The British Empire, whose representatives are assembled here to-day, has often been described as the product of accidents. It is, in fact, the natural and spontaneous product not of its own necessities only, but of those of mankind. Scarcely four centuries have passed since the continents of the world swung like new planets into each other's ken. When Columbus discovered America and Vasco da Gama opened the routes to the East, all nations and kindreds of the earth were presently brought into intimate contact. A few years later a political writer of the sixteenth century remarked: “Henceforth the world is one Commonwealth.” In a sense his words were prophetic. Our ever increasing control of natural forces has so knit the nations together that whatever affects one for good or ill affects them all. They are as organs of one body. But the mastery achieved over physical forces has completely outdistanced the control acquired over human forces. The fact is that our minds learn far more quickly than our characters change; so the social and political structure of the world has not kept pace with the growth of its knowledge. I am not saying that no progress has been made in applying moral ideas to political facts. Before me I see men who together can speak for a world commonwealth containing one-quarter of mankind. The peoples you represent are drawn from all the continents, from all their races, from every kind of human society. Like a network of steel embedded in concrete this Commonwealth holds more than itself together. It held through the greatest cataclysm that has ever shaken the foundations of the world. Dissolve those ties and civilization itself would collapse.

We are often told that self-interest binds the Empire together. A half truth presented as the whole is a dangerous falsehood. I have likened the ties which unite us to steel, but steel of the wrong temper may be brittle as glass. The only element which can give a tensile quality to human ties is a sense of duty in men to each other. We, gathered in this chamber, will strengthen the bonds which unite us so far as we are able to keep in mind the needs of others than those for whom we speak. We stand here on an equal footing and no Government present in this chamber can bind the rest. We can act with effect so far as we agree, and no further; but I weigh my words when I say that we shall achieve agreement and so strengthen the bonds which unite us only in so far as each and all of us is seeking how to relieve not only our own difficulties and troubles, but those also of a distracted world. The British Empire cannot live for itself alone. Its strength as a Commonwealth of Nations will grow so far as its members unite to bear on their shoulders the burdens of those weaker and less fortunate than themselves.

### OPENING SPEECH BY THE PRIME MINISTER OF CANADA

MR. MACKENZIE KING: Prime Minister and Gentlemen: The Prime Minister in his opening remarks made reference to precedents which have been established at former gatherings. I understand that the representative of the senior Dominion has been the first to speak after the Prime Minister of Great Britain. In these circumstances, I venture to say just a word or two. Personally I could not but wish that one of the more experienced and older members of the gathering had been the first to address his remarks to this Conference, my friend Mr. Massey, or General Smuts, who have been at similar gatherings in the past; but it may be well that precedents should be observed, and the procedure at former Conferences followed.

### WELCOME TO REPRESENTATIVES OF IRISH FREE STATE

May I thank the Prime Minister very cordially for the heartiness of the welcome which he has extended to us? I am sure we all join with him in experiencing pleasure at the presence at this gathering of the representatives of the Irish Free State. Coming from the Dominion of Canada, the close association of the name of our Dominion with that of the new Irish Free State in the Treaty and Constitution makes it a special pleasure to me to have the privilege of meeting at this table the representatives of that State.

### COMMENTS ON MR. BALDWIN'S SPEECH

Having regard to the short time we expect to occupy this morning, it would scarcely, I think, be advisable for me in any way to attempt to comment upon the clear, comprehensive review which has been made by the Prime Minister of the situation in Europe, and the mention made of other parts of the world, except to say that the information which has been given to us to-day, and particularly the elevated note which has been struck, will, I believe, be welcome not only to members of this gathering, but to the countries that are represented here, and, indeed, should be helpful in the wider field of international relations. The subjects that have been touched on are, of course, among the most important with which the British Empire is concerned, the issues with which they deal and to which they give rise are far-reaching, and it would not be advisable therefore to attempt to comment in any particular upon any phase of the questions at this stage. During the sittings of the Conference I assume ample opportunity will be afforded to all of us to make such references and comment as we may think would be necessary and helpful.

## VALUE OF IMPERIAL CONFERENCES AND OF PERSONAL CONSULTATION

I feel it is a very great privilege to have the opportunity of meeting in this personal way members of the British Government, the heads of the Governments of the Self-Governing Dominions, and the representatives of India, to discuss matters, many of which are of common concern. In matters of government the value of personal contact and association cannot I think be over-estimated. Some of the gentlemen present, most in fact, I am having the opportunity of meeting for the first time to-day; some little acquaintance has been formed by correspondence and cables, but I think a personal meeting is worth more than all the cables and correspondence combined. In so far as I have the privilege of speaking for the people of Canada, I would say that at this Conference we have only one aim and purpose, that, namely, which actuates all of us, of meeting together with a view to being mutually helpful, in doing what we can towards solving as far as may be possible many of the great problems which are of concern to us all. I think as we each speak our minds clearly with reference to matters in which some of us have perhaps a special interest and to other matters of general interest, we will find that no problem is incapable of being at least in some way appreciably solved if the spirit of goodwill is present, as it is certain to be in this gathering.

## VALUE OF PUBLICITY

May I just say this one word—it is a thought which has come to me more forcibly as I have listened to the Prime Minister's review—important as it is that those of us who represent Governments and are members of Governments should have the information which has been given to us to-day, and should have a common understanding among ourselves, more important I believe it to be that the Parliaments of the Empire should have equal advantage, as far as may be possible, of the fullest information with respect to such matters as are of concern to us all, and not only the Parliaments, but still more important, I would say, as far as this can be attained, the peoples of the various Dominions from which we come. For that reason I am glad of the publicity which is to be given to to-day's proceedings.

As a common sentiment, a common feeling, is developed among the peoples of the component parts of the British Empire, the solution of the questions that arise will be found appreciably easier. I can think of no greater service any of us could find it possible to render than that perhaps of taking back to our Parliaments, and through our Parliaments transmitting to our people, much of the information which we will gather here, information which will be helpful in interpreting to those whom we represent the difficulties and problems with which other parts are concerned. Similarly, I feel positive that no contribution can be rendered to this gathering of greater value or of greater permanent worth than that as representatives we should seek not merely to express our own individual views, but, so far as we can do it, set forth the views of our Parliaments and the views of the people represented in our Parliaments, with reference to the affairs of the Empire, and of the different countries that compose it.

## EMPIRE STANDS FOR PEACE

I think, Prime Minister, that throughout the British Dominions there will be very great satisfaction at the emphasis which you have placed upon the desire which actuates us all here, not only to further goodwill and harmonious relations between the different parts of the Empire, in working out our own problems, but also to make what contribution we can towards peace and justice.

in the world. That, I think, is the pride we all feel in the British Empire, that it has stood for peace, justice and goodwill among men, and, in so far as we can make a contribution that will be of benefit to mankind, it seems to me that it will come in largest measure through the circumstance that, representing different countries, scattered in different parts of the globe, we nevertheless are all one in our aims and in our purpose, and that the purpose which you have just set forth in such eloquent terms.

#### OPENING SPEECH BY THE PRIME MINISTER OF NEW ZEALAND

Mr. MASSEY: Prime Minister, I do not intend at present to comment upon matters to which you have referred in the very clear and very exhaustive statement which you have just given to the Conference. I say that because I think better and more suitable opportunities will offer later on, and I would just like to express a hope that before this Conference comes to an end we shall be able to do something definite and satisfactory in the way of solving as many as possible of the problems that have arisen during the last few years. I just wish to join with you, Prime Minister, and with the Prime Minister of Canada, Mr. Mackenzie King, in the welcome which you have extended to each and every one of the new members who have appeared at the Conference table to-day for the first time. I have no doubt they will be able to do good work, and as one of the older members I can say for myself, and I know General Smuts will join with me, we shall be very pleased to have their assistance in the many matters that are certain to be brought before us during the next six weeks or two months.

#### OPENING SPEECH BY THE PRIME MINISTER OF THE UNION OF SOUTH AFRICA

##### WELCOME TO REPRESENTATIVES OF IRISH FREE STATE

General SMUTS: Prime Minister, I join with my colleagues here in expressing with what great interest we have listened to you. I also join with them in welcoming our friends from Ireland to this Conference. You have painted a very dark picture of the present state of affairs in Europe, and yet the presence of the Free State here goes to show what the spirit of goodwill can effect. Two years ago, when we had our last Imperial Conference, the state of affairs in Ireland was about as black as anything which exists in Europe to-day; but the difficulties were resolutely grappled with and as a result we have the Irish Free State represented here at this great Conference, sitting at this Board of our Commonwealth and collaborating with us on the problems which face us all. A case like this is to me a proof that nothing is really as bad as it looks, nor perhaps is Europe as bad as it looks. I join most heartily and most sincerely in welcoming our friend President Cosgrave here to-day. He will find in this Conference, I am sure, sympathy and support from all of us. The difficulties which Ireland has passed through and will continue to pass through are difficulties which are not peculiar to her. He will find that many of those questions which confront Ireland are common to the whole Empire. Here he will find help and assistance and sympathy in the consideration of his own problems, and he will find that this Conference, this High Court of our great Commonwealth, is the best forum for the discussion of his problems.

SESSIONAL PAPER No. 37a

I am very glad that Mr. Massey has been able to come. I know he has had to face great difficulties in coming. However, he has triumphed, as he always does, and I hope that, now we shall have a full Conference, we shall be able to do really good work and that a real advance will be registered on this occasion.

## SITUATION IN EUROPE

This is a most important and solemn occasion in the history of our great Commonwealth. The picture which the Prime Minister has painted to us to-day in his able and interesting speech is a very black one. The world is undoubtedly in a bad way. Instead of the peoples drawing together as we hoped they would after the War the tendencies are the other way, the passions which the War has let loose are still rampant everywhere, and if ever there was a time when a helping hand was needed by the world, and Europe especially, it is now. Our Commonwealth is still there; it has stood many a storm; it has laid down many a great precedent in the history of the world; and the present situation in Europe more than any previous one calls for a great united effort on its part. I trust it will really pull its weight and make a great contribution to the solution of the questions which are confronting the world.

## WASHINGTON CONFERENCE

You are right, Prime Minister, in pointing out what was achieved with regard to the Washington Conference. There is no doubt that the inception of the Washington Conference was brought about in this Chamber. It originated here in our deliberations, and owing to the subsequent great initiative of the Government of the United States.

That Conference marked greater advance for peace than any other Conference which has been held after the war. In that way the last Imperial Conference became very fruitful. I hope that this Conference will be as fruitful, and even more fruitful, in the contributions which it will make towards a settlement of the questions which are now distracting the world.

With regard to the Empire questions to which you have referred, I am sure that in one way and another they are all capable of solutions. At least, we can, as Mr. King has said, make an advance toward their solution. The spirit of goodwill and friendship in which we meet here makes every question soluble. We can register an advance even if we cannot arrive at definite solutions. In saying this, I do not wish to enter into a discussion of details; we will do that as the Conference progresses.

MR. BALDWIN: Yes, on Friday.

## POWER OF THE EMPIRE

GENERAL SMUTS: Yes, Friday. I await the statements of the Foreign Secretary and other gentlemen who are going to address us. But let me say this here and now; I have the feeling that our Commonwealth is a very great and powerful one. The British Empire can exert a force such as possibly no other agency on earth to-day to pull the world together, and I am anxious, so far as it can be done with goodwill and firmness, that whatever influence there is in this Empire, this greatest machine on earth, should be used to the full in order to assist the settlement of Europe. We have no reason to speak with bated breath. For centuries this country has, on every critical occasion in the history of Europe, spoken with the voice of authority, and the other Nations have always in the end had to listen to that voice.

My feeling and my desire is that on a unique occasion like this, without using threats or violent language, and in a spirit of complete goodwill, we should once more do what has been done before and speak with a voice that will be listened to in the affairs of the world. I am not going into details now because we shall come to them later in the course of the week.

#### JANINA MURDERS AND OCCUPATION OF CORFU. POSITION OF LEAGUE OF NATIONS

You have made reference to the League, and I agree with what you have said. At the same time, I think there is much misunderstanding as to what happened quite recently at Geneva. I have the feeling that the League has strengthened its position. The League has in the face of what threatened to be a very grave crisis in Europe acted with moderation and wisdom.

But the general view is that the crisis in Southern Europe has constituted a check for the League. The impression is that the League in a first-class crisis has not pulled its weight and has been inefficient, and whatever good work there was was done by other agencies. It is most important to clear up the position and remove this erroneous impression. I hope Lord Robert Cecil, when he comes back, will be able to explain to this Conference what has really happened. It would be lamentable that the impression should gather that the League has been pushed aside. Our object should be to strengthen the League and support it in every way; there is nothing else to do. If there were some other agency holding the nations together and working for peace, I would back that up. It is not a question of any particular form. So far we have devised one form and one form only for holding the nations together in a brotherhood of peace. As the real nature and interest of the British Empire is peace, I think we should support the League to the full and strengthen her hands as far as possible and add whatever weight we can to her counsels. I hope the misunderstanding which exists at present will be cleared up and that people will recognize that the League has really come with credit out of the Italian business.

#### DEBT TO UNITED STATES

As regards the American debt, I have expressed my cordial agreement with what you have done in funding that debt. The British Empire carries out its contracts. At the same time, I fear that, unless there is a real recovery of the world, unless you can succeed in re-establishing the trade and commerce of the world, you may find that you have undertaken an intolerable burden for this country. What you have done should therefore be followed up with equal decision in a great attempt to restore the trade conditions of Europe. Otherwise you may find that what you have undertaken is perhaps more than this nation can bear. Some people seem to regard their debts very lightly nowadays. I am glad that the British Government has been consistent. At the beginning of the war in 1914, it insisted on the fulfilment of International obligations. It staked the existence of the whole Empire on that. Similarly after the war, you said, we shall honour our bond and pay. That is right and proper as a policy, but, at the same time, think it would be almost an intolerable burden to this people unless you can really have peace in the world.

#### NEED FOR PEACE IN EUROPE

Our duty, therefore, not only to the world, but to this people who are going to carry this obligation, is to move heaven and earth in having peace re-established in Europe. Some people think that Europe does not concern us, that it is mere philanthropy or meddlesomeness to concern ourselves with her affairs, that we should leave Europe alone in her present stress. That attitude seems to me quite hopeless. You cannot have even the possibility of paying your American

## SESSIONAL PAPER No. 37a

debt unless you can restore peaceful conditions in Europe. We can go far to extend Empire trade, and I hope that everything will be done to do so. Without any revolutionary departure from the settled fiscal policy of this country, I think a great deal can be done to foster inter-Empire trade, and I hope that this Conference will register a very great advance in that direction. But it will naturally take many years before the British Empire could take the place of Europe in your trade. In the meantime, you will have to carry all your burdens; you have to carry the present internal burdens and also to carry the weight of this intolerable external debt. It is clear to me you will not be able to do it unless peaceful conditions are restored in Europe. I do not want to say any more, Prime Minister. I only wish that this Conference will be successful—that it will achieve not only the objects it has in view with regard to the Empire, but also with regard to that larger and more difficult situation which confronts us in Europe. It is not only you who wish to re-establish trade—we in the outer Empire want to do the same. We also had our markets in Europe, and they are largely gone. Therefore, even if there were no higher motive than mere self-interest, we should still try our very best to establish conditions of peace and quiet in Europe. But there is much more. Deeper human motives appeal to us. The same motives that carried us into the war continue to guide us in the peace. It is quite impossible for us to disinterest ourselves in the awful conditions which exist all around us as a result of the war. We shall require much patience, and it may be that it will take much longer than we thought possible to have the world restored to normal conditions. Let us exercise patience, but at the same time let us really pull our weight. There is a rapid worsening of conditions all over Europe. It may be that this will still continue for years and become an irremediable set-back to Western civilization. Even at this moment fundamental changes are taking place in Europe which will largely affect the future status and relations of the nations. I only hope that it may be possible to stay the rot before things have gone too far.

## OPENING SPEECH BY THE PRESIDENT OF THE EXECUTIVE COUNCIL, IRISH FREE STATE

### ACKNOWLEDGES WELCOME EXTENDED TO REPRESENTATIVES OF IRISH FREE STATE

Mr. COSGRAVE: Prime Minister, I wish to express my very real appreciation of the welcome you have extended to us and of the pleasing references you have made to our inclusion in this Conference. I also appreciate very highly the cordial welcome extended to us by Mr. King, Mr. Massey and General Smuts, and the great interest in Ireland shown by General Smuts in his speech. He is perhaps the best able to appreciate the difficulties through which we have passed, as he also gave ready and most valuable assistance to bring about the position which leads to our presence here to-day.

### POSITION OF FREE STATE

In your statement, Sir, you have referred to problems which, both in size and number, overshadow our own immediate difficulties, and it gives us hope that, besides settling our own affairs, we may give some assistance in the solution of problems affecting the whole world. We come to this Conference in good faith, with an earnest desire to render what assistance we can in the solution of the problems to be faced, and to carry out with good faith and goodwill our part of that undertaking which you on your side have faithfully honoured in the

past, realizing that it is only in the exercise of these great attributes that it is possible for us to reach the desired end. This business is new to us and it is not possible for us to express opinions upon the many great and important matters which have been mentioned in your speech. The troubles and difficulties of our present situation and the circumstances surrounding it make my immediate association with the Conference less than I would wish. You, Prime Minister, will appreciate that, and I am sure His Grace the Duke of Devonshire will do so also. I would say it is a very real pleasure for me to be here and to have witnessed such a cordial and wholehearted reception. We realize our responsibilities and we are prepared to take over and shoulder the burdens, which are common burdens. I was very much gratified with the concluding paragraphs of the Prime Minister's speech and with the statement made by General Smuts that the real objective of this Conference is to further the cause of peace.

### OPENING SPEECH BY THE PRIME MINISTER OF NEWFOUNDLAND

#### WELCOME TO REPRESENTATIVES OF IRISH FREE STATE

MR. WARREN: Prime Minister and Gentlemen, I just desire to thank you, Sir, for the very cordial welcome that I have received. Perhaps as representing Britain's first-born, it might come well from me to congratulate the newest Dominion, the Free State, and to assure Mr. Cosgrave, on behalf of Newfoundland, that he has many of his countrymen there who have the greatest sympathy for him, and they all sincerely hope that he may be successful in the task he has undertaken.

#### POSITION OF NEWFOUNDLAND

I should like to say, Sir, that the fact that I am here at all is a sign of what Great Britain has always stood for. I represent a small community, but we have never been impelled, coerced, not even, as far as I know, asked, to merge our political independence into that of a larger Dominion. We have been allowed to plough our own furrow and we have every confidence that we shall be allowed to do so in the future. Perhaps after I have attended as many Conferences as my friend on my right, Mr. Massey, I may be able to speak with more confidence than I do this morning. I have to thank him for his reference to us. We all know that among Dominion Prime Ministers he is the father of us all and, sitting as I do so close to him, I hope that I may learn from him how to acquire a title to Prime Ministership by prescription. There are a vast number of people looking to this Conference and looking to us to show some results. I feel sure that we are all imbued with one idea, and that is to do everything we can to achieve the results which are expected of us, and I am sure that we are all ready to make any sacrifice that may lead to those results.

### OPENING SPEECH BY HIS HIGHNESS THE MAHARAJAH OF ALWAR, ON BEHALF OF THE INDIAN DELEGATION

LORD PEEL: Prime Minister, I will ask my colleague, His Highness the Maharajah of Alwar, to reply for the Indian Delegation.

SESSIONAL PAPER No. 37a

THE MAHARAJAH OF ALWAR: Prime Minister of Great Britain, your Lordships and Gentlemen, I come to-day as the nominated representative of the Princes of India. You know that they rule over one-third of the Indian Empire and most of them are connected by treaties and engagements with the British Crown; but they are perhaps best known for their united loyalty and attachment to the Throne.

To-day, however, I am privileged to speak in the name of the 300 millions of peoples of my country. I speak on behalf of one of the oldest civilizations within the Empire, but who in the race of self-government have still much leeway to make. In the name of India, I thank you, Prime Minister, for the very felicitous terms in which you have extended your welcome to us on behalf of the British Cabinet. I thank you, and through you those on whose behalf you speak, for the expressions of goodwill for my country. I thank you all, friends, for the hopes that have been expressed that the Conference may achieve harmonious results. I can only say that I sincerely share that hope myself and, in conclusion, I trust that it will be permissible for me to thank the Prime Minister for the kind remarks he has made about myself and my State. I appreciate them particularly as I take them to be compliments paid to my Order, through me as their representative.

I will only speak about one word more. On such an occasion as this, I ask myself what is to be our attitude? Surely it is on this factor that the ultimate results of our Conference will mainly depend. The answer I receive to my question is in unhesitating terms. Surely is not this Conference composed of brother delegates from the sister Dominions? We assemble round the hub of the Empire as members of the family of nations, all united in one cause—namely, the uplift of the British Empire—all cemented together by one force, namely, the British Crown.

Gentlemen, the recent great war has left behind its aftermath to which the Prime Minister has given very lucid expression. Wounds and sores are still festering in many parts of the world.

With a little sacrifice, with a little toleration, with a little understanding, all this world can, I believe—and firmly so—still be made a playground for God's children. With a little willingness to give—and it does not require much willingness to take—mountains can certainly be converted into mole-hills.

On the completion of this Conference, I ask myself—would we rather say that we were able to achieve and gain this or that for our individual country or that we were in the privileged position of being able to subscribe, however little or great it was, for the unity of the British Empire. It will be a proud moment indeed if we can subscribe to the latter sentiments eventually. I do not mean to say that there will not be questions during our discussion and deliberations on which there may be differences of opinion, or on which it will be our responsibility to seek gain for our individual territories and nationalities. But in carrying out that responsibility, all we have to remember is that we have something greater to look to than our own country, namely, the British Empire, and that there is something even greater than the British Empire, namely, Humanity. Why is it then that we wish to subscribe our little quota to make that British Empire, which is already great, if possible even greater? It is because we like to believe that it will be, with every individual component part working out its own destiny in mutual harmony with others, and even with all our different nationalities, creeds, castes and religions existing—that the British Empire is going to fulfil its great object of leading humanity, not only towards peace, not only towards right understanding, but ultimately towards the great Divinity of which after all each one of us are but active sparks. That at least is my idea for the attitude at our Conference, to fulfil it shall be my endeavour.

## APPENDIX II

STATEMENT BY THE SECRETARY OF STATE FOR THE COLONIES  
AS TO THE COLONIES, PROTECTORATES AND MANDATED  
TERRITORIES, OCTOBER 3, 1923

**THE DUKE OF DEVONSHIRE:** I understand that it is the general wish of the Conference that, as Secretary of State for the Colonies, I should give a brief account of the manner in which the responsibilities entrusted to the Colonial Office for the Colonies and Protectorates have been discharged during the two years which have passed since the Conference last met. Although the destinies of these great dependencies of the Crown are the immediate responsibility and trust of the British Government, it would be wrong if it were to be supposed that the moral and material progress and development of these large areas were not of increasing importance to all the partners in the British Empire, and it is the constant aim and endeavour of the Colonial Office to foster the interest of the Oversea Dominions in these great territories and so to stimulate inter-Imperial trade.

I do not propose to attempt to deal in any detail with the economic aspects of the Colonial Empire. These aspects, important as they are, come more properly within the purview of the Economic Conference, on which the special interests of the Colonies and Protectorates will be represented and advocated by the Parliamentary Under-Secretary of State, Mr. Ormsby-Gore, who will have associated with him Sir James Stevenson and Sir Gilbert Grindle, aided by an Advisory Committee composed of persons possessed of special and practical experience of the industrial life of the several Colonies and groups of Colonies concerned.

## ECONOMIC DEPRESSION SLOWLY LIFTING

In the statement which my predecessor, Mr. Churchill, made to the Conference of 1921 about the Colonies and Protectorates,\* he referred to the creeping paralysis which had overtaken almost all their industries after the artificial prosperity of the war period. They still suffer under the general depression of trade, but I think I may say that, taken as a whole, the Colonies are "pulling through." The financial position of some of the smaller Colonies is a constant source of anxiety to their Governments and to us, but there are indications that the larger tropical areas for which we are responsible are recovering. Much, however, remains to be done before the trade of the Colonies can be said to be in a satisfactory position, and it is to trade within the Empire that we must look to regain at least part of the ground that has been lost during recent years. Proposals will be placed before the Economic Conference with the object of increasing inter-Imperial trade with our tropical possessions and of fostering their development. But action by Governments alone, however beneficial if rightly directed, is not in itself sufficient and needs to be aided and reinforced by private capital and private enterprise; and this all-important aspect of the question is being explored by an expert Committee under the Chairmanship of Lord Ronaldshay, the late Governor of Bengal.

---

\*See pp. 34-39 of Cmd. 1474.

## SESSIONAL PAPER No. 37a

## BRITISH EMPIRE EXHIBITION

It may not be thought inappropriate if I refer in passing to the British Empire Exhibition, with which I am associated in an unofficial capacity as Chairman of its Council. In common with the Dominion Governments the Colonial Governments are taking a considerable share in promoting the success of the Exhibition, and my anticipations will be disappointed if the Exhibition does not achieve the results expected of it and if it does not open the eyes of the world to the tremendous material resources contained within the ambit of the British Empire. I am looking forward to meeting members of the Conference at Wembley next Saturday, when they will be enabled to see for themselves the scale and scope of this great enterprise.

## EXTENT OF COLONIAL EMPIRE

With this brief preface I now propose to touch upon certain aspects of the progress which has taken place in the political and industrial life of the Colonies since last their affairs were under review at a meeting of the Governments of the Empire. The British Colonial Empire, with its two million square miles and a population of fifty millions, distributed in every quarter of the globe, presents a panorama of ever-varying interest and romance; and I must emphasize what was said by my predecessor two years ago that it is impossible in the time at our disposal to attempt to do justice to this theme.

## WEST INDIES

I will turn first to the oldest group of British Colonies—the West Indies.

The visit to the West Indies and British Guiana in 1922 of the former Parliamentary Under-Secretary of State (Mr. Edward Wood), who was accompanied by Mr. Ormsby-Gore, gave an impetus to the movement in progress there, as in other parts of the Empire, for constitutional development. At the same time it enabled the Secretary of State to deal with West Indian problems with the aid of the sure knowledge which comes from personal touch with the representatives of every shade of opinion on the spot. I feel confident that I carry the members of this Conference with me when I say that the written and cabled word is no substitute for direct personal contact. It is the fixed policy of the Colonial Office to follow the precedent so successfully established and to take every opportunity of repeating in other parts of the Colonial Empire similar official visits. I have already invited Mr. Ormsby-Gore to pay a visit to the British West African Colonies this forthcoming winter, and I hope that he will be leaving in the middle of December.

As a result of Mr. Wood's visit constitutional reforms are in the course of being carried out in Jamaica, Trinidad, Grenada, St. Vincent, St. Lucia and Dominica.

The economic position of the West Indian Colonies is far from satisfactory. It has been necessary for several Colonial Governments to come to the assistance of their staple industries in order to enable them to tide over a period of grave depression. Both the sugar and the cocoa industries have experienced great difficulties, and the oil industry of Trinidad, from which so much was hoped, has not hitherto come up to the expectations that were formed in regard to it.

## TELEGRAPHIC COMMUNICATION WITH WEST INDIES

Telegraphic communication between and with the West Indies has given rise to dissatisfaction for some time past, both in those Colonies and, I believe, in Canada. The question was discussed at the Conference held at Ottawa in

1920, but at that time the existing contract with the West India and Panama Telegraph Company had still some years to run and no immediate solution of the problem was possible. We have recently put before the Canadian Government and the West Indian Governments concerned a scheme for an all-British cable from Turks Islands to Barbados, with subsidiary connections by cable and Wireless Telegraphy to the other Colonies. This scheme, which is based on the continued co-operation of the Government of the Dominion and of the Colonial Governments with His Majesty's Government, has now been accepted in principle by all the contributory Governments, and I hope that it will be carried out during the coming year.

This scheme will afford an opportunity for an even wider measure of inter-Imperial co-operation than the existing arrangement for joint contributions to the West India and Panama Cable Company's subsidy. The proposed cable is to be laid and maintained by, or on behalf of, all the Governments concerned, and as it is impossible for them to undertake directly an enterprise of this nature we propose, if the Dominion Governments represented on the Board see no objection, to ask the Pacific Cable Board to undertake the management of the cables and wireless stations which will be maintained under the scheme. We do not, of course, suggest that the Board should undertake any financial responsibility in the matter. All we ask is that they will extend to this new all-British route the skilled management and control which has been so successful in maintaining the all-British route across the Pacific. If our proposals are accepted, as I sincerely trust they will be, this new development of the activities of the Pacific Cable Board will form an interesting example of a Board, constituted for one inter-Imperial purpose, being subsequently employed by another kindred inter-Imperial purpose and will show in practice how co-operation between British administrations once started in any sphere tends inevitably to grow. We could ask for no happier augury of the outcome of the first Economic Conference.

#### AGRICULTURAL COLLEGE

Another Imperial development which emanates from the West Indies is the recent change in the scope and title of what was formerly known as the West Indian Agricultural College. At a meeting held at the Colonial Office this summer under my Chairmanship it was unanimously agreed that the scope of the College should be Empire-wide, but it was felt that the prospect of obtaining the necessary funds would be gravely impaired if the College retained a title suggesting that it was merely a local institution. It was, therefore, recommended that the title should be changed to the Imperial College of Tropical Agriculture, and our aim is that it should provide for the needs of all tropical dependencies by becoming the chief centre of agricultural research and staff training.

#### BRITISH GUIANA

British Guiana in particular presents a special problem. Our only Colony on the mainland of South America is rich in mineral and forest resources. In area it is as large as Great Britain, but it has a population of only 300,000. It is to be hoped that immigration, without which the Colony cannot be developed, may be resumed.

#### WEST AND EAST AFRICA

I now turn to Africa. The British West and East African colonies both in area and population provide our greatest opportunity and the widest scope for sustained development. In those large tropical territories the improvement of communications and the advancement of education are the foundation of moral

## SESSIONAL PAPER No. 37a

and material progress. New railway construction is now steadily proceeding in Nigeria, Gold Coast and Kenya, while important harbour works are being carried out at Takoradi in West Africa (Gold Coast) and at Kilindini in East Africa (Kenya). It is also hoped that the last link in the connection by railway of Lake Nyssa with the coast at Beira will soon be undertaken.

## KENYA AND UGANDA

In Kenya political questions have recently overshadowed all others. It has been no easy task to provide an equitable adjustment of the several interests concerned in the political future of the Colony, but, after very careful consideration, the British Government has taken certain decisions which have been made public and which I need not here repeat. I sincerely trust that the settlement which we have made will enable all its inhabitants to devote their utmost energy to the development of the great resources of the territory in which they live.

In the administration of Kenya, as in other African Colonies and Protectorates, we regard ourselves as exercising a trust on behalf of the African population. Whatever measures we take must be considered in their relation to that paramount duty. We propose to continue the general policy of moral, economic and intellectual development of the African. Within the limits of their finances the East African Governments will continue, side by side with the great work of the Missions, to do all that is possible for the advancement of the natives. Considerable progress has already been made, and the Uganda Railway Administration is now paying special attention to the training of natives for mechanical work on the railways. It is confidently anticipated that in time mechanical work of this kind and the ordinary clerical work of Government will be carried out by Africans.

## TANGANYIKA TERRITORY

In East Africa we administer, under a mandate issued by the League of Nations last year, a territory larger than any Colony, that of Tanganyika. The country's prosperity depends mainly upon agriculture and it has suffered from the general trade depression, besides having much lee-way to make up owing to the wreckage caused by the War. Progress is, however, being made, though revival is necessarily slow. Revenue is steadily increasing, and the relations between the native population and the Government are excellent. It has been found possible to make a considerable reduction in the military garrison. The system of administration which has been adopted is to support and supervise, with the least possible interference, the established native authority. It is recognised that, except to a very limited extent, the country is not suitable for European settlement, and this has been recently affirmed by the adoption of a Land Law modelled closely on one which has stood the test of time in the Northern Provinces of Nigeria. "Compulsory servitude," which is the same thing as slavery, has been abolished without any of the social disturbance that was dreaded in some quarters, and, I may add, without expense. This is a step which our German predecessors had never ventured to take. We are now able to spend more money on native education—though not so much as I would wish—and also on agriculture, thanks to the liberal assistance afforded by the Empire Cotton Growing Corporation, who regard the Territory as a promising field for development.

## RHODESIA

In Rhodesia important constitutional changes are now taking place.

As explained by Mr. Churchill, the position when the last Conference was held in 1921 was that a delegation from Southern Rhodesia was due to arrive

shortly in this country to discuss the terms of the future constitution. As a result of this visit, draft Letters Patent providing for the constitution of responsible Government were prepared with a view to submission to the electors in Southern Rhodesia. Subsequently discussions were also held in South Africa between the Union Government and representatives from Southern Rhodesia regarding the alternative policy of entry into the Union.

Following on these discussions, a referendum was held in October of last year on the question whether the territory favoured entry into the Union or the grant of responsible government. The referendum having resulted in a vote in favour of the latter alternative, the Constitution has accordingly now been completed and came into force this week on the 1st October. Difficult questions which had arisen with regard to the unalienated lands and the rights of the British South Africa Company on the termination of their administration have now been satisfactorily settled by means of agreements which have been arrived at with the Company and the Elected Members of the present Legislative Council of Southern Rhodesia. The settlement with the Company involves a substantial contribution from Imperial funds in addition to the amount for which the new Administration will make itself responsible. The settlement should be of material assistance to the new Government in the discharge of its responsible task. Under the new Constitution certain powers with regard to native administration are reserved to the High Commissioner for South Africa, but in other respects the people of Southern Rhodesia will have a full control of their Government and administration. In Northern Rhodesia, under the agreement made with the British South Africa Company, the British Government will relieve the Company of the administration on the 31st March, 1924, so that on that date the whole of the administrative side of the Company's great work in Rhodesia will come to an end.

#### CEYLON

I turn now to the East.

In Ceylon the new Constitution granted in 1920, under which the unofficial element in the legislature is given a majority, has justified the hopes of its advocates and has worked successfully for three years, although some further modifications of the Constitution are now under consideration. Ceylon's tea and copra trade is flourishing, and there has recently been a substantial improvement in the position of the rubber industry as a result of the measures for the restriction of output undertaken jointly by the rubber-growing Colonies.

#### MALAYA

I am glad to report that the economic depression in Malaya, especially in the two main exports of tin and rubber, would seem to be passing.

The revenue has improved, and the financial stringency, which was especially severe in the case of the Federated Malay States, is to some extent relieved. A large loan of £10,000,000, of which £ 9,000,000 have already been issued on the London market, has enabled the administration to be carried on and important public works to be proceeded with. The loan has been entirely applied to Federated Malay States purposes, but in order that it might be a trustee security it was found necessary that it should be issued by the Colony of the Straits Settlements, which has re-lent it to the Federated Malay States.

The Colony itself has come through a severe period of adversity without having to borrow for its own purposes.

## SESSIONAL PAPER No. 37a

## HONG KONG

The disturbed condition of the neighbouring Chinese province of Kwang Tung and of China generally has naturally had a bad effect on the trade of Hong Kong as a distributing centre for South China, but in spite of this the trade returns for last year would have shown a considerable increase on those of the previous year had it not been for a very serious strike of Chinese labourers which paralysed the port for several weeks in the spring of 1922. A large scheme is under contemplation at present for an extensive reclamation undertaking, designed to increase the facilities of what is already, from the point of view of tonnage entered and cleared, the biggest port in the world.

Of all parts of the Empire, Hong Kong has probably come through the recent acute period of trade depression with the least loss and suffering. This is due to the fact that, as the entrepôt of South China, she profits from every branch of the huge and varied export trade of China, as well as from its European imports. It is also true that political unrest in China has diverted much wealth and capital to the neighbouring British Colony, in which the merchants and well-to-do classes of Chinese have implicit confidence.

## FIJI

Fiji has suffered from the loss of the Australian market for its principal export products, namely, sugar and fruit. But thanks to New Zealand, which now takes the bulk of the sugar crop, these islands, which are of great importance to our Imperial position in the Pacific, have passed the worst. I have recently learned with interest that there is an expectation of important new developments in trade and shipping communications between Canada and Fiji which cannot but be of mutual benefit to both. The demand for labour in Fiji exceeds the present supply, but the impetus of the new Canadian trade may attract both capital and labour to the South Pacific group.

## FALKLAND ISLANDS AND ANTARCTIC

It may interest the Conference to know that the late Captain Scott's Antarctic ship, the "Discovery," has been purchased on behalf of the Government of the Falkland Islands for employment mainly in research into whaling in the Dependencies of the Colony, which include South Georgia, the South Shetlands and Graham Land, the South Orkneys, and the South Sandwich Islands.

In these Dependencies the Empire possesses a whaling field which in recent years has been more productive than all the rest of the world combined.

Existing scientific knowledge of the numbers and habits of the whale is inadequate; and we are anxious to devise a system of control of the industry which will prevent the practical extermination which has taken place in other whaling areas. The expedition will also afford opportunities for adding to scientific knowledge in many other directions.

Evidence that the investigations are also of interest to the Dominions is afforded by the opinion expressed by the Government of the Union of South Africa that the efforts which are contemplated in regard to the study of whaling off South Africa will gain immensely from the operations of the "Discovery."

## MIDDLE EAST

This concludes what I have to say to-day about the Colonies and Protectorates, but my survey would be incomplete without some special reference to developments in the Middle East. The supervision of this area, which includes Iraq and Palestine, was assumed by the Colonial Office in the spring of 1921.

In the statement made to the Conference by Mr. Churchill in 1921, a general outline was given of the Middle Eastern policy of the late Government, which was directed towards reducing expenditure both in Iraq and Palestine. This policy has been steadily pursued both by the late Government and the present Government, and the result is that the total expenditure this year on these two countries falling on the British Exchequer is estimated at £8,548,000 as against the actual expenditure of £26,695,364 for the year 1921-22.

#### IRAQ

To take Iraq first: On the 23rd June, 1921, the day after Mr. Churchill made his statement, the Emir Feisal, third son of the King of the Hejaz, arrived at Basrah as a candidate for the throne of Iraq. He was well received by the people, and on the 11th July the Council of State passed a unanimous resolution declaring him King of the country, provided that his Government should be a constitutional, representative and democratic Government, limited by law. Sir Percy Cox, who was then High Commissioner, took steps to obtain a confirmation of this resolution by means of a referendum, of which the results were known on the 19th August. In an electorate of about 1,000,000 the votes for King Feisal represented a proportion of 96 per cent, and he was accordingly recognized as King of Iraq by His Majesty's Government. The next step was to place our relations with him on a proper footing. Our position as mandatory was regulated by the terms of the draft mandate (though that document had not then, and has not yet, been formally approved by the League of Nations); but it was felt that a stage had been reached, with the establishment of constitutional monarchy in Iraq, when some more appropriate instrument was required as between ourselves and the mandated State. Accordingly a communication was made in November, 1921, to the Council of the League of Nations, informing them that the British Government had been led by political developments in Iraq to the conclusion that their obligations vis-à-vis the League could be most effectively discharged if the principles on which they rested were embodied in a Treaty to be concluded between His Britannic Majesty and the King of Iraq. This Treaty would serve merely to regulate the relations between the mandatory and the Iraq Government, and was not intended as a substitute for the Mandate, which would remain the operative document defining the obligations incurred by His Majesty's Government towards the League of Nations. Negotiations with King Feisal were opened at the same time. After somewhat lengthy discussions a Treaty of Alliance was eventually signed on the 10th October, 1922. You will note the date, which was just before Mr. Lloyd George's Government went out of office. The Treaty provided for the conclusion of a number of subsidiary Agreements in which the precise degree of obligation undertaken by His Majesty's Government was to be defined. It was originally to remain in force for twenty years, but the present Government, after a most careful review of the whole question of policy in Iraq, arrived at the conclusion that this period was too long. On the 30th April, 1923, a Protocol was signed at Baghdad, providing that the Treaty should terminate upon Iraq becoming a member of the League of Nations, and in any case not later than four years from the ratification of peace between Great Britain and Turkey. It was further stipulated that nothing should prevent a fresh agreement being concluded with a view to regulating the subsequent relations between the High Contracting Parties, and that negotiations for that object should be entered into between them before the expiration of the above period.

The present position is that the elections for the Constituent Assembly in Iraq, whose approval is necessary before the Treaty and Protocol are rati-

## SESSIONAL PAPER No. 37a

fied, commenced on the 12th July. The electoral procedure is a cumbrous one, with an elaborate machinery of primary and secondary elections based upon the Turkish system. It is not expected that the Assembly will be in session much before the end of the year. It is hoped that before its first meeting the various subsidiary Agreements now under negotiation with the Iraq Government will have been provisionally concluded.

## FUTURE OF MOSUL VILAYET

There is one important point with regard to which the future of Iraq is still unsettled. You may remember that, during the first Lausanne Conference, an acute controversy arose over the future of the Mosul Vilayet. The Vilayet has been administered as part of Iraq since the end of the war. On economic and racial grounds the case for its inclusion in the Iraq State is exceedingly strong.

Nevertheless, the Turks, though their arguments were entirely refuted by Lord Curzon, held tenaciously to their claim that the Vilayet should be restored to Turkey. It was finally agreed that a decision on the boundary question should be held over for the moment; that a period of nine months should be fixed (as from the date of the ratification of the Treaty of Peace with Turkey) during which the frontier between Turkey and Iraq was to be laid down by "friendly arrangement" between the British and Turkish Governments; and that, failing such agreement within the period specified, the matter should be referred to the Council of the League of Nations. This arrangement was embodied in Article 3 of the Treaty as eventually signed at Lausanne on the 24th July last. We hope to start negotiations with the Turks at a very early date.

## GENERAL SITUATION

Although this question is still outstanding, it may, I think, be claimed that the policy initiated by the late Government and adopted with the modifications explained above by the present Government, has on the whole succeeded beyond expectation. Relations between the British representative at Baghdad and the Arab Government are good. Our hope is that, within the maximum period of four years, we shall have discharged in full our obligations to the Iraq State. We also hope that we shall have established such strong ties of friendship with the Government and people of the country that they will be glad to make fresh arrangements with us, at the termination of the mandatory period, in which our special position, as the Power mainly instrumental in achieving Arab liberation, will be freely recognized. That is our confident hope. If it is realized, Iraq may yet constitute a stable factor in the East. I do not wish, however, to take too sanguine a view of the present situation. There are many difficulties still before us. The Iraq Constituent Assembly has still to be elected. It is impossible to predict with any certainty what will be its general attitude and complexion. Its first task will be to ratify the Treaty concluded by King Feisal and the subsidiary Agreements which I have already mentioned: also to enact the Organic Law which the Mandatory is required under the terms of the draft Mandate to frame for submission to the Council of the League of Nations. Until these stages have passed it is difficult to speak with full confidence.

## TRIBUTE TO SIR PERCY COX

I should not like to close this part of my statement without paying a tribute to Sir Percy Cox, who recently retired from the High Commissioner-ship for Iraq. He possessed a knowledge and experience of Middle Eastern

affairs that can only be described as unique. They were built up on a quarter of a century's arduous and successful work in the Persian Gulf region, where he acquired an influence that can never have been surpassed. We have been very fortunate in having been able to count on the assistance of this distinguished public servant in dealing with our Middle Eastern difficulties. He was succeeded last month by Sir Henry Dobbs, an Indian civil servant with a distinguished record, who had served previously in Iraq.

#### PALESTINE

With regard to Palestine there is one direction in which the situation has greatly improved since Mr. Churchill spoke in June 1921. The garrison has been largely reduced and the cost correspondingly diminished. The actual charge to the British Exchequer in respect of Palestine was £2,024,000 in 1922-23. The estimate for 1923-24 is £1,500,000, while we have undertaken to reduce the figure to £1,000,000 in 1924-25. The figure of £1,500,000 is, of course, included in the amount which I mentioned above as the total estimated expenditure in Iraq and Palestine for this year. Beyond 1924-25 we have not given any explicit undertaking, but we hope that the progressive reduction of expenditure will go steadily on until the figure has been reduced to very small dimensions indeed. But our success in this direction must depend on the economic development of the country, which in its turn depends upon political stability. I wish I could report to you that there has been a substantial improvement in the local political situation during the last two years. In one sense it would be true. Since the Jaffa outbreak in the early part of 1921, which Mr. Churchill mentioned in his speech, there has been no serious disturbance of the public peace. We have now got a very efficient gendarmerie in Palestine which could be trusted to deal promptly with any emergency that might arise. But political unrest is by no means a thing of the past. A solution of the Jew-Arab controversy has still to be found. Perhaps I may be allowed very briefly to sketch the events of the last two years.

#### ZIONIST POLICY

You are aware that our policy in Palestine is based upon the Balfour Declaration of November 1917, by which we undertook to promote the establishment of a National Home for the Jews, subject to the condition that the civil and religious rights of the rest of the population were not to be prejudiced. We have been doing our best to honour both parts of that declaration. Our High Commissioner, Sir Herbert Samuel, has displayed not only administrative abilities of the highest order, but also the strictest impartiality in dealing with the conflicting interests of the inhabitants of Palestine. A Jew himself, he has never been accused of showing undue favour to the Jews. On the contrary, his high sense of justice is recognized and applauded in every quarter.

Nevertheless, opposition to the so-called Zionist policy has continued. It came to a head in May 1921, when the Jaffa outbreak took place. In the following June the late Government published a definition of what was meant by the "National Home," with a view to allaying Arab apprehensions. The Arab spokesmen were not satisfied and decided to send a Delegation to London to place their case before the Government. The Delegation stayed in London for nearly a year, but in spite of much discussion it was not found possible to come to terms with them. What did happen was that a fresh statement of policy was issued in June 1922 which made important advances towards meeting the Arab views. The statement was officially accepted by the Zionists, but not by the Arab Delegation, who returned to Palestine after its publication. The new

## SESSIONAL PAPER No. 37a

policy included the establishment of a Legislative Council on a partially elected basis. The elections for this Council were fixed for the early part of this year. Owing to Arab abstentions, an insufficient number of secondary electors were returned and the project of setting up a Legislative Council had to be suspended. The Arab politicians have, in fact, adopted an attitude of non-co-operation with the Government. They have received a good deal of encouragement from various quarters, both in England and elsewhere. We shall, of course, continue to carry out our obligations. There can be no doubt whatever on that point. But the present unrest is undoubtedly doing harm, and we should be glad to see it brought to an end without delay. The matter is engaging our active attention.

## TRANSJORDANIA

Perhaps I ought to add a word about Trans-Jordan. To this region, though it is covered by our Mandate for Palestine, the Zionist policy does not apply. We have there an administration under an Arab ruler, assisted by a British adviser. The ruler is the Emir Abdullah, a brother of King Feisal of Iraq and a son of the King of the Hejaz. On the whole the experiment has worked well, though the position is not altogether free from anxiety.

## CONCLUSION

That is all that I wish to lay before the Conference this morning. I shall be very glad to supply further information on any point connected with the Colonies and Protectorates or with the Middle East in which any member of the Conference may be interested, and I need not say that we shall welcome any advice or counsel which may be forthcoming from any of the Delegates in the handling of the large and complex responsibilities which devolve upon the Colonial Office.

## APPENDIX III

**STATEMENT BY THE SECRETARY OF STATE FOR FOREIGN  
AFFAIRS AS REGARDS THE TURKISH TREATY AND THE  
REPARATIONS PROBLEM, OCTOBER 5, 1923**

## I

## TURKISH TREATY

LORD CURZON: Two years ago, when I spoke here about the position in Anatolia, where the Turkish and Greek armies were ranged opposite to each other, hostilities between them had just recommenced. The fighting began with a preliminary success, but ended in an early check, to the Greeks.

My object throughout, for I acted as representative of His Majesty's Government in the many Allied conversations and Conferences that took place, was to bring these ill-judged and ill-fated hostilities to a close. They could do no good to either party. They were desolating one of the fairest regions in Asia. The Greeks were unlikely to win, and, even if they did win, had neither the men nor the resources to maintain an advanced position in Asia Minor. The Turks would probably triumph in the long run, but only at a heavy cost.

Throughout 1921 and 1922 therefore my time was largely consumed at Conferences in London and Paris in the attempt to bring about Allied inter-

vention, and to persuade both parties to place their case in our hands. I was a firm believer in united action, *i.e.*, in Allied action. His Majesty's Government at no stage had a policy as distinct from the Allies, and to this policy we loyally and unswervingly adhered. But my task was not rendered easier by the notorious Agreement concluded in October 1921 between a French agent and the Angora Turks, known as the Franklin-Bouillon Agreement, which undoubtedly led the Turks to think that the French Government was unreservedly on their side, and which greatly encouraged their pretensions. All our efforts to bring about negotiations, or mediation, or an armistice, failed. Finally, the Turkish Army, imbued with a revived national ardour, well led, and taking advantage of the increasing weakness and demoralisation of the Greeks, made a sustained advance and practically drove the Hellenic forces out of Asia Minor.

This was followed by dramatic events. There was a revolution in Greece which resulted in the enforced abdication of King Constantine. The victorious Turkish army, elated by its success, conscious of Allied disunion, and resolved to push forward even at the cost of a war with Great Britain, practically destroyed Smyrna and advanced towards the Straits, then held by Allied forces. The French withdrew their troops to the European shore, being resolved in no circumstances to become involved in hostilities with the Turks. Great Britain alone saved the situation and prevented the invasion of Europe by rushing a powerful force, military, naval and air, to the Dardanelles and to Constantinople. But it was by a hair's breadth only that the renewal of war was avoided. Presently I found myself again in Paris, engaged once more in the attempt to build up Allied unity and to obtain even at the eleventh hour a pacific solution. The Mudania Armistice followed in October 1922, and the stage for the peace negotiations was set.

Just, however, as the Greek defeat had cost Constantine his throne, so the victory of Angora cost the Sultan his Kaliphate. He was deposed by Angora and fled to Malta, and his successor, appointed by the Grand National Assembly was permitted only to enjoy a purely religious authority.

On the 20th November, the first Lausanne Conference began, and there I met the representatives of France, Italy, Japan, Roumania, Yugoslavia and Greece. Thither came the Turks, with whom we were to negotiate the Treaty and the Bulgarians and others when their interests were involved. Thither the Americans sent observers. There, for the purpose of discussing the future status of the Straits, in which they were vitally interested, Russian representatives also were admitted. There we sat for eleven weary weeks, engaged in daily, and often in nightly, negotiations. At the end of that time we were on the brink of concluding a Treaty—indeed, the pen and ink were ready and the draft was lying on the table ready for signature, when at the last moment difficulties about the financial, economic and capitulatory clauses of the draft Treaty arose—feature in which the French and Italian, but particularly the former, were more actively concerned than ourselves, but in respect of which I stood unflinchingly by my colleagues—and the Turks, calculating, in view of the many concessions that had been made to meet them, that they had only to hold out to obtain even more, declined to sign. I had no doubt myself that in the long run, after some more palavering and after extracting some further concessions from the fatigue and war-weariness of the Allies, they would come to terms, and this view I expressed confidently on my return to England in February of the present year.

The discussions were resumed at Lausanne in April, and lasted for another three months, our chief representative on this occasion being Sir Horace Rumbold, the British High Commissioner at Constantinople. There were many anxious moments then as before, and the process of haggling was continued

## SESSIONAL PAPER No. 37a

with pertinacity and at a length that recalled the palmiest days of Oriental diplomacy in the past. Finally, a Treaty was signed on the 24th July last, which has since been ratified both by Turkey and Greece, and only awaits ratification at the hands of the Great Powers as soon as their Parliaments have reassembled. Since then, it having been decided by the terms of the Agreement that the Allied forces, which have remained in occupation of Constantinople ever since the war, should evacuate within a period of six weeks—which period terminated two days ago—the British troops ably commanded by Sir Charles Harington, who has shown the most conspicuous tact and self-restraint in very trying circumstances, have withdrawn. Our Turkish entanglement is now at an end, and it rests with the Turkish Government, having re-entered into possession of their capital, to demonstrate what use they can make of their recovered position.

I have seen the Treaty thus concluded severely criticised, as a rule by those whose motives in making the attack are not free from suspicion. Undoubtedly the Treaty is not such a Treaty as could have been concluded in 1919, had the Allied Powers at Paris devoted to the Turkish problem one-fiftieth part of the attention that they bestowed—I might almost say squandered—upon problems and peoples of vastly inferior importance. It is not such a Treaty as was concluded and signed, though not subsequently ratified, at Sèvres in August, 1920. It is not such a Treaty as might have been signed at Lausanne had the Powers at all points maintained the united front which they displayed on some. But I should like to explain how and why it was that it was the best Treaty that could be obtained in the circumstances.

In the first place, I would remind the Conference that when I went out to Lausanne in November last it was not generally believed that a Treaty could be concluded at all. Such was the temper of the Turks, elated by their overwhelming defeat of the Greeks, profoundly suspicious of Allied and notably of British intentions, and convinced that their arms were unconquerable, that the majority of my colleagues here consoled with my mission and expected very soon to see me back again. Secondly, the principal problems, whether of the Straits or the Islands, or the frontiers, or the capitulations or finance, seemed almost insoluble, unless the Allies were prepared to dictate their terms at the point of the bayonet.

Such had been the case with all the previous post-war Treaties. These had in each case been drawn up by the victorious Powers, sitting, so to speak, on the seat of judgment, in the absence of the culprit, and imposing what penalty or what settlement they chose. Only when the terms had been drawn up was the beaten enemy admitted to be told his sentence and to make the conventional protest of the doomed man.

Such indeed was the environment in which the original Treaty of Sèvres was drawn up and signed, though never ratified by the Turkish representatives. Far otherwise was it at Lausanne. There the Turks sat at the table on a footing of equality with all the other Powers. Every article of the Treaty had to be debated and explained to them. Agreement had to be achieved, not by brandishing the big stick, but by discussion, persuasion and compromise. The Turks knew very well that the Allies had no stomach for further fighting. The Allies were never certain how far the genuine desire of the leading Turks for peace would control the unruly Nationalist and Extremist elements, who had a quite exaggerated estimate of their strength.

What then did the Treaty achieve? Territorially it lopped off from the Turkish State the whole of Syria, of Palestine, and of what is now called Iraq. Turkey ceased to have any hold or power over Arabia. Her possessions were confined to the Anatolian plains and highlands from which the Ottoman Turks originally came, and to the narrow European territories of her former Empire

up to the confines of Bulgaria on the one hand and Greece on the other. She recovered Eastern Thrace and two or three of the Islands, but beyond the River Maritza, except for the tiny enclave of Karagach, she was not permitted to go.

But I draw special attention to the arrangement about the Freedom of the Straits, that great international safeguard, for which thousands of brave British and Dominion soldiers fought and died. When I went out to Lausanne, I doubt if any one thought that we would secure more than the freedom of commercial passage. I came away with an arrangement by which free access from the Aegean to the Black Sea, for foreign warships and aircraft, as well as merchant ships, subject to a reasonable limitation of numbers, was guaranteed to the States of the world. The Black Sea ceased *ipso facto* to be a Russian preserve. Demilitarized and unfortified zones were created on both sides of the Dardanelles and the Bosphorus. Turkey was given an international guarantee for the safety of her capital and the territories around the Straits, and was allowed to maintain a garrison at Constantinople. Who can doubt that this was a solution eminently favourable to those British Imperial interests which I was sent to Lausanne to guard?

In the course of the discussion about the Straits, to which Russia had been admitted—though at that time she indignantly refused to sign the Convention—I was fiercely criticized by advanced organs at home for alienating the Power whose acquiescence in any future *règlement* of the Straits was essential, and was charged with sowing the seeds of future war. My concluding remarks at Lausanne, when the Powers, with the single exception of Russia, had signified their adhesion to the Straits Convention, were as follows:—

“M. Chicherin has announced to us that Russia will have no voice and take no part in this Convention. The responsibility for that rests on the Russian Government, and even if it be their present decision I hope the time may come, perhaps not in the distant future, when, on reconsidering the matter, they may find it in their own, as well as in the public, interest, to give the signature which they refuse to-day.”

Those words were prophetic. Five months later the Russians, quietly and without saying much about it, affixed their name to the very Straits Convention which they had repudiated and denounced, and which is now therefore a part of the accepted law of Europe. But I have never received a word of apology or vindication from the critics who were so certain six months ago of my sanguinary and sinister intentions.

In the course of the discussions at Lausanne, remembering all that my countrymen and fellow-subjects throughout the Empire had suffered at Gallipoli, I insisted upon the handing over, the proper maintenance and the safeguarding of the sacred soil on the Gallipoli Peninsula, which had been stained with their blood, and where their bodies lay. When the Turks realized that I would break up the Conference sooner than cede this point they gave way.

We laboured hard at Lausanne to secure for the minorities, particularly the Greek and Armenian minorities in the future Turkish State, a protection even in excess of that guaranteed to them by the minority clauses of the European Treaties which we adopted and confirmed in ours. I cannot say that in this I was successful. The records will show the nature of the fight that I put up for these unhappy peoples. But the Turks, in their passion for a self-sufficing and self-centred national existence, were resolved upon purging their State of all alien elements—a policy which, in my view, was grossly mistaken, which has been attended by incidents of great cruelty and hardship, and which, as time passes, they will often have occasion to repent. I did, however, obtain this much, that Turkey undertook to apply for membership of the League of

## SESSIONAL PAPER No. 37a

Nations after the ratification of Peace; and at the hands of that tribunal the afflicted minorities will receive such protection as it may be in the power of Europe to afford.

A troublesome question arose about the future possession of the Mosul Vilayet on the northern border of the Iraq State. To that province the Turks put forward what I conceived to be quite untenable claims, which I was called upon vigorously to contest. The dispute ended in an agreement to refer the matter to amicable discussion between Turkey and ourselves during the period of nine months after the evacuation of Turkish territory by the Allied forces. If we cannot come to an agreement, the matter will then go to the League of Nations.

The financial and economic clauses of the Treaty, which concerned France much more than ourselves, ended in considerable concessions to Turkish pertinacity, as did those parts of the Treaty which related to the conditions under which foreigners will in future reside and trade in Turkey. I do not pretend to be satisfied with those conditions. But in my view the chief sufferers will not be the foreign communities so much as the Turks themselves, who will soon learn from experience the extent to which even an emancipated Turkish State is dependent upon the resources and assistance of the foreigner. At Lausanne Turkey was consumed with jealousy for her own sovereignty, which none of us had any desire to impugn; and when the alternative was presented, as it frequently was, of ceding a point which though important was not vital, or of breaking up the Conference and reverting to a state of war, diplomacy was, I think, rightly reluctant to adopt the latter alternative.

Perhaps from the British point of view the most satisfactory result of the protracted discussion and the final agreement was the resumption of friendly relations between ourselves and a people with whom we had many connections in the past, and who went to war with us, not we with them. A second result which I do not think will be disputed by a single foreign Delegation at Lausanne has been that the Power which emerged from the proceedings with the largest access of prestige in Turkey was our own. This prestige, coupled with the strong financial position of Great Britain, should enable this country to play such part in the financial and economic reconstruction of Turkey as the stability of the future Turkish Government may justify and our own interests demand.

If then we survey the whole field, I think that the final restoration of peace in the Near East, where our troops have now been engaged for exactly nine weary and costly years, the Freedom of the Straits, the liberation of the entire block of Arab countries, the enhanced prestige of Great Britain in Turkey, together with the appeasement in all Moslem countries which is already following the reconciliation between Turkey and ourselves, are results sufficient to justify our labours at Lausanne, and to silence the not always disinterested and frequently ungenerous critics who have derided our handling of a problem which they were powerless to compose themselves. But I repeat that the destiny of Turkey lies with Turkey herself far more than with anyone else. The future which she has planned for herself, whether she become a Republic or not, whether she rules from Angora or Constantinople, will be mainly of her own creation. A very heavy task in the disbandment of her forces, the reorganization of her civil service, the husbanding of her economic resources, the resuscitation of her industrial and commercial life, lies before her. I think that she will experience great disillusionment and many disappointments, and that some of the fruits which she claims to have garnered will turn out to be Dead Sea apples in her mouth. But in making what will be a great experiment she starts with a complete absence of resentment on our part and with the sincere expression of our goodwill

## II.

## REPARATIONS PROBLEM

I proceed to deal with the Franco-German, or as I should prefer to call it the European, problem; for it is one that concerns not two or three States alone, but the whole of those Powers that were engaged in the war, and to whom reparations were allotted, and not least among them the British Empire. His Majesty's Government have consistently held the view that the final settlement could only be achieved by common action and common consent, and that the dispute is not merely a military or political conflict between contiguous States.

I cannot in the small space of time available to me narrate in detail all that has happened since we last met at this table in June 1921. At that date the German Government had just yielded to an Allied ultimatum which covered a schedule of payments for the discharge of the reparation debt, as well as undertakings by the German Government for the early execution of the military disarmament and other clauses of the Treaty. The Reparation Commission, who had under the Treaty been charged with the task of fixing the reparation debt, had estimated it at £6,600 millions—a total which has since in some quarters assumed an almost sacrosanct character, but which in reality bore no relation to what Germany could pay, but was arrived at by lumping together the demands of the various claimant Powers. This total, which is well known to be a quite impossible sum, and which no sane person has ever expected that Germany would be able to pay in full, can only be altered by the consent of all the Powers. For a time in 1921, the ultimatum having been accepted by Germany, and the policy of Dr. Wirth's Government being the fulfilment of the Treaty, payments were regularly made. But the situation in Germany was unstable; the mark began the first downward movement of its finally catastrophic descent; German industry and high finance were stubborn and hostile; assassination found its first victim in Erzberger—to be followed at a later date by Rathenau. Before the end of the year Germany made her first application for a reduction of the payments due in 1922. This request was discussed at Cannes in January, 1922, and certain concessions were made; more were then asked for, involving the grant to Germany of a more complete Moratorium for the rest of 1922 and for the whole of 1923, 1924.

This was the situation when the Allied Premiers met in London in August, 1922, to consider the request. M. Poincaré declared that if there was to be a further Moratorium he must have productive pledges, *i.e.*, the yield of certain taxes and industrial undertakings, as well as the forests and mines in the Rhineland and the Ruhr. These proposals were declared to be financially and economically unsound by the majority of the expert Committee who advised Mr. Lloyd George in the matter; and no decision was arrived at.

In the course of the autumn Dr. Wirth's difficulties increased; in November he resigned; and with his disappearance the policy of fulfilment, which had been his watchword, receded into the background. He was followed by Dr. Cuno.

At the end of the year, when a decision by the Powers was necessary, since the next payments were due, a further Conference of Allied Prime Ministers was held in London, followed a little later by a renewal of the meeting in Paris. By this time Mr. Lloyd George had ceased to be Prime Minister, and Mr. Bonar Law had taken his place. Now it was that the Ruhr, which had been in the background of all the French plans and proposals for two years, emerged into prominence as the sole French specific—the Ruhr to be occupied, preferably by the Allies, if not, then by France and such of her Allies as would go in with her, France's object in the move being to obtain immediate payment of the £1,300 millions which she claimed, plus whatever sum might be required

## SESSIONAL PAPER No. 37a

to pay off her debts to Great Britain and the United States. Put in another way, France would agree to no reduction of the total of the German reparation debt save as a set-off against the cancellation of her war debts to Great Britain and America.

The British view on the other hand was that Germany was incapable of making large immediate payments; that the occupation of the Ruhr was not the right way in which to secure such payment; that by reducing the capacity of Germany to pay, owing to the loss of her most important industrial and economic centre, payment would be indefinitely postponed, and further exasperation and probably at a later date internal disruption in Germany would be produced and that grave economic loss would thus be entailed, not merely on the occupying Powers, but on Europe, viewed as an economic unit, in general. Mr. Bonar Law therefore declined to join in the occupation, and proposed an alternative plan for the reduction of the total debt to £2,500 millions with an accompanying issue of bonds, a moratorium for a short period of years and the institution of a drastic control over German finance. Further, if this proposal were accepted, he made the offer, startling though unrecognized in its generosity, to cancel the French and Italian war debts to us *in toto*.

The French refused, and on the 11th January the Franco-Belgo-Italian occupation of the Ruhr began. It cannot, I think, be denied that the sanguine expectations with which it was entered upon have been largely falsified by the results. An extensive and prolonged military occupation was far from being contemplated, and, indeed, as soon as it appeared inevitable, the Italians retired from the scene. The sustained obstinacy and fury of passive resistance were not foreseen. The anticipated payments, whether in deliveries of coal and coke or in reparation payments, were presently shown to be not forthcoming. Meanwhile, as the net yield of the Franco-Belgian occupation became increasingly disappointing, so the treatment of the inhabitants by the Franco-Belgian authorities became increasingly severe. Thus there grew up a sort of deadlock, or, if the metaphor be varied, a condition of embittered stalemate between the rival forces. The Germans took the view that the occupation was in direct violation of the Treaty. They refused all voluntary reparation payments to France and Belgium, and they threw every possible obstacle in the way of the industrial exploitation of the region. The work of the military disarmament of Germany, provided for by the Peace Treaty, also came to a standstill.

In the meantime Mr. Bonar Law, in a generous anxiety not to frustrate by British action the success of a policy in the practical application of which he disbelieved, but the principle underlying which, viz., the desire and necessity to obtain reparations, was equally accepted by ourselves, while wishing the French good fortune in their undertaking, took up an attitude of strict neutrality. That attitude we have maintained throughout the summer, retaining our army of occupation in the area the custody of which had been assigned to us by the Treaty, endeavouring to hold the scales between the rival parties, and hoping to bring them to an ultimate arrangement. The fact that we learned from our Law Officers, after Mr. Bonar Law's return from Paris, that the occupation was not, in their opinion, justified by the terms of the Treaty, thus confirming the wisdom of the British attitude, was never concealed by us from our Allies. On the other hand, public use was not made of it until M. Poincaré himself raised the legal issue by basing his case on the alleged illegality of the German action in resisting the occupation.

I am not here to apportion praise or blame between the various parties in the conflict. Our sentimental sympathy would always have been and was with our old and trusted Ally. We had not the smallest desire to take the side of Germany, or to let the Germans down easily, or to deprive France of her just due. On the other hand, we also had to consider our due, and, viewing the

matter not through the glasses of sentiment, but from a severely practical angle we regarded with increasing anxiety the prosecution of a policy that seemed to us to be productive of no good results, and to be leading on to disaster and ruin.

In the course of the spring the German Government under Dr. Cuno made a number of rather ill-advised suggestions for compromise, which I need not summarize because they were in each case inadequate and stillborn. I did not think that their diplomacy in this respect was wise; and in my various interviews with the German Ambassador I never failed to impress upon him this point of view and to urge that the duty of his Government was three-fold: (1) to pay their just debts, (2) to agree to the fixation of the payments by competent authority, (3) to offer specific and adequate guarantees. Simultaneously His Majesty's Government never wavered in the assertion of their broad and general loyalty to the Entente, and more than once indicated to the French Government that, if security rather than, or in addition to, reparations was in their mind, we should at any time be willing to discuss it. The first definite move, again halting and ill-conceived, was made by Germany in the opening days of May last. It was promptly turned down with scorn by France and Belgium and met with no approval from us. Then in response to a suggestion made by His Majesty's Government their second offer of the 7th June came. This was more substantial; for the German Government now offered to accept the decision of an impartial international body as to the amount and methods of payment, they proposed certain specific guarantees, and they asked for a Conference to work out a definite scheme. Here at least seemed to His Majesty's Government to be both the chance of progress and the material for a reply. Prolonged conversations with our French and Belgian Allies left their views and intentions veiled in some obscurity; and accordingly we decided, with their knowledge, to draw up the draft of a joint reply, with a view to securing the inestimable advantage of concerted action.

By this time the question of passive resistance, which had been continued with unabated intensity and had baffled all the French expectations, had assumed the first place in the outlook of our Allies, and M. Poincaré more than once laid down with uncompromising clearness that not until it was abandoned would he enter into discussions as to the future. For our part we continued to give advice in a similar sense to the German Government; and in the draft reply which we submitted, its abandonment, entailing the gradual resumption of civil administration and the progressive evacuation of the Ruhr, was put in the forefront of our scheme. In our explanatory letter to the Allies we further made concrete proposals, viz., for the examination by a body of impartial experts, acting in conjunction with, and if necessary under the orders of, the Reparations Commission, of the question of German capacity and modes of payment, a similar examination into the question of the proposed guarantees, and the summoning of an Inter-Allied Conference to bring about a general financial settlement. I do not think, therefore, that it can be said of His Majesty's Government that they were either backward in initiative or barren of suggestion; and certainly our proposals appeared to us to be characterized both by impartiality and goodwill. They were unfortunate, however, in receiving an unfavourable reply from France, and a not much more favourable reply from Belgium. These replies have been published to the world, and I need not recapitulate their nature. It is enough to say that not until passive resistance was definitely abandoned by Germany would our Allies agree to make any move; our proposal for an expert enquiry was rejected; the French and Belgian claims for repayment were restated in unqualified form. I confess that my colleagues and I were greatly disappointed at the result of our sincere but thankless intervention. Once more we stated our case in the British Note of the 11th August, a note revised with meticulous care, first by the Cabinet and

## SESSIONAL PAPER No. 37a

then by the Prime Minister and myself, and once again we offered as the price of a settlement to cancel the whole of our claims except for the sum of £710 millions sterling to meet our debt to the United States Government. Moreover, if we could get a portion of the sum from German reparations, our demands upon our Allies would be proportionately reduced. The replies of the French and Belgian Governments have been published. They indicated not the faintest advance from the position already taken up. Our capacity for useful intervention was manifestly exhausted.

Meanwhile, as time passed, it became apparent that the German Government could not, even if they desired, persist in the policy of passive resistance; and at length, only a week ago, Herr Stresemann, who had succeeded Dr. Cuno a few weeks earlier, decided to surrender. I think myself that this surrender should have been made three months ago and was unwisely and foolishly postponed. But I have always been told, and I suspect that it is the truth, that no German Government could at that time have survived which made the surrender. Whether Herr Stresemann, who had the courage and the wisdom to take this step, will survive is uncertain as I speak these words.

And now what is the point to which we have come? We do not grudge our Allies the victory—if victory it be. On the contrary we welcome, just as we have for long ourselves advised, it. But are we any nearer to settlement? Will the reparation payments begin to flow in? What is the new form of civil administration or organization that is to be applied to the Ruhr? These are questions which it is vital to put, and vital also to answer.

One of the results at any rate that we anticipated has already been brought about. For we see the beginnings of that internal disruption which we have all along feared, but which we have been consistently told to regard as a bogey. And let it be remembered that disruption is not merely an ominous political symptom. It has a portentous economic significance, for it may mean the ultimate disappearance of the debtor himself.

What therefore should be the next step? I have made no concealment of our view in my conversations with the French Ambassador, and it has the approval of the Prime Minister, who recently did so much by his visit to Paris to recreate a friendly atmosphere after the rather heated discharge of the rival guns. We have repeatedly been assured by the French Government that, as soon as passive resistance definitely ceased, the time for discussion between the Allies would have come. So far as I can gather, the German Government are sincere in their intentions, and have taken the steps required of them. What may be the attitude of the local population in the Ruhr I cannot say. But if the French contention be valid that it is only in obedience to orders from Berlin that they have hitherto resisted, there should be no difficulty about their conduct now. I would merely remark that, while passive resistance has, as we hoped and desired, been replaced by passive assistance, it may be too much to expect it to be followed all in a flash by enthusiastic co-operation.

The French Government know therefore that we await and expect the next proposals from them. The contingency of the cessation of passive resistance must have long been anticipated at the Quai d'Orsay, and the consequent measures doubtless exist in outline if not in detail. We shall be quite ready to receive and to discuss them in a friendly spirit. Our position at Cologne in the occupied area gives us a right to be consulted in any local arrangements that may be proposed, and that position we have no intention to abandon. Our reparation claim, willing as we have been to pare it down in the interests of settlement, renders it impossible that any such settlement could be reached without our co-operation. Our stake in the economic recovery of Europe, which affects us as closely, and in some respects more so, than the immediate neighbour of Germany, makes us long for an issue. We have already shown our willingness, by unexampled concessions, to contribute to it.

## APPENDIX IV

SPEECHES REGARDING THE WORK OF THE LEAGUE OF  
NATIONS, OCTOBER 11, 1923STATEMENT BY LORD ROBERT CECIL, K.C., M.P., LORD PRIVY SEAL  
AND BRITISH REPRESENTATIVE ON THE COUNCIL OF THE  
LEAGUE OF NATIONS.

LORD ROBERT CECIL: Prime Minister, I am in a little physical difficulty and I hope the Conference will pardon me if my statement appears to be inadequate to the importance of the cause.

I propose, with your permission, to deal a little generally with the topic of the League and not merely to confine myself to the particular issue of the Italo-Greek crisis, unless the Conference desires me to do so.

I do not propose to give you, or attempt to give you, a review of the history of the League proceedings during the last few years, because, in the first place, I have so recently joined the Government that I should not be qualified to do it from the inside point of view, and from every other point of view everybody is equally qualified with myself, because the whole of the proceedings, as you know, are always published either immediately or at a very short interval after they have taken place.

## AIMS AND POSITION OF LEAGUE

What I would like to try to do, if I may, is to make some kind of estimate of the present position of the League and what place it ought to occupy, and does occupy, in the foreign policy of the Empire. And it is necessary, though I should have hoped it would not have been, to begin by one or two elementary observations, owing to certain criticisms from highly-placed quarters, which have been passed on the recent proceedings of the League. It seems necessary to emphasize once again that the League is not a super-State and it is not there to give laws to the world it is not an organization which either legislates for or administers other countries, nor is it a mere debating society, a collection of more or less eminent persons who go there to indulge in futile oratory. I think it may be defined as an international organization, to consider and discuss and agree upon international action and the settlement of international difficulties and disputes. Its method is not, therefore, the method of coercive government; it is a method of consent and its executive instrument is not force, but public opinion. Now, I am sorry to insist upon what to many of my hearers must be very elementary observations, and I only do so, because, in connection with this crisis, there was published a very strong criticism of the League and the action of the British representatives, on the authority of an ex-Prime Minister, which seemed to me to show that there was a considerable misapprehension, even in the highest quarters, of what the League really strives to do.

## OBJECT OF LEAGUE IS TO PROMOTE AGREEMENT AMONG NATIONS

The League's business is not to impose a settlement, even when a controversy is brought before it; it is to promote agreement. The recent controversy was brought before the League under Article 15, as I shall show in a minute, and its business was to get a settlement of the controversy and an agreement of

## SESSIONAL PAPER No. 37a

the parties, and, if they did not agree, there was no power under the Covenant, nor would it have been at all in accordance with the general principles of the League, for the League to attempt to enforce what the Council of the League might think was the proper settlement. As everybody, I imagine, in this room knows quite well, there is only one occasion in which, under the Covenant, force is to be used, *i.e.*, under Article 16, and the object of that is not to enforce any particular settlement or a particular action, but to prevent nations from fighting, especially until an opportunity has been given for discussion, and consideration, and agreement. It is rather important, I think, that that should be realized in considering the actions of the League, and not least its action in connection with this Italian-Greek crisis. There ought to be no doubt about it, because the very words of the Preamble describe its objects—"To promote international co-operation and to achieve international peace and security." Those are the two objects of the League and they are to be accomplished, as I say, by inducing the nations to agree and act together, and not by any attempt by a group of nations, or by the majority of the League, to enforce on any particular nation any particular line of conduct which is approved.

## RESULTS ALREADY ACHIEVED

Now I would like—I will be as brief as I can—just to ask whether this conception, because it is necessary to ask it in view of what has recently been said in some quarters, whether this conception has, in fact, worked out successfully. Let me just take the first object of the Preamble—international co-operation. I do not think the severest criticism of the League will deny it has achieved an immense amount of co-operation of the most valuable kind and of the most multifarious description. I only propose to mention—I do not propose to discuss or describe—what it has done, but, when we come to consider the enormous number of different ways in which it has acted in order to promote international co-operation, I think there will be no doubt in the minds of anybody in this room that it has carried out this part of its duty with very remarkable success. Take its humanitarian exertions: the repatriation of hundreds of thousands of prisoners of war, the relief of hundreds of thousands of refugees, the organization of a defence against the epidemics from the east of Europe, achieved with very little expense and with absolutely complete success. Or you may take its social activities: the great efforts and the successful efforts it has made to strengthen the fight against opium, to extirpate the horrible traffic in women and children, which is one of the disgraces of our civilization, the assisting and protection of native races, and a very large part of its work which is subsidiary to the League, but in a sense part of it, its work in the International Labour Organization.

Or you may take its economic work: the great amount of work it has already done to facilitate the increase of transit between nations, or the smaller matters that it has had something to do with, to relieve the hindrance caused by passport regulations, or the work which it has done quite lately, the other day, to induce the nations to agree on a convention for the enforcement of commercial arbitration, a thing of immense importance to the commercial interest all over the world. Or you may take its financial work: I need not go back on the old Brussels Conference of 1920, although I still think that was a very considerable effort towards the financial re-establishment of the world, and that it deserved better practical success than it actually achieved. Or you may take the better known and more striking success, the very, very considerable steps that have been taken towards the financial rehabilitation of Austria. very remarkable work—I have not time to deal with it in any detail, but the Conference is well aware of the very remarkable success that has been

achieved in that direction. So remarkable is it that Hungary is asking us to help her in the same kind of way, though, I hope, with less contingent financial liability than in the case of Austria; and unhappy Greece, which has been saddled with a terrible financial problem of providing for a million refugees, *i.e.*, a quarter of her whole population, in addition to the existing population, is asking us to facilitate the raising of a loan for that purpose, and the establishment of a scheme for the settlement of these refugees on a sound economic basis. Or you may take its administrative work: the administration of Danzig, the administration of the Saar, the various administrative duties which have been thrust upon it, or have been offered to it, by the Lausanne Treaty; or you may take the number of other cases—I will not weary the Conference by enumerating any more—from what is called the intellectual co-operative work, which I think perhaps has more the sympathy of our continental neighbours than ourselves, down to a conference for fixing the movable feasts of the Church so as to have a fixed holiday instead of a movable one. All this work has been done, and, I think, with very great and remarkable success, and, considering the immense amount of advantage that has accrued to the populations of the world, with wonderfully little expense. I do not believe it could have been done in any other way than by the existence of the League.

