the master to assist him in the navigation of the vessel.

The court therefore considers that the pilot did not show either ordinary skill or good judgment, in attempting to pass through the Lower Traverse channel under the existing conditions, and therefore suspends the license of Jules Lachance, the pilot, for a period of three months from this date.

In view of the master, David Taylor, knowing that the Lower Traverse lightship was not on her station, and the risks attending the navigating of these narrow channels with a strong flood tide, the court is of opinion that the master ought to have been on deck after passing Cape Goose, and censures him for this negligence.

The fact of the Lower Traverse light vessel not being on her station at the time of the casualty, does not appear to the court to have any bearing on the matter, as the Saturnia had passed the position where the light vessel would have been moored, some minutes before the accident, and, had the light vessel been considered necessary for safe navigation, both the master and the pilot were taking undue risks in trying to navigate the Lower Traverse with the full knowledge that the light vessel was not there.

Dated at Ottawa this ninth day of May, 1914.

N. ST. G. LINDSAY,
Dominion Wreck Commissioner.

Concurred in:

FRANCIS NASH,
J. O. GREY,
Assessors.

Read in open court, at Montreal, Quebec, this 11th day of May, 1914.

N. ST. G. LINDSAY,
Dominion Wreck Commissioner.
REPORT in the matter of a Formal Investigation into the Causes which led to the Stranding of the British Steamship *Montfort*, on Beauport Bank, River St. Lawrence, on Tuesday, April 28, 1914, held in the Wreck Commissioner's Court, Montreal, on Tuesday, May 3, 1914, before Commander Henry St. George Lindsay, R.D., R.N.R., Dominion Wreck Commissioner, assisted by Captain Francis Nash and Captain Joseph Osten Grey, acting as Assessors.

The British steamship *Montfort*, official No. 110,588; gross tonnage, 6,578; owned by the Canadian Pacific Railway Company, Montreal, Canada, and engaged in the Canadian service, sailed from Antwerp, bound for Quebec and Montreal, on April 15, 1914, with 162 passengers and a general cargo, having on board a crew of 95 all told, and was apparently well found and equipped in every respect, and arrived at Father Point, in the gulf of St. Lawrence, on Monday, April 27, at 5.19 p.m., the ship drawing about 21 feet 7 inches forward and 21 feet 10 inches aft, and after embarking Francois Gaudreau, a special pilot for the Pilotage District of Quebec, proceeded on her voyage towards Quebec.

Everything appears to have gone well during the run up the Lower St. Lawrence, the vessel passing Quarantine at about 6.55 a.m., Tuesday, April 28, the usual courses being steered, and the weather appears to have been fine and clear throughout the night and early morning. At 8.16, according to the company's regulations, all hands came on stations, and standby was ordered on the engine room telegraph. At 8.18 west end of Orlean's Island was abeam one-quarter of a mile off, and a course (W. by N. § N.) was ordered by the pilot. At 8.19 the speed was reduced to half speed, and at 8.22 a.m. to slow. Shortly after this the vessel ran into a dense fog, and thinking that the vessel was too near to the Levis shore, on account of his hearing the noise of a hydraulic rivetting machine on the port side, the pilot gave orders to port the helm, which was done, and the vessel's head swung off to N.W. by compass. About this time the leadsman reported four and a half fathoms, and before the next sounding could be taken the vessel took the ground on Beauport bank, about two and a half miles below Quebec, and one and one-quarter miles to the westward of the west point of the Isle of Orleans, where she remained until assisted off at 8 a.m. on the 29th. No apparent damage was reported after examination by divers at Montreal.

It would appear that about the time the vessel stranded the master superseded the pilot in the management of the ship, as he saw that the latter had apparently become bewildered as to the ship's position.

FINDING.

The court, after considering the evidence adduced in this case, is unanimous in its opinion that the stranding of the steamship *Montfort* was caused entirely by the want of skill and poor judgment displayed by Pilot Francois Gaudreau, inasmuch as he appears to have lost all knowledge of the position of his vessel after entering the fog, and the court considers that his local knowledge, and his knowledge of the tides and the ice movement, should have prompted him to do the only proper thing possible under the circumstances, and to anchor, until he found out his actual position.

The court therefore suspends the license of Francois Gaudreau, the pilot, for a period of three calendar months from this date.

278—1
No blame, in the opinion of the court, can be attached to the master and officers of the ship, as everything appears to have been done by them to assist in the proper navigation of the vessel, and the court considers that the master was perfectly justified in taking the ship out of the pilot's hands, although unfortunately not in time to prevent the stranding, and commends him for his action.

The fact that all the aids to navigation were not in place on April 27, in the opinion of the court, has no material bearing on this stranding.

Dated at Ottawa this ninth day of May, 1914.

II. ST. G. LINDSAY,
Dominion Wreck Commissioner.

Concurred in:

FRANCIS NASH,
J. O. GRAY,
Assessors.

Read in open court at Montreal, Quebec, this 11th day of May, 1914.

II. ST. G. LINDSAY,
Dominion Wreck Commissioner.