#### IMPROVEMENT ON PREVIOUS PROCEDURE

If anybody who is familiar with these things consider what, under the old system of a diplomatic correspondence and special conferences perhaps called of a partial kind, which have no machinery to carry them out between their summoning, if you consider that, I think you will agree that the work could not have been done except by the League. The truth is that the League really has done splendid work in all these respects, and, as Lord Curzon said the other day, the League has exercised a wholesome and conciliatory influence in world politics. I do not think it is right to under-estimate the immense importance of all these kinds of activities in that conciliatory influence on the larger political questions which have to be transacted between nations. But, of course, all that is comparatively a minor matter.

#### STATUS OF LEAGUE IN INTERNATIONAL DISPUTES

The second object of the League is the object of achieving international peace and security, and anyone may well say how can you make any claim for the League if you consider the condition of Europe now, after the League has been in existence for three or four years.

I feel the force of the observation. But, in the first place, I must point out that the League is only what the Governments composing it choose to make it. It for them to say. As I have already explained, it is not a super-State, it has no coercive jurisdiction—it is for the Governments to say how much or how little work they entrust to the League. The League was not asked to deal with the Russo-Polish war; it was not asked to deal with the Turco-Greek war; it was not asked to deal with the question of Reparations; and it is those three big questions more than anything else that have been responsible for the unrest which still prevails in Europe. No doubt, of course, it may be said that if it had been asked to deal with those three big questions it would have failed. All one can say is that may be so, but the organizations which have attempted to deal with them have not been pre-eminently successful. On the other hand, as everyone knows, in the number of smaller questions which have been entrusted to the League, the League has succeeded in allaying the difficulties and disputes which have come before it.

## SESSIONAL PAPER No. 37a

I need not recount the circumstances of those disputes, the question of the Aaland Islands, the question of Upper Silesia, the question of Albania and Serbia, which was a very dangerous question, and even the question of Vilna, which many people regard as one of the least successful matters; but war between Lithuania and Poland was prevented. I think no one can deny that the work of the League did not meet with complete success, yet it did do this, it prevented any further fighting on the subject, and stopped the fighting which was already in progress.

## ITALIAN-GREEK CRISIS

But all these are smaller questions, and that is why the recent Italian-Greek question is of such enormous importance in the history of the League. It was the first occasion on which an International Dispute of the first order—one which might easily have led to serious wars in Europe—it was the first big question that had come before the League, and it is for that reason that I hope the Conference will allow me just to go through the dates and events, and point out exactly what the League did do and what the League did not do.

The murder of General Tellini took place on the 27th August, and the Italian ultimatum was issued on the 29th August. The Greek reply was the next day—the 30th August—and after acceding to the first three or four demands and explaining that the Greek Government was not able to accede to the other three, without abdicating its sovereignty—that is, undertaking to hang somebody, to allow another Power to take its place in trying the criminals, and, above all, to undertake to pay 50,000,000 lire whatever happened—those three demands the Greeks refused and concluded by saying that, if their reply was not deemed to be satisfactory, they were quite willing to submit the whole matter to the League; and they bound themselves beforehand to accept whatever the League should suggest. On the same day, the 30th, came the Ambassadors' note making their demands, for the Ambassadors were parties to the dispute; they made their demands on the same day, and also on the same day the Italian Government intimated that they would not accept the League. It is rather important that that should be emphasized, because it has been suggested that it was something which the League did which induced the Italian Government to reject it, but, as a matter of fact, they rejected it before the League had done anything. On the 31st the Ambassadors' note was delivered and the bombardment and occupation of Corfu took place, and articles appeared in the Italian press hostile to the League.

## APPEAL TO LEAGUE BY GOVERNMENT OF GREECE AND ACTION TAKEN BY COUNCIL

On the 1st September the Greek request for a hearing before the Council of the League was received in Geneva. The Council of the League happened to be in session already. It immediately met on the morning of the 1st in private; it is an illusion of some of our critics to suppose that the first meetings of the Council to deal with this matter were in public. It met in private, and the Greek representative, M. Politis, presented his request for the consideration and decision of the League. He read Articles 12 and 15, or at any rate the material parts of them, and under those articles anyone can see who refers to them that there is an absolute right given to any member of the League to submit to the League any dispute likely to lead to a rupture with any other member of the League, and it becomes the absolute duty of the Council to take that matter into consideration and endeavour to effect a settlement of it, and, if a settlement is impossible, then to hear and report upon the issue submitted to it, the parties agreeing that they will not resort to war until the dispute has been heard and reported upon.

In making his speech M. Politis disclaimed any desire that Article 16 should be applied. Article 16, as everyone knows, is an article which provides for economic pressure and blockade, and ultimately stronger measures, in case a country resorts to war without having submitted its dispute to the League. In other words, M. Politis did not claim that there had been a resort to war. I think he was right in the attitude he took. There had been an act which might have been treated as an act of war, but in fact was not treated as an act of war by the party against whom it was directed; and, therefore, there was technically no resort to war, and M. Politis very explicitly said that he had no desire that Article 16 should be applied. I do not know whether the Conference may have noticed a letter by Sir Frederick Pollock in yesterday's "Times" in which that distinguished jurist explains his view that there was no resort to war in this case.

#### QUESTION OF COMPETENCE OF LEAGUE

The Italian representative, Signor Salandra, said that he had no instructions, and asked for an adjournment, but incidentally called attention to the fact that, since the matter was also an offence against the Conference of Ambassadors, they were involved, and it was a question—he did not actually say that the League had no competence at that stage, but suggested that it was a matter that the Conference of Ambassadors ought to deal with. That was not accepted at that stage by the Greek representatives, and on behalf of the British Government I said we had no doubt at all as to the competence of the League, and I, while deploring deeply the murder—which I, of course, did—said on behalf of the British Government that we felt there was no question as to the duty of the League to entertain the request of the Greek Government under the clear terms of Article 15. I think the Conference would agree that the position was clear. There was a dispute, if ever a dispute existed which could be described as likely to lead to a rupture; it was a dispute of that nature; it was a dispute which at any moment might have caused war between the two countries. Any hasty action on the part of the Greek Commander might have precipitated the two countries into a war, and it may be with other countries as well; that was clearly a dispute likely to lead to a rupture. It was submitted to the Council of the League by one of its members expressly asking them to act under Article 15, and, as anyone who will read that article will agree, there was no option or discretion in the matter; the Council were bound to act, and they did act. The line which I took on behalf of the British Government was very warmly supported by the Swedish representative, M. Branting, and there was no question on the part of any member of the Council as to what the duty of the Council was, apart from the Italian representative. However, we adjourned till the 4th in order to allow the Italian representative to receive his instructions, merely passing a resolution to the effect that we hoped nothing would be done on either side to aggravate the situation.

#### FEELING IN ASSEMBLY

The Assembly met on the 3rd, and it had become quite evident that there was a very strong and a unanimous feeling in the Assembly on the point. It is perhaps worth while to remind the Conference of the position of the Assembly, I mean of the delegates. The larger Powers are usually represented by persons of more or less importance, commonly ex-Ministers or persons of note of that kind; the smaller Powers are not infrequently—I think I might say almost usually—represented by their Foreign Minister or somebody of equal authority in their country: Dr. Benes on behalf of Czecho-slovakia, M. Nineic on behalf of Serbia, M. Kalfoff on behalf of Bulgaria and Dr. Nansen on behalf of Nor-

## SESSIONAL PAPER No. 37a

way, and so on; consequently a very large proportion of them speak directly for their Governments, and those who are not actually Ministers are usually people of such importance that anything they say carries the opinions of their countries with them. It was, therefore, of great importance that there was a really strong vehement feeling that the League must act and must do its duty, and a strong feeling also, of course, that the occupation and bombardment of Corfu was, in the circumstances, not a defensible proceeding.

## FURTHER PROCEEDINGS OF COUNCIL

There had been delivered on the 2nd, and this is an important fact in the situation, the reply of the Greeks to the note from the Ambassadors' Conference and in that reply they expressed their willingness to accept whatever the Ambassadors put upon them. On the same day I received, and was intensely grateful to the Prime Minister and the Foreign Secretary for them, the instructions from the British Government authorizing me to take whatever action I thought right to support the Covenant. The next day the Greek Note to the Ambassadors was received of course, and we received—I need not go into the detail of it—we received information of the rather vehement and formal rejection of all competence of the League on behalf of the Italian Government. That was the 2nd September. When we met on the 4th September, in the first public meeting of the Council, the Italian instructions had not arrived. They had sent somebody, one of their members, to Rome to get personal instructions and all that we did on that occasion was to hear a further proposal from the Greek Government offering the deposit of 50 million lire in a Swiss bank to await whatever damages might be awarded against them. Then came the meeting of the 5th September and then we had a communication for the first time from the Ambassadors' Conference telling us what was going on in Paris. We had a speech from the Italian representative denying the competence of the League in a very much more moderate form, it must be said, than the language which had been used outside the Council of the League, and it was on that occasion that we had read to us the relevant articles of the Covenant in French and English pointing out what the duties of the Council were and that we could not infringe those duties without breaking the Covenant and incidentally breaking the Treaties of Peace of which the Covenant was part. It became clear at this stage, both from what Signor Salandra said to us in the Council and from information conveyed to us from outside, that the Italians were now prepared—they had not said so up till then—to accept the Conference of Ambassadors, not only as the proper authority for dealing with the offence to the Ambassadors, but as determining what ought to be done between Greece and Italy, and therefore on that date we were for the first time in the presence of an agreement by the two parties of the dispute to accept the decision of a Tribunal, of a body, outside the League. We had a meeting, a certain number of members of the Council met and considered what reply we ought to send to the Ambassadors and we felt that our business under the Covenant was to do everything we could to promote a settlement, and since the two parties had agreed to accept the decision of the Conference of Ambassadors our object henceforward was to do everything we could to facilitate the task of the Ambassadors, and to make their decision as nearly in accordance with public opinion of the world as expressed at Geneva as we could. We therefore drew up the proposed terms of settlement apart from the question of the evacuation of Corfu, and these were proposed by the Spanish member of the Council at the meeting of the Council on the 6th. We were unable to send those proposals as agreed recommendations to the Council of Ambassadors, and it was in order to get over that difficulty that at my suggestion we decided to send the whole of the minutes of our proceedings to the Ambassadors who,

as we knew, were going to meet the next day to deal with the matter, and the minutes included not only the actual proposals which were, in fact, the proposals which were afterwards adopted practically without alteration or very small alterations by the Conference of Ambassadors, but also included certain very important declarations by other members besides the British member of the Council as to the competence of the League. The Belgian member, for instance, M. Hymans, made a very strong declaration as to the clear competence of the League. That was assented to by the Swedish member and by the Uruguayan member, and also by the Spanish representative. It was, of course, quite well known that that represented the strong feeling, as I have already said, of all these nations there assembled at Geneva, and I happen to know, as a matter of fact, that that feeling was conveyed by a great number of different nations both at Paris and at Rome to the Governments of France and Italy. I have not myself the least doubt that that strong feeling had a considerable effect upon the readiness with which the Conference of Ambassadors on the 7th September adopted the suggestions which the Council of the League had put forward as to the settlement of the question apart from the evacuation of Corfu. The Conference of Ambassadors did adopt them. They were accepted by Greece and Italy and then took place a rather awkward pause. We were informed that the Conference of Ambassadors were going to deal with the question of Corfu also. As I have said only too often, the business of the League was to promote an agreement and a settlement, and as long as there was any prospect of a settlement being reached it was not the duty of the Council of the League to intervene. They therefore held their hand altogether during the next few days awaiting the decision of the Conference of Ambassadors as to what was going to happen in Corfu. They, of course, reserved to themselves the right to take the matter up again if no settlement was reached or if a settlement was reached so plainly in defiance of all public law that they could not allow it to pass. As a matter of fact, on the 13th the settlement was reached, and the note which was sent by the Conference of Ambassadors to Greece was not unsatisfactory. It said that it adhered to the terms, of course, of the 7th September, the first note, and that having received from the Italian Ambassador a statement that Italy would in any case evacuate Corfu on the 27th September, which, I may parenthetically observe, was two days before the end of the Assembly, having received that assurance it went on to say that, if the Ambassadors were satisfied that Greece had not carried out with due care its obligations to search for and punish the criminals, then they reserved to themselves the right to impose further penalties on Greece including the payment of the whole 50 million lire without any reference to the International Court. That was the note of the 13th September. On that we were not called upon to make any observations, because both Greece and the Italians accepted the note and so far as the League was concerned the matter was at an end.

#### PART PLAYED BY LEAGUE IN SETTLEMENT

A settlement had been effected; we had done the best we could to effect that settlement and I am convinced that the concentration of public opinion at Geneva was one of the great factors in promoting what was, after all, a very rapid pacific solution of an exceedingly difficult question. On the 17th September there was a meeting of the Council at which we took note of this settlement and I took the opportunity of explaining very much what I have explained to the Conference here, what seemed to us the duty of the League in cases of this kind. On the 18th the Italian representative made a further statement as to his objection to the competence of the League. It was, I think one may say without impertinence, more moderate than the previous declarations had been and thereupon it was

## SESSIONAL PAPER No. 37a

agreed that we should take means to clear up definitely and for ever, as far as one could, all these legal questions that had been raised, the question of competence and the question of the right to seize territory in order to enforce demands—I will deal with that in a moment—and also the question of the responsibility for political crimes committed on the territory of a State. I need not trouble the Conference with the details of the negotiations that then took place. A number of meetings of the Council took place and we called in our legal advisers. They drew up five questions which raised these matters and they were accepted, together with a declaration to which I shall refer in a moment, by the Italian Government.

## DISCUSSION IN ASSEMBLY

On the 28th, and this is the last date I shall have to trouble the Conference with, there was a meeting of the whole Assembly when, for the first time, the Assembly thought it was right for them to discuss and express an opinion upon these events. It was begun by the President of the Council, Viscount Ishii, reading the resolutions to which the Council had come. He was followed by M. Branting, who expressed certain criticisms, particularly that the matter had not been referred directly to the International Court of Justice. I made some observations.

Then occurred a really rather remarkable demonstration. Eight or ten representatives from all parts of the world, from all four quarters of the globe, one after the other, expressed in the strongest way their conviction that the League was competent to deal with the matter and their regret at some of the incidents that had occurred.

## SUMMARY OF POSITION

May I just try and summarize what seems to me to have been the result? Greece submitted the questions under Articles 12 and 15, and, as I have explained, the Council was bound to entertain them and did entertain them. There was no resort to war and hence, as the Greeks very truly said, Article 16 did not apply. On the other hand a very serious question was raised as to the action of the Italian Government in occupying territory in order to enforce a demand against Greece.

## PRECEDENTS FOR ITALIAN ACTION

That is not as clear a matter as perhaps some of us would wish. Undoubtedly before the Covenant it had been quite common for countries of all kinds to exercise coercion of that kind. Sir Frederick Pollock called attention to the proceedings in Crete, but there are stronger cases still. There is a case in the early sixties where the British Government did almost exactly the same as the Italian Government. A British subject was murdered in Japan by one of the feudal clans. This was before the marvellous changes in Japan. The British Government demanded £25,000 as compensation to the relatives of the murdered man and £100,000 as compensation to the British Government and apologies and the arrest of the criminals. When the criminals were not arrested as quickly as they thought they ought to be arrested the British fleet bombarded a place called Kagoshima and burned it to the ground. I mention this because it is right that we should realize that, apart from the Covenant, there was nothing unusual, whatever we may think of it as a proper international proceeding, there was nothing unusual in what the Italians did at Corfu. On the other hand it has raised the question of whether that Covenant permits any such action to be taken by one member of the League against another without at any rate resorting to every means of discussion and debate in order to settle the dispute before such measures are taken.

## DEFENCE OF COUNCIL'S ACTION

Shortly, I venture to say that the Council did exactly what it ought to have done under the Covenant. Its business was to promote a settlement. If that settlement could not be promoted by diplomacy or by arbitration, which are mentioned under Article 13, its business was to hear and report upon the dispute itself. It carried out that duty of promoting a settlement absolutely, and its suggestions, as I venture to think, for the settlement were of great value and were in themselves quite sound. But once the parties had agreed on settling it in another way than by the report of the Council, it was not only the right, but it was the duty of the Council to do everything they could to facilitate the settlement by those means.

## APPOINTMENT OF COMMISSION OF JURISTS

There remain then these two questions which I have referred to, the question of the legality of the occupation of Corfu, which I have already dealt with, and the question of the competence of the League. They have been dealt with in this way. We, most of us, or I and several of the other members of the Council, desired that they should be referred to the International Court of Justice for an advisory opinion. The Italians were opposed to that, in the case of one of the questions. They proposed that they should be referred to a Commission of Jurists. Ultimately we agreed to the Commission of Jurists and they agreed to a very strong declaration: That any dispute between members of the League likely to lead to a rupture is within the sphere of action of the League and that, if the dispute cannot be settled by diplomacy, arbitration or judicial settlement, it is the duty of the Council to deal with it under Article 15 of the Covenant. In view of that very strong declaration which seemed to me to go far to dispose of the question of competence, I did not myself think it was necessary to fight any longer for the immediate reference to the International Court of Justice. The matter will go to this Committee of Jurists and they will report to the next meeting of the Council on the 10th December. If the Council still feel that the matter is in any doubt they will be able to put any further questions they like to the International Court.

## EFFECT OF ITALIAN ACTION ON POSITION OF LEAGUE

It seems to me, therefore, that as far as the formal position of the League is concerned, it is unhurt. An attack was made on its competence that has been either actually withdrawn or will be dealt with finally in the near future. The question of the occupation of Corfu is also to be submitted to legal determination, and so is the question of the responsibility for a political crime committed on the territory of a State. I confess I think those provisions for dealing with these questions which have been raised in this dispute in a strictly legal way form a very valuable precedent. I do not recall any instance of an international dispute of this nature raising very difficult questions which has been followed by an attempt to settle those questions by strictly legal and constitutional means, and if that precedent is established and is followed it really will lay the foundation, as it seems to me, for a gradual elaboration of international law which may be of enormous value for the future peace of the world. Therefore formally the League is unhurt.

Substantially, however, I do not think one can go as far as that. There has been the challenge by a great Power of the competence of the League. It is quite true that that has been met immediately by a very remarkable rally of all the smaller Powers to the support of the League. It showed a very strong, vigorous, vital feeling on the part of all those Powers not only in Europe, but

## SESSIONAL PAPER No. 37a

all over the world that the League must be supported, that it was the only guarantee of justice between the States and that the small States particularly were vitally interested in the maintenance of the authority of the League. I think that was a very valuable counterweight to the repudiation—I think we must admit it was repudiation—by a great Power of the competence of the League, at any rate for a time. I do not think that repudiation has done the League's authority as much harm as some people believe.

## GENERAL ATTITUDE TOWARDS COUNCIL OF GOVERNMENTS REPRESENTED ON IT

Apart from the actual repudiation by a great Power, the other unfavourable symptom that struck me at Geneva was a certain want of confidence in the Council of the League by the members of the Council. They did not feel as sure of themselves as I could have wished. They did not quite know what it would be safe for them to do. That is perhaps not a matter of surprise considering the short time which the League has been in existence, but I do think, if I may say so, that it points to the necessity for those countries that believe in the League, as I hope we do, giving to the League on all possible occasions every support that they can and making it a most essential part of our foreign policy.

## COMMENTS ON LEAGUE MACHINERY

On the other hand, I think we may say, those of us who believe in the League, that there were very many encouraging things about this crisis, not only the matters to which I have already alluded. I think we may say with great truth that the machinery of the League worked well, that it all worked, as we used to be told, according to plan, that the dispute when it was presented came naturally to the Council, the Council naturally considered it, there was no hitch or difficulty. I myself believe that the publicity in which the later stages of the controversy took place was all to the good. I believe it enabled public opinion to support the League, to support what I think was justice. I think that the effect of public opinion was exactly what we who believed in it thought it would be; it was so overwhelming that no country could stand against it, and that, when it became clear that the public opinion of the world was on one side, that country had to modify its policy in accordance with the opinion expressed.

## SUPPORT OF BRITISH EMPIRE FOR LEAGUE

Somebody said to me the other day that the British Empire never had any foreign policy except to keep the peace. I believe that is roughly true; at any rate, true for very many decades, if not centuries, past. We have tried to keep the peace; that has been the great object of British foreign policy, working not by force, not by power, but by trying to promote friendliness amongst the nations. That has been, I believe, the broad object, sometimes more and sometimes less successfully pursued by successive British Ministries. I believe it is still the essential thing we should aim at. We now have in our hands an instrument for that purpose in the League of Nations, incomparably more effective than anything we have had before. We ought to do our utmost to strengthen the League and make it more and more the corner stone of our policy, for unless we can get rid of the war machinery, the idea of force and compulsion, I do not myself think there is any hope that we shall see a pacified and restored Europe.

## STATEMENT BY THE PRIME MINISTER OF CANADA

## APPRECIATION OF LORD ROBERT CECIL'S STATEMENT

Mr. MACKENZIE KING: I do not know that I have much to add by way of comment, except to express appreciation for the information we have received, particularly in relation to the Italian-Greek crisis, and the fact that Lord Robert Cecil went so carefully and fully into the different aspects of the work of the League in which we are all so interested.

## EFFECT OF ITALIAN ACTION ON PUBLIC OPINION IN CANADA

In speaking of the Italian-Greek crisis and the relations of the League thereto, we cannot from a distance but feel that the extent to which public opinion was focussed on the dispute was increased a thousandfold by virtue of the fact that the League's authority to a certain extent had apparently been ignored. It gave to every country, certainly to Canada in her interest in the dispute, a feeling of immediate concern, which I think she otherwise would never have had. I believe that much the same feeling was aroused in America, though she is not a member of the League. I think there was a feeling that, after all, nations had endeavoured to set up some machinery to take the place of force, which machinery should be respected. I believe that the fact that the League was meeting at the time certainly went far in arousing world opinion and would have led to a much more vigorous action from the outside world if necessity had occasioned it. Certainly nothing could better express the views that were held in Canada generally with reference to the support which should be given to the League than the concluding remarks of Lord Robert Cecil. In every particular they would be endorsed with enthusiasm from one end of our country to the other.

## GOOD EFFECTS OF LORD ROBERT CECIL'S VISIT TO CANADA AND THE UNITED STATES

May I take advantage of this occasion to express the pride and pleasure which we all felt in the visit of Lord Robert Cecil to America and the addresses given there. I believe they were distinctly helpful in interpreting the work of the League in a sympathetic manner to the people of the North American continent. I believe the speeches did much good. I do think that Lord Robert Cecil's visit was in every particular helpful to the League and to the British Empire.

I should like to mention that my colleague, Sir Lomer Gouin, was one of our representatives at the League and possibly the Conference would like him to say a word or two if he so desires.

## STATEMENT BY MINISTER OF JUSTICE, CANADA

Sir LOMER GOUIN: I was at Geneva representing my country at the last meeting of the League of Nations. I followed the deliberations of the Assembly and the deliberations of the Council. I must say that I felt proud of the rôle played by Lord Robert Cecil both before the Assembly and before the Council.

## CANADIAN AMENDMENT TO ARTICLE 10 OF THE COVENANT

I must take this opportunity to thank Lord Robert Cecil for the great help he gave Canada in connection with the proposition that we laid before the Assembly with regard to Article 10 of the Covenant. As you remember, in 1919, at the time that the Peace Conference was preparing the Covenant, the representative of Canada, my predecessor, the Right Hon. Mr. Doherty, opposed

## SESSIONAL PAPER No. 37a

Article 10, and, after the Covenant was signed and brought to our Canadian Parliament for ratification, he maintained his opposition to that Article. But, believing in the Covenant and wishing to be a party to the League of Nations, he asked our Parliament to ratify the Covenant, which was done. In 1920, at the very first meeting of the Assembly of the League, he came before the delegates and asked for the repeal of Article 10. This was referred to a Commission appointed by the Council, and the report of that Commission was to the effect that, instead of repealing Article 10, an interpretative clause should be adopted by the Assembly. That report was discussed at two Assemblies, and in 1922 our representative, the Hon. Mr. Lapointe, finding that he could not obtain the repeal of Article 10, brought up another amendment in advance of the proposition of the interpretative clause. This year I brought up the same amendment and with the help of Lord Robert Cecil and the representatives of the other Great Powers, we succeeded in having the Commission, which had been entrusted with the examination of our proposal, submit an interpretative declaration to the Assembly, which voted for it by a large majority, one State only voting against it. It is true that the Clause was not adopted, as unanimity was necessary under the rules, but . . . .

LORD ROBERT CECIL: It was only Persia who was against it.

SIR LOMER GOUTIN: Yes, and that is why I say that in effect we have obtained the interpretative declaration which we were seeking. And for this I wish to renew my thanks to Lord Robert Cecil for the assistance that he has given us. That is all I have to say.

## STATEMENT BY THE PRIME MINISTER OF THE COMMONWEALTH OF AUSTRALIA

### INTEREST OF AUSTRALIA IN LEAGUE

MR. BRUCE: Prime Minister, on behalf of the people of Australia, I feel I must say something in regard to this question, because I do not think there is anything at this time they are more interested in than the League of Nations. The idea of the aims and objects of the League is gradually percolating through Australia, and there is a very strong feeling growing up there that the League of Nations has at least got the germ of a hope to maintain peace in the world. I am confident that Australia would take any action it could to promote the authority of the League of Nations, and to give it every opportunity to go forward and grow in strength and become the great instrument that those who brought it into being had in mind. I think that Australia's demand for some voice in the foreign policy of the Empire is, to a very great extent, directly traceable to the League of Nations and Australia's interest in its objects.

### AUSTRALIA STANDS FOR PEACE AND SUPPORT OF LEAGUE

It has been very well put by Lord Robert Cecil, to whom we are very grateful for the information he has given, that Britain's foreign policy is Peace. Australia's foreign policy would certainly be Peace; and, quite apart from any apprehensions, which I may have appeared to suggest that we had, of being involved in war without our consent, we also feel that, after the late tragic war, we have a responsibility to try to do our share in promoting peace in the world, and Australia believes that the foundation of Britain's foreign policy should certainly be to support the League of Nations and make its authority as great and world-wide as is possible. In the debate which took place in Australia with

regard to these Conferences, the view was expressed that one of the greatest tasks that lay to our hand was to see whether this Conference, representative of the whole Empire, could not really do something towards ensuring the peace of the world and solving some of the very serious problems we are faced with to-day. The people of Australia take a very strong view of this matter; and I am sure they would say, almost with a united voice, that they do believe in the League of Nations, and that all our actions ought to be directed towards trying to promote its power, its force and its authority in the world.

#### NEED FOR DISCRETION

There are one or two things, however, that I think I ought to say. We are enthusiastically in favour of the League, but we think that the League ought to show great discretion, and very great discretion, in the next few years, certainly in the period of its infancy. If the League tries to go too far and too fast and to achieve all the objects it has in view in too short a time, I think it will defeat its own ends.

#### PROGRESS ALREADY MADE AND PROSPECTS FOR THE FUTURE

Personally I think very great progress, considering the time the League has been in existence, has already been made, and I am quite certain that that progress will be accelerated and that we may be a little surprised at what the League can accomplish. I recognize, of course, that the League of Nations is never going to do what we hope while there are great nations outside it; but there is no reason, because certain nations to-day do not see that they can join the League, why we should think that the League should not go on and that the case is hopeless. The position will probably improve in the future, and the one thing we have got to bear in mind is to keep the League in existence, keep it functioning; and whether it is this League, or a greater League that will spring up in a few years, we have to keep its idea alive. We saw very clearly that it was imperative when the tragic sufferings of the war were very close to us, which many of us rather seem to have forgotten. The League should be kept alive because, if this League goes, we have no hope of establishing anything of the sort until we have been through another world tragedy of the same character as that which our generation has seen. The next world tragedy of that character is going to be a tragedy one-hundredfold worse than the one we have experienced. So that, although Australia is enthusiastically behind the idea of the League of Nations, it does not think that the League at this stage, in its infancy, can ensure the peace of the world, but it believes that, if the League is given opportunity to grow, there is the germ here of the one thing that may ensure the great object we all have, to maintain the peace of the world.

### STATEMENT BY THE PRIME MINISTER OF NEW ZEALAND

#### APPRECIATION OF LORD ROBERT CECIL'S STATEMENT

MR. MASSEY: I would just like to say by way of introduction, Prime Minister, how much I appreciate the very plain and straightforward statement that we have had this morning. I think if even part of Lord Robert Cecil's statement is published it will go a long way to clear the atmosphere which has undoubtedly been created by recent events. I wish also to say how much I sympathise with Lord Robert Cecil in what has recently taken place

## SESSIONAL PAPER No. 37a

For years past he has given practically the whole of his efforts, and the whole of his energy, and the whole of his ability, to the business of the League of Nations, from the commencement right up to now. I know that he must have been disappointed with some of the criticisms, at which I am surprised myself, and with some of the misrepresentations—which are worse than criticisms—that have been given utterance to by men who ought to have known better.

## PERSONAL OPINION OF VALUE OF LEAGUE

In saying that, I am bound to admit that I have never been quite an enthusiastic supporter of the League. But, with regard to what has taken place, my own opinion is that too much was expected from the League, and I think that some of the more ardent supporters of the League are themselves to blame for the feeling that has been created. The idea that was created was this, that the operations of the League would prevent war. I never thought so. I do not think for a moment that the prevention of war by the League was possible. The League was initiated to promote peace—peace by arbitration, peace by conciliation, or peace by bringing to bear public opinion. I say now that I believe a very great deal of good has been done by the League and it ought to get credit therefor.

## STATEMENT BY THE PRIME MINISTER OF THE UNION OF SOUTH AFRICA

## APPRECIATION OF LORD ROBERT CECIL'S WORK FOR LEAGUE

GENERAL SMUTS: I wish to join those of my colleagues who have already spoken in expressing very strong appreciation of the work that Lord Robert Cecil has done at Geneva. As the Representative of one of the Dominions for a number of years, and now the Representative of the British Government, I think he has rendered invaluable service, not only to the world at large, but also to the British Empire, in the stand he has made for League principles and for the position of the League. I nominated him as the South African Representative, not because he was necessary from the South African point of view or to defend South African interests, but in order to give him, as the great protagonist in this country for the League, a platform from which he might continue effectively to support that movement. He has done so in a way which I think is above praise. The moral stock of the British Empire, so far as I am informed, is very high in Geneva. I was very much struck by what one of the South African representatives told me on his return from Geneva the other day. He said the most remarkable thing at Geneva is the confidence, the faith, the reliance, which all the small peoples of the world represented there have in the British Empire and in the stand that we are making for justice, fair play, and international honesty. That is a matter of very great importance to us and I think it is very largely due to the ethical tone which Lord Robert Cecil has been able to give to the discussions there, and to the message of goodwill that he has been able to bring from this country and from the other young nations of the British Empire to the nations of the world.

## RESTORATION OF AUSTRIA

Lord Robert has told us this morning in his very full statement what the League has done and the successes the League has achieved, and he has in particular referred to the successful restoration of Austria. The success of the

Austrian experiment is valuable and significant not only in itself, but because it points a way to a similar treatment to any other country that may require our help in the future. I was discussing with some financial men in the City what might be done in case Germany were to break down completely financially, and there was a consensus of opinion that the Austrian experiment had been so successful and formed so good a precedent that, if we had to take action, our treatment of Austria might serve as a very valuable precedent. And let me say this: that in the case of Austria also South Africa has been able to be helpful. We happen to have as one of our South African representatives a gentleman of Austrian origin and of very great financial ability who has been able to make a very notable, if not the main, contribution towards the rehabilitation of Austria.

#### SUPPORT OF BRITISH EMPIRE FOR THE LEAGUE

I would press very strongly that the British Empire, the British Government and the Governments represented here at this Conference, should use all their power in order to keep their hands clean and support the League and support the smaller Powers where their interests clash against the larger Powers. I agree thoroughly with Lord Robert when he said that the position of the League is not one of force; it does not rest on the sanction of force, but on public opinion, the moral enlightened opinion of mankind. The more we can marshal that opinion, and we can play a large part in doing so, the more we can marshal the support of public opinion and the feeling of the world on the side of the League, the better for the future of the League. The League is inevitable. The League ideal seems to be the only hope of the world, and, if in practice the League has not realized the great anticipations of those who originated it, it is because of its youth and inexperience, and because of the difficulties of the time through which we are passing, times of reaction, times of disillusion, times when it is almost impossible to keep any good cause afloat. We recognize that we are passing through an era of grave difficulty; all we can do is to keep the flag of the League flying, and not to put burdens on it which it cannot carry. In the end it must triumph; that is inevitable. There is nothing else if there is to be a reign of law and justice in this world. In the meantime, we can do our best to marshal public opinion behind it and to see that it stands for the high principles for which it was originally founded. I was very glad to hear the speech of Mr. Bruce, the Prime Minister of Australia. It shows how all the young countries of the British Empire are now falling into line in real wholehearted support of the League. To my mind there is no doubt that the League is not only a great world interest; it is a British interest too. I thoroughly endorse what Mr. Bruce has said. The more we can make the League a real living force, the less armaments we as an Empire shall require. We cannot rest merely on a military or a naval basis. Something far greater than armaments will be wanted in an Empire as great as ours, and the League seems to me to be a real, substantial, moral reinforcement of our whole position. The more we can strengthen it, the more we can make it a reality, the more secure our position will be, which is not one of military or naval ambitions, but one of peace and social progress in the world. I therefore hope that whatever we can do to strengthen the position of the League we shall do.

#### VALUE OF LEAGUE TO EMPIRE

Let the world know that behind the League and behind the action it has occasion to take is the whole force and weight of the British Empire. I am sure the League is adding a new bond of cohesion to the Empire. I am sure that the time is coming when the young nations of the British Empire will be pre-

## SESSIONAL PAPER No. 37a

pared to support any particular line of action, not merely to support Great Britain, but because the League is being flouted, because the League is being attacked, and they stand by the League. These young nations will have an added motive and an added reason for coming forward and supporting the international action of Great Britain.

## WORLD'S NEED FOR LEAGUE

But it is to our interest, not only from the point of view of the British Empire, but far more still from a broad human point of view, to support the League as strongly as we can. What do we see to-day? We see a whole world lapsing into decay. Europe has been so smashed by the war that nothing seems possible to make her rally again. The break-up which began at the end of the war is continuing. We do not know what Europe will be like in ten or twenty years' time. We only see that forces are at work, far deeper and of a more fundamental character than we ever thought possible. We thought it would be possible to stabilize the position at the peace and to have a settlement of Europe which might be abiding. We have seen now that hope has been in vain. Nothing now is abiding. The unsettlement of Europe continues, the break-up continues. And in those circumstances, if there is any practical force that will work in keeping the nations together in peace and protect us against an era of complete reaction and brigandage such as seems now to be setting in, if there is any such practical institution, let us exploit it to the full. We are no doubt in for a very bad time. I think this present generation will probably see human institutions put to as severe a test as they have ever been. And when we have an institution like this which, whatever the attitude of the great Powers, is undoubtedly appealing strongly to the smaller Powers, practically to all of them, I think we should marshal our forces behind it, knowing that this will be a stabilizing agency and that it will help to keep us together and keep humanity afloat through the dark seas through which we are voyaging now. Perhaps I speak too strongly, but that is my feeling. So far from the League being a sort of revolutionary agency as many have thought, something that will destroy the British Empire, something that will work unknown mischiefs in the world, I look on it as a great conservative stabilizing force working on the side of the British Empire and the ideals for which we stand. Not only from the large human motives which have impelled us, but also from the point of view of the British Empire, we have every reason to support this movement to the fullest of our power and ability, and I hope we shall continue to do that, and I trust that the next crisis, which may not be far off, will see the League emerge with greater credit and more strongly than it has come out of this last crisis.

STATEMENT BY THE MINISTER OF EDUCATION, IRISH  
FREE STATE

## ACCEPTANCE BY IRISH FREE STATE OF PRINCIPLES OF LEAGUE

Professor JOHN MACNEILL: I may say that the Irish Free State has arrived at nothing nearer to a definition of foreign policy than is expressed in its adhesion to the League of Nations, and I was very much gratified to hear on all sides to-day, from Lord Robert Cecil and from the representatives of other States who have spoken, the view expressed that the foreign policy in which we, as a group of nations, ought to be interested—I shall not say to

which we ought to be committed, but in which we ought to be interested—should be in harmony with the principles underlying the League of Nations. I sincerely trust that will always be so. If it is so there will never be any difficulty in our following a common course together and following it effectively. Speaking as the junior among you and representing a junior State among you, I have no hesitation in saying that, if a test of those principles arose and if the League of Nations through its properly accredited organs required a certain duty to be done, a certain amount of pressure, in whatever form desired, to be applied, I am perfectly certain that the nation for which I sit here would not be behindhand in doing that duty. I should like to emphasize the point of view that I have expressed, because, as an observer in Geneva, I did my best to estimate the feeling that was abroad, especially among the smaller nations, and I should say undoubtedly it was a feeling of dissatisfaction rather than a feeling of want of confidence, a feeling of desire that the objects of the League should be made effective, which is I think the next thing to the operative will that they should be made effective. On this question in general I did my best to express the view of the Irish Delegation in a statement that I made at the meeting of the Assembly on the 28th September and I shall not take up the time of this Conference in repeating that view now.

#### APPRECIATION OF LORD ROBERT CECIL'S WORK FOR LEAGUE

I should like to join with those who have spoken already in offering a testimony, a stronger testimony than my own personal testimony, when I say that, so far as I know, and I have heard of nothing to the contrary, it was the unanimous feeling of the representatives of the nations at Geneva that Lord Robert Cecil had done as much as could be done to maintain the prestige and the effectiveness of the League of Nations.

#### STATEMENT BY THE PRIME MINISTER OF NEWFOUNDLAND

##### APPRECIATION OF LEAGUE

Mr. WARREN: I will not trespass upon the Conference except to express what I feel as a result of this discussion. Youth as a rule does not command respect and is sometimes subjected to correction, either moral or physical, which, as I know from personal experience, is sometimes quite unjustifiable. The League is a young one and I think it has borne the strain very successfully. The fact that it has borne that strain shows that although it is young still it is a hardy and strong growth, and I feel confident that when it goes forward and becomes the power, which undoubtedly it will become, it will not be subjected to such strains as have been put on it recently. By that I mean that the nations will see what the League can really do and will rather apply to it for aid than attempt to thwart it.

##### NEWFOUNDLAND'S CONFIDENCE IN LORD ROBERT CECIL

So far as Newfoundland is concerned we are not represented in the League of Nations, but we leave our interests, with perfect confidence, in the hands of Lord Robert Cecil.

SESSIONAL PAPER No. 37a

STATEMENT BY THE SECRETARY OF STATE FOR INDIA, AS HEAD  
OF THE INDIAN DELEGATION

## SUPPORT OF LEAGUE

LORD PEEL: I desire to associate myself generally, on behalf of India, with the views that have been expressed here by the representatives of the Dominions in support of the League of Nations.

## OPIMUM QUESTION

I think that I ought to make one or two remarks on the position of India in connection with the opium question. Some resolutions were passed at the last meeting of the Advisory Committee on Opium with reference to the traffic in opium and we have been criticized, I understand, in certain quarters because our representatives could not fully accept those resolutions and were compelled to make a reservation on behalf of India. The reservation that was made on behalf of India was to the following effect: "That the use of raw opium according to the established practice in India and its production for such use are not illegitimate under the Convention." Those who are familiar with Indian habits and customs will realize how essential it was that the representatives of India should support such a reservation.

## INDIA'S POSITION AS REGARDS OPIUM TRAFFIC

As there has been some criticism of Indian action on this point I should like to say, and I will say it very briefly, how very strong the position of India is upon this subject. First of all, let me remind the Conference that the Indian Government have made very great sacrifices in the cause of the restriction of this opium traffic. They have sacrificed no less than four million sterling per year by their restriction of this traffic, a very great sacrifice indeed in the case of a country with such a large poor population and such comparatively limited resources as India possesses, but not only that, they have most loyally and faithfully and fully carried out—I was going to say to the letter—all the provisions of the Hague Conventions in connection with the subject of opium. I do not want to criticize other countries, but I could not say the same thing of many of those countries adjoining India who have a financial interest in the opium traffic. And not only that, but the Indian Government have been very careful to restrict all their exports of opium to the amount actually approved of by the Governments of the countries to whom their opium was exported. They have, in fact, only exported on indents, as you might call them, from those particular countries and I would like to add this point, that, as regards the consumption of opium, during the last three years this has become a subject which is domestic to the provinces rather than an all-India subject, because this question of the consumption of opium is now under the control of Ministers, Indian Ministers, in the provinces; in fact, it is altogether under the control of Indian Ministers except in one particular province, and that is Assam. Those Indian Ministers are responsible to Councils and those Councils consist of a substantial majority of popularly elected persons; therefore we may assume that those Ministers responsible to those Councils are fully cognizant of the interests of their own people and are fully competent, if they wish, in the interests of those people to restrict the consumption of opium. I point this out because the situation, of course, has very largely changed in this respect during the last three years and I am not sure whether some of the other representatives at the League of Nations were fully cognizant of the change that had thus taken place.

OCTOBER 24, 1923

## STATEMENT BY THE SECRETARY OF STATE FOR INDIA, AS HEAD OF THE INDIAN DELEGATION

LORD PEEL: Prime Minister, I should like to thank you and to thank the Conference also for giving the members of the Indian Delegation the opportunity of bringing this question of the position and status of Indians in the Dominions before you. I think you will all recognize that this subject is one of very high Imperial importance, and I know that in approaching the subject I speak in a general atmosphere of goodwill.

## IMPORTANCE OF PROBLEM

Now, at the outset of the observations let me say that I wish to deal with the broad outlines of the subject, because my colleague, Sir Tej Bahadur Sapru, has some definite suggestions to make when he follows me. I propose to deal with this subject not so much as it affects any Dominion or any Colony, but in the most general way. I want to show that if the unity and the strength of the Empire are to be maintained and preserved it is really essential and imperative that we should find a solution of this problem of the position of Indians in the Dominions

## SESSIONAL PAPER No. 37a

overseas. There have been, as the Conference knows, very great constitutional changes quite recently in the position of the Government of India, and these changes have brought into prominence what was possibly latent before, but is now clear, the existence of various parties with various opinions and policies. But, however much these parties may be divided in their points of view on general political subjects, on this one point there is complete unity of feeling. For instance, there is no difference as regards the strength of this feeling between the party which has been giving general support to the Government in the Assembly, and the various sections of what I may call the non-co-operative parties. When I speak of Indian opinion, I am not referring, as is often suggested, to what is described as the opinion of the *intelligentsia* only, of a definite intellectual class, but I am also stating the views of a great many who are not really necessarily concerned with politics at all. Let me pass from them for a moment. You have the opinions, we will say, of the Indian Princes, whose views will be given expression to to-day by His Highness the Maharajah of Alwar. You have other men like my other colleague, Sir Tej Bahadur Sapru, who, as we all know, was a member of the Viceroy's Executive Council, and who holds a very high place in Indian public affairs. Therefore, you have this singular picture, that politicians, differing widely on all other subjects, and men of differing shades of thought, are generally united on this particular subject. You have staunch supporters of our rule in India combining on this subject with the extreme types of politicians. You have business men and landowners combining with men of a very different class and point of view.

## FEELING IN INDIA

I certainly do not exaggerate when I say that this subject more than any other, I think, is constantly impressed upon me both officially and personally by the Government of India and by Lord Reading, the Viceroy. The Viceroy, in his private letters, is constantly explaining and pressing upon me how strongly the feeling of soreness and bitterness is growing on this subject, and how, in many ways, the task of wisely governing India is made more difficult by this intensity of feeling. Therefore, I want to place this first point before the Conference—the remarkable unanimity of feeling on the position of Indians in the Dominions; but I do not think when you come to ask the cause that it is very far to seek.

The reason why there is such unity among our fellow subjects in India is this, that they regard the disability under which their countrymen labour in other parts of the world as a brand of social inferiority. That is what cuts so deep into the consciousness of the Indian. I am not necessarily, of course, associating myself entirely with that view, because I know quite well that there are other causes contributing, that there are questions of economic difficulty, political questions with which this question must necessarily be linked. But I have no doubt whatever that, in what I am saying now, I do voice the general opinion of Indians.

This question of social status is a contributory cause in the history of many social and political movements disguised under more resounding names.

## INDIA'S SERVICE TO THE EMPIRE

Well, let me say a word about this great country, feeling so strongly and unitedly on the subject. First of all, look at its contribution to the Great War. No less than 1,400,000 men from India took their part in the service of the Great War. Their contribution in money was well over £200,000,000. We all remember the general enthusiasm from all parts of India, and how Princes and others less distinguished all alike took part in the struggle of the Great War.

## HIER NEW STATUS

And here, if I may say so, there are in-talled at this very table representatives of the Indian Delegation, showing that India is sitting here on equal terms with the other Dominions in the great council chamber of the Empire. And, again, at the League of Nations the representatives of India take their place with the other States represented there and are able to contribute their voice and their influence just as much as others to the deliberations of that Assembly.

## HIER INDUSTRIAL POSITION

Moreover, and I do not think this is always recognized, India, though it has been for centuries, for thousands of years, a great agricultural State, is now ambitious to become an industrial State; it has gone far along the road, because it has been accepted by the League of Nations as one of the eight greatest industrial States of the world.

## INDIA'S NEW CONSTITUTION

Now India, as the Conference knows, has recently received a new political constitution, and that constitution, while giving the Indians far more power than they had before in the administration of India, has also given them a great outlet for the utterance of their national sentiments. Now what is the position in India itself? In India itself there is a policy of co-operation. Britons and Indians co-operate together in the Government of India; Britons and Indians sit together on juries; they meet together in business; they are fellow-directors in the great companies; they serve together on the Viceroy's Council; many of them, of course, are Ministers in the great provinces, and those Ministers command the assistance of members of the all-India Services whether British or Indian. Now, what must be the contrast in the minds of these men when they look abroad and see what their standard or status is in the States of the Empire. The members of this Conference, with their great experience of the cumulative effect of these institutions and the position which India now occupies here and in the League of Nations, will realize how much all these changes have contributed towards the growing self-consciousness and sense of dignity of India.

## INDIA'S FEELING FOR THE EMPIRE

Now I want to say this, and in the most plain way that I can; if I thought, and if my colleagues thought, that this desire for equality of treatment was inspired in any sense by a desire not to be part of, or to take part in, this great Empire, neither I nor my colleagues would be pleading the cause at this table. It is, indeed, the desire and it is the ambition of Indians—I will exclude the negligible class of extremists, who can be found I suppose in any country—it is their intent and ambition to share in the splendours, the glories, and the traditions of the British Empire.

They believe, moreover, that they can bring their own contribution, of thought, culture and loyalty, to this great combine. There are those who suggest that these disabilities under which Indians labour in some parts of the Empire are of little importance, that they do not interfere with their liberty, and that the denial of the vote does not very much matter one way or the other. Now, these views are, as one knows, the common form of objections put forward, either here or in any country, to franchise extensions and franchise grants. But, though the question has importance from the purely material point of view, I should be very ill discharging my duty to this Confer-

## SESSIONAL PAPER No. 37a

ence if I were to represent this matter as one to be regarded merely from the practical point of view. It is very largely with the Indians a matter of national sentiment and feeling, and it is with this feeling that we have to reckon.

## IMPORTANCE OF INDIA TO THE EMPIRE

Now, in all situations of Imperial activity, in matters of Imperial defence, matters of Imperial trade, Imperial communications or the development of Imperial resources, in all these India plays a most prominent part, and, as we have granted to India a large measure of representative institutions, it is quite clear that in dealing with these large matters we cannot disregard the opinions of the representative bodies which we have set up. And, supposing they were disregarded, how, after all, are you going to expect India to co-operate wholeheartedly in the great work of consolidating the Empire, and how, without this co-operation, can the Empire attain its full measure of strength? We know, too, that economic policy is very often influenced by political considerations; and I feel that both on the political and the economic side the task of governing India may be greatly increased, and that there will be, unless we settle this question, no real unity in the Empire, not merely on the material side—on which I am not laying so much stress to-day—but on what is so vastly more important, the moral side.

## SCOPE OF PROBLEM

Moreover, the scope of this problem as regards many of the Dominions is not really very great. For the moment I am excluding from that general proposition South Africa, where I know a great many currents and cross-currents of opinion complicate the issue; but as regards Australia, and as regards New Zealand, where much has been done, and as regards Canada, the numbers that we have to deal with are very small—about 2,000 in Australia, in all that vast country, about 600 in New Zealand, and about 1,200 in Canada, of whom, I think, rather more than 1,100 are in the Province of British Columbia.

## RESOLUTION OF 1921 CONFERENCE

I want to reaffirm what was stated at the Conference in 1921\* as to the complete acceptance by the Government of India and Indian opinion of the right of the great Dominions to determine the composition of their own community. May I read the words of that resolution? They are as follows:—

“The Conference, while reaffirming the resolution of the Imperial War Conference of 1918 that each community of the British Commonwealth should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities, recognizes that there is an incongruity between the position of India as an equal member of the British Empire and the existence of disabilities upon British Indians lawfully domiciled in some other parts of the Empire.”

Therefore, that principle is laid down quite clearly, and consequently there need be no anxiety on the part of any of the Dominions that there is any desire on the part of Indian feeling to go back on that decision. Thus, in pressing this matter upon the generous consideration of the Dominions, I feel that, vast as are the implications of the problem, the solution of the practical question is perhaps not so difficult as it appears. Well, justice and expediency are often

---

\*See page 8 of Cmd. 1474.

divided. Sometimes they approach each other, and when, as I think in this case, they combine and are merged in one another, the appeal is surely irresistible, and I am going to ask this Conference if the time has not come when these disabilities should be specifically removed.

#### INDIAN GOVERNMENT'S DUTY OF SAFEGUARDING INDIAN NATIONALS OVERSEAS

I want to add this point, about the interest—possibly some may think the unnecessary interest—which the Government and the Indian people take in the position of Indians in the great Dominions. Now, so long as to any extent Indians in the Dominions may be regarded as a foreign body in the great body politic of those Dominions, so long is the Government bound to take an interest in their fate and to assure themselves as to the manner in which they are treated. But once they are absorbed they cease to be a foreign body; once they are absorbed into the great corporation, as it were, of the Dominions, then the interest of the Indian Government, of course, will cease; and there is nothing that anybody connected with it, there is nothing the Secretary of State for India, dislikes more than interfering or appearing to interfere with the domestic affairs of the great Dominions. Now, I am not insensible, of course, of the grave difficulties which stand in the way. I know how very difficult it is to bring home always to local opinion that local views and opinions are not necessarily coincident with the wider interests of the Empire, and I know quite well that those who are listening to me as representative of the Dominions—whatever they may or may not have done—desire that a solution of this question should be found, and I do most earnestly plead that, when later in this Conference they take into consideration the practical measures which they may adopt for the solution of this question, they will bear in mind the intense feeling that has been aroused on this subject in India, and will bring home to their own people that in the highest interest of the Empire the aspirations of India should be respected.

#### DIFFICULTIES OF PROBLEM

I know that there are great difficulties. The Prime Minister, in his opening address, spoke of the contacts of civilization. There are contacts, of course, here of more than one civilization and you have peoples differing in tradition and social habits, fashioned in the course of centuries—thousands of years, I may say—fashioned by differences of national surroundings, by differences of secular and religious thought. We have to deal—and we should never forget when dealing with India that we have to deal—with ancient races full of the pride of race; we have to deal—with ancient religions full of the pride of religion. That is, of course, one of the great differences we have to remember in dealing with the position of India as compared with countries further west. There are, for instance, 70 millions of Moslems in India—70 millions in India; but in communion with them through religious ties and rites there is a vastly greater body—hundreds of millions of Moslems—stretching in a great belt from the Gulf of Malaya right across to West Africa—hundreds of millions of Moslems, who, in their hour of worship, all turn their faces to Mecca.

#### INDIAN CULTURE AND TRADITIONS

We have the pride of the Hindoos in their own history, in their recollections of the past; they look back to, shall we say, the Mauryan Empire, the memories of Chandra Gupta and of his famous grandson King Asoka. Their memories stretch to an even earlier time when, scarcely noticed by history, their Aryan ancestors were moving down from the North-West Frontier, the traditional path for the invasion of India, along the plains of the Five Rivers now called

## SESSIONAL PAPER No. 37a

the Punjab; they look back to dim far off times, to a date long before the Jutes and Angles and Saxons and Norsemen, the original elements of which our race is composed, landed on these shores; when Rome itself was a mere village, before the Roman legions garrisoned the Great Wall which used to run from sea to sea in the North of Britain; a period even before the Druids reared the gigantic monoliths of Stonehenge.

I press this subject on the Conference, and I hope, with the consent of the Prime Minister, that they will listen to Sir Tej while he deals with the subject in more detail.

## STATEMENT BY SIR TEJ BAHADUR SAPRU

SIR TEJ BAHADUR SAPRU: Prime Minister, let me at once say how deeply grateful I feel to you and to His Majesty's Government, and may I thank you and His Majesty's Government and the various Prime Ministers for giving me this opportunity of a free and full discussion of the question in which India is to-day so vitally interested. I fear I may take some time, but I shall crave your indulgence for more reasons than one; the most important of those reasons is the importance of the subject. I am glad that His Majesty's Government have decided to set apart a special day for this subject. That being so, am I not entitled to draw from it the inference that His Majesty's Government do really recognize the importance of this question? When it is known in my country that His Majesty's Government recognize the importance of this subject, and that that recognition is shared by the various Dominion Prime Ministers, that fact alone will inspire them with some hope.

Before I proceed further, may I also express my deep gratitude to Lord Peel for the assistance he has given me in helping to bring this subject up before the Conference, and for the speech which he has delivered to-day, which has filled me with gratification, and which I have no doubt, when it comes to be known to my countrymen, will fill them also with gratification. He has identified himself to-day completely and unreservedly with every sentiment of our national honour. That is what I appreciate more than the moving eloquence with which he delivered his great speech this morning.

I may well produce in some quarters the impression of being a fighter. I do not object to criticism of that kind. Really and truly, I am fighting the cause of my country, and the Premiers of the various Dominions, who have in their day fought the cause of their country, will not object if I fight the cause of mine. But I do fight, let me tell you frankly, as a subject of King George, and I fight for a place in his household and I will not be content with a place in his stables.

## UNANIMITY OF INDIAN FEELING ON QUESTION

Prime Minister, let me tell you that the problem of Indians overseas is of vital importance not only to India, but to the whole of the Empire. Whatever may be our position in regard to self-government, howsoever distant we may be from that cherished dream of ours, let me tell you that, so far as this question of Indians overseas is concerned, we stand solid and united. We have our own domestic quarrels; we have moderates and extremists; we have non-co-operators; and we have Hindus and Mahomedans. But so far as this question is concerned, let me tell you with all the sincerity that I am capable of that we stand absolutely united. Do not be misguided by what appears in certain papers here which attempt to show that there is no feeling on this question. We attach far more importance to the honour of our nationals in other parts of the Empire than probably you realize.

## QUESTION OF "IZZAT"

We express that feeling in the vernacular of our own country by a comprehensive and delicate phrase, which I have no doubt will readily be understood by Lord Curzon and His Highness the Maharajah—that phrase is "Izzat." There is not a man either among the Princes or among the humblest subjects of His Majesty who does not attach great importance to that question of "Izzat." When "Izzat" (which means honour) is at stake, we prefer death to anything else. That is our sentiment, and it is in that light that I present my case to you.

## INDIA'S POSITION IN THE EMPIRE

Do not forget that my country, India, is the one country which makes the British Empire truly Imperial. I take pride in that. I do not indulge in the slightest degree in reflection upon the dignity or honour or position of any one of the Dominions, but I do claim that it is my country which makes the British Empire truly Imperial. One-fifth of the human race, with a far more ancient civilization than your own, to which eloquent reference has been made by Lord Peel, joins with you in acknowledging the suzerainty of our common Throne. That allegiance with us is a real living thing. Shake that allegiance, and you shake the foundations of the entire fabric, with consequences which it is difficult to overestimate.

## FUNCTION OF THE CONFERENCE

Might I explain to you here the considerations which will guide me in presenting my case to you? In my humble judgment, the one function of this Conference—the highest advisory body of the Empire—is to bring about a good understanding between the various units that constitute the British Commonwealth, to strengthen the ties which unite, or ought to unite, the different units of the Empire with their different outlook and their different religions. If this Conference fails to achieve that end, then let me say it fails to justify its existence in the eyes of the Empire. But to achieve that end, it seems to me that it is absolutely necessary that we should open out our minds to each other with entire frankness. Any mental reservation on an occasion like this, and round this table, would, in my humble judgment, amount to nothing short of treason against the King and treason against the Empire. It is in that spirit of frankness, in that spirit of candour, that I will venture to present to you my case, and, even though I may use now and again expressions to indicate the strength of my feeling and the feeling of my countrymen, I beg of the Dominion Prime Ministers not to misunderstand my spirit.

## INDIAN SENTIMENT ON PROBLEM NOT CONFINED TO INTELLECTUALS

Let me tell you at once that the feeling on this question in India is deep-seated and widespread. Let me also remove a very wrong impression, and I am glad that Lord Peel has referred to this question for I desire to reinforce his arguments as an Indian. Twenty-seven years I have been in public life; thirteen years I have been connected with the legislative Councils, and I have sat in the Viceroy's Cabinet. I have never witnessed before what is happening in India to-day. Five years ago it may have been possible for you to say that a wide gulf divided the masses from the classes. Let me now give you this warning. The classes lead the masses as never before. India has rapidly changed, and that is the outstanding feature of the situation there. The intellectuals, or, if you like to call them, agitators, have gained ascendancy over the masses. What the intellectuals think to-day the masses will think to-morrow.

## SESSIONAL PAPER No. 37a

This question now before us, let me tell you, affects directly the masses, for it is from the masses mainly that most of our population has gone to the Dominions. I belong to a province which has supplied a considerable number of men to the various Dominions, and I know their feelings. You may condemn the agitators, you may condemn the intellectual classes; I will not quarrel with that, but remember they have got power now with the masses.

## INFLUENCE OF VERNACULAR PRESS

Do not forget the growing and increasing influence of the vernacular press. I do not justify or vindicate its attitude in every respect. I will, however, state the facts. It now penetrates into the innermost recesses of our villages, and every village has got a reader who reads for the illiterate people the vernacular newspapers. I have been reading extracts from the vernacular press of my own country, and, while I do deprecate the wild language in which it has indulged, let me tell you frankly that it is seething with indignation over this question, and that it is affecting the whole outlook of my countrymen in the villages.

## SERIOUSNESS OF SITUATION

Any inequality of Indian nationals enters like iron into our souls. For Heaven's sake, whether you find a solution or whether you do not find a solution, do not dismiss this statement of mine as mere sentimental nonsense. It is an absolute fact, and I am here to interpret to you the present position of my countrymen in regard to this question; it cuts to the quick our national pride and our new consciousness. It permeates and sours our whole outlook in regard to Imperial relationship. It derives impetus from the natural inclination to take pride in being a member of the biggest Commonwealth that the world knows to-day. It makes the task of the Government of India, of which I had the honour of being a member until a few months ago, infinitely more difficult in dealing with their domestic problems than you realize. Here I must reinforce the arguments of Lord Peel. This feeling runs right through our national life.

## FEELING OVER KENYA QUESTION

Let me at once tell you that I am not willing to enter at length into the merits of the Kenya decision, but my countrymen expect me, and my Government expects me, and I am bound by all considerations of honour and duty, to put you in full possession of the sentiments of my countrymen and of my Government in regard to your decision. They have received that decision with the utmost possible dismay. I know the official view is that in certain respects our position in Kenya has been improved. That is not a view we share. We judge you by a standard which is admittedly very high. We were not fighting for little things; we were fighting for a big principle. I know and I feel, and my countrymen feel, and my Government feels, that a serious blunder has been made. I know also that British statesmanship is wise, and whenever a thing goes wrong it begins to think, and I honestly believe that it will soon recognize the mistake which it has made. Let me tell you, on behalf of my countrymen, that neither my country nor the Government which I have the honour to represent will accept this decision as final. Indeed, there is nothing final in politics, and I want His Majesty's Government to recognize that position and to indicate, if possible, that they do look upon that question in the light in which I have just presented it. May I conclude this portion of my speech by assuring the Conference that while on domestic questions of Indian politics we, like most of you, have our differences of parties, groups and interests, yet, upon this question

which concerns the honour of our nationals in Kenya, and the honour of our nationals overseas, there is no difference between us, from the Viceroy downwards?

#### VIEWS OF THE GOVERNMENT OF INDIA

May I remind you of what the distinguished and eminent statesman, with whom I had the privilege of working in close co-operation for two years, and to whom I hope my countrymen and his countrymen will do justice some day, said on a critical occasion to the legislative Assembly when the announcement of the Kenya decision was published in India? I will quote from his speech.

"The news of the decision regarding Kenya," said Lord Reading, "came to me and my Government no less than to you as a great and severe disappointment; for India had made the cause of Indians in Kenya her own. As His Majesty's Government has stated, this decision conflicts on material points with the strongly expressed views of my Government as laid before the Cabinet by the Secretary of State for India." That is the opinion of the Viceroy.

#### ILLUSTRATIONS OF NON-OFFICIAL FEELING

May I crave your indulgence just for two minutes to read out to you a few typical telegrams which I have received during the last few days, some of them from absolutely unexpected quarters. They have come to me from representative bodies of all shades of opinion. Mr. Sastri, who has been so frequently, during the last few years, connected with this matter, sends me a telegram supporting the proposals, not without misgivings, which I am going to put before you at present. Now, the Swaraj Party, to which I do not belong, and which does not see eye to eye with me, and from which I should never have expected to receive support, sends this telegram from Poona, through its Secretary and leader, M. Kulkar: "Maharashtra Swarajya Party offers you full support any strong action you take to get redress Kenya wrong." Let me tell you again that most of the telegrams come from unexpected quarters.

#### UNEXPECTED TESTIMONY

Well, here is a most remarkable telegram from a gentleman with whom I worked in full co-operation until five years ago, but from whom I separated when differences arose. Pandit Madan Mohon Malaviya now belongs to the non-co-operation Party, and three days ago, if you would have asked me, I should never have said that I would receive a telegram like this from that gentleman. It is from a man with forty years solid work behind him, and this is his telegram. It is sent to me from Simla.

"Indians all shades public opinion at one with you in demanding equality status with fellow subjects throughout British Empire. If representatives other parts not prepared give practical support this elementary right Indians as citizens Empire, participation Indians Imperial Conference becomes mockery, deep national humiliation, and trust both you and Maharajah of Alwar will withdraw."

I have received two telegrams from Mrs. Besant, giving support to me on her own behalf and on behalf of her entire Party. Let me tell you that while I am her friend I do not belong to her Party.

#### TELEGRAM FROM GOVERNMENT OF INDIA

Lastly, may I give to you the telegram which was handed over to me the day before yesterday, which has come to me from the Government of India. It says: "We understand from Reuters that Conference will discuss overseas

## SESSIONAL PAPER No. 37a

questions probably on 24th. The resolution passed recently by a majority of the Bombay Corporation to boycott Empire goods, where possible, as a protest against the Kenya decision, and a resolution on the same lines of the Poona public meeting, further indicate the importance attached to equality of status overseas, and we sincerely hope that the proceedings of the Conference will restore confidence and good feeling. As regards 'C' Mandates, we trust that the atmosphere will permit you to secure a favourable solution, otherwise India's right to revision of the policy must be reserved. Sapru's proposal in letter to Sir Narasimha Sarma to reserve the right to challenge policy when India's interests are affected, though substantially the same as ours, is less elastic. We earnestly hope that you have secured Sinuts' agreement to abandon or modify the segregation policy as suggested in our despatch. We attach very great importance to it. We hope also that the Dominions and the Colonial Office will consent to the appointment of Agents to assist them and us in this difficult question as suggested in our memorandum. Please send copy of the telegram to Sapru."

I will not take up your time further. I have tried only to reinforce the argument which Lord Peel put forward by showing how the different classes of our people are agreed on this question.

## PRESENT POSITION OF INDIANS OVERSEAS

Having explained the depth and implication of Indian feeling, I will now proceed to explain the circumstances in various parts of the world by which this feeling is at present aggravated. I have been studying such official papers as are available to me, and, for the sake of convenience and to save your time, I propose to read out to you a very brief summary of the position. There are about 1½ million Indians now settled in other parts of the Empire, and in many parts they are subjected, as Indians, and quite irrespective of how well they shape up to local franchise standards, to grave political and even economic disabilities.

## NEW ZEALAND

Let me start my brief survey of these grievances by paying a tribute to the Government of New Zealand, which is represented by my distinguished friend over there. That Government, in its own territory at least, treats Indians on a footing of equality with all other inhabitants of the country. And my countrymen can live there among the New Zealanders as fellow-citizens in honour.

## AUSTRALIA

In Australia also the disabilities which Indians suffer are comparatively small. We hope that before long legislation will be passed to enable them to exercise the Dominion franchise, and to remove the disqualification they at present suffer in regard to invalid and old-age pensions. In certain provinces also there are minor disabilities which I hope it will not be hard to remove. In Queensland they have no State franchise; and they have to undergo a dictation test for employment in the sugar and dairy industries, which is apt to operate prejudicially. In Western Australia also they have no State franchise; while in Southern Australia they are disqualified for leases under the Irrigation Act. Let me tell you plainly that, if I have failed in this statement to convince Mr. Bruce, I hope he will at least extend to me the hand of fellowship on this question; I am willing to co-operate with him to devise methods for a solution of these difficulties.

## CANADA

In Canada, of which Mr. Mackenzie King is the distinguished Prime Minister, there is a small population—I hope he will correct me if I am wrong—of not more than 6,000.

Mr. MACKENZIE KING: Over 1,200.

Sir TEJ BAHADUR SAPRU: Thank you very much. In British Columbia there is no Dominion, Provincial or Municipal franchise.

## SOUTH AFRICA

Now I come to the most difficult part of my task. I come to South Africa. In South Africa the problem is most serious. Here there are 161,000 Indians, of which all but a few thousands, mainly resident in Cape Colony, have no political franchise. In Natal, besides this, they fear to lose the municipal franchise. In the Transvaal there is no franchise of any kind. Nor is it only of political subjection that my countrymen complain. They also suffer under severe economic handicaps. In Natal they are restrained from acquiring town lands in townships. In the Transvaal they are prohibited, either as individuals or as companies, from acquiring land; and in the Gold Area they may not occupy land. To make their lot more miserable, the laws governing the grant and regulation of traders' licenses are administered in a manner which strikes directly at their own interests. Moreover, the Union Government, of which my friend, General Smuts, is the head, is even now contemplating legislation which will provide for the compulsory segregation of Indians in urban areas by restrictions on the ownership and occupation of land.

## REFERENCES TO PREVIOUS STATEMENTS BY GENERAL SMUTS AND MR. BURTON

May I be permitted, at this stage, to invite the attention of the Conference to a curious discrepancy between this very serious state of affairs and the sentiments enunciated in 1917. I believe in this very hall? General Smuts then said,\* and I quote his very words:—

“Once the white community in South Africa were rid of the fear that they were going to be flooded by unlimited immigration from India” (a fear removed once and for all by India's acceptance of the Reciprocity Resolution of 1917) “all the other questions would be considered subsidiary and would become easily and perfectly soluble.”

May I also remind you of what Mr. Burton said† on a former occasion at the Imperial Conference, and I attach considerable importance to the testimony he has given as to the character of my countrymen in South Africa? Mr. Burton said: “As far as we are concerned, it is only fair to say, and it is the truth, that we have found that the Indians in our midst in South Africa, who form in some parts a very substantial portion of the population, are good, law-abiding, quiet citizens, and it is our duty to see, as he (*i.e.*, Sir S. P. Sinha) expressed it, that they are treated as human beings, with feelings like our own and in a proper manner.”

## COLONIES. BRITISH GUIANA

From the self-governing Dominions I shall pass on to the Colonies and very briefly allude to our position there. In British Guiana I gladly acknowledge that our Indian population can live on terms of honour and equality of treatment. Their grievances are comparatively very much fewer.

\*See page 119 of Cd. 8566.

†See page 199 of Cd. 9177.

## FIJI

In Fiji my countrymen demand more adequate representation, based on a satisfactory franchise, in the legislative bodies; they also ask for the settlement of a minimum wage based on the cost of living; they ask for the removal of the poll tax, which presses very hard upon them. They ask further that land should be given to them for settlement. They ask, and I have received a cable from an important quarter, that if these grievances are not removed they should be repatriated.

## KENYA

In Kenya the Indians desire a common roll instead of command franchise. They protest against the administrative veto, which prevents them acquiring land from willing European sellers in the highlands; and they fear that the immigration restrictions may be employed in such a way as to prejudice the development of the colony by Indians.

## UGANDA AND TANGANYIKA

In Uganda the Indians are pressing for representation by two nominated members of the Legislative Council; and in Tanganyika, which my countrymen helped to win for the Empire, they have certain grievances which, I understand, are at present under the consideration of the Colonial Office, such as Profits Tax, peddlers' licences and the trade licences, and may I express a fervent hope that the Colonial Office will give most sympathetic consideration to those grievances before they arrive at any decision?

Thus, wherever we may turn, we see circumstances in the local status of Indians which are not to be reconciled with India's national aspirations or with the position which she will obtain as the result of the declared policy of His Majesty's Government—a position which I hope to achieve much sooner than some people realize.

## "C" MANDATES

At this stage I will slightly digress from my argument and refer to the "C" Mandates in a very few words. In regard to the administration of what I will call the "C" Mandated Territories which have been committed to the charge of certain Dominions, I desire to say that my countrymen cannot acquiesce in any position which does or may in the future make their status inferior to what it was when those territories were administered by Germany. I have already read to you the views of the Government of India in the telegram. The matter is at present not of very great practical importance as the number of my countrymen is very small; but I must in fairness enter a caveat against any action which may in future turn to our disadvantage. May I also in this connection remind you of the provisions of Article 22 of the League of Nations? I will only quote the material portions. After referring to Central African and other peoples, it lays down the Mandatory Power, besides certain other duties, shall "secure equal opportunities for the trade and commerce of other Members of the League." I take my stand on that.

## RESOLUTION OF 1921 CONFERENCE

Having thus reviewed the position in the self-governing Dominions and the Colonies according to the information available to me—and I shall not object to any Member of this Conference correcting me if I am wrong in any detail—let me tell you what the position was that was taken by this Confer-

ence in 1921.\* Lord Peel read out to us a portion of that Resolution, but I propose to read out to you the whole of that Resolution; that Resolution runs as follows:—

“The Conference, while reaffirming the Resolution of the Imperial War Conference of 1918 that each community of the British Commonwealth should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities, recognizes that there is an incongruity between the position of India as an equal member of the British Empire and the existence of disabilities upon British Indians lawfully domiciled in some other parts of the Empire. The Conference accordingly is of the opinion that in the interests of the solidarity of the British Commonwealth it is desirable that the rights of such Indians to citizenship should be recognized.

“The representatives of South Africa regret their inability to accept this Resolution in view of the exceptional circumstances of the greater part of the Union.

“The representatives of India, while expressing their appreciation of the acceptance of the Resolution recorded above, feel bound to place on record their profound concern at the position of Indians in South Africa, and their hope that by negotiation between the Governments of India and of South Africa some way can be found, as soon as may be, to reach a more satisfactory position.”

#### IMMIGRATION QUESTION DOES NOT ARISE

You will thus see that the resolution divides itself clearly into three parts. I will take up the first part which deals with the question of immigration. It gives each Dominion the fullest and the freest right to regulate the character and the composition of its own population. I am bound by that. You are bound by it, but just as I am bound by it you are also bound in honour by the second part of the resolution, which really is the most vital part with which I have got to deal, except, of course, that portion which relates to South Africa. But before I proceed further let me make one point clear. Let there be no misgiving about the question of immigration. There is a growing sentiment in my country that we should not send our nationals outside anywhere, and I may perhaps make a confession, with the permission of the Prime Minister and the Secretary of State, regarding my attitude when I was a member of the Government of India. I helped to draft the Immigration Act, and I was the President of the Committee which sat to consider it. I was probably the strongest exponent of the view that there should be no immigration from India outside on any conditions whatsoever. We do not want our nation outside India to appear as a nation of coolies. We have had enough of that. There is plenty of scope for the conservation of the energy of my countrymen in my own country. We want them to rise to the full height of their stature in our own country. The Dominions therefore need have no fear on that account.

#### NECESSITY OF IMPLEMENTING RESOLUTION

I have just said that, as I felt bound in honour by the first part of the resolution, I consider, and I hope that I am not demanding anything extravagant from you, that you are also in honour bound by the second part of the resolution. I will be absolutely frank. I will exclude South Africa, because South

\*See page 8 of Cmd 1474.

## SESSIONAL PAPER No. 37a

Africa stood out. I make no appeal to South Africa on the basis of the second part of the resolution, but I will ask the other Dominion Prime Ministers what my countrymen, and what my Government, are asking in India, namely, what steps have been taken, or are proposed to be taken, to honour this three-year-old agreement? While every reasonable man must make allowances for practical difficulties in the implementing of that resolution, while I recognize the difficulties arising from local circumstances and prejudices, from the slow changes of public opinion, and from the exigencies of party politics, yet, I must tell you, the question, to us, is one of vital importance, and in fairness to my country I must say that she finds herself absolutely unable to acquiesce in the present position. I have, therefore, come to you in the name of my Government, and in the name of the many millions of my countrymen, to make an earnest appeal, a sincere appeal, to join hands with me in devising some methods such as your statesmanship will enable you to do, methods intended to give effect to the principle of equality embodied in that resolution, the resolution of 1921. Do not for a moment think that I fail to recognize your difficulties. I have held office, and I know the difficult position of responsible Ministers. I am not blind to those difficulties, but pray let me ask you also to realize our national difficulties and my difficulties.

## PROBLEM MUST BE FACED IN A SPIRIT OF CO-OPERATION

I invite you to face with me in the broadest spirit of statesmanship this vital problem that Lord Peel and I have had the honour of placing before you this morning, and I claim your co-operation in devising methods of solving this problem. After a long and careful consideration I have come to the conclusion that I must place certain definite constructive suggestions for your consideration. If you, on your side can make better suggestions to me, if you can offer any better alternatives to me, take it from me that you will not find anyone more ready than myself to accept them. I earnestly suggest that what the occasion demands is a united effort if we are to find a solution of this difficult problem, a problem which threatens at no distant date to acquire almost the character of a problem of foreign policy. I appeal to the Dominion Governments and to His Majesty's Government to take a united course.

## A CONSTRUCTIVE PROPOSAL.

I will now tell you what my resolution or proposal is. I have reduced it to writing, and with your permission I will read it. My resolution is: Let the Dominion Governments, who have an Indian population, let His Majesty's Government in areas under their direct control, such as Kenya, Uganda, Fiji, and other places where there are Indians resident, appoint committees to confer with a committee, which the Government of India will send from India, in exploring the avenues how best and how soonest the principle of equality implicit in the 1921 resolution may be implemented. And, lest the course of the enquiry be prejudiced, I will couple with my proposal the request that any anti-Indian legislation which may be pending should be stayed until the report of these joint committees is available. That is my resolution. At once I propose to remove any misapprehension which may be lurking in the minds of anyone who has listened to me. I do not want a Central Committee. Let me tell you, I want a Committee appointed by each Dominion within its own borders, and I want the Committee appointed by each Dominion to confer with the Committee which will be appointed by the Government of India, and which will go to each Dominion. That is my appeal to the Dominions, except, of course, to South Africa, under the resolution of 1921. I make the same earnest appeal to His Majesty's Government, and especially to His Grace the Duke of Devonshire and the Colonial Office, in so far as the resolution relates to the Colonies.

## ITS ADVANTAGES

I will, in a few words, tell you what, in my humble judgment, are the advantages to be gained from my resolution. In the first place, you gain time, and that will enable us to calm the angry passions that have arisen in India on this question. In the second place, India will be undoubtedly in a more hopeful frame of mind, and we all of us can bring all the more forces available to us to bear upon the solution of this problem. In the third place, my resolution absolutely safeguards your independence, I mean the independence of the Dominions. It places the initiative in your hands, and let me tell you, it is not merely because I am anxious that the Dominions should have that independence that I have provided that safeguard, but also because of a lurking feeling of self-interest in my mind. You have received a rich inheritance of independence, freedom and self-government in your territories. I am still aspiring to it. I hope my aspirations will be realized very soon, and then, like you, I shall be jealous of any outside authority imposing its will upon me in my affairs. It is for that reason that I am anxious that the Dominions themselves should take the initiative in regard to this Committee which I have suggested and to the Committee which we propose to send out from India to confer with you in your countries. I think, and I honestly believe, if the problem is explored on those lines it will be found that it does not in the end prove to be insoluble.

## SOUTH AFRICA. ADDRESS TO GENERAL SMUTS

I now turn perhaps to the most difficult part of my work, and that is my address to General Smuts. I frankly recognize that I cannot address him on the basis of the resolution of 1921. He was no party to it. But I address him on three specific grounds: first of all, as a humanitarian; secondly, as an Imperial statesman; thirdly, as the Prime Minister of South Africa.

## AS A HUMANITARIAN

As a humanitarian I say he cannot absolve himself of the moral duty which rests on his shoulders of elevating the status of my countrymen within his Dominion. Let it be granted that their standard is low; it makes his task all the more imperative and urgent that he should help them in raising that standard. My countrymen, and I wish to say it emphatically, are as much strangers in South Africa as Englishmen or as General Smuts. The assistance of my countrymen, like the assistance of General Smuts and others, has helped in building up the prosperity of South Africa; and let him not forget my countrymen now when it lies in his power to raise their standard. He cannot permanently relegate them to a position of inferiority; for therein lies a menace not to his country or to mine, but to the Empire.

## AS AN IMPERIAL STATESMAN

I appeal to him next as an Imperial statesman. Ever since the days of the Armistice, what is it that General Smuts has stood up for? He has stood up for peace, peace to all the world; and he has stood as the protector of minorities. He has acquired a unique position as an Imperial statesman. It has given him world-wide fame. What is it that we have observed during the last three weeks of the sitting of this Conference? General Smuts has been trying to devise means to bring peace to a distracted world. Is he going to exclude from that happy mission of his, his country and mine? For let me tell you that there shall be no peace unless he includes his country and my country within the ambit of his big proposals. I do not address him on the basis of

## SESSIONAL PAPER No. 37a

the resolution of 1921; I do not wish to interfere with his very natural desire to be consistent. I appeal to him independently of that resolution, and I say to him: "Will you not join hands with me, as I have appealed to the other Dominion Prime Ministers, in devising methods for the solution of this problem now and for all time?" I do not indulge in any threat; that is not in my line; and I hope General Smuts will not misunderstand me. However powerful he may be in South Africa, and however weak we may be in India, you cannot relegate my countrymen for all time in King George's Empire to a position of inferiority.

## AS PRIME MINISTER OF THE UNION OF SOUTH AFRICA

I will now address General Smuts as the Prime Minister of South Africa. Does he fully realize the implication of his present policy? I doubt whether he does. Will he not be aggravating the trouble not merely in South Africa, but throughout the world, by putting the white people on one side and the coloured races on the other side? I tell him frankly that if the Indian problem in South Africa is allowed to fester much longer it will pass, as I said just now, beyond the bounds of a domestic issue and will become a question of foreign policy of such gravity that upon it the unity of the Empire may founder irretrievably. I therefore earnestly trust that he will not refuse to co-operate with me in attempting to discover a solution, and I also hope that, in view of the present seriousness of a situation to which my Government and my people have referred more often than I can repeat here, he will agree to the appointment of a Diplomatic Agent to be sent by the Government of India to South Africa, who will protect our nationals there, who will act as an intermediary between them and the South African Government and who will put our Government in full possession of the facts relating to our nationals.

## PROPOSALS CONTAINED IN GENERAL SMUTS' MEMORANDUM

I will very briefly make a reference to the proposals which General Smuts has been good enough to circulate in a memorandum\* among the members of this Conference. I have read them with very great care and with all the attention and weight to which a memorandum of General Smuts is entitled. Let me tell him, and let me tell you all, that it is a document of remarkable subtlety, such subtlety as I have always been accustomed to associate with the name of General Smuts. In the first place, General Smuts takes exception to what Mr. Sastri has been saying or doing. I do not hold a brief for Mr. Sastri. He has been an intimate friend of mine and a fellow-worker in public life during the last twenty years. If the only objection General Smuts has got to find with him, and if the only crime to be attributed to him, is that he has in the Dominions frankly and freely pleaded for the equality of his countrymen, then let me tell General Smuts that he is indicating not merely Mr. Sastri, but 320 million of my countrymen. We all plead guilty to that charge.

## IMPLICATIONS OF MEMORANDUM

I will refer no more to the personal issue, but I will ask you first of all to consider the implications of that important memorandum. General Smuts compares the British Commonwealth to the League of Nations, but I say emphatically that analogy may hold good up to a certain point, but after that breaks down. The League of Nations has no common Sovereign. The British Commonwealth has a common Sovereign, and we are united to him by our

---

\*See page 138.

allegiance to him. But if the British Commonwealth is to be compared with the League of Nations, you cannot stop short of the full extent to which that analogy must be applied. What is it that the League of Nations has been created for? It has been created, as I understand it, to settle disputes between the various Governments by conference, by consultation, and will do so unless they refuse to come to that conference and that consultation. But it is just this consultation and conference which General Smuts, as I understand, is refusing. What is it that a resolution like his comes to? It asks the Dominion Prime Ministers, who took part in the Conference of 1921 and agreed to that Resolution, now to treat it is a "scrap of paper" and to join him in passing an absolutely new Resolution which, on the face of it, has for its object the reservation of the fullest freedom of each Dominion to pass its own laws regarding Franchise.

#### PRACTICAL LIMITS TO CONSTITUTIONAL RIGHTS OF DOMINIONS

Nobody has doubted that Constitutional right, but there are limits to that Constitutional right, limits which are prescribed by prudence. Let me illustrate that. The British Parliament here is a Sovereign Parliament, and the Free State Parliament in Ireland is also an independent Parliament. Suppose the Irish Free State Parliament passed, or intended to pass, legislation to the effect that it would not recognize the right of any Protestant or Englishman to the Franchise in Ireland, and suppose, on the other hand, the British Parliament intended to pass legislation to disenfranchise all Irishmen settled in Scotland; well, if you looked at it strictly from the legal point of view you might say that these Parliaments would be within their right, but prudence would at once prescribe limits to the exercise of that power, that constitutional right. The first impulse of the two Parliaments would be to confer, to devise methods of avoiding a conflict. Will they not do it? Yes. I recognize the constitutional liberty and the constitutional rights of the Dominion Governments, but let me tell you this, that constitutional rights can only be exercised with prudence and discretion up to a certain point, and beyond that point you have to allow those constitutional rights to be subordinated to statesmanship, to prudence and to discretion. Well, I do not wish to raise a legal argument. I hope no legal argument will be raised, because this is not a legal body. There is only one thing I will say. General Smuts has said that the one binding tie between the Dominions and other parts of the Empire and India is our common allegiance to the common Sovereign, but he has coupled that statement with a further proposition, viz., that from that allegiance political rights do not flow.

#### CONSTITUTIONAL ISSUE NOT TO BE RAISED HERE

Well, I will not have a duel with General Smuts on a point of constitutional law, but I will venture to tell him one thing. Allegiance to the Sovereign is a very living thing. It is not a mere figure of speech, and, whenever you pass any law which affects the allegiance of the subject to the sovereign and the corresponding duty of protection of the sovereign to the subject, you tread on very dangerous ground. If a constitutional position like that is to be argued, let it be argued before a legal body, and, speaking for myself, with all humility, I have no fear of facing that constitutional issue on legal grounds, but I do not wish to raise that legal argument at this Conference.

#### APPEAL TO THE CONFERENCE. INDIA'S POSITION IN EMPIRE

I have practically reviewed the whole position and I will now make an appeal to the Conference itself. I will appeal to the Conference to realize to the full the implications of the Indian problem. I have placed before my

## SESSIONAL PAPER No. 37a

colleagues from the Dominions and His Majesty's Government here certain specific proposals. I believe, and honestly believe, that the British Empire stands for justice and equality in the eyes of the world. Will you make a place within it for India? Think for a moment of the present position. Ancient and modern history provides no parallel to it. Three hundred and twenty million of my countrymen, whose religion is different from yours, whose colour is different from yours, whose race is different from yours, whose history is different from yours, are united by the common tie of allegiance to the common sovereign. They are members of a commonwealth the like of which has never existed before and let me tell you, that, while I do not wish to interfere with your absolute independence inside your own borders, I am one of those men who say that the British Empire can never be described as an exclusively white Empire. Within its borders it comprises a large number of populations of coloured races. Now, how are you going to keep Indians, or for that matter, all the other coloured races, within that Empire? By force? Never, because apart from the obvious limitations of force you cannot be untrue to your own traditions of liberty, justice and equality; you cannot afford to ignore and neglect the world opinion on this question. By preserving and safeguarding our sentiments? Certainly. That will be the strongest tie you can have and it remains for you to make use of it. Fulfil our aspirations within our own country for self-government, fulfil our aspirations for a position of equality inside the Dominions and inside the Colonies, and India will stand shoulder to shoulder with you through thick and thin. It is by preserving that sentiment that you can keep India and I pray, with all the sincerity I am capable of, that this Conference may come to some decisions which may strengthen the bonds between the Empire and India, for I do believe in that connection. Make no mistake, it is by sentiment and by the preservation of that sentiment that you will retain us and enable us to achieve self-government and to satisfy our other national ambitions outside our own country.

## WHAT INDIA MEANS

Think for a moment what India means to you. More than three hundred million men are closely allied to other Asiatics, constituting almost the entire half of humanity. They are placed within the ambit of the British Empire. If we are incorporated within the commonwealth, think what we shall mean to the peace of the world, with our ideals of self-government, bridging as we do the East and the West, shouldering burdens which are yours as well as ours for the service of humanity.

## COMMON LOYALTY TO CROWN

Think again of the ties which bind us together, if you will allow them to do so. King George is your King, but our Sovereign. The devotion to his person and to his throne is a very real thing notwithstanding what some wild and extravagant men may say in my country. I claim, and let me be very plain, not as a matter of grace, but as a matter of right, as the King's subject, to have an honourable place in his household, a position of equality and honour within the Empire, wherever it may be; for to us our position in his household overseas is of far greater importance than any other questions which are agitating our minds at the present moment. I am fighting in this spirit, fighting as a firm believer in the connection of India with England, fighting as a loyal and devoted subject of the King, as one who has had the honour of serving him in his Government in India, and I am fighting for the honour of my country before you all: my plea—indeed the plea of all my countrymen, is for equality within the great King's Empire, including his Dominions. On that there can be no faltering or weakening on my part. I invite you to devise means with me to give effect to this cherished ambition of my countrymen.

## APPEAL TO PRIME MINISTER OF GREAT BRITAIN AND HIS MAJESTY'S GOVERNMENT

May I now make an appeal to the Prime Minister? Sir, you are the head of His Majesty's Government. Let me tell you that every single word that falls from you on this occasion will be read and re-read and analyzed in my country from one end to the other.

I now want to make an appeal to the Prime Minister and to his colleagues. Do not send His Highness the Maharajah, do not send me, back to India to say that I have attempted to seek justice at this greatest advisory council of the Empire and that I have failed. I speak with all earnestness. One single gesture from His Majesty's Government, one single expression of sympathy put into practice, one honest attempt made to try to find a solution, will allay the situation in India in a manner which you do not realize. I am afraid that I have trespassed too much on your time and I beg your pardon. I also thank you for the patient and courteous manner in which you have listened to me; but the cause of my country demanded that I should put my whole case before you frankly and to the best of my ability.

## STATEMENT BY HIS HIGHNESS THE MAHARAJAH OF ALWAR

The MAHARAJAH OF ALWAR: Prime Minister and Friends, I join in the echo of thanks to the Prime Minister for having set aside a day specially for discussing the problem of Indians overseas, a question which, I believe, will be tackled with all the goodwill that I see around me, and will help, when it reaches its final stages, to allay the great amount of feeling that is at present rather prominent in the minds of my countrymen. To-day is India's day, and, as these words come before my vision, thoughts and ideas of all kinds surge through my mind, some of emotion, some of patriotism, others of unity of the Empire; but coloured as they are by comparatively narrow ideas of nationalism, citizenship, political rights and freedom, they pale into almost insignificance before the dominating sunlight of the feelings and ideas of common brotherhood. But I have to speak to-day of mundane affairs, the sordid affairs of the political arena, and about the very life and existence in this material world of some unprotected communities. I must perforce descend from the high and exhilarating heights and leave my pedestal, which is yours also, by birthright, as of every individual either inside this room or outside it—nay, of all fellowbeings within the four corners of the Empire. I do so, Sir, I hope, only temporarily, to try, and find my level again in the life of love where we were all intended to live, and sometimes try to get to.

## INDIA DIVIDED INTO BRITISH INDIA AND THE INDIAN STATES

Now, before going further, I will briefly halt to touch, in passing, on a subject that is known to many of you already, but which, I know, is not known to some. You know that India is divided into two parts, or rather, more correctly speaking, I should say into two administrative spheres. Two thirds of that country is called British India, and is under the direct sovereignty of His Majesty the Emperor and his Government, with all its machinery of Parliament, Cabinets, Government of India, and so forth. There is the other one-third, which is governed by the Indian Princes and Chiefs, whose subjects are the subjects of their own rulers, and who have, not from to-day, but from six to eight generations, been in alliance by means of treaties, Sanads, engagements, etc., originally formed with the British East India Company, but the responsibilities of which were taken over by the Crown in 1858. These systems are not the growth of

## SESSIONAL PAPER No. 37a

yesterday, but the survival of a régime of hundreds of centuries, yet able to imbibe and assimilate such progress as is compatible with our traditions, religions, ideas and environments. I have trespassed on your time with regard to these matters, as they will bear an important part on what I have to say later. I intend to speak to-day, not merely as a representative of the Princes, but also, and even more so, as an Indian, than whom I believe no one regards his motherland more sacred, and who wishes nothing more than that she shall receive justice from the British Government, in whose hands her destiny is placed, and co-operation from her sister States who form the comity of nations in our Empire. Let me say at the outset that I have no vain threats to place before you—for the simple reason that they go against the very principle of "Co-operation" which I placed before myself on entering the precincts of this room the first day of our Conference. I will say, furthermore, that while, on the one hand, I have nothing to beg, and I will not beg, I also make no demands, as I have no demands to make. But the motherland, whose salt I eat, the land whose soil has given me birth, tells me that it is my duty to place in plain, untarnished, but candid form in words before you all the facts of our case, such as I know them.

## PUBLICITY

And now, Prime Ministers, I have one request to make, and that is that every word I utter or have uttered to-day in my statement may be cabled in full to my countrymen and in no hashed or pruned form. I do not desire this because I seek cheap notoriety by making Gallery Shots, but because my countrymen have the right to know every word I say in their name. They may have some things to criticize and others which they may not entirely like. It is in justice to them, speaking, not as their representative, but as one of them, that I therefore do not wish to say anything behind their backs, 7,000 miles away, which I will not gladly say to their face.

## BRITISH EMPIRE STANDS FOR JUSTICE AND FREEDOM

I will now proceed. We believe that the greatest assets to the British Empire lie in its championing the cause of freedom and justice. It is because I feel, my country feels—rightly or wrongly—that freedom and justice are at stake as exercised, or perhaps as understood, that I want to speak these words. I hope they will be in the interests of the Empire, and it will be something done—if nothing more—if misunderstandings and misapprehensions that do exist are somehow removed. It will be all the greater glory to you all—and I speak of no tinsel glory, but the glory of the heart—if the British Government and the Great Dominions will show by words, and prove by action, that they mean to assist one of their sisters who is old in age, but also at present the weakest member on the chess-board of the political game.

## DESPONDENCY IN INDIA

I hear wails from India itself—and now I speak principally of that two-thirds—conveying the feelings of despondency. The words of my fellow brethren, of my country, seem to ring in my ears: Are we going to progress steadily, progressively, yet not too slowly towards our goal, which the other sister nations have been more fortunate in already achieving—the goal of having the power to govern our own country as a loyal and integral part of the Empire? Are we going to be helped affectionately and with kindly feeling to the goal which has been pronounced publicly by the British Government, and more than which we do not aspire to, of being a loyal self-governing Dominion within the Empire? Is everything going to be done to accelerate our progress, or is our progress

under various pretexts to be retarded and delayed? Have we a long number of years before us of a great furnace to pass through, from which Ireland has only just emerged?

Sometimes I am afraid this despondency has been seen to give rise to despair, which has resulted in giving exhibitions in many places of those hideous atrocities at which the British Government, as the Custodians of our country, do not feel happy, and of which we, as its sons, are certainly not proud. If India had some more definite proposition before it than having to wait every ten years for its destiny to be enhanced, if it had reasonable assurance of rapid but progressive advancement, I believe that self-government, which is the goal of us all, for two-thirds India could be achieved, early and smoothly. I add this despite anything that may be said to the contrary, that the achievement is possible within a very much shorter period than some people would like to have us believe. I know, and I do not need to be told, that it depends to a great extent on India's capacity herself. I agree, but surely you do not desire to throw India entirely on her own resources? Does she not look to Britain to give her periodical and sustained assistance, so that my country may be, as it has been in the past, really and genuinely a grateful and loyal partner of your wonderful heritage?

#### SOLUTION OF CONSTITUTIONAL PROBLEM IN INDIA

I am speaking of self-government for two-thirds India, and, in dealing with this subject, I hope I may seek your indulgence for another few moments. The solution, I firmly believe, will not lie in grafting Western principles of political government on to the East with a stroke of the pen. Already many old bottles have cracked into which this new wine has been poured. I would much rather you get India round a table in confidence, and work out, with her sons, plans and methods that would be best suited to her environment, by which she can obtain her goal in the most rapid, but, at the same time, most peaceful and loyal manner. I say it is possible, and probable of early success, and you will be doing something for 300 millions of human beings that will cement them to you with gratitude and brotherly feelings.

The world was not built for academic or pious assurances spread over a number of years, the fulfilment of which may well pass over a lifetime. But what seems to me is this—and that is why I have mentioned this subject and in connection therewith I will say no more—that the whole problem, if viewed with breadth of vision and imagination, is really, Oh! so simple. It is not such a hedgehog as may be conceived by those who do not come in close contact with it; and it is really still capable of a solution which will leave a stronger England and a loving India.

In the end, in this connection, I will only say this much. Many unpleasant incidents have taken place in India of late years. I have no desire to lift before you the veil to disclose tales of woe or wails of lamentation.

Many mistakes have undoubtedly been made on both sides. So far as India's side of the picture is concerned, it will be a regrettable spot on India's fair name, and I say this in all solemnity, that any grievances which India may have had and did have, were allowed to be involved in interfering with the welcome given to the Royal Heir to the British throne, namely, the Prince of Wales, when he was touring in British India.

Will the British Royalty, you British Statesmen and people, not overlook this blunder and let it be past history? Can we not bury what has happened and rise in mutual goodwill and understanding for the future? Let not then the hand of the clock be held back. Advance in full confidence that what you do for India will be repaid to you a thousandfold from the people who know how to respond to generous sentiments.

## POSITION OF INDIANS OVERSEAS

And now I start on a voyage outside my country under the agis of the British Flag. Under the protection it gave to its loyal citizens, Indians in search of wealth, adventurous people in search of enterprise, left their homes and their shores to find refuge in parts where freedom, justice and peace were symbolized in the trident of the Red, White and Blue.

Indians found their way to South Africa, to Canada, to New Zealand, Australia, and, I am not personally aware, but perhaps some of them to Newfoundland. They went as citizens under the Union Jack, established their homes, invested their money, and settled down as peaceful citizens of the Empire. I have been told, and perhaps rightly so, by General Smuts, that the idea of British citizenship has changed from what it was a few years ago. I have forthwith applied myself to the facts, and asked the question, What does that mean? Surely the answer cannot be the treating of any particular race as outcasts. I am well aware of the fact that several of the questions with regard to Indians Overseas lie almost outside the direct concern of the Imperial Government. They are really within the purview of the self-governing Dominions, who are connected with the main centre by silken ties, and I will leave it at that. I want to address a few remarks directly to my Dominion colleagues.

And I will say this: One of your links in the chain is weak. If one link in it is weak and further weakened, perhaps you can do without it. That is your business. We, on our part, do not wish it. We want to have you with us. Let your inclinations decide. I know, my friends, how difficult it is for you to make any personal promises—for your positions depend, your authority depends on people to whom you are answerable. I assure you I appreciate the difficulty of your position. I, an Indian, have only tried to hold out my hand. I do not know if you and your people have the power and the desire to grasp it. Nothing hurts in the world more than the loss of "Izzat," humiliation. It is that one word which is the keynote of half the troubles of this world. It is certainly the keynote of the troubles of my country. Whether it is imaginary or real, Providence will judge, at least with open hearts shall we be able to approach Him, our Lord, on the Day of Judgment, and say, We are your children. It was all a game, it was all the chequer board of nights and days; we played our part, if it were ours for sacrifice, then we sacrificed that others might live.

Friends, I want to tell you that I have received messages from my country asking me that I should not work on the Conference, encouraging me to resign because India suffered humiliation—in Natal and Kenya. But I paid no attention to these counsels of despair. It may perhaps be thought that I sought honour and glory, and could not forego such a lure as the Imperial Conference, but the reason that kept me here, rightly or wrongly, was because I felt that nothing in this world was achieved by ill-feeling, that a great deal if gained by toleration and goodwill. Come what may, I am determined to exercise them to the last in this assemblage.

I have received wails from the Fiji Islands, saying that the poll-tax was causing Indians grave injustice, and that they desired to be repatriated if no other gratification could be given to them. I have received tales of woe from Natal complaining that a law was going to be introduced segregating them as outcasts. Similar stories come from Basutoland and other places which I need not go on reciting. How all this sounds to your ears I do not know. How it sounds to mine is it necessary to speak? How it is going to affect India if these questions are not solved, is a prophecy that I shudder to make.

And, remember, my friends, that this question does not affect British India only, but our Indian States' subjects also are involved in this over-seas problem. It is not alone a question that agitates the mind of British India, but it is one

that is viewed with equal humiliation in the Indian States. Why! I was surprised myself to receive letters from my own subjects, one or two sentences of which I will read out to you. I hope you will not mind the portions in which, out of affection and loyalty, personal references are made to me. This is certainly not the reason why I quote these sentences: "The Imperial Conference is drawing near. Your Highness is a member of that important assembly. India, bereft of all sympathy with the outside world, has been passing her transitional days in trying circumstances, aggravated recently to a great extent by the Kenya decision."

Again: "Whether the movement means for India a political set-back or a real awakening and a sure progressing State, towards building up a great national edifice, remains to be seen, but at present she looks to Your Highness with wistful eyes."

#### KENYA SETTLEMENT

I say no more, and I regret having mentioned this portion of the letter. I have read the main portion of it to illustrate that the question is viewed with no less concern in one-third India than it is in two-thirds. I can give you innumerable instances, but I will not waste your time. The question of Indians in the Dominions is one that concerns the Dominion Premiers and their Parliaments primarily; but the question of Kenya as a Colony stands on an entirely different footing. I believe I am right when I say that many Indian settlers went to Kenya long before it was discovered as a suitable place for colonization by the white people. They took lands, invested money, and to a great extent helped in developing the prospects of that country economically. So long as the colony was administered by the Imperial Government, difficulties, I understand, did not arise until the question of franchise to the residents came under consideration. It has now been decreed in the last decision that the recent white settlers, who are in a minority, are to be given the majority of votes in relation to an Indian population, which is in majority—thus leaving the latter at the mercy of the former, to be gradually ousted, if necessary, and as seems possible, by means of legislation.

I do not mean to enter into the pros and cons of this case—what Lord Elgin said or Lord Milner recommended are side issues—because, from my own twenty years' experience of administration, I know how easy it is to produce arguments with all the power in one's hands and records and papers at one's disposal in favour of one case against another. Arguments would be an unwise course for me to adopt, for understandings are not always reached by arguments. I know that there are some noblemen and gentlemen of influence from this country who desire to settle there, if they have not already done so. But the principal argument that has been advanced is that the Colonial Office holds Kenya in trust on behalf of the African races, who are the original inhabitants of that country.

Now, if I may say so, it strikes me as being peculiarly grotesque that a country, held in trust on behalf of a people who are backward and have yet to grow under the agis of the British flag, should actually have a franchise given to any one else to develop the country during the interregnum. Does this mean that, when the original tribes and people awaken from their slumber, they will be given primary consideration in relation to those who have invested money for several years past, and who govern the country, not under trust, but under a Franchise? I do not wish to enter into any further arguments. The whole question of Indians overseas seems to be one which does not mean the flooding of the different portions of the Empire with Indian immigrants claiming rights and privileges merely by their number in order to oust others who may have the rightful heritage. Mr. Mackenzie King, in one of his utterances in this

## SESSIONAL PAPER No. 37a

Conference, said, with regard to Canada, that it was possible to restrict immigration from Japan by mutual agreement, not necessitating the introduction of law. That was mutual right understanding which did not cause any humiliation on either side, and allowed the Dominions to grow in accordance with their own environments, yet at the same time made no strictures or asked no strictures to be passed on peoples who had settled there as peaceful citizens. I believe that the Indian Government—and I am open to correction if I am wrong—would be equally prepared to enter into mutual understanding with the various Dominions and Colonies to prevent immigrants from flooding these countries. Under such circumstances is it not possible to modify the laws and to enforce them in a manner that they do not pointedly chafe against any particular community, thus causing them humiliation? What I want to know is whether my countrymen, as citizens of the British Empire, have any rights to settle in these countries, not for exploitation, not by way of peaceful penetration, but as peaceful traders, to live their unobtrusive existence.

## TRIBUTE TO GENERAL SMUTS

General Smuts, in talking about the questions of Indians who come to his country, suggested, I think, in a casual way that they might be sent for settlement to British Guiana. I believe the British flag has been planted at the North Pole, so I wonder if that would not be a more suitable solution of the problem if it was desired to exterminate them. But I really came to know General Smuts after my brief knowledge of him, that, although he has been called—I am sorry to say—the arch-enemy of India, yet we have in him, if I may be permitted to say so to his face, a sagacious statesman who sees far ahead of ordinary mortals what is in the interests of our greater Empire. From my personal conversations with him I would reverse the epithet, and say that I regard him since I have come here—and I speak in no platitudes—in his heart of hearts, personally a staunch friend and supporter of India.

I may assure you, friends, that I quite appreciate the difficulties that exist in the solution of this great problem. I realize that, though individually most of you may be prepared to look at the matter from a broad Imperial view, you have to return to your Parliaments which may hold different opinions. All I have to say, therefore, is that, while we are conferring in this Imperial assemblage, can we not put our heads together to solve the difficulty which surely human beings were meant to solve, not for the sake of individuals, but for the sake of the Empire. I have said this much, because I feel that the problem is much greater than what appears on the surface relating merely to Indians overseas. If you can enable India by real action to feel that her humiliation is removed, that she can take pride in the Empire to which she has the privilege to belong, you will have achieved something which will be of lasting credit to yourselves and of benefit to the chain of which we all form a loyal link. Particularly since I have come here have I realized how whole-heartedly and with a single purpose Lord Reading and his Government have given their utmost help to our cause. Things do not always appear in public or in the Press which enable India to see what part the Government of India is playing in our cause. All glory, however, is due to them for their assistance. We shall not easily forget it, and hope that some day we may repay them for their effort and goodwill. Regarding Lord Peel, it is more difficult to give him thanks since he sits beside me. I thank him, however, in the name of India—if I may do so—and thank him with a grateful heart for his powerful championship of our cause he has indulged in to-day. My heart has been softened by the words he has spoken of our nationality and our religion. I hope every word of this state-

ment will go to India, so that my country may not despair that it has no one to support it. When the discussions take place, similarly, I hope the Prime Ministers of the Dominions will allow their goodwill and proposals to go to my country, for that I am sure will have a very happy result. I have very little more to say.

#### MESSAGE FROM PRINCES OF INDIA

Now, Prime Minister and Friends, it is my pleasurable task to read out a message that I received from my Order in India. His Highness the Chancellor of our Chamber, the Maharajah of Bikaner, has conveyed it to me by means of a cablegram. This is the message:—

"Had the Chamber been sitting at this time, Indian princes would have desired to send a message to this Conference in view of the important question of Indians overseas, including Indian States' subjects who are affected specially in Kenya. But as the Chamber is not sitting the Princes of India by cablegram convey a cordial message of friendship and goodwill to His Majesty's Government, the British Nation, to the Dominions and Colonies and their distinguished representatives at the Imperial Conference, with whom the Princes are united by common ties of loyalty to His Imperial Majesty the King-Emperor."

The cable continues as follows:—

"We give expression of our hope that the united efforts of all concerned at the Conference will yield some satisfactory result, drawing closely together into bonds of good fellowship the great comity of nations forming the British Empire to which the Princes and States are firmly attached, and securing the Indians, including the subjects of Indian States, an honoured position in all parts of the Empire in keeping with India's rightful place in the British Commonwealth and in conformity with the assiduous and constant efforts of His Excellency the Viceroy and the Government of India."

Friends, I convey this message to you coupled with my own hope that its aims and objects may be finally achieved before we leave England at the termination of the Imperial Conference.

The subject is undoubtedly large and certainly complicated, but surely with goodwill we will overcome difficulties, and, if, as we believe, we are firmly determined to see that every portion of the British Empire is strengthened, then I by no means despair; but on the other hand hope for possibilities of arriving at a settlement which will make you all the more respected and loved in the eyes of those you help and will leave those grateful to you to whom you extend your hand in assistance. I hope that it will be possible for you to consider also whether it would not be advisable hereafter to allow India to be called a Dominion, not a self-governing Dominion until she becomes so, but a Dominion, specially when making reference to her in relation to her sister Dominions.

Gentlemen, I think I have said all that I wished to on the subject of my countrymen overseas on India's day. It has been a great pleasure to me to meet round this table great Statesmen who are my colleagues from the Dominions and to have the pleasure of making their personal acquaintance. May I thank them for their kindness and courtesy to myself which I take as a token of their goodwill for my country? If, at any time, any of my colleagues think of visiting India, I hope they will give us an opportunity of showing and proving that we do not always speak words but act on them, and that we can give you as cordial a welcome to our country as it is possible to do within our capacities.

## SESSIONAL PAPER No. 37a

## GENERAL SMUTS WELCOMED TO INDIA

I said one day to my friend, General Smuts—and I speak sincerely and in no conventional language because he who was our enemy a few years ago is to-day one of our best friends and a great statesman of to-day—I said to him I hoped he would come some day to India and he replied that he would be viewed with suspicion. I hope India, with all her political quarrels and difficulties, has not lost her human touch and response to appreciate great statesmen and to prove to them that beyond our domestic disputes, beyond our domestic quarrels, lie the sentiments of humanity.

I believe, and I will with this conclude, that India came into the comity of nations within the British Empire with a definite purpose. It is a link that was soldered by the hand of Divine Destiny. It was a means of enabling the West to understand the East and *vice-versa*, but it also came in in order that the two civilizations with their spiritualities, with their material advancement and progress, might by their association together evolve a civilization, a great humanity of God's children playing their individual parts in the cause of God. When that day comes before us and, figuratively speaking, we stand before the Judgment Seat of Him who has sent us here, we shall each have our accounts to render. India may differ from you in race; she differs in religion and in creed, but she does not differ in point of humanity. Personally I say this: If you give us your assistance in time of need—for a friend in need is the friend in deed—we shall give you not only our gratitude but also our cordiality and practical assistance. But if it is destined to be otherwise, then I say this, that we shall be in a still higher position, for India will be able to say that she sacrificed herself in order that others might live; she prided herself in her political weakness in order that others may be strong; we gave our little best for the Higher purpose, for the Divine purpose which is our common goal—our common brotherhood and the salvation of humanity.

OCTOBER 29, 1923

## STATEMENT BY THE SECRETARY OF STATE FOR THE COLONIES

## TRIBUTE TO PRESENTATION OF CASE FOR INDIA

**THE DUKE OF DEVONSHIRE:** At the outset of the few remarks I have to offer, I cannot refrain from saying that India has been exceedingly fortunate in the spokesmen selected to represent her case in this Conference.

That case, eloquently stated by Lord Peel and His Highness the Maharajah of Alwar, was developed by Sir Tej Bahadur Sapru in a speech the closely reasoned argument of which was greatly reinforced by its studied moderation.

## WHAT INDIA ASKS

I particularly noticed that the proposal which he submitted was outlined rather than reduced to the specific terms of a resolution. In this, if I may say so, I think he was very wise, because, while he made the general purport of his proposal perfectly clear, he left the precise form to be moulded in the subsequent discussion. Let me state as shortly as I can the gist of that proposal as I understood it. Two years ago this Conference, with the exception of the Prime Minister of the Union of South Africa, agreed that the rights of Indians domiciled in parts of the Empire other than India should be recognized. Sir

Tej now proposes that the question how and when effect can be given to this agreement should be made the subject of inquiry and discussion between committees representing the several Governments concerned and a committee representing the Government of India.

#### LIMITATION OF INDIAN REQUEST

That is what Sir Tej Bahadur Sapru asks. But before I proceed I must also invite you to note that there are various matters already settled which he is not attempting to reopen. He does not question the right of each community in the British Commonwealth to control the composition of its own population. He is not, in a word, asking the self-governing Dominions to reopen the question of Indian immigration. He frankly recognizes the autonomy of the Dominion Governments within their respective territories. What he asks is that the Governments concerned will agree to discuss with the Government of India the steps necessary to give effect to the resolution passed by the Conference in 1921. It is, of course, in the last instance for each Government to decide for itself, but, because in certain matters such decisions are not limited in their effects to the countries by which they are taken, the issues to which they relate may be brought for mutual discussion here.

#### BRITISH GOVERNMENT ACCEPTS PRINCIPLE OF REQUEST

In so far as the British Government is responsible for the Colonies and Protectorates, I can only say on behalf of the British Government that we certainly accept the principle of the request put forward by Sir Tej Bahadur Sapru.

#### MAINTENANCE OF KENYA SETTLEMENT

In saying this you will not understand me to mean that we are prepared to reopen matters which have been made the subject of recent and most carefully considered decision. I refer more especially to the Kenya settlement, the terms of which were placed before and accepted by the British Parliament in July. While I would not propose that the area of discussion between the contemplated Committee and the Secretary of State for the Colonies should be limited, I should only be misleading India if I were to say anything to suggest that the Government could consent to reconsider the decisions embodied in the settlement of July last. To use the words of the White Paper, the constant endeavour of the British Government throughout their deliberations was to relate the principles which must govern the administration of a British Colony in Tropical Africa to the wider considerations of general Imperial Policy as enunciated in the Resolution of the Imperial Conference of 1921.

#### RESPONSIBILITIES OF BRITISH GOVERNMENT

I have also to remind the representatives of India that, so far as the British Colonies and Protectorates are concerned, the ultimate responsibility rests with the British Government, and it is with the British Government, and more particularly with the Secretary of State for the Colonies, that any questions affecting British Indians domiciled in these Colonies and Protectorates should be discussed in the first instance by such a Committee as Sir Tej has suggested. It will then be for the Colonial Office to consult, as may be necessary, any Colonial Government concerned with these discussions before any decisions are taken by the British Government.

## SESSIONAL PAPER No. 37a

## POLITICAL STATUS OF INDIANS IN COLONIES, PROTECTORATES AND MANDATED TERRITORIES

I am hopeful that the area to be covered by these discussions will not in fact prove wide. I recently circulated to members of the Conference, in response to their general wish, a memorandum\* upon the political status of British Indians in the Colonies, Protectorates and Mandated Territories. I studiously confined my memorandum to facts, and perhaps I may be permitted to summarize quite briefly what that memorandum contains.

It shows that, in the West Indian Colonies, British Indians are under no political or legal disability of any kind. They have the same franchise and the same opportunities of becoming members of elective bodies as any other British subjects. The West Indian Colonies in which there is a considerable British-Indian population are British Guiana, Trinidad and Jamaica. In British Guiana and Jamaica the elective system already exists, and it will be introduced in Trinidad at an early date.

When you turn to the Eastern Colonies the memorandum shows that in Ceylon, under a revised Constitution about to be issued, qualified British Indians will be eligible for the franchise and for election to the Legislative Council in the same manner as all other British subjects. Again, in Mauritius there is no distinction between British Indians and other British subjects as regards eligibility for the franchise.

In East Africa you will find from the memorandum that in Uganda the Legislative Council is not elective, but that there is no restriction on the number or race of the unofficial members who may be nominated to the Council, while in Tanganyika Territory there is no Legislative or Executive Council.

Subject to a clear understanding on these points, my colleagues and I cordially welcome on behalf of the British Government the proposal of the representatives of India so far as the Colonies and Protectorates are concerned.

## STATEMENT BY THE PRIME MINISTER OF CANADA

## CANADA'S ATTITUDE OF GOODWILL

MR. MACKENZIE KING: I would like to say that I think Canada fully appreciates the magnitude and seriousness of the problem with which the Government of India and the Government of Britain are confronted in dealing with any question affecting the status of Indians, and that our attitude from the beginning has been, and at present is, one of being exceedingly anxious to be helpful in the solution of any problem that may arise. His Highness the Maharajah, in speaking last week, referred to the manner in which we had recently taken up by conference some questions respecting Immigration with Japan, and he said that, in his opinion, any of these questions of status and political rights respecting resident Indians could be best settled by adopting a similar method. He referred particularly to an attitude of goodwill being more important than anything else in the solution of these difficult questions. I think the Maharajah is entirely right. Attitude in these matters is all-important; so far as the Canadian attitude is concerned, it gives me pleasure to say that we are most anxious to deal with this whole question in a spirit of mutual understanding and goodwill.

---

\*See page 136.

## RECENT HISTORY OF INDIAN IMMIGRATION QUESTION

I have in my hand a Report\* that I made to the Government of Canada in 1908. It relates to Immigration to Canada from the Orient, and Immigration from India in particular. It was the result of a visit which, at the instance of the Government of the day in Canada, I paid to England to confer with the Secretary of State for India in regard to the question of Immigration from India to Canada. If I may be permitted, I would like to read the concluding paragraph of this Report, because it sets out the attitude of that time—fifteen years ago—which we took towards questions affecting our fellow British citizens from India:—

“Nothing could be more unfortunate or misleading than that the impression should go forth that Canada, in seeking to regulate a matter of domestic concern, is not deeply sensible of the obligations which citizenship within the Empire entails. It is a recognition of this obligation which has caused her to adopt a course which, by removing the possibilities of injustice and friction, is best calculated to strengthen the bonds of association with the several parts, and to promote the greater harmony of the whole. In this, as was to be expected, Canada has had not only the sympathy and understanding, but the hearty co-operation of the authorities in Great Britain and India as well.”

I should say, perhaps, that, after conferring with the Secretary of State for India in London at that time in regard to this question, I subsequently, at the instance of the Canadian Government, went to India to take up with the authorities there the question of the migration of Indians to Canada with a view of seeing whether we could not work out a solution which would avoid anything in the nature of legislation which might be misunderstood or regarded as invidious in India, and I am happy to say that we were able, as a result of conferences, to come to an understanding between the two Governments which was as satisfactory to the Government of India as it was to the Government of Canada. If it was possible to do that in regard to the difficult question of Immigration, I think it ought to be possible for us similarly to effect a satisfactory solution with respect to any of these other questions that may arise, and it is from that point of view that I hope my colleagues from India will feel that the Canadian Government is approaching this particular subject.

## POSITION OF INDIANS DOMICILED IN CANADA

Lord Peel in his remarks said, I think, very rightly, that what the Indians felt more than anything else was that the disabilities under which their countrymen live appear as a brand of social inferiority. The extent to which that is true depends very largely upon the nature of the disabilities and the circumstances which account for any that may exist.

## NO DISABILITIES IN EIGHT PROVINCES. SOME POLITICAL DISABILITY IN ONE

May I say at once in regard to Canada that, in eight of the Provinces out of nine which comprise the Dominion, I am not aware of any legal or political disability under which any Indian resident in Canada suffers, and, with respect to the ninth Province, I am not aware of any legal disability of any kind; I am only aware of a political disability in the matter of the exercise of the franchise in that one Province, and that not as regards all Indians, because, as respects all Provinces, including British Columbia, the one exception I have mentioned, the Federal Law relating to the franchise sets it down that any

\*See Canadian Sessional Paper No. 36A of 1908.

## SESSIONAL PAPER No. 37a

Indian who served with His Majesty's Forces—Military, Naval or Air—is entitled to the franchise. I mention this as evidence of the fact that our citizens appreciate the services that India has rendered the Empire and desire to acknowledge them wherever possible.

## HISTORY OF CANADIAN FRANCHISE

May I say a word as to the way our franchise has been developed? The Dominion is the result of the bringing together of a number of Provinces, and the Party to which I belong—the Liberal Party in Canada—has taken a position that, wherever it was possible to recognize the wishes of a Province in matters pertaining to the franchise, regard to such should be had. For that reason our Federal Franchise Act for many years recognized for Federal purposes only the franchise prevailing in the Province. We had not a separate franchise for the Dominion. We took, for the Dominion, the provincial franchise as it existed, with the result that in some Provinces some classes had the right to vote who had not the right to vote in others, not on account of race, but owing solely to the fact that for their own reasons certain of the Provinces had thought it well to limit the franchise in certain particulars. The late Government, which represented an opposite view in some particulars, changed somewhat the Franchise Law a few years ago, and endeavoured to enact a Federal Franchise which would be applicable generally throughout the Dominion. They provided that women, for example, should have the right to vote in Federal matters. Those of us who had held to a recognition of provincial enactments opposed that attitude. We said it should still be left to the Provinces to determine as respects the franchise to be given women, as in all else, what they thought best. However, the Government at that time did carry a provision which made the law in this matter of the exercise of the franchise by women generally applicable. Notwithstanding, that very Government, having regard for the conditions in the Province of British Columbia, in order to avoid a serious situation arising there which might have been misunderstood in other parts of the Empire, found it necessary as regards certain of the provisions affecting the Federal Franchises in the cases of British Columbia to make an exception to this general application. I mention this because it discloses how in one Province a particular question may become a burning political issue. For the Federal Government to try and deal with it in a manner which would be regarded as coercing any Province would give rise to an entirely new question. For example, if the Federal Government had tried in respect of all persons resident there to impose on the Province of British Columbia certain obligations, such, for example, as the right to vote under the Federal franchise, the issue would not in public discussion have been a question of the franchise at all; it would have been a question of coercion by the Federal Government of a Provincial Government, and you would have had a political battle fought on the basis of what we speak of as "provincial rights." I am sure all at this table will appreciate that that kind of political conflict is one of the most dangerous a country can be faced with. It is as though Britain were to try and impose certain obligations on Canada or some other part of the Empire. In dealing with the Provinces we of the Federal Government seek, as far as we can, to prevent anything in the way of coercion. I think it is as well to mention this because it helps to explain why in one Province it has not been possible, up to the present, to concede the franchise to the Indians who are there.

## QUESTION BEST DEALT WITH ON RECIPROCAL LINES

As to how Canada's action may be viewed in India, it seems to me to be very much a matter of interpretation, and the spirit of interpretation. I

could go to India and say with truth, that every citizen coming from the State over which His Highness the Maharajah of Alwar rules has rights of citizenship in my Province which I have not in his. That is a point which cannot be brought out too clearly. In eight Provinces out of nine in Canada every Indian resident there has the same right as other Canadian citizens, but that is not equally true of Canadians resident in India. If this aspect is put before the people of India they will see that the reciprocal method of dealing with this question, as pointed out by General Smuts, is one which perhaps presents the line along with which we can proceed most satisfactorily. So far as Canada is concerned, we would not ask for our citizens resident in India any right which we are not prepared equally to concede to Indians resident in Canada. I think you may take that as the fundamental basis on which we would be prepared to deal with this question; we hold to this reciprocal point of view because in all things we have found it to be one of the most satisfactory methods of dealing with questions of this kind.

#### PROBLEM IN BRITISH COLUMBIA AN ECONOMIC ONE

So far as British Columbia is concerned the problem is not a racial one; it is purely an economic problem. The Labour forces in British Columbia are very strong. That Province has had industrial problems of a character which no other Province in the Dominion has had and what the Labour people are aiming at is, I think, to maintain certain industrial standards which they had sacrificed much to acquire. As respects some of those who have come from other countries they are rather fearful, until at least they have resided for some time in Canada and have acquired our method of living, our customs, habits, and so forth, that to give them the rights of franchise in full may mean that the standard already maintained may be undermined. I would like to make this clear.

#### POSSIBLE POLITICAL CONSEQUENCES OF GIVING FRANCHISE TO INDIANS IN BRITISH COLUMBIA

It may seem I am straining a little in emphasizing the possible political consequence of giving the franchise to resident Indians in British Columbia.

But take the actual situation as it is in Parliament to-day. When we came into office, I had a majority of one behind me in the House of Commons. I think we have a majority of three at the present time. Many of the constituencies were very close. It is conceivable that in British Columbia the difference in the result might be material by increasing a certain vote in some of the constituencies. In other words, were the subject to become one of political discussion, I think it would be possible for a political orator to make it quite apparent to the people of British Columbia that the fate of the Federal Government might depend upon the vote cast by the Indians resident in that Province. It would not be an exaggeration, it would not be a figure of speech; it is a literal and absolute truth. It is conceivable that the complexion of Parliament as it is to-day might be entirely changed. The consequence might be that one Government rather than another would be in office by the vote of those who, neither in their own country nor in Canada, have ever exercised the franchise. That is the situation which exists at the moment. I do not expect it will exist very long, but it all helps to show the difficulty which we are confronted with when we contemplate, in any immediate way, results which we all hope will be effected in the course of time. It is for that, among other reasons, that I appreciate the method of approach which Sir Tej has adopted in bringing his suggestion before this Conference. He has appreciated, I think, our difficulties as well as his own, and, in suggesting there could be

## SESSIONAL PAPER No. 37a

a Conference between representatives of India and representatives of Canada, I think he has had in mind enabling the citizens of India to appreciate just the kind of circumstances which have governed our actions quite as much as having our citizens appreciate his difficulties. That is the sort of approach and attitude which permits us to get together and I should be surprised if, dealing with this question in that spirit, we could not work out a thoroughly satisfactory solution.

## INTERPRETATION OF 1921 RESOLUTION

There is one point I ought to make quite clear and that is the extent to which my hands are tied in dealing with this question. The resolution\* which was passed at this Conference two years ago in the minds of some present committed the Dominions to giving the franchise to the Indians. It was, they allege, in the nature of a general commitment. It is all important that we should know whether that was the intention of the resolution or not. I think in the first place we should be very careful of resolutions that are introduced or passed, and I think, when once they are passed, we should do our utmost to see that any hopes to which they may give rise are not destroyed. In the House of Commons I asked my predecessor, Mr. Meighen, what his interpretation was of the resolution of 1921. I have before me the "Hansard" of the 29th June of this year,† which contains the record, and with the permission of the Conference I shall read from it:—

"Mr. MACKENZIE KING: May I ask my right honourable friend one question? The resolution of the Conference, or at least one clause of it, is as follows:—

"The Conference accordingly is of the opinion that in the interests of the solidarity of the British Commonwealth it is desirable that the rights of such Indians to citizenship should be recognized."

"The Honourable Member for George Etienne Cartier, Mr. Jacobs, has said that these words imply an undertaking on the part of this Parliament, or rather on the part of Canada, to see that the federal franchise is granted to the Indians in British Columbia. Is that correct or not?

Mr. MEIGHEN: The words are English and the words are simple. I understand them fully and if the Prime Minister does not I must leave him just where he is.

Mr. MACKENZIE KING: I think the House is entitled to an answer from my right honourable friend. He represented this country at the Imperial Conference. He knows better than anyone else what interpretation he placed on these words. I ask him, seeing that he represented Canada at the Imperial Conference when that resolution was passed, whether he understood that Canada was giving an undertaking to the Indians in British Columbia to the effect that they should be entitled to the franchise.

"Mr. MEIGHEN: No human being understood anything of the sort. The words are very plain and there is no misunderstanding them."

I should be taken very seriously to task if, when I returned to Canada, it could be said that I had placed an interpretation on that resolution which the Prime Minister of Canada who was present at the time it was passed was unwilling to have placed upon it. I think Mr. Meighen has taken his attitude

\*See page 9 of Cmd. 1474.

†See page 4815 of Official Report, House of Commons Debates, Canada, 1923.

from the words: "It is desirable that the rights of such Indians to citizenship should be recognized." If that means we would all like to see it done, that we hope it may be done, I think I can agree with him in this expression of such a wish. On the other hand, as to its constituting an actual pledge, I am bound to take the interpretation which Mr. Meighen himself gives and places upon it. I should, perhaps, say that I presented that point of view to Mr. Sastri when he was in Canada and my recollection is that Mr. Sastri did not maintain that the resolution constituted a pledge which obliged the Federal Government to give the franchise to resident Indians but rather that it expressed what the Conference hoped would be done by the different Dominions as opportunity offered.

#### MR. SASTRI'S VISIT

May I say just a word in regard to Mr. Sastri's visit? We were pleased to welcome Mr. Sastri to Canada and we sought to give him the fullest opportunity to speak publicly wherever he wished to do so in the Dominion, to confer with any persons whom he might wish to meet, and we were glad to have him in conference with us in the Cabinet so that we could explain very fully all the considerations of which we had to take account. I think Mr. Sastri appreciated our situation the better in view of having seen conditions for himself and having talked with many persons in different parts of the Dominion.

#### MATTER WILL BE CONSIDERED WHEN FRANCHISE LAW REVISED

I cannot do better in setting forth our Governments attitude than to read to the Conference and place on record the letter I wrote to Mr. Sastri just as he was leaving our Dominion. It is dated Ottawa, the 5th September, 1922, and is as follows:—

"The Right Hon. V. SRINIVASA SASTRI,

"Chateau Laurier, Ottawa.

"Dear Mr. SASTRI,—

"In reply to the representations made by you at the interview with my colleagues and myself on Friday of last week, and which were the subject of further conference between us yesterday, I desire to assure you that, at the earliest favourable moment, the Government will be pleased to invite the consideration of Parliament to your request that natives of India resident in Canada be granted a Dominion parliamentary franchise on terms and conditions identical with those which govern the exercise of that right by Canadian citizens generally.

"The subject is necessarily one which Parliament alone can determine. It will be submitted to Parliament for consideration when the franchise law is under revision.

"In conveying to the Government of India an expression of the attitude of the Government of Canada in this matter, we hope that you will not fail to make it clear that at the present time, in eight of the nine provinces of which our Dominion is composed, the federal franchise is granted to natives of India resident in Canada, on terms which are identical with those applicable generally to Canadian citizens.

"Yours sincerely,

"W. L. MACKENZIE KING."

You will observe that we have promised Mr. Sastri that when our Federal Franchise Law comes up for revision we will take care to see that Parliament is fully informed of his representations and wishes, and we will seek to have those representations and wishes given every consideration. It is probable that

## SESSIONAL PAPER No. 37a

the Dominion Franchise Act will come up for revision at the approaching Session of Parliament. I told Mr. Sastri it was hardly probable it would come up last Session, but that I thought it would come up next Session. If the course we anticipate is followed, the Franchise Act will be referred to a Committee of the House, and that Committee will be in a position to hear any representations that may be made to it.

IF COMMITTEE FROM INDIA SENT TO CANADA, IT WILL BE GIVEN EVERY OPPORTUNITY  
TO DISCUSS QUESTION

My friends from India will have to decide for themselves what is likely to be most in their own interests in the matter of having a Committee visit Canada and take up this matter anew. I say that for the reason that I am not so sure that Mr. Sastri's visit has made it easier for us to deal with this problem. I would put it in this way. Mr. Sastri's visit helped to direct the attention of the country to something which I imagine the greater part of the country did not know anything about. I doubt if the majority of the people in Canada were aware that in the Province of British Columbia, for example, the Indians did not have the franchise. They may have known in the other Provinces that they had the franchise, but the question of the few in British Columbia not having the franchise would hardly be known to any extent outside that Province. Once, however, Mr. Sastri began delivering his speeches the Labour Council from one end of the country to the other began to receive communications from Labour Organizations in British Columbia asking them to take care to see that such standards as labour had won in British Columbia were maintained. The forces that were opposed to granting the franchise to Indians became organized in a way they had not been before. Whether that same result might follow the visit of a deputation from India I cannot say. It might or it might not, but, should our friends from India think it would help them to have a delegation come to Canada to confer on the subject, we shall be most happy to appoint a corresponding group to meet and confer with them. If it were their desire to have their delegation given an opportunity of meeting the Parliamentary Committee to which the matter will be referred for consideration, I should be glad to see, if the time of their visit so permitted, that they were given a chance to meet the members of that Committee and to confer with them at Ottawa. In other words, we would be only too happy to give to any group which may come from India, any person she may send, the amplest opportunities to discuss with our public men all aspects of this particular question. I say this having regard to the method of approach Sir Tej has presented to us here. He has made it clear that the Committee would come for the purpose of exploring avenues and ways and means to reach an ultimate result. He should recognize that we may have to take time in this matter, but I would like him to believe that we are sincere in hoping that we will be able to meet his wishes. In seeking so to do, we may have to proceed step by step, but the Canadian people as a whole are, I am sure, really desirous of meeting our fellow British citizens from India in every reasonable particular. I have not the slightest doubt about that.

PROGRESS OF INDIA TOWARDS SELF-GOVERNMENT

Perhaps I may be permitted to say just one word in conclusion. Sir Tej spoke very feelingly the other day about political freedom and the desires of India in the matter of self-government. When I was in India I heard a good deal of the discussion that was going on. Let me say that I have a natural sympathy with the desires of a people to have the right to manage their own affairs. Were I a citizen of India, and this is what I felt most at that time, I

should feel above everything else that in India being a part of the British Empire there lay the surest guarantee that this desire for self-government will be realized in the course of time in the manner which to India herself will be most effective and helpful. It is inconceivable that the opinions represented at this table, the views of the different Dominions represented here, should not accord with aspirations of self-government. There is this, however, which I think we have to remember and which those of us in the Dominions have had occasion to realize, that our Dominions have been peopled largely by citizens who have come out from the British Isles, and that those who have been most active in effecting reforms have themselves come with ideals which it had taken their ancestors many, many years to work out in this old land. Our struggle for responsible government in the Dominions was largely a continuation of the long struggle of several centuries which had taken place in the British Isles, and I think the evolution of self-government in the Dominions has become what it is largely because of the long process of political training through which in previous years the peoples of the British Isles had passed. For that reason I hope that our friends in India will appreciate that here again time may be a helpful factor in the working out of what, in the long run, in the interests of India herself will be the surest and the best guide to complete self-government.

## STATEMENT BY THE PRIME MINISTER OF THE COMMONWEALTH OF AUSTRALIA

### TRIBUTE TO PRESENTATION OF CASE FOR INDIA

Mr. BRUCE: Prime Minister, I would like to preface the few remarks I wish to make by congratulating the representatives of India on the very eloquent and temperate manner in which they stated the case which they have to present.

### ATTITUDE OF AUSTRALIA TO RESOLUTIONS OF PREVIOUS CONFERENCES

This question is not one which vitally affects Australia as it does South Africa. I desire, however, to refer to the Resolution on the position of Indians in the Empire which was adopted by the Conference of 1921. The resolution commenced by reaffirming the previous Resolution of 1918, that the government of each community of the British Commonwealth should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities. It then went on to recognize that there is an incongruity between India's position as an equal member of the British Empire and the existence of disabilities upon British Indians lawfully domiciled in some other parts of the Empire. The resolution recorded the opinion that, in the interests of the solidarity of the British Empire, it is desirable to recognize the rights of such lawfully domiciled Indians to citizenship in their countries of domicile. This resolution was concurred in by the representatives of Australia.

### SYMPATHY WITH INDIANS DOMICILED IN AUSTRALIA

The object of the representatives of India at this Conference in bringing forward the question of the status of Indians is, as I understand, to further the investigation of the question of the means of giving practical effect to that part of the resolution which refers to the recognition of rights of citizenship of Indians lawfully domiciled in other parts of the Empire. As far as Australia is concerned, this question has been the subject of considerable public discussion,

## SESSIONAL PAPER No. 37a

and the representatives of every shade of political thought have shown sympathy with the claim that lawfully domiciled Indians should enjoy full citizen rights. As the question did not figure in the preliminary agenda of the Conference, I have not had the opportunity of consulting my colleagues or my Parliament upon it. I believe, however, that Australian public opinion is ready to welcome, so far as the position of Indians domiciled in Australia is concerned, any measure which is conceived in the interests of the Empire as a whole. The number of Indians in Australia is small—there are only 2,000 of them—so that from the purely Australian point of view the problem is a small one, but it is recognized that this is part of a larger Imperial problem.

## NO CHANGE IN COMMONWEALTH IMMIGRATION POLICY

It is not a question of admitting fresh Indians within our territory. That would be contrary to the fundamental principles which animate the people of Australia and must govern the policy of any Australian Government; nor, as I fully understand, is there the slightest shadow of a suggestion that the immigration of Indians into Australia is desired by the Government or by the people of India. It is simply a question of satisfying the legitimate aspirations of the few Indians who are already lawfully domiciled in our midst, and contributing by this action to the solution of an Imperial problem, by the removal of anomalies which, as I understand, are felt very keenly in India in view of her new status as an integral part of the Imperial Commonwealth.

## TRIBUTE TO INDIA'S PLACE IN EMPIRE, AND TO HER CIVILIZATION

India is no longer a mere Dependency, but one of the component members of the British Commonwealth of Nations. We have the greatest admiration of the efforts put forth by India in the late war, by which she won her new status. I need only refer to her contributions in men, money and material, her recruitment on a voluntary basis of something like  $1\frac{1}{2}$  million men, the services which her army rendered by sending more than a million Indian troops overseas to all the theatres of war, and her free gift to the Imperial Exchequer, which added, as I am told, over 30 per cent to her national debt at that time. Apart from these material aids, the moral value of the part played by India in the war cannot be over-estimated. The vast masses of the Indian people have always been conspicuous for their loyalty to the British Throne, and their whole-hearted and voluntary participation in the world conflict undoubtedly afforded striking proof of this to both foes and friends alike. Even apart from that welcome evidence that in its hour of need the Empire may rely on India as a strength and support, instead of a source of weakness as our late enemies dared to hope, I wish to emphasize that the people of Australia have always had the greatest respect for India's traditions and culture, her literature and her arts, her attainments in the world of thought and her achievements in action—in a word, for her civilization, which, while reposing on such ancient foundations, has, at the same time, shown itself capable of progress and adaptation to the needs of the modern world. That civilization is not identical with ours; it is older, and it is the civilization of the East rather than of the West; capable, however, as India has already shown, of absorbing what is valuable in Western civilization, just as the West, in its turn, has lessons to learn from the civilization that is characteristic of India.

## INDIAN PROBLEM RESULTS FROM CONFLICT OF ECONOMIC STANDARDS

Nor is the established policy of maintaining the European character of our population and not permitting the immigration of Asiatic settlers in conflict with

such an appreciation. It is not a policy founded on feelings of race or colour, but it is motivated by economic considerations which appear to us to be clear and cogent. I have said that the civilization of the East, though older and possibly in some respects superior, is different from that of the West, and among other things this implies a well-marked difference of economic standards. Asiatic immigrants would be able to work and support life with what, to them, would represent a high degree of comfort, under conditions and for wages which would make it impossible for workers of European descent, accustomed to European standards, to compete with them. If, therefore, Asiatic immigrants were admitted, it would be impossible to provide employment for Europeans. They would inevitably be ousted from the labour market, and our population, and with it our institutions and our civilizations, would gradually lose their original European character which we are naturally determined to do all in our power to preserve. It is for this reason that the Commonwealth Parliament has passed enactments which effectively prohibit the immigration of Indian or other Asiatic settlers or labourers, and it is for this reason that we welcomed the Resolution of 1918, reaffirmed in 1921, by which the Imperial Conference has recognized the right of each Government to control the composition of the population of its country by means of restriction on immigration from the other communities of the Empire.

#### ATTITUDE OF AUSTRALIA IS SYMPATHETIC, BUT NO NEED FOR COMMITTEE

That Resolution was accepted by India, and the Government of India have never swerved in their loyal acquiescence and co-operation with us in our policy. But, viewing the relations of India with the other parts of the Empire as an Imperial problem, we appreciate that the maintenance of the immigration policy is only one side of the question. On the other side we have the desire of India to see the grant of political and other rights of citizenship accorded to her sons who have already, and in some cases for many years past, been legitimately domiciled within Australia. This desire is largely satisfied in the principle of the Resolution of 1921. That Resolution, together with the Resolution of 1918, must be regarded as interdependent parts of a single endeavour to promote harmonious relations between the Dominions and India by securing the immigration policy of the former on the one hand and by removing the cause of any ill-feeling in India on the other. The object of both Resolutions, as I regard them, is to foster the cohesion of the Empire as a single unit, not only comprehending within itself certain communities of European race all inspired by Western ideals of civilization, but also uniting in one system the different ideals, elements of strength and potentialities of progress towards the common good which the Empire is happily able to draw from Eastern as well as from Western sources.

In view of the position which exists in Australia and the consideration which has been given to the question, there is no necessity for a Committee further to discuss the matter such as has been suggested by Sir Tej Bahadur Sapru. While I appreciate the spirit in which it is put forward, I do not think, in the special circumstances of Australia, there is any necessity for such action. On my return to Australia I will consult with my colleagues as to what action can be taken.

SESSIONAL PAPER No. 37a

## STATEMENT BY THE PRIME MINISTER OF NEW ZEALAND

## TRIBUTE TO PRESENTATION OF CASE FOR INDIA

Mr. MASSEY: I will only detain the Conference a very few minutes. I should like—and I have no doubt the other members of the Conference feel as I do—I should like to express my appreciation of the eloquent speeches delivered by the representatives of India. I am especially impressed by the fact, which was very evident, that, while they were insistent in looking after the interests of India, they spoke as patriotic British citizens. I do not think there will be very much difficulty in the plan—I am thinking now of the proposal that Committees representing the Dominions should meet a Committee representing India. I am speaking more particularly for my own country

## POSITION OF INDIANS IN NEW ZEALAND

I would like to endorse that, so far as New Zealand is concerned, we are practically giving the natives of India resident in New Zealand the same privileges which are enjoyed by people of the Anglo-Saxon race who are settled there. There is practically no difference between them. If there is or ever has been at any time any objection to natives of India coming to New Zealand, those objections have been raised for economic reasons such as have been referred to by the Prime Minister of Australia. The workers in New Zealand are naturally anxious to maintain the present standard of living, and if there happened to be a large influx of natives of India at any time they have an idea that such standard might become lowered. They are naturally anxious—and I am bound to say the New Zealand Parliament is also anxious—to prevent anything of the sort happening. There is no such thing as race-prejudice or anything of that sort. So far as the aboriginal natives of New Zealand are concerned they are in exactly the same position as the European residents in New Zealand; they have the same privileges in regard to Parliament and in connection with local affairs.

## STATUS OF INDIA AT IMPERIAL CONFERENCE

I have heard it stated as a matter of fact that there is an impression in India that the representatives of the Indian Empire at the Imperial Conference do not occupy the same position as the representatives of the Dominions or other parts of the Empire. Now I think that ought to be contradicted emphatically. We who represent the Dominions—and I know I can speak for those who represent the United Kingdom and the Colonies as well—are anxious that the representatives of India sitting round this historic table should enjoy all the privileges that we enjoy and should have exactly the same position. I think that ought to be made perfectly clear in India.

## METHODS OF AGITATION IN INDIA

I know this, that India has become during recent years a fruitful hunting ground for agitators; I am not thinking of Indian agitators when I say that, because I know—and it is nothing to be proud of—that some of the people of our own race have taken a prominent part in fomenting trouble in India, and not only in India, but in those British countries where a number of natives of India have become located. There are not many opportunities in my country, but I have known people of our own race to be doing their level best to stir up trouble with the natives of India. Fiji is our neighbour and there is a large number of Indians there. I am not speaking for Fiji, but I would only say this, that I have the best of reasons for knowing—I know it officially—that Europeans

frequently have been doing their level best to foment disturbances in Fiji. I am simply speaking of labour troubles and difficulties of that sort. Once troubles are started and when strikes take place we, who have had experience of these industrial troubles, never know where they are going to end; and they sometimes stir up trouble which is not forgotten for a very long time afterwards.

#### TRIBUTE TO INDIA'S PLACE IN EMPIRE, AND TO HER CIVILIZATION

My opinion—I speak as a British citizen and not only as the representative of New Zealand—is that we should do everything that is possible to make the natives of India feel, whether here or in India itself, that we want to treat them with justice, and that we want to do everything that is fair and right and proper as far as they are concerned. I know perfectly well that when we think of government by Indians we have to remember—and I think it was the Maharajah who expressed his opinion—that if development is to take place it will not be quite by what is called Western methods. We can understand that. When one remembers the huge population of India, the number of races which are there, the number of languages that are spoken, and the different religions, I have often thought that it might be desirable, when the time comes, as I believe it will come, to let India be divided into a number of Dominions rather than to remain one State or Empire as it is at present. I have not been to India, and I only look at it from the outside. The European residents in India, and the representatives of India themselves, know very much better than I do what will be necessary in time to come to enable Indians to attain the position they desire to occupy. I was very much struck with the concluding remarks of Lord Peel, and I have not forgotten that when the destinies of the British Empire were trembling in the balance there was no hesitation on the part of India to do her duty; I will not say “to come to its assistance,” because when they were fighting for the Empire they were fighting for themselves as citizens of the Empire. They undoubtedly did their duty in a way which was admired in every part of the Empire and by every one of its races. The Prime Minister of Australia has mentioned the number of men who were sent and the amount of money contributed by the Indian Empire itself, and on that account I am quite sure the representatives and the patriotic British citizens, to whichever part of the Empire they belong, will always be desirous of upholding the wishes of the people of India and of assisting in the development which they so ardently desire. I do not know whether it can be done for some time or not; probably hurrying up matters might do more harm than good.

#### NEW ZEALAND STANDS BY PREVIOUS RESOLUTIONS

So far as the Committees are concerned, when Mr. Sastri was in New Zealand he had an opportunity of meeting both branches of the Legislature and an opportunity of saying everything he chose to say to them. He said that, so far as New Zealand was concerned, he then had practically no fault to find. I hope later on that the same thing may be said of the residents in other parts of the Empire. I was present, of course, when the original arrangement was made in 1918; I was present when it was reaffirmed in 1921; and by that we desire to stand. If any improvements can be suggested with regard to what is in operation at present, I have not the slightest doubt but that the representatives of the Dominions and the other representatives of the British Empire here will consider them. I do not know whether anything of the sort is intended at present, but I want to assure the representatives of India that so far as they are concerned there is no desire to keep them in the background, but to give them all the privileges that British citizens in other parts of the Empire enjoy.

## SESSIONAL PAPER No. 37a

I should like to say that I do not intend to interfere in the matter of Kenya. The position in South Africa stands by itself and I am not able to judge of it. I only say that I should like to do anything I possibly can to bring about a better understanding between the two races in South Africa, those representative of the European race and those representative of the Indians. If we can do anything at all we shall be only too glad to do it.

## STATEMENT BY THE PRIME MINISTER OF THE UNION OF SOUTH AFRICA

## TRIBUTE TO PRESENTATION OF CASE FOR INDIA

GENERAL SMUTS: I desire to pay my tribute also to the earnestness, the eloquence, and the ability of the speeches that have been made here by the representatives of India. The proposal which has been made by Sir Tej Sapru does not concern South Africa, and therefore I do not think it is necessary for me to detain the Conference at any length. As, however, the subject is a very difficult one I may perhaps be allowed to say a few words in reference to the general situation.

## MR. SASTRI'S MISSION HAS MADE SOLUTION OF PROBLEM MORE DIFFICULT

The Maharajah has said, very rightly, that what this question requires is understanding—understanding not only of the difficulties and the special position of India, but also of the difficulties and the special position of other British communities; and I think a few words of mine might not be out of place here. So far as I can judge, the atmosphere has really become worse in the last two years for a solution of this question. In South Africa, undoubtedly, it has become worse. That is due partly to the visit of Mr. Sastri and his speeches in various parts of the Empire, to which I do not wish to refer with any particularity. The Prime Minister of Canada has said what the effect of the visit has been in Canada, and in South Africa it has undoubtedly emphasized the difficulties that existed before. That was one of the reasons why I thought it might not be wise for Mr. Sastri to come to South Africa. Our difficulties are great enough as they are.

## SOUTH AFRICAN ATTITUDE TO INDIAN PROBLEM IN KENYA

There was another circumstance which has affected the attitude and the atmosphere in South Africa very considerably, and that is the Kenya question. There is no doubt that in South Africa a profound sympathy was stirred up for Kenya. Here you have a very small British community, a handful of settlers, who find themselves pitted against the mighty Empire of India, who find themselves against overwhelming forces, and who, although they are the most loyal community in the British Empire, consisting mostly of ex-Army men, had in the end to go to the length of almost threatening force in order to maintain their position. The sympathy that was aroused and stirred for Kenya in South Africa has had a very serious repercussion there on the Indian question as a whole. I have no fault whatever to find with the attitude of either the Colonial Office or the India Office here. I have nothing but praise for the way they handled this very difficult situation, and the settlement that was come to was, I think, a wise compromise, and so far as my influence went I used it with the people of Kenya to get them to accept the settlement, as they have accepted it. But I must say, quite frankly, that I have been very much perturbed over

the attitude adopted by the Indian Government in this matter. They pressed the case against Kenya in a way which seemed to me to exceed the limits of prudence and wisdom, and when the settlement was ultimately made language was used in regard to it which I think would certainly not help the case of loyalty either in India or anywhere else in the Empire. The whole incident, as I say, has had a very bad effect in South Africa.

#### POSITION IN SOUTH AFRICA ITSELF

The difficulties from the African point of view are very great. Sir Tej has said—and quite rightly—that the majority of the population of the British Empire are coloured. That is so. But let me make this remark: all through the very able and moderate argument of Sir Tej he referred to this colour question and the indignity which was either openly or by inference inflicted on those British subjects who have colour. Well, I wish to say that, so far as we in South Africa are concerned, it is not a question of colour, it is a different principle that is involved.

#### QUESTION NOT ONE OF COLOUR BUT OF ECONOMIC COMPETITION

I think that every thinking man in South Africa takes the attitude, not that the Indian is inferior to us because of his colour or on any other ground—he may be our superior: it is the ease of a small civilization, a small community, finding itself in danger of being overwhelmed by a much older and more powerful civilization and it is the economic competition from people who have entirely different standards and viewpoints from ourselves. From the African point of view, what is the real difficulty? You have a continent inhabited by 100 million blacks, where a few small white communities have settled down as the pioneers of European civilization. You cannot blame these pioneers, these very small communities, in South Africa and in Central Africa if they put up every possible fight for the civilization which they started, their own European civilization. They are not there to foster Indian civilization, they are there to foster Western civilization, and they regard as a very serious matter anything that menaces their position, which is already endangered by the many difficulties which surround them in Africa. In south Africa, our position in a nutshell is as follows: In the Union, we have a native population of over 6 million; we have a white population of over 1½ million; we have an Indian population of something like 160,000, mostly confined to one Province, to the most British Province in the Union, the Province of Natal.

#### PARTICULARLY IN NATAL

Mr. Sastri, in one of his somewhat outrageous statements, referred to this as a Boer Empire, an empire which is swamped by Boer ideals. Well, the fact is that the Indian difficulties have mostly arisen, and continue to grow, in a part of South Africa where there are almost no Boers at all, in an almost purely British community; but you have in this Province of Natal a majority of Indians and a minority of British settlers, and, whatever the mistakes of the past may have been, the grandchildren of to-day do not plead guilty to the errors of their ancestors and they want to right the situation and safeguard the future for themselves and their children.

#### SUFFRAGE QUALIFICATIONS IN SOUTH AFRICAN PROVINCES

What is the position? In the Cape of Good Hope and the Cape Province we have a franchise, a property and income and literary franchise, and in that Province the Indians are on exactly the same footing and have the same fran-

## SESSIONAL PAPER No. 37a

chise as the whites; no difference is made. But in the other three Provinces of the Union we have a manhood suffrage. In the two Provinces of the interior, the Transvaal and the Free State, that franchise was laid down by the British Government, and not by ourselves. When we received a Constitution after the Boer War, many years ago, this Constitution contained manhood suffrage, and that has remained the state of affairs up to to-day, and will probably remain the state of affairs for a long time. The tendencies in South Africa, just as elsewhere, are all democratic. You cannot go back on that manhood suffrage. Once it has come, you will probably pass on from manhood suffrage to universal suffrage. That was the act of the British Government, and not of the people of South Africa.

## EXTENSION OF FRANCHISE TO INDIANS IS IMPOSSIBLE

How are you going to work that in with an Indian franchise? If an Indian franchise were given, it has to be identical; no differentiation would be allowed by Indian public opinion—and quite rightly. Well, the result would be that in Natal, certainly, you would at once have an Indian majority among the voters. But our difficulty is still greater. You have a majority of blacks in the Union, and, if there is to be an equal manhood suffrage over the Union, the whites would be swamped by the blacks; you cannot make a distinction between Indians and Africans; you would be impelled by the inevitable force of logic to go the whole hog, and the result would be that not only would the whites be swamped in Natal by the Indians, but the whites would be swamped all over South Africa by the blacks, and the whole position for which we have striven for 200 years or more now would be given up. So far as South Africa is concerned, therefore, it is a question of impossibility. Sir Tej and his colleagues say, quite rightly, that for India it is a question of dignity. For South Africa, for white South Africa, it is not a question of dignity, but a question of existence, and no Government could for a moment either tamper with this position or do anything to meet the Indian point of view.

## 1921 RESOLUTION A MISTAKE

That is why I think the resolution passed in 1921 was a mistake. I thought it then, I still think it, a great mistake. We got on the wrong road there. For the first time we passed a resolution through this Conference by a majority. It has never been done before and I do hope it will never occur again. Our procedure in this Conference has been by way of unanimity. If we cannot convince each other we agree to differ and to let the matter stand over. But, for once, we departed from that most salutary principle, which I consider fundamental to the whole Empire, and we passed that resolution by a majority. I had to stand out. But that has made things worse in South Africa. South Africa now certainly sees that she has to stand to her guns much more resolutely than she would have done otherwise. I think we made a mistake in 1921, and that is why I suggested the other alternative consideration of this subject.

## POSSESSION OF BRITISH CITIZENSHIP DOES NOT IMPLY RIGHT TO FRANCHISE

Sir Tej said that I was subtle, that my memorandum\* was a subtle one. I am not subtle, and my memorandum, I thought was a truism. All that I said was this. There is one British citizenship over the whole Empire, and there should be; that is something solid and enduring; but we must not place a wrong interpretation upon that; we must not derive from the one British citizenship

---

\*See page 138.

rights of Franchise, because that would be a profound mistake. The attitude has been that Franchise does not depend upon British citizenship. It is only in India that this position is not understood. Indians go the length of deriving from their British citizenship the further notion of equal Franchise rights too, and they claim that they may go from India to any other part and enjoy the same Franchise rights as the other portions of the Empire. I think that is a wrong conception. It is wrong not only as regards India, but as regards every part of the Empire. I do not think that an Australian for instance, should come to South Africa and claim the Franchise there as a matter of course. He is a British subject, and on that footing we are equal in the eye of the law, but, when it comes to the exercise of political Franchise rights, I think that there is a great difference and distinction and we should recognise that; and where a distinction is carried into actual practice, as it is in South Africa, it should not be looked upon as an indignity, as a reflection on the citizens of any Dominion, including India, who come to us and who do not get these rights. That is really all I wish to say about this matter.

#### INDIA CANNOT MAKE QUESTION ONE OF FOREIGN POLICY

I noticed in Sir Tej's statement a remark which almost looked like a threat: that if India fails in forcing on us the view which she holds strongly, then she may be compelled to make of it a question of foreign policy. Well, I would say this, you cannot have it both ways. As long as it is a matter of what are the rights of a British subject, it is not a matter of foreign policy; it is a matter entirely domestic to the British Empire. If it becomes a question of foreign policy, then Indians cannot claim on the ground of their British citizenship any more the recognition of any particular rights. Once they appeal to a tribunal, whether it be the League of Nations or whatever it be, outside the British Empire, they can no longer use as an argument the common British citizenship. I want to keep it there. I want it to be recognized that you must not drive it too far, and you must not derive from that citizenship claims which you cannot uphold.

#### COMMENT ON SPEECH OF MAHARAJAH OF ALWAR

Let me just say in this regard to what fell from the Maharajah. He said that, if we do not invite him, that he will invite himself.

The MAHARAJAH OF ALWAR: I did not quite say that.

GENERAL SMUTS: Let me say this, Maharajah. Nobody would be more welcome in South Africa than you would be, and I would welcome nothing more than that you should come as a great representative of India to look into conditions in South Africa yourself, convince yourself of the situation there, and convince yourself also that, apart from the far-reaching political difficulties we have, our fundamental attitude towards our Indian fellow-citizens is one of justice and fair play. I do not think that our Indian fellow-subjects in South Africa can complain of injustice. It is just the opposite. They have prospered exceedingly in South Africa. People who have come there as coolies, people who have come there as members of the depressed classes in India, have prospered. Their children have been to school; they have been educated, and their children and grandchildren to-day are many of them men of great wealth.

I noticed the other day that the Reverend Mr. Andrews, who is a great friend of the Indian cause in South Africa, publicly advised Indians in South Africa not to go back to India. The Government of South Africa actually pay for their tickets, give them pocket money and other inducements in order voluntarily to return to India, and thousands avail themselves of that policy and

## SESSIONAL PAPER No. 37a

return to India. That gentleman, who is a great protagonist of the Indian cause, has publicly advised Indians not to fall in with that policy. He says: "You will be worse off in India." I quote this to show that there is no unfairness, no injustice to our fellow-citizens in India; but, when they come forward and make claims which, politically, we cannot possibly recognize, our attitude of friendliness will worsen and the position as regards them will become very difficult and complicated.

**THE MAHARAJAH OF ALWAR:** I should just like to get my mind a little more clear on one point, and that is with regard to settlers in Natal who have built their houses, invested their money and spent their money there. What would you propose about them?

**GENERAL SMUTS:** They have all the rights, barring the rights of voting for Parliament and Provincial Councils, that any white citizens in South Africa have. Our law draws no distinction whatever. It is only political rights that are in question. There, as I have explained to you, we are up against a stone wall and we cannot get over it.

## STATEMENT BY THE MINISTER OF EXTERNAL AFFAIRS, IRISH FREE STATE

### SYMPATHY OF IRISH FREE STATE WITH INDIAN CLAIMS

**MR. FITZGERALD:** Prime Minister, in our country I do not need to say we have no racial distinctions at all. Indians in Ireland have the same position as Englishmen or South Africans. It seems to me that this matter falls more or less into two classes. There are the Indians in the Dominions and the Indians in the Colonies and mandated territories, etc. Now we recognize the Dominions as independent Sovereign countries, having a perfect right to look after their own affairs, and we really have no right to interfere there, and in the mandated territories and Protectorates they are controlled by the British Government and we have no responsibility. So all that I can do really is to give an opinion. We have no responsibility in the matter; but, if we had responsibility, we should have to protest very strongly against any racial distinctions being made. We who are not Anglo-Saxons have suffered a good deal in the past from being treated as an inferior race. Now the Indian representatives here are not on an equality with the rest of us, because they are not really here in a representative capacity; they are not really sent by an independent Indian Government, and they cannot really be regarded as equal with the rest of us. If I were an Indian, putting myself in their position, I would recognize that this hypersensitiveness about their treatment outside of India arises really from the fact that they have not, so far, reached the degree of self-government that the rest of us have reached. With regard to Indians in the Protectorates and so on, the Government which is primarily responsible for those places being the Government which is also responsible for India, it seems to us unjust that there should be any distinction drawn between Indians and other British subjects in those places.

### PROGRESS TOWARDS SELF-GOVERNMENT ONLY SOLUTION

At the same time it seems to me that the only solution of this trouble, which comes from racial sensitiveness, is for Indians to be in a position to make real reciprocal arrangements and to make bargain for bargain. The only way that this Indian trouble is really going to be solved is for that progress towards self-government—whatever form of self-government they consider suitable for themselves—to be hastened with all speed so, as to avoid what Sir Tej

and the Maharajah indicated—revolutionary methods taking the place of evolutionary methods. We in our country must necessarily sympathize wholeheartedly with the Indians both in their protests against their inferior race treatment and in their feelings as to the freedom of their country. We also recognize quite plainly here that we have no right to dictate to the other Dominions as to what they do in their own areas. That is all I have to say, Prime Minister.

## STATEMENT BY THE PRIME MINISTER OF NEWFOUNDLAND

### TRIBUTE TO PRESENTATION OF CASE FOR INDIA

Mr. WARREN: I must add my congratulations to the Indian Delegation upon the eloquence and force of the speeches they have made.

### NO DISABILITIES IN NEWFOUNDLAND

As far as Newfoundland is concerned, we have no distinction whatever. As long as an Indian is a British subject he can vote in Newfoundland in the same way as an Australian, Canadian, or New Zealander, or anybody else. We have no restriction on immigration and I may say that, if an Indian is not a British subject, the mere fact that he is an Indian is no bar to his becoming naturalized and obtaining the vote in that way in Newfoundland. I do not want to express any opinion upon the internal affairs of any other sister Dominion.

## STATEMENT BY SIR TEJ BAHADUR SAPRU

### APPRECIATION OF RECEPTION OF PROPOSALS

Sir TEJ BAHADUR SAPRU: Prime Minister, I must tell you, and through you your colleagues in His Majesty's Government, and the Dominion Prime Ministers that I could not have hoped to have had a better hearing here. Therefore my thanks are due to one and all of you, even though it may not be that I see eye to eye with you in some of your remarks.

### COMMENTS ON STATEMENT OF SECRETARY OF STATE FOR THE COLONIES

I will first of all refer to the speech delivered this morning by His Grace the Duke of Devonshire. I listened with deep interest to his speech, and let me express to him my thanks for the manner in which he has expressed sympathy with our general aspirations in this matter. His Grace was good enough to say that he did not want to mislead India in regard to Kenya, and, therefore, he spoke frankly. I hope His Grace will pardon me if I also desire to be equally frank in giving expression to our position. I did not expect at any moment during the last few days that I have been working over this question that I would go back with the Kenya decision reversed. That was not what I was aiming at; but I want to make it abundantly plain that I do not wish the substance of my proposition to be affected. The language of the resolution is a matter for settlement; but it is of the very essence of that resolution that Kenya must come in. Secondly, I want to explain that, while His Grace has said that His Majesty's Government are not prepared to accept

## SESSIONAL PAPER No. 37a

the resolution in regard to Kenya, my country will refuse to accept that decision as final. Thirdly, I will make it plain that the Committee I have proposed should, in conferring with the Colonial Office, have the widest scope—that is to say, it must discuss not only questions affecting other Colonies, but also those relating to Kenya: otherwise I do not see that you can possibly satisfy my countrymen.

This is all I wanted to say with regard to the Committee and its dealings with the Colonial Office here. Well, I will now pass on from the Duke of Devonshire and the Colonial Office to the Dominion Ministers.

## COMMENTS ON STATEMENT OF PRIME MINISTER OF CANADA

I have listened with very great interest to the speech of Mr. Mackenzie King, and must thank him heartily for supporting me and accepting the substance of my proposal.

## INTERPRETATION OF RESOLUTION OF 1921 CONFERENCE

There are just one or two words with regard to his speech that I would like to say. He referred to his view, or rather the construction put in his Parliament on the Resolution of 1921, and he read out a passage from Mr. Meighen's speech. Now let me tell him that we are here sitting, not as lawyers, nor are we sitting in a Court of Law; our functions are quite different. I suppose that we would claim that the functions of a statesman are very much higher than those of a lawyer, although I myself happen to be associated with that noble profession. Now that Resolution of 1921 I believe was not drafted by a conveyancing lawyer, it was probably drafted by someone of the statesmen around this table or by someone similar to a statesman, and I would like you and your Parliament to approach it from the point of view of the statesman. I know that as a Prime Minister and as a party politician it may be safe to rely on certain phrases, but let me tell him that it would be a great mistake to dispose of those words "it is desirable" as not morally binding upon him—I do not care whether they are legally binding upon him or not.

## HOPES FOR GOOD RESULT FROM APPOINTMENT OF COMMITTEE

I am inspired by the hope, and particularly by the manner in which Mr. King has spoken, that the result of the conference of the Committee which we propose to send to Canada with the Committee going to be appointed there to consider the questions of franchise cannot but lead to satisfactory results. I will not anticipate the verdict of the conference of the two Committees, which Mr. King has to a certain extent attempted to do. I will leave it entirely to the hands of the Committee to come to their own conclusions, and then will be the time for us to discuss how far we are in agreement or how far we are separated. But I recognize his spirit of support and of sympathy with me, and I appreciate that. I do thank you, Mr. Mackenzie King, for the spirit in which you have spoken this morning.

COMMENTS ON STATEMENT OF PRIME MINISTER OF THE COMMONWEALTH  
OF AUSTRALIA

From Mr. Mackenzie King I shall pass on to Mr. Bruce, and let me express my unreserved admiration for the manner in which he has spoken this morning, and the tribute he has paid to my countrymen and our civilization. I note that he considers it unnecessary for my Government to send any Committee to his country because he thinks the problem is such that it may be

settled without any discussion. Well, that is encouraging to me, but I do venture to express a hope that, if we do decide to send a Committee just to place our case before him and his Government, he will not refuse to accept that Committee. We do not want to send a Committee to create any agitation in his country—or for the matter of that any agitation in any country—and I can absolutely feel sure that that is not what is at the back of my mind; but, if it is necessary for us to explain our position to you and to help you in the problem, for Heaven's sake do not refuse to accept a Committee like that. We want simply to help you, and, if without receiving a Committee from my Government and my country you can solve the problem, so much the better for you, so much the better for us, and so much the more creditable to you and to your Government.

#### COMMENTS ON STATEMENT OF PRIME MINISTER OF NEW ZEALAND

Well, my thanks are also due to Mr. Massey. I hope Mr. Massey will recognize that in my speech of Wednesday I thanked him. I very much appreciate his reference to the services of India during the war, and I do sincerely hope that such grievances as there may be in his country will receive sympathetic treatment at his hands. I do hope that he will accept the substance of my Resolution. We wish to help him in every possible way; we do not want to harass him in his own country or in his Government.

#### COMMENTS ON STATEMENT OF PRIME MINISTER OF THE UNION OF SOUTH AFRICA

Now from Mr. Massey I propose to pass to General Smuts. I am sorry to miss him here, but I will say he has never replied to the points I raised. He referred to my description of him as subtle: well, if he objects to that I will withdraw it, but I will say that his present speech is remarkably illusory and evasive.

I raised questions with regard to specific grievances, relating to residence, acquisition of land, and trading licences in his country, and I find no expression of opinion upon those questions. He then said my Resolution had nothing to do with him.

It has primarily to do with him. I made it abundantly plain in the course of my speech that I did not make an appeal to him on the basis of the resolution of 1921, but that my appeal was made to him independently of that resolution and that I wanted him to join hands with me in investigating the facts and in trying to devise some methods of solving this problem, which he probably thinks is insoluble, but which does not appear to me to be insoluble. Again, he referred to Mr. Sastri, and to the prejudice he has caused. I have already said what I felt about Mr. Sastri, and I do not want to say more. If Mr. Sastri's fault was that he pleaded for his countrymen in the Dominions, then that is a fault which can reasonably be found with the 320 millions of his countrymen.

#### MEANING OF BRITISH CITIZENSHIP

Now I will come to one particular portion of the speech which struck me as based on an entire misconception, legal and constitutional. That is the question of citizenship. He said that India was the only country which probably claimed all political rights merely from the fact that Indians were British citizens. Let me warn him that India is not the only country which holds that view. There are other countries which hold those views. Well, he absolutely confuses the territorial law with personal law; in other words, his position really is this, that, if in my own country I did not enjoy full rights of citizenship, when I go to his country I must be under a disability. I will put to

## SESSIONAL PAPER No. 37a

General Smuts, what would have happened if an Irishman, before the new constitution came into force, had gone from Ireland and had settled down in Natal or any other part there and was told: "Because you are not a free nation within your own borders, you dare not claim those rights, although you are qualified according to our Franchise Law to claim them"? There is an essential confusion in the position which General Smuts takes. Really the fact of the matter is, that you cannot, according to modern law of citizenship and according to the latest development of thought on this subject, have two kinds of citizenship in the same Empire, a higher and a lower.

When I go to your country, and I do satisfy the requirements of the law of franchise, you have no right to tell me that because I am an Indian subject of His Majesty I shall not be entitled to exercise my Parliamentary rights. Therein lies the whole position General Smuts has taken, and, with regard to the disability of Indians in the purchase of townlands and in respect of trade licences and other things, General Smuts, as I have said before, had not a word to say in his speech this morning.

## DEPRECATES RESCINDING OF 1921 RESOLUTION

Therefore, the position remains this, that while I receive support, substantial and general, from His Majesty's Government and from all the Dominion Prime Ministers, I have received no support from General Smuts.

On the contrary, he has expressed a desire that the resolution of 1921 should be repealed. I hope for the reputation of this Conference, for the great reputation of the Dominion Prime Ministers and for the reputation of His Majesty's Government, that nothing of the kind will be done, and, though you may tell my countrymen that the problem is undoubtedly a difficult one, I request you also to say that you are trying to discover means of solving it. If you will do that you will change our attitude in regard to great Imperial questions.

## POSITION OF INDIANS ALREADY IN SOUTH AFRICA

There is only one more remark I will make in regard to General Smuts' speech. He referred to the desire for repatriation and to the advice of Mr. Andrews. Let me tell you that, if anyone understands Mr. Andrews or knows him intimately, I do. There are hundreds and thousands of my countrymen in South Africa who cannot even speak their mother tongue. They have settled there, their fathers have settled there, and it is very easy to understand how difficult they will find it to leave a land in which they and their fathers and grandfathers have lived. It is for those reasons that Mr. Andrews advised, and it is for those reasons that I should advise them, not to leave that country, but to fight their battles until their position is recognized some day or other as that of equal citizens.

## MEANING OF ALLUSION TO "FOREIGN POLICY"

General Smuts said that as a British subject I could not claim that this problem would pass from the stage of a domestic problem to that of a foreign problem. He misunderstood me. It is not difficult to foresee a stage being reached when even the Government of India, whom he has attacked over its attitude in regard to Kenya, but which I must admire for the very same attitude which it did take, may find it necessary to appeal to His Majesty's Government, and to say, that one part of the Empire is standing against the other, and it is for you, His Majesty's Government, now to treat this problem inside your own Commonwealth as you would deal with a problem of foreign policy. That

is what I meant, and I do anticipate a stage like that being reached at no distant date in so far as the relation of India with South Africa is concerned.

COMMENT ON STATEMENTS OF MINISTER OF EXTERNAL AFFAIRS, IRISH FREE STATE,  
AND OF PRIME MINISTER OF NEWFOUNDLAND

Lastly, I will pass on to what my friend, Mr. Desmond Fitzgerald, said. No one could be more happy or contented than myself if he could help me to get self-government for India to-day, but that is a matter between us and His Majesty's Government. I see no reason, however, why until we get complete self-government in India we should be treated on a lower footing in King George's Empire outside India. We have a strong sentiment on that point, and there can be no weakening in that sentiment so far as I am concerned and so far as my fellow-countrymen are concerned. There is no one who believes more strongly than I do, or is working harder than I am, to win self-government for India, and, God willing, I do hope to win it notwithstanding any doubts that may be entertained by members of His Majesty's Government. But I will not allow those considerations to affect my position in regard to the status of Indians overseas. Suppose we get Dominion self-government to-morrow in India, the problem will still have to be faced. Therefore let us not mix up the two. I should be very glad indeed if the Conference would endorse a resolution in favour of self-government, but I want them to endorse a resolution, also in regard to Indians and their position overseas. I must also thank Mr. Warren for the support he has given me.

WISHES TO PRESS PROPOSAL FOR RESOLUTION

There is only one word that remains for me to say. When I moved that resolution I perhaps did not make it quite clear that I was moving it. I merely said: "My resolution is as follows." I wish the Conference to understand that I definitely moved that resolution. I have already said I am open to argument in regard to the phraseology of it so long as the substance remains and so long as Kenya finds a place in it. That is a matter which is between me and the Colonial Office and could be sent up to you later on, but I do wish to move that resolution, and I beg your support; at any rate I am entitled to ask for the support of the general idea embodied in that resolution. I do wish it to be understood that, so far as I am concerned, I stand by the resolution of 1921 and by the principle of equality. I do not wish to put any larger interpretation on the resolution than is justified or is just, but do not let me give you the impression that there is any weakening on my part so far as the resolution of 1921 is concerned or so far as the supplementary resolution which I had the honour to put before you on Wednesday last is concerned. I thank you, Prime Minister, and all the other Prime Ministers.

OCTOBER 31, 1923

STATEMENT BY THE SECRETARY OF STATE FOR INDIA, AS HEAD  
OF THE INDIAN DELEGATION

THANKS FOR RECEPTION OF PROPOSAL OF INDIAN DELEGATION

LORD PEEL: I desire to thank most sincerely the Members of the Conference for the very cordial and sympathetic way in which they have received our proposals about the position of Indians in the Empire. I thank them also for the high place that they have assigned to this question among Empire problems. I thank them for the complete grasp that they have displayed of this difficult

## SESSIONAL PAPER No. 37a

business, not as an isolated or local or Indian question, but in its Imperial aspect. I am grateful to them for the complete frankness and fulness with which they have explained the views of those they represent.

## SUMMARY OF RESULTS OF DISCUSSION

In opening this discussion, I explained that the intensity of the feeling aroused in India was due to the opinion widely held there, that the disabilities of Indians were based on distinction of colour, and were badges of racial inferiority. I did not associate myself with that view. I believe it to be mistaken. The course of this discussion has shown that I was amply justified. Any impartial person reviewing the statements made will find it impossible to prove that any general ban is maintained against Indians in the Empire or that throughout the Empire they are placed in an inferior status; or again, that such disabilities as they may suffer from are based on colour or racial grounds.

The Duke of Devonshire has shown that in the West Indian Colonies—British Guiana, Jamaica, Trinidad—Indians enjoy the same rights as other British subjects. The same, I believe, is true in Ceylon and Mauritius.

Mr. Mackenzie King has told us that in eight out of nine provinces in Canada Indians enjoy full rights of citizenship. If in one province there are exceptions to the general rule, these exceptions are based, not on the colour distinction, but on rather complicated social and political considerations.

Mr. Bruce has told us that representatives of every shade of political thought in Australia have shown sympathy with the claim that lawfully domiciled Indians should enjoy full citizen rights. He believes that Australian public opinion is ready to welcome, as far as the position of domiciled Indians is concerned, any measure which is conceived in the interests of the Empire as a whole.

General Smuts said, "It is not a question of colour; it is a different principle. . . . It is the case of a small civilization, a small community, finding itself in danger of being overwhelmed by a much older and more powerful civilization; it is the economic competition from people who have entirely different standards and viewpoints from ourselves."

The same sentiments have been expressed by the representatives of the other Dominions, and notably by Mr. Massey. These opinions, so remarkably similar in tone, of this great body of Empire statesmen, must surely bring conviction and comfort to any Indian whose feelings may have been injured or whose sense of dignity may have been impaired by a contrary view. Let their suspicions and their doubts be allayed by these declarations of the Empire leaders, sent out to the world from this Conference.

## NOT DESIRABLE TO PRESS RESOLUTION

Let me now consider whether any action should be taken on the definite proposals placed before the Conference by my colleague, Sir Tej Saprú. He was not concerned, nor was the Delegation concerned, so much with his concrete proposals as with the attitude that would be taken up by the Prime Ministers in their different Dominions on this subject. I consider that the position of the Indians within the Empire has been most notably advanced in this Conference. Mr. Bruce has stated that he thinks that further enquiry is unnecessary, but that, on his return to Australia, he will consult with his colleagues and see what action can be taken. Mr. Mackenzie King has reaffirmed his statement about the revision of the Federal Law, and he is quite willing, if it is thought desirable to send a Delegation to Canada, to appoint a group to meet and confer with such Delegation. I rather gather, however, that the passing of this particular

resolution might not necessarily assist in obtaining the result which we desire. General Smuts, I am afraid, will not be able to support the resolution. General Smuts, it is true, did not support the resolution of 1921. I should like to say that I do not rest my case entirely on the resolution. If there had been no resolution of 1921, this problem would still be urgent and pressing. The resolution of 1921 stands, but I rest my case not merely upon a formula but upon the broad equities of the case and an appeal for justice and Imperial unity. I am quite aware of the difficulties of South Africa, but I hope General Smuts, when he returns, while alive to his own difficulties, will retain a vivid consciousness of our own.

It has been said that the Empire Conference should be unanimous in its resolutions. I think that, if this resolution is pressed, some members might be disposed not to vote for it; not because they do not sympathize with the end to be attained, but because they think this particular means is either unnecessary or perhaps not desirable. Such a vote, therefore, might create a totally false impression in India of the real situation. I ask my friend, Sir Tej Sapru, whether he might not consider it advisable not to press his resolution. But I am very anxious that it should be made quite plain in India what are the results that have been attained. I think it would be most valuable if a short note could be added to the Report of the Conference showing clearly what are the practical results of this discussion and what India has gained.

#### STATEMENT BY HIS HIGHNESS THE MAHARAJAH OF ALWAR

The MAHARAJAH OF ALWAR: In this world of ours a great deal, if not everything, depends on how far, and how, we are able to control our human nature and in what channels we can guide it in order to achieve successful results. It is easy enough to see the dark patches, to brood over difficulties, to exaggerate and enlarge upon them, and finally to be overcome with remorse, repentance or despair.

But history teaches us the great lesson that the world advances and does not recede, when, without deluding ourselves, we are able to buckle our determination and throw our vision beyond the clouds on to the silver lining. Humanity, after all, behind which shines the radiance of the Godhead, is not so black as our imaginations and our unfulfilled desires and hopes are likely sometimes to paint it. Stone upon stone can steadily be built into an edifice with a single-hearted purpose, with the help of cement of our goodwill and toleration.

#### OBJECTS OF CONFERENCE

I conceive that our Conference of the members of the British Empire has assembled in order to shed light over the dark patches, to exercise our determination in subscribing our quota to solve difficult problems, and, instead of hypnotizing ourselves with pessimism, to enable us to look ahead to the dawn which must invariably follow the night.

#### ACKNOWLEDGMENTS

India did not figure in the Agenda of our Conference when we assembled around this table, but, as an Indian, I thank the Prime Minister and the British Government for having agreed to our suggestion to set aside a day for the discussion of the important problem of Indians overseas. We owe acknowledgments for letting the discussion extend to a much longer time than originally conceived, in order to give everyone an opportunity to unburden their mind and to put forward their points of view.

## SESSIONAL PAPER No. 37a

## SUMMARY OF PREVIOUS DISCUSSION, AND THANKS TO PRIME MINISTERS AND OTHER SPEAKERS

In my own personal capacity I said at the commencement of the Conference that rightly or wrongly—and I believe rightly—I came with the determination of giving co-operation and goodwill, and I am happy to be able to acknowledge to-day that during our discussions we have found the full measure of it.

I thank the Prime Minister of Canada for having given a very welcome lead, in viewing our problem, relating to his Dominion, from a broad point of view.

On behalf of my Order I thank Mr. Bruce for his sympathy, and the Prime Ministers of New Zealand and of Newfoundland for the very warm and cordial support of India as related to their Dominions.

From Ireland came a very warm-hearted response towards their fellow-citizens of the Empire in my country.

I hope I may even thank General Smuts for such kind references as he has made for my countrymen, and I thank him for extending to me personally an invitation to come to South Africa to see for myself the problems and difficulties that exist. I sincerely hope that I may be able to accept his very kind invitation and I almost wish I was going back with him to his country. But at the present moment this is not feasible; but that invitation will certainly not pass into oblivion, but will remain in a tender corner of my heart, and I hope for the sake of my country I may be able to respond to it at no great distant date. I make it clear, however, that I should like to come in my personal capacity and not as a representative of my country or of my Order, for that would be the best way to enhance my own personal knowledge of the difficulties that exist and to understand the problems that exist in that country which are, perhaps, the main sources of the whole question having come up so prominently.

General Smuts will appreciate, however, that, although I may deprive myself of coming as a representative, I shall still come as an Indian and as one in whose heart these questions undoubtedly rankle, but who, for his personal satisfaction—and if he can be of any use and is desired to be of any use to his country—will be able to do so, while at the same time keeping in mind the broader view of trying fully to appreciate the difficulties that exist on the different sides.

## POSITION OF INDIANS IN CANADA

Now what is the position of Indians overseas as we see it to-day on the bright side, if you look? Mr. Mackenzie King has told us that in Canada there are eight provinces in which no legal disability exists as regards Indians, and where, I understand, they have equal rights of franchise.

Mr. MACKENZIE KING: There are nine provinces. They have no legal disabilities; there is a political disability in one; that is all.

## IN AUSTRALIA

The MAHARAJAH OF ALWAR: In Australia, although the domiciled Indians amount only to about 2,000, we have the promise of the Australian Premier that they will be treated sympathetically and that this question has been the subject of considerable public discussion and the representatives of every shade of political thought have shown sympathy with the claim that lawfully domiciled Indians should enjoy full citizen rights and finally that, so far as the position of Indians domiciled in Australia is concerned, any measure which is conceived in the interests of the Empire as a whole would be welcomed.

## IN NEW ZEALAND

In New Zealand the number of Indians is small, but the spirit which recognizes no difference of race, colour or creed is indeed one that should inspire not only our admiration, but also our gratitude, and the Prime Minister of New Zealand has told us that they give the Indian residents in New Zealand practically the same privileges which are enjoyed by people of the Anglo-Saxon race, and that there is practically no difference between them.

It is even a happy augury to hear words come out of the mouth of this responsible Statesman that the Aboriginal Tribes in New Zealand are in exactly the same position as the European residents, and that they have the same privileges in parliamentary and local affairs.

## IN NEWFOUNDLAND

In Newfoundland the numbers of Indians are smaller still, but we are glad to see the same spirit prevailing there as in New Zealand.

## IN IRISH FREE STATE

In Ireland the problem does not arise, but we nevertheless appreciate and welcome the sentiments on behalf of its Representatives.

## IN SOUTH AFRICA

In South Africa, General Smuts has told us that, in the Cape of Good Hope and the Cape Province, Indians are on exactly the same footing as the Whites and have a franchise. General Smuts has hinted to us that in the Transvaal and the Free State the franchise was not laid down by South Africa, but by the British Government.

## IN COLONIES, PROTECTORATES, &amp;C.

And now after the Dominions I come to the Colonies. His Grace the Colonial Secretary has told us that, so far as British Colonies and Protectorates are concerned, in the West Indian Colonies British Indians are under no political or legal disability. This includes British Guiana, Trinidad and Jamaica where there is a considerable Indian population. In Ceylon, qualified British Indians will be eligible for the franchise in the same way as other British subjects. In Mauritius there is distinction between Indian and other British subjects as regards eligibility for the franchise.

In East Africa there is no restriction on the number or race of the unofficial members who may be nominated on the Executive Councils of Kenya or Uganda.

## EXISTING DIFFICULTIES

Now, Gentlemen, I have to say this, that I know some people who read what I have said so far may consider that I have spoken in empty platitudes; and that in doing so I am seeking favours or honour. How for that vision is from my mind it is not necessary to state, but, if looking on the bright side of things is wrong in appreciating the facts that are already before us, then I gladly stand open to the charge and have no bones of contention to pick, but the primary reason why I have taken your time in emphasizing these facts is in order to condense what I have already seen, that the whole of the British Empire is not such a dark patch for our countrymen as some would like to believe, and that there is much ground to improve the situation by showing our goodwill and co-operation. This does not mean that I do not

SESSIONAL PAPER No. 37a

appreciate the difficulties where they lie—and they do lie. It is not difficult for human nature to bite or to sting, but those are qualities which do not appeal to me in such an atmosphere as this.

The difficulties that exist with regard to Indians overseas exist I know—and all know—in British Columbia in Canada, in Natal in South Africa, and have reached their climax in Kenya. In British Columbia, Mr. Mackenzie King has told us, very frankly and candidly, that it is a question of Provincial franchise where the Federal Franchise Act supports it which places Indians in a position of disability. Mr. Mackenzie King has said that his action when viewed in India would be very much a matter of the spirit of interpretation—where he is entirely right—for it is the spirit in which we take such things that the problems come before us.

In British Columbia we are told that the problem is not a racial one, but an economic one, and that Mr. Mackenzie King welcomes the proposition made by Sir Tej for a Committee to go to Canada to discuss this question with his Government.

The responsible statesmen of Canada have been good enough to say that they welcomed Mr. Sastri and gave him full opportunity to speak and confer with any persons he might wish to do so in order to meet the difficulty, and finally that, when the Federal Law comes up for revision, Canada will take care that Parliament is informed of India's wishes. We sincerely hope that they will pay every favourable consideration to this important point regarding our people.

In Natal, General Smuts has equally candidly explained that if he gave Indians the right to franchise on an equality it could not then be withheld from the native population of South Africa, and would, under the circumstances, flood this portion of the country and demolish the work of the White settlers of 200 years, and this is, indeed, a potent argument and I appreciate the difficulties, but the question as regards Natal, as also of other places where such disabilities exist, does not hinge on the future migrations flooding this country, for, with right understanding, I believe the Government of India's co-operation can be achieved to solve this difficulty, but the question is with regard to Indian settlers who have lived in Natal and who have invested their property and have settled there for several generations. Is it likely that, without the franchise, laws will be passed by those who possess the franchise to oust the Indians from their rightful heritage, since they went to that country under the British flag as peaceful settlers? General Smuts gave the assurance in answer to my question that Indians would have the full rights of citizenship, and the only question concerned with the difficulty was with regard to franchise. I hope that the Prime Minister of South Africa will give this question favourable consideration, not from a local, but from an Imperial point of view, in order to see that no disabilities exist which would hamper the peaceful existence of my countrymen there. It would, indeed, be a useful advance in conciliatory methods if General Smuts could see his way to asking his Parliament to welcome our Committee to go there from India in order to discuss frankly, candidly and, if necessary, quietly, the whole problem as it affects India.

#### KENYA

And now I come to Kenya. I believe, from what I am informed and from what I have seen myself, that no question of Indians overseas agitates their minds and gives them more feeling of racial discrimination and loss of self-respect than Indians in Kenya. This I believe to be mainly due to the fact that, while it has been asserted by previous Imperial Conferences that the Dominions have a right to settle their own populations, Kenya is not a self-

governing Dominion, but is a Colony administered by the British Government. It is to the British Government, therefore, that Indians look to see that their position, which has already become very awkward in Kenya by the minority of white settlers being given a majority in votes, is not further jeopardized and that they are not placed under disabilities by laws being passed by the majority segregating them or eventually ousting them from positions in which they have invested money in the country which, I understand, they have helped to improve for many years back.

I understand—and if I am wrong in my assumption I hope I will be corrected—that His Grace, holding the charge of the Colonial Office at present, has been good enough to agree that the Committee of India would be welcomed to discuss with him the whole problem, and that the entire question will be fully and sympathetically considered by the Imperial Government from the points of view put forward by the Indian Committee. May I thank His Grace and, through him, the British Government, for this assurance, and earnestly hope that the final results will be an advance on the present situation and give cause for my countrymen to be grateful for assistance?

#### PERSONAL POSITION

On this important problem of Indians overseas I have little more to say, but I wish to add this, that my position as a Delegate from India is likely to be misunderstood in some quarters and even in India, and therefore I would like to make it clear.

I have not come here as an elected or selected representative of British India. I have not even been elected or selected by my Brother Princes, or have their mandate.

I think you know that I am not an employee of the British Government, but in accordance with past precedent I have come here as the nominated representative of the Indian Princes and have been invited to work here by the Government of India and the Secretary of State. But, although I carry no mandate for what I say for my Order, I nevertheless happen to be one of them. I am an Indian and I belong to a family who have been loyal and faithful allies of the Crown and its Government. I have, therefore, primarily expressed my own views, but I hope also what I feel to be the views of my Order and my countrymen, or at least some of them.

I have much appreciated the compliment of having been asked to work on this Conference, but, for the sake of my country, I hope that my successor at the next one will be even more fortunate in being elected by my Order to come to this distinguished gathering in consultation, with the approval of the Viceroy and the Secretary of State.

I should welcome indeed if our member for two-thirds of India should be privileged to enjoy the same position, but on this topic I will not attempt to speak as it is outside my purview and because I would be charged with treading on ground on which angels fear to go.

#### CONCLUSION

And now, in conclusion, I will say this. The whole question of Indians overseas is, we are told, in many places, an economic problem; that it is not a racial one, to impress upon anyone the inferiority of any particular race. I, at any rate, welcome that sentiment and I feel, now that this goodwill and co-operation is prevailing on all sides, that the whole of this difficult problem will be set at rest—and the earlier the better—within the domains of possibilities, so that India can turn her mind towards her own domestic problems and work out her salvation to be a loyal and integral part of the British Empire.

## SESSIONAL PAPER No. 37a

In conclusion, may I thank the Dominion Prime Ministers for the words that have fallen from their lips, where one said that he certainly desired to see India go ahead; and that the 1921 Resolution passed by the previous Conference is regarded as a pledge which all concerned seem anxious to fulfil and to uphold?

Prime Minister and Gentlemen, I thank you one and all for having created in this room that favourable atmosphere towards my country, which I hope will soon bear practical and tangible results, not only for the sake of the British Empire, but for the sake of one-fifth of the human race.

Mr. Harvey, in giving his views recently, when Lord Curzon presided, said: "We have preferred settlement to argument." That exactly sums up my conclusion, and I hope that I may be permitted to express my final sentiments. Although it is in poetry, I think the words exactly express my views:—

"What then shall be the guerdon  
(A great and priceless burden)  
Of taut'ning up our Grand Old Empire's Chain?

It shall be for us the Glory  
To prove in full the story  
Our Brotherhood does not exist in vain.

Don't criticize and grumble;  
Don't sneer at every stumble;  
Let each one try and see the other's aim:  
And if at first we fail  
To hear the friendly hail  
Let us bear in mind the birthright of our slain.

Like them we'll pull together—  
Rose and Wattle, Maple, Heather—  
Our own bright Star is rising with the morn;  
Aye, let's sail the ship together  
Thro' storm and stress of weather,  
Onward, ever onward, to the Dawn!"

## STATEMENT BY THE SECRETARY OF STATE FOR THE COLONIES, ON BEHALF OF THE SECRETARY OF STATE FOR HOME AFFAIRS

THE DUKE OF DEVONSHIRE: I regret to say the Home Secretary is unable to be here this afternoon, but, as a statement\* has been circulated to the whole of the Conference which will eventually be published, I would like to make the following observations on his behalf:—

### MEANING OF IMPERIAL NATIONALITY

"This interesting and frank discussion has brought out in high relief a distinctive characteristic of the British Empire or Commonwealth—an essential unity attaining realization in varying and independent methods and practices under a great variety of conditions.

"At the core lies the vital principle of common British nationality on which the representatives of India have justly and eloquently laid great stress, and which finds expression in General Smuts' words: 'The common Kinship is the binding link between the parts of the Empire.'

"It is not inconsistent with this principle to recognize, as it always has been recognized, that every part of the Empire is free to settle its own domestic concerns, including questions as to the rights to be enjoyed by any person or classes

\*See page 138.

of persons within its territory. In considering problems arising out of this right or freedom it is important not to confuse the issue by any ambiguous use of such words as 'citizen' or 'citizenship.' If those words are used, as they rightly may be, as having a local significance and connoting a status or right which it is within the power of any self-governing Dominion to confer on persons within its territory, they should not at the same time be used as though they were almost synonymous with the Imperial conception of nationality.

"Imperial nationality is one and indivisible; local citizenship and the rights and privileges attached thereto may be diverse. If we keep these two conceptions clearly in our minds it ought to be possible, notwithstanding difficulties of detail and practice, to maintain a principle of action consistent alike with Imperial unity and local autonomy."

### STATEMENT BY THE PRIME MINISTER OF GREAT BRITAIN

MR. STANLEY BALDWIN: After what has been said on behalf of the Dominions and by the Duke of Devonshire on behalf of the British Government, I have little to add.

#### RESULT OF INDIAN PROPOSAL AS REGARDS COLONIES AND PROTECTORATES

I should like first of all to read to the Conference a statement which has been drawn up, as the result of informal discussions, since our last meeting. It sets out, for inclusion in the records of the Conference, the result of Sir Tej Sapru's proposal, so far as it relates to the Colonies and Protectorates. The statement is as follows:—

"The Secretary of State for the Colonies, on behalf of His Majesty's Government, cordially accepted the proposal of Sir Tej Bahadur Sapru that there should be full consultation and discussion between the Secretary of State for the Colonies and a Committee appointed by the Government of India upon all questions affecting British Indians domiciled in British Colonies, Protectorates and Mandated Territories. At the same time the Duke was careful to explain that, before decisions were taken as a result of discussion with the Committee, consultations with the local Colonial Governments concerned, and in some cases local enquiry, would be necessary.

"Further, while welcoming the proposal, the Duke of Devonshire reminded the Conference that His Majesty's Government had recently come to certain decisions as to Kenya, which represented in their considered view the very best that could be done in all the circumstances. While he saw no prospect of these decisions being modified he would give careful attention to such representations as the Committee appointed by the Government of India might desire to make to him.

"Sir Tej Bahadur Sapru, while taking note of the above statement of the Duke, desired to make plain that the recent Kenya decisions could not be accepted as final by the people of India."

#### PUBLICATION OF SPEECHES

I am glad to think that, on this occasion, we have been able to arrange for the speeches made at this Table to be published. This constitutes a departure from the procedure at the 1921 Conference, when only the resolution which has been quoted here more than once was made public. We shall, of course, include a brief summary of the proceedings when a report on the work of the Conference comes to be prepared.\*

## HELPFUL NATURE OF DISCUSSION

I hope that the Indian delegation will feel, as I feel, that the discussions we have had on this subject have been most helpful and encouraging. There has not merely been goodwill and an earnest attempt to meet India's wishes so far as varying political and economic circumstances in different parts of the Empire permit, but we can record quite definite results. These are due to the growing sense of partnership among all the many peoples and races who owe common allegiance to the Crown. It is this sense of Partnership which I should like to stress. India's value to the Empire and the Empire's value to India are becoming every day more clearly seen. The British Commonwealth of Nations rests upon no narrow basis. It is the greatest association known to the world of many races bound together ever more intimately by common interests and by mutual desire to help each other. Here at these Conferences we can with full freedom learn each other's problems and each other's point of view, and India can, I am sure, feel that the magnitude of her share in our common partnership, and of her contribution to the common weal, is being realized in increasing measure. I am confident that the members of the Conference who have spoken for India will feel, both from the manner in which their representations have been received and from the actual results achieved, that mutual goodwill can and does help each and all of us to solve our common problems. I think the Conference as a whole can congratulate itself on what has been effected.

## STATEMENT BY SIR TEJ BAHADUR SAPRU

SIR TEJ BAHADUR SAPRU: Before the Conference leaves this very important subject, I desire to take up just two minutes of your time in making my own position quite clear.

## EFFECT OF DISCUSSION ON INDIAN OPINION

I am completely satisfied with the kindness of my colleagues from the Dominions, and I am sure that Indians throughout the Empire will derive new hope and encouragement from their attitude. This, of course, does not apply to South Africa, regarding which country I had my say on Monday last. As regards the Colonial Office, I am very glad to notice that the Committee to be appointed as I suggested is not to be restricted in its scope to certain specified Colonies. To me, as an Indian, it is, of course, disappointing that the Duke, speaking last Monday, saw no prospect of modifying the Kenya decisions, which, as I have already made clear, can never be accepted in India. But his agreement with the principle of my scheme, and his consent to give careful attention to such representations as the Committee may lay before him, inspires me with the hope that the door is not barred, and that the Colonial Office may be shown the way to an acceptable solution. I shall recommend those with whom I have any influence, both in India and elsewhere, to work through this Committee to obtain an amelioration of such conditions as they and every Indian regard as incompatible with our national dignity and with our position as equal subjects in the Empire of our common Sovereign.

## NO NEED TO MOVE FORMAL RESOLUTION

May I here just also refer to the expression of opinion made by Lord Peel to-day with regard to the Resolution that I intended to move on the last

\*See pages 17-20 of Cmd. 1987.

occasion? I thoroughly appreciate the advice that has been given to me to-day by Lord Peel. I have noted with great pleasure the spirit of cordiality shown by my colleagues from all over the Empire, except General Smuts. I take their speeches as very encouraging, and I note that what I wanted really has been achieved, namely, that they recognize the character of the Resolution of 1921, and that they have given me a hope that they would do something material to achieve the end which we have in view, namely, the accomplishment of the principle of equality. Most of them have accepted my suggestions about Committees; Mr. Bruce thinks that he can do without a Committee. As I said on a former occasion, so much the more honourable and creditable to him and to his country. It is because I have this support from all the Dominion Prime Ministers excepting one, that it is unnecessary for me to move my Resolution formally.

#### THANKS TO LORD PEEL

Lastly, will you allow me to say one word about Lord Peel? Throughout the anxious days I have had to spend upon this question within the last two weeks I have received nothing but unreserved support and encouragement from him, and I am sure that, when my countrymen come to know how strongly he has stood by me, they will realize that not only the Government of India and the great Statesman who presides over that country have identified themselves with our national sentiment with regard to this matter, but that the Secretary of State has also done the same. May I thank you, Sir, on behalf of myself and on behalf of those whom I represent? That is all, Sir.

#### Annexe (A)

### POLITICAL STATUS OF BRITISH INDIANS IN THE COLONIES, PROTECTORATES, AND MANDATED TERRITORIES

#### MEMORANDUM PREPARED IN THE COLONIAL OFFICE

##### *West Indies.*

In the *West Indies* British Indians are under no political or legal disability of any kind. They have the same franchise and the same opportunities of becoming members of elective bodies as any other British subjects.

The West Indian colonies in which there is a considerable British Indian population are British Guiana, Trinidad and Jamaica. It may be of interest to add some particulars regarding the franchise in these colonies.

In *British Guiana* the property qualifications for voters are somewhat complicated, and the following may serve as examples. Persons are qualified to be voters for counties if they have an annual income or salary of \$480 or are tenants of a house, or house and land, of an annual rental of \$192. A person is qualified as a voter for a city or town if he possesses a similar income or salary, or is a tenant to the value of \$120. In either case, the payment of \$20 in taxes qualifies. No person is entitled to be registered as a voter unless he can read and write some language.

In *Trinidad* the Legislative Council is at present nominated, but the elective system will be introduced at an early date. A person desirous of being registered as a voter must be able to satisfy the Registration Officer that he or she can understand the English language when spoken, and must possess one of a number of property qualifications. An annual salary of £62 10s., or the payment of £12 10s. for rent, or the occupation of land, or land and house thereon, assessed to taxes at 10s. a year will qualify.

## SESSIONAL PAPER No. 37a

In *Jamaica* the qualification for voters is the receipt of salary or wages of £50, or income of a similar amount combined with the payment of a rental of £10, or the payment of taxes of 10s. on real property or £1 10s. on personal property.

*Eastern Colonies.*

In *Ceylon*, under a revised Constitution about to be issued, qualified British Indians will be eligible for the franchise and for election to the Legislative Council in the same manner as all other British subjects. In addition, they will have the privilege of electing two Indian representatives on a communal basis. The property qualification for the franchise is reasonably low.

In *Mauritius* there is no distinction between British Indians and other British subjects as regards eligibility for the franchise. Moderate property and educational qualifications are imposed in all cases. An Indian member is also specially nominated to the Council of Government, to represent Indian interests.

In the *Straits Settlements* provision for an Indian representative, nominated by the Governor, is made in the recently revised Constitution of the Legislative Council.

With regard to the *Federated Malay States*, the Government of India has recently suggested that Indians should have representation in the Federal Council. This question is now under discussion with the High Commissioner.

*Southern Pacific.*

In *Fiji* the question of the political representation of Indians is still under consideration.

*Eastern Africa.*

In *Kenya*, where there are four communities to consider, the communal system of representation in the Legislative Council has, after careful consideration, been adopted. The European British subjects vote for eleven elected members on an adult franchise. The Indians will vote for five elected members on a wide franchise, which will be determined in consultation with the Indian community. The Arabs will vote for one elected member on a franchise to be determined in a similar manner. Until the political education of the African is advanced, African interests will be represented by a non-African, nominated, unofficial member, who will be a missionary.

The unofficial members of the Executive Council are not limited either as to race or numbers by the instrument of Government. Hitherto, there have been two European unofficial members and one Indian unofficial member, and it is hoped to continue this arrangement, with the addition of an unofficial member whose advice on matters affecting Africans will be of value.

In each Council there is an absolute official majority.

In *Uganda* the Legislative Council is not elective. There is no restriction on the number or race of the unofficial members who may be nominated to the Council. The members at present approved are two Europeans and one Indian. There is an official majority.

In the Executive Council, there are no unofficial members.

In the *Tanganyika Territory* there is no Legislative or Executive Council; but, speaking generally, the Indians have the same rights as the citizens of other countries members of the League of Nations.

COLONIAL OFFICE, October, 1923.

## Annexe (B)

## THE POSITION OF INDIANS IN THE BRITISH EMPIRE

## MEMORANDUM BY THE PRIME MINISTER OF THE UNION OF SOUTH AFRICA

Before the Conference comes to consider this thorny subject, I wish my colleagues to consider the following suggestion of a way out of the difficulties in which we find ourselves. In India the position of Indians in other parts of the Empire seems to be adding to the political agitation and unrest, while in those other parts the atmosphere for the solution of the difficulty is not improving, but on the contrary getting worse. This latter change is in some measure due to the Sastri mission. Mr. Sastri by his mission and his speeches has undoubtedly made matters worse. He has, for instance, never failed, whenever opportunity presented itself, to attack the Indian policy of South Africa, and has thereby greatly exasperated public opinion in that Dominion, already very sensitive on this issue. In other Dominions he has made people alive to the issue—indeed he has largely created it. The claim he has everywhere vigorously pressed for equal franchise rights for Indians over the whole Empire has not only gone further than the local claims of the Indians themselves, but has tended to raise opposition in quarters where it did not exist before. It is because I foresaw this development that I did not invite Mr. Sastri to include South Africa in his mission. It is not alleged that the economic position of Indians in other parts of the Empire is bad. It is admitted that they are successful and thriving under the laws of the Dominions, and are in most respects economically better off than they would be in India. But the claim is put forward for equal political rights throughout the Empire, and its denial is looked upon as a stigma, as an affront to our Indian fellow-subjects. And no questions are more difficult and dangerous than those involving national dignity and honour.

The Indian claim for equal franchise rights in the Empire outside of India arises, in my opinion, from a misconception of the nature of British citizenship. This misconception is not confined to India, but is fairly general, and the Conference would do not only India but the whole Empire an important service by its removal. The misconception arises, not from the fact, but from the assumption, that all subjects of the King are equal, that in an Empire where there is a common King, there should be a common and equal citizenship, and that all differences and distinctions in citizen rights are wrong in principle. Hence it is claimed that, whether a British subject has or has not political rights in his country of origin, he should, on migration to another part of the Empire where British subjects enjoy full political rights, be entitled automatically to the enjoyment of these rights. It is on this basis that equal political rights are claimed for Indians who live in the Dominions or Colonies outside of India.

It is, of course, clear that the assumption on which the claim is based is wrong. There is no equality of British citizenship throughout the Empire. On the contrary, there is every imaginable difference. In some parts British subjects have no political rights whatever; in others they have modified rights of one kind or another; in others, again, they have the fullest political rights. In the same part you may find British subjects with little or no political rights, and others with full rights. There is no common equal British citizenship in the Empire, and it is quite wrong for a British subject to claim equality of rights in any part of the Empire to which he has migrated or where he happens to be living. There is no indignity or affront at all in the denial of such equality. Once this is clearly recognized, the stigma above referred to falls away. Indians in those parts of the Empire where they do not enjoy equal franchise rights cannot justly or fairly claim that their national dignity or status is involved.

## SESSIONAL PAPER No. 37a

I go even further. The newer conception of the British Empire as a smaller League of Nations, as a partnership of free and equal nations under a common hereditary Sovereign, involves an even further departure from the simple conception of a unitary citizenship. British citizenship has been variable in the past; it is bound to be even more so in the future. Each constituent part of the Empire will settle for itself the nature and incidents of its citizenship. The composition and character and rights of its people will be the concern of each free and equal State in the Empire. It will not only regulate immigration from other parts of the Empire as well as from the outside world, but it will also settle the rights of its citizens as a matter of domestic concern. The common Kingship is the binding link between the parts of the Empire; it is not a source from which private citizens will derive their rights. They will derive their rights simply and solely from the authority of the State in which they live. Hence Indians going to Canada will not be entitled to claim equal political rights with the other citizens of Canada, no more than Canadians going to India or Australia could claim equal political rights there. The conception of the Empire as a League of Nations ought to do away with these claims, which are so disturbing and unsettling in the Empire.

From this point of view the Indian resolution passed at the last Imperial Conference was a profound mistake. It was not only impracticable, but it ran counter to the new conception of the Empire as not a unitary State but a partnership of equal States. It has both theoretically and practically landed us in a false position, and the sooner we get out of it the better for the future good relations of the different States of the Empire. The political claims of Indians arising under that resolution should not be allowed to create difficulties for the Governments of the Dominions, which would not have arisen if the constitutional position had been properly appreciated.

The Indian Government should not claim from the other Empire Governments what (say) the friendly Governments of Japan and China would not claim. And the fact is that with neither of these Governments have we any difficulties in the Dominions, while the difficulties with India are notorious and growing.

We must get to the right constitutional conception, which I take to be the absolute and unquestioned power and authority of each part of the Empire to settle such questions for itself. India has threatened retaliation as a method of reprisal against Dominions which do not concede equal rights to her nationals. This is, again, a false position arising out of the misconception which I have explained. There should be no question either of retaliation or reprisal. India should be free to deal with nationals of the Dominions on a basis of reciprocal treatment, and neither on her part nor on the part of the Dominions concerned should there be any resentment or ill-feeling in the matter. Our relations in this regard should be practically those of friendly sovereign States towards each other. Unless this readjustment of viewpoint is brought about it is feared that the question of the position of Indians in the Empire may continue to grow in gravity.

I would therefore suggest that for the resolution of the last Conference on the subject there be substituted a resolution affirming the right of each portion of the Empire to regulate citizenship as well as immigration as domestic questions for its own handling and not affecting the status or dignity of other portions of the Empire, and expressing the opinion that provisions for reciprocal treatment of the nationals of the States of the Empire should not be looked upon as unfriendly or otherwise affecting the good relations of these States *inter se*. It would thus be left to the good sense of each State of the Empire to say what citizen rights shall be enjoyed, and by whom, within their terri-

torial jurisdiction, and no State of the Empire should have claim to force its citizens on any other State or resent their exclusion or special treatment by the latter.

## APPENDIX VI

### PAPERS REGARDING NATIONALITY QUESTIONS

#### PART 1

MEMORANDUM PREPARED BY THE COMMONWEALTH GOVERNMENT FOR CONSIDERATION AT THE IMPERIAL CONFERENCE, 1923

THE Commonwealth Government desires to make certain amendments in the Commonwealth *Nationality Act* 1920-1922. This Act gives effect, within the Commonwealth, to the system of Empire naturalization introduced by the British Act, the *British Nationality and Status of Aliens Act* 1914-1918. As the British Act was framed in consultation with the Dominions, the Commonwealth Government desires that the amendments now suggested should be discussed at the forthcoming Imperial Conference.

The amendments desired relate to:—

- (A)—The constitution of the tribunal to which cases of revocation of naturalization are referred for enquiry.
- (B)—Re-admission to British nationality of British-born women married to aliens.
- (C)—Naturalization of Residents of "B" and "C" Mandated Territories.

#### (A)—CONSTITUTION OF THE TRIBUNAL TO WHICH CASES OF REVOCATION OF NATURALIZATION ARE REFERRED FOR ENQUIRY

By section 7 of the *British Nationality and Status of Aliens Act* 1914-1918 the Secretary of State is given power to revoke certificates of naturalization for the various classes of reasons set out in that section. In some of these cases he is given discretion, and in others he is required, before making an order of revocation, to give the person whose certificate is proposed to be revoked an opportunity of claiming that the case be referred for enquiry to a committee presided over by a person who holds or has held high judicial office, or to the High Court.

Section 8 of the British Act provides that, if the scheme of Empire naturalization is adopted by a Dominion, the Dominion shall have the same powers of revocation, there being substituted for "High Court," in section 7, the words "High Court or Superior Court" of the Dominion.

The Commonwealth *Nationality Act* 1920-1922, conforming to the British Act, confers on the Governor-General similar powers of revocation, and provides that the corresponding enquiries shall be held by a Committee presided over by a person who is or has been a Justice of the High Court of Australia or a Judge of a Supreme Court of a State or the officer holding the principal judicial office in a Territory, or by the High Court of Australia.

The classes of persons thus designated as competent to preside over a committee of enquiry hold offices in the Commonwealth which correspond to

## SESSIONAL PAPER No. 37a

those named in the British Act. It has been found, however, that in remote parts of the Commonwealth it is sometimes very difficult to arrange for a president qualified under this section. To facilitate the holding of enquiries, the Commonwealth Government desires to amend the section to provide that a committee of enquiry may be presided over by a Judge of a District Court or of a County Court (these being courts the jurisdiction of which is inferior to that of the Supreme Courts and which sit in parts of the Commonwealth not visited by Judges of the Supreme Courts) or by a special or stipendiary magistrate (that is, a magistrate having professional qualifications who sits in a court of minor jurisdiction).

Before making this amendment, it is desired to have the concurrence of the Governments of the other parts of the Empire which have adopted the scheme of Empire naturalization.

(B)—RE-ADMISSION TO BRITISH NATIONALITY OF BRITISH-BORN WOMEN  
MARRIED TO ALIENS

The *British Nationality and Status of Aliens Act 1914*, Part II of which has been adopted by the *Commonwealth Nationality Act 1920-1922*, provides that a Certificate of Naturalization shall not be granted to any person under "disability," the definition of which term includes "the status of being a married woman."

This provision has, in the Commonwealth, resulted in the infliction of considerable hardship upon certain women of British birth who have married aliens and been deserted by them, but who are nevertheless not eligible to re-acquire their former British nationality.

As an illustration, the case may be cited of a woman born in England who emigrated to South Australia where, in 1885, she married a German. In 1912 her husband deserted her and returned to Germany. Since his departure he has not written to her, not sent her money, and she has had to earn a living as best she could. She was the mother of ten children. The eldest son served in the Light Horse in the late war, and returned to Australia a cripple. In 1920 the woman had a paralytic stroke and was ill for a considerable time, and partially lost her memory. Fourteen of her male relations, including sons, grandsons, and nephews, served in the late war, and three of them were killed, yet this woman is not entitled to the privileges of a British subject.

Other women of British birth married to aliens have also been deserted by their husbands or been separated from them and have been precluded from exercising privileges which they enjoyed prior to marriage.

In this connection attention is invited to the war-time provision of the British Act, and the corresponding section 18 (3) of the *Commonwealth Nationality Act 1920-1922*, which permits of the re-admission of married women to British nationality *where the husband is a subject of a State at war with His Majesty*.

Although this provision is applicable only during war time, it establishes a principle which it is thought might, with advantage, be extended to British-born women in meritorious cases at all times.

The Commonwealth Government desires to ascertain whether the Imperial Government and the Governments of the Dominions which have adopted Part II of the British Act would be agreeable to an amendment which would confer upon British-born women the right of re-acquiring British nationality in cases where they have lost such nationality through marriage with aliens and have been deserted by their husbands.

In this connection it is pointed out that if the power under section 5 (2) of the British Act (and section 10 (2) of the *Commonwealth Nationality Act*)

to grant naturalization in special cases to "minors," who are as a class subject to the same general "disability" as "married women," were extended to cover "married women of British birth," all requirements would be met.

(C.)—NATURALIZATION OF RESIDENTS OF "B" AND "C" MANDATED TERRITORIES

The Permanent Mandates Commission of the League of Nations, at its session in August 1922, adopted for submission to the Council of the League a resolution that Mandatory Powers to which "B" and "C" Mandated Territories have been entrusted might make arrangements, in conformity with their own laws, for the individual acquisition of their nationality by inhabitants of these territories.

The Commonwealth Government is advised that under the existing law British nationality cannot be acquired by residents (not being in the service of the Crown) of mandated territories. It accordingly suggests that the British Act should be amended so that residence in a "B" or "C" Mandated Territory should count as residence in His Majesty's Dominions, for the purpose of qualifying by residence for naturalization. When the British Act has been amended, a corresponding amendment can be made in the Commonwealth Act.

PRIME MINISTER'S DEPARTMENT,  
MELBOURNE, July 26, 1923.

PART 2

GRANT OF NATURALIZATION TO PERSONS RESIDENT IN MANDATED TERRITORIES

JOINT MEMORANDUM PREPARED IN THE HOME OFFICE AND COLONIAL OFFICE

The Commonwealth Government have asked that the question of amending "The British Nationality and Status of Aliens Act, 1914," so as to permit of the grant of naturalization to persons resident in mandated territories may be brought before the Imperial Conference. It is understood that the Commonwealth Government have in mind Imperial naturalization, and the amendment which they suggest is one to the effect that residence in "B" or "C" mandated territories should count as residence in His Majesty's Dominions for the purpose of qualifying by residence for naturalization.

2. In this connection, the Commonwealth Government have referred to the proposal submitted to the Council of the League of Nations by the Permanent Mandates Commission in August 1922, which was in the following terms:—

"It is open to mandatory Powers to whom 'B' and 'C' mandated territories have been entrusted to make arrangement in conformity with their own laws for the individual and purely voluntary acquisition of their nationality by inhabitants of these territories."

3. The matter was considered by the Council of the League in April, 1923, and the following resolutions were adopted:—

- (1) The status of the native inhabitants of a mandated territory is distinct from that of the nationals of the mandatory Powers, and cannot be identified therewith by any process having general application.

## SESSIONAL PAPER No. 37a

- (2) The native inhabitants of a mandated territory are not invested with the nationality of the mandatory Power by reason of the protection extended to them.
- (3) It is not inconsistent with (1) and (2) above that individual inhabitants of the territory should voluntarily obtain naturalization from the mandatory Power in accordance with arrangements which it is open to such Power to make with this object under its own law.

4. Hitherto naturalization, except on the ground of service under the Crown in foreign countries, has depended on residence in British territory, and it has been considered undesirable to allow naturalization on account of residence in protectorates on the ground that it is contrary to sound principle to exercise such a high right of sovereignty as that involved in changing the nationality of an inhabitant in a territory which does not form part of His Majesty's dominions. Only two exceptions to this principle have been admitted, namely, in Southern and Northern Rhodesia, where *local* naturalization has been provided for by Orders in Council.

5. If provision is to be made for Imperial naturalization in mandated territories, and it would appear from the resolutions of the Council of the League of Nations quoted above that the League entertains no objection to this as regards "B" and "C" mandated territories, it will be necessary to make similar provision in protectorates to which these territories are analogous.

6. The position is different as regards protected States where there are local rulers and the native inhabitants are subjects of those rulers. It would hardly be possible for His Majesty to take power to enable such subjects of the local rulers to transfer their allegiance to himself, and even if naturalization in such territories were confined to persons who were not subjects of the local rulers it is probable that the local rulers would object to such action as an infringement of their own sovereign rights and powers. Somewhat similar objections would apply to a proposition to provide for Imperial naturalization in "A" mandated territories, the position of which is analogous to that of protected States.

7. If a general desire is expressed for such a change in the law as is proposed by the Commonwealth Government, the most convenient method of procedure would appear to be that, when next legislation amending the Act of 1914 is introduced, provision should at the same time be made enabling the Act to be applied by Order of His Majesty in Council (or, in the case of territories mandated to Dominions, Order of the Governor General in Council), to the territories in question, subject to such modifications and adaptations as may be necessary. Having regard to the difficulty which arises in connection with protected States and "A" mandated territories, it would be desirable not to provide generally for the application of the Act to "any territory under His Majesty's protection or in respect of which a mandate on behalf of the League of Nations has been accepted by His Majesty," but to provide for its application to certain individual territories specified in a schedule to the Act. This schedule would include "B" and "C" mandated territories and most of the protectorates, as to which no difficulty in regard to sovereignty occurs, but would not include "A" mandated territories or protected States.

8. *Nationality of Children Born to British Subjects in Mandated Territories.*—Somewhat similar considerations underlie another question which arises out of the scheme for the continuance of British nationality amongst successive generations born abroad contained in "The British Nationality and Status of Alien Act, 1922." It would appear that, as regards the children of British subjects born in "B" and "C" mandated territories, there is no neces-

sity to go through the procedure contemplated in the Act of 1922 in order that they may obtain British nationality at birth and retain it at majority. It would seem that they are to be deemed to be "born in a place where by treaty, capitulation, grant, usage, sufferance or other lawful means His Majesty exercises jurisdiction over British subjects," and they therefore acquire British nationality at birth in their own right under the proviso to section 1 (1) of the Act of 1914, as amended in 1922. Children born in protectorates appear to be in the same position. On the other hand, children born in protected States and in "A" mandated territories would appear not to acquire or retain British nationality except in pursuance of the procedure laid down in the Act of 1922 in regard to registration at birth and assertion of British nationality at majority.

September 10, 1923.

### PART 3

#### NATIONALITY OF MARRIED WOMEN

##### *Memorandum prepared in the Home Office*

1. The Commonwealth Government have asked that the question of the readmission to British nationality of British-born women married to aliens may be placed on the agenda of the Imperial Conference.

2. Whether the cases which the Commonwealth Government have in mind are confined to those of women who have been abandoned by or for some reason have been permanently separated, but not divorced, from their alien husbands, or whether they include also cases of British-born women living with their alien husbands, the discussion of the question must necessarily bring into consideration the general question of the nationality of married women which has attracted considerable attention in recent years, both within the British Empire and in certain foreign countries.

3. The existing British law relating to the nationality of married women is statutory, and is based on the principle of a common nationality for husband and wife. The matter was first dealt with, partially, in "The Naturalization Act, 1844," next, more completely, in "The Naturalization Act, 1870," and now by section 10 of "The British Nationality and Status of Aliens Act, 1914," in which the general rule is expressed as follows: The wife of a British subject shall be deemed to be a British subject, and the wife of an alien shall be deemed to be an alien.

This rule is followed by the majority of civilized countries, though the Legislature of the United States of America has recently reversed it.

4. Previously to the statutes quoted and under the common law of England, British nationality could neither be acquired nor lost by marriage. This position does not seem to have been the result of any deliberate policy of the law in favour of independent nationalities for husband and wife, but followed incidentally from the application of the two general rules which at common law governed our nationality law. Thus, in the first place, women, equally with men, were subject to the general rule *nemo potest exuere patriam*, and as the result of this rule a British woman could not divest herself of her British nationality by the voluntary act of marriage. Secondly, the principle governing the acquisition of British nationality at common law was "birth within the allegiance," and British nationality could not be acquired in any other way. To this rule the voluntary act of marriage was no exception, and accordingly an alien woman did not at common law acquire British nationality on marriage to a British subject.

## SESSIONAL PAPER No. 37a

5. To the above general rule, quoted from the Act of 1914, there are certain important exceptions (some contained in the Act of 1914 originally and others introduced by the amending Act of 1918). These exceptions are:—

- (a) Where a British subject, during the continuance of his marriage, becomes an alien by naturalization or otherwise his wife can remain British if she makes a declaration of her desire to do so ("British Nationality and Status of Aliens Act, 1914," section 10).
- (b) The British-born wife of any alien who is the subject of a State at war with His Majesty can become British by the grant of a certificate of naturalization upon a declaration by her that she wishes to resume British nationality. (Amendment of section 10 of the above Act by the Act of 1918.)
- (c) The wife of a naturalized British subject whose certificate is revoked retains her British nationality, unless the order of revocation directs that she shall cease to be a British subject. (Section 7A of the principal Act inserted by the Act of 1918.)

6. In April, 1922, a Bill was introduced into the House of Commons by Sir John Butcher, in which it was proposed to make important alterations in the existing law, and to provide *inter alia* that a British woman shall not lose her British nationality by marriage with an alien, and that an alien shall not acquire British nationality merely by marriage with a British subject. This Bill was referred to a Select Standing Committee of the House of Commons for examination and report, but the proceedings of the Committee were interrupted before any report was made by the dissolution of Parliament.

7. In 1923, on the motion of Sir John Butcher, a Joint Committee of both Houses of Parliament was appointed "to examine the British law as to the nationality of married women; to consider in their legal and practical aspects the questions involved in the possession by husband and wife of the same or of different nationalities; and, with due regard to the operation of the laws of foreign countries, to report what, if any, alteration of the British law is desired."

8. This Committee, after hearing a considerable amount of evidence, was unable to agree as to the form of a report. The proceedings of the Joint Committee have not yet been published,\* but advance copies of a portion of the proceedings containing two alternative draft reports which were laid before that Committee (one by the Chairman and one by Sir John Butcher) have been secured for the use of the Imperial Conference and are annexed hereto. These draft reports disclose numerous considerations which may be advanced in favour of or against any substantial alteration of the existing law.

9. A summary of the points and arguments urged in favour of an alteration of the law will be found in paragraph 9 of the Chairman's report. It may be stated generally that the main arguments proceed from (a) the demand of various women's organisations that married women should have the same right as men of individual choice and self-determination in respect of their national status; and (b) the special grievances of British-born women who have become aliens by marriage, and are subject, as such, to certain disabilities and incapacities (*e.g.*, franchise disqualification).

10. As regards (a) it has to be considered *inter alia* whether the theoretical value of the principle of self-determination is not outweighed by the practical disadvantages (affecting, *inter alia*, the children) involved in a difference of nationalities between the parents, disadvantages ranging from the regions of

\*Since published as House of Commons Paper No. 115 of 1923.

diplomatic protection and private international law to the position of the family as a unit of society (see paragraphs 10 and 11 of the Chairman's report and the second section of Sir John Butcher's report).

11. As regards (b), it has to be considered whether the disabilities and incapacities in question are such as to justify a change in the law of nationality, or whether a remedy for most, if not all, of the grievances of British-born women cannot be found in specific legislative provisions dealing with the particular subject matter (see paragraphs 10 (i) and 14 of the Chairman's report).

*Home Office, October, 1923.*

#### PART 4

### VALIDITY OF MARRIAGES BETWEEN BRITISH SUBJECTS AND FOREIGNERS

#### CORRESPONDENCE BETWEEN THE SECRETARY OF STATE FOR THE COLONIES AND THE GOVERNOR-GENERAL OF THE COMMONWEALTH OF AUSTRALIA

##### (a) *From the Governor-General to the Secretary of State*

(No. 381.)

SIR,

October 4, 1922.

I have the honour, at the instance of my Prime Minister, to inform you that a question has been raised in regard to the validity of marriages contracted between Australians and foreigners.

It is thought that it would probably be within the powers of the Commonwealth Parliament to enact that all such marriages shall be valid, but that validity would probably not be recognized outside Australia if the foreigner was not, by the law of his country of domicile, capable of contracting the marriage. Such legislation, however, would not go far to improve the position, and, while Imperial legislation extending to all the Dominions would advance matters a little further, it is considered that it would be inadvisable to interfere with the established rules of international law in this connection.

In order that some action might be taken which would lead to a satisfactory settlement of the question, my Ministers have suggested that His Majesty's Government might be asked to consider the desirability of discussing the matter at an Imperial Conference, with a view to international arrangements being made which would be acceptable to all parties concerned and I should be glad if you would be so good as to take the necessary steps to give effect thereto.

I have, etc.,

FORSTER.

##### (b) *From the Secretary of State to the Governor-General*

(No. 133.)

MY LORD,

April 6, 1923.

I have the honour to acknowledge the receipt of Your Excellency's despatch No. 381 of the 4th October regarding the validity of marriages contracted between Australians and foreigners, and to request you to inform your Ministers that the question of the validity of marriages between British subjects and foreigners has on many occasions in the past formed the subject of consideration by His Majesty's Government.

## SESSIONAL PAPER No. 37a

2. As regards such marriages contracted in foreign countries according to the *lex loci*, it has long since been found necessary, in order to satisfy the requirements of foreign marriage laws, to authorize His Majesty's consular officers to issue certificates in individual cases, varying from a statement that the publication of banns in this country is not required in the case of such marriages, to statements that, the parties having gone through the antecedent formalities required by law for enabling them to be married at His Majesty's consulate under the provisions of the Foreign Marriage Act, 1892, there is no obstacle to the celebration of their marriage. Certificates according to the particular requirements of the foreign law concerned have in this way for a good many years past been issued by His Majesty's consular officers in France, Belgium, Germany, Switzerland, Italy, Hungary and Sweden. On the other hand, in the case of marriages contracted in this country the French Government have since 1904 authorized French consular officers in this country to issue certificates to French citizens marrying British subjects to the effect that the formalities of French law have been complied with, while in the case of Belgium, by an agreement of November 1888, a similar certificate is issued by the Belgian legation.

3. Under the provisions of the Foreign Marriage Act, 1892, and of the Foreign Marriages Order in Council, 1913, His Majesty's consular officers are in many cases empowered to solemnize marriages between parties of whom one is a British subject. This Act and Order in Council form the subject of Chapter XXX of the Consular Instructions. In this connection reference is invited to Viscount Milner's despatch Dominions No. 506 of the 17th December 1920, and connected correspondence, as to officers who are empowered to issue the certificates required by Article 10 of the Foreign Marriages Order in Council, 1913. I enclose a copy of a printed memorandum,\* which, while summarizing in a convenient form the formalities to be observed under the Act and Order in Council, exhibits also information which has been compiled as regards foreign *lex loci* marriages and marriages between British subjects and various classes of foreigners. Copies of this memorandum were forwarded in the late Viscount Harcourt's despatch No. 468 of the 30th July, 1914.

4. On the 29th November, 1906, "The Marriage with Foreigners Act, 1906" (6 Edward VII, Chapter 40), was passed. This Act in section 1 provides that any British subject desiring to be married in a foreign country a foreigner according to the law of that country may give notice to the Registrar, or if abroad to the marriage officer (i.e., His Majesty's consular officer), and apply for a certificate that after proper notices have been given no legal impediment to the marriage has been shown to exist. In section 2, as regards marriages in the United Kingdom, it is provided that, where arrangements have been made with a foreign country for the issue by the proper officers of that country of certificates that after proper notices have been given no impediment according to the law of that country has been shown to exist, His Majesty may by Order in Council require the production of such certificate before the marriage can be solemnized. Section 3 provides for the issue of an Order in Council making general regulations prescribing the forms to be used.

5. After the passing of this Act a considerable correspondence, which extended over several years, took place with foreign Governments with a view to ascertaining the possibility of giving effect, in the case both of sections 1 and 2 of the Act, to the arrangements contemplated. While it was found that in the case of some countries a certificate of the nature contemplated by section

---

\* Foreign Office Memorandum, entitled "Marriages Abroad and in the United Kingdom": not reproduced.

I was unnecessary, and that, in the case of some, no arrangements of the nature contemplated by section 2 were possible, the correspondence showed that in the case of a number of foreign countries such arrangements were possible, though the requirements of the various foreign laws created difficulties as to the forms of certificates which would be required. Concurrently with this correspondence His Majesty's Representatives abroad were instructed to obtain and communicate to the Foreign Office the texts of the marriage laws of foreign countries, with a view to a more complete study of the question, and these laws as received were translated, and have been published in Parliamentary Paper Miscellaneous No. 11, 1911 (Cd. 5993), of which a copy is enclosed.

6. As the outcome of the correspondence referred to above, the preparation of the form of certificate to be given by the Registrar (and *mutatis mutandis* by His Majesty's consular officers) under section 1 of the Act of 1906 was commenced, but various difficulties have so far delayed its completion. When this has been done it will be possible again to approach foreign governments in the matter and to endeavour to bring about the further arrangements contemplated under section 2 of the Act.

7. It is noted that Ministers suggest that the matter might be discussed at an Imperial Conference, and a copy of the correspondence is accordingly being sent to the other Dominions and to the Secretary of State for India.

I have, &c.,

DEVONSHIRE.

## APPENDIX VII.

### ADDRESS BY HIS HIGHNESS THE MAHARAJAH OF ALWAR, ON THE DUSSEHRA FESTIVAL, OCTOBER 19, 1923

THE MAHARAJAH OF ALWAR: Prime Minister and Friends, it is a curious coincidence, I hope a happy coincidence, that to-day in this room we should be discussing questions relating to Military, Naval and Air matters, all connected with the defence of the Empire, on the exact day when in India is being celebrated our greatest festival of the year.

It is a festival to commemorate the march of Shri Ram, one of our greatest incarnations, to Ceylon where he achieved victory. The anniversary is celebrated nowadays in India inspecting our Military troops and units, in other words, examining the means of war, or, more correctly speaking, the means of peace.

We may thus in a sense be celebrating the Dussehra festival to-day by examining the means of Defence of our Empire.

Friends, I wish you all in the name of my country as an Indian, in the name of the Princes as one of their Order, our cordial and sincere Dussehra greetings to each and all of you.

Let us hope that this quiet, almost unostentatious, work that we are doing, or trying to do, will lead to co-ordination and co-operation of all the forces of the Empire to secure real peace, not only within, but also without.

## APPENDIX VIII.

REPLY FROM HIS MAJESTY THE KING, EMPEROR OF INDIA,  
TO THE ADDRESS FROM THE CONFERENCE

It has been a great satisfaction to the Queen and myself to receive from the Prime Minister of Great Britain the Address presented by the Members of the Imperial Conference at the close of their sessions. We thank you most cordially for these inspiring words.

The last few weeks have given me a happy opportunity to renew personal touch with some of my Ministers from the Overseas Dominions, and of making the acquaintance of others on whom their present high responsibilities have fallen since the last Conference.

As Emperor of India, I welcome the Members of the Conference from that great country. I know that its many peoples will rejoice that the problems brought on their behalf to the attention of the Conference have been dealt with so fully and sympathetically.

No one can follow closely, as I have done, the work of successive Conferences without realizing the immense value of such Meetings. First comes the spread of mutual knowledge of the conditions obtaining in all parts of the Empire, then the increase of good feeling that springs naturally from such knowledge, and, lastly, the hearty desire to co-operate in strengthening the bonds which unite us, so that, however distracted the world may be, the British Commonwealth shall stand steadfast and undismayed.

I thank you one and all for your labours. I am confident that these will redound to the security, happiness and prosperity of all the nations and peoples of my Empire.

GEORGE R.I.

NOVEMBER 14, 1923.

ROYAL COMMISSION *re* HOME BANK

---

# INTERIM REPORT

---

JUNE 10, 1924

---

OTTAWA  
F. A. ACLAND  
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY  
1924

## INTERIM REPORT

*To His Excellency General the Right Honourable Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O., Governor General and Commander-in-Chief of the Dominion of Canada.*

In compliance with the Commission of Your Excellency dated the 27th day of February, 1924, by which I was appointed a Commissioner to make investigation into all material and relevant facts in relation to the Orders in Council attached to the above-mentioned Commission, I have the honour to submit the following interim report.

This report does not contemplate a consideration of all the matters referred to, but has to do with such of them as have a bearing upon the facts alleged in a petition presented to Your Excellency by an executive committee of the depositors of the Home Bank of Canada, dated the 23rd day of February, 1924, praying that those who suffered loss as such depositors because of the facts set out in the said petition, should be indemnified against such loss on grounds set forth.

The hearing in the matter was commenced before me in the city of Ottawa on the 16th day of April last, and evidence was taken under oath both at Ottawa and at Toronto on divers days between that date and the 20th day of May, 1924, inclusive; Mr. E. Lafleur, K.C., and Mr. H. J. Symington, K.C., appearing throughout as counsel for the Government of the Dominion of Canada; Mr. H. J. McLaughlin, K.C., Mr. A. G. Browning, K.C., and Mr. W. T. J. Lee appearing for the depositors during the continuance of the hearing; and in addition to the above-named counsel, Sir Thomas White, K.C., Mr. McGregor Young, K.C., and Mr. R. A. Reid appeared for different interests from time to time.

In view of the questions raised and argued before me during the investigation, it is well, I think, to clearly define the proper range of the present inquiry, as limited by the Orders in Council under which I am directed to act. No ambiguity attaches to them, and it is my duty to confine myself circumspectly to the letter of the instructions received.

I am the more desirous of doing so, inasmuch as the courts of the province, on their civil and criminal sides, are concerned with the conduct of many of those whose names have been mentioned in the testimony adduced before me, and actions both civil and criminal have been commenced against some of them. Regard for the obvious proprieties of the situation, demands complete reticence on my part concerning the issues which have been thus judicially raised and as to which the proper tribunals are now making inquiry. While some reference to their acts as such directors was unavoidable during the taking of the evidence, such reference was made for the most part wholly ancillary to the depositors' claim, and in explanation of the grounds upon which this claim is based.

I am further particularly concerned to confine myself strictly to what I am now directed to do, since it is said that the Parliament of Canada may be asked to take certain action in respect of the petition filed by the depositors, and I appreciate how jealously the frontiers of parliamentary responsibility and action are guarded. I do not consider that the commission requires me to set foot over that line. I am asked to answer these questions, and whether the findings of fact involved in such answers be accepted or not, or whether any

action may be taken upon them, is not for me to say. While I realize that I have permission to express an opinion on the result of the investigation and the evidence taken, I recognize that the responsibility for any action thereon really lies elsewhere, and those who carry that burden should, I think, approach their task unaffected by the expression of any opinion on my part. My duty, as I see it, is simply to put them in possession of definite answers to the questions submitted, as best I may. I have been urged by certain of the counsel to say that in my opinion compassionate allowance should be made to the depositors who have suffered loss, and also to pronounce what would amount to a finding of negligence on the part of some responsible for the administration of the Department of Finance in its oversight of the bank. While my right to discuss the discretionary acts of a minister of the Crown, where no dishonesty is alleged, has been sharply challenged by other counsel, on the ground that the jurisdiction therein abides with Parliament itself, nevertheless I have been further invited to express an opinion upon the diligence and honesty of administrative acts. But in strictly confining myself to answering the questions set out in the Orders in Council, I am constrained to lay aside any inquiry into matters suggested immediately above and to refrain from comments upon facts, concerning which various counsel have asked that pronouncement may be made, especially regarding the conduct of ministers of the Crown responsible for the administration of the department immediately involved.

While it would, I think, be impossible for one to follow the evidence and discussion without forming an opinion, and perhaps a strong opinion, upon the questions so raised, yet the expression of such opinion, to my mind, would serve no useful purpose, but rather cloud the direct issues to which I am commanded to give attention. It may be that other matters related to the Home Bank will be explored later, as coming within Order in Council number 412, directing the commissioner to investigate:—

“the affairs of the said bank during the whole interval between the issue of the bank's charter and the failure of the said bank” etc., but in this interim report I am confining myself solely to the task of finding answers to the questions set out in the Order in Council number 306, which questions are as follows:—

“1. Whether, in the years 1915, 1916 and 1918, representations were made to the Department of Finance of the Dominion of Canada respecting the condition of the Home Bank of Canada, and, if so, what representations were so made.

“2. Whether, if such representations were made, a state of affairs was revealed concerning the condition of the said bank such as would have justified an investigation under the powers conferred upon the Minister of Finance by section 56A of the Bank Act.

“3. What action if any was taken by the then Minister of Finance upon such representations as may have been made.

“4. What effect would an audit under section 56A of the Bank Act if made in 1915, 1916 and 1918 have had upon the conduct of the affairs of the said bank and upon the position of the present depositors.

“5. What was the financial condition of the said Home Bank of Canada in the years 1915, 1916 and 1918, respectively, and what steps, if any, could have been taken by the Government to save the situation.”

Adhering to the course indicated above and in compliance with what I consider to be the directions of the commission in this regard, I desire to state specifically my answers to the questions above set out.

SESSIONAL PAPER No. 100d

Question 1 is as follows:—

"1. Whether, in the years 1915, 1916 and 1918, representations were made to the Department of Finance of the Dominion of Canada respecting the condition of the Home Bank of Canada, and, if so, what representations were so made."

It will be observed that this question contains two component inquiries:—

First, whether during the years mentioned any representations were made, and,

Second, if such representations were made, of what nature were they?

I think it was established by the evidence that in the year 1915 no representations were made to the Department of Finance respecting the condition of the bank.

With equal clearness it is apparent that during the year 1916 such representations were actually made to the Department of Finance. They are evidenced by exhibits submitted and filed numbered from "2" to "42" inclusive. These exhibits show that such representations originated from Messrs. T. A. Crerar, John Kennedy and John Persse, who then were directors of the Home Bank, residing in Winnipeg. In these communications, as well as in many others, Messrs. Crerar, Kennedy and Persse are termed "the western directors," and it is clear that originally they assumed such position with a view especially of scrutinizing the operations of the bank in Manitoba and the western provinces of Canada. Such representations took the form of three separate communications to the then Minister of Finance, each bearing date the 22nd day of January, 1916, the first of which in order of filing is headed:—

(Ex. 2. p. 12).

"*Re* Home Bank of Canada.  
*Re* Prudential Trust Loan.

Confidential memorandum to the Minister of Finance."

It is signed thus:—

"James Fisher,  
For Western Directors."

The second communication is headed:—

(Ex. 3. p. 15).

"*Re* Home Bank.

Confidential memorandum *re* Barnard loan."

and is also signed:—

"James Fisher,  
For the Western Directors."

The third communication is headed:—

(Ex. 5. p. 17).

"*Re* Home Bank of Canada.

Confidential memorandum to the Honourable, the Minister of Finance,  
from Messrs. Crerar, Kennedy and Persse, Directors of the Home  
Bank residing in Winnipeg."

and is signed:—

"James Fisher,

On behalf of and by instructions of the three Western Managers."

There are contained in the communications themselves, as well as in the accompanying statements attached, particulars concerning various loans and complaints about the way the bank's business was being transacted and other matters which will be detailed as far as necessary in answer to the second part

of this question. There were also submitted to the Minister of Finance at that time, accompanying such communications, many letters written by and on behalf of the western directors, and replies thereto, covering the period extending from the 17th day of February, 1915, to the 18th day of January, 1916.

From all this correspondence it is apparent that in the year 1915 the affairs of the bank were under criticism on the part of the western directors, and that they were making complaints to the eastern directors concerning certain loans and the general lack of oversight and proper care that existed, and this is especially evidenced by the communication of February 17, 1915, by Messrs. Crerar, Kennedy and Persse to A. C. Macdonell, M.P. (ex. 10, p. 24).

The letters which passed between the western and eastern directors, of the year 1915, are attached to the file brought to the attention of the department in the year 1916, and admittedly came under the attention of the Minister of Finance at that time.

It is therefore abundantly clear that as far as the year 1916 is concerned, it must be reported that representations were made to the Department of Finance of the Dominion of Canada respecting the condition of the Home Bank of Canada.

The same answer must be made as regards the year 1918, for all the communications and documents above referred to were again brought to the attention of the Minister of Finance in the year last mentioned and he received further representations concerning the condition of the bank by way of a communication from Mr. W. A. Machaffie, for many years an official of the Home Bank. The contents of these communications will be referred to in answer to the second part of this question.

In addition to the above, there were also interviews during the years mentioned between the then Minister of Finance and the president and other directors of the bank as well as with Mr. Z. A. Lash, counsel for the Home Bank.

Summing up what is above written as regards the first part of question number 1, I repeat that no representations were made to the Department of Finance of the Dominion of Canada respecting the condition of the Home Bank during the year 1915; but that such representations were made to the Department of Finance during the year 1916, and during the year 1918.

Turning now to the second part of this question, which asks what representations were made:—It is to be noted that they take the form of three special memoranda, each bearing date the 22nd of January, 1916, and signed by James Fisher for or on behalf of the western directors (ex. 2, p. 12; 3, p. 15; and 5, p. 17). Of these, one is more general in its character and will be referred to first in order (ex. 5). It drew to the attention of the Minister the fact that out of a paid-up capital of not quite two millions of dollars, about \$500,000 was held in the West; that a few years then previous, three western stockholders were placed on the board of directors to deal with the western business; that they met weekly and reported regularly their action to the head office. No eastern director met with them, and none of the three attended the head office meeting in Toronto unless specially requested. Also that in the fall of 1914 the western members became apprehensive that the business of the Toronto branch was not in good condition whereupon they went to Toronto about the middle of November of that year, for the purpose of acquainting themselves with the condition of affairs of the home branch, as well as to make complaint of the lack of money for loans in their part of the country; that upon their request meetings of the directorate of the bank were at once called, lasting for four days, during which they for the first time learned that there was no regular inspection of the Toronto office, the reason alleged being that the business there transacted was under weekly supervision by the eastern members of the board. The complainants set out that they were not satisfied with the information furnished at these

SESSIONAL PAPER No. 100d

meetings, especially as to certain accounts, one of which on the first day of meeting was reported at the figure \$1,100,000, but on the second day an error was admitted to have been made, and the amount was raised to \$1,500,000, and on the third day it was placed at \$1,780,000; and concerning which loan it appears that even the largest figure given was too small, for at the meeting on the 30th of the following month, it was disclosed that the amount involved was nearly two millions of dollars. They also learned that the general manager was indebted to the bank in a sum first reported as \$35,000, and which was afterwards disclosed to be \$76,000, and the like situation existed regarding other customers (ex. 10, p. 24). It was further represented to the minister that although they had urged an immediate inspection of the Toronto office, and that the report be ready for the next annual general meeting, it was not ready at that time, and the annual report of the bank had been sent to Ottawa without the western directors knowing of its contents. Also that they refused to acknowledge the validity of the election of Messrs. Barnard and Haney to the board of directors, in the place of Messrs. Gooderham and McNaught, who had resigned, and the western directors notified the manager that they held themselves free to contest the validity of these elections (ex. 9, p. 23). Another matter of complaint was that at the December meeting a resolution had been submitted and approved to the effect that a committee be appointed consisting of the assistant general manager and two others to carry on the affairs of the bank, and to specially pass upon all credits and make every possible effort to collect all overdue loans, and submit the earliest possible statement showing the present condition of the bank, with recommendations, which resolution was not pressed to its passage as the general manager was at that time out of the country in ill-health, but it had been agreed that this course would be taken, but the agreement was ignored and nothing done pursuant to these plain directions (ex. 10, p. 25). This communication was of a general nature, and in that sense supplementary to the particulars set out in the other two accompanying memoranda referred to below, but all the matters above noted were contained therein, and in accompanying exhibits, and thereby brought to the attention of the Minister of Finance.

The memorandum filed as exhibit number 2 is of the same date and has reference to the loan made by the bank to the Prudential Trust Company. The facts laid before the minister in this document showed that the bank had parted with \$500,000 in a transaction involving the Prudential Trust Company and the New Orleans Southern and Grand Isle Railway Company, which was explained by the general manager in a communication to Mr. Crerar, under date of December 24, 1915 (ex. 31, p. 53), part of which reads:—

*“James Mason to T. A. Crerar*

*“Messrs. Warren, Bristol and Morden were the promoters of the reorganized New Orleans Southern and Grand Isle Railway Company, and as such made application to the Prudential Trust Company, Limited, for a loan of \$500,000, which the trust company agreed to make, provided the bank would advance to the trust company the necessary funds. It was afterwards discovered by the solicitor for the trust company that under its charter it could not make the advance, but could accept the funds from the bank for investment by way of loan to the railway company and that the trust company could guarantee repayment to the bank—there was no connection between Warren, Bristol and Morden and the bank—their dealings being direct with the trust company.”*

There is a feature of this loan upon which I desire to make no comment, but feel it necessary to state, and that is, that apparently, preliminary to the

loan being made by the bank, a like sum of \$500,000, being trust funds of one of the provinces, then in the hands of the Prudential Trust Company, was deposited in the Home Bank. It was considered by certain of the directors that in some way these funds would be security for the loan to the trust company, but obviously such could not be the case, and on reference to the bank's solicitor, advice to that effect was obtained. The security taken for this loan was a note signed by the Prudential Trust Company in favour of the Home Bank of Canada, and \$750,000 of bonds of the railway company as collateral security. Now this loan represented a very large proportion of the bank's capital, and the western directors whose amounts for western accommodation were being curtailed, were unsparing in their criticism of the transaction. The exhibits show a great deal of activity concerning this loan; the trust company made no effort to repay it, and the same may be said of the railway company.

Their third communication to the minister (ex. 3, p. 15), deals with a loan to C. A. Barnard, who had become a director of the bank, and concerning whose election the western directors protested, as above referred to. It sets out that from the report of the inspector of the Toronto office made in June, 1915, it appears that C. A. Barnard was indebted to the bank in the sum of \$394,000, and that 2,622 shares of Home Bank stock were held in the name of Barnard and Pellatt in trust. The inspector pointed out that there was no trust deed held concerning these shares, and that they would have to realize about 125 per cent to enable the bank to avoid a loss. It will be shown a little later that in addition to these three large amounts other individuals and companies were shown to be indebted to the bank in sums wholly disproportionate to the bank's assets, but in their first communications the western directors called the attention of the minister to these three large accounts then representing more than the whole paid up capital of the institution. They complained as to the Barnard loan that they never could get any satisfactory explanation of the transaction; that it had been explained by Col. Mason at the November meeting in 1915 that it was connected with the taking over of the Banque Internationale, but how it came to be made or what its object was, complainants say they could not ascertain; neither could they understand, nor were they informed, as to the relationship of the bank shares to the loan in question; and by the submission of these three accounts and others mentioned in the exhibits, they brought the attention of the department to the condition of the bank. I do not conceive it to be my duty to enter into detailed history or explanation concerning these loans; I am answering the question as to what the representations were, and it is apparent that the existence of three accounts, viz: the Prudential Trust Company, C. A. Barnard, and the A. C. Frost Company, involving at that time the withdrawal from circulation of over two and a half millions of dollars of the bank's funds (ex. 4, p. 16, and 35 p. 59), upon which no interest was being paid, and to some of which addition was being made from time to time, was relied on by the western directors in their complaint against the bank management. They further showed that by a statement placed before the board of directors at the meeting in September, 1915 (ex. 4, p. 17), the Barnard account and the Prudential Trust Company account, and other accounts mentioned below, had been increased from December 31, 1914, and August 31, 1915, in the amount of \$192,849.30. Increases involved in the A. C. Frost Company account and the Pellatt & Pellatt account were responsible for the greater part of this sum and except incidentally in the statement of increases mentioned above, the indebtedness of the last named firm was not placed before the minister in the year 1916. This branch of question number 1 is two-fold:—

First, as to what representations were made in 1916; and,

Second, what representations were made in 1918. Coming now to the representations made in the year 1918, it will be observed that everything that was placed before the department in 1916 was still available, as well as an addi-

## SESSIONAL PAPER No. 1000

tional representation contained in the letter of Mr. W. A. Machaffie, who signed himself "Late assistant to the president"; and under date of August 29th, 1918 (ex. 88, p. 178) communicated certain very important facts concerning the condition of the bank to the then Minister of Finance, by registered mail. He drew the reports of Mr. Fisher, made in February, 1916, to the Minister's attention, and also referred to the A. C. Frost account—which will be mentioned below—as well as to certain shipbuilding transactions in which he alleged that the bank, as well as the president and one of the directors, were interested with a Mr. Stewart whom he described as a personal friend of Mr. Haney, the vice-president; he made the serious charge that the dividends which had been declared during the years 1916 and 1917 had been based on the addition of interest to doubtful accounts; that section 153 of the Bank Act had been violated; and that Home Bank officials, unwilling to share in what he termed the "guilt" of making false returns, were obliged to resign; that the auditor who had the affairs of the bank under examination was incapable of filling that position; that information was withheld by the officials of the bank from their counsel, Mr. Lash. Taken as a whole, the nature of this communication was such as to cause the liveliest apprehension concerning the financial standing of the bank, and concerning the safety of the funds entrusted to it, if even only a portion of such representations were true. And from the particulars furnished to the Minister by officials of the bank in response to his demand for information bearing upon the accounts referred to in the communications sent to him, it appeared that the indebtedness of the Prudential Trust Company to the bank on the 15th of November, 1918, had risen to the sum of \$933,747.74 (ex. 107, p. 194). This large increase was due, for the most part, to a further expenditure, the object of which was to protect the original investment, but which in 1918 gave little promise of assisting to work the account out. The account of A. C. Frost & Co., sometimes referred to as the British Columbia timber account, was reported on 30th November, 1918, as an indebtedness of \$2,425,288.58 (ex. 108, p. 200). The Pellatt & Pellatt accounts showed that \$1,900,960.69 of the bank's funds were locked up therein (ex. 109, p. 201). A portion of these capital sums represents interest on the original investment, and the bank's statement to the Minister also revealed the disquieting fact that unpaid interest amounting to \$688,962.42 on the Frost account and \$234,955.11 on the Prudential Trust Co. account, had been added to the principal and taken into profits (ex. 107, p. 195).

It was therefore abundantly clear that the management of the bank had resulted in an amount over twice its paid-up capital and reserve being locked up in accounts not realizable, and for the most part not bearing interest, from which it followed that whatever funds were available from day to day were those of the depositors, and notwithstanding the declaration of dividends, a proper accounting would have shown that no profit at all had been made for years. The bearing of these facts upon the condition of the bank is specifically enquired of in the next quotation and will, I think, be more properly considered thereunder.

*Answer to question number 1:—*

A. In the year 1915 no representations were made to the Department of Finance of the Dominion of Canada respecting the condition of the Home Bank of Canada. Such representations were made in the year 1916, as well as in the year 1918.

B. The following important representations were made to the Department of Finance concerning the condition of the Home Bank during the years 1916 and 1918, viz:—

(1) That an amount more than double the total paid up capital and reserve of the bank was locked up in four accounts, the securities for which could not be realized upon.

(2) That loans wholly disproportionate to the assets of the bank had been made on inadequate security, from which large loss was likely to occur.

(3) That amounts representing unpaid interest on at least three large accounts were carried into profit year by year and dividends declared on the basis of much fictitious earnings.

(4) That arrangements agreed upon at a meeting of the board of directors with a view of passing upon all credits and making an early statement showing the bank's position, with recommendations, were not carried out.

(5) That false returns were made by the directors of the bank to the Department of Finance.

(6) That specific instructions given by the Minister of Finance in 1916 forbidding the capitalizing of unpaid interest, were disobeyed.

(7) That the president and some of the directors were indebted to the bank in large sums upon personal account and through companies in which they had an interest.

(8) That the auditor employed by the bank from year to year was incompetent and important matters were concealed from the board of directors and from Mr. Lash the bank's counsel.

Question number 2 reads as follows:—

“Whether, if such representations were made, a state of affairs was revealed concerning the condition of the said bank such as would have justified an investigation under the powers conferred upon the Minister of Finance by section 56A of the Bank Act.”

Argument was presented in support of the proposition that the minister is responsible to parliament alone, and that unless he were charged with dishonesty or bad faith in the performance of his duties, the exercise of his discretion could not be challenged by this commission. I am not disposed to dispute this contention, seeing that the only duty imposed upon me under this question is to say whether the representations made to him were such as to justify him in calling for an audit under section 56A of the Bank Act.

I am not called upon to question the manner in which he made use of the powers therein given to him, nor whether he exercised his discretion correctly or otherwise. It is easy to conceive that certain representations might be made to a minister which would be of such a nature as not to call for the exercise of the rights given to him by this section of the statute, while on the other hand it is equally obvious that other representations might be made of a character which would not only justify the exercise of his discretion, but would make it a matter of careless administration if he should not do so. How such discretion should be exercised is a matter by itself, and must be for the determination of the head of the department. If any fault is to be found with the minister as to how his discretion was exercised, the complaint must be tried before parliament itself, always assuming honesty and integrity of purpose on his part, and no question whatever was, or could be, raised in that regard. But it is open to me I conceive, to say whether such a state of affairs was revealed as would call for the exercise of the discretionary powers vested in the minister. In answer to the preceding inquiry, I have detailed the representations which were made, and, taking them as a basis for my answer to this question, I do not think that any doubt can be entertained that what had been so represented was of sufficient importance to call for an audit under section 56A of the Bank Act. I am in harmony with the view of Sir Thomas White, as shown in his evidence at page 345 of the record:—

SESSIONAL PAPER No. 100d

"Q. As a result of the memorandum and other documents filed with you by Mr. Fisher, you proceeded under section 113 of the Bank Act to ask for a report?—A. I did.

Q. You also decided that it would justify an investigation under section 56A?—A. I asked the auditor to make a report to me.

Q. That is under that section?—A. Yes, 56A, without doubt I proceeded under the Bank Act.

Q. Well, you might answer my question, you felt yourself justified in asking for a report under section 56A of the Bank Act?—A. Yes, undoubtedly, and calling on the board and on the auditor.

Q. Did you call on the auditor for a report under section 56A of the Act?—A. Right."

It will be remembered that in his argument Sir Thomas White contended, with reference to the evidence above quoted, that in answering these questions as he did, he was not committing himself to the view that an outside auditor should have been called in, but that he was confining his testimony to an assent on his part that the auditor appointed by the shareholders should make report, and he said that if the questions had been put to him plainly as to his being justified in calling in an outside auditor, he would have answered them in the negative, for the reason that, in his opinion, the conditions prevailing in the bank at that time would have meant that calling in an outside auditor would have necessitated closing its doors.

The powers given under section 56A of the Bank Act, as it stood in 1916, were not confined to the employment of an outside auditor, or to the employment of the regular bank auditor either. The provision was to the effect that the minister could direct any auditor "to examine and enquire especially into any of the affairs or business of the bank", and the argument was, that an auditor wholly detached from the bank should have been selected, whereas the minister, in the exercise of his discretion, for the reasons indicated, thought best to appoint Mr. Jones, the regular auditor of the bank. There is no necessity for the expression of any opinion upon my part as to whether the minister should have engaged an inside or an outside auditor for this work; either one could be appointed by the minister under that section according to his discretion and the evidence above quoted shows that the minister exercised his discretion under the section in question by the appointment of Mr. Jones. It must therefore follow that to his mind the conditions prevailing justified the investigation under the authority of section 56A of the Bank Act, altogether apart from the question whether it should be made by one class of auditor or the other. The enquiry up to this point, has, I think, brought us to the conclusion that the reason that an outside auditor was not appointed was that the minister feared such action would result in the collapse of the bank. It is not said by anyone that the exercise of the powers given by section 56A were not or should not, have been called into action. The argument put forward by counsel for the shareholders was, that such discretion as the minister saw fit to exercise was really useless. The statement that an outside auditor would have closed the bank, throws some light upon that contention.

The letters which passed between Sir Thomas White and the president of the bank and Mr. Lash and others, show that it was with considerable reluctance that the minister relinquished his first idea of calling the attention of the Bankers' Association to the condition of the bank, but that he was moved thereto by representations of a betterment of condition by change of management, and by statements made by Mr. Lash, in whom, it is unnecessary to say, he reposed a very great deal of confidence; but inasmuch as it is admitted that these representations resulted in calling upon the auditor of the bank under sec-

tion 56A, it is hardly necessary for me to amplify reasons which have led me to the conclusion that the state of affairs revealed by the representations made, justified an investigation under the powers conferred upon the minister by section 56A of the Bank Act, for what the minister did shows it. That he considered the situation to be a serious one, is evidenced by his letter to General Mason, then the president of the bank, written under date of January 24th, 1916, (ex. 43, p. 75), immediately after receiving the complaint of the western directors through Mr. Fisher. It will be remembered that these representations and complaints were not made by outside people, or by individuals to whom some personal grievance or antagonism towards the bank could be attributed; they emanated from persons bearing the responsibility of the institution, being directors, entrusted by their shareholders with seeing that an honest management prevailed. In this letter the minister said that he considered it his duty to ask for full particulars, both from the board and from the auditor, as to the accounts of the Prudential Trust Company, Pellatt and Pellatt, and A. C. Frost and Co., with a detailed statement of securities held. In answer to a letter received from the president, asking the minister if he would have the thirty days referred to in section 113 of the Bank Act to make such return, the minister advised him that the matter was of so serious a character that he thought it advisable that the reply should be completed and forwarded at as early a date as possible.

In writing to Mr. Fisher upon the subject, (ex. 54, p. 86) Sir Thomas further said:

"You make certain definite explicit charges, which I conceive it to be my duty to investigate."

This latter sentence describes the effect produced upon the minister by the communications.

The evidence discloses that after the receipt by Sir Thomas White of the communications from the western directors, attempts were made to change the management of the bank so as to meet with the approval of all the directors, and such attempts were well known to the Minister of Finance, being conducted mainly through the late Mr. Z. A. Lash, K.C., who had personal interviews and carried on correspondence with the minister concerning the matter. But notwithstanding the desirability of having the whole directorate in accord, Sir Thomas White did not consider that to be a solution of the difficulty, and defined his position in a letter of February 17th, 1916, written to Mr. Lash in these words: (Ex. 71, p. 162.)

*"Sir Thomas White to Z. A. Lash.*

*"Re Home Bank of Canada:*

"DEAR MR. LASH:—I have your private letter of the 14th instant and think I must ask you for the statements to which you refer. In themselves they may disclose a situation which apart altogether from the question of other accounts would cause me to bring the affairs of the bank to the attention of the Bankers' Association through its president here. The position is that I have been made aware by the Winnipeg directors of a certain condition which is most disturbing. It does not appear to me that I would be justified in staying enquiry because the Winnipeg directors may ask me to suspend action. The real question is whether the bank, having regard to the condition which will be disclosed by the statements should be allowed to continue business with the public. I shall be glad, therefore, if you will send me those statements. It would

## SESSIONAL PAPER No. 100d

not appear to me necessary that you should specially come down about the matter but I leave this to your discretion. I shall desire, of course, to give the reorganized board and management every opportunity to restore the bank's position, but this statement must be taken subject to the overriding consideration of the public interest."

This was the view taken of the matter by the minister both in 1916, and two years later, when his attention was again drawn to it by Mr. Machaffie's letter. The serious character of the representations made therein was appreciated by the minister, as shown by his letter to Mr. Lash under date of September 4th 1918. He enclosed a copy of the Machaffie letter and asked Mr. Lash to take the matter up with the board of directors, and expressed himself as follows:— (ex. 90, p. 179).

*"Sir Thomas White to Mr. Lash.*

"I regard the matter as of the utmost public importance, and it is my intention to have a thorough investigation made through the Bankers' Association or otherwise. Before taking this step, however, I wish to have a reply from Mr. Haney and his board."

All I am at present directing my attention to is, whether or not the representations made would have justified an investigation under section 56A of the Bank Act. From the testimony above quoted, and from the letters, extracts from which are set out above, it is very apparent to me that the representations made were regarded, on all sides, as of a character which would justify such investigation, and, I thoroughly agree with that view.

*Answer to question 2:—*

The condition of the bank, as revealed by the representations made, was such as to justify an investigation under the powers conferred upon the Minister of Finance by section 56A of the Bank Act.

Question number 3 reads as follows:—

"What action, if any, was taken by the then Minister of Finance, upon such representations as may have been made."

It is apparent that the answer to this must be shown by the communications which passed between the minister and the bank and parties in interest. They disclose in the first place, a lively apprehension on the part of the minister concerning the position of the bank, and a desire to keep it upon its feet.

Confining myself first to the year 1916, it is evident that the minister acted promptly on the receipt of the three memoranda from the western directors, for on the 24th of January, 1916, he addressed a letter to the president of the bank, detailing the information submitted to him by Mr. Fisher and the complaints made. After referring to the accounts of the Prudential Trust Co., Pellatt & Pellatt, and the A. C. Frost Co., the safety and security of which were challenged, the minister concludes his communication to the president of the bank as follows (ex. 43 p. 76)—

*"Sir Thomas White to James Mason.*

"I shall be obliged if you will write me officially, setting out concisely the history of these loans and indicating the amounts of unpaid interest (if any) in such accounts. I also request a detailed statement as to the securities held as collateral and the valuation placed upon them by your bank. Apart altogether from the question of security, the loans appear to me to be exceedingly large, having regard to the capital of your bank."

and I can only express the hope that the concern which is undoubtedly felt by the directors mentioned may prove to be unfounded. In directing to you this letter with reference to the memorandum which, as I have stated, has come before me officially, I am following the practice which we have hitherto adopted in similar cases and am acting under the provisions of section 113 of the Bank Act."

On the same day the minister addressed a letter to the auditor of the bank, Sydney H. Jones, enclosing a copy of the letter which he had sent to the president, as follows: (ex. 46. p. 78.)—

*"Sir Thomas White to Sydney H. Jones.*

*"The Home Bank of Canada.*

"For your information I enclose herewith copy of a letter I have today addressed to Hon. James Mason, president of the above bank, referring to a memorandum which has been officially filed with me respecting certain accounts of the bank and requesting detailed information.

Under the provisions of section 56A of the Bank Act, I now direct and require you as auditor to enquire into the accounts mentioned and report to me in all proper detail respecting them. Your prompt attention will greatly oblige."

Mr. Jones acknowledged the receipt of this letter on the 26th of January 1916, but, further than that, he seems to have paid no attention to the directions sent him by the minister, who again addressed him on the 24th of the following month as follows:— (ex. 59. p. 89.)

*"Sir Thomas White to Sydney H. Jones.*

*"Re Home Bank of Canada.*

"Referring to my previous letter requesting an investigation by you of certain accounts of the above bank, I shall be glad if you will send me as soon as possible a detailed statement showing advances, repayments, and interest charges on the A. C. Frost Company account. The western members of the Board have thought it desirable that I should obtain this information. Your prompt attention will oblige."

This communication was acknowledged by Mr. Jones on the 26th of February 1916, and on the first day of March following he forwarded a statement showing details of advances, repayments and interest in the A. C. Frost Company account, which he said that he had duly verified by the books of the bank. (Ex. 61. p. 90.) This is all that was done by the minister or the auditor under the provisions of section 56A of the Bank Act.

It is apparent that the minister relied with confidence upon the opinions expressed by Mr. Lash, counsel for the bank, and accepted his conclusions. The result was, that in consequence of the representations made by Mr. Lash and the directors, acting then in harmony, Sir Thomas consented to allow them to work the situation out, but in assenting to this it is plain that the mind of the minister was hardly at rest and his opinion concerning the condition of affairs can easily be gathered from his letter to Mr. Lash as follows: (Ex. 84, p. 175).

*"Sir Thomas White to Z. A. Lash*

"I have yours of the 23rd inst., in which you set forth substantially what occurred at our interview on Wednesday. You clearly understand that I reserve to myself the fullest liberty to consult with the president of the Canadian Bankers' Association, or take any other steps which I may deem to be in the public interest without further communication

## SESSIONAL PAPER No. 100d

with Mr. Haney or yourself on the subject. In the meantime it appears to me from the statement of yourself and Mr. Haney and from Mr. Crerar's letter that the position of the bank is being improved. I should like to have from you an assurance that interest upon the Frost account will not be taken into profits distributed to shareholders in the way of dividends. It would appear to me also that until the New Orleans situation is cleared, it would be advisable to pursue a similar course respecting that account."

Within a week from the receipt of the letters from Mr. Fisher, the minister had interviews with Mr. Haney, vice-president of the bank, and Mr. Barnard, then a director (ex. 51, p. 80), whose dealings with the bank were criticized, and impressed upon them the necessity of bringing pressure to bear on the doubtful accounts, and the danger of showing unpaid interest as profit. This was followed by communications to the minister from Mr. Fisher, K.C., and Mr. Lash, K.C., and a communication from J. Cooper Mason, acting general manager of the bank, to the minister, enclosing papers and documents showing in full the statements of the accounts which were challenged (ex. 63, p. 93). All these communications were written and information supplied within four weeks from the time of the receipt by the minister of the complaint from the western directors, which shows that no time was lost on his part in an effort to secure the necessary information. The correspondence shows that the minister was not convinced that, because the eastern and western directors had settled their difference, he should stay his hand from a thorough and complete investigation of the bank's affairs (ex. 71, p. 162). But further correspondence carried on by Mr. Lash and Mr. Crerar, and personal interviews with the two latter as well as with Mr. Haney, and information furnished concerning the accounts—much of it misleading and false—and promises of a thorough investigation of the bank's affairs under the direction of Mr. Haney and Mr. Machaffie, and information supplied by both these gentlemen (ex. 83, p. 172) and the minister's desire to prevent the collapse of any bank in view of war conditions, resulted in his acquiescing in the unanimous request of the whole board that no investigation should be made. No other report from the auditor was asked for or received. It was represented to the minister, in a letter signed by Mr. Crerar (ex. 81, p. 171) that a change in management had taken place by which he expressed himself certain that the knowledge and information concerning the position of affairs desired by the western directors, and the changes they wished when they sent their request to him, could now be made without calling in outside assistance; that the situation had materially improved within the past month, and that it was better to have the inquiry proceed from within rather than from without.

If the information thus furnished to the minister concerning these accounts had been accurate, I think it is reasonably clear that the course adopted was in the interest of everybody, including the depositors; but it is difficult to conclude that they had made a full disclosure to the minister concerning the situation which Mr. Lash described by letter written on the 29th of February, 1916, to Mr. Fisher, in these words (ex. 132, p. 292):—

*"Z. A. Lash to James Fisher*

"The more I consider the bank's position, even assuming that every account will ultimately be collected in full, the more doubtful I feel as to the possibility of its continuing in business. The amount locked up indefinitely in four large accounts, is probably three times the paid-up capital, and more than half the total deposits; and if anything should take place which would cause a comparatively small percentage of the depositors to ask for their money. I do not see how the bank would, without assistance from outside, continue with open doors

"I told Sir Thomas that my main object, since I learned in outline what the bank's position was, has been to bring about a position, which, if the worst happened, would result in liquidation with open doors. This can only be brought about by the assistance of other banks, and I want definite instructions from the board as to how far I may go in this direction in consultation with Sir Thomas White, for he is now an essential element in the situation, which cannot be disregarded. He told me, and I could not dispute the correctness of his position, that, after you, on behalf of the Winnipeg directors, had submitted to him information which, to say the least, was very disturbing, the responsibility was thrown upon him, which he could not avoid, and which would not be discharged because those who had invited his intervention might desire him to withhold further action."

Attention may be drawn here to the fact that this communication was not addressed to Sir Thomas, nor is there any evidence that he was in possession of Mr. Lash's views as above expressed. Following the representations above referred to, the hand of the minister was stayed, no inspection was ordered, and the audit, if it can be called such, was useless.

Attention was drawn by Mr. Lafleur, of counsel for the Government, to the unwisdom of seeking information from the parties whose good faith was challenged, and he strongly urged that the only proper course to have pursued would have been to have sought information from an outside source. I am not asked to comment on the course taken by the minister, but simply to say what he did. It is open to all concerned to draw whatever inferences the circumstances would seem to justify in that regard.

Upon receipt of the complaint, in 1916, the first action taken by the minister was to direct an enquiry into the accounts complained of, and a report thereon by Mr. Jones, the bank's auditor, under section 56A of the Bank Act. (ex-46-p-78). And at the same time he called upon the president of the bank for special returns under the provisions of section 113 of the Bank Act. (ex-43-p-75).

Turning to the consideration of what was done by the minister in 1918, when further complaint was made, it is clear that upon the receipt of the letter from Mr. Machaffie, dated the 29th of August 1918 (ex-88-p-178), the minister lost no time in communicating its contents to Mr. Lash, as appears by his letter dated September 4th 1918, in which he enclosed a copy of Mr. Machaffie's letter to him, and asked that it be taken up with the board of directors and a report be made. The letter reads as follows:—(ex-90-p-179).

*"Sir Thomas White to Z. A. Lash*

*"Re Home Bank*

"DEAR MR. LASH,—I enclosed herewith copy of a letter which I have received from Mr. Machaffie, late assistant to the president of the above bank. I shall be glad if you will take the matter up with the board of directors and have a report prepared dealing with the several charges made. I regard the matter as of the utmost public importance, and it is my intention to have a thorough investigation made through the Bankers' Association or otherwise. Before taking this step, however, I wish to have a reply from Mr. Haney and his board."

Absence of Mr. Lash and illness of Mr. Haney seemed to be the cause of a delay in forwarding the board's reply to the charges made by Mr. Machaffie, but it was eventually sent to the minister under date of October 29th, 1918. (ex-96-p-182). The report is a voluminous one, touching upon all of the doubtful accounts, denying the charges contained in Mr. Machaffie's letter, and

## SESSIONAL PAPER No. 100d

picture a condition of affairs with reference to the bank, which, if true, would have disproved the necessity of action being taken. It is in the form of a resolution of the board of directors, dealing with all the matters complained of by Mr. Machaffie, and signed by the president. The regrettable thing about it is that in very many respects it was not true. But its receipt seems to have satisfied the minister that the proper course to be taken under the circumstances was to allow the bank officials to work out the situation. Having said so much about Mr. Machaffie's letter, it is right, I think, for me to say, that its force in anybody's mind would very naturally be broken by the fact that on the 25th of February, 1918, Mr. Machaffie had drafted a letter to the Minister of Finance (ex-135-p-390) in which he made representations concerning the Pellatt account, the New Orleans account, and the Frost account, commenting adversely upon them, and saying that there were numerous other accounts in a precarious condition, and sharply criticizing the policy of the president, Mr. Haney. This letter was not sent to the Minister of Finance, but a copy of it was forwarded to the Home Bank. (ex-146-p-402). Mr. Machaffie subsequently retracted all these statements in a letter to the bank, admitting that his information was inaccurate and incomplete, and that his first letter would have conveyed a wrong impression as to the condition of the bank and the conduct of its affairs. Now the minister was acquainted with the fact of this withdrawal, and that the reason Mr. Machaffie had retracted these statements was, that he might procure a settlement of his claim against the bank. If the accuracy of the information concerning the banks' affairs had depended upon Mr. Machaffie's representations, while perhaps it would be too strong to say that no attention whatever should have been paid to him, yet the fact remains that he had retracted them under circumstances that would very materially weaken them, and would also present their author in a very unfavourable light. If it were a question between Mr. Machaffie and the officials of the bank, backed in their statement by Mr. Lash, no one would expect otherwise than that Mr. Machaffie's statements would be ignored. In response to the minister's call for a report upon the matters, there was submitted to him under date of 29th October, 1918, a lengthy statement signed by the president of the bank, in the form of a report unanimously adopted by the board, instructing the president to forward a copy to Mr. Lash, and with a direction to have the same forwarded to the minister. (ex-96-p-182). The report made reference to what was done in 1916, and the changes made since that time in the management of the bank, discussed the accounts which had given so much trouble, and reported favourably on the British Columbia account, and the New Orleans account; it denied that any dividends had been paid out of capital, and asserted that the profits of the bank actually earned had been sufficient to warrant the payment of the dividends; it set out the net profits for the years 1917 and 1918, and controverted Mr. Machaffie's statements about the shipbuilding enterprise, on which he had commented unfavourably; it assured the minister that the position of the bank had been steadily growing stronger, giving figures of its growth comprising the years 1917 and 1918, and at great length purported to set out the improved position of the institution. It was a report of such a character as to set at rest the mind of anyone who believed it, and apparently was written with that end in view. Upon its receipt the minister apparently was convinced that there was no necessity for ordering any further investigation. It was so drawn as to raise an issue between Mr. Machaffie and the president and directors of the bank, thereby clouding the real question.

*Answer to question 3:—*

The action taken by the Minister of Finance upon the representations made to him consisted in:—

(a) Calling for special returns from the bank under section 113 of the Bank Act.

(b) Calling for a report from the bank's auditor under section 56A.

(c) Seeking and obtaining information from Mr. Lash, the bank's counsel, and from its president and other directors, including therein detailed statements of accounts regarding the dealings of the bank with the following individuals and firms, viz: A. C. Frost & Co.; Pellatt & Pellatt; the Prudential Trust, New Orleans account.

(d) Forbidding further capitalization of interest on doubtful accounts.

(e) Securing a promise from Mr. Lash and the president that a thorough investigation would be made of the affairs of the bank under the direction of Mr. Haney and Mr. Machaffie.

I think it is right to say also that the minister's intervention in 1916 resulted in a change of management of the bank, Mr. Haney becoming vice-president, with the understanding that he should discharge the duties of president, and have full powers with respect to the organization of the staff; this change appears to have met with the approval of all concerned, although no improvement seems to have actually resulted from it.

*Question number 4 reads as follows:—*

"What effect would an audit under section 56A of the Bank Act, if made in 1915, 1916 and 1918, have had upon the conduct of the affairs of the said bank and upon the position of the present depositors."

Confining myself to the years 1916 and 1918, as no evidence whatever has been directed towards the year 1915, it is clear that an effective audit would have revealed a condition of affairs demanding the application of immediate and drastic remedies. It will be noticed that both in his evidence and in his argument Sir Thomas White directs attention to the fact that he called for an audit of certain accounts under the above mentioned section of the Act, and the criticism of the other counsel was, as outlined in the answer to question 2, that he directed the auditor of the Home Bank to do the work, instead of selecting an outside auditor or one named by the Bankers' Association, as he had first in mind. It is apparent that he received no such audit, and at page 346 of the evidence he thus describes it, in answer to questions put by Mr. McLaughlin:—

"Q. So while you directed the audit under section 56A you never received one?—A. I received an audit of the Frost account.

"Q. Just the statement from the ledger?—A. Well, that is what appears in these exhibits. It is not in my mind that I received anything else, but I may have. But I do not say I did.

"Q. There is nothing else in the exhibits. That of course was not the kind of independent audit that these directors wanted?—A. Not up to a certain stage, up to a certain stage they wanted an independent audit.

"Q. And this was the auditor who had certified to the various reports of the bank from year to year?—A. Yes.

SESSIONAL PAPER No. 100d

"Q. So to ask him for a further statement would be to merely ask him to send in his previous report or else show he was wrong?—A. I do not think so, the previous report dealt with general accounts. I asked him for a report in all fitting detail.

"Q. Anyway, the report was never received, except this?—A. Apparently not."

The evidence of the minister is to the effect that had he known the true condition of affairs in 1916 or 1918 he would have taken steps to meet the situation. The steps indicated by him were, that by calling in the aid of the Bankers' Association, arrangements could have been made to have the bank taken over by another institution. Even if, for reasons that might be imagined, this could not have been consummated, I think a revelation to the stockholders of the existing condition of affairs could have had no other result than a complete change of management. Anyone whose funds were at stake must instantly have realized the necessity of forcing the liquidation of the large accounts, whose inactivity was gradually drying up the resources of the bank. It is impossible to state with certainty what would have occurred in any line of business, had certain events intervened, and what renders an estimate in that regard most questionable, is the fact that one's mind and opinions are liable to be influenced and shaped, even unconsciously, by events subsequent to the period which is under consideration; consequently the value of an answer to a question of this nature must for that reason be impaired; but notwithstanding all this, one can always rely in judgment upon the continued operation of natural impulses for safety which prevail in financial dealing. It is a fact that disclosure of the true financial condition of the bank in 1916 and still more in 1918, would have shown that, under the management of the then board of directors, the bank had been placed in most extreme jeopardy; that they, and others associated closely with them in its affairs, had access to the resources of the institution to a degree wholly incompatible with the bank's financial standing; that the capital had been most seriously impaired, if not altogether lost, and fictitious earnings were being put into profit and loss account as a justification for declaring dividends which had not been earned, and in view of these facts I think it can safely be said that the effect of an audit of the bank's affairs in 1916 or in the year 1918, would have been to bring to the attention of the shareholders a condition of affairs which would have moved them instantly to insist upon a change of management, and to have wholly reversed the policy theretofore pursued. It is inconceivable, I think, that the permission of the Department of Finance, or of the shareholders of the bank, could have been procured to countenance the continuation of the then conduct of the bank's affairs, as must have been disclosed by a thorough and effective audit. It might have come to pass that the minister, after such audit, would have been able to secure the amalgamation of the Home Bank with another bank. If that desirable course could not have been effected, the bank would have come under honest management, and in my view, been compelled to liquidate its affairs; for after disclosure of its true condition, as must have followed an effective audit, there would inevitably have been an instant demand by the depositors for their money, and a withdrawal of public support generally, which, in view of the condition of the large accounts, and the impossibility of converting them into liquid assets, must, I think, have resulted in liquidation.

I now turn to the second branch of this question, which asks:—

"What effect such audit would have had upon the position of the present depositors."

In answer to this I may say I am taking it for granted that such audit would have been thorough and effective, and as observed above, I think the result would have been either to close the bank altogether, or put it upon a firm foundation as an integral part of another banking institution, since, for the reasons above noted, I do not think it could have had further independent existence. In the light of this supposition, it is obvious that as far as the year 1916 is concerned, such audit would have saved the situation for the then depositors, for although the capital and reserve had largely, if not wholly, disappeared, yet despite the loss thus made, there was still left a fairly balanced account, according to the testimony given by Mr. Edwards.

There is no evidence as to what number of those who are referred to in the question as "present depositors," occupied that position in 1916 and 1918; but I think it is clear, as regards those who were depositors in the first named year, that if either of the foregoing remedies had been applied, their accounts would have been met in full from the then resources of the bank, backed by the double liability of the shareholders, and it is this last asset which might have saved the situation for the depositors in the year 1918.

It is my duty to specifically inquire into the financial condition of the bank during the years 1916 and 1918 under the next succeeding question, and the result of that inquiry is closely bound up in the answer to the present one; but my finding on this branch of question 4 is that an effective audit in 1916 would have resulted in action which would have saved the depositors from loss. While, because of lack of evidence on which to base a conclusion, it is impossible to speak with as much certainty as regards the year 1918, the probability is that the same result would have followed had the audit been made and action taken in that year.

*Answer to question 4:—*

For the reasons above set out, I think an effective audit under section 56A of the Bank Act made in 1916 or 1918, would have resulted, as far as concerns the conduct of the bank's affairs, in either:—

(a) Liquidation immediately following such audit, or,

(b) Amalgamation with another bank.

And the effect of such audit upon the position of the present depositors:—

If made in 1916 the present depositors would have suffered no loss.

If made in 1918, I do not think any loss would have fallen upon them.

*Question number 5 reads as follows:—*

"What was the financial condition of the said Home Bank of Canada in the years 1915, 1916 and 1918 respectively, and what steps, if any, could have been taken by the Government to save the situation?"

The returns to the Government for 1916 show (ex. 170, p. 495) that the paid-up capital of the bank was \$1,946,639; the reserve, \$300,000; the deposits, \$10,028,224; the total liabilities were \$18,722,963; and the total assets \$21,030,353. Upon this showing a dividend of five per cent was declared and paid. The foregoing figures indicate an excess of assets over liabilities of \$2,307,390, which represents what the officials of the bank reported to the Government in that year as to the financial condition of the Home Bank of Canada. The expert accountants, Mr. Clarkson and Mr. Edwards, who testified before the commission, were undoubtedly best equipped to find the answer to this question. Whatever lack of unanimity there is in the opinions expressed

SESSIONAL PAPER No. 100d

by these two gentlemen, arises from a difference as to what would have been their respective opinions if confronted by the physical assets of the bank in 1916 and asked at that time to pronounce upon their value. If the answer to the question—what was the financial condition of the Home Bank in 1916—depended wholly upon ascertaining what value should be placed upon the bank's assets in the year indicated, I think that is a most difficult thing to determine. Confining attention for a moment to the large accounts which were challenged, it seems to me that the one concerning which an auditor at that time would have spoken with most certainty, was the Prudential Trust account, spoken of as the New Orleans account. The bonds, which were security for the loan, had become worthless by the underlying property having been disposed of under a prior claim, and it looked as if a total loss would be made in that particular, and yet, to illustrate the difficulty of relying upon opinions thus formed, it is only necessary to say that at present, Mr. Clarkson holds out strong hope of this account being paid in full, that result having followed from further expenditure for the purpose of protecting the claim. An estimate of the value of the security underlying the loan to A. C. Frost & Co. in 1916 must have been influenced by the reports on these timber limits, then on file in the offices of the bank, as well as from reports of two of the directors who had personally visited the locality and pronounced favourably upon it. A like remark may be made as to the Pellatt & Pellatt loan, and while both these latter have turned out much more disastrously than could have been anticipated, they nevertheless, in the year 1916, could not have given to an auditor anything like the concern which now prevails regarding them. Again, the wisdom of adding interest to an existing loan and carrying such interest into profits year by year, as far as the safety of the investment is concerned, must depend upon the value of the underlying security, and that remark I think has a bearing upon what conclusion an auditor in the year 1916 would have drawn as to the financial condition of the bank from the standpoint of its physical assets represented so largely by the existing securities for these large loans. I can draw only lame conclusions in view of the reports which would be laid before the auditor in 1916. Clearly an auditor could not have taken it upon himself to have personally valued the timber lands, nor indeed to have gone over all the properties and securities represented by the Pellatt loans or the New Orleans Railway loan, but looking at such information as was available for him in the year 1916 with reference to the securities underlying these large loans, and speaking from the standpoint of that year, it is difficult to say what value should have been placed upon these assets in 1916, and consequently what its financial condition was viewed from that standpoint. If estimated in the light of knowledge since acquired, the answer is easy. But I think there were easier tests to apply, which were open to his observation, and would have challenged the attention of any competent auditor. One of these lies in the power of the bank to earn and pay dividends from year to year. While from the standpoint of abstract security as manifested by the reports available, I think it could hardly be said at that time, that the capitalization of interest on these accounts would necessarily be productive of danger, yet considering that such course resulted in depriving the bank of its liquid assets available for dividends as well as for daily use, I think these accounts were calculated to cause the liveliest apprehension. It is just as necessary that a bank be in a position to marshal its assets for the purpose of a dividend as that its solvency be manifest from a comparison of its general liabilities and assets, and having regard to the capital and resources of this bank, the capitalization of interest on these large accounts from year to year must have been looked upon as a most dangerous and alarming procedure. And I think it would be equally correct to say that the existence of these accounts them-

selves, which rendered it necessary to capitalize the interest, was a most disturbing circumstance apart from the question of securities held for them. The effect of a bank passing a dividend is too well known to require comment. Conditions may be imagined in which directors would wisely determine it to be better to pay the ordinary dividend, even though the profits were unliquid, as in the case of this bank; but, before another year should elapse, unquestionably steps should be taken to force the liquidation of accounts rendering that course necessary, otherwise the result would be as in the present instance.

Also, there is always an existing danger that for some reason or other a run upon a bank's funds may take place for which a volume of ready money is necessary to tide over the situation. Whether any cause exists justifying such action is beside the point. It does occur from time to time that depositors become alarmed, frequently for no valid reason, and in consequence of such alarm demand their money. No bank should lose sight of the possibility of such an incident taking place, and be prepared to meet it. From that point of view it is unnecessary to argue that these accounts then carried by the Home Bank were altogether incompatible with safety, and I think that any competent auditor would have felt compelled to so report. Here again it will be perceived that this has no direct bearing upon the sufficiency of the security for the principal and interest of the loan, but the existence of these large loans was, in my opinion, wholly contrary to sound banking principles, for the two reasons briefly outlined above, and therefore that they created a very dangerous condition for the bank. Now for these reasons, rather than from the comparison of assets and liabilities, I think a competent auditor, viewing the situation in 1916, would have felt compelled to report an extremely dangerous situation in connection with the bank, for it was apparent that dividends were being paid out of interest which had been capitalized; in other words, from earnings which were not available, and he would have been confronted by the ominous fact that the amount of interest so capitalized and taken into profits then amounted to much more than the whole capital and reserve of the bank. He would have seen that during the year 1915, although a profit of \$163,900 was shown, the actual state of affairs was that there had been taken into profits uncollected interest on four accounts to an amount exceeding \$275,000; (p. 270) that in the year 1916, in which a profit of \$133,406 was shown, uncollected interest to the amount of \$210,000 (p. 271) had been put to profit account. Now the necessity of taking these uncollected annual amounts into profit and loss in order to declare a dividend, would have given to an auditor most serious concern, apart altogether from the question whether the security available for each individual account could have stood the strain of the additional interest as well as the principal which it professed to guarantee. No doubt an auditor would have been very much embarrassed by finding these large accounts in the condition in which they were, and must have reported them with such comments as in his judgment were necessary bearing upon the question of security, but apart from their safety from that standpoint, the fact that by capitalizing the interest of these accounts they were absorbing more money than the bank was making year by year, would convince him that a very grave situation existed. I have illustrated the situation with reference to 1916 by a reference to the accounts above named, but other accounts were in a similar condition, and the combined effect of all these matters were danger signals of the most alarming nature.

For the reasons suggested above, I cannot satisfactorily work out an answer to this question from a comparison of assets and liabilities. I think it must have been as a result of looking at the matter in this light, on the part of the late Mr. Z. A. Lash, K.C., that as early as February, 1916, he wrote to Mr.

SESSIONAL PAPER No. 100d

Fisher, K.C., of Winnipeg (ex. 132, p. 292) the letter previously set out, in part, in my answer to question three, wherein he expressed doubt as to the possibility of the bank continuing in business, because, as he therein said:—

*“Z. A. Lash to James Fisher.*

“The amount locked up indefinitely in four large accounts, is probably three times the paid-up capital and more than half the total deposits.”

And he also alluded to the danger of even a slight run upon the bank.

Having regard to the condition of the bank in the years in question, from a comparison of the assets and liabilities, Mr. Edwards has testified as a result of his investigations that the assets of the bank in the year 1916 should have been reduced by the sum of three millions of dollars thereby leaving the liabilities and assets about even, thus assuring the depositors of the safety of their money, and that the entire capital and rest had disappeared (p. 515). In arriving at these figures Mr. Edwards put a valuation upon the assets, as it would be necessary for him to do, and while that is easily done at present, yet from the standpoint of the information available in 1916, I cannot say that it would have appeared so clearly to me at that time.

Mr. Clarkson, one of the liquidators, spoke very guardedly as to the exact position of the bank in 1916, but remarked (p. 283):—

“He must have felt that the bank was not earning profits sufficient to continue payment of dividends without capitalizing interest on accounts which were in jeopardy or at least in deep water; and that being the case, the situation must have appealed to him as a serious situation.”

And further says (p. 287):—

“There were a great many danger signs and the revenue situation was one of them.”

Down to May, 1916, the interest capitalized on the A. C. Frost & Co. account was estimated by Mr. Edwards at \$535,000 (p. 540), and it may not be out of place to say that until the date of failure interest had been capitalized to the extent of over two millions of dollars.

The financial condition of the bank in the year 1918 when the attention of the minister was drawn to it a second time, had become more serious, although returns to the government for that year gave no cause for apprehension. The returns showed (ex. 170, p. 495) paid-up capital to have slightly increased, it then being \$1,947,635. Reserve stood at the same figure, viz., \$300,000. The deposits showed almost five million dollars increase, being \$14,988,422. The total liabilities were \$25,842,635, and the assets \$28,270,766. From all of which it appeared, that if the assets were realizable, the bank was, from that standpoint, on safe footing. But an examination of the books would have shown—according to Mr. Edwards' testimony—that the accumulated and unpaid interest for the years 1916, 1917 and 1918 amounted to \$676,000 (p. 509), which illustrates in a startling way how dangerous these frozen accounts were. Such examination would also have shown that in 1917 a profit of \$142,900 was shown in the bank's statement, but that in that year interest to the extent of \$205,000 was capitalized and never collected (p. 271); that the earnings of the bank for 1918 were \$167,157 which was the most satisfactory showing for a long while, but as a matter of fact the annual statement represented the bank to have made \$228,963 in that year (p. 271).

After the receipt of Mr. Machaffie's letter the minister reverted to his determination to refer the matter to the Canadian Bankers' Association, but for the reasons which have been duly detailed in answer to question 3, he was persuaded not to do so.

As to what further loss in capital had taken place between 1916 and 1918, it is difficult to form a conclusion. That some such impairment had taken place within that period is certain, although no details of amount are furnished in the evidence. Two yearly dividends amounting to over \$190,000 had in the meantime been paid.

The concluding part of this question asks:—

“What steps, if any, could have been taken by the Government to save the situation.”

In considering what the Government might have been able to do to that end in the years above mentioned, attention is directed to the probability of assistance from other financial institutions. By its continual supervision of banking matters and from the fact that there must be a renewal of the charter of each bank every ten years, it is obvious that the Department of Finance is in a position to exercise much influence with the Bankers' Association. While the Government has no power to compel one bank to take over another, and the Bankers' Association has no funds with which to assist a weak bank, nevertheless, the stability of banking institutions being supreme law in financial circles, one can see the force of the opinion expressed by Sir Thomas White, that intervention on his part would have resulted in the Home Bank being taken over by another bank or by other banks. Speaking strictly, such action could not be forced upon the Bankers' Association, or upon any bank, and therefore, if one is to consider what the Government could have done to save the Home Bank, apart from co-operation by the Bankers' Association or by other banks, the answer to such restricted enquiry is, I think, that the Government, after ascertaining the facts, could have closed the bank and forced liquidation at a time when, in my opinion, no loss would have fallen upon the depositors. But there still remained, however, the good services of other financial institutions responding to the express desire of the Department of Finance, especially when considering the imperative necessity for financial stability at that time. Whether, in view of the situation which would have been then disclosed by a proper audit and inspection, any other financial institution would have burdened itself with the Home Bank's liabilities or not, is a matter to which I cannot give absolute and definite answer. The evidence of Sir Thomas White is clear and distinct that he would not have allowed the Home Bank to fail at that time, but he would have had it taken over by some other institution, clearly explaining, however, that such action could not be made imperative upon any other bank. He was referring to the condition of affairs from a national standpoint, and to the overwhelming necessity at that time for keeping up a strong financial front in face of the world's demands, and replying upon the unquestioned patriotism of those who directed the issues of financial matters within Canada. Sir Henry Drayton expressed the same opinion. Keeping in mind these two spheres of operation open to the Government, it is clear I think, that all that it could have done to save the situation for the depositors would have been either to have closed the bank, forcing a liquidation of its assets to meet its liabilities as far as then possible, or have brought such influence to bear upon the Bankers' Association, or some other bank, as might have resulted in its amalgamation with another financial institution.

SESSIONAL PAPER No. 100d

*Answer to question 5:—*

I. The financial condition of the Home Bank was:—

*In 1916:*

(a) More than double its total paid up capital and reserve was locked up in four accounts, the securities for which were not realizable.

(b) No interest was being paid on three of these large accounts.

(c) No money was available for dividends except money belonging to the depositors, and the dividends paid from year to year were paid out of the depositors' money.

(d) A demand by the depositors for even a small percentage of their money could not have been met.

(e) The total paid up capital and reserve of the bank had been lost.

(f) A loss of assets calculated by Mr. George Edwards at over \$3,000,000, had been sustained, leaving the assets and liabilities about even.

*In 1918*

(a) There had been no reduction in the amounts due to the bank from their heaviest debtors, but on the contrary further capitalization of interest had taken place.

(b) All the weaknesses which existed in 1916 were accentuated.

(c) The dividends paid in the meantime, amounting to over \$190,000, had been paid out of money belonging to depositors.

(d) A further loss of assets had been sustained but the auditors were unable to state with any certainty as to the amount of such loss.

II. The only steps that the Government could have taken to save the situation would have been to make thorough investigation into the bank's affairs, which would have resulted:

(1) In forcing the liquidation of the bank, or,

(2) Bringing about its amalgamation with another bank.

It will be noticed that by Order in Council number 412, dated 17th March, 1924, the Committee of the Privy Council advised that the powers of the Commissioner under Order in Council number 306:—

“Be not limited to the specific years 1915, 1916 and 1918 referred to in the petition of the depositors, but should extend to an investigation of the affairs of the said bank during the whole interval between the issue of the bank's charter and the failure of the said bank, including any representations made to the Government of the day, as to its condition, any action taken by way of the Ministers of Finance upon such representations as may have been made, and the effect on the position of the depositors of any audit under section 56a of the Bank Act if made at any time in consequence of such representations.”

I beg to report that there is no evidence that representations of any kind were made to the Government concerning the Home Bank of Canada subsequent to the year 1918.

14 GEORGE V, A. 1924

After his retirement from office, correspondence took place between Sir Thomas White and his successor, Sir Henry Drayton, bearing upon the condition of the Home Bank, as set out in the evidence given before me by Sir Henry Drayton, but nothing requiring consideration here arises therefrom, as in any way bearing upon the substance of the depositors' petition.

An incidental reference to the Home Bank was made by Sir Henry Drayton to his successor in office, the Right Honourable W. S. Fielding, when the latter succeeded to the position of Finance Minister, but nothing was said as to the existence of the memoranda or letters above referred to.

No representations of any kind appear to have been made to either Sir Henry Drayton or to the Right Honourable W. S. Fielding concerning the condition of the Home Bank, and although the present Minister of Finance expressed himself as ready to give evidence before the commission, if required, it did not seem to me that anything had taken place which made such a step necessary. There was nothing to indicate that his attention had ever been drawn to the existence of the various memoranda or to the correspondence above dealt with.

Having reference therefore to the scope of the enquiry, as enlarged by Order in Council number 412, I beg to report that there were no representations of any kind made to the Government of the day as to the financial condition of the Home Bank of Canada after the year 1918, and consequently no action in that respect was taken by any of the Ministers of Finance.

All of which is respectfully submitted.

OTTAWA, the 10th day of June, 1924.

HARRISON A. McKEOWN,

## SUPPLEMENTARY RETURN

To an Address to His Excellency the Governor General of the 24th March, 1924, praying that he will cause to be laid before the House a copy of all memoranda, correspondence, telegrams and other documents exchanged between the Government of Canada or any of its members and other governments, corporations or individuals, since the first of January, 1922, relating to the St. Lawrence Waterway Route, and the establishment of dams on the St. Lawrence for the development of certain water-powers.

A. B. COPP,  
*Secretary of State.*

Mover: Mr. ARCHAMBAULT.

### RURAL MUNICIPALITY OF SASKATCHEWAN LANDING NO. 167

*Geo. G. Smith, Reeve*

STEWART VALLEY, SASK., February 11, 1924.

Minister of Justice and Attorney General,  
House of Commons,  
Ottawa, Canada.

HON. AND DEAR SIR.—I take great pleasure in enclosing for your consideration and action copy of a resolution which was unanimously adopted at the regular meeting of the council board of the above rural municipality, held at Leinan, Saskatchewan, on the 4th day of February, 1924.

Yours very truly,

P. S. CAMPBELL,  
*Secretary-Treasurer.*

### RESOLUTION FROM THE RURAL MUNICIPALITY OF SASKATCHEWAN LANDING NO. 167

Moved by John T. Stewart, seconded by George G. Smith:

Whereas the Council of the Rural Municipality of Saskatchewan Landing No. 167 is cognizant of the fact that excessive transportation costs are one of the factors contributing most seriously to the economic problems which affect the farmers of Western Canada;

And whereas excessive charges which prevail in connection with the lake and rail haul of grain and other exportable products from Port Arthur to the seaboard constitute a very heavy setback on the net price received by the farmer for these products;

And whereas the proposed deepening of the St. Lawrence canals for power and navigation purposes will reduce these lake and rail rates from approximately

13 cents per bushel on wheat to 4 or 5 cents a bushel from Port Arthur to Montreal, thus making a saving of 8 or 9 cents a bushel on freight charges;

And whereas the development of these deepened canals is proposed in a section of the St. Lawrence river that is owned equally between Canada and the United States, with costs to be shared according to the benefits to be derived by each country;

And whereas the development of power in this international section will produce a revenue that will take care of the amortized bonds for the whole undertaking, making the project self-financing and self-supporting, without the necessity of added taxation upon the people;

And whereas it is authoritatively stated that the United States is now seeking a conference with the Government of Canada for the purpose of entering into a definite treaty for the immediate prosecution of this work;

Therefore be it hereby resolved that this Rural Municipality of Saskatchewan Landing No. 167 request that the Government of Canada acquiesce in the request for a conference with the Government of the United States for the purpose of going ahead at the earliest possible moment with the deepening of the St. Lawrence canals in the international section between Lake Ontario and Montreal, to a depth of 25 feet instead of the present depth of 14 feet, in order that the large lake freighters may have free access from the head of the lakes to Montreal, and that ocean tramp steamers may be permitted an open seaway through to the head of the lakes, thus carrying our grain and other exportable products at a minimum lake freight charge from the ports of Port Arthur and Fort William to the markets of the world;

And further, that this Council protest most vigorously against any action on the part of the Dominion Government whereby the requests of certain interests in Ontario for the development of the power end of the project being gone ahead with immediately, and that the navigation improvement be done later by the Dominion Government at the entire expense of the government; but rather that the navigation and power improvement be undertaken simultaneously and at the earliest possible date;

And that copies of this resolution be sent to Premier King at Ottawa, and all the Dominion Cabinet Ministers, to our constituency member of the Dominion House, and to the Premiers of the provinces of Manitoba, Saskatchewan, Alberta, Ontario and Quebec.

Dated at Leinam, Sask., this 4th day of February, 1924.

Resolution unanimously adopted.

(Signed) P. S. CAMPBELL,  
Secretary-Treasurer,

R. M. Saskatchewan Landing No. 169.

February 15, 1924.

DEAR SIR,—I acknowledge receipt of your letter of the 11th instant with which you enclose copy of a resolution adopted by the Council Board of the Rural Municipality of Saskatchewan Landing, No. 167, on the subject of the deepening of the St. Lawrence Canals.

This resolution shall have my careful consideration.

Yours sincerely,  
(Sgd.) ERNEST LAPOINTE

P. S. CAMPBELL, Esq.,  
Secretary-Treasurer,  
Rural Municipality of Sask. Landing,  
Stewart Valley, Sask.

SESSIONAL PAPER No. 101c

## THE SWIFT CURRENT BOARD OF TRADE

SWIFT CURRENT, SASKATCHEWAN, CANADA

February 20, 1924.

Minister of Justice,

House of Commons,

Ottawa, Canada.

HON. AND DEAR SIR,—Upon instructions of the Swift Current Board of Trade Executive Council, I enclose herewith for your information and consideration copy of a resolution respecting the Deep Waterways, which was unanimously passed at a general meeting of the Board of Trade on February 12th, 1924.

Yours truly,

(Sgd.) CHAS. THORESON,  
Secretary-Treasurer.

*Copy of Resolution Adopted at the Annual Meeting of the Associated Boards of Trade of Saskatchewan at Moose Jaw, Sask., February 27, 1924*

## ST. LAWRENCE DEEP WATERWAY IMPROVEMENT

Whereas substantial reductions in transportation rates on grain, cattle and other exportable products of Western Canada will reasonably ensue from the completion of the St. Lawrence Deep Waterway improvement, whereby the large lake freighters will have through navigation to Montreal, and ocean tramp steamers an open seaway to the Head of the Great Lakes, thus eliminating costly transfers and rail haul between Buffalo and New York and between Georgian Bay ports and Montreal;

And whereas these reductions, together with lower freight charges on incoming commodities from Eastern ports and overseas will unquestionably promote most effectively the permanent growth and development of Western Canada.

And whereas the deepening of the canals between Lake Ontario and Montreal is proposed in a section of the St. Lawrence river that is international waters, owned equally between Canada and the United States, with costs to be shared according to benefits derived by each country;

And whereas, according to a memorandum in possession of the Dominion Government, the development of hydro-electric energy in this international section will provide a revenue that will pay the total cost of the undertaking, without imposing a cent of added taxation upon either country, and without increasing the burden of Canada's national debt;

Therefore, be it resolved that this annual meeting of the Saskatchewan Associated Boards of Trade assembled at Moose Jaw Sask., this 27th day of February, 1924, does hereby approve and endorse the action of the Dominion Government in conferring with the Government of the United States in a proposal to obtain fullest technical, and economic details concerning the Deep Waterway project, and that we respectfully request our Government to consummate present negotiations without unnecessary delay.

## THE SWIFT CURRENT BOARD OF TRADE

SWIFT CURRENT, SASKATCHEWAN, CANADA

*Resolution Unanimously Adopted by Swift Current Board of Trade, Tuesday Evening, February 12, 1924*

Moved by R. T. Graham, seconded by A. E. Longmore:

Whereas excessive charges which prevail in connection with the lake and rail haul of grain and other exportable products of the prairie provinces from Port Arthur to seaboard constitutes a very heavy financial setback on the net price received by the farmer for these products;

And whereas the proposed deepening of the St. Lawrence canals for power and navigation purposes will reduce these lake and rail rates from approximately 13 cents per bushel on wheat to 4 or 5 cents a bushel, Port Arthur to Montreal, thus making a saving of 8 or 9 cents a bushel on wheat carried to Montreal by the large freighters; and a further reduction of from 1 to 3 cents where tramp steamers can carry our grain direct from the head of the lakes to Liverpool without any transfer whatsoever.

And whereas the development of these deepened canals is proposed in a section of the St. Lawrence river that is international waters, owned equally between Canada and the United States, with costs to be shared according to the benefits to be derived by each country;

And whereas the development of power in this international section will produce a revenue that will pay for the whole cost of the undertaking, thus making the project self-financing and self-supporting, without imposing a cent of added taxation upon either country, and without increasing the burden of Canada's national debt;

And whereas the deepened St. Lawrence, besides providing unquestionable great savings on transportation rates for exportable products and incoming commodities, will also be a great stimulus to the more intensive development of the agricultural West, and provide an outstanding incentive for attracting new immigration;

Therefore be it resolved, that the Swift Current Board of Trade does hereby approve and endorse the action of the Dominion Government in conferring with the government of the United States in an effort to obtain further technical details concerning the St. Lawrence project. And that we hereby respectfully request that the Dominion Government will proceed with all the haste possible to consummate present investigations in order that a satisfactory treaty between the two countries may be arrived at, and work upon the project actually begun at the earliest possible moment with a view to its speedy completion in the economic interest of the Dominion of Canada at large.

And that copies of this resolution be sent to Hon. W. L. Mackenzie King, Prime Minister, the various Cabinet Ministers at Ottawa, to our constituency member of the Dominion House; also that copies be sent to the various Boards of Trade of Saskatchewan, Manitoba and Alberta, and to the associated Boards of Saskatchewan, asking their endorsement of this resolution.

(Signed) W. W. COOPER,

President.

CHAS. THORESON,

Secretary.

SWIFT CURRENT, SASK., Feb. 12, 1924.

SESSIONAL PAPER No. 101c

February 23, 1924.

DEAR SIR,—I acknowledge receipt of your letter of the 20th instant, enclosing copy of a resolution adopted by the Swift Current Board of Trade respecting the Deep Waterways. The representations contained in this resolution shall have my careful consideration.

Believe me,

Yours sincerely,

(sd.) ERNEST LAPOINTE.

CHARLES THORESON, Esq.,

Secretary-Treasurer,

The Swift Current Board of Trade,

Swift Current, Sask.

FORT GARRY HOTEL,

WINNIPEG, March 23, 1924.

Dear Mr. LAPOINTE:—

*St. Lawrence Canals*

I took the liberty of writing you on the 30th January, with a few suggestions as to the proposed deepening of the St. Lawrence Canals and the lake harbours, so as to allow the ocean steamer to go to upper lake ports.

Since then, the Government seem to have taken a step towards meeting the wishes of the U. S. Government, by consenting to the appointment of a commission to study the question further.

You know, much better than I, I feel sure, how strongly opposed the people of our Province are towards this project, which may prove disastrous to our seaports, and in fact their feeling towards any new public works, whilst the debt and taxation of the country are weighing so heavily upon us.

Why not call a halt until we see whether the railways which we have overbuilt, at such enormous cost, may not be able to do the trade which they were built to do.

The Transcontinental Railway, which the wise policy of Sir Wilfrid Laurier built, for the purpose of correcting the diversion of our grain trade to U. S. seaports, has proved its ability to do so. It has carried export wheat from Fort William to Quebec for 6 cents per bushel. (The all water rate from Fort William to Montreal last year was 11 and 12 cents and in 1922 went as high as 14 cents.)

Rival influences seem to have been able to prevent this new railway from carrying out this great public service, and our own officials have raised its tariff to the ridiculous figure of 21 cents, whereas even if the Crowsnest basis, in force west of Fort William, had been adopted, the rate would only have been 11 cents.

The result has been to prohibit through grain shipments, and to force our wheat into the lake boats at Fort William and thence to Buffalo and New York, which last year took 65 per cent of our transatlantic export, and, the year before, 74 per cent.

Is not this policy simply robbing the unfortunate western farmer, who has also seen his wheat tumble in price from \$3 to \$1, and at the same time depriving Canadian seaports of their legitimate traffic?

Why not remove this barrier—of our own creation—before plunging into any more public works?

If, however, the question of St. Lawrence waterways has to be studied further, may I take the liberty of making the following suggestions, as to

14 GEORGE V, A. 1924

the conditions upon which, in the interest of Quebec and the Maritime Provinces, that study should be pursued:—

1. That the rate of 11 cents per bushel upon export wheat from Fort William or Armstrong over the Government railway, to Quebec or Montreal and 12 cents to St. John and Halifax, should be immediately put into force, and that, as recommended by the Senate investigation, 10 million bushels storage should be put at Quebec, Halifax, St. John and Vancouver (14 million is now being built at Montreal) and marine insurance guaranteed by Government at New York rates of premium.

2. That the Cardinal, Ottawa & Montreal route for the canal as recommended by Mr. Cauchon, C.E., should also be examined and reported upon. If as he says, it will only cost half the money, and will be altogether in Canadian territory, it is well worth looking into. The route would develop the water power at Carillon, said to be as great as Shawinigan, and might eventually form part of the proposed Georgian Bay Canal.

Hoping that these suggestions may be of some interest to you.

Yours very truly,

J. G. SCOTT.

If branch lines of the Canadian National Railways are to be built in the northwest, at the public expense, should not the same policy be followed at Lake St. John, where there are flourishing settlements, at Normandin, Albabel, Mistassini and Peribonca, which are great feeders of the National Railways at St. Felicien, and would be much greater if the farmers had not to drive their produce 40 and 50 miles to reach it? A very great hardship.

Might I suggest that if you should have occasion to discuss with your Maritime Province members the propriety of using the Transcontinental Railway for the grain traffic, it might be well to remind them that by the existing tariff the extra charge for carrying export wheat from Montreal or Quebec to Halifax or St. John is only 1 cent per 100 lbs. (6 10c pr. bushel). So that if the rate from Armstrong to Quebec is made 11c, as it should be, Halifax and St. John would be able to take advantage of the 214 miles shortening of distance between Winnipeg and Quebec, and would be in a position to compete as to price with New York for the winter shipment to Europe. The Maritime Provinces should understand, at last, that their future depends upon the use of the Transcontinental Railway and that they must work with Quebec.

March 27, 1924.

J. G. SCOTT, Esq.,  
Fort Garry Hotel,  
Winnipeg, Man.

Dear Mr. Scott:—

Re: *St. Lawrence Canals*

I have your letter of March 23rd, contents of which are carefully noted.

Thanking you.

I remain, yours faithfully.

## FURTHER SUPPLEMENTARY RETURN

To an Address to His Excellency the Governor General of the 24th March, 1924, praying that he will cause to be laid before the House a copy of all memoranda, correspondence, telegrams and other documents exchanged between the Government of Canada or any of its members and other governments, corporations or individuals, since the first day of January, 1922, relating to the St. Lawrence Waterway Route, and the establishment of dams on the St. Lawrence for the development of certain water-powers.

A. B. COPP,  
*Secretary of State.*

Mover: MR. ARCHAMBAULT.

OTTAWA, April 3, 1924.

DEAR SIR,—I have the honour by direction to transmit herewith a Return to an Address of the House of Commons of Canada, so far as the Department of Agriculture is concerned, showing a copy of all memoranda, etc., between the Government of Canada or any members thereof, since January 1, 1922, re St. Lawrence Waterway Route, and have to request that you will be good enough to cause the same to be forwarded to the proper officer for submission to the House.

Reference No. 46 is returned herewith.

I have the honour to be, Sir,

Your obedient servant,

A. L. JARVIS.

*Assistant Deputy Minister and Secretary*

The Under-Secretary of State,  
Ottawa

OTTAWA, March 20, 1924.

J. E. H. LAIDLAW, ESQ.,  
Secretary-Treasurer.

Rural Municipality of Swift Current No. 137,  
Swift Current, Sask.

DEAR MR. LAIDLAW,—I am in receipt of your favour of the 14th March, together with copy of a resolution unanimously adopted by the Rural Municipality of Swift Current, urging the deepening of the canals of the St. Lawrence to permit access of ocean ships to the head of the Lakes.

In reply, Mr. Laidlaw, I think I cannot do better than attach hereto copy of the Speech from the Throne, which was delivered by the Governor General on the opening day of the Session and which contains the Government's programme for this Session. You will, I know, be interested to find that one paragraph deals with the subject you mention.

Thanking you for your representations, I am,

Yours very truly.

14 GEORGE V. A. 1924

## RURAL MUNICIPALITY OF SWIFT CURRENT No. 137

SWIFT CURRENT, SASK., March 14, 1924.

Hon. W. R. MOTHERWELL,  
Minister of Agriculture,  
Ottawa, Canada.

HON. AND DEAR SIR,—Enclosed herewith please find copy of a resolution unanimously adopted by our council board at a regular meeting on Saturday, March 1.

Believing that nothing which can be devised will effect such a comprehensive solution to the grievous transportation problems confronting Western Canada as the deepening of the canals of the St. Lawrence to permit access of ocean ships to the head of the Lakes, we trust you will give this resolution your very best practical consideration.

Yours very truly,

(Sgd.) J. E. H. LAIDLAW,  
Secretary-Treasurer.

## ST. LAWRENCE DEEP WATERWAY IMPROVEMENT

*Resolution Adopted by the Rural Municipality of Swift Current No. 137 in Regular Council Meeting at Swift Current, Sask., on Saturday, March 1, 1924.*

Whereas the Council of the Rural Municipality of Swift Current No. 137 is cognizant of the fact that excessive transportation costs are one of the factors contributing most seriously to the economic problems which affect the farmers of Western Canada:

Whereas excessive charges which prevail in connection with the lake and rail haul of grain and other exportable products from Port Arthur to the seaboard constitute a very heavy setback on the net price received by the farmer for these products:

Whereas the proposed deepening of the St. Lawrence canals for power and navigation purposes will reduce these lake and rail rates from approximately 13 cents per bushel on wheat to 4 or 5 cents a bushel from Port Arthur to Montreal, thus making a saving of 8 or 9 cents a bushel on freight charges:

Whereas the development of these deepened canals is proposed in a section of the St. Lawrence river that is owned equally between Canada and the United States, with costs to be shared according to the benefits to be derived by each country:

Whereas the development of hydro-electric power in this international section will produce a revenue that will take care of the amortized bonds for the whole undertaking, making the project self-financing and self-supporting, without the necessity of special taxation upon the people.

Therefore be it hereby resolved that this Rural Municipality of Swift Current No. 137 request that the Government of Canada act in conjunction with the Government of the United States for the purpose of going ahead at the earliest possible moment with the deepening of the St. Lawrence canals in the international section between lake Ontario and Montreal, to a depth of 25 feet instead of the present depth of 14 feet, in order that the large lake freighters may have free access from the head of the lakes to Montreal, and that ocean tramp steamers may be permitted an open seaway through to the head of the lakes, thus carrying our grain and other exportable products at a minimum lake freight charge from the ports of Port Arthur and Fort William to the markets of the world;

SESSIONAL PAPER No. 101d

And that copies of this resolution be sent to Premier King at Ottawa, and all the Dominion Cabinet Ministers, to our constituency member of the Dominion House, and to the Premiers of the provinces of Manitoba, Saskatchewan, Alberta, Ontario and Quebec.

Dated at Swift Current, Sask., this 1st day of March, 1924.

Resolution unanimously adopted.

(Sgd.) J. E. H. LAIDLAW,  
Secretary-Treasurer,

R. M. of Swift Current, No. 137.

Copy

OTTAWA, March 1, 1924.

Wm. McINNIS, Esq.,  
2236 Smith Street,  
Regina, Sask.

Dear Mr. McINNIS.—Your favour of the 25th inst., with respect to Deep Waterways, came to hand yesterday, and I think the best reply I can send you is to attach hereto copy of Votes and Proceedings, No. 1, of the House of Commons, in which you will find the Speech from the Throne, which has special reference to the matter about which you write me.

I am, yours very truly,

Encl.

2236 SMITH STREET, REGINA, SASK., February 25, 1924

Honourable W. R. MOTHERWELL,  
Parliament Buildings,  
Ottawa, Canada.

*Re Deep Waterways*

SIR:

No doubt you are well acquainted with all the facts in connection with this enterprise. There is only one solution to freight rates, and I think the waterways is it, and in the coming session I think a man in your position has a great opportunity to help Western Canada out of a lot of the difficulties which farmers are up against at the present time. The Hudson Bay Route has been in the air for so long, that I think it amounts to nothing, and never will and I do hope that you will see your way clear to not leave a stone unturned to try to get this waterways deal through this session, especially while the United States are willing to do so much towards the financing of the whole deal.

Yours sincerely,

(Sgd.) Wm. McINNIS.

*Copy of Resolution Adopted at the Annual Meeting of the Associated Boards of Trade of Saskatchewan at Moose Jaw, Sask., February 27, 1924.*

#### ST. LAWRENCE DEEP WATERWAY IMPROVEMENT

Whereas substantial reductions in transportation rates on grain, cattle and other exportable products of Western Canada will reasonably ensue from the completion of the St. Lawrence Deep Waterway Improvement, whereby the large lake freighters will have through navigation to Montreal, and ocean tramp

14 GEORGE V, A. 1924

steamers an open seaway to the Head of the Great Lakes, thus eliminating costly transfers and rail haul between Buffalo and New York and between Georgian Bay ports and Montreal:

And whereas these reductions, together with lower freight charges on incoming commodities from Eastern ports and overseas will unquestionably promote most effectively the permanent growth and development of Western Canada:

And whereas the deepening of the canals between Lake Ontario and Montreal is proposed in a section of the St. Lawrence river that is international waters, owned equally between Canada and the United States, with costs to be shared according to the benefits derived by each country:

And whereas, according to a memorandum in possession of the Dominion Government, the development of hydro-electric energy in this international section will provide a revenue that will pay the total cost of the undertaking, without imposing a cent of added taxation upon either country, and without increasing the burden of Canada's national debt:

Therefore, be it resolved that this annual meeting of the Saskatchewan Associated Boards of Trade assembled at Moose Jaw, Sask., this 27th day of February, 1924, does hereby approve and endorse the action of the Dominion Government in conferring with the Government of the United States in a proposal to obtain fullest technical and economic details concerning the Deep Waterway project, and that we respectfully request our Government to consummate present negotiations without unnecessary delay.

Secretary-Treasurer, Board of Trade,  
Swift Current, Sask.

Dear Mr. THORESON,—Mr. Motherwell has asked me to acknowledge and thank you for your favour of the 20th instant together with resolution respecting the Deep Waterways, which was unanimously passed by your Board at a general meeting on February 12th.

Your very truly,

*Private Secretary.*

#### THE SWIFT CURRENT BOARD OF TRADE

SWIFT CURRENT, SASK., February 20, 1924.

Honourable W. R. MOTHERWELL,  
Parliament Buildings,  
Ottawa, Canada.

Hon. and DEAR SIR,—Upon instructions of the Swift Current Board of Trade Executive Council, I enclose herewith for your information and consideration copy of a resolution respecting the Deep Waterways, which was unanimously passed at a general meeting of the Board of Trade on February 12th, 1924.

Yours truly,

(Sgd.) Chas. THORESON,  
*Secretary-Treasurer.*

SESSIONAL PAPER No. 101d

THE SWIFT CURRENT BOARD OF TRADE, SWIFT CURRENT, SASK., CANADA

*Resolution unanimously adopted by Swift Current Board of Trade, Tuesday evening, February 12, 1924.*

Moved by R. T. Graham, seconded by A. E. Longmore:

Whereas excessive charges which prevail in connection with the lake and rail haul of grain and other exportable products of the prairie provinces from Port Arthur to seaboard constitutes a very heavy financial setback on the net price received by the farmer for these products;

And whereas the proposed deepening of the St. Lawrence canals for power and navigation purposes will reduce these lake and rail rates from approximately 13 cents per bushel on wheat to 4 or 5 cents a bushel, Port Arthur to Montreal, thus making a saving of 8 or 9 cents a bushel on wheat carried to Montreal by the large freighters; and a further reduction of from 1 to 3 cents where tramp steamers can carry our grain direct from the head of the lakes to Liverpool without any transfer whatsoever;

And whereas the development of these deepened canals is proposed in a section of the St. Lawrence river that is international waters, owned equally between Canada and the United States, with costs to be shared according to the benefit to be derived by each country;

And whereas the development of power in this international section will produce a revenue that will pay for the whole cost of the undertaking, thus making the project self-financing and self-supporting, without imposing a cent of added taxation upon either country, and without increasing the burden of Canada's national debt;

And whereas the deepened St. Lawrence, besides providing unquestionable great savings on transportation rates for exportable products and incoming commodities, will also be a great stimulus to the more intensive development of the agricultural West, and provide an outstanding incentive for attracting new immigration;

Therefore be it resolved, that the Swift Current Board of Trade does hereby approve and endorse the action of the Dominion Government in conferring with the government of the United States in an effort to obtain further technical details concerning the St. Lawrence project. And that we hereby respectfully request that the Dominion Government will proceed with all the haste possible to consummate present investigations in order that a satisfactory treaty between the two countries may be arrived at, and work upon the project actually begun at the earliest possible moment with a view to its speedy completion in the economic interest of the Dominion of Canada at large;

And that copies of this resolution be sent to Hon. W. L. Mackenzie King, Prime Minister, the various Cabinet Ministers at Ottawa, to our constituency member of the Dominion House; also that copies be sent to the various Boards of Trade of Saskatchewan, Manitoba and Alberta, and to the associated Boards of Saskatchewan, asking their endorsement of this resolution.

W. W. COOPER, *President.*

CHAS. THORESON, *Secretary.*

SWIFT CURRENT, SASK., February 21, 1924.

OTTAWA, April 28, 1924.

SIR,—I have the honour to enclose herewith the information in the Department of the Interior asked for in the Address of the House of Commons dated 24 25 March, 1924, your Reference No. 46, moved by Mr. Archambault showing: -

14 GEORGE V, A. 1924

"A copy of all memoranda, correspondence, telegrams and other documents, exchanged between the Government of Canada or any of its members and other Governments, corporations or individuals since the 1st of January, 1922, relating to the St. Lawrence Waterway Route, and the establishment of dams, on the St. Lawrence River, for the development of certain water-powers."

I have the honour to be,

Sir,

Your obedient servant,

W. W. CORY.

*Deputy Minister.*

THOMAS MULVEY, Esq., B.A., K.C.,  
Under-Secretary of State,  
Ottawa.

SESSIONAL PAPER No. 101d

A. G. CHISHOLM, K.C.,  
Barrister, etc.

CANADIAN BANK OF COMMERCE CHAMBERS,  
CORNER DUNDAS AND RICHMOND STREET,  
LONDON, CANADA, December 18, 1923.

Right Hon. W. L. MACKENZIE KING, P.C.,  
Prime Minister,  
Ottawa, Ont.

DEAR SIR,—For some months past I have been gathering all the data connected with or bearing on the so called Great Waterways scheme for the improvement of the St. Lawrence canal system, that my reading has led me to, and one conclusion reached, is that there is a very highly organized system of propaganda being conducted in the endeavour to force the hand of the Canadian Government, to enter into negotiations with the United States on this subject. This may not be altogether apparent to a casual observer at the present time, but I will be greatly surprised if some development does not take place within the next three months. In my view, it is the most important question, I make no exception, any Canadian Government has had to consider since Confederation.

My study of this subject has not been along the line of whether or not the navigation project is economically feasible or could be made a commercial success, though I have read enough to convince me it cannot; but rather what would be the effect on the political future of the country, of surrendering to International control, Canada's chief outlet to the Sea. My conclusion is it would mean a "complete sacrifice of Canadian autonomy," and is fraught with the direst possibilities for continued Canadian independence.

I have also concluded, that as it is apparent what would be the logical result of the scheme, if carried out, it is not a question on which Canadians can consent to any negotiation. A conference to negotiate a treaty, which failed of result, would undoubtedly provoke an acrimonious feeling in the United States, more particularly in the Middle West, and once aroused in an emotional people like the Americans, one cannot foretell the end. Later American Writers concede it was the West which drove the American government to war in 1912.

My own opinion is, that the only safe reply a Canadian government can make to any overtures on this subject is, that our policy for many years has been to construct and maintain an independent Canadian outlet to the sea, and that this cannot now be altered. If the American Government desires a waterway, let them construct a canal on their own side, the same as we have with the Welland, or at the Sault. It may be remembered, the latter while long contemplated, was actually begun and rushed to completion because of Cleveland's attempt to withdraw the Bonding privilege, and this threat was made because Canada would not surrender to the Americans on the Fisheries question, and the whole Fisheries embroglio which lasted for nearly one hundred years, arose through the complacent attitude of Lord Bathurst to American pretensions in 1915, and so on and so on, in an endless chain.

I could write pages in justification of these conclusions, and I think demonstrate the correctness of the views I express, and I hope to make some use of the information I have acquired to influence public opinion, for I believe at present there is little real knowledge of the matter and its possibilities, but I cannot refrain from now forwarding you these remarks, even if only to show appreciation of what is the very serious and vital question, your Government will undoubtedly have to decide upon in the near future, and my conviction of how the whole scheme of Canadian independence is inseparably linked, with our unfettered control of a St. Lawrence route to the Sea.

14 GEORGE V, A. 1924

In expressing the above views, I may strike a discordant note, but I run that risk for, above all things I am a Canadian and have the most profound conviction of the peril to be here avoided. I am sure then under the circumstances, you will find some excuse for my addressing you on the subject. With cordial assurances of my esteem, believe me to be,

Very sincerely yours,  
(Sgd.) ANDREW GORDON CHISHOLM.

## ONTARIO

OFFICE OF THE PARLIAMENTARY UNDER SECRETARY,  
DEPARTMENT OF LANDS AND FORESTS AND DEPARTMENT OF MINES.

The Right Honourable Mr. KING,  
Prime Minister of Canada,  
Ottawa, Ontario.

Dear Mr. KING,—In the first place, in accordance with the season, let me wish you a pleasant Christmas and a Happy New Year.

In the next place, you will recall, at the deputation when we were before you and on one or two other occasions, the suggestion that the United States should again communicate and reopen the negotiations respecting the St. Lawrence.

It was difficult to get this done. The former President felt that the answer he received through his Secretary of State was the quietus.

The new President, however, has acted and communicated with your Government.

Simply as one who thinks he understands this question and thinks that it is the question that carries more benefit to Canada than any other public question, may I urge that as far as possible you meet the United States in their present request?

May I point out to you, as suggested at the time when you did me the honor of dining with me in my house at Ottawa, that this is one of the quick ways to settle the diversion of waters by the Chicago drainage canal? The City of Chicago is quite desirous of seeing the St. Lawrence consummated, and once the United States and Canada are associated on the problem they will not be interested in interfering with their new outlet to the sea through our territories, and this would make a clean up of what otherwise is a disagreeable situation.

Then again, Ontario is faced with a shortage of power and she can only get that from the International section in which she is interested.

All these things combined, together with the high price that is charged up eventually to the Western producer because the big upper lake carrier cannot go on to Montreal or any other St. Lawrence River ports, makes me believe that your Government will realize the wisdom, in the interests of Canada, of taking up this problem.

The West is now beginning to realize that they are paying more in this extra freight annually than the whole of Canada would have to pay for the sinking fund and interest and operating expenses for its share in the proposed development, and this, supposing that there is no revenue whatever from power produced.

You will remember that it was suggested that the United States should pay one-half the cost of the work and also one-half the cost of the Welland. When this is figured out and then the interest and sinking fund computed, even

SESSIONAL PAPER No. 101d

without any power revenue to liquidate what Canada's remaining portion would be, the amount is much less than the West annually loses in the unnecessary water rate.

I do sincerely trust, now that the United States has approached your Government again, that you will meet them half way.

Yours very truly,

(Sgd.) FRANK H. KEEFER.

OTTAWA, January 9, 1924.

Dear Mr. KEEFER,—I have been asked to acknowledge your letter of December 20th, addressed to the Prime Minister, regarding the "St. Lawrence to the Sea" navigation and power project.

I am looking forward to an opportunity of discussing this matter with you.

Yours faithfully,

(Sgd.) CHAS. STEWART.

FRANK H. KEEFER, Esq., K.C., M.P.P.,

Parliamentary Secretary,

Department of Lands and Forests,

Toronto, Ont.

#### DOMINION MARINE ASSOCIATION

The Rt. Hon. W. L. MACKENZIE KING, C.M.G., etc.,

Prime Minister of Canada,

Ottawa, Ontario.

SIR,—I beg to submit herewith a copy of a resolution adopted by the Dominion Marine Association in Annual General Meeting at Ottawa on the 17th instant, referring to the proposal of the Government of the Province of Ontario for the development of power near Morrisburg in the St. Lawrence River. I am directed to commend this resolution to your serious consideration.

I have the honour to be, sir,

Your obedient servant,

(Sgd.) FRANCIS KING.

RESOLUTION ADOPTED BY THE DOMINION MARINE ASSOCIATION IN ANNUAL  
GENERAL MEETING AT OTTAWA ON JANUARY 17, 1924

*Resolved:*

That the Dominion Marine Association disapproves of the proposal made through the Hydro-Electric Commission of the Province of Ontario for the immediate development of power in the vicinity of Morrisburg on the St. Lawrence River in so far as the proposal in any way (a) contemplates any reversal of the order of priority between navigation and power fixed by the Treaty of 1909 as the order to be observed in the use of boundary waters; (b) permits in the slightest any surrender by the Dominion of the complete control of the river necessary for the purpose of improving and protecting navigation, or subjects the existing control to the dominance of any parties primarily interested in the development of power; (c) or includes a power

14 GEORGE V, A. 1924

development scheme which does not form a proper part of a well considered and fully approved plan for the development of the whole river as a unit, primarily to improve navigation and incidentally to develop power.

That the Association will be pleased to see the demand for more electrical power in Ontario satisfied as soon as possible, so long as navigation interests remain in every way paramount and under the exclusive and unfettered control of federal authorities, and so long as any work undertaken forms a proper part of the general plan for development of the whole river above mentioned.

And that copies of this resolution be forwarded to the Rt. Hon. the Prime Minister, and to the Hon. the Ministers of Railways and Canals, Marine and Fisheries and Public Works.

### KINGSTON BOARD OF TRADE

KINGSTON, CANADA, January 22, 1924.

Honourable CHAS. STEWART,  
Minister of the Interior,  
Ottawa, Ontario.

Dear Mr. STEWART,—I enclose herewith copy of resolution passed at the Annual Meeting of the Dominion Marine Association which explains itself.

The general impression among marine men is that as far as the development at Morrisburg is concerned it conflicts very seriously with the scheme laid down by the engineers of your Government and the engineers of the International Joint Commission, and while it may temporarily act as a supply of power that when the development is continued at Long Sault the proposed dam and power development will either have to be flooded out and made useless for power purposes or else if continued, navigation will be seriously interfered with between Morrisburg and Cornwall and the power development above Cornwall will be useless in the winter time.

There is ample power available on the Ottawa River to take care of the demand in Eastern Ontario until the St. Lawrence scheme can be carried on as a completed whole. Some years ago the Hydro-Electric Commission expropriated the water power at Chate Falls which they now own and which they have never attempted to develop and which is capable of supplying Eastern Ontario for the next ten years. As far as Toronto is concerned their proper source of power is Niagara Falls and I have no doubt that when the demand for power becomes insistent the Federal Governments will grant the power companies the right to use more water.

I am satisfied that the engineers of the Hydro-Electric Commission know that they are absolutely wrong and they do not expect that the scheme will ever be put through.

Yours very truly,  
(Sgd.) J. M. CAMPBELL.

#### RESOLUTION ADOPTED BY

THE DOMINION MARINE ASSOCIATION IN ANNUAL GENERAL  
MEETING AT OTTAWA ON JANUARY 17, 1924.

#### *Resolved:*

That the Dominion Marine Association disapproves of the proposal made through the Hydro-Electric Commission of the Province of Ontario for the immediate development of power in the vicinity of Morrisburg on the St. Lawrence River in so far as the proposal in any way (a) contemplates any

SESSIONAL PAPER No. 101d

reversal of the order of priority between navigation and power fixed by the Treaty of 1909 as the order to be observed in the use of boundary waters; (b) permits in the slightest any surrender by the Dominion of the complete control of the river necessary for the purpose of improving and protecting navigation, or subjects the existing control to the dominence of any parties primarily interested in the development of power; (c) or includes a power development scheme which does not form a proper part of a well considered and fully approved plan for the development of the whole river as a unit, primarily to improve navigation and incidentally to develop power.

That the Association will be pleased to see the demand for more electrical power in Ontario satisfied as soon as possible, so long as navigation interests remain in every way paramount and under the exclusive and unfettered control of federal authorities, and so long as any work undertaken forms a proper part of the general plan for development of the whole river above mentioned.

And that copies of this resolution be forwarded to the Rt. Hon. the Prime Minister, and to the Hon. the Ministers of Railways and Canals, Marine and Fisheries, and Public Works.

OTTAWA, ONTARIO,

February 18, 1924.

DEAR MR. CAMPBELL,—I beg to acknowledge the receipt of your letter of the 22nd ultimo, enclosing a copy of a resolution passed at the Annual Meeting of the Dominion Marine Association relative to the proposed scheme of development of the St. Lawrence River at Morrisburg.

Since the date of the above resolution, there has been made public the contents of a despatch from the Government of Canada to the Government of the United States wherein the question is raised of appointing an enlarged board to make a detailed study of the engineering and economic phases of the St. Lawrence River Scheme.

In any action which may be taken you may rest assured that navigation interests will be fully protected.

Yours Faithfully,

(Sgd.) CHAS. STEWART.

J. M. CAMPBELL, ESQ.,

c/o the Kingston Board of Trade,  
Kingston, Ontario.

TOWN OF CORNWALL

January 26, 1924.

The Honourable W. L. MACKENZIE KING,  
Ottawa, Ontario.

HONOURABLE SIR,—I take the liberty of writing you to express my personal views upon the much talked of St. Lawrence development.

I am opposed to any development whatsoever that does not include the question of navigation as well as power. I was one of a delegation that waited upon you in either January or February 1923 to ask your government to again open up negotiations with the United States government upon the plan recommended by the Joint International Waterways Commission.

This plan as you are aware, Sir, is for a dam at the Longue Sault and an International Power House at the foot of Barnhart's Island and is capable of

14 GEORGE V, A. 1924

developing four times the amount of H.P. as compared with Morrisburg at the same time the question of navigation is also part and partial of development.

At Morrisburg I believe a head of 42 feet is available whereas at the Longue Sault upwards of 70 feet can be developed.

I feel that I am voicing the sentiments of most of the citizens of Cornwall when I say they are opposed to the plan as suggested at Morrisburg.

I was not one of the recent delegation that waited upon you last week from Ontario or did I receive an invitation to attend.

My attendance in January, 1923, before you expressed my views on this most important question.

As one of a family who have been fighting for Liberalism in this County for upwards of fifty years I beg to express to you my personal view that Sir Adam Beck's Morrisburg Hydro Development is in part political and with the idea of endeavouring to embarrass the Liberal Government of which you have the honour to be Leader.

I am, yours sincerely,

(Sgd.) HARRY W. SNETSINGER,

*Mayor.*

#### ST. LAWRENCE DEEP WATERWAYS ASSOCIATION OF WESTERN CANADA

SWIFT CURRENT, SASK., January 29, 1924.

Hon W. L. MACKENZIE KING,

Premier, Dominion of Canada,  
Ottawa, Ontario.

HON. AND DEAR SIR.—Acting under instructions from the President and Directors of the St. Lawrence Deep Waterways Association of Western Canada, I am enclosing a copy of a resolution unanimously passed at an executive meet- of the above association held on Friday, January 25, 1924, with the earnest prayer that you and your Cabinet give the text matter of this resolution your very earnest consideration.

After careful and exhaustive investigation, it is the firm conviction of this association that nothing is more vital to the economic destiny of Western Canada than our farmers be given the advantages in transportation that unquestionably will ensue with the deepening of the Canals of the St. Lawrence so as to bring tidewater to the Head of the Lakes, and the Liverpool market 1,500 miles financially closer to the heart of the prairies.

I have the honour to be,

Sir,

Yours very truly,

A. S. BENNETT,

*Executive Director.*

#### RESOLUTION FROM THE ST. LAWRENCE DEEP WATERWAY ASSOCIATION OF WESTERN CANADA

Whereas it has come to the attention of the executive council of the St. Lawrence Deep Waterway Association of Western Canada that strong pressure is being brought to bear upon the Dominion Government, by the Province of Ontario and the Ontario Hydro-Electric Commission, for the development of power in the international section of the St. Lawrence river without provision for simultaneously proceeding with navigation development in these waters,

SESSIONAL PAPER No. 101d

heretofore so urgently advocated in many quarters of Eastern Canada and now being vigorously advocated in Western Canada with a strong and rapidly growing conviction in favour of the project:

And whereas the deepening of the canals of the St. Lawrence sufficient to permit passage of large lake freighters through to Montreal, and give ocean tramp steamers of 8,000 tons capacity an unimpeded seaway to the head of the Lakes, and according to statistics from exhaustive investigations made by this Association, reduce by at least 7 or 8 cents a bushel the freight costs to the farmers of Western Canada for delivering their wheat at seaboard;

And whereas the deepened canals will readily facilitate the handling of much larger quantities of grain at the lake head during the rush period in the Fall, thus enabling more favourable competition with other countries where crops mature later;

And whereas the deepened canals of the St. Lawrence will enable Western Canada to benefit largely in the more direct and cheaper shipment of other exportable products, such as cattle, dairy products, fruits, potatoes, etc.;

And whereas these transportation savings on exportable products, as well as the not inconsiderable reduction of rates on incoming commodities from Eastern Canada and overseas countries, and bring a direct benefit to the farmers of the prairie provinces of \$50,000,000 per annum, at a low estimate;

And whereas the benefits that will accrue to the agricultural industry of Western Canada through a deepened St. Lawrence will encourage settlers now in the country to remain on their farms and proceed with more intensive development of their lands, also attract and retain new agricultural immigrants and tend to a speedy reduction of the taxation load and deficits on the national railways, thus, in our opinion, making the improved St. Lawrence Waterway the crucial economic question of a domestic nature before the Dominion of Canada to-day:

And whereas the economic problems of Western Canada are of vital concern to the whole of the Dominion, and the solution thereof is of national and not sectional importance;

Therefore be it resolved, that the St. Lawrence Deep Waterways Association of Western Canada vigorously protest against any action upon the part of the Government of the Dominion of Canada that will acquiesce in, or assist to finance, any proposals for the development of power in the international section of the St. Lawrence river unless the most adequate development for improved navigation, as set forth in the preamble hereof, be proceeded with at one and the same time;

And it is Further resolved, that this association urge upon the Dominion Government conferring with the Government of the United States at the earliest possible date with a view to immediately proceeding with the work of deepening the canals of the St. Lawrence in the section referred to for increased navigation and power development, in the interests of the Dominion at large;

And that copies of this resolution be forwarded to the Hon. W. L. Mackenzie King, Premier, and members of his Cabinet at Ottawa, also members of the Senate and members of the Dominion Parliament at large, as well as to such other persons of official or private capacity as may be deemed advisable in the judgment of this executive.

Dated at Swift Current, Sask., this 25th day of January, 1924.

(Sgd.) W. W. COOPER,

*President.*

A. S. BENNETT,

*Executive Director and Secretary.*

14 GEORGE V, A. 1924

## RURAL MUNICIPALITY OF SASKATCHEWAN LANDING, No. 167.

STEWART VALLEY, February 11, 1924.

Hon. W. L. MACKENZIE KING,  
Premier, Dominion of Canada,  
Ottawa, Ontario.

HON AND DEAR SIR,—I take great pleasure in enclosing for your consideration and action copy of a resolution which was unanimously adopted at a regular meeting of the council board of the above rural municipality, held at Leinman, Saskatchewan, on the 4th day of February, 1924.

Yours very truly,  
(Sgd.) P. S. CAMPBELL,  
*Secretary-Treasurer, Atlas P.O.*

## MUNICIPALITY OF SASKATCHEWAN LANDING, No. 167

STEWART VALLEY, SASKATCHEWAN, February 11, 1924.

Minister of Interior,  
House of Commons,  
Ottawa, Canada.

HON. AND DEAR SIR,—I take great pleasure in enclosing for your consideration and action copy of a resolution which was unanimously adopted at the regular meeting of the council board of the above rural municipality, held at Leinman, Saskatchewan, on the 4th day of February, 1924.

Yours very truly,  
(Sgd.) P. S. CAMPBELL,  
*Secretary-Treasurer, Atlas P.O.*

## RESOLUTION FROM THE RURAL MUNICIPALITY OF SASKATCHEWAN LANDING No. 167

Moved by John T. Stewart, seconded by George G. Smith:

Whereas the Council of the Rural Municipality of Saskatchewan Landing No. 167 is cognizant of the fact that excessive transportation costs are one of the factors contributing most seriously to the economic problems which affect the farmers of Western Canada;

And whereas excessive charges which prevail in connection with the lake and rail haul of grain and other exportable products from Port Arthur to the seaboard constitute a very heavy setback on the net price received by the farmer for these products;

And whereas the proposed deepening of the St. Lawrence canals for power and navigation purposes will reduce these lake and rail rates from approximately 13 cents per bushel on wheat to 4 or 5 cents a bushel from Port Arthur to Montreal, thus making a saving of 8 or 9 cents a bushel on freight charges;

And whereas the development of these deepened canals is proposed in a section of the St. Lawrence river that is owned equally between Canada and the United States, with costs to be shared according to the benefits to be derived by each country.

And whereas the development of power in this international section will produce a revenue that will take care of the amortized bonds for the whole undertaking, making the project self-financing and self-supporting, without the necessity of added taxation upon the people.

SESSIONAL PAPER No. 101d

And whereas it is authoritatively stated that the United States is now seeking a conference with the Government of Canada for the purpose of entering into a definite treaty for the immediate prosecution of this work;

Therefore be it hereby resolved that this Rural Municipality of Saskatchewan Landing No. 167 request that the Government of Canada acquiesce in the request for a conference with the Government of the United States for the purpose of going ahead at the earliest possible moment with the deepening of the St. Lawrence Canals in the international section between Lake Ontario and Montreal, to a depth of 25 feet instead of the present depth of 14 feet, in order that the large lake freighters may have free access from the head of the lakes to Montreal, and that ocean tramp steamers may be permitted an open seaway through to the head of the lakes, thus carrying our grain and other exportable products at a minimum lake freight charge from the ports of Port Arthur and Fort William to the markets of the world;

And further, that this Council protest most vigorously against any action on the part of the Dominion Government whereby the requests of certain interests in Ontario for the development of the power end of the project being gone ahead with immediately, and that the navigation improvements be done later by the Dominion Government at the entire expense of the Government; but rather that the navigation and power improvement be undertaken simultaneously and at the earliest possible date;

And that copies of this resolution be sent to Premier King at Ottawa, and all the Dominion Cabinet Ministers, to our constituency member of the Dominion House, and to the Premiers of the provinces of Manitoba, Saskatchewan, Alberta, Ontario and Quebec.

Dated at Leinan, Sask., this 4th day of February, 1924.

Resolution unanimously adopted.

(Signed) P. S. CAMPBELL,

*Secretary-Treasurer,*

*R. M. Saskatchewan Landing No. 167.*

OTTAWA, ONTARIO,

February 18, 1924.

Dear Mr. CAMPBELL,—I beg to acknowledge the receipt of your letter of the 11th instant, enclosing copy of a resolution unanimously adopted at the regular meeting of your Council Board held at Leinan, Sask., on the 4th February, 1924, requesting the Government to confer with the Government of the United States for the purpose of going ahead at the earliest possible moment with the deepening of the St. Lawrence canals in the international section between Lake Ontario and Montreal.

Yours faithfully,

(Sgd.) CHAS. STEWART.

THE ONTARIO ASSOCIATED BOARDS OF TRADE AND CHAMBERS OF COMMERCE

*Conservation of Great Lakes*

Whereas the lowering of the Great Lakes levels may threaten transportation by water, and the costs of deepening harbours and connecting rivers thereby be steadily increased, and whereas the maintenance of the Great Lakes Levels is vital to such water transportation, generation of hydro-electric power, development of the Great Lakes-St. Lawrence River waterway to tide-water, extension of the fishing industry and the profit and pleasure of our citizens generally; therefore be it resolved that the Dominion and Provincial Governments be urged to take immediate action:

First, to determine the actual cause of any lowering of Great Lakes Levels; and second, (a) To devise ways and means to prevent any further lowering, and (b) To restore the Lakes to their former levels.

Adopted at the Annual Meeting of the Ontario Associated Boards of Trade and Chambers of Commerce held at Hamilton, Ontario, November 15-16, 1923.

(Sgd.) T. MARSHALL,  
*Secretary-Treasurer*

THE ONTARIO ASSOCIATED BOARDS OF TRADE AND CHAMBERS OF  
COMMERCE

TORONTO, February 12, 1924.

The Rt. Honourable W. L. MACKENZIE KING,  
Prime Minister of Canada,  
Ottawa, Ont.

Dear SIR,—I am instructed to enclose a copy of a Resolution adopted at the recent Annual Meeting of the Ontario Associated Boards of Trade and Chambers of Commerce and re-confirmed by the Executive Council at meeting of February 8, 1924, on the subject of the Development of the St. Lawrence River.

The Executive Committee respectfully commends the Government's recent action in this connection, as reported in the press, and would urge that further steps be taken, as conditions warrant, as will result in the early consummation of this important international project.

I am also forwarding copy of this Resolution to the Honourable Minister of Marine and Fisheries.

Yours very truly,  
(Sgd.) T. MARSHALL,  
*Secretary Treasurer.*

SESSIONAL PAPER No. 101d

"Whereas in the opinion of the Ontario Associated Boards of Trade and Chambers of Commerce transportation facilities are of the first importance to the people of this Province, and in order that the fullest development of our resources be encouraged, it is desirable that our products should reach the markets of the world at the least expense and with the utmost despatch;

And Whereas this Association is further of the opinion that deepening the water channel from Lake Ontario to Montreal should be such as will accommodate ocean going vessels that will secure the cheap and rapid conveyance of goods to the world's markets;

Therefore be it Resolved that the Ontario Associated Boards of Trade and Chambers of Commerce strongly recommend the deepening of the St. Lawrence to a depth of thirty feet, and that the project should be undertaken at the earliest date practicable, and pushed forward to completion with the greatest possible expedition;

And be it further Resolved that to obtain the desired development referred to, the Hydro Electric Power available through the improvement of the waterway be utilized to the fullest extent."

Adopted at Annual Meeting, Ontario Boards of Trade and Chambers of Commerce, Sept. 21-22, 1922, and re-affirmed at meeting, Executive Council, Ontario Boards of Trade and Chambers of Commerce, February 8th, 1924.

(Sgd.) T. MARSHALL,  
*Secretary-Treasurer.*

COUNCIL CHAMBER, February 18, 1924.

Moved by Ald. W. V. Oglesby, seconded by Ald. McKenzie:

Whereas the proposed deepening of the St. Lawrence waterway between Lake Ontario and Montreal, for navigation and power purposes, if consummated, will reduce the cost of haulage and therefore constitute a desirable, permanent improvement.

And Whereas it is claimed that the development of power in this international section will produce a revenue that will take care of the amortized bonds for the whole undertaking, making the project self-financing and self-supporting, without the necessity of added taxation upon the people.

Therefore the Council of the City of Brandon, in Council assembled, hereby memorializes the Government of the Dominion of Canada to assent to a conference with the Government of the United States of America, for the consideration of the proposed project, with a view to thoroughly investigating the merits and demerits thereof, and the early consummation as an international project should it, after such investigation, promise to be a desirable venture.

Carried.

H. CATER.

OTTAWA, ONTARIO, March 7, 1924.

Dear Mr. BENNETT.—I beg to acknowledge the receipt of your letter, addressed to the Minister of Agriculture, in which you stress the importance to the Prairie Provinces of the early completion of the St. Lawrence deep waterway project, and wish to thank you for the trouble which you have taken in placing your views so adequately before the Administration.

Permit me to assure you that the subject is receiving attentive consideration.

Yours faithfully,  
(Sgd.) CHAS. STEWART.

A. S. BENNETT, Esq.,  
Swift Current,  
Saskatchewan.

14 GEORGE V, A. 1924

## THE SWIFT CURRENT BOARD OF TRADE

SWIFT CURRENT, SASKATCHEWAN, CANADA,

February 20, 1924.

Minister of the Interior,  
House of Commons,  
Ottawa, Canada.

Hon. and Dear Sir,—Upon instructions of the Swift Current Board of Trade Executive Council, I enclose herewith for your information and consideration copy of a resolution respecting the Deep Waterways, which was unanimously passed at a general meeting of the Board of Trade on February 12th, 1924.

Yours truly,

CHAS. THORESON,  
*Secretary-Treasurer.*

## THE SWIFT CURRENT BOARD OF TRADE

SWIFT CURRENT, SASKATCHEWAN, CANADA

*Resolution Unanimously Adopted by Swift Current Board of Trade, Tuesday evening, February 12, 1924.*

Moved by R. T. Graham, seconded by A. E. Longmore:

Whereas excessive charges which prevail in connection with the lake and rail haul of grain and other exportable products of the prairie provinces from Port Arthur to seaboard constitutes a very heavy financial setback on the net price received by the farmer for these products;

And whereas the proposed deepening of the St. Lawrence canals for power and navigation purposes will reduce these lake and rail rates from approximately 13 cents per bushel on wheat to 4 or 5 cents a bushel, Port Arthur to Montreal, thus making a saving of 8 or 9 cents a bushel on wheat carried to Montreal by the large lake freighters; and a further reduction of from 1 to 3 cents where tramp steamers can carry our grain direct from the head of the lakes to Liverpool without any transfer whatsoever;

And whereas the development of these deepened canals is proposed in a section of the St. Lawrence river that is international waters, owned equally between Canada and the United States with costs to be shared according to the benefits to be derived by each country;

And whereas the development of power in this international section will produce a revenue that will pay for the whole cost of the undertaking, thus making the project self-financing and self-supporting, without imposing a cent of added taxation upon either country, and without increasing the burden of Canada's national debt;

And whereas the deepened St. Lawrence, besides providing unquestionable great savings on transportation rates for exportable products and incoming commodities, will also be a great stimulus to the more intensive development of the agricultural West, and provide an outstanding incentive for attracting new immigration;

Therefore be it resolved that the Swift Current Board of Trade does hereby approved and endorse the action of the Dominion Government in conferring with the Government of the United States in an effort to obtain further technical details concerning the St. Lawrence project. And that we hereby respectfully request that the Dominion Government will proceed with all the haste possible

SESSIONAL PAPER No. 101d

to consummate present investigations in order that a satisfactory treaty between the two countries may be arrived at, and work upon the project actually begun at the earliest possible moment with a view to its speedy completion in the economic interest of the Dominion of Canada at large.

And that copies of this resolution be sent to Hon. W. L. Mackenzie King, Prime Minister, the various Cabinet Ministers at Ottawa, to our constituency member of the Dominion House; also that copies be sent to the various Boards of Trade of Saskatchewan, Manitoba and Alberta, and to the associated Boards of Saskatchewan, asking their endorsement of this resolution.

(Signed) W. W. COOPER, *President*,  
CHAS. THORESON, *Secretary*.

SWIFT CURRENT, SASK., February 12, 1924.

OTTAWA, ONTARIO, February 26, 1924.

Dear Mr. THORESON,—I beg to acknowledge the receipt of your letter of the 20th instant, enclosing copy of a resolution respecting the Deep Waterways, which was unanimously passed at a general meeting of the Swift Current Board of Trade on the 12th instant.

This will have our attentive consideration.

Yours faithfully,

(Sgd.) CHAS. STEWART.

CHAS. THORESON, Esq.,  
Secretary-Treasurer,  
Swift Current Board of Trade,  
Swift Current, Saskatchewan.

#### CANADIAN PACIFIC RAILWAY COMPANY'S TELEGRAM

MONTREAL, February 21, 1924.

Honourable W. L. MACKENZIE KING,  
Prime Minister of Canada, Ottawa.

We understand that Government proposes to appoint Commission to study St. Lawrence problems and export of power. Stop. We urge that before Government makes any commitment that our great interests have opportunity to interview your ministers and explain position of Province of Quebec. Stop. Unless you deal with the entire complicated problem any commitment now may adversely affect the great navigation industrial and power interests of this Province.

H. S. HOLT.

#### CANADIAN NATIONAL TELEGRAPHS

OTTAWA, February 21, 1924.

Sir HERBERT HOLT,  
Royal Bank of Canada,  
Montreal.

Replying your telegram received to-day, the Government has made no commitment respecting the St. Lawrence waterway beyond expressing willingness to have problem studied in all its aspects. Stop. I shall be only too pleased to arrange for representations to be made to such body as may be constituted for the purpose by any interests so desiring. Stop. I would suggest that any request for such an opportunity should be made either through Minister of Interior or Minister of Railways and Canals.

W. L. MACKENZIE KING.

14 GEORGE V, A. 1924

## CANADIAN DEEP WATERWAYS AND POWER ASSOCIATION

400 CROWN OFFICE BLDG.,

TORONTO, ONTARIO, February 21, 1924.

Rt. Hon. W. L. MACKENZIE KING,  
Prime Minister of Canada,  
Ottawa, Ont.

Dear Sir,—At the Annual Meeting of the Canadian Deep Waterways and Power Association held in the City Hall, Toronto, on Monday last the 18th inst. a Resolution was passed dealing with the proposed deepening of the St. Lawrence Canals and the development of power in the International section of the river and I was instructed to forward copy of Resolution to you and urge that it receive your serious consideration.

Copy of the Resolution is enclosed herewith and expresses the view of delegates from Ontario municipalities from Prescott in the East to Fort William and Port Arthur in the West.

Yours respectfully,

(Sgd.) ALEX. C. LEWIS,  
*Secretary-Treasurer.*

## RESOLUTION

Moved by Alderman W. A. Sommerville, Toronto; seconded by, Controller John Tope, Hamilton:

Whereas the development of the power now wasting on the St. Lawrence River and the construction of a new lock system in that river of the same capacity as the new lock system being constructed in the new Welland Ship Canal are matters of paramount importance to the people of Canada,

And whereas the Government of Ontario is pressing urgently for the authority to develop the power in the International Section of the river and such development without further delay is an urgent need of Ontario,

And whereas the two developments of power and navigation should be carried out co-incidentally,

Now therefore be it resolved that the Canadian Deep Waterways and Power Association strongly urge on the Government of Canada the urgent desirability of immediately proceeding jointly with the United States Government, with a proper scheme of joint development in order to meet transportation needs and also to provide for adequate power facilities.

OFFICE OF  
THE CANADIAN GOVERNMENT TRADE COMMISSIONER  
IN THE UNITED STATES

March 4, 1924.

*St. Lawrence Waterway Project*

SIR,—I am requested to transmit to you the enclosed copy of a Memorial adopted by the Philadelphia Board of Trade and transmitted to the Congress of the United States.

Your obedient servant,

(Sgd.) FREDERIC HUDD,  
*Canadian Government Trade Commissioner.*

The Right Hon. W. L. MACKENZIE KING, P.C., M.P.,  
Prime Minister,  
Ottawa,  
Canada.

Acknowledged by the Prime Minister's Private Secretary and referred to the Minister of the Interior.

SESSIONAL PAPER No. 101d

PHILADELPHIA BOARD OF TRADE  
BOURSE BUILDING

*To the Honourable the Senate and House of Representatives in Congress Assembled:*

This Memorial of the Philadelphia Board of Trade respectfully represents:

That the Board, believing the plan of opening up the Lake Ports for ocean-going vessels will prove impractical and such ocean transportation uneconomical feels justified in opposing the enactment as law of H. R. Bill 5635 providing for a deep waterway from the Great Lakes to the Atlantic Ocean;

That the effect of the Bill will definitely commit the United States to the projected improvement of the St. Lawrence, recommended by the International Joint Commission in its report made in 1921;

That a well formed doubt exists as to the wisdom of a great national investment having for its purpose the promotion of direct trade between the Lake Ports and foreign countries and great doubt is entertained whether the volume of such a trade-movement would be sufficient to warrant the proposed outlay;

That until the many projects already authorized for the improvement of the rivers and harbours of the Country are provided for by ample appropriations, no endorsement of one such as that of the St. Lawrence with its enormous costs should be endorsed; therefore

Your Memorialist, the Philadelphia Board of Trade, earnestly protests against the enactment as law of H. R. Bill 5635, to provide for a deep waterway for ocean-going vessels from the Great Lakes to the Atlantic Ocean by way of the St. Lawrence River and the Welland Canal;

And your Memorialist will ever pray.

THE PHILADELPHIA BOARD OF TRADE.

(Sgd.) WM. M. COATES, *President*.

(Seal)

Attest:

(Sgd.) W. R. TUCKER,

*Secretary.*

## THE MONTREAL BOARD OF TRADE

MONTREAL, March 4, 1924

Right Honourable MACKENZIE KING,  
Prime Minister,  
Ottawa.

SIR,—I have the honour by direction of the Council of this Board to inform you that it is unanimous in reaffirming the report of the Council for 1922 (see printed copy appended) with regard to the St. Lawrence Waterway Project, the leading points thereof being as follows:—

That the whole question of cost should be very carefully considered, as at the present time Canada is not in a position to take on a further financial obligation of such tremendous magnitude,—

That it is most unlikely that joint control by Canada and the United States of the extensive system of canals and waterways proposed in this scheme would be possible without leading to many complications between the two countries;—

That while the question of increased electric power to be afforded by the proposed development is a most important one, it would appear

14 GEORGE V, A. 1924

that this power would be for the most part available in that section of Canada where power is already in excess of the requirements, and that when additional power is needed it could be obtained at a very much lower cost than by said proposed development,—

That, in conclusion, the Council of the Montreal Board of Trade reaffirms its opposition to any serious consideration being given by the Canadian Government to the proposed scheme for deepening the St. Lawrence Waterway and the power development therefrom, until the financial position of Canada has so far improved as to warrant contemplation of such a costly undertaking.

I am to add that the foregoing report was unanimously approved by the general membership of this Board at the annual meeting in January, 1923, also that the Council prays your Government to favourably consider the conclusions of the above report.

I have the honour to be, sir, your obedient servant.

(Sgd.) J. STANLEY COOK,  
*Secretary.*

Acknowledged by the Prime Minister's private secretary and referred to the Minister of the Interior.

## POSTMASTER GENERAL, CANADA

OTTAWA, March 5, 1924.

HON. CHARLES STEWART, M.P.,  
Minister of the Interior,  
Ottawa.

Dear Mr. STEWART:

### *Re International Waterways*

Herewith enclosed, I send you a copy of a letter written by Mr. John S. Pardee, Assistant Executive Director, Great Lakes-St. Lawrence Tidewater Association, on the above subject.

It would seem that, notwithstanding his position, Mr. Pardee holds views on the above subject quite at variance with those advanced by Sir Adam Beek, Mr. Keefer and the other advocates of the rights of Ontario as against the world.

Sincerely yours,

(Sgd.) CHAS. MURPHY.

## THE CANADIAN ENGINEER

February 26, 1924.

### STATE VS. FEDERAL RIGHTS

SIR,—Question having been raised as to the respective interests of the Government of the United States and of the State of New York in the St. Lawrence River, the best answer is a reference to certain leading decisions of the United States courts.

The Federal Government has exclusive control of navigable waters and the right of navigation is paramount.

There was a bridge case, a railroad bridge over a navigable stream. The government said, "That bridge will have to be moved, it is in the way of navigation." The railway company said, "But we had permission to put it

SESSIONAL PAPER No. 101d

there. The specific plans were approved." And the court said, "That makes no difference. If it is in the way of navigation it will have to be moved." The railway company was obliged to get out of the way. Its rights, no matter how well secured, retired before the superior right of navigation.

There is a long line of decisions which support one another and which constitute settled law in that respect. Anything that gets in the way of navigation in a navigable stream must get out of the way whenever the government says so.

As to power rights, they too retire before the superior right of navigation.

There was a case at the Soo. The Government was re-arranging the channel. In doing that, it destroyed a water-power and the property served by that water-power was taken under condemnation. The owners thought they should be compensated for loss of the water-power. The court said, "No, nothing was taken from you. The government simply went ahead with its improvement of navigation and your water-power disappeared." "But," they said, "the land which the government took was extra valuable because it had a water-power attached to it." And the court said, "No, the minute the government drowned out that water-power it was no longer attached to the land."

"You can have what that property was worth as just plain land. The water-power ran away when the government exercised its right of navigation." Thereafter it appeared that the water-power which had been destroyed at one place re-appeared in another, and the government, the court said, had a perfect right to dispose of that power. Having seized the river for the purpose of navigation everything else was included in the seizure. Furthermore the court would not review the act of Congress. Congress said the river was wanted for the purposes of navigation and that settled it. It was a political decision which the court will not review.

Now in this case the State of New York is the unquestioned owner of the riparian rights in the river, but when the Federal Government undertakes to improve the river for navigation the rights of New York retire. They may be recognized by Congress if Congress pleases. All or part of the accruing revenues may be yielded to the State of New York if Congress pleases. The Federal Government, it may be supposed, will retain at least enough of the earnings to reimburse itself for the cost of the dam and as much more as Congress thinks fit, all of it if Congress thinks best. And as much of the water-power, or of the revenue derived from it, may be yielded to the State of New York as may seem good to the Congress at Washington.

Whatever the conflict of interest may be between the State of New York and the Federal Government it is a much less formidable difficulty than many suppose.

Very truly yours,

JOHN S. PARDEE,

*Assistant Executive Director.*

*Great Lakes-St. Lawrence Tidewater Association.*

DULUTH, MINN., February 15, 1924.

OTTAWA, March 10, 1924.

DEAR MR. MURPHY,—I wish to thank you for your letter of the 5th instant and for the copy which you enclosed of a letter written by Mr. John S. Pardee, Assistant Executive Director of the Great Lakes-St. Lawrence Tidewater Association, on the subject of International Waterways.

Yours faithfully,

(Sgd.) CHAS. STEWART.

The Honourable CHARLES MURPHY, M.P.,  
Postmaster General,  
Ottawa.

P.C. 386

*CERTIFIED COPY of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 10th March, 1924.*

The Committee of the Privy Council have had before them a report, dated 6th March, 1924, from the Secretary of State for External Affairs, submitting that the problems presented by the proposal to develop the St. Lawrence Waterway are of such variety and complication that it would be useful to provide for the co-ordination of the views of the technical officers of the several departments of Government whose work may be affected by the initiation of negotiations leading to the conclusion of a treaty with the United States of America on the subject, or by the carrying out of the work, if it is undertaken.

The Minister accordingly recommends that there be constituted a committee including one representative from each of the following departments, viz., the Departments of Finance, Public Works, Marine and Fisheries, Interior, Railways and Canals, and Trade and Commerce such representatives to be selected by the Ministers of the said Departments respectively, who may each of them appoint an alternate member to act in the absence of his principal nominee, and that Colonel Biggar, Government Counsel, be appointed Chairman of such committee.

The Minister further recommends that the Committee be directed to bring to his attention such technical aspects of the problems presented by the proposal as in its opinion may require consideration either in determining whether or not negotiations looking to the conclusion of a treaty should be entered into, or, in the course of any such negotiations as may be initiated, and also to report especially upon any matter relating to the proposed waterway which may be referred to it by any Minister of the Crown or by the Canadian section of the Joint Engineering Board, the enlargement of which has already been agreed upon. Each member of the Committee shall keep his Minister informed of its proceedings and conclusions.

The Committee concur in the foregoing and submit the same for Your Excellency's approval.

(Sgd.) E. J. LEMAIRE,  
*Clerk of the Privy Council.*

The Honourable

The Minister of the Interior.

#### MUNICIPAL DISTRICT OF SHEPARD, No. 220.

CALGARY, ALTA., March 11, 1924.

Right Honourable W. MACKENZIE KING,

Premier of Canada,

Ottawa.

DEAR SIR:—The Rural Municipality of Saskatchewan Landing No. 167, have forwarded to our Municipality a resolution moved by Mr. John T. Stewart, and seconded by Mr. George G. Smith, in connection with the deepening of the St. Lawrence canal in the international section between Lake Ontario and Montreal.

Their letter informs us that they have forwarded this resolution to yourself, and they have requested that our Council draft a similar resolution.

The Council of the Municipal District of Shepard, at their meeting on March 6th, thoroughly endorsed the resolution as submitted by the Municipality

SESSIONAL PAPER No. 101d

of Saskatchewan, Landing No. 167, and we earnestly pray that this will receive the attention of your Cabinet should this matter come up before Parliament during the coming Season.

Yours respectfully,  
(Sgd.) W. HINDE,  
*Secretary-Treasurer.*

Acknowledged by the Prime Minister's Private Secretary and referred to the Minister of the Interior.

## MUNICIPAL DISTRICT OF BOW VALLEY

STRATHMORE, ALTA., March 26, 1924.

HON. CHARLES STEWART,  
Minister of Interior,  
Parliament Buildings, Ottawa, Ont.

DEAR SIR.—Enclosed with this please to find resolution passed unanimously by the Council of the Municipal District of Bow Valley, No. 219, at Strathmore, Alberta; who respectfully request that you do all in your power to bring this project into being, as soon as possible.

Yours truly,  
(Sgd.) W. G. WAY,  
*Secretary-Treasurer.*

By order of the Council.

## MUNICIPAL DISTRICT OF BOW VALLEY, No. 219,

STRATHMORE, ALTA.

*Resolution from the Municipal District of Bow Valley No. 219*

Moved by C. S. Baker:—

Whereas the Council of the Municipal District of Bow Valley No. 219 is cognizant of the fact that excessive transportation costs are one of the factors contributing most seriously to the economic problems which affect the farmers of Western Canada;

Whereas excessive charges which prevail in connection with the lake and rail haul of grain and other exportable products from Port Arthur to the seaboard constitute a very heavy setback on the nett price received by the farmer for these products;

Whereas the proposed deepening of the St. Lawrence canals for power and navigation purposes will reduce these lake and rail rates from approximately 13 cents per bushel on wheat to 4 or 5 cents a bushel from Port Arthur to Montreal, thus making a saving of 8 or 9 cents a bushel on freight charges;

Whereas the development of these deepened canals is proposed in a section of the St. Lawrence river that is owned equally between Canada and the United States, with costs to be shared according to the benefits to be derived by each country;

Whereas the development of power in this international section will produce a revenue that will take care of the amortized bonds for the whole undertaking, making the project self-financing and self-supporting without the necessity of added taxation upon the people;

14 GEORGE V. A. 1924

Whereas it is authoritatively stated that the United States is now seeking a conference with the Government of Canada for the purpose of entering into a definite treaty for the immediate prosecution of this work;

Therefore be it hereby resolved that this Municipal District of Bow Valley No. 219 request that the Government of Canada acquiesce in the request for a conference with the Government of the United States for the purpose of going ahead at the earliest possible moment with the deepening of the St. Lawrence canals in the international section between Lake Ontario and Montreal to depth of 25 feet instead of the present depth of 14 feet, in order that the large lake freighters may have free access from the head of the lakes to Montreal, and that ocean tramp steamers may be permitted an open seaway through to the head of the lakes, thus carrying our grain and other exportable products at a minimum lake freight charge from the ports of Port Arthur and Fort William to the markets of the world;

And further, that this Council protest most vigorously against any action on the part of the Dominion Government whereby the request of certain interests in Ontario for the development of the power end of the project being gone ahead with immediately, and that the navigation improvement be done later by the Dominion Government at the entire expense of the Government; but rather that the navigation and power improvement be undertaken simultaneously and at the earliest possible date.

Dated at Strathmore, Alta., this 6th day of March, 1924.

Resolution unanimously adopted.

(Sgd.)

W. G. WAY,

*Secretary-Treasurer.*

OTTAWA, April 2, 1924.

MY DEAR SIR,—I am in receipt of your letter of the 26th ultimo, enclosing a resolution passed by the Council of the Municipal District of Bow Valley, No. 219, relative to the St. Lawrence Deep Waterways project, and may say in reply that this matter will receive attentive consideration.

Yours faithfully,

(Sgd.) CHAS. STEWART.

W. G. WAY, Esq.,

Secretary-Treasurer,

Municipal District of Bow Valley,

Strathmore, Alberta.

*Copy of Resolution from Brokenhead (Man.) Board of Trade*

Whereas the matter of the St. Lawrence Deep Waterway\* is at the present time under discussion both in Canada and in the United States.

And whereas the satisfactory completion of the proposed work is of great importance to Canada and especially to Western Canada;

And whereas experience has proven that anything which facilitates production and marketing is beneficial to the whole and every part of the country, so that none need fear that the proposed improvement in navigation of the St. Lawrence River and the Great Lakes will do them damage.

Now therefore be it resolved that we, the Brokenhead Board of Trade, being representative of Northeastern Manitoba, urge the Dominion Government to confer with the Government of the United States without delay and with a view to immediately proceeding with the work of deepening the canals, rivers and lakes of the St. Lawrence and Great Lakes Route and also with a view to Power development in connection with said work.

SESSIONAL PAPER No. 101d

If it be found feasible, we are in favour of making said Waterway of a navigable depth of thirty feet.

Dated at Beausejour in the Province of Manitoba, this 28th day of February, A.D. 1924.

*Copy of Resolution Adopted at the Annual Meeting of the Associated Boards of Trade of Saskatchewan at Moose Jaw, Sask., February 27, 1924*

#### ST. LAWRENCE DEEP WATERWAY IMPROVEMENT

Whereas substantial reductions in transportation rates on grain, cattle and other exportable products of Western Canada will reasonably ensue from the completion of the St. Lawrence Deep Waterway improvement, whereby the large lake freighters will have through navigation to Montreal, and ocean tramp steamers an open seaway to the Head of the Great Lakes, thus eliminating costly transfers and rail haul between Buffalo and New York and between Georgian Bay ports and Montreal;

And whereas these reductions, together with lower freight charges on incoming commodities from Eastern ports and overseas will unquestionably promote most effectively the permanent growth and development of Western Canada;

And whereas the deepening of the canals between Lake Ontario and Montreal is proposed in a section of the St. Lawrence river that is international waters, owned equally between Canada and the United States, with costs to be shared according to the benefits derived by each country;

And whereas, according to a memorandum in possession of the Dominion Government, the development of hydro-electric energy in this international section will provide a revenue that will pay the total cost of the undertaking, without imposing a cent of added taxation upon either country, and without increasing the burden of Canada's national debt;

Therefore, be it resolved that this annual meeting of the Saskatchewan Associated Boards of Trade assembled at Moose Jaw, Sask., this 27th day of February, 1924, does hereby approve and endorse the action of the Dominion Government in conferring with the Government of the United States in a proposal to obtain fullest technical and economic details concerning the Deep Waterway project, and that we respectfully request our Government to consummate present negotiations without unnecessary delay.

Moved by R. H. Moore, seconded by H. D. McNaughton:

That the Municipal Council of the ..... of ..... desires to endorse the action of the delegation of January 11, 1924, representing over three hundred and fifty Municipalities in requesting the Honourable the Prime Minister of Canada and his Government to use every effort to enable the Hydro Electric Power Commission to develop electric energy on the St. Lawrence River on behalf of the Municipalities of the Province of Ontario.

And in view of the immediate necessity of making provision for an adequate supply of power to meet the Municipal and industrial requirements of this province we respectfully request that the Government of Canada approve the plans of the Hydro Electric Power Commission of Ontario for the development of the St. Lawrence river and the undertaking of the first stage in such development at Morrisburg and that immediate action be taken so that the commencement of this work may not be delayed.

Passed this 3rd day of March, 1924.

..... Mayor.  
..... Clerk.

## DEPARTMENT OF PUBLIC WORKS

*Order of the House of Commons*

Mr. Archambault—Order of the House—For a copy of all memoranda, correspondence, telegrams, and other documents exchanged between the Government of Canada or any of its members and other governments, corporations or individuals since the 1st of January, 1922, relating to the St. Lawrence Waterway Route, and the establishment of dams on the St. Lawrence River for the development of certain water powers.

2756-1C

## BRITISH EMBASSY,

WASHINGTON, January 30, 1922.

Dear Mr. WALKER, —As requested in your letter of January 27th, I have pleasure in enclosing herewith six additional copies of joint Resolution 262, providing for the establishment of an International Board to have jurisdiction of the construction, operation, and control of the improvement of the Great Lakes St. Lawrence Waterway.

Yours faithfully,

(sgd.) M. M. MAHONEY.

Acting Under Secretary of State for External Affairs, Ottawa, Canada.  
 Referred to: Public Works.

2756-1C.

H. J. Res. 262

## IN THE HOUSE OF REPRESENTATIVES

January 20, 1922.

Mr. Chalmers introduced the following joint resolution; which was referred to the Committee on Interstate and Foreign Commerce and ordered to be printed.

SESSIONAL PAPER No. 101d

## JOINT RESOLUTION

*Providing for the establishment of an International Board to have jurisdiction of the construction, operation and control of the improvement of the Great Lakes Saint Lawrence Waterway.*

Whereas in the treaties now in force between the United States of America and Great Britain, namely, the Webster-Ashburton Treaty of 1842, the reciprocity treaty of 1854, the treaty of Washington of 1871, and the treaty of Washington of 1909, it is provided that the Saint Lawrence River shall forever remain free and open for the purpose of commerce to the citizens of the United States; and

Whereas the treaty of Washington of January 11, 1909, provides for the organization of an International Joint Commission; and

Whereas the River and Harbor Act approved March 2, 1919, provided that the International Joint Commission should investigate what further improvement of the Saint Lawrence River between Montreal and Lake Ontario is necessary to make the same navigable for ocean going vessels, together with the estimated cost thereof, with its recommendation for co-operation by the United States with the Dominion of Canada in the improvement of said river, and

Whereas on January 21, 1920, in what is known as the Reference, the Secretary of State requested the International Joint Commission to investigate what further improvement in the Saint Lawrence River between Montreal and Lake Ontario is necessary to make the same navigable for deep-draft vessels of either the lake or ocean going type and what draft of water is recommended and the estimated cost; and

Whereas on January 1, 1920, the Secretary of State in said Reference asked the Board of Engineers to take charge of the survey of the Saint Lawrence River from Montreal to Lake Ontario for the purpose of preparing plans and estimates for its further improvement to make the same navigable for deep draft vessels of either the lake or ocean going type, and to obtain the greatest beneficial use of these waters; and

Whereas in July, 1921, the Board of Engineers unanimously recommended the improvement of said waterway for navigation and power purposes; and

Whereas the International Joint Commission on January 10, 1922, recommended to the Government of the United States and the Dominion of Canada the completion of the New Welland Canal connecting Lake Erie and Lake Ontario, and the improvement of the Saint Lawrence River from Lake Ontario to the sea for navigation and power purposes; Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, that an International Board be established, composed of six members, three on the part of the United States, one appointed by the President thereof, one by the President of the Senate, and one by the Speaker of the House of Representatives, and three on the part of Great Britain.

Resolved further, That the International Board shall have jurisdiction of the construction, operation and control of the improvement of the Great Lakes Saint Lawrence waterway from Lake Erie to Lake Ontario and from Lake Ontario to the sea, providing for a channel thirty feet deep, and shall determine the final plans for the construction of the improvement for navigation and power purposes.

Resolved further, That one half of the cost of construction, maintenance, and operation of the navigation and power works shall be borne by the United States of America and one half by the Dominion of Canada.

14 GEORGE V, A. 1924

Resolved further, That one half of the hydro-electric power generated by the construction of this work shall be credited to the United States of America and one half to the Dominion of Canada, and that the International Board shall supervise the control, use, and sale of the power thus made available.

Resolved further, That the expenditure of the sum of \$1,000,000 is hereby authorized to be paid from funds not otherwise appropriated, to be under the control of the American section of the International Board, to be transferred to the control of the International Board when completed by the legal appointment of the Canadian section of said International Board and the appropriation of an equal amount of money by the Dominion of Canada. This joint appropriation is to be used by the International Board for organization purposes and to start the work until additional funds are made available.

Resolved further, That the International Board is hereby authorized to issue bonds, guaranteed by the United States of America and Great Britain, in an amount necessary to pay for the construction of the navigation and power works.

2756-1C

BRITISH EMBASSY,

WASHINGTON, February 13. 1922.

Dear Sir JOSEPH POPE,—I have the honour to enclose herewith four copies of Senate Resolution No. 235, respecting proposed St. Lawrence development, introduced in the Senate on February 10th, by Senator King of Utah.

Yours faithfully,

(Sgd.) M. M. MAHONEY.

Referred to: Public Works.

Sir JOSEPH POPE, K.C.M.G.,

Under Secretary of State for External Affairs,  
Ottawa, Canada.

2756-1C

S. Res. 235

IN THE SENATE OF THE UNITED STATES

February 3 (Calendar day, February 10) 1922.

Mr. King submitted the following resolution; which was referred to the Committee on Commerce.

## RESOLUTION

Whereas the project for the canalization of the Saint Lawrence River, and the development of hydraulic power in connection therewith, between Lake Ontario and the head of tidewater, in the Saint Lawrence River below the city of Montreal, at the joint expense of the Governments of the United States and the Dominion of Canada, contemplates that the Government of the United States shall contribute one half of the cost of the construction of the necessary channels, dams, locks, and hydraulic works in that portion of the Saint Lawrence River between the northern boundary of the State of New York and the mouth of the Richelieu River, which portion of the Saint Lawrence River passes entirely through Canadian territory, and upon which the United States has no riparian rights, or rights with respect to the water power, and has no contact with the banks or with the proposed navigable channels, canals, dams, locks or hydraulic works, for which the Government of the United States is expected to appropriate one half of the cost of construction; Now, therefore, be it

SESSIONAL PAPER No. 101d

Resolved, That it is the sense of the Senate that, as a condition precedent to the Government of the United States joining with the Government of the Dominion of Canada in the construction of such works, the Dominion of Canada cede to the United States the territory lying between the Richelieu River, Lake Champlain, and the northern boundary of the State of New York, including the bank and the bed of the Saint Lawrence River to the center of the channel thereof, from the point of intersection with the northern boundary of New York to the mouth of the Richelieu River, in order that the United States may become joint owner with the Dominion of Canada of the course of the Saint Lawrence River to the head of tidewater below the city of Montreal and joint owner with the Dominion of Canada in the proposed canals, channels, dams, locks and hydraulic works and of all rights of navigation and of water power appurtenant thereto.

2756-1C

BRITISH EMBASSY,

WASHINGTON, February 21, 1922.

Dear Sir JOSEPH POPE,—I enclose herewith four copies of House Resolution 287 relating to the St. Lawrence River Development.

Yours faithfully,

(Sgd.) M. M. MAHONEY.

Sir JOSEPH POPE, K.C.M.G.,

Under Secretary of State for External Affairs,  
Ottawa, Canada.

Referred to: Public Works.

2756-1C

H. Res. 287.

IN THE HOUSE OF REPRESENTATIVES

February 14, 1922.

Mr. Ten Eyck submitted the following resolution: which was referred to the Committee on Foreign Affairs and ordered to be printed.

## RESOLUTION

Whereas the Saint Lawrence River is a natural boundary line and the interests of the Government of the Dominion of Canada and of the Government of the United States are mutual in its utilization:

Therefore be it

Resolved, That the President is requested to take such steps as are consistent and in accordance with international procedure with the Dominion of Canada and Great Britain to purchase all that territory in the Dominion of Canada lying east and south of the line comprising the centre of the channel of the Saint Lawrence River from its mouth to its source and the centre of the Gulf of Saint Lawrence, including the full riparian rights and rights to develop and utilize half of the water power from the Saint Lawrence River.

Resolved further, That the President is requested to use his best endeavours to have payments due the United States on the British debt credited on the purchase price of the territory so acquired.

14. GEORGE V, A. 1924

## DEPARTMENT OF STATE

May 25, 1922.

For the Press:

The Secretary of State, on May 17, 1922, sent to the British Ambassador a note stating that the United States Government would be glad to take up with the Canadian Government the negotiation of a treaty looking to the deepening of the waterways which would enable ocean going ships to reach the Great Lakes.

The note to the British Ambassador referred to the fact that on January 21, 1920, the Governments of the United States and Canada referred to the International Joint Commission for investigation and report, under the terms of Article IX of the Treaty of January 11, 1909, relating to Boundary Waters, questions with respect to the improvement of the St. Lawrence River between Lake Ontario and Montreal, both for navigation and the development of water power. This Commission reported on December 19, 1921.

The Secretary of State said that he was authorized to state that the President favors the negotiation of a treaty on the basis of this report of the International Joint Commission, or such modifications as might be agreed on, and requested to be informed as to whether the appropriate British and Canadian authorities are disposed to undertake the negotiation of a treaty.

The Department understands that this note has been forwarded to the Canadian Government. No answer has as yet been received.  
Referred to: Public Works.

2756-1C

OTTAWA, December 4th, 1923.

Dear Mr. HUNTER,—In accordance with your telephone request of yesterday I am forwarding to you, herewith, copy of the despatch No. 413 of the 19th November 1923, from His Majesty's Charge d'Affaires at Washington to His Excellency, on the subject of the St. Lawrence River Improvement Scheme, together with copy of Sir Auckland Geddes' despatch No. 127 of the 18th of May, 1922, referred to therein, and copy of the Minute of Council authorizing the Minister of the Interior to deal with international questions relating to the joint waters of Canada and the United States.

Yours very truly,

(sgd.) W. H. WALKER.

Referred to: Public Works.

2756—1C

BRITISH EMBASSY,

WASHINGTON, January 30, 1924.

SIR,—I have the honour to refer to the note which you were so good as to address to me on November 17th last, regarding the St. Lawrence River improvement scheme and to inform you, by request of His Excellency the Governor General of Canada, that the Dominion Government have had under consideration the contents of your note addressed to Sir Auckland Geddes on May 17th, 1922. In that note you suggested either the immediate conclusion of a treaty looking to the development of the St. Lawrence waterway along the lines recommended by the International Joint Commission charged with the formulation of a complete plan which would be subject to the approval of the two Governments, or alternatively, the constitution of a Joint Commission of experts to make preliminary studies and investigations and to frame the draft of a treaty.

The Dominion Government point out that the report of the International Joint Commission recommended that, before any work was carried out, the

14 GEORGE V, A. 1924

Joint Engineering Board, whose proposals it generally approved, should be enlarged, and that once so enlarged, the said Board should further consider the technical aspects of the problem in detail and decide upon the plan which should be adopted.

While the Government of Canada desire to give further consideration to the suggestions put forward in your note of May 17th, 1922, they are of opinion that the proposal made by the International Joint Commission should be acted upon without further delay. The Dominion Government are accordingly prepared to appoint additional engineers to enlarge the Joint Engineering Board with a view to the Board undertaking the preparation of a final report covering the engineering features of the whole project, including its cost. The Government of Canada intend, further, to form a committee which will, in consultation with the Canadian members of the Joint Engineering Board, enquire fully from a national standpoint into the wide questions involved, and they hope shortly to be in a position to take further action of the proposals made by the United States Government.

Meanwhile the Government of Canada would be glad to learn the views of the United States Government in regard to the number of additional engineers who should be appointed by each Government to the Joint Engineering Board. The Dominion Government are also ready to nominate one or more technical officers to discuss with similar United States officers the form which the instructions to the enlarged Joint Engineering Board should take, and the time within which the Board should be directed to report.

In expressing the hope of the Government of Canada that the above proposals will be agreeable to the United States Government, I have the honour to inform you that Lord Byng of Vimy would be grateful if arrangements could be made by telegraph for their publication simultaneously in Washington and Ottawa.

I have the honour to be,

With the highest consideration, sir,

Your most obedient, humble servant,

(Sgd.) H. G. CHILTON.

The Honourable CHARLES E. HUGHES,  
Secretary of State of the United States,  
Washington, D.C.

2756-1C

## CANADA READY TO ACT ON LAKES WATERWAY

WILL APPOINT ST. LAWRENCE RIVER PROJECT ENGINEERS HUGHES ADVISED

The Canadian government, in a note transmitted to the State Department through the British Embassy, has declared its readiness to act without delay on certain proposals made by the International Joint Commission for improvements in the St. Lawrence river between Montreal and Lake Ontario to make possible deep water navigation into the Great Lakes.

The Ottawa government asserts that it desires to give further consideration to some of the suggestions made by Secretary Hughes to Sir Auckland Geddes, British Ambassador, in a note transmitted in May 1922, but is prepared now to appoint additional engineers to enlarge the joint engineering board and undertake the preparation of a final report covering "the engineering features of the whole project, including its cost."

## RIVERS WATERWAY PLAN

SPEAKER PREDICTS GRAIN WILL REACH BALTIMORE FROM LAKES

*Special Despatch to the Star.*

Baltimore, February 18. The middle west will ship grain and iron direct to Baltimore by an all-water route when the the great lakes St. Lawrence waterway project is a reality, declared Charles M. Jackson of the Northern New York Development League, speaking to the Foreign Trade Club here Saturday.

He predicted that Canada and the United States will join to build the waterway and asserted that it could be built in ten years at a cost of \$250,000,000. This cost, he said, would build two canals, a channel in the St. Lawrence and a power plant of 1,500,000 horse-power that would pay the bill within fifty years by selling power at two mills per kilowatt hour.

Mr. Jackson said the railroads are in favour of the plan and that President Coolidge and a majority of the cabinet and Congress, as well as a majority in the Canadian government, approve it.

2756-1C

## BRITISH EMBASSY,

WASHINGTON, February 28, 1924.

My Lord,—With reference to my despatch No. 39 of January 30th last, I have the honour to transmit to Your Excellency herewith copies of a note from the United States Government containing their views on the proposals made by the Dominion Government in connection with the St. Lawrence River improvement scheme, from which it will be seen that the United States Government are in general agreement with the suggestions put forward in my note No. 97 of the 30th ultimo.

SESSIONAL PAPER No. 101d

In expressing the hope that the proposals contained in the enclosed note will be acceptable to the Government of Canada, Mr. Hughes states that he will be pleased if arrangements can be made by telegraph for a simultaneous publication in Ottawa and Washington.

A copy of this despatch is being communicated to His Majesty's Government.

I have the honour to be, my Lord,

Your Excellency's most obedient humble servant,

(For His Majesty's Charge d'Affaires),

(Sgd.) JOHN CECIL.

His Excellency,

THE LORD BYNG OF VIMY, G.C.B.,

etc., etc., etc.,

Ottawa, Canada.

Referred to: Public Works.

2756-1C

#### DEPARTMENT OF STATE

WASHINGTON, February 27, 1924.

SIR,—In your note of January 30th, 1924, in regard to the project for joint action by the United States and Canada for the improvement of the St. Lawrence River between Montreal and Lake Ontario for navigation and the development of water power, you informed me that while the Government of the Dominion of Canada desires to give further consideration to the suggestions brought forward to my note of May 17, 1922, to Sir Auckland Geddes with a view to carrying out the recommendations made by the International Joint Commission, the Dominion Government is nevertheless prepared to act without delay on the recommendation for the enlargement of the Joint Engineering Board which assisted the Commission in making the investigation of the project and to appoint additional engineers to the Board with a view to having it undertake the preparation of a final report covering the engineering features of the whole project, including its cost.

You informed me also that the Government of Canada intends to form a committee which will in consultation with the Canadian members of the Joint Engineering Board, inquire fully from a national standpoint into the wide questions involved in the project.

In reply permit me to say that this Government is gratified to learn that the Canadian Government hopes shortly to be in a position to take further action on the proposals made in my note of May 17, 1922, and meanwhile is especially pleased to be advised that the Government of Canada intends to create a committee for the purpose described in your note. This Government, similarly, will immediately constitute a national committee which will in consultation with the American members of the Joint Engineering Board make adequate inquiry from a national standpoint into the questions involved to the end that the project for the improvement of the St. Lawrence River for navigation and the development of its water power may be carried forward as speedily as possible.

This Government is glad to give its assent to the suggestion that the Joint Engineering Board should be enlarged and, in response to the request of the Canadian Government for its view as to the number of additional engineers which should be appointed, suggests that two engineers be added to the Board of each Government, the membership of the Board thus being increased to six.

three of whom would be representatives of the United States and three would be representatives of Canada. In connection with this enlargement of the Board it may be noted that the first of the recommendations made by the International Joint Commission was that the Governments of the United States and Canada enter into an arrangement by way of treaty for a scheme of improvement of the St. Lawrence River between Montreal and Lake Ontario. It would appear that the Commission did not contemplate that negotiations for a treaty should be postponed until after a report should be made by an enlarged board of engineers but that negotiations should forthwith be opened, that the proposed works between Montreal and Lake Ontario should "be based upon the report of the Engineering Board" accompanying the report of the Commission, and that the Governments should have the benefit of the advice of an enlarged Board of Engineers before a "final decision" should be reached.

This Government would propose that the instructions to the enlarged Engineering Board should be prepared in joint conference by the two advisory committees which the Governments of Canada and the United States intend to establish as indicated in your note and this reply, and that the two committees should accordingly be empowered to meet in joint conference for the purpose of formulating such instructions. However, the instructions would be given to the Board of Engineers by the Governments and the report of the engineers would be made to the Governments.

As it appears that the report of the Board of Engineers of June 24, 1921, while of a preliminary character, as contemplated in their instructions, nevertheless presented a general plan believed to be practicable in its main features, this Government would desire to have included in the first instructions to the enlarged Board the two fundamental questions whether the scheme for the improvement of the St. Lawrence Waterway which the Board presented in its report of June 24, 1921, is practicable and whether the estimates of costs made by it require revision. The time within which the Board should make its report should, as was suggested by the Canadian Government, be determined in advance and stated in the instructions. It is believed that the fundamental questions can be reported upon within a short time. If the suggestion that the instructions to the Joint Engineering Board be prepared by the two advisory committees in joint conference be acceptable to the Canadian Government the appointment of technical officers especially for this purpose as proposed by the Canadian Government would not be necessary.

This Government further suggests that the two committees be empowered to meet from time to time in joint session in order to prepare supplemental instructions for the Board of Engineers as occasion may require, and to consider and develop the broader aspects of the whole matter so that each committee may be as helpful to the other as possible.

This Government is hopeful that the foregoing proposals will be acceptable to the Government of Canada and I should be pleased if arrangements can be made by telegraph for publishing them simultaneously at Washington and Ottawa.

Accept, Sir, the renewed assurance of my high consideration.

(sgd.) CHARLES E. HUGHES.

SESSIONAL PAPER No. 101d

## MORRISBURG

10741-1

KINGSTON, ONT., January 21, 1924.

Hon. Dr. JAMES H. KING,  
Minister of Public Works,  
Ottawa, Ontario.

SIR,—I beg to submit herewith copy of a resolution adopted by the Dominion Marine Association in Annual General Meeting at Ottawa on the 17th instant, referring to the proposal of the Government of the Province of Ontario for the development of power near Morrisburg in the St. Lawrence River. I am directed to commend this resolution to your serious consideration.

I have the honour to be, sir,

Your obedient servant,

(Sgd.) FRANCIS KING,

RESOLUTION ADOPTED BY THE DOMINION MARINE ASSOCIATION IN ANNUAL  
GENERAL MEETING AT OTTAWA ON JANUARY 17, 1924

*Resolved:*

That the Dominion Marine Association disapproves of the proposal made through the Hydro Electric Commission of the Province of Ontario for the immediate development of power in the vicinity of Morrisburg on the St. Lawrence River in so far as the proposal in any way (a) contemplates any reversal of the order of priority between navigation and power fixed by the Treaty of 1909 as the order to be observed in the use of boundary waters; (b) permits in the slightest any surrender by the Dominion of the complete control of the river necessary for the purpose of improving and protecting navigation, or subjects the existing control to the dominance of any parties primarily interested in the development of power; (c) or includes a power development scheme which does not form a proper part of a well considered and fully approved plan for the development of the whole river as a unit, primarily to improve navigation and incidentally to develop power.

That the Association will be pleased to see the demand for more electrical power in Ontario satisfied as soon as possible, so long as navigation interests remain in every way paramount and under the exclusive and unfettered control of federal authorities, and so long as any work undertaken forms a proper part of the general plan for development of the whole river above mentioned.

And that copies of this resolution be forwarded to the Rt. Hon. the Prime Minister, and to the Hon. the Ministers of Railways and Canals, Marine and Fisheries and Public Works.

10741-1

## HYDRO-ELECTRIC POWER COMMISSION

TORONTO, January 24, 1924.

To the Secretary.

Department of Public Works,  
Ottawa, Ont.

*Re: Application of Hydro-Electric Power Commission of Ontario for Morrisburg Development.*

DEAR SIR:

In pursuance of authority of the Government of Ontario, the Hydro-Electric Power Commission of Ontario makes application for the approval of plans

14 GEORGE V, A. 1924

and site for dam and power development works proposed to be built on the St. Lawrence river at or near Morrisburg.

Accompanying this application are the following plans and documents, which I beg to enclose herewith:—

1. Five copies of a description of the general engineering features of the proposition of the Hydro-Electric Power Commission of Ontario to develop the St. Lawrence river in the vicinity of Morrisburg, dated January 10, 1924.

2. Five copies of Plan No. 160-E-105, entitled "Project for the Power Development of the St. Lawrence River" dated January 8, 1924, being a general plan of the site, regulating dam, the power works, and the lock for navigation within the above structures at or near Morrisburg.

3. Five copies of plan No. 160-D-106 entitled "St. Lawrence River project for power development channel improvements" showing excavation plans at Leishman Point and Ogden Island.

4. Five copies of plan No. 160-E-107 entitled "St. Lawrence River project for power development channel improvements" showing excavation in vicinity of Galops Island head of South Galops Rapids.

5. Five copies of plan No. 160-D-103, entitled "Power House at Morrisburg, St. Lawrence River, scheme "B" being a general cross section of the power house, and section of the dam, in which it is located.

6. Five copies of a general map of the St. Lawrence river from Brockville to Montreal, with approximate proposed location of the works indicated thereon.

The above referred to plans, together with descriptive matter are general, but I trust will answer the requirements of your department for the present. It is expected that further detailed plans will be provided at a later date, as are found necessary and required by your department.

The Commission suggests that a conference between the engineers of your Department and the Commission might be desirable, with a view to settling objections, if any, that your engineers may have to the proposed works.

The Commission desires to proceed with the work at the earliest possible date, and would be glad to have this application receive your early consideration.

Yours truly,

(Sgd.) W. W. POPE,  
Secretary.

10741-1

*Description of General Engineering Features of the Proposal of the Hydro-Electric Power Commission of Ontario in the vicinity of Morrisburg, Ontario. (January 23, 1924.)*

The works proposed to be constructed on the St. Lawrence river, opposite the village of Morrisburg, Ontario, provide for navigation and for the development of power. The works comprise excavated channels, navigation lock, dams and sluiceways, embankments and power house.

The site near the village of Morrisburg, Ontario, has been selected on account of its many advantages, some of which are,—accessibility for purposes of construction, a location for the power house that in large measure is free from construction hazards, the procuring of foundation material for all the major structures, and such contours of the lands upstream as will greatly reduce the damage and inconvenience that would result to residents as contrasted with developments at other feasible sites.

The general arrangement of the proposed works may be understood by reference to the accompanying drawings, upon which the various structures and works are shown in their respective general situations.

## SESSIONAL PAPER No. 101d

Sufficient spillway and sluiceway capacity will be provided to take care of the total maximum flow of the St. Lawrence river without any allowance for flow through the turbines in the power houses. At the main dam there will be provided 600 feet of free spillway with crest at or about elevation 241; sluiceways aggregating a clear 800 feet in length with a depth of 21 feet, controlled by stoney sluices; a clear length of sluiceways aggregating 320 lineal feet with a depth of 21 feet of submerged sluices with suitable gates. Further, it is proposed to divide the river, as far down as the foot of Murphy Island, into two channels, by an embankment connecting this island to the power house. The south channel will be connected to the forebay of the power plant by a channel 600 feet wide, cut through Murphy Point. Also a dam, provided with 350 lineal feet of submerged sluices, and 250 lineal feet of ice sluices will be placed across the upper end of this channel.

The channel south of Ogden island, known as Little river, with the channels east and west of Clark island, will form the forebay of the proposed development. There will be three inlets to this basin, of which the present mouth of Little river will form one. This channel will be improved by cutting off part of Leishman's Point, by deepening the channel of Little river, and by removing the present dam near Waddington. A cut 300 feet wide will also be made across the low part of Ogden island west of Waddington with a bottom grade at elevation 213. In addition to this channel, there will be another channel across the island just above the main dam. Inasmuch as the new water level created by the proposed structures will create sufficient depth of water across this channel, no excavation is contemplated here as the existing contours provide all the carrying capacity that is required at this place.

Provision is made for sufficient excavation in the channels on either side of Galops island to permit the proposed pool levels to be maintained without causing lake Ontario to rise as high as its natural flood level. This part of the proposed work is shown on drawing 160-E-107.

*Power House.*—The Canadian power house occupies the channel between the lower end of Ogden island and Clark island. Provision is made for an American power house between the east side of Clark island and Murphy point. The Canadian power house will contain some 34 units, each capable of developing 10,800 h.p. under a head of 27 feet. A cross section of the power house through one of the units is shown in drawing 160-B-103. The general location of the power house, dams, and other structures and work are shown on drawings Nos. 160-E-105, 160-D-106 and 160-E-107.

*Question of Damages for Flooding.*—The important feature of damage to property by flooding or by other means has not been overlooked. On account of the uncertainties appertaining to this phase of the project, it has not been considered necessary at this stage to do more than here give the assurance that this matter will be disposed of in such a manner as to do full justice to all interests concerned.

*Navigation Structures.*—At the north end of the dam a lock with 30 feet of water on the sill at low water will permit shipping to pass between the pool above the dam to the part of the present Morrisburg canal below Mariatown. This lock is provided with ample entrance piers, four pairs of service gates, a pair of unwatering gates, and an emergency gate. Sluices in the dam adjacent to the lock supply water to the lower reach of the canal, and for the power plants at present drawing their water supply from the canal at Morrisburg. Provision is made also for adequate sluices to discharge surplus water from this reach to the river below the dam. A swing bridge over the lock will provide access by a railway spur to the power house.

14 GEORGE V, A. 1924

Shipping after passing into the portion of the Morrisburg canal below the dam, would continue as at present through the present lock 23 and thence return to the river and vice versa.

When, in the future, it is desired to provide for navigation with a draft of 25 to 30 feet, then the channels above and below the 30 ft. lock would be excavated to provide the necessary depth and the necessary additions to the entrance piers built. Shipping would then pass from the pool above the dam to the river below the dam or vice versa.

10741-1.

OTTAWA, January 25, 1924.

SIR,—I beg leave to acknowledge the receipt of your letter of January 24 instant, enclosing the following plans in connection with the application of the Commission for approval of a dam and power development works proposed to be built on the St. Lawrence River at or near Morrisburg:—

1. Five copies of the description of the general engineering features dated January 10, 1924.
2. Five copies of plan No. 160-E-105, project for the power development of the St. Lawrence River, dated January 8, 1924.
3. Five copies of Plan No. 160-D-106 showing excavation plans at Leishman Point and Ogden Island.
4. Five copies of plan No. 160-E-107 showing excavation in the vicinity of Galops Island, head of South Galops Rapids.
5. Five copies of plan No. 160-D-103 being a general cross-section of the power house and section of the dam.
6. Five copies of a general map of the St. Lawrence River from Brockville to Montreal.

None of the plans mentioned are certified by the Registrar. I note that further detailed plans will be provided later on if they are found necessary by this Department.

Would you please send a set of tracings of the plans filed, and have them certified by the Registrar.

Your suggestion that a conference between the Engineers of this Department and the Commission might be desirable has also been noted.

The plans are being referred to the Chief Engineer for report.

I enclose a copy of our memorandum explaining the requirements of the Navigable Waters Protection Act which govern works of this nature.

Yours obediently,

(Sgd.) L. H. COLMAN, Secretary.

W. W. POPE, Esq., Secretary,

Hydro-Electric Power Commission of Ontario, 190 University Ave.,  
Toronto, Ont.

No. 840.

#### DEPARTMENT OF PUBLIC WORKS, CANADA

*Memorandum in reference to applications for the approval by the Governor General in Council under the provisions of chapter 115, revised statutes of Canada, 1906, and amending Acts, of the sites and plans of works in navigable waters.*

Paragraph (a) of Section 2 of the Navigable Waters Protection Act as re-enacted by Chapter 33, 1918, defines "work" as follows:—

## SESSIONAL PAPER No. 101d

(a) "Work" includes any bridge, boom, dam, aboiteau, wharf, dock, pier or other structure, tunnel or pipe, or telegraph or power cable or wire and the approaches or other works necessary or appurtenant thereto, or any work, structure, or device, whether similar in character to the foregoing or not, which may interfere with navigation.

Under the Statute and practice of the Department the procedure is as follows:—

1. To deposit a written description of the site, if possible by metes and bounds, and also a plan or plans of the proposed work, with the Minister of Public Works, accompanied by an application for their approval by the Governor General in Council. The plan or plans must be sufficient to indicate clearly the nature and extent of the work, and also the site of the same. Five copies of the description and five copies of the plan, or set of plans if there are more than one plan, are required. One of the plans, or one set of the plans if there are more than one, must be traced on linen, the others may be blue or white prints. The descriptions must be typed on heavy paper. If these documents are sent by mail, they should be addressed to "The Secretary, Department of Public Works, Ottawa."

2. A duplicate of the above-mentioned description of the site and of the plan or plans of the proposed work, must be deposited with the Registrar of Deeds for the district, county or province in which the work is to be constructed. Evidence that the description of the site and the plans have been so deposited, and of the date of their deposit, must be furnished to the Department, and the most satisfactory evidence is a certificate of the Registrar endorsed upon one of the descriptions of the site, and upon one of the plans or on each of the plans forming a set of plans, if there are more than one plan, forwarded to the Secretary of the Department. It is essential that it be clearly established that the description and plan or plans deposited with the Registrar are duplicates of those filed with the Minister. The plan or plans so certified must be the tracings referred to in Clause 1 hereof.

3. One month's notice in the form set out at the conclusion hereof, of the deposit of the description of the site and of the plan or plans with the Minister of Public Works and with the Registrar of Deeds must be given by advertisement in the *Canada Gazette* and in two newspapers published in or near the locality where the work is to be constructed.

Evidence of the publication of the advertisement in the *Canada Gazette* and in the two local newspapers must be furnished to the Department, and may be by Statutory Declaration, with copies of the advertisement in the *Canada Gazette* and in each newspaper attached as exhibits. The declaration must state that the two newspapers containing the advertisement are published in or near the locality where the work is to be constructed, and must mention the dates of the issues of the newspapers that contained the advertisement. Four insertions of the advertisement at weekly intervals will be accepted as satisfactory compliance with the provisions of the Statute in this regard.

4. The Applicants must furnish proof that they own or have a sufficient interest in the land and land covered with water upon which the works are to be constructed. It is not sufficient to hold the riparian interests alone if the work extends beyond the limits of the shore, but a sufficient portion of the harbour, river or lake bed must also be held by the Applicants. The Statute has reference to the erection of structures on lands owned by the Applicants or which they have the right to use and is designed to provide for due protection to navigation. It cannot be used as a means of acquiring title to lands upon which the structure is to be erected.

Applicants will note that when it is necessary in connection with the proposed work for them to acquire land (including land covered with water) belonging to the Dominion of Canada, a separate application for such land must be made:—

(a) To the Department of Marine if the land is situated in a public harbour.

(b) To the Department of the Interior if the land is not a public harbour and is in Manitoba, Saskatchewan, Alberta, the Railway Belt of British Columbia, the Northwest Territory or the Yukon Territory or if it is Ordnance Land in the Provinces of Ontario, Quebec, Nova Scotia and New Brunswick.

(c) To the Department of Indian Affairs if the land belongs to an Indian reserve.

(d) To the Department of Railways and Canals if the land is part of a canal reserve.

(e) To the Department of Militia and Defence if the land is part of a Military reserve.

(f) In other cases the application for the Dominion Land required may be sent with the application for the approval of the work, and the description of the site thereof, to the Department of Public Works.

All applications for Dominion Lands must be accompanied by a plan and description of the land by metes and bounds in quintuplicate. One of the plans must be a tracing, the others may be blue or white prints.

5. By Section 4 (2) of the Act, as re-enacted by Chapter 33, S-9 George V, 1918, certain small works costing not more than one thousand dollars, which do not interfere with navigation are excepted from the operation of the Act and may be, on application, approved by the Department without advertising or filing of plans and description of the site in the Registry Office, as otherwise required. It is to be noted, however, that if the work costs more than one thousand dollars, or if it in the slightest degree interferes with navigation or encroaches upon navigable waters, even though it may really be otherwise of the utmost value to navigation, it will not be within the exception. The works covered by this exception are the following:—

Small wharfs or groynes or other bank or beach protection works, or boat-houses.

6. It is to be noted that it will be too late to apply for approval of the plans and site after the work is built, and works must not be commenced before the plans have been duly approved. The Statute gives no power to approve of works already constructed or in process of construction, except in the case of works constructed or in process of construction on the first day of June, 1918.

The procedure to secure approval of the plans and sites of works constructed or in process of construction on June 1, 1918, is the same as already described for works proposed to be constructed, except that legal evidence must be supplied that the works were constructed or in process of construction on that date; this evidence may be by Statutory Declaration.

DEPARTMENT OF PUBLIC WORKS, CANADA,  
OTTAWA, September 17, 1919.

10741.

OTTAWA, February 5, 1924.

SIR,—Complying with a request of the Honourable the Minister of Justice, I am directed to send you herewith a copy of the application of the Hydro Electric Power Commission of Ontario for approval of a dam and power development works proposed to be built on the St. Lawrence River at or near Morrisburg. One copy of the description and of the five plans accompanying this application are sent you under separate cover.

The above are forwarded in connection with a meeting to be held by La Chambre de Commerce de Montreal on the 6th instant to consider all projects in reference to the opening of the St. Lawrence water rates.

As the Department will probably require this set later on, it is to be considered as a loan, and I would, therefore, ask you to please return it at your early convenience.

Your obedient servant,  
(Sgd.) L. H. COLMAN,  
*Secretary.*

J. C. GROVES CONTANT, Esq.,  
Secretary La Chambre de Commerce, Montreal, P.Q.

## HYDRO-ELECTRIC COMMISSION

TORONTO, January 28, 1924.

MR. L. H. COLMAN,  
Secretary Department of Public Works, Ottawa, Ont.

DEAR SIR,—I beg to acknowledge receipt of yours of the 25th inst., with enclosures, as stated, in connection with the application of the Commission for approval of dam and power development works proposed to be erected on the St. Lawrence River, at or near Morrisburg.

Yours truly,  
(Sgd.) W. W. POPE,  
*Secretary.*

10741

OTTAWA, February 22, 1924.

GENTLEMEN.—Referring to my letter of January 25, further examination of the plans filed by you with your application for the construction of a dam and

14 GEORGE V, A. 1924

power development works on the St. Lawrence River at or near Morrisburg shows that the power houses proposed are to be located wholly in the United States, and that only a part of the dam and the canal are to be situate in Canada. The project is consequently one which must be dealt with internationally, not departmentally.

Moreover, since you were represented before the International Joint Commission on the hearings preceeding their report upon the development of power and navigation on this section of the St. Lawrence you are no doubt aware that the Commission recommended a project differing in essentials from that now submitted by you, and that in accordance with the Commission's recommendation action has recently been taken looking to the reconstitution, with additional members, of the International Board of Engineers, upon whose report that of the Commission was based.

If, in the circumstances you consider that any further steps can usefully be taken at present upon your application, the Department will be glad to receive your suggestions.

Your obedient servant,

(Sgd.) L. H. COLMAN,  
*Secretary.*

The Hydro-Electric Power Commission of Ontario,  
190 University Avenue, Toronto, Ont.

MASSENA

## INTERNATIONAL JOINT COMMISSION

OTTAWA, September 12. 1922.

DEAR SIR,—I beg to enclose herewith copy of Application of the St. Lawrence River Power Company for approval of a further continuance of the submerged weir in the south chanel of the St. Lawrence River below the mouth of the Company's Power Canal near Massena, N.Y., constructed in 1918 under an Interim Order of this Commission.

Yours very truly,

(Sgd.) LAWRENCE J. BURPEE,  
*Secretary.*

J. B. HUNTER, Esq.,  
Deputy Minister of Public Works,  
Ottawa.

SESSIONAL PAPER No. 101d

## INTERNATIONAL JOINT COMMISSION

*Application of the St. Lawrence River Power Company for approval of a further continuance of the submerged weir constructed in the year 1918, under an interim order of the International Joint Commission, in the South channel of the Saint Lawrence River, below the mouth of the St. Lawrence River Power Company's Power Canal, near Massena, New York.*

To the Honourable the International Joint Commission:

The application of the St. Lawrence River Power Company respectfully sets forth:—

1. Under an Interim Order, promulgated by your Honourable Commission September 14, 1918, a copy of which is attached hereto and marked Exhibit 1, the applicant, The St. Lawrence River Power Company, a New York corporation, with its principal office at Massena, St. Lawrence County, New York, hereinafter termed the "Company" constructed during the months of October, November and December, 1918, a submerged weir in the South Channel of the St. Lawrence River, near the mouth of the company's power canal near Massena, New York, as shown on the map attached hereto, marked Exhibit 2.

2. The applicant respectfully sets forth that the said weir and the South Channel of the St. Lawrence River, in which it is located, are wholly within the territory of the United States and the construction and maintenance of said weir have been authorized by the United States and approved and a permit therefor issued by the Secretary of War (bearing number 38786 64 dated September 10, 1917), a copy of which is attached hereto marked Exhibit 3.

3. The company therefore respectfully applies to your Honourable Commission for its approval of a further continuance of the submerged weir hereinbefore referred to and shown on Exhibit 1 and in the permit of the Secretary of War of the United States; that is to say, the weir as at present constructed.

Respectfully submitted,

(Sgd.) THE ST. LAWRENCE RIVER POWER COMPANY,

G. R. GIBBONS,  
Vice-President.

2400 Oliver Building,  
Pittsburgh, Pennsylvania,  
September 1, 1922.

OTTAWA, September 13, 1922.

DEAR SIR,—I beg to thank you for yours of the 12th instant, enclosing copy of Application of the St. Lawrence River Power Company for approval of a further continuance of the submerged weir in the south channel of the St. Lawrence River below the mouth of the company's power canal near Massena, N.Y., constructed in 1918 under an interim order of the International Joint Commission.

Yours truly,

(Sgd.) J. B. HUNTER,

Deputy Minister.

LAWRENCE J. BURPEE, Esq.,  
Secretary International Joint Commission,  
Ottawa.

14 GEORGE V. A. 1924

## INTERNATIONAL JOINT COMMISSION

OTTAWA, October 14, 1922.

DEAR SIR,—I beg to inform you that a public hearing on the application of the St. Lawrence River Power Company for approval of a further continuance of the submerged weir constructed in 1918 under an Interim Order of this Commission, in the south channel of the St. Lawrence River below the mouth of the company's power canal near Massena, New York, will be held in the offices of the Commission, Old Land Office building, Washington, on Tuesday, December 5th, at ten o'clock a.m.

Yours very truly,

(Sgd.) LAWRENCE J. BURPEE,  
*Secretary.*

J. B. HUNTER, Esq.,  
Deputy Minister of Public Works,  
Ottawa.

OTTAWA, October 17, 1922.

DEAR SIR,—I am just in receipt of your favour of the 14th instant, advising that a public hearing on the application of the St. Lawrence River Power Company for approval of a further continuance of the submerged weir constructed in 1918, under an interim order of the International Joint Commission, in the south channel of the St. Lawrence River below the mouth of the company's power canal, near Massena, N.Y., will be held in the offices of the Commission, Old Land Office Building, Washington, on Tuesday, December 5, 1922, at ten o'clock a.m.

Yours sincerely,

(Sgd.) J. B. HUNTER,  
*Deputy Minister.*

LAWRENCE J. BURPEE, Esq.,  
Secretary International Joint Commission,  
Ottawa.

## INTERNATIONAL JOINT COMMISSION

OTTAWA, October 21, 1922.

DEAR SIR JOSEPH POPE,—I am forwarding herewith copy of a communication received from the Harbour Commissioners of Montreal setting forth their regard to the application of the St. Lawrence River Power Company. I have written Mr. MacDougald pointing out that if this communication is to be regarded as a formal statement in response it should under the commission's rules be printed and sent to the Government for transmission to the commission. Meanwhile you may wish to put the views of the Harbour Commissioners before the Government engineers who may have been charged with this matter.

Yours very truly,

(Sgd.) LAWRENCE J. BURPEE,  
*Secretary.*

SIR JOSEPH POPE, K.C.M.G.,  
Under Secretary of State for External Affairs,  
Ottawa.  
Referred to: Public Works.

SESSIONAL PAPER No. 101d

## HARBOUR COMMISSIONERS OF MONTREAL.

## PRESIDENT'S OFFICE.

MONTREAL, October 11, 1922.

DEAR SIR,—The Montreal Harbour Commissioners respectfully submit the following statement for the consideration of the International Joint Commission.

For many years the organization known as the Harbour Commissioners of Montreal has been recognized generally as a public "Trust." Important public interests, relating to navigation, to the St. Lawrence Route, to Maritime Commerce as well as to the Harbour of Montreal, have been entrusted to them, not only for development but for guarding inviolate the rights, obligations, and interests of Canada in the River St. Lawrence District.

The Harbour Commissioners recognize therefore, not only their important functions in the development of the Harbour, and the facilitation of Transport and Trade, but their obligations in connection with the rights of the United States and Canada, in International matters connected with the St. Lawrence River. They recognize that they are serving Canada rather than Montreal. Their views, in the past, have been held in such authority that the Commissioners have approached this serious question with an open mind, and from a practical viewpoint. It was their first impulse to cry "halt" "The Sacred Treaty of 1842 must not under any circumstances be profaned and what may have been approved in 1918 and permitted, at the request of the United States to meet an urgent necessity for the prosecution of the War must not now be continued."

The Commissioners, after careful study, have concluded that such a decision would not be in keeping with the traditions and past policy of the Trust. Their policy must be commercial development, their duty to guard and improve navigation.

After, therefore, due consideration of the questions involved in connection with the application of the St. Lawrence Power Company for approval of their application by the International Joint Commission, of the continuance of the submerged weir in the channel south of Long Sault Island, the Harbour Commissioners of Montreal are of the following opinions:

1. That the submerged weir is a fundamental transgression of not only the letter but also of the spirit of the Webster Asburton Treaty of 1842.

2. The weir was permitted only as an interim measure, and as being a great International necessity.

3. What could be accepted as an International requirement may not be approved as being in the interests of a Corporation.

4. The existence of the weir in question is regarded without apprehension as regards navigation interests and transportation. The very able Chief Hydrographer of the Department of Marine, Canada, Mr. W. J. Stewart, has given an opinion, which is concurred in by the Consulting Engineer of the Commissioners, Mr. F. W. Cowe, that navigation conditions are if anything improved.

5. If, then, the St. Lawrence River Power Company desires a valuable privilege for profitable operations of its plant, and no interests are in the meantime suffering, it would seem reasonable that an International lease, with public interests safeguarded and cancellable should be negotiated by the International Joint Commission, the proceeds to be strictly applied to navigation interests on the St. Lawrence.

14 GEORGE V, A. 1924

The Harbour Commissioners of Montreal again submit for the consideration of the International Joint Commission, that approval of every important matter connected with the St. Lawrence should be withheld until a properly developed plan is prepared, taking in the whole river from Lake Ontario to Montreal, fully safeguarded for the people of the United States and Canada their heritage in connection with

1. Navigation
2. Hydro-electric power
3. Regulation of flow.

Faithfully yours,

(Sgd.) W. L. McDOUGALD,  
*President.*

LAWRENCE J. BURPEE, ESQ.,  
Secretary International Joint Commission,  
Ottawa, Ontario.

8812

## INTERNATIONAL JOINT COMMISSION

OTTAWA, December 1, 1922.

Dear SIR,—I enclose herewith copies of statements filed by Canadian Cottons, Limited, and the Shipping Federation of Canada, in regard to the Application of the St. Lawrence River Power Company for a further continuance of the submerged weir constructed in 1918 in the south channel of the St. Lawrence River below the mouth of the Company's Power Canal, near Massena, N.Y.

Yours very truly,

(Sgd.) LAWRENCE BURPEE,  
*Secretary.*

Referred to: Public Works.

Sir JOSEPH POPE, K.C.M.G.,  
Under Secretary of State for External Affairs,  
Ottawa.

8812

## CANADIAN COTTONS, LIMITED,

CORNWALL, November 29, 1922.

The Honourable the International Joint Commission,  
Attention of Mr. Lawrence J. Burpee, Secretary,  
Ottawa, Canada.

Dear SIRs,—We desire to file with your Commission, the following statement in regard to the continuance of the submerged weir built in 1918 by the St. Lawrence River Power Company of Massena, N.Y., in the South Channel of the St. Lawrence River, near the head of the Long Sault Island.

Since this weir was built, the conditions, insofar as power development from waters of the Cornwall Canal are concerned, have been much improved and we have not been called upon to close down our mills, as we have had to do in previous years, on account of the low head of water at the entrance to Lock 21, Cornwall Canal. Prior to the placing of the weir and with the water in the river at the level that it is to-day, we would be put to serious inconvenience and financial loss on account of not being able to get enough water through the

SESSIONAL PAPER No. 101d

inlet gates of the canal to supply the requirements of navigation and power and in all probability we would be operating our auxiliary steam plant to make up for the shortage in our water-power which is developed from the Cornwall canal waters.

So far as our interests are concerned, we think it would be a mistake to remove this weir. We therefore respectfully request your honourable Commission to take such action as will insure its continuance.

Yours very truly,  
(Sgd.) CANADIAN COTTONS LIMITED,  
W. V. BOYD,  
Manager.

8812

OTTAWA, December 6, 1922.

Dear Sir,—With reference to your letter of the 5th instant, I enclose herewith copy of a statement from the Shipping Federation of Canada, which should have accompanied my reference to you of the 4th December, 1922.

Regretting this inadvertency,

Yours very truly,  
(Sgd.) F. M. BAKER,  
For Under Secretary of State for External Affairs.

The Deputy Minister of Public Works,  
Ottawa.

8812

## THE SHIPPING FEDERATION OF CANADA.

218 BOARD OF TRADE BLDG.,  
MONTREAL, November 30, 1922.

LAWRENCE J. BURPEE, Esq.,  
Secretary International Joint Commission,  
Ottawa, Ontario.

*Re application of the St. Lawrence River Power Company for approval of a further continuance of their submerged weir.*

Dear Sir,—The Shipping Federation of Canada (Incorporated) have given careful consideration to the application of the St. Lawrence River Power Company for permission to further continue with their submerged weir constructed in 1918, and have come to the unanimous conclusion that they still hold to the same views as expressed in their petition addressed to the International Joint Commission on the 24th August, 1918.

The Federation have always opposed in principle any scheme that would give any vested rights of any kind whatsoever to a private corporation in connection with damming or controlling our national highway. If, however, the International Joint Commission feel there are circumstances which justify the weir remaining, it should be taken over by the International Joint Commission or other properly constituted authority and leased annually to whom they may see fit, but under no circumstances should the vested rights of this weir be allowed to remain in the hands of a private corporation.

Respectfully submitted,

(Sgd.) ROBERT W. REFORD,  
President.

(Sgd.) THOMAS ROBB,  
Manager and Secretary.

8812

## INTERNATIONAL JOINT COMMISSION

OTTAWA, December 12, 1922.

Dear SIR,—I enclose herewith copy of the Interim Order in the matter of the Application of the St. Lawrence River Power Company, adopted by the Commission on December 6, 1922.

Yours very truly,

(Sgd.) LAWRENCE J. BURPEE,

*Secretary.*

J. B. HUNTER, Esq.,

Deputy Minister of Public Works,  
Ottawa.

IN THE MATTER OF THE APPLICATION OF THE ST. LAWRENCE RIVER POWER COMPANY FOR A FURTHER CONTINUANCE OF THE SUBMERGED WEIR IN THE SOUTH CHANNEL OF THE ST. LAWRENCE RIVER, NEAR MASSENA, N.Y.

Whereas, the Commission, by interim order dated 14th September, 1918, approved the construction and maintenance of a submerged weir in the St. Lawrence River, pursuant to an application dated 25th July, 1918, by the St. Lawrence River Power Company, a New York State Corporation having its principal office at Massena, N.Y., as by reference to the said order will more fully appear, and

Whereas, said applicant has constructed said weir in said river and maintained the same, and

Whereas, said applicant has made application for the further continuance of the approval of said weir.

It is hereby ordered, as a further interim measure that the approval of the construction and the maintenance of the said submerged weir, as expressed by the interim order of the 14th September, 1918, shall be and is hereby extended for the further period of two years next following the 14th day of September, 1923, and thereafter until six months notice in writing either by the Government of Canada or by the Government of the United States to the St. Lawrence River Power Company that the notifying Government objects to the further maintenance of the said weir; and thereupon, at or before the expiry of said notice, the said weir shall be removed by the applicant company, unless the said company having applied to the Commission within two months after the service of the said notice, for the approval of the continuance of said weir for a further period and having prosecuted said application with due diligence, shall obtain such approval; approval granted by this order to be, however, upon and subject to the following conditions:

1. That the diversion of water by the Massena power canal shall at no time exceed 25,000 c.f.s. unless when the diversion of a larger quantity of water will not, in the opinion of the Board of Control hereafter constituted, injuriously affect navigation.

2. That the St. Lawrence River Power Company shall, at its own proper cost and charges, with reasonable dispatch and under the direction of the Board of Control, cause sluice gates or other suitable contrivances to be provided so as to protect against injury from flood; and also with reasonable dispatch and under the like direction shall complete, according to the approved plans, repair, put into good condition and make tight, so far as reasonably practicable, the said weir in order that it may afford the utmost possible compensation at low water

SESSIONAL PAPER No. 101d

for the diversion which takes place through the Massena Power Canal; and that the weir with the sluice gates or other contrivances as aforesaid, shall thereafter be maintained in good condition during the period of extension hereby authorized, or for so long as this order shall continue to operate or to be effective.

3. That the weir and the flood control works herein provided for and, in time of emergency, any equipment of the applicant wherever situated which can be used for flood control be placed under the direction of said Board of Control consisting of two engineers, one to be named by the Government of Canada and the other to be named by the Government of the United States who shall control the operation of the gates and sluices therein or connected therewith so as if possible to insure that at high water the level at the head of the Cornwall Canal shall not be higher than that which would be caused by the river discharge under natural conditions; that at low water the said level shall not fall lower than at the time of low water under natural conditions and that no diversion of water by the Massena Power Canal in excess of 25,000 c.s.f. shall at any time take place to the injury of navigation. In the event of disagreement in the execution of their powers the Board of Control shall apply to the Commission for directions, and further shall have the right to apply in any circumstances where deemed necessary or advisable.

Provided that notwithstanding anything in this order contained the Commission may, at any time, of its own motion and upon notice and after hearing revoke the approval hereby granted; and moreover all the terms and conditions in the said interim order of the 14th September, 1918, expressed are mutatis mutandis and so far as they are capable of being applied to this order to be incorporated herein.

WASHINGTON, D.C., December 6, 1922.

(Sgd.) O. GARDNER,  
C. A. MAGRATH,  
C. D. CLARK,  
H. A. POWELL,

## DEPARTMENT OF STATE,

WASHINGTON, February 26, 1923.

EXCELLENCY.—Referring to your note No. 74 of January 27, 1923, informing the Department that Mr. W. J. Stewart, Consulting Engineer of the Department of External Affairs, has been appointed as the representative of Canada upon the International Board of Control, constituted by an Order passed by the International Joint Commission, on December 6, 1922, concerning the submerged weir in the South Channel of the St. Lawrence River, near Massena, New York, I have the honour to inform you that Major Paul S. Reinecke, United States District Engineer, in charge of Federal River and Harbour Improvements in the district within which the submerged weir is located, has been designated as this Government's representative on the Board. Major Reinecke's address is 540 Federal Building, Buffalo, New York.

Accept, Excellency, the renewed assurance of my highest consideration.

(Sgd.) CHARLES E. HUGHES.

Re *Application of the Cedars Rapids Manufacturing & Power Company, Montreal, for approval of Plans under Chapter 115, R.S.C.*

DEAR SIR,—In connection with the above application, we enclose herewith five copies of the petition and description of works and are sending you by

SESSIONAL PAPER No. 101d

express five copies of the plan. You will note that one copy of the plan as well as one copy of the description of the works has been certified by the Registrar of the District of Soulanges evidencing the deposit in his office. The advertisements are running in the local papers and have been forwarded for publication in the Canada Gazette.

If any further information or documents are required kindly advise. In the meantime we would be obliged if you would acknowledge receipt.

Yours truly,

(Sgd.) BROWN, MONTGOMERY & McMICHAEL.

## NAVIGABLE WATER PROTECTION ACT

R.S.C., Chapter 115.

The Cedars Rapids Manufacturing and Power Company hereby gives notice that it has, under Section 7 of the said Act, deposited with the Minister of Public Works at Ottawa, and in the office of the District Registrar of Land Registry, District of Soulanges at Coteau, a description of the site and the plans of ice protection, piers and glance boom to be built in the St. Lawrence River at Cedars, joining the Company's property and in front of Lots numbers 131, 132, 133, 134, 135, 136, 137 and 138.

And take notice that after the expiration of one month from the date of the first publication of this notice the Cedars Rapids Manufacturing and Power Company will, under Section 7 of the said Act, apply to the Minister of Public Works at his office in the City of Ottawa, for approval of the said site and plans and for leave to construct the said ice protection, piers and glance boom.

Dated at Montreal, this 26th day of April, 1922.

THE CEDARS RAPIDS MANUFACTURING AND POWER COMPANY.

(Sgd.) C. S. BAGG,

*Secretary*

3560-1D

IN THE MATTER of the Application of the CEDARS RAPIDS MANUFACTURING AND POWER COMPANY, Montreal, for Approval of its Plan for the Construction of Certain Work in Navigable Waters, to wit, the St. Lawrence River.

To His Excellency Julian Hedworth George, Baron Byng of Vimy, General on the Retired List and in the Reserve of Officers of The Army, Knight Grand Cross of The Most Honourable Order of the Bath, Knight Grand Cross of The Most Distinguished Order of Saint Michael and Saint George, Member of The Royal Victorian Order, Governor-General and Commander in Chief of The Dominion of Canada.

## IN COUNCIL:

The Petition of the undersigned, the Cedars Rapids Manufacturing and Power Company, a body politic, incorporated by special act of the Dominion of Canada, and having its head office and principal place of business in the City of Montreal, in the Province of Quebec.

## HUMBLY SHEWETH:

1. That your Petitioner was incorporated for the purpose of constructing and operating a hydro-electric development on the St. Lawrence River at Cedars, Quebec.

2. That upon report of the Committee of Privy Council approved by His Excellency, the Governor General, on the 28th day of May, 1909, the plans submitted by The Cedars Rapids Manufacturing and Power Company and the description of the proposed site filed with the Minister of Public Works was approved subject to the conditions set forth in the said Order in Council to which the Cedars Rapids and Manufacturing and Power Company agreed and obliged itself.

3. That upon report of the Committee of Privy Council approved by His Excellency, the Governor General on the 16th day of June, 1913, the plans submitted by The Cedars Rapids Manufacturing and Power Company for the construction of an ice boom and concrete piers at the intake to its power canal, filed with the Minister of Public Works, was approved.

4. That upon report of the Committee of Privy Council approved by His Excellency, the Governor General, on the 12th day of November, 1920, the plans submitted by The Cedars Rapids Manufacturing and Power Company for the installation of a wing dam constructed of rock and earth instead of an ice boom and concrete piers, filed with the Minister of Public Works, was approved.

5. That your Petitioner has for a number of years past operated its hydro-electric development at Cedars, and since the installation of its wing dam approved of under date November 12, 1920, has found that the trouble experienced from low water, frazil and anchor ice has been mitigated but the trouble experienced from large sheets of floating ice which break away from the shores between the head of the power canal and Coteau Rapids still continues to be a menace to the operation of the Company's plant.

6. That your Petitioner has determined that by the installation of ice protection piers, and glance boom, the difficulties encountered during the winter season with the large sheets of floating ice will be overcome.

7. That your Petitioner has caused copies of its plan and description of the site and proposed work to be deposited with the Minister of Public Works and with the office of the Registrar of Deeds, for the District in which such work is proposed to be constructed, the whole in accordance with the provisions and requirements of Chap. 115 of the Revised Statutes of Canada, 1906.

8. That your Petitioner is prepared to properly protect all interests which might be affected by the proposed works, and to compensate for any losses which might be sustained by reason of the proposed works, as well as to protect the rights of navigation.

Wherefore your Petitioner prays that your Excellency in Council may be pleased to approve the plan and description deposited by your Petitioner as aforesaid.

And as in duty bound your Petitioner will ever pray.

MONTREAL, 26th April, 1922.

(Sgd.) THE CEDARS RAPIDS MANUFACTURING & POWER CO..

E. T. NORRIS, *Vice-President*.

C. S. BAGG, *Secretary*.

Solicitors.

SESSIONAL PAPER No. 101d

APPLICATION OF THE CEDARS RAPIDS MANUFACTURING AND POWER COMPANY FOR  
APPROVAL OF PLANS OF IMPROVEMENTS TO PLANT AT CEDARS, QUE.

## Description of Work.

*Site.*—The proposed work is situated on the the St. Lawrence River, in the County of Soulanges, Province of Quebec, at a place known as Cedars, Quebec.

The St. Lawrence River at this point has a fall of approximately 30 feet and The Cedars Rapids and Manufacturing and Power Company has a hydro-electric development at Cedars using a portion of the river flow.

*Purpose of Work.*—The Company asks for the right to install ice protection piers and glance boom abutting on its wing dam and extending at an angle of approximately 15 degrees upstream in a westerly direction for a distance of approximately 2500 feet and thence to the shore line a distance of approximately 1500 feet.

The purpose of the ice protection piers and glance boom is to break up and keep out of the Company's power canal large sheets of floating surface ice which seriously interfere with the operation of the plant during the winter season.

*Ice Protection Piers and Glance Boom.*—The ice protection, piers and glance boom will be constructed from the end of the Company's wing dam in a westerly direction, as indicated on white print of Drawing No. 1289—E. The Cribs supporting the glance boom will consist of timber, rock filled, the glance boom consisting of three 12 inch by 12 inch timbers bolted together with four inch spacings between timbers. The section of boom being chained together and to the piers, so as to permit of same being easily removed during the season of navigation. The western end of boom will be anchored to a rock filled bank situated on top of a reef as shown on plan.

The ice piers consist of timber rock filled and constructed in such a manner as to break up the sheets of floating surface ice.

Bureau d'enregistrement du Comté de Soulanges, déposé à 9½ heures am le 26 Avril, 1922.

IN THE MATTER OF THE APPLICATION OF THE CEDARS RAPIDS MANUFACTURING AND POWER COMPANY, FOR APPROVAL OF ITS PLAN FOR THE CONSTRUCTION OF CERTAIN WORK IN NAVIGABLE WATERS, TO WIT, THE ST. LAWRENCE RIVER.

I, Robert M. Wilson, of the City of Montreal, Province of Quebec, do make oath and say:—

1. That I am the Engineer of the Company applicant.

2. That I have a knowledge of the matter, and that the allegations in the annexed Petition of The Cedars Rapids Manufacturing and Power Company, for the approval of its plan is to the best of my knowledge true in substance and in fact.

14 GEORGE V, A. 1924

And I make this solemn declaration conscientiously believing it to be true, and knowing that it is of the same force and effect as if made under oath and by virtue of the Canada Evidence Act.

Declared before me at the City of Montreal, in the Province of Quebec, this 24th day of April, 1922.

(Sgd.) R. M. WILSON.

3560-1C

OTTAWA, May 1, 1922.

GENTLEMEN,—I have received your letter of April 29 last, making application under section 7 of the Navigable Waters Protection Act, for approval of the plan and description of the site of ice protection piers and a glance boom proposed to be constructed at Cedars, Que., by the Cedars Rapids Manufacturing & Power Company, in connection with its power development works. The following enclosures accompanied your communication; five copies of a document containing a copy of the advertisement; a copy of the Company's petition; a description of the work, the description being certified by the Registrar; a statutory declaration; five copies of the plan—one being certified.

Your obedient servant,

(Sgd.) R. C. DESROCHERS,

*Secretary.*

SESSIONAL PAPER No. 101d

3560-1D

KINGSTON, June 19, 1922.

J. B. HUNTER, Esq.,

Deputy Minister of Public Works,  
Ottawa, Ont.*Re Dam at Isle aux Vaches erected by Cedars Rapids Mfg. & Power Company*

Dear Mr. HUNTER,—There was a correspondence in May of last year regarding this dam and after investigation at the stage which construction had then reached it was reported to you by this Association that the dam did not appear to be interfering with navigation. It has now been found that levels are being interfered with, and the pilot of the "Rapids Prince" reports touching bottom in the Cedars Rapids notwithstanding the prevailing higher water levels. It appears that levels vary with the amount withdrawn inside the dam and according to the report the dam has obviously changed shore levels at certain points under conditions when good water might have been expected, and presumably the same depreciation in level has taken place in the Channel.

The owners of the Rapids steamer are naturally concerned and I have been instructed to call the matter to your attention and to ask whether construction is being carried on with strict regard to the proposals approved and whether also there is not a remedy applicable to the present difficulty. Will you be so good as to let me know about this. Perhaps you would indicate the present position of the construction work and the extent of the additional work already authorized.

Then too, it is also understood that advertisement has recently been made by the Montreal Light, Heat & Power Company of proposed additional works. I am asked to enquire as to the character and probable effect of these works. If they would in any way increase the difficulties of navigation the Association would of course be on record as protesting.

I shall be glad to be favoured with a reply from you and no doubt you will realize the seriousness of any undertaking which will in fact bar the river to navigation, and will see that prompt investigation is made and advice given to me on behalf of the Association.

Yours very truly,

(Sgd.) FRANCIS KING.

3560-1D

OTTAWA, June 22, 1922.

Dear Mr. KING,—Your letter of the 19th instant concerning the dam which is being erected by the Cedars Rapids Mfg. and Power Company at Isle aux Vaches, P.Q., interfering with navigation duly received.

Your communication is being referred to the Engineering Branch of the Department for immediate investigation.

Yours very truly,

(Sgd.) J. B. HUNTER,  
Deputy Minister.

*Re Cedars Rapids Manufacturing and Power  
 Company. Approval of Plans*

Dear Sir,—In further reference to your request, we have pleasure in enclosing herewith certified copy of the Order in Council granting the water lot, together with certified copies of plan and description. Trusting that this will give you the information desired, we remain,

Yours truly,

(Sgd.) BROWN, MONTGOMERY & McMICHAEL.

3560-1D

COPIE DU RAPPORT D'UN COMITÉ DE L'HONORABLE CONSEIL EXÉCUTIF EN DATE DU  
 7 JUIN 1922 APPROUVÉ PAR LE LIEUTENANT-GOUVERNEUR LE 7 JUIN 1922

*Concernant la demande de la compagnie dite "The Cedar Rapids Manufacturing  
 and Power Co. Ltd."*

1110.

L'honorable ministre des Terres et Forêts, dans un rapport en date du 30 mai (1922) expose: que la compagnie "The Cedar Rapids Manufacturing and Power Co. Ltd." demande la concession d'un certain lot faisant partie du lit du Saint-Laurent en front de la paroisse de Saint-Joseph de Soulanges, pour y faire certains travaux dans et but d'améliorer le canal d'aménée de leur usine hydro-électrique des Cèdres.

Que par acte devant le notaire Jos. Allaire, de Québec, en date du 2 courant 1910, le Gouvernement a loué à la compagnie susmentionnée par bail emphytéotique de 99 ans, à courir du 1er août 1910, les forces hydrauliques d'une partie du rapide des Cèdres et une certaine étendue des grèves et du lit du fleuve, le tout mieux défini au bail et d'une superficie de 194.85 arpents carrés.

Qu'en vertu d'un acte devant le notaire J. A. Perodeau, en date du 31 mars 1913, deux lots additionnels faisant partie du lit du fleuve Saint-Laurent, d'une étendue totale de 123½ arpents carrés ont été loués à la dite compagnie pour le reste de la durée du bail emphytéotique original. (2 août 1918).

Que par acte devant le notaire Chs Delagrave, en date du 25 avril 1921, le Gouvernement a concédé par bail emphytéotique un nouveau lot adjacent aux précédents faisant partie du lit du Saint-Laurent, d'une superficie de 52.2 aeres, pour le reste de la durée du bail original.

Considérant que la nouvelle demande est nécessaire à l'usine, établie en vertu de la première concession, l'honorable ministre recommande d'être autorisé à louer jusqu'à l'expiration du susdit premier bail et aux conditions ordinaires, le lot demandé de 5.7 aeres au prix de \$10.00 de l'aere, en réservant les droits des tiers et un passage d'accès et de sortie pour les propriétaires riverains ainsi enclavés et celui des tiers en général ainsi que pour la navigation, le tout sujet aux lois et règlements du Gouvernement fédéral et du Gouvernement provincial, (8 Geo. V, chap. 68) concernant la navigation, les mines et les pêcheries.

Certifié,

(sgé) A. MORISSET,  
*Greffier Conseil Exécutif.*

## 3560-1D

*DESCRIPTION of a Deep water lot which the Cedars Rapids Manufacturing and Power Company purposed to lease from the Government of the Province of Quebec, in front of lots 131 to 137 inclusive, of the Cadastre of the Parish of St. Joseph des Cedres, county of Soulanges.*

A parcel of land, of irregular shape, lying and being on the river bed of the St. Lawrence river, in front of lots Nos. 131, 132, 133, 134, 135, 136, 137 of the Cadastre of the Parish of St. Joseph des Cedres, County of Soulanges, bounded towards the North by the lot No. 131; towards the Northeast and Southwest, by the bed of the river St. Lawrence; towards the Southeast by the westerly boundary of a deep water lot leased by the Cedars Rapids Manufacturing and Power Company, by contract dated 25th April, 1921, and passed before Charles Delagrave, N.P.

The present parcel of land is shown in detail on a plan prepared by Paul A. Beique, Q.L.S., under date of May 13, 1922, and it may be more particularly described as follows:—

1. A strip of land Fifty (50) feet in width, lying and being twenty-five (25) feet on each side of the centre line which may be more particularly described as follows:—

Commencing at a point marked "Z" on the plan hereto annexed, which said point "Z" is situate at a distance of One hundred and sixty-seven feet measured along a line to the Southwest and perpendicular to the division line between Lots Nos. 131 and 132 of said Cadastre of the Parish of St. Joseph des Cedres, from a point distant One hundred and six feet and four tenths (106.4) measured towards the Southeast, along said division line between lots Nos. 131 and 132, from its intersection with the Northerly boundary of the Public Road. Said starting point "Z" is located on the high water mark bounding lot No. 131, to the South. From said starting point "Z" proceeding in a straight line, in a direction South  $40^{\circ} 03\frac{1}{2}'$  East, for a distance of One thousand, two hundred and fifty-nine (1,259) feet to a point marked "V;" thence, proceeding along a straight line, in a direction South  $40^{\circ} 03\frac{1}{2}'$  East and seven tenths (343.7) to a point marked "U;" thence proceeding in a straight line, in a direction South  $61^{\circ} 58\frac{1}{2}'$  East, for a distance of Two thousand, seven hundred and fifty-four feet and two-tenths (2,754.2) to a point marked "Y" which is located on the Westerly Boundary of line described by letters "M-X" in a lease of the Honourable H. Mercier to the Cedars Rapids Manufacturing and Power Company, passed before Charles Delagrave, N.P., on the 25th April, 1921. Said point "Y" is located at a distance of One thousand, three hundred and twenty-three feet and one-tenth (1,323.1) measured in a South Westerly direction, along said line "M-X" from point "E."

2. A strip of land measuring fifty feet (50) in width, and lying twenty-five feet (25) on each side of the centre line, and which may be more particularly described as follows:—

Commencing at a point "V" hereinabove referred to in part No. 1 which said point "V" is situate at One thousand two hundred and fifty-nine (1,259) feet measured in a direction South  $40^{\circ} 03\frac{1}{2}'$  East, from starting point "Z" located on the high water mark at the Southerly boundary of said lot No. 131, and fully described hereinabove under part No. 1; and from said point "V" proceeding in a straight line in a direction South  $18^{\circ} 35\frac{1}{2}'$  East, for a distance of One thousand and thirty feet and seven-tenths (1,030.7) to point "X."

Said two parcels of land, as described, containing by admeasurement, Five acres and seven-tenths (5.7) acres more or less, and being shown coloured pink, on plan attached hereto.

14 GEORGE V, A. 1924

All bearings are astronomical, and all distances English measure, and expressed in decimals of a foot.

The high water elevation is one hundred and thirty-one feet and five-tenths (131.5) and the low water elevation is one hundred and twenty-eight feet and four-tenths (128.4) above mean tide.

(Sgd.) PAUL A. BEIQUE,

OTTAWA, July 5, 1922.

*Re application of the Cedars Manufacturing and Power Company, Limited, for approval of ice protection piers and glance booms proposed to be built at Cedars, P.Q.*

GENTLEMEN,—I beg leave to acknowledge the receipt of your letter of July 3 instant, enclosing a certified copy of the Order in Council passed by the Provincial Government of Quebec, which you state grants the water lot required for the works. Copies of the plan and description were likewise received.

Your obedient servant,  
(Sgd.) R. C. DESROCHERS,  
*Secretary.*

Messrs. BROWN, MONTGOMERY & McMICHAEL,  
Barristers, etc.,  
Dominion Express Building, Montreal, P.Q.

3560-1D

MONTREAL, July 10, 1922.

Mr. C. R. COUTLEE,  
Dept. of Public Works,  
Hunter Building, Ottawa, Ont.

Dear SIR,—Referring to our interview in the matter of letter received by Mr. Hunter, Department of Public Works, from Mr. Francis King, under date of June 19th, 1922, representing the Dominion Marine Association, alleging that the wing dam which we have constructed at Cedars from Isle aux Vaches westward has been responsible for changing water levels so as to cause the grounding of one of the Rapids' boats in the Cedars Rapids, the property of the Canada Steamship Lines, we most emphatically deny that our wing dam has in any way been responsible for the grounding of the "Rapids Princee."

In order that your record may be quite clear we take pleasure in furnishing the following:

In June, 1920, the Power Company started the construction of its embankment from the end of Isle Aux Vaches westwards; by the end of the season of 1920 there had been completed approximately one quarter of the total embankment.

At a meeting held on March 30th, 1921, of the Dominion Marine Association in Montreal, a representative of the Canadian Steamship Lines stated that one of their pilots, Captain Ouelette, made a complaint that our work would be the cause of trouble to the Steamship Line boats in the Cedars Rapids.

Under date of April 30th, 1921, a letter of protest was forwarded by Mr. Francis King to Mr. Hunter, Deputy Minister of Public Works, complaining

## SESSIONAL PAPER No. 101d

that we were obstructing the channel in the Cedars Rapids. As a result of this communication, Mr. L. G. Papineau, Supervising Engineer of the Department of Public Works in Montreal, visited the work at Cedars and made certain observations with a view to ascertaining if the work was being carried out in accordance with plans furnished your Department, and he found such was the case.

About May 12th, 1921, Captain Ouelette called at the Power Company's offices and interviewed the undersigned, stating he was very much worried that our work, which had been carried out during the previous year on the embankment, would cause him trouble in navigating the Cedars Rapids. We assured him we were certain our work would in no way affect navigation and in order to satisfy him we agreed to run the Rapids in one of our own boats to prove to him and any other Captain piloting boats through the Rapids that such was the case.

On May 17th, 1921, Captain Ouelette, accompanied by Captain Batten, ran the Cedars and Cascade Rapids in one of our boats accompanied by Mr. Hawley, the Company's Resident Engineer at Cedars, and the undersigned. Both of the Captains informed us that they were satisfied that our work had not interfered with the navigating conditions in the Cedars Rapids.

It might be of interest for you to note that at the time the trip was made through the rapids our dam had been extended practically 50 per cent of its total length. The Rapids' boats continued to operate all the season of 1921, during which time our dam was being constructed, and was completed on October 29th, 1921.

Since last October we have not extended the bank. The work during the present season has been the widening of the bank on the Company's own property.

A short time after the company started the construction of its works at Cedars, automatic recording gauges were installed at the head of Isle a l'Ail and at the head and bottom of Isle Ville Monble, otherwise known as Quenneville Island, and elevations recently taken, viz. on June 24th, 1922, demonstrate that instead of the water being lower in the boat channel since the construction of the embankment from Isle aux Vaches west that the water is actually higher.

The following levels are of interest and confirm this statement:—

August 1, 1917—Elevation Lake St. Francis.. . . .	152.4
Western end of Isle a l'Ail.. . . .	124.04
Western end of Quenneville Island.. . . .	115.54
Eastern end of Quenneville Island.. . . .	107.74
June 24, 1922.—Elevation Lake St. Francis.. . . .	152.5
Western end of Isle aux Vache.. . . .	124.41
Western end of Quenneville Island.. . . .	116.44
Eastern end of Quenneville Island .. . . .	108.84

For the purpose of locating these gauges in relation to the Company's works we forward herewith a rice paper copy of the plan of the river in the vicinity of the Company's Plant.

On June 9th of the present year, which was the first day the Canada Steamships Line started to run their Rapids' boats down through the Rapids, the "Rapids Prince" touched bottom in going through la barriere. Cedars Rapids, and as a result our work at Cedars was immediately blamed for the boat having touched bottom.

It is interesting to note that the boats have continued to run the Rapids every day since the 9th inst., and have not grounded although the water is lower in the river and the condition of our dam is exactly the same as on the 9th inst.

14 GEORGE V, A. 1924

We think you are sufficiently acquainted with the conditions that exist in the Cedars Rapids during the winter season to know that the large volumes of anchor ice that are formed in the Rapids are responsible for the movement of large boulders, and also changed the shore line conditions along the islands. We have experienced ourselves a very serious condition as the result of the movement of large boulders during the ice season.

If there is any further information you would like on this matter in the way of records of water elevations we would be most pleased to furnish same.

It has been suggested that possibly the cause of the trouble of the boat grounding was our drawing more water through the plant than we are entitled to. For your information I beg to advise you that our contract with your Department permits us to use 56,000 sec. feet of water, and up to the present time we have not used any more than approximately 43,000 to 44,000 sec. ft. and each day's usage at the present is practically uniform.

In our opinion either one of two things happened to cause the grounding of the "Rapids Prince,"—the pilot either mistook the channel owing to the absence of some of his monuments, which are in no way permanent, or else the anchor ice during the past winter carried down large boulders which lodged in the gate at the point where the boat struck.

The work, which is contemplated by the application made to your Department, filed in April of the present year, will in no way affect navigation, as you will readily ascertain by looking at the plans filed.

It is very important to us to have the approval of our plans at once in order that we can begin our construction work so that the glance boom and ice piers will be completed in time to protect our plant and improve operating conditions during next winter.

We would consider it a great favour if you can see your way clear to having this matter disposed of at once.

Yours truly,

(Sgd.) MONTREAL LIGHT HEAT & POWER CONSOLIDATED.

R. M. WILSON,  
*Chief Electrical Engineer.*

3560-1D

KINGSTON, ONT., July 12, 1922.

J. B. HUNTER, ESQ.,  
Deputy Minister of Public Works,  
Ottawa, Ont.

Referring letter nineteenth Isle aux Vaches dam, President Marine Association advises that Department's engineers and others yesterday satisfied him as to construction works under way but this association should maintain right to question amount of water withdrawn by Company. Protest therefore temporarily withdrawn; shall write again after meeting at Montreal, Friday.

(Sgd.) FRANCIS KING.

3560-1D

OTTAWA, July, 13, 1922.

A. ST. LAURENT, ESQ.,  
Chief Engineer, Public Works Department,  
Ottawa.

SIR,—I have the honour to state that following an interview with Mr. A. W. Wilson, Chief Electrical Engineer, Montreal Light, Heat and Power Consoli-

SESSIONAL PAPER No. 101d

dated, the enclosed letter has been received from him refuting the allegations made that navigation in the Cedars Rapids was being injured by the power company's works.

Briefly the extension of the power dam above Ile aux Vache was authorized and work began June 1920 and it was completed October 1921, since when no further extension has been made. The Marine Association protested this work 1st May, 1921, but on 17th May the Power Company took the rapids boat captains through the Cedars chutes and both were satisfied that navigation conditions had not been interfered with. At this time the new bank was 50 per cent completed, and the boats continued to run the rapids until the end of season without trouble.

On June 9th this year on first trip down the "Rapids Prince" touched in Cedars Rapids and a protest was made. Since however, the boat has been running every day without trouble.

After consideration it seems that possibly steering marks ashore have disappeared, or were confused on the occasion of the first trip this year. Possibly last winter's ice may have carried boulders and deposited them in a jam upon the edge of one of the shoals.

In the protest it was alleged that the regime of the St. Lawrence river had been altered and that the surface above and below the power works did not fluctuate as formerly. To examine into this condition, monthly mean readings for the last two years were plotted against one another and the results are enclosed in the form of a diagram. They indicate that nothing unusual has occurred, the gauges at Coteau Landing and Coteau du Lac above the works rising and falling in unison with the gauge at St. Timothee. The plotted points are within an inch or two of the theoretical line, the variation being due to prevailing winds and to the use of a constantly reading automatic gauge against a gauge read once a day at St. Timothee.

With regard to abstraction of water from the boat channel into the power works, the fact is that in the natural state 60,000 to 75,000 c.f.s. passed between Ile aux Vache and the north shore. At present according to the horse-power generated only 44,000 c.f.s. passes between Ile aux Vache and the north shore, the difference upwards of 15,000 c.f.s. is thrown into the navigation channel thereby improving its condition. Occasional meterings across the power canal would be advisable to check the consumption of water and directly prove that the public channel was receiving its proper amount.

Evidence as to maintained channel heights is also contained in Mr. Wilson's letter which shows that in August 1917 with Lake St. Francis, elev. 152.4 the foot of Quenneville Island which is situated well down the Cedars Rapids showed elev. 107.74. In June 1922, with Lake St. Francis at practically the same elevation, the foot of Quenneville Island showed elev. 108.84 or a good foot higher than five years previously.

It seems clearly settled that the steamboat channel through the rapids has not been injured by the power works and I recommend that the stay in granting the application for the ice boom be removed, and that the company's request be approved.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) C. R. COUTLEE.

Engineer, Grade II.

14 GEORGE V, A. 1924

3560—1D.

OTTAWA, July 18, 1922.

SIR,—Referring to previous correspondence, I enclose the following papers relative to the application of the Cedars Rapids Manufacturing and Power Company for approval of ice protection piers and a glance boom proposed to be constructed at Cedars, P.Q.:

1. Letter dated July 10, 1922 from Mr. R. M. Wilson, Chief Electrical Engineer of the Montreal, Light, Heat and Power Consolidated.
2. Report of July 13, 1922 from Mr. C. R. Coutles, our Engineer.

Your obedient servant,

(Sgd.) L. H. COLMAN.

Assistant Secretary.

FRANCIS KING, Esq. K.C.,  
Dominion Marine Association,  
Kingston, Ont.

3560—1D.

KINGSTON, July 19, 1922.

J. B. HUNTER, Esq.,  
Deputy Minister of Public Works,  
Ottawa, Ont.

Dear SIR,—I beg to refer to my telegram of the 12th instant, with reference to the dam under construction at Isle aux Vaches and with reference to my letter of the 19th ultimo.

The matter received further consideration at a meeting of the Executive Committee of this Association in Montreal and I have now been instructed to confirm the substance of the telegram mentioned withdrawing the Association's protest as to the construction works but preserving the right to question the amount of water withdrawn by the company.

Yours very truly,

(Sgd.) FRANCIS KING.

3560—1D.

OTTAWA, July 21, 1922.

Dear SIR,—In the absence of the Deputy Minister I beg to acknowledge receipt of your favour of the 19th instant, with reference to the dam under construction at Isle aux Vaches, and confirming the substance of your telegram withdrawing the protest of the Dominion Marine Association to the construction of this work, but reserving the right to question the amount of water withdrawn by the Company.

Yours very truly,

(Sgd.) L. H. COLMAN,

Act'g. Deputy Minister.

FRANCIS KING, Esq., K.C.,  
Kingston, Ont.

SESSIONAL PAPER No. 101d

3560-1D

P. C. 1681

*CERTIFIED COPY of a Report of the Committee of the Privy Council approved by His Excellency the Governor General on the 14th August 1922.*

The Committee of the Privy Council have had before them a report dated 3rd August, 1922, from the Minister of Public Works, submitting that on January 6th, 1906, an Order in Council was passed approving of the plans submitted by the Cedars Rapids Manufacturing and Power Co. under the Statute 4 Edward VII, Chapter 65, 1904, of certain power development works proposed to be built in the River St. Lawrence at St. Joseph de Soulanges, in the Province of Quebec. The Order in Council also approved of the book of reference describing the various lots which the Company desired to expropriate in connection with the said works, and it provided that the approval of the plans and the book of reference should not be effective until an agreement had been passed between the Crown and the Company;

By the statute referred to the Company was given power, amongst other things, to construct, develop, acquire, own, use and operate water powers in or adjacent to the St. Lawrence River, in the County of Soulanges and Province of Quebec, and to construct, operate, and maintain, works, canals, race-ways, water courses, dams, piers, booms, dykes, sluices, conduits and buildings in connection with the said water powers, provided that any work authorized by the said Act should not be commenced until the plans thereof had first been submitted to and approved by the Governor General in Council.

Before entering into the agreement mentioned the matter was referred to the International Waterways Commission, which, after careful examination, reported that though they were unable to form opinion in detail as to the effect of the proposed works on navigation, they did not consider that fact a valid reason for reporting adversely against the scheme as outlined, assuming that in the detailed plans which were to be submitted later for the approval of the Minister of Public Works the interests of navigation would be safeguarded.

Pursuant to the authority granted in the Order in Council of January 6, 1906, an agreement was entered into on May 28, 1909, a copy of which is attached hereto, between the Crown, as represented by the Minister of Public Works, and the said company, in which were stipulated, amongst other conditions, the following:—

1. That the company will so construct their works that the general navigation of the St. Lawrence River shall not be impeded or interfered with, and that the diversion of water shall not be so great or so effected as to in any way injure the navigation on the St. Lawrence River.

2. That, if at any time, in the opinion of the Minister or of any engineer appointed by the Minister for that purpose, the navigation of the St. Lawrence has been injuriously affected by the said works, then the company shall at once construct and maintain remedial or compensating works, or such other works in addition thereto or in substitution therefor as in the opinion of the Minister may be necessary to fully restore and maintain the said navigation of the St. Lawrence.

3. That, in the event of such remedial works not having the effect anticipated, the company shall modify, alter or remove such portion of their said works, or so reduce the use of the water provided by the said works as in the opinion of the Minister may be necessary to fully restore and maintain the said navigation;

4. That no construction shall be commenced before detail plans have been submitted to and approved of by the Minister.

5. That said works shall be constructed by the company subject to the approval of an engineer authorized for such purpose by the Minister of Public Works, etc.

In compliance with condition No. 4 of the agreement referred to detailed plans of the proposed power development works were submitted by the company and approved by the Minister of Public Works, and by an Order in Council passed on October 26, 1911, the approval of the Minister of Public Works was confirmed, and it was provided that the Minister should appoint a special engineer to follow up the progress of the works and report to him from time to time as to the action to be taken to enforce all the conditions of the agreement and fully protect navigation interests.

On August 15, 1916, an Order in Council was passed giving the Cedars Rapids Manufacturing and Power Company permission to divert from the St. Lawrence River, in connection with its power works at St. Joseph de Soulanges, an additional 19,000 cubic feet a second of waste water from November 20 in each year to May 20 in each succeeding year, subject to the condition that such permission did not imply a guarantee that the said quantity should be always available, and should not constitute a preferential right for the company when a general system of control and distribution of the waters of the St. Lawrence would be established at the outlet of Lake St. Francis.

The Cedars Rapids Manufacturing and Power Company applied under Section 7 of the Navigable Waters Protection Act for approval of the plan and description of the site of a wing dam proposed to be constructed on its property known as Isle aux Vaches, and extending upstream in a westerly direction for a distance of approximately 3,500 feet;

Under date of November 12, 1920, an Order in Council issued approving of the plan and description of the site of the wing dam referred to, such approval being subject to the terms of the agreement of May 28, 1909, and further, to the following conditions:

1. That the company shall secure from the Provincial Government of Quebec the necessary portion of the river bed required for the work.

2. That beacons or signals shall be maintained by the company at its expense, so as to show the end of the pier or the open space reserved for navigation.

3. That openings shall be maintained at the expense of the company to give access to the Cedars Wharf.

4. That the depth of dumped material shall not be less than 14 feet at low water.

It was mentioned in the Order in Council of November 12, 1920, that the application for approval of the wing dam was referred to the Department of Justice which reported in effect that it was not one which needed to be referred to the International Joint Commission but that it was purely a domestic matter for the consideration of the Governor General in Council under the provisions of the Navigable Waters Protection Act.

The Dominion Marine Association entered a protest against the wing dam referred to on the ground that it caused interference with the level of the river, but later withdrew the protest reserving the right to question the amount of water withdrawn by the company.

The Cedars Rapids Manufacturing and Power Company has now applied for approval of the plan and description of the site of ice protection piers and a glance boom which it proposes to build in the St. Lawrence River at Cedars in connection with the said power development, according to the plan and description hereto annexed.

## SESSIONAL PAPER No. 101d

The Engineer of the Department of Public Works at Montreal has recommended the approval of the application subject in effect to the following conditions:—

1. That the company shall agree to modify and increase the size of the opening when it is found that navigation requires an increased passage way.

2. That the general conditions in the agreement of May 28, 1909, and in the Orders in Council of August 15, 1916, and November 12, 1920, shall apply.

3. Plans to be approved by the Minister of Public Works before the company can begin works.

4. That the construction of the works shall be subject to the approval of an engineer designated for the purpose by the Minister of Public Works.

5. That the company is to pay all damages arising from the development of the works.

6. Lights or signals which may be necessary shall be established and maintained at the company's expense.

7. Beacons shall be erected on each of the two side piers marking the open space to the best possible channel, these beacons to be easily visible at daylight at a distance of two miles; the size, elevation and colour of the beacons to be satisfactory to the engineer of the Department of Public Works so designated.

8. Should the Department of Public Works consider it advisable the company may be required to install posts or signals on land to show the range of the channel inside the power canal.

The Chief Engineer and the Deputy Minister have concurred in the Engineer's report, the company having secured the right to use the site of the work. The Deputy Minister considers that as to conditions 6, 7 and 8 regarding the beacons and signals that this would properly come under the jurisdiction of the Department of Marine and Fisheries;

The Department of Justice has reported that all the requirements of Section 7 of the Navigable Waters Protection Act have been complied with, and that the application may now properly be submitted for the approval of the Governor General in Council subject in effect to the conditions mentioned.

The Minister, therefore, recommends the approval, under Section 7 of the Navigable Waters Protection Act, Chapter 115, Revised Statutes of Canada, 1906, of the attached plan, and description of the site of ice protection piers and a glance boom proposed to be built by the Cedars Rapids Manufacturing and Power Company in the St. Lawrence River at Cedars, such approval to be subject to the following conditions:—

1. That the company shall agree to modify and increase the size of the opening when it is found that navigation requires an increased passage way.

2. That the general conditions in the agreement of May 28, 1909, and in the Orders in Council of August 15, 1916, and November 12, 1920, shall apply.

3. Plans to be approved by the Minister of Public Works before the company can begin works.

4. That the construction of the works shall be subject to the approval of an engineer designated for the purpose by the Minister of Public Works.

5. That the company is to pay all damages arising from the development of the works.

6. Lights or signals which may be necessary shall be established and maintained at the company's expense, satisfactory to the Department of Marine and Fisheries.

7. Beacons shall be erected on each of the two side piers marking the open space to the best possible channel, these beacons to be easily visible at daylight at a distance of two miles; the size, elevation and colour of the beacons to be satisfactory to the Department of Marine and Fisheries.

8. Should the Department of Marine and Fisheries consider it advisable the company may be required to install posts or signals on land to show the range of the channel inside the power canal.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) RODOLPHE BOUDREAU,  
*Clerk of the Privy Council.*

3560—1D

THIS AGREEMENT made in duplicate this twenty-eighth day of May in the year of Our Lord one thousand nine hundred and nine:—

Between His Majesty King Edward the Seventh, represented, by The Honourable William Pugsley, His Majesty's Minister of Public Works of Canada, hereinafter called "The Minister"

*Of the First Part;*

And the Cedars Rapids Manufacturing and Power Company, hereinafter called "The Company" represented and acting by James William Denville, its President, and Casimir Dessaulles, Secretary, duly authorized by a resolution of the Board of Directors of said company passed on the 8th May, 1909, a certified copy whereof is hereunto annexed.

*Of the Second Part;*

Whereas the company was duly incorporated by an Act of Parliament of Canada, in 1904, Chapter 65, and was given power, amongst other things, to construct, develop, acquire, own, use and operate water powers in or adjacent to the River St. Lawrence in the County of Soulanges, in the Province of Quebec, and to construct, operate and maintain works, canals, race-ways, water courses, dams, piers, booms, dykes, sluices, conduits and buildings in connection with the said water powers, provided that any work by the said Act authorized should not be commenced until the plans thereof had first been submitted to and approved by the Governor in Council.

And whereas it is by the said Act also provided that lands actually required for the construction, maintenance or operation of the power, canals, water courses, race-ways, reservoirs, dams, booms, piers, dykes, transmission lines and conduits of the company may be taken and acquired by the company subject to the approval of the Governor in Council and subject also to such of the provisions of the Railway Act 1903, as are applicable to such taking and acquisition.

And whereas the said Company have applied for the approval by His Excellency the Governor in Council of the plans for the construction of a masonry dam with sluice gates from the lower point of l'Île aux Vaches running in an easterly direction about 500 feet; of an earth dyke running thence in the same direction to the mainland of Pointe des Cedres, a distance of about 600 feet; for a channel to be cut through said Pointe des Cedres about 2,600 feet in length; and from thence to erect an earth dyke from such channel about 3,200 feet in length to the upper end of Île Bedard of an earth dyke from the lower end of Île Bedard running in about the same direction for a length of about 1,200 feet to Pte. du Moulin; and a masonry

## SESSIONAL PAPER No. 101d

dam from Pointe du Moulin running the same direction about 400 feet in length and of a power house situated on the said last-mentioned dam (the said dams, dykes, channel and power house being hereinafter referred to as the said "Works"). The whole as will more fully appear upon reference to the plan dated the eighth day of September A.D. 1905 and signed by the parties hereto *ne varietur*.

And whereas the company have also applied for the approval of the Governor in Council to the taking and acquiring by the said company of the lands required for the said works, which said lands are described in the Book of Reference prepared by the said company, a copy of which is hereto attached marked "Schedule A" (which said lands are hereinafter referred to as the said "lands").

And whereas by an Order in Council bearing date the 6th day of January A.D. 1906, a copy of which is hereto annexed, marked B, the plans of the said works and of the acquiring of the said lands by the company have been approved by His Excellency the Governor in Council upon condition that the company enters into an agreement with His Majesty represented as aforesaid, for the protection of certain rights and interests therein referred to.

Now therefore these presents witness that the company for and in consideration of the approval of the plans for the said works, and for the acquisition of the said lands by the company for itself, its successors and assigns contracts and agrees with His Majesty represented as aforesaid as follows:—

1. That the said company will so construct the said works that the general navigation of the St. Lawrence River shall not be impeded or interfered with and that the diversion of water shall not be so affected as to in any way injure the navigation on the St. Lawrence River, such diversion not to exceed the quantity mentioned in Order in Council dated 6th January 1906, namely 350,000 gallons per second.

2. That if at any time in the opinion of the Minister or of any Engineer appointed by the Minister for that purpose, the navigation of the St. Lawrence has been injuriously affected by the said works, then the company shall at once construct and maintain dykes or dams of which the location and mode of construction shall be determined by the Minister, from the lower end of Ile à l'Ail to the upper end of Ile No. 467 of the official cadastral plan and book of reference of the said Parish of St. Joseph de Soulanges, a length of about 600 feet; and from the lower end of the said Island No. 467 to the upper end of Ile Villemomble a length of about 700 feet; and from time to time build and maintain such other works in addition thereto or in substitution therefor as in the opinion of the Minister may be necessary to fully restore and maintain the navigation of the St. Lawrence.

3. That if the works directed by the Minister to be built by the company under the provisions of the last clause shall not have the effect of fully restoring and maintaining the navigation of the St. Lawrence River, then in such case the company shall alter, modify or remove such portion of their said works, or so modify or reduce the use of the water provided by the said works as in the opinion of the Minister may be necessary to fully restore and maintain the said navigation.

4. That the company shall not commence the construction of the works until the proposed sites, plans and details of construction and all necessary information respecting the said works have been submitted to and approved of by the Minister.

5. That the said works shall be constructed by the company subject to the approval of an Engineer authorized for such purpose by the Minister of Public Works, and the decision of the said Engineer shall be final and conclusive upon all questions that may arise in connection with such construction.

6. That the company will settle, pay and fully provide for the claims of all riparians and other persons who may sustain any loss or damage in consequence of the construction of the said works or of any of the works which the company may be required to construct and maintain for the purpose of restoring or maintaining the navigation of the St. Lawrence.

7. That it is distinctly understood and agreed that nothing in these presents contained shall in any way relieve the said company from its obligation to observe and abide by all the provisions of its said Act of Incorporation or of any of the provisions of the Railway Act 1903 that may be applicable to it.

8. That if, in the opinion of the Minister of Public Works, the construction of these works should impede the free passage of rafts down the river, provision shall be made to pass rafts through the power canal, and a proper slide shall be provided at the lower end of the said canal, such opening and slide to be provided and operated at the expense of the said company.

9. That the Hon. the Minister of Public Works may establish and maintain at the expense of the company on the dam or appurtenant works such lights and other signals as he may deem necessary on account of the existence of the proposed works for the protection of navigation.

10. Provided further that the company shall commence their works within a period of 3 years and shall complete the development of a minimum quantity of 30,000 horse power within a period of 10 years from the date of signing this agreement.

11. Whenever in this agreement "the company" is referred to such reference shall include the heirs, executors, administrators, and assigns, and whenever "His Majesty" or "The Minister" is referred to, such reference shall include his Successors and Assigns.

In witness where of, the parties hereto of the first and second parts have hereunto set their hands and seals the day, month and year first above written.

Signed, Sealed and Delivered by the

ORDER IN COUNCIL

Dated 14 August, 1922.

Privy Council, Canada.

(Sgd.) RODOLPHE BOUDREAU,  
Clerk of the Privy Council.

SESSIONAL PAPER No. 101d

3560-1D.

OTTAWA, August 18, 1922.

GENTLEMEN,—I send you herewith a copy of an Order in Council passed on August 14 instant, approving subject to certain conditions of the plan and description of the site of ice protection piers and a glance boom proposed to be built by the Cedars Rapids Manufacturing & Power Company at Cedars, P.Q. I enclose also copies of the plan and description approved by the Order in Council.

Kindly acknowledge receipt of these documents.

(Sgd.) L. H. COLMAN.

*Assistant Secretary.*

*Re Ice protection piers and glance booms Cedars Rapids Manufacturing and Power Company, at Cedars.—Your file No. 3560-1C.*

DEAR SIR,—We are most obliged for your letter of the 18th instant enclosing copy of Order in Council, and also copies of plan and description as approved by the Order in Council.

Yours very truly,

(Sgd.) BROWN, MONTGOMERY & McMICHAEL.

3560-1D

OTTAWA, February 27, 1924.

J. B. HUNTER, Esq., C.M.G.,  
Deputy Minister of Public Works,  
Ottawa, Ont.

*Re Cedar Rapids Manufacturing and Power Company*

DEAR SIR,—By agreement dated the 28th day of May, 1909, the Cedar Rapids Manufacturing and Power Company obtained the right to use 350,000 gallons of water per second from the St. Lawrence River. This is equivalent to 56,000 cubic feet.

The works of the Company were approved apparently by an Order in Council dated January 6th, 1906, which is attached to the agreement.

14 GEORGE V, A. 1924

Reference to the agreement shows that the whole arrangement with the Company was conditional upon the preservation of navigation on the St. Lawrence and it specifically provided that it shall not be impeded or interfered with and that the diversion of water shall not be so affected as to in any way injure the navigation of the St. Lawrence River. The Company is expressly prohibited from taking more than 350,000 gallons of water per second. Paragraph 2 of the agreement provides, among other things, that if at any time in the opinion of the Minister or any engineer appointed by the Minister for that purpose, the navigation of the St. Lawrence River has been injuriously affected by the said works, the Company is bound to construct dykes and dams as therein provided for the purpose of restoring and maintaining the navigation of the river. Clause 3 of the agreement makes this last provision more drastic and provides for the alteration and removal of the Company's works, if necessary.

I do not think it necessary to refer at greater length to the provisions of the agreement as the original is no doubt on file in the Department for reference.

Representing the Canada Steamship Lines, Limited, I have to say that during the years 1920, 1921, 1922 and 1923 it has been brought to our attention that navigation has been seriously impaired and on many occasions of which we can furnish the Department with full evidence, our steamships, the *Rapids Queen* and *Rapids King* and the *Rapids Prince* have struck bottom and sustained damage at the point in the river affected by the works and operations of the power company and navigation has apparently been seriously interfered with.

This interference with navigation may be due to the construction of the works of the Company, or to the Company taking more water from the river than the quantity stipulated in the agreement. In either case, the remedy under the agreement appears to be in the hands of the Minister of Public Works. As I said in the earlier part of the letter, the agreement gives him power to compel the Company to preserve free navigation even if it should be necessary to order some of the works to be removed.

The Canada Steamship Lines do not desire to be unreasonable in the matter. This Company is only concerned with the preservation of navigation but the interference with navigation at this place has reached such a point that it has become almost unsafe to bring down our boats laden as they are with passengers.

We would therefore respectfully request that the Minister of Public Works exercise his powers under the agreement and investigate first, the question as to whether the Company is taking from the river more water than the quantity stipulated. It has been stated that this is the case but the Steamship Company has no means of verifying this. It is however, in the power of the Minister to do so. Secondly, we would respectfully request that investigation be made to ascertain whether the works of the Company constructed under the above mentioned Order in Council and agreements have had the effect of interfering with free navigation of the river. If it should be found on investigation that the Company is taking too much water from the river or that the works interfere with navigation, on behalf of the companies and persons navigating the river, we would further respectfully request that steps be taken by the Minister to relieve the situation under the powers vested in him by the agreement.

I shall be glad any time to attend at your convenience to discuss the matter further and the Canada Steamship Lines will be glad to furnish you with whatever evidence you may require which is in their possession.

Yours respectfully,

(Sgd.) N. G. GUTHRIE.

SESSIONAL PAPER No. 101d

3560-1D

OTTAWA, February 28, 1924.

DEAR SIR,—I am in receipt of your favour of the 27th instant, suggesting that the Cedar Rapids Manufacturing & Power Company is using a larger quantity of water on the St. Lawrence than authorized by their agreement, and that the effect is detrimental to navigation and is complained of by the Canada Steamship Lines, Limited.

The matter will be duly investigated.

Yours truly,

(Sgd.) J. B. HUNTER,  
*Deputy Minister.*

N. G. GUTHRIE, Esq.,  
Barrister,  
Ottawa, Ont.

3560-1D

OTTAWA, February 29, 1924.

J. B. HUNTER, Esq., C.M.G.,  
Deputy Minister of Public Works,  
Ottawa, Ont.

*Re Cedar Rapids Manufacturing & Power Company.*

DEAR MR. HUNTER,—I have your letter of February 28th, informing me that the subject matter of the Canada Steamship Company's complaint will be duly investigated.

I have a letter from the Secretary of the Company to-day asking me for information as to what evidence we will have to submit, as the Company desires to put the Department in possession of evidence that navigation has been seriously impaired and will probably want to produce technical evidence of engineers that this is due to the Cedar Rapids Company taking too much water or to the nature and character of the construction of their works. I would be glad to be advised on this point.

Yours respectfully,

(Sgd.) N. G. GUTHRIE,

3560-1D

OTTAWA, March 3, 1924.

DEAR SIR,—I am in receipt of your letter of the 29th ultimo, concerning the complaint made by the Canada Steamship Company re Cedar Rapids Manufacturing and Power Company, and if you submit all the evidence the Canada Steamship Company has in support of this complaint, it will facilitate the study of this matter by the Department. I take it that evidence as to the nature and character of the construction of the Cedar Rapids Manufacturing and Power Company's works need not be supplied.

Yours very truly

(Sgd.) J. B. HUNTER,  
*Deputy Minister.*

N. G. GUTHRIE, Esq.,  
Barrister, etc.,  
Citizen Building, Ottawa.

## LACHINE

10730-1

OTTAWA, January 29, 1924.

DEAR SIR,—With reference to the application on behalf of the Lachine Rapids Hydraulic & Land Company, Ltd. for approval of plans and site of proposed development in replacement of the existing development at Lachine Rapids, I would advise you that this application has been referred to our District Engineer in Montreal, Mr. J. L. Dansereau, for a report, and I have advised Mr. Dansereau to communicate with you for any further information which he may require in the matter.

When Mr. Dansereau's report is received I will be pleased to make an appointment with you here, so that the matter may be further considered.

Yours very truly,

(Sgd.) K. M. CAMERON,  
*Chief Engineer.*

Mr. POPE,  
Care Montreal Light, Heat & Power Consolidated,  
Montreal, P.Q.

10730-1

MONTREAL, February 2, 1924.

The Minister of Public Works,  
Ottawa, Ont.

*Re Navigable Waters Protection Act and proposed application of the Lachine Rapids Hydraulic & Land Company, Ltd.*

DEAR SIR,—We are writing on behalf of Messrs. F. H. and C. W. Peniston of Verdun, Que., the owners of Lot No. 999, cadastre of the Parish of Lachine, now in the Town of Lasealle.

On examination of the plans deposited by the above named Company under section 7 of the said Act, in the Registry Office of the Registration Division of Hochelaga and Jacques Cartier at Montreal, we find that a portion of our clients' property will evidently be used by the Company for the purposes of its proposed development, and that not only this portion but the entire lot of property will suffer a very serious detriment.

No steps have as yet been taken by the Lachine Rapids Hydraulic & Land Company, Limited to procure from our clients the necessary rights or offer them any compensation. Hence we must, on their behalf and in protection of their interests place ourselves on record as opposing the proposed development.

We would be glad to make personal representations to you in support of our clients' opposition if and when you should so desire or deem necessary.

Would you kindly acknowledge receipt hereof.

Your very truly,

(Sgd.) LAFLEUR, MacDOUGALL, MacFARLANE & BARCLAY.

SESSIONAL PAPER No. 101d

10730-1

MONTREAL, February 4, 1924.

To the Honourable J. H. KING,  
Minister of Public Works,  
Parliament Bldgs., Ottawa.

DEAR SIR,—Our attention has been drawn to a notice published in our daily papers by the Montreal Light, Heat and Power Company, under the "Navigable Waters Protection Act" advising that they are asking for leave to erect a power plant in front of Lot 4687, P. of Montreal, (City of Verdun).

We understand that opposition to this project is to be heard before you; would you be kind enough to advise us when and where such hearing will take place.

Being the owners of said Lot 4687 we are deeply interested in this case and would be very thankful should you accede to our request.

We beg to remain, dear sir,

(Sgd.) THE GREATER MONTREAL LAND COMPANY,  
J. Ald. OUMET,  
Manager.

10730-1

OTTAWA, February 5, 1924.

DEAR SIR,—I have yours of the 2nd instant protesting against the application of the Lachine Rapids Hydraulic and Land Company, Ltd., for approval of plans and site of proposed development in replacement of the existing development at Lachine Rapids, and shall be pleased to have your representations looked into and reported upon by the Engineering Branch.

Your sincerely,  
(Sgd.) J. H. KING.

MESSRS. LAFLEUR MACDOUGALL, MACFARLANE BARCLAY,  
Barristers, Royal Trust Building,  
Montreal, P.Q.

10730-1

OTTAWA, February 7, 1924.

DEAR SIR,—I am in receipt of your letter of the 4th instant in which you state that your attention has been drawn to a notice published in your daily papers by the Montreal, Light, Heat and Power Company, under the Navigable Waters Protection Act advising that they are asking for leave to erect a power plant in front of Lot 4687, P of Montreal, City of Verdun.

This application is now being considered by the Engineering Branch of this department. Will you please file in writing as soon as possible any objections which you have to this application so that they may be carefully studied.

If a public hearing is held in connection with this application, you will be advised in good time so that you may have a representative present.

Yours sincerely,  
(Sgd.) J. H. KING.

J. A. OUMET, Esq.,  
Manager,

10730-1

OTTAWA, February 9, 1924.

J. B. HUNTER, Esq., B.A.,  
Deputy Minister of Public Works,  
Ottawa, Ont.

DEAR SIR,—I note that the Lachine Rapids Hydraulic and Land Company, Limited are advertising under the Navigable Waters Protection Act the deposit of plans in connection with a proposed hydro-electric development in the St. Lawrence River at Lachine Rapids, in front of lots numbers 993, 994, 995, 996 and 999, Cadastre of the Parish of Lachine. I am instructed by my clients the Canada Steamship Lines, Limited, to protest against the approval of these plans on the ground of interference with navigation through reducing the depth of water or altering the currents in the river. I therefore respectfully request that before this matter is dealt with, the fullest opportunity may be given to the Canada Steamship Lines, Limited, and others interested to lay before the Department their views on the subject. I would take it as a great favour if I could be advised that consideration of the application will be deferred until my clients and others interested have been heard.

Yours respectfully,  
(Sgd.) N. GUTHRIE.

10730-1

OTTAWA, February, 11, 1924.

DEAR SIR,—I am in receipt of your letter of the 9th instant, protesting against the application of the Lachine Rapids Hydraulic and Land Company, Limited, for approval of plans for a proposed hydro-electric development in the St. Lawrence River at Lachine and will be pleased to see that your representations are given careful consideration when the matter is reported upon by the Engineering Branch.

Yours sincerely,  
(Sgd.) J. B. HUNTER,  
Deputy Minister.

N. G. GUTHRIE, Esq.,  
Barrister,  
Citizen Building, Ottawa.

10730-1

KINGSTON, ONT., February 11, 1924.

J. B. HUNTER, Esq.,  
Deputy Minister of Public Works,  
Ottawa.

DEAR SIR,—It has just come to the notice of the Dominion Marine Association that The Lachine Rapids Hydraulic and Land Company, Limited, is applying for approval of plans for certain developments and that the one month's notice is on the point of expiring. The plans have not yet been examined by the Association and formal action is scarcely possible until the next meeting of the Executive Committee, but I am asked in the meantime to lodge a necessary protest on behalf of the Association and to ask for time for consideration. I shall be glad to know that this is in order and I shall endeavour to have advise at an early date.

I have the honour to be, sir,  
Your obedient servant,  
(Sgd.) FRANCIS KING.

# FURTHER CORRESPONDENCE between Canada and the United States of America respecting the St. Lawrence Waterway Project—Appointment of a Joint Engineering Board.

No. 167

BRITISH EMBASSY,

WASHINGTON, D.C., April 29, 1924.

My LORD,—I have the honour to refer to Your Excellency's despatch No. 32 of the 10th ultimo regarding the Joint Engineering Board in connection with the improvement of the St. Lawrence River, and to transmit to you herewith a copy of a note received from the United States Government in reply to the representations which I made on the 12th ultimo. A copy of my note of that date was enclosed in my despatch No. 103 of the same day.

I have received a verbal communication from the State Department to the effect that the United States Government desire to release this note for publication at the earliest possible moment, and I should therefore be grateful if Your Excellency would inform me by telegraph, with the least possible delay, whether your Ministers concur in its publication.

I have the honour to be, My Lord,

Your Excellency's most humble servant,

(For the Ambassador)

(Sgd.) H. G. CHILTON.

His Excellency

THE LORD BYNG OF VIMY, G.C.B., etc., etc., etc.,

Governor-General of Canada,

OTTAWA.

DEPARTMENT OF STATE,

WASHINGTON, April 28, 1924.

EXCELLENCY,—In your note of March 12, 1924, you informed me further in regard to the views of the Canadian Government with reference to the proposal for joint action by the United States and Canada for the improvement of the St. Lawrence River between Montreal and Lake Ontario for navigation and the development of water power.

In pursuance of the intention of this Government, as stated in my note of February 27, 1924, the President has appointed a national committee of nine members having as its Chairman the Honourable Herbert Hoover, Secretary of Commerce, which will act as an advisory committee to this Government on all questions that may arise in the consideration of the project.

While regretting that the Canadian Government does not desire that the committees for the two Governments shall meet in joint conferences, at least at the outset, to prepare instructions for the enlarged joint engineering board and to consider the broader aspects of the project for the proposed development of the St. Lawrence waterway, this Government would be grateful if you would inform the Canadian Government that the National Committee for the United States will be prepared at all times to meet in conference with

14 GEORGE V, A. 1924

the Canadian Committee in the event that circumstances should develop in the view of the Canadian Government would cause it to appear that joint conferences by the two committees or by representatives of the committees might be desirable for the consideration of any questions arising in connection with the project.

This Government is pleased to note that the Canadian Government concurs in its suggestion that the enlarged Joint Engineering Board shall consist of six members, three representing the United States and three representing Canada, and to accept the proposal of the Canadian Government that two technical officers be appointed by each Government for the purpose of formulating the terms in which the matters to be enquired into by the Board shall be defined.

The United States will be represented on the Joint Engineering Board by Colonel Edgar Jadwin, Colonel William Kelly, and Lieutenant Colonel George E. Pillsbury, Corps of Engineers, United States Army. Colonel Jadwin and Lieutenant Colonel Pillsbury will also act as technical officers for the United States to formulate in collaboration with the technical officers to be designated by the Canadian Government the instructions which will be given to the engineers.

This Government is also pleased to note the acceptance by the Government of Canada of the proposal of this Government that there shall be included in the first instructions to the Joint Engineering Board the two fundamental questions, whether the scheme for the improvement of the St Lawrence River water-way which the Engineering Board submitted in its report of June 24, 1921, is practicable and whether the estimates of the costs of the project made by the Board require revision, and to agree to the suggestion made by the Dominion Government that amongst other matters the enlarged Board shall be directed to enquire into the extent to which the water levels in the St. Lawrence River at and below Montreal, as well as the river and lake levels generally, will be affected by the execution of the project.

It will, of course, be understood that the instructions drafted by the technical officers will be subject to review and approval by the appropriate officials of the respective Governments before they would be given to the Board of Engineers by the Governments in conformity with the remark made on that point in my note of February 27, 1924. In connection with such review and approval, the instructions drafted by the technical officers will be submitted by the officers for the United States to the National Committee, for this Government.

This Government would be pleased to be informed at the early convenience of the Canadian Government of the names of the technical officers appointed by that Government in order that the officers for the two Governments may make arrangements with as little delay as possible to collaborate in the drafting of the instructions for the joint engineering Board. This Government would also be pleased to be informed in due course of the names of the Canadian members of the Joint Engineering Board.

Accept Excellency, the renewed assurances of my highest consideration.

(Sgd.) CHARLES E. HUGHES.

His Excellency

The Right Honourable

Sir ESME HOWARD, G.C.M.G., K.C.B., C.V.O.

Ambassador of Great Britain.

SESSIONAL PAPER No. 101e

CODE TELEGRAM FROM THE GOVERNOR GENERAL TO HIS  
MAJESTY'S AMBASSADOR AT WASHINGTON

OTTAWA, May 7, 1924.

With reference to your despatch No. 167 of the 29th April. St. Lawrence River.

The Government of Canada has selected as its representatives on the Board—Duncan W. McLachlan, B.Sc., Ottawa; Olivier Odilon Lefebvre, Chief Engineer, of the Quebec Streams Commission, Montreal, P.Q.; and Brigadier-General Charles Hamilton Mitchell, C.B., C.M.G., B.A.Sc., C.E., of Toronto; and of them the two last mentioned will act as technical officers on its behalf to settle the terms of reference.

Canadian Government entirely concurs with the Government of the United States that it should be understood that the instructions drafted by the technical officers will be subject to approval by the respective Governments before being given to the Board, and these instructions will be submitted by the technical officers for Canada to the Canadian National Advisory Committee which has been constituted under the Chairmanship of the Honourable George P. Graham, Minister of Railways and Canals, and which includes among its members the Honourable Walter Edward Foster, of St. John, N.B., the Honourable Sir Clifford Sifton, K.C.M.G., K.C., of Toronto, Ontario; Dr. Wilfrid Laurier McDougald, of Montreal, P.Q.; Major-General John William Stewart, C.B., C.M.G., of Vancouver, B.C., the Honourable Adelard Turgeon, C.M.G., C.V.O., of Quebec, P.Q.; and Messrs. Thomas Ahearn, of Ottawa, Beaudry Leman, B.Ss., C.E., of Montreal, P.Q.; and Edward D. Martin, of Winnipeg, Man.

The Canadian Government suggests that the unpublished despatches should be released for publication in the afternoon papers of Friday, May 9th.

(Sgd.) BYNG.

**CERTIFIED COPY of a Report of the Committee of the Privy Council approved by His Excellency the Governor General on the 7th May, 1924.**

*P.C. 779.*

The Committee of the Privy Council have had before them a Report, dated 7th May, 1924, from the Secretary of State for External Affairs, submitting that the question of improving the navigation on the St. Lawrence Waterway so as to provide access to the Great Lakes for maritime commerce, is one of considerable difficulty and complication, and its right decision may be of the highest possible importance to Canada. The project necessarily involves collaboration with the United States of America and the expenditure of very large sums of money. The minutest examination of the problem in all its aspects, financial, economic, technical and international, is not only justified but essential. The International Joint Commission has held hearings on the subject in both Canada and the United States, and has submitted a most elaborate and valuable report; the engineering problems involved have already been the subject of enquiry and report by an international board of engineers, and are to be further investigated by another such Board; other technical connected questions are in course of being studied by an interdepartmental committee.

The Minister is of the opinion that it would be in the public interest to constitute a National Advisory Committee to consider generally whether or not the project would, if completed, be beneficial to Canada, whether the benefits which might accrue and the pecuniary returns, direct or indirect, which may be anticipated from it are such as to counterbalance its disadvantages, if any, whether Your Excellency should indicate a readiness to enter into discussions with the United States of America looking towards the negotiation of a treaty for the carrying out of the necessary works, and what should be the character of the stipulations which any such treaty should contain.

The Minister accordingly recommends that a National Advisory Committee be constituted for the purposes aforesaid, the Honourable George Perry Graham, Minister of Railways and Canals, to be Chairman thereof, and the following to be its members:—

Thomas Ahearn, Ottawa, Ont.;  
Honourable Walter Edward Foster, St. John, N.B.;  
Beaudry Leman, B.Sc., C.E., Montreal, P.Q.;  
Edward D. Martin, Winnipeg, Man.;  
Dr. Wilfrid Laurier McDougald, Montreal, P.Q.;  
Honourable Sir Clifford Sifton, K.C.M.G., K.C., Toronto, Ont.;  
Major-General John William Stewart, C.B., C.M.G., Vancouver, B.C.;  
Honourable Adelard Turgeon, C.M.G., C.V.O., Quebec, P.Q.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) E. J. LEMAIRE,  
*Clerk of the Privy Council.*

**CERTIFIED COPY of a Report of the Committee of the Privy Council appointed by His Excellency the Governor General on the 7th May, 1924.**

*P.C. 778.*

The Committee of the Privy Council, on the recommendation of the Secretary of State for External Affairs, advise that Duncan W. McLachlan, B.Sc., of the Department of Railways and Canals, Ottawa; Olivier Odilon Lefebvre, Chief Engineer, Quebec Streams Commission, of Montreal, and Brig.-General Charles Hamilton Mitchell, C.B., C.M.G., B.A.Sc., C.E., of Toronto, be appointed to act with three engineers nominated by the Government of the United States of America as a Joint Board of Engineers to examine further into such matters relating to the improvement of the St. Lawrence Waterway as may be referred to such Board by agreement between the Government of Canada and the Government of the United States, and to report upon the matters referred to the Board within such time as may be limited by the specific instructions agreed on as aforesaid.

The Committee, on the same recommendation, further advise that the two engineers last above named be appointed to consult with two technical officers selected by the Government of the United States as to the subjects of investigation which should be specifically referred to the Board, and to submit their recommendations as to the form and contents of such specific instructions.

All of which is respectfully submitted for Your Excellency's approval.

(Sgd.) E. J. LEMAIRE,

*Clerk of the Privy Council.*

## RETURN

To an Address to His Excellency the Governor General, 19th March, 1924, for a copy of all correspondence, papers, applications, agreements, letters and other documents exchanged between the Government of Ontario and the Hydro-Electric Commission of Ontario and the Government of Canada, relating to the construction of a power dam on the St. Lawrence River near the town of Morrisburg for the generation of electric power for the use of the people of the Eastern part of the province of Ontario.

A. B. COPP.

*Secretary of State.*

Mover: Mr. CHURCH.

## DEPARTMENT OF PUBLIC WORKS

## OFFICE OF THE DEPUTY MINISTER

OTTAWA, March 27, 1924.

SIR,—I beg to transmit herewith Return called for by Order of the House of Commons, for a copy of all correspondence between Ontario Government or Hydro Electric Commission and Dominion Government, *re* Construction Power Dam on St. Lawrence River near Morrisburg, etc., together with your Reference No. 10.

I have the honour to be, sir,

Your obedient servant,

J. B. HUNTER,

*Deputy Minister.*

The Under Secretary of State,  
Ottawa.

Encl.

## HYDRO-ELECTRIC POWER COMMISSION

TORONTO, January 24, 1924.

To the Secretary,  
Department of Public Works,  
Ottawa, Ontario.

Re: *Application of Hydro-Electric Power Commission of Ontario for Morrisburg Development.*

DEAR SIR,—In pursuance of authority of the Government of Ontario, the Hydro-Electric Power Commission of Ontario makes application for the approval of plans and site for dam and power development works proposed to be built on the St. Lawrence River at, or near Morrisburg.

Accompanying this application are the following plans and documents, which I beg to enclose herewith:—

14 GEORGE V, A. 1924

1. Five copies of a description of the general engineering features of the proposition of the Hydro-Electric Power Commission of Ontario to develop the St. Lawrence River in the vicinity of Morrisburg, dated January 10th, 1924.

2. Five copies of Plan No. 160-E-105, entitled "Project for the Power Development of the St. Lawrence River" dated January 8th, 1924, being a general plan of the site, regulating dam, the power works, and the lock for navigation within the above structures at or near Morrisburg.

3. Five copies of plan No. 160-M-106 entitled "St. Lawrence River project for power development channel improvements" showing excavation plans at Leishman Point and Ogden Island.

4. Five copies of plan No. 160-E-107 entitled "St. Lawrence River project for power development channel improvements" showing excavation in vicinity of Galops Island head of South Galops Rapids.

5. Five copies of plan No. 160-D-103, entitled "Power House at Morrisburg, St. Lawrence River, scheme "B" being a general cross section of the power house, and section of the dam, in which it is located.

6. Five copies of a general map of the St. Lawrence River from Brockville to Montreal, with approximate proposed location of the works indicated thereon.

The above referred to plans, together with descriptive matter are general, but I trust will answer the requirements of your Department for the present. It is expected that further detailed plans will be provided at a later date, as are found necessary and required by your Department.

The Commission suggests that a conference between the Engineers of your Department and the Commission might be desirable, with a view to settling objections, if any, that your Engineers may have to the proposed works.

The Commission desires to proceed with the work at the earliest possible date, and would be glad to have this application receive your early consideration.

Yours truly,

(Sgd.) W. W. POPE,

Secretary.

*DESCRIPTION of General Engineering Features of the Proposal of the Hydro-Electric Power Commission of Ontario to Develop the St. Lawrence River in the vicinity of Morrisburg, Ontario.—January 23, 1924.*

The works proposed to be constructed on the St. Lawrence River, opposite the village of Morrisburg, Ontario, provide for navigation and for the development of power. The works comprise of excavated channels, navigation lock, dams and sluiceways, embankments and power house.

The site near the village of Morrisburg, Ontario, has been selected on account of its many advantages, some of which are: accessibility for purposes of construction, a location for the power house that in large measure is free from construction hazards, the procuring of foundation material for all the major structures, and such contours of the lands upstream as will greatly reduce the damage and inconvenience that would result to residents as contrasted with developments at other feasible sites.

The general arrangement of the proposed works may be understood by reference to the accompanying drawings, upon which the various structures and works are shown in their respective general situations.

Sufficient spillway and sluiceway capacity will be provided to take care of the total maximum flow of the St. Lawrence river without any allowance for

## SESSIONAL PAPER No. 157

flow through the turbines in the power houses. At the main dam there will be provided 600 feet of free spillway with crest at or about elevation 241; sluiceways aggregating a clear 800 feet in length with a depth of 21 feet, controlled by stoney sluices; a clear length of sluiceways aggregating 320 feet with a depth of 21 feet of submerged sluices with suitable gates. Further, it is proposed to divide the river, as far down as the foot of Murphy Island, into two channels by an embankment connecting this island to the power house. The south channel will be connected to the forebay of the power plant by a channel 600 feet wide, cut through Murphy Point. Also a dam, provided with 350 lineal feet of submerged sluices, and 250 lineal feet of ice sluices will be placed across the upper end of this channel.

The channel south of Ogden Island, known as Little River, with the channels east and west of Clark Island will form the forebay of the proposed development. There will be three inlets to this basin, of which the present mouth of Little River will form one. This channel will be improved by cutting off part of Leishman's Point, by deepening the channel of Little River, and by removing the present dam near Waddington. A cut 300 feet wide will also be made across the low part of Ogden Island west of Waddington with a bottom grade at Elevation 213. In addition to this channel, there will be another channel across the Island just above the main dam. Inasmuch as the new water level created by the proposed structure will create sufficient depth of water across this channel, no excavation is contemplated here as the existing contours provide all the carrying capacity that is required at this place.

Provision is made for sufficient excavation in the channels on either side of Galops Island to permit the proposed pool levels to be maintained without causing Lake Ontario to rise as high as its natural flood level. This part of the proposed work is shown on drawing 160-E-107.

*Power House*—The Canadian power house occupies the channel between the lower end of Ogden Island and Clark Island. Provision is made for an American power house between the east side of Clark Island and Murphy Point. The Canadian power house will contain some 34 units, each capable of developing 10,800 H.P. under a head of 27 feet. A cross section of the power house through one of the units is shown in drawing 160-B-103. The general location of the power house, dam and other structures and work are shown on drawings Nos. 160-E-105, 160-D-106, and 160-E-107.

*Question of Damages for Flooding*—The important feature of damage to property by flooding or by other means has not been overlooked. On account of the uncertainties appertaining to this phase of the project. It has not been considered necessary at this stage to do more than here give the assurance that this matter will be disposed of in such a manner as to do full justice to all interests concerned.

*Navigation Structures*—At the north end of the dam a lock with 30 feet of water on the sill at low water will permit shipping to pass between the pool above the dam to the part of the present Morrisburg canal below Mariatown. This lock is provided with ample entrance piers, four pairs of service gates, a pair of unwatering gates, and an emergency gate. Sluices in the dam adjacent to the lock supply water to the lower reach of the canal, and for the power plants at present drawing their water supply from the canal at Morrisburg. Provision is made also for adequate sluices to discharge surplus water from this reach to the river below the dam. A swing bridge over the lock will provide access by a railway spur to the power house.

Shipping, after passing into the portion of the Morrisburg canal below the dam, would continue as at present through the present lock 23 and thence return to the river and vice versa.

14 GEORGE V, A. 1924

When, in the future, it is desired to provide for navigation with a draft of 25 or 30 feet, then the channels above and below the 30-foot lock would be excavated to provide the necessary depth and the necessary additions to the entrance piers built. Shipping would then pass from the pool above the dam to the river below the dam or vice-versa.

OTTAWA, January 25, 1924.

SIR,—I beg leave to acknowledge the receipt of your letter of January 24th instant, enclosing the following plans in connection with the application of the Commission for approval of a dam and power development works proposed to be built on the St. Lawrence River at or near Morrisburg:—

1. Five copies of the description of the general engineering features dated January 10, 1924.
2. Five copies of plan No. 160-E-105 project for the power development of the St. Lawrence River, dated January 8, 1924.
3. Five copies of plan No. 160-D-106 showing excavation plans at Leishman Point and Ogden Island.
4. Five copies of plan No. 160-E-107 showing excavation in the vicinity of Galops Island, head of South Galops Rapids.
5. Five copies of plan No. 160-D-103 being a general cross-section of the power house and section of the dam.
6. Five copies of a general map of the St. Lawrence River from Brockville to Montreal.

None of the plans mentioned are certified by the Registrar. I note further detailed plans will be provided later on if they are found necessary by this Department.

Would you please send me a set of tracings of the plans filed, and have them certified by the Registrar.

Your suggestion that a conference between the Engineers of this Department and the Commission might be desirable has also been noted.

The plans are being referred to the Chief Engineer for report.

I enclose a copy of our memorandum explaining the requirements of the Navigable Waters Protection Act which governs works of this nature.

W. W. POPE, Esq.,

Secretary, Hydro-Electric Power Commission of Ontario,  
Toronto, Ont.

Yours obediently,

(Sgd.) L. H. COLMAN,  
Secretary.

#### DEPARTMENT OF PUBLIC WORKS, CANADA

*MEMORANDUM in reference to applications for the approval by the Governor-General-in-Council under the provisions of chapter 115, revised statutes of Canada, 1906, and amending acts, of the sites and plans of works in navigable waters.*

Paragraph (a) of Section 2 of the Navigable Waters Protection Act as re-enacted by Chapter 33, 1918, defines "work" as follows:—

(a) "Work includes any bridge, boom, dam, aboiteau, wharf, dock, pier or other structure, tunnel or pipe, or telegraph or power cable or wire and the

## SESSIONAL PAPER No. 157

approaches or other works necessary or appurtenant thereto, or any work, structure, or device, whether similar in character to the foregoing or not, which may interfere with navigation."

Under the Statutes and practice of the Department the procedure is as follows:—

1. To deposit a written description of the site, if possible by metes and bounds, and also a plan or plans of the proposed work, with the Minister of Public Works, accompanied by an application for their approval by the Governor-General-in-Council. The plan or plans must be sufficient to indicate clearly the nature and extent of the work, and also the site of the same. Five copies of the description and five copies of the plan, or set of plans if there are more than one plan, are required. One of the plans, or one set of the plans if there are more than one, must be traced on linen, the others may be blue or white prints. The descriptions must be typed on heavy paper. If these documents are sent by mail, they should be addressed to "The Secretary, Department of Public Works, Ottawa."

2. A duplicate of the above-mentioned description of the site and of the plan or plans of the proposed work must be deposited with the Registrar of Deeds for the District, County or Province in which the work is to be constructed. Evidence that the description of the site and the plans have been so deposited, and of the date of their deposit, must be furnished to the Department, and the most satisfactory evidence is a certificate of the Registrar endorsed upon one of the descriptions of the site, and upon one of the plans or on each of the plans forming a set of plans, if there are more than one plan, forwarded to the Secretary of the Department. It is essential that it be clearly established that the description and plan or plans deposited with the Registrar are duplicates of those filed with the Minister. The plan or plans so certified must be the tracings referred to in Clause 1 thereof.

3. One month's notice in the form set out at the conclusion hereof, of the deposit of the description of the site and of the plan or plans with the Minister of Public Works and with the Registrar of Deeds must be given by advertisement in the "Canada Gazette" and in two newspapers published in or near the locality where the work is to be constructed.

Evidence of the publication of the advertisement in the "Canada Gazette" and in the two local newspapers must be furnished to the Department, and may be by Statutory Declaration, with copies of the advertisement in the "Canada Gazette" and in each newspaper attached as exhibits. The declaration must state that the two newspapers containing the advertisement are published in or near the locality where the work is to be constructed, and must mention the dates of the issues of the newspapers that contained the advertisement. Four insertions of the advertisement at weekly intervals will be accepted as satisfactory compliances with the provisions of the Statute in this regard.

The Applicants must furnish proof that they own or have a sufficient interest in the land and land covered with water upon which the works are to be constructed. It is not sufficient to hold the riparian interests alone if the work extends beyond the limits of the shore, but a sufficient portion of the harbour, river or lake bed must also be held by the Applicants. The Statute has reference to the erections of structures on lands owned by the Applicants or which they have the right to use and is designed to provide for due protection to navigation. It cannot be used as a means of acquiring title to lands upon which the structure is to be erected.

Applicants will note that when it is necessary in connection with the proposed work for them to acquire land (including land covered with water) belonging to the Dominion of Canada a separate application for such land must be made:—

(a) To the Department of Marine if the land is situated in a public harbour.

(b) To the Department of the Interior if the land is not a public harbour and is in Manitoba, Saskatchewan, Alberta, the Railway Belt of British Columbia, the Northwest Territory or the Yukon Territory or if it is Ordnance Land in the Provinces of Ontario, Quebec, Nova Scotia and New Brunswick.

(c) To the Department of Indian Affairs if the land belongs to an Indian reserve.

(d) To the Department of Railways and Canals if the land is part of a canal reserve.

(e) To the Department of Militia and Defence if the land is part of a Military reserve.

(f) In other cases the application for the Dominion Land required may be sent with the application for the approval of the work, and the description of the site thereof, to the Department of Public Works.

All applications for Dominion Lands must be accompanied by a plan and description of the land by metes and bounds in quintuplicate. One of the plans must be a tracing, the others may be blue or white prints.

5. By Section 4 (2) of the Act, as re-enacted by Chapter 33, 8-9 George V, 1918, certain small works costing not more than one thousand dollars, which do not interfere with navigation are excepted from the operation of the Act and may be, on application approved by the Department without advertising or filing of plans and description of the site in the Registry Office, as otherwise required. It is to be noted, however, that if the work costs more than one thousand dollars, or if it in the slightest degree interferes with navigation or encroaches upon navigable waters, even though it may really be otherwise of the utmost value to navigation, it will not be within the exception. The works covered by this exception are the following:—

Small wharfs or groynes or other bank or beach protection works, or boat-houses.

6. It is to be noted that it will be too late to apply for approval of the plans and site after the work is built, and works must not be commenced before the plans have been duly approved. The Statute gives no power to approve of works already constructed or in process of construction, except in the case of works constructed or in process of construction on the first day of June, 1918.

The procedure to secure approval of the plans and sites of works constructed or in process of construction on June 1, 1918, is the same as already described for works proposed to be constructed, except that legal evidence must be supplied that the works were constructed or in process of construction on that date; this evidence may be by Statutory Declaration.

SESSIONAL PAPER No. 157

Department of Public Works, Canada,  
Ottawa, September 17, 1919.

## HYDRO-ELECTRIC POWER COMMISSION

TORONTO, January 28, 1924.

Mr. L. H. COLMAN,  
Secretary Department of Public Works,  
Ottawa, Ont.

DEAR SIR,—I beg to acknowledge receipt of yours of the 25th inst., with enclosures, as stated, in connection with the application of the Commission for approval of dam and power development works proposed to be erected on the St. Lawrence River, at or near Morrisburg.

Yours truly,

(Sgd.) W. W. POPE.

Secretary.

OTTAWA, February 22, 1924.

GENTLEMEN,—Referring to my letter of January 25, further examination of the plans filed by you with your application for the construction of a dam and power development works on the St. Lawrence River at or near Morrisburg, shows that the power houses proposed are to be located wholly in the United States, and that only a part of the dam and the canal are to situate in Canada. The project is consequently one which must be dealt with internationally, not departmentally.

Moreover, since you were represented before the International Joint Commission on the hearings preceding their report upon the development of power and navigation on this section of the St. Lawrence, you are no doubt aware that the Commission recommended a project differing in essentials from that

14 GEORGE V, A. 1924

now submitted by you, and that in accordance with the Commission's recommendation action has recently been taken looking to the reconstitution, with additional members, of the International Board of Engineers, upon whose report that of the Commission was based.

If, in the circumstances, you consider that any further steps can usefully be taken at present upon your application, the Department will be glad to receive your suggestions.

Your obedient servant,

(Sgd.) L. H. COLMAN,

*Secretary.*

The Hydro-Electric Power Commission of Ontario,  
190 University Avenue, Toronto, Ont.

### HYDRO-ELECTRIC POWER COMMISSION

TORONTO, February 25, 1924.

Mr. L. H. COLMAN,  
Secretary Department of Public Works,  
Ottawa, Ontario.

DEAR SIR,—Yours of the 22nd inst. with reference to the construction of dam and power development on the St. Lawrence River, near Morrisburg, came duly to hand and will be brought to the attention of the Board at an early date, when you may expect to be communicated with further.

Yours truly,

(Sgd.) W. W. POPE,

*Secretary.*

## RETURN

To an Address to His Excellency the Governor General of the 19th March, 1924, for a copy of all correspondence, petitions, protests, letters, resolutions, and other documents exchanged between the Government and any person or persons or organizations, or Provincial Governments or other public bodies in Canada, protesting against the illegal diversion of the waters of the Great Lakes by the Chicago Drainage Commission and of any and all correspondence with the Government of the United States, the Joint International Commission or others on the subject.

Mover: Mr. CHURCH, M.P.

P.C. 721

PRIVY COUNCIL, CANADA

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Royal Highness the Governor General on the 27th March, 1912.*

On a Memorandum, dated 25th March, 1912, from the Minister of Marine and Fisheries, stating that he understands that the United States Secretary of War has arranged to hear argument in the matter of the Chicago Drainage Canal scheme, at Washington, on the 27th March, 1912.

The Minister observes that as the proposed works contemplate the diversion of ten thousand cubic feet of water per second from Lake Michigan to the Desplaines River, the question of the effect of any such scheme on navigation in the international boundary waters, and in the St. Lawrence River, calls for careful consideration.

The Minister recommends,—in order that the views of the Canadian Government may be laid before the Secretary of War,—that Messrs:—

Wm. J. Stewart, Chief Hydrographer of Canada, Department of the Naval Service;

Victor W. Forneret, Superintending Engineer, St. Lawrence Ship Channel, Marine and Fisheries Department;

Arthur St. Laurent, Assistant Deputy Minister, Public Works Department;

John Kennedy, Consulting Engineer, Harbour Commissioners of Montreal; and

Daniel Mullen, K.C., St. John, N.B.,

be authorized to attend the meeting to be held at Washington on the 27th March, 1912, in connection with the Chicago Drainage Canal scheme, and to oppose, on behalf of the Canadian Government, any proposal which will result in lowering the level in the International boundary waters and in the St. Lawrence River.

The Committee submit the same for approval.

(Sgd.) RODOLPHE BOUDREAU,

Clerk of the Privy Council.

14 GEORGE V, A. 1924

The Honourable

The Secretary of State for External Affairs.

*From the Governor General to His Majesty's Ambassador at Washington.*

GOVERNMENT HOUSE,

OTTAWA, November 23rd, 1912.

No. 145.

SIR.—I have the honour to transmit, herewith, for Your Excellency's consideration, copies of an Approved Minute of the Privy Council for Canada on the subject of the Calumet and Sag Channel.

Your Excellency will observe that my responsible advisers view the making of this Channel with grave concern and would be glad if Your Excellency will protest to the United States Government against its construction being allowed to continue, on the grounds that it would be highly detrimental to the interests of the Dominion.

I have, etc.,

(Sgd.) ARTHUR.

His Excellency

The Right Honourable, JAMES BRYCE, P.C., etc., etc., etc.,

19th November.

P. C. 3249

PRIVY COUNCIL, CANADA.

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Royal Highness the Governor General on the 19th November, 1912.*

The Committee of the Privy Council have had before them a report, dated 16th November, 1912, from the Right Honourable the Secretary of State for External Affairs, stating that it has been represented to him that work has been commenced by the City of Chicago and is in progress on a new channel called the Calumet and Sag channel, having for its object the diversion of water from Lake Michigan to the Chicago Sanitary Canal.

The Minister submits that this work is a further menace to the navigation of the Great Lakes and the River St. Lawrence; the present diversion has lowered Lake Huron  $4\frac{1}{4}$  inches and the new channel would lower it  $2\frac{1}{2}$  inches, additional, making a total of  $6\frac{3}{4}$  inches. As each inch represents a loss of 68 tons in the cargo carrying capacity of the largest boats, it is evident that this would result in a loss on each trip of no less than 459 tons.

The Minister represents that the Calumet and Sag channel will carry 4,000 cubic feet per second. At present, with an authorized diversion of 4,167 cubic feet per second, the City of Chicago actually takes from 7,000 to 8,000 cubic feet per second. This will mean that when the Calumet and Sag channel is completed, the City of Chicago will be diverting three times the amount of water authorized.

The Committee, on the recommendation of the Secretary of State for External Affairs, advise that Your Royal Highness may be pleased to request His Majesty's Ambassador at Washington to inform the United States Government that Canada views the making of this Calumet and Sag Channel with grave concern and, on the ground that it would be highly detrimental to the interests of the Dominion, to protest to the United States Government against its construction being allowed to go on.

All which is respectfully submitted for approval.

(Sgd.) RODOLPHE BOUDREAU,

Clerk of the Privy Council.

SESSIONAL PAPER No. 180

*From His Majesty's Ambassador at Washington to the Governor-General*

No. 217

BRITISH EMBASSY,

WASHINGTON, December 30, 1912.

SIR.—With reference to Your Royal Highness's despatch No. 145 of the 23rd ultimo, on the subject of the Calumet and Sag Channel, I have the honour to transmit, herewith, a copy of a Note from the United States Government in reply to the representations which I addressed to them on the subject.

Your Royal Highness will observe that the note states that your Government have been misinformed in the matter, and that the amount of water to be withdrawn from Lake Michigan to the Chicago and Calumet rivers together will not exceed the total amount already authorized to be withdrawn through the Chicago river alone. I should be glad to know what reply you wish me to make to the United States Government.

I have, etc.,

(Signed) JAMES BRYCE.

His Royal Highness

The DUKE OF CONNAUGHT AND STRATHEARN, K.G.,

etc., etc.,

The Governor General.

Enclosure in No.

*From the Acting Secretary of State of the United States to His Majesty's Ambassador at Washington*

No. 1713

DEPARTMENT OF STATE,

WASHINGTON, December 24, 1912.

EXCELLENCY.—Referring to your note of the 29th ultimo concerning the apprehension felt by the Government of Canada that that work in progress by the City of Chicago on the Calumet and Sag Channel for the diversion of water from Lake Michigan to the Chicago Sanitary Canal will prove a menace to the navigation of the Great Lakes and the St. Lawrence River, and result in the diversion of water by the city in excess of the amount now authorized, I have the honour to communicate the substance of a report by the Chief of Engineers, United States Army, made to the Secretary of War on the 16th instant, in explanation of the situation and which I feel confident will satisfy Your Excellency that the Government of Canada has been misinformed in the matter, and that the amount of water to be withdrawn from Lake Michigan to the Chicago and Calumet rivers together will not exceed the total amount already authorized to be withdrawn through the Chicago River alone:—

"The Calumet and Sag Channel is being constructed under authority of a permit issued by the War Department June 30, 1910. Its purpose is to substitute two routes instead of one between Lake Michigan and the centre third of the Drainage Canal of the Sanitary District of Chicago, on the express condition however, that there shall be no increase in the amount of water diverted from Lake Michigan. The language of the permit of June 30, 1910, on that point, is as follows:—

14 GEORGE V, A. 1924

"That the amount of water withdrawn from Lake Michigan, through the Chicago and Calumet Rivers together, shall not exceed the total amount of 250,000 cubic feet per minute (4,167 cubic feet per second) already authorized to be withdrawn through the Chicago River alone".

"The amount of diversion is not only restricted by the permit but it is also controlled by the fact that the new channel will unite with the Drainage Canal at a point some distance above the point of its discharge into the Des Plaines River; and, from the junction to the point of discharge, the flow of water through the Chicago River combined with that flowing through the Calumet or Sag Channel, must find its exit through some miles of the existing section of the Drainage Canal, for which no enlargement is authorized or contemplated by the War Department.

"At the time the permit was given to the Sanitary District of Chicago in 1899 for its original diversion of water from Lake Michigan through the Chicago River a connection with the Calumet River was not mentioned, but if it had been, it is probable that a connection with that river as well as with the Chicago River would have been allowed. So long as the waterflow remains unchanged and the exit remains unenlarged, there seems to be no special objection to allowing an entrance to the canal from both rivers, instead of confining it to a single one; especially since, if the new (Calumet) route be developed later to a navigable state, the doubled route between the Lake and the Drainage District dock frontage will be greatly to the advantage of navigation interests.

"The question of the final total amount of water which the War Department may allow the Sanitary District of Chicago to divert from Lake Michigan is still before the Secretary of War for consideration, and when his decision on that point is made, it will apply to the entire diversion, whether through a single entrance channel or through two entrance channels."

I have etc.,  
(Signed) HUNTINGTON WILSON,  
*Acting Secretary of State.*

His Excellency The Right Honourable JAMES BRYCE, O.M.,  
Ambassador of Great Britain.

Telegram

*Mr. Bryce to the Governor General*

WASHINGTON, D.C., January 13, 1913.

Referring to Previous correspondence with Prime Minister of last February Secretary of State for War has refused application of Chicago sanitary district.  
(Sgd.) BRYCE.

*From His Majesty's Ambassador at Washington to the Governor General*

No. 7

BRITISH EMBASSY,

WASHINGTON, January 14, 1913.

SIR,—With reference to my telegram of yesterday, I have the honour to transmit to Your Royal Highness herewith copies of the decision of the Secre-

SESSIONAL PAPER No. 180

tary of War in the matter of the application made by the Trustees of the Sanitary District of Chicago for permission to divert water from Lake Michigan.

I have the honour to be, sir,

Your Royal Highness'

most obedient, humble servant,

(Sgd.) JAMES BRYCE.

His Royal Highness

The DUKE OF CONNAUGHT AND STRATHEARN, K.G.,

etc., etc., etc.,

The Governor General.

(To be held as *Confidential* until date of release, which will be for the morning papers of January 13, 1913.)

DECISION OF THE SECRETARY OF WAR IN THE MATTER OF THE APPLICATION OF THE TRUSTEES OF THE SANITARY DISTRICT OF CHICAGO, ILL., FOR PERMISSION TO DIVERT FROM LAKE MICHIGAN 10,000 CUBIC FEET OF WATER PER SECOND.

IN THE MATTER of the application of the trustees of the Sanitary District of Chicago for permission to divert from Lake Michigan 10,000 cubic feet of water per second.

WAR DEPARTMENT

WASHINGTON, January 8, 1913.

The Sanitary District of Chicago applies to the War Department for permission to increase the amount of water it is authorized to withdraw from Lake Michigan from 4,167 cubic feet per second, the amount now authorized, to 10,000 cubic feet per second.

The Chicago Drainage Canal was opened in January, 1900. It reverses the flow of the Chicago River, which formerly emptied into Lake Michigan, and as a result a portion of the waters of that lake, instead of following their former course through Lakes Huron, Erie, and Ontario into the St. Lawrence, are now carried across the watershed into the Illinois River, and thence to the Mississippi and the Gulf of Mexico. The canal thus serves as a system of drainage for the city of Chicago, carrying the sewage of that city southward to the Mississippi, and thus protects the water supply of that city, which is taken from Lake Michigan.

Permission to divert water from Lake Michigan was first granted by my predecessor, Secretary Alger, on May 8, 1899. He permitted a flowage of 5,000 cubic feet per second, but his permit contained the following conditions:—

1. That it be distinctly understood that it is the intention of the Secretary of War to submit the questions connected with the work of the Sanitary District of Chicago to Congress for consideration and final action, and that this permit shall be subject to such action as may be taken by Congress.

2. That if, at any time, it becomes apparent that the current created by such drainage works in the south and main branches of Chicago River be unreasonably obstructive to navigation or injurious to property, the Secretary of War reserves the right to close said discharge through said channel or to modify it to such extent as may be demanded by navigation and property interests along said Chicago River and its south branch.

Subsequently, during the administration of Secretary Root, the amount of the current permitted to be taken was modified or restricted until December 5, 1901, when it was fixed at the amount now permitted, and these permits contained the conditions that the permission herein given shall be subject to such modification as in the opinion of the Secretary of War the public interests may from time to time require.

On March 14, 1907, an application made for permission to divert an additional 4,000 cubic feet per second for the purpose of reversing the current of the Calumet River and flowing that river also through the canal to drain the southern portion of Chicago was denied by Secretary Taft in an opinion in which he referred once more to the desirability of submitting "this question of capital and national importance to the Congress of the United States."

It is clear that even under the conditions heretofore manifested on these applications, the proposition to divert the waters of Lake Michigan into another watershed has not been entertained without hesitation and careful restriction by my predecessors. The propriety of obtaining congressional sanction for the project has been pointed out from the beginning; and the form in which the permit has been granted, even for the moderate amount of diversion permitted, has been so phrased as to indicate that the permission was prejudicated upon the absence of any substantial injury to commerce.

The sanitary canal has never received the direct sanction of Congress. It was built solely under the authority of the State of Illinois, as given in its 1889 general act for creating sanitary districts. And although pursuant to the suggestion of my predecessors the question of the propriety of its diversion of water from Lake Michigan was presented urgently in the reports of the Chief of Engineers for the years 1899 and 1900 as transmitted to Congress, no action upon the question has ever been taken by that body. In the argument before me it was urged that the present canal represented the growth and development of a national policy expressed in two acts of Congress, 1822 and 1827, which authorized the construction of a canal "to connect the Illinois River with Lake Michigan," thus connecting the two watersheds. (Acts of Mar. 30, 1882, and Mar. 2, 1827.) But these statutes authorized a canal for the purpose of navigation and not sanitation. (*Missouri v. Illinois*, 200 U. S., 526.) The Illinois and Michigan Canal, actually constructed under their authority, derived its water for navigation purposes from the Calumet, Des Plaines, and Chicago Rivers, and not from the Lakes. And although in the latter part of its existence it was used to a very slight extent to help purify the waters of the Chicago River and thus sanitize the city of Chicago, such a purpose could not have been dreamed of at the time its construction was authorized by Congress, 90 years ago. I can not see that its authorization and construction offer the slightest congressional sanction for the great canal now under discussion, which was not even contemplated until much more than half a century later. Even at the time when the present canal was constructed and opened it is very evident that its ultimate possible effect upon the navigation of the Great Lakes was not clearly realized by those interested in that navigation. The evidence before me indicates that the withdrawal of water from Lake Michigan at Chicago would require about five years to produce its full effect upon the levels of the Great Lakes (see report of International Waterways Commission on Chicago Drainage Canal, p. 7), and that this effect be still further obscured by periodic oscillations in the lake levels. These facts may easily explain any inaction on the part of the Nation and their representatives to this withdrawal of water and make it clear that any argument of implied acquiescence must be scrutinized with unusual care.

In this respect the situation is now very different. The present application was opposed by representatives of 23 cities and 6 States interested in harbors

## SESSIONAL PAPER No. 180

and commerce upon the Great Lakes, notably the cities of Duluth, Milwaukee, Toledo, Cleveland and Buffalo. It was opposed by representatives of the navigation interests engaged on the Chicago River as well as on the Great Lakes, and by the official representatives of the Canadian Government as well as private Canadian interests engaged in the navigation of the Lakes and the St. Lawrence River, including representatives of the cities of Kingston and Montreal.

A very careful consideration of the voluminous evidence and statements submitted, as well as a consideration of the reports of other commissions and boards of engineers who have investigated the subject, leaves no doubt in my mind that the withdrawal of 10,000 cubic feet per second would substantially interfere with the navigable capacity of the Great Lakes and their connecting rivers. The Chief of Engineers, whose statutory authority in passing upon this application is concurrent with and independent of my own, and whose opinion upon such a question of scientific conclusion must be given especial weight, so states in his recommendation. His conclusions are corroborated by the authority of other boards of investigation, notably the report of the International Waterways Commission of January 4, 1907.

Careful observations and calculations conducted under the offices of the United States Lake Survey and reported through the Chief of Engineers, covering observations for the last 46 years, indicate that a withdrawal of 10,000 cubic feet per second would reduce levels at various places as follows:

	Inches.
Lakes Huron and Michigan .....	6.9
Lake St. Clair .....	6.3
Lake Erie .....	5.4
Lake Ontario .....	4.5
St. Lawrence River at Rapide Plat.....	4.8+

The foregoing effects would be produced at mean lake levels; the lowering effects would be much greater at low-water periods—the precise time when any additional shortage would be most keenly felt. This reduction would create substantial injury in all of the American harbors of the Great Lakes and in the St. Marys, St. Clair, and Detroit Rivers. It would produce equal injury in Canadian harbors on the Great Lakes, and a still greater injury on the lower St. Lawrence, the Canadian officials claiming a probable lowering effect of 12 inches at Montreal at low water.

The United States has improved about 106 harbors and rivers on the Great Lakes affected by this diversion and has spent on such improvements over ninety millions of dollars. The Canadian Government has improved over 50 harbors on Georgian Bay and Lakes Huron, St. Clair, Erie, and Ontario. By treaty, American vessels are accorded equal rights of navigation with Canadian vessels in all these waters, including the St. Lawrence River. The reduction of the water in these harbors and channels would diminish to just that extent the amount of these improvements, and would nullify to just that extent the effects of the moneys which have been appropriated for that purpose by the respective Governments. Connecting various portions of these waterways are the two canals at the Sault Ste. Marie, the Welland Canal, and a number of canals on the St. Lawrence River. The available depth of water over one or all sills of each of these canals would be affected, and in some cases reconstruction might even be made necessary.

The enormous lake traffic which uses these harbors and these rivers is increasing with great rapidity, both in gross volume and in the size and average draft of the vessels employed therein. The Chief of Engineers reports that to lower the water surface 6 inches would reduce the permissible load of one of

the large modern vessels by from 300 to 550 tons, with a consequent loss of from \$3,600 to \$7,500 in freights for such vessel per season. The International Waterways Commission reported that it would be a conservative estimate which would make the loss to the navigation interests resulting from a reduction of 6 inches in the depth of water as \$1,500,000 per annum, or a sum which, capitalized at 4 per cent, would amount to a loss of \$37,500,000 (see third progress report of International Waterways Commission of Dec. 1, 1907, p. 24). The lowest careful estimate of injury to American vessels alone is reported by the Chief of Engineers as \$1,000,000 per year.

The argument was made before me that, owing to the well-known fact that the levels of the lake vary, owing to winds and change of barometric pressure, by amounts even greater than the reduction which would be caused by this canal, therefore the proposed reduction is of no consequence. This argument is well disposed of in the report of the International Waterways Commission of January 4, 1907, on page 8, as follows:—

It is evident that the average level of the lake may be lowered considerably without the change becoming immediately apparent, and that fact has been used as an argument to prove that the lowering caused by the Chicago Drainage Canal is of no consequence to those interested in navigation. Since they can not see it they will not know it and will not feel it. The argument is fallacious. It is true that they can not see it immediately, but they will soon feel it and will know it through the most costly means of acquiring knowledge—the injury to their material interests. The oscillations will remain the same as before but low water will fall lower and high water will rise less high. The average draft of vessels must be diminished by the amount that the average level is lowered unless the depth be restored by remedial works.

In a word, every drop of water taken out of Chicago necessarily tends to nullify costly improvements made under direct authority of Congress throughout the Great Lakes, and a withdrawal of the amount now applied for would nullify such expenditures to the amount of many millions of dollars, as well as inflict an even greater loss upon the navigation interests using such waters.

On the other hand, the demand for the diversion of this water at Chicago is based solely upon the needs of that city for sanitation. There is involved in this case no issue of conflicting claims of navigation. The Chief of Engineers reports that so far as the interests of navigation alone are concerned, even if we should eventually construct a deep waterway from the Great Lakes to the Mississippi over the route of the sanitary canal, the maximum amount of water to be diverted from Lake Michigan need actually be not over 1,000 feet per second, or less than a quarter of the amount already being used for sanitary purposes in the canal. This estimate is confirmed by the report of the special board of engineers on the deep waterway from Lockport, Ill., to the mouth of the Illinois River, dated January 23, 1911. It is also confirmed by the practical experience of the great Manchester Ship Canal in England. From the standpoint of navigation alone in such a waterway too great a diversion of water would be a distinct injury rather than a benefit. It would increase the velocity of the current and increase the danger of overflow and damage to adjacent lands.

We have, therefore, presented in this case claims of entirely different characters and jurisdictions—the claim of sanitation on the one side and of navigation on the other; the vital interest of a single community on the one side and the broad interest of the commerce of the nation on the other. The discretion given to the Secretary of War under sections 9 and 10 of the act of 1899 is very broad, but I have very grave doubts as to whether it was intended

## SESSIONAL PAPER No. 180

to authorize him to grant a permit which would inflict a substantial injury upon commerce in order to benefit sanitation. The entire purpose and scope of that legislation was to make him the guardian of the commercial interests of the nation represented in their waterways. And while he sometimes under that statute must decide that the interests of one class of transportation are less important and must yield to the conflicting interests of another class, I have considerable doubt whether it was intended to give him authority to sacrifice substantial interests of navigation to entirely different claims over which he normally has no jurisdiction whatever.

But however that may be, and without resting my decision upon the question of my legal authority, I am quite clear as a matter of discretion that under the facts presented by this case no further diversion of water should be permitted at Chicago without the direct sanction of the Congress of the United States. I do not for one moment minimize the importance of preserving the health of the great city of Chicago; but when a method of doing this is proposed which will materially injure a most important class of the commerce of the nation and which will also seriously affect the interests of a foreign power, it should not be done without the deliberate consideration and authority of the representatives of the entire nation. The growth of Chicago is phenomenal and its representatives are quite unwilling to put any final limit to the demand which may be made upon the waters of Lake Michigan for its sanitation under the system now in use. I have before me the report in 1911 of the president of the sanitary district, in which he says:—

I am of the opinion that the presumption that our water supply is to be limited to 10,000 cubic feet per second, or 600,000 cubic feet per minute, is gratuitous and mischievous and should not be voiced by the officials of this district. I believe that we should have the volume requisite to our needs as they appear and are justified.

It is therefore quite conceivable that compliance with their sanitary needs according to this method of sanitation may eventually materially change this great natural watercourse now existing through the Lakes. The weighing of the sanitation and possibly the health of one locality over against the commerce of the rest of the Nation and the consideration of our relations and obligations to Canada in respect to a great international waterway are not matters of mere technical or scientific deduction. They are broad questions of national policy. They are quite different in character, for example, from the question of fixing the proper location of a pierhead line or the height or width of a drawbridge over a navigable stream—fair samples of the class of questions which come to the Secretary of War for decision under the above-mentioned act of 1899. While the researches and opinions of experts in the respective fields are necessary and useful as an assistance toward reaching a fair and proper policy, the final determination of that policy should belong not to an administrative officer but rather to those bodies to whom we are accustomed to entrust the making of our laws and treaties.

In my view of the proper exercise of my discretion in this matter the foregoing considerations are sufficient for a decision of this case. Having reached the conclusion that the proposed diversion of the waters of Lake Michigan would substantially injure the interests of navigation on the Great Lakes which it is my legal duty to protect, it would clearly follow that the present application should be denied.

I have carefully examined, however, the evidence which both sides have introduced bearing upon the sanitary needs of the city of Chicago, and my conclusion is in no way shaken. I am not persuaded that the amount of water applied for is necessary to a proper sanitation of the city of Chicago. The

evidence indicates that at bottom the issue comes down to the question of cost. Other adequate systems of sewage disposal are possible and are in use throughout the world. The problem that confronts Chicago is not different in kind but simply larger and more pressing than that which confronts all of the other cities on the Great Lakes, in which nearly 3,000,000 people of this country are living. The urban population of those cities, like that of Chicago, is rapidly increasing, and a method of disposition of their sewage which will not injure the potable character of the water of the Lakes must sooner or later be found for them all. The evidence before me satisfies me that it would be possible in one of several ways to at least so purify the sewage of Chicago as to require very much less water for its dilution than is now required by it in its unpurified condition. A recent report of the engineer of the sanitary commission (Oct. 12, 1911) proposes eventually to use some such method, but proposes to postpone its installation for a number of years to come, relying upon the present more wasteful method in the meanwhile. It is manifest that so long as the city is permitted to increase the amount of water which it may take from the Lakes, there will be a very strong temptation placed upon it to postpone a more scientific and possibly more expensive method of disposing of its sewage. This is particularly true in view of the fact that by so doing it may still further diminish its expenses by utilizing the water diverted from the Lakes for water power at Lockport. But it must be remembered that for every unit of horsepower realized by this water at Lockport four units of similar horsepower would be produced at Niagara, where the natural conditions are so much more favorable. Without, therefore, going more into detail in a discussion of this question, I feel clear that no such case of necessity has been presented by the evidence before me as would justify the proposed injury to the many varied interests in the great waterways of our lakes and their appurtenant rivers.

It remains only to consider certain special arguments that have been pressed upon me. It has been urged that the levels of the lakes, even if lowered, could be restored by compensating works. To a certain extent that is true. But the very nature of this consideration offers another illustration of the importance of having the whole question passed upon by Congress. Such compensating works can only be constructed by the authority of Congress and at very considerable cost. It is not a matter which is in the hands of the Secretary of War. Permission to divert water which will at one and the same time nullify the effect of past appropriations and make necessary similar expenditures in the future, should be granted only with the express consent of the body in whose hands the making of such appropriations and the authorization of such works rest.

Furthermore, in most cases such compensating works could only be constructed with the joint consent of our neighbor Canada. The United States Government alone would be unable, even if it were willing to spend its own funds, to compensate for the damage done through the lowering of these levels unless Canada were willing to join in constructing the portion of such works which would necessarily stand upon Canadian soil.

The question therefore becomes not merely national but international, and this leads me to the consideration of the arguments which were urged by both sides in reference to the treaty with Great Britain in respect to Canada of January 11, 1909. A careful consideration of that treaty fails to indicate to me that it is in any way controlling upon the questions now before us. It gives to the citizens of both countries certain mutual rights of navigation in the waters of the Great Lakes and their connecting rivers; but beyond that the question of the right to this diversion at Chicago seems to me to have been carefully excluded. The applicants for the permit have urged upon me that article 8 of the treaty gives a preference to the uses of water of the lakes for domestic and

## SESSIONAL PAPER No. 180

sanitary purposes over the uses of such water for navigation. Article 8, however applies only to future cases brought before the International Joint Commission; and furthermore I am clearly of the opinion that the domestic and sanitary purposes referred to in that article were intended to be the "ordinary" uses of such waters for domestic and sanitary purposes referred to in article 3. It would be quite contrary to our own national policy to give such a preference to an extraordinary sanitary use of such a character as to create a substantial injury to navigation. The matter has been before our own Supreme Court in the case of the *United States v. Rio Grande Dam and Irrigation Co.* (174 U.S. 690). In that case the Supreme Court held that a company which proposed to take the water of the Rio Grande River for the purpose, among others, "of supplying water to cities and towns for domestic and municipal purposes" could be prevented from so doing when the result would be a substantial injury to the navigability of the Rio Grande River farther down. In its opinion the court said:—

The question always is one of fact, whether such appropriation substantially interferes with the navigable capacity within the limits where navigation is a recognized fact. In the course of the argument this suggestion was made, and it seems to us not unworthy of note, as illustrating this thought. The Hudson River runs within the limits of the State of New York. It is a navigable stream and a part of the navigable waters of the United States, so far at least as from Albany southward. One of the streams which flows into it and contributes to the volume of its waters is the Croton River, a nonnavigable stream. Its waters are taken by the State of New York for domestic uses in the city of New York. Unquestionably the State of New York has a right to appropriate its waters, and the United States may not question such appropriation, unless thereby the navigability of the Hudson be disturbed. On the other hand, if the State of New York should, even at a place above the limits of navigability, by appropriation for any domestic purposes, diminish the volume of waters, which, flowing into the Hudson, make it a navigable stream, to such an extent as to destroy its navigability, undoubtedly the jurisdiction of the National Government would arise and its power to restrain such appropriation be unquestioned; and within the purview of this section (act of Sept. 19, 1890, ch. 907) it would become the right of the Attorney General to institute proceedings to restrain such appropriation.

The treaty, however, contains provisions in its article 10 by which "any questions or matters of difference arising between the high contracting parties involving the rights, obligations, or interests of the United States or of the Dominion of Canada, either in relation to each other or to their respective inhabitants, may be referred for decision" to an international joint commission established by the said treaty. The hearing before me brought forth the fact that the Government of Canada regards the proposal contained in this application as one which affects the material interests of that country. The establishment by formal treaty between the two countries of a tribunal with jurisdiction to decide just such questions seems to me to afford an additional reason against the assumption of jurisdiction to decide the question by an administrative officer of one of those countries.

In short, after a careful consideration of all the facts presented, I have reached the following conclusions:

First. That the diversion of 10,000 cubic feet per second from Lake Michigan, as applied for in this petition, would substantially interfere with the navigable capacity of the navigable waters in the Great Lakes and their connecting rivers.

14 GEORGE V, A. 1924

Second. That that being so, it would not be appropriate for me without express congressional sanction, to permit such a diversion, however clearly demanded by the local interests of the sanitation of Chicago.

Third. That on the facts here presented no such case of local permanent necessity is made evident.

Fourth. That the provisions of the Canadian treaty for a settlement by joint commission of "Questions or matters of difference" between the United States and Canada offer a further reason why no administrative officer should authorize a further diversion of water, manifestly so injurious to Canada, against Canadian protest.

The prayer of the petition is therefore denied.

HENRY L. STIMSON,  
*Secretary of War.*

*From the Governor General to His Majesty's Ambassador at Washington*

CANADA

No. 16

GOVERNMENT HOUSE, OTTAWA, February 25, 1913.

SIR,—With reference to Your Excellency's Despatch No. 217 of the 30th December on the subject of the diversion of water from Lake Michigan to the Chicago Sanitary Drainage Canal, I have the honour to transmit herewith, copies of an Approved Minute of the Privy Council for Canada submitting a memorandum embodying the views of the Department of Public Works, the Department of Marine and Fisheries and the Commission of Conservation on the opinion expressed by the Government of the United States as contained in Your Excellency's Despatch referred to above.

Your Excellency will observe that my responsible advisers are anxious that representations should be made to the United States Government in the sense of this Minute maintaining the protest against the proposed construction of the Calumet Sag Channel and against the continued injurious affection of the said boundary waters.

I have, etc.,  
(Signed) ARTHUR.

His Excellency  
The Right Honourable JAMES BRYCE, O.M.  
February 21.

Enclosure in No. —

P.C. 398

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Royal Highness the Governor General on the 21st February, 1913.*

1. The Committee of the Privy Council have had before them a report, dated 17th February, 1913, from the Right Honourable the Secretary of State for External Affairs, upon a despatch from His Majesty's Ambassador at Washington, dated 30th December, 1912, on the subject of the diversion of water from Lake Michigan to the Chicago Sanitary Drainage Canal.

2. The Minister observes that this despatch conveyed to Your Royal Highness an expression of the opinion of the United States Government that Your

## SESSIONAL PAPER No. 180

Royal Highness's advisers had been misinformed in the matter, and that, as by the terms of the War Department permit under which the Calumet and Sag Channel is being constructed, the amount of water to be withdrawn through the Chicago and Calumet Rivers together would not exceed the total amount (4167 cubic feet per second) already authorized to be withdrawn through the Chicago River alone, no danger to navigation interests need be apprehended.

3. The Minister has submitted to the Department of Public Works, to the Department of Marine and Fisheries and to the Commission of Conservation the opinion expressed by the Government of the United States and has the honour to submit a memorandum, hereto attached, embodying the views (in which he entirely concurs) that have thus been elicited from the two Departments and from the Commission.

4. The Minister states that no official information was received by the Canadian Government with regard to the construction of the Canal or the request for diversion of water, and consequently no protest was made at the time by that Government. Notwithstanding such absence of notice Canada's failure to protest has been advanced as a reason for assuming her acquiescence in the proposal to divert 10,000 cubic feet per second, a fact which renders it the more desirable that Canada shall now make plain its attitude of steadfast opposition to the policy involved in the proposed diversion.

5. Your Royal Highness's advisers have already pointed out in the Minute of Council, approved on the 19th November, 1912, the serious detriment to navigation interests caused by the diversion of water from Lake Michigan and the consequent lowering of the levels of the Great Lakes. It is pertinent to observe further that the full effect of this diversion is at the present time mitigated to some extent by the fact that it is made from a reserve that has accumulated in these years of plenty. There is every reason to apprehend that when years of low precipitation return the harmful effects will be still more severely felt.

6. Considering, therefore, the fact that in practice the Chicago Sanitary District has greatly exceeded the provisions of the War Department permit; considering further its avowed policy largely to increase the present diversion, and having regard to the fact that the proposed Sag and Calumet Channel cannot be of service for sanitation purposes unless the diversion at present permitted should be increased, and that its construction would permit of a largely increased flow through the portion of the channel between Sag and Lockport which cannot under existing conditions take place without danger to navigation in the main channel between Lake Michigan and Sag. Your Royal Highness's advisers are constrained to regard the construction of the proposed channel as constituting a grave menace to important Canadian interests; and they consider it desirable that Canada's protest as put forward in the Minute of Council approved by Your Royal Highness on the 19th November should be maintained, on the ground that any diversion of water from Lake Michigan which prejudicially affects the navigation of the Great Lakes constitute an invasion of the rights secured to Canada by the Ashburton-Webster Treaty of 1842 in the channels in the river St. Lawrence and in the river Detroit and in the other passages and channels referred to in Article 7 of that Treaty, and further of the rights of navigation in boundary waters and in Lake Michigan to which this Dominion is entitled under Article 1 of the Boundary Waters Treaty of 1909.

7. While relying upon the provisions of the Treaties above mentioned and any other relative Treaties and Conventions, Your Royal Highness's advisers are not prepared to admit, and they do not admit that apart from these Treaties the authorities of the United States or the authorities of any State have the

right under the recognized principles of International Law to divert from Lake Michigan by any means, or for any purpose, such an amount of water as will prejudicially affect the navigation of boundary waters in which both Canada and the United States are deeply and vitally interested. It is submitted moreover that the navigation of these boundary waters, upon the improvement and development of which as International waterways each country has spent many millions of dollars, ought to be secured absolutely from injurious diversion on either side of the boundary line to the end that the interest of navigation and commerce, common to both countries, may be adequately preserved.

The Committee, on the recommendation of the Secretary of State for External Affairs, advise that Your Royal Highness may be pleased to forward a copy of this Minute, if approved, to His Majesty's Ambassador at Washington with a request that he make representations to the United States' Government in the sense thereof maintaining the protest against the proposed construction of the Calumet Sag Channel and against the continued injurious affection of the said boundary waters.

All which is respectfully submitted for approval.

(Signed) RODOLPHE BOUDREAU,

Clerk of the Privy Council.

*MEMORANDUM respecting the despatch from His Excellency the British Ambassador at Washington of 30th December, 1912, conveying reply of the Acting-Secretary of State of the United States of the 24th December, 1912, with regard to the diversion of water from Lake Michigan to the Chicago Sanitary Drainage Canal.*

1. The despatch of His Excellency the British Ambassador at Washington, above mentioned, and accompanying reply of the Acting-Secretary of State of the United States, have been submitted to the Department of Marine and Fisheries, to the Department of Public Works and to the Commission of Conservation.

2. Reports have been received from the two departments and from the commission, the effect of which is expressed in the following paragraphs of this memorandum.

3. According to information available to the Government of Canada, the Chicago sanitary drainage canal was built solely under the authority of the state of Illinois without federal authority or sanction; and upon its completion the United States government was first officially informed of its existence by a request for permission to divert water from Lake Michigan for the dilution of the sewage of Chicago.

4. Permission to divert water from lake Michigan was first granted by the federal authorities on May 8, 1899, subject to the conditions therein stated. The flowage then permitted was 5,000 cubic feet per second.

5. Subsequently the amount of the current permitted to be taken was modified and on the 5th of December, 1901, it was fixed at 4,167 cubic feet per second.

6. Although the federal authorities have never given permission to divert a greater amount than 4,167 cubic feet per second it is a matter of public notoriety that at least 8,000 cubic feet per second, and probably nearly nine thousand cubic feet per second are now being diverted through the canal for the purpose above mentioned.

7. The trustees of the Chicago sanitary district have displayed remarkable persistency in the attempt to divert an increased volume through the canal.

## SESSIONAL PAPER No. 180

An application to authorize a flowage of 10,000 cubic feet per second was made in 1912, to the Secretary of War, who dismissed the application on the 8th January, 1913.

8. The Chicago sanitary drainage canal between Sag and Lockport has a capacity of 14,000 cubic feet per second and those in control avow the intention of diverting that amount from lake Michigan if it can be done without injury to the navigation of the Chicago river. Evidences of that intention may be found in the following extract from the report of the president of the sanitary district for the year 1911:—

“I am of the opinion that the presumption that our water supply is to be limited to 10,000 cubic feet per second, or 600,000 cubic feet per minute is gratuitous and mischievous and should not be voiced by the officials of this district. I believe that we should have the volume requisite to our needs as they appear and are justified.”

9. It is urged by the United States authorities that aside from the provisions of the War Department permit, further protection against undue diversion is afforded by the fact that no enlargement of the existing section of the drainage canal below the point at which the Calumet and Sag channel would enter the same, is authorized or contemplated in connection with the works in progress. Such an argument is by no means convincing because, as has already been pointed out, the drainage canal below Sag has now a capacity of 14,000 cubic feet per second. Thus, the sanitary district could, if unrestricted, pass through it a flow greater than the combined capacities of the Calumet and Sag Channel and the Chicago river without increasing the section of the canal between the point of junction and its discharge into the Desplaines river.

10. It appears that in the main canal between lake Michigan and Sag the flow is at present limited not on account of the size of the canal but out of consideration for navigation interests which cannot manage their vessels in that channel with stronger currents than would be caused by a flow of 9,000 cubic feet per second.

11. It is of importance further to consider that for the sanitation purposes forming the ostensible object of the canal's construction, the amount of flow authorized by the War Department permit,—measured by the standard of the sanitary district's charter which calls for a flow of  $3\frac{1}{2}$  cubic feet per second for each thousand of population,—is only sufficient for a population of one and one quarter millions, a number admittedly not greater than that which is now dependent on the drainage canal. This being the case it is not apparent what advantage, for such sanitation purposes, can be derived from the construction at great cost of a new channel which must obtain its flow, if the restrictions of the permit are observed, at the expense of the main drainage canal.

12. Importance is attached to the reasons given by the secretary of war in his decision of 8th January, 1913, upon the application of the trustees of the sanitary district of Chicago. The conclusions of the secretary of war are as follows:—

“First. That the diversion of 10,000 cubic feet per second from lake Michigan, as applied for in this petition, would substantially interfere with the navigable capacity of the navigable waters in the Great Lakes and their connecting rivers.

“Second. That that being so, it would not be appropriate for me, without express congressional sanction, to permit such a diversion, however clearly demanded by the local interests of the sanitation of Chicago.

“Third. That on the facts here presented no such case of local permanent necessity is made evident.

"Fourth. That the provisions of the Canadian Treaty for a settlement by joint commission of "questions or matters of difference" between the United States and Canada offer a further reason why no administrative officer should authorize a further diversion of water, manifestly so injurious to Canada, against Canadian protest."

13. Inasmuch as the trustees of the Chicago sanitary district are at the present time diverting nearly the entire amount for which permission was refused, it is apparent that not only the navigation interests of Canada but those of the United States as well are suffering detriment from the course now being pursued.

14. The following extract from the decision of the Secretary of War is pertinent and cogent:—

"A very careful consideration of the voluminous evidence and statements submitted, as well as a consideration of the reports of other commissions and boards of engineers who have investigated the subject, leaves no doubt in my mind that the withdrawal of 10,000 cubic feet per second would substantially interfere with the navigable capacity of the Great Lakes and their connecting rivers. The Chief of Engineers, whose statutory authority in passing upon this application is concurrent with and independent of my own, and whose opinion upon such a question of scientific conclusion must be given special weight, so states in his recommendation. His conclusions are corroborated by the authority of other boards of investigation, notably the report of the International Waterways Commission of January 4, 1907.

"Careful observations and calculations conducted under the officers of the United States Lake Survey and reported through the Chief of Engineers, covering observations for the last 46 years, indicate that a withdrawal of 10,000 cubic feet per second would reduce levels at various places as follows:—

	Inches.
Lakes Huron and Michigan.. . . .	6-9
Lake St. Clair.. . . .	6-3
Lake Erie.. . . .	5-4
Lake Ontario.. . . .	4-5
St. Lawrence River at Rapide Plat.....	4-8 x

"The foregoing effects would be reduced at mean lake levels; the lowering effects would be much greater at low-water periods—the precise time when any additional shortage would be most keenly felt. This reduction would create substantial injury in all of the American harbours of the Great Lakes and in the St. Marys, St. Clair, and Detroit Rivers. It would produce equal injury in Canadian harbours on the Great Lakes and a still greater injury on the lower St. Lawrence, the Canadian officials claiming a probable lowering effect of 12 inches at Montreal at low water."

15. Canada has expended in the construction of canals and in the improvement of lakes, rivers and harbours, forming part of the St. Lawrence Waterway, about two hundred million dollars and further large expenditures are now in contemplation. The benefits resulting from such expenditure will be largely minimized and may even be destroyed, if the existing diversion from Lake Michigan be permitted to continue.

SESSIONAL PAPER No. 180

*From His Majesty's Ambassador at Washington to the Governor General*

No. 40.

BRITISH EMBASSY,

WASHINGTON, March 25, 1913.

SIR,—I have the honour to transmit herewith copy of the Note which I have addressed to the United States Government in pursuance of the instructions contained in Your Royal Highness's despatch No. 16 of February 25 regarding the Calumet and Sag Channel.

The United States Government have promised to give careful consideration to the views of Your Royal Highness' Government.

I have, etc.,

(Signed) JAMES BRYCE.

His Royal Highness

The DUKE OF CONNAUGHT AND STRATHHEARN, K.G.,

etc., etc., etc.,

The Governor General.

Enclosure No.

*From His Majesty's Ambassador at Washington to Secretary of State of the United States.*

No. 67.

BRITISH EMBASSY,

WASHINGTON, March 17, 1913.

SIR,—On receipt of your predecessor's note No. 1713 of the 24th of December last relative to the protest of the Canadian Government against the construction of the Calumet and Sag Channel for the diversion of water from Lake Michigan, I at once communicated the information contained in that note to the Canadian Government.

In reply the Governor General has sent me a memorandum, of which a copy is enclosed, questioning the correctness of the statements furnished to the State Department by the Department of Engineers.

This memorandum, which is based on information obtained from the Canadian Department of Public Works, the Department of Marine and Fisheries and the Commission of Conservation, represents the views of the Canadian Government, who, in calling attention to it, offer the following further observations.

They state that: no official information was received by the Canadian Government with regard to the construction of the canal or the request for diversion of water, and consequently no protest was made at the time by that Government. Notwithstanding such absence of notice Canada's failure to protest has been advanced as a reason for assuming her acquiescence in the proposal to divert 10,000 cubic feet per second, a fact which renders it the more desirable that Canada should now make plain its attitude of steadfast opposition to the policy involved in the proposed diversion.

The serious detriment to navigation interests caused by the diversion of water from Lake Michigan and the consequent lowering of the levels of the Great Lakes has already been pointed out. It is pertinent to observe further that the full effect of this diversion is at the present time mitigated to some extent by the fact that it is made from a reserve that has accumulated in these years of plenty. There is every reason to apprehend that when years of low precipitation return the harmful effects will be still more severely felt.

Considering, therefore, the fact that in practice the Chicago Sanitary District has greatly exceeded the provisions of the War Department permit; considering further its avowed policy largely to increase the present diversion, and having regard to the fact that the proposed Sag and Calumet Channel cannot be of service for sanitation purposes unless the diversion at present permitted should be increased, and that its construction would permit of a largely increased flow through the portion of the channel between Sag and Lockport which cannot, under existing conditions, take place without danger to navigation in the main channel between Lake Michigan and Sag, the Canadian Government regard the construction of the proposed channel as constituting a grave menace to important Canadian interests; and they consider it desirable that Canada's protest as already put forward should be maintained, both on the ground that any diversion of water from Lake Michigan which prejudicially affects the navigation of the Great Lakes infringes the rights secured to Canada by the Ashburton-Webster Treaty of 1842 in the channels in the River St. Lawrence and in the river Detroit and in the other passages and channels referred to in Article 7 of that Treaty, as well as the rights of navigation in boundary waters and in Lake Michigan to which the Dominion is entitled under the Boundary Waters Treaty of 1909, and also on the ground that apart from these Treaties the authorities of the United States or the authorities of any State have not under the recognized principles of International Law any right to divert from Lake Michigan by any means, or for any purpose, such an amount of water as will prejudicially affect the navigation of boundary waters in which both Canada and the United States are deeply and vitally interested. The navigation of these boundary waters, upon the improvement and development of which as International waterways each Country has spent many millions of dollars, is a question of vital interest to both the United States and Canada and it should be secured absolutely from injurious diversion on either side of the boundary line to the end that the interests of navigation and commerce, common to both countries, may be adequately preserved.

I am desired earnestly to draw the attention of the United States Government to the views of the Canadian Government as here expressed on a question to which they attach great importance, and to urge that the whole matter shall be re-examined with a view to securing in the best manner the common and general interests of all the regions adjoining the Great Lakes and of meeting the serious objections which the Canadian Government entertain to the continuance of the works against which they consider it their duty to protest.

I have, etc.,

The Honourable WILLIAM JENNINGS BRYAN,  
Secretary of State, etc., etc.

*From the Governor General to His Majesty's Ambassador at Washington*

GOVERNMENT HOUSE,

OTTAWA, June 9, 1916.

No. 135.

SIR,—With reference to my telegram of the 8th instant, I have the honour to transmit herewith, for Your Excellency's information, a copy of the letter from the Secretary of State for External Affairs upon which my telegram was based.

I have, etc.,

(Sgd.) ARTHUR.

His Excellency

The Right Honourable Sir CECIL SPRING RICE, G.C.V.O., K.C.M.G.,

7th June.

SESSIONAL PAPER No. 180

*To His Royal Highness the Governor General:*

The undersigned has the honour to represent to Your Royal Highness that he has had under consideration a Bill—H.R.12193—now engaging the attention of the Congress of the United States, providing for the construction, repair and maintenance of public works on rivers and harbours and for other purposes.

By a reference to the Bill alluded to it will be observed that commencing at line 23, page 32 of the printed document, provision is made for "the improvement of navigation of the Illinois River authorized by an Act of the Illinois General Assembly approved June 18, 1915, providing for an expenditure of \$5,000,000 therefor by the State of Illinois be and is hereby authorized in accordance with said Act".

It will be further observed that beginning at line 4, page 34, it is: "provided further that the amount of water to be diverted from Lake Michigan through this system of waterways, shall never exceed the rate of two hundred and fifty thousand cubic feet per minute".

The Minister of Marine has been advised by Daniel W. Hoan, Mayor, John L. Klinger, President Merchant and Manufacturers Association and William George Bruce, President Harbour Commission, all of Milwaukee, Wisconsin, that while the provision in the preceding paragraph restricting the volume of water to be diverted, was passed by the Senate, there is danger that it may not find sufficient support in the House of Representatives.

The Government of Canada has already urged strong grounds for the non-interference with the waters discharging through the St. Lawrence system, holding the view that the conservation of these is essential to the trade and commerce of this country.

The undersigned submits that the experience of the past two seasons in the River St. Lawrence has fully justified the position hitherto assumed by the Canadian Government with reference to this question, which position they now desire to reaffirm.

The undersigned recommends that His Majesty's Ambassador at Washington may be so informed by telegraph and requested to renew the protest made by the representatives of the Canadian Government before the Secretary of War in 1912 against any further diversion of the waters discharging through the St. Lawrence system.

Humbly submitted,

(Sd.) R. L. BORDEN,

*Secretary of State for External Affairs.*

Ottawa, June 7, 1916.

*From His Majesty's Ambassador at Washington to the Governor General*

No. 130.

BRITISH EMBASSY, WASHINGTON, April 22, 1921.

My LORD DUKE.—I have the honour to transmit to you, herewith, copies of the paper mentioned in the subjoined schedule.

I have, etc.,

(For the Ambassador)

R. L. CRAIGIE.

His Excellency

The DUKE OF DEVONSHIRE, K.G.,

etc.,

etc.,

etc.,

Governor General of Canada.

<i>Name and Date</i>	<i>Subject</i>
British Embassy, Washington, April 22, 1921.	Diversion of water from Lake Michigan.

*Reference*—Canada telegram of April 15, 1921.

*From His Majesty's Ambassador at Washington to the Secretary of State  
of the United States*  
No. 285.

BRITISH EMBASSY, WASHINGTON, April 22, 1921.

SIR,—I have the honour to inform you that my attention has been drawn by the Canadian Government to statements recently made public to the effect that the authorities of the city of Chicago are about to approach Congress with a view to obtaining legislative authority to increase the diversion of water from Lake Michigan for the use of the Chicago Sanitary Canal up to, and even possibly beyond, a rate of 10,000 cubic feet per second.

For convenience of reference I may perhaps be permitted to recall the earlier correspondence that has taken place on this subject: in a note dated March 17, 1913, His Majesty's Ambassador made known to the Secretary of State the attitude of steadfast opposition which Canada has consistently adopted to the policy involved in the proposed diversion. Mr. Bryce took the opportunity to point to the serious prejudice caused to Canadian navigation interests by the diversion of waters from Lake Michigan and the consequent lowering of the levels of the Great Lakes, even when such diversion had been made from a reserve that had accumulated in years of plenty. He further represented that any diversion of water from Lake Michigan which prejudicially affected the navigation of the Great Lakes constituted an infringement of the treaty rights secured to Canada by the Ashburton-Webster Treaty of 1842 in so far as concerned the channels of the rivers St. Lawrence and Detroit and other channels and passages mentioned in Article 7 of that Treaty. It was pointed out that such diversion was also an infringement of those rights of navigation in boundary waters and in Lake Michigan to which the Dominion is entitled under the Boundary Waters Treaty of 1909.

In drawing attention again to the above representation, I should like to lay stress upon the fact, quoted by Mr. Bryce that, apart from the question raised by these specific treaty stipulations, the recognised principles of International Law do not confer either upon the Federal Authorities of the United States or upon any individual State of the Union the right to divert from Lake Michigan, by any means or for any purpose, such an amount of water as will prejudicially affect the navigation of boundary waters in which both Canada and the United States are interested.

The existing diversion of water has not been acquiesced in by the Canadian Government and is, in fact, greatly in excess of the amount authorised by the Secretary of War in December, 1901. It has already done considerable harm and the Water Power interests throughout all the Great Lakes and the St. Lawrence system, from Lake Huron to tide water, look upon the present situation with apprehension—an apprehension which is shared by the Canadian Government.

The United States Government will, I think, agree that no solution of the area question is likely to be permanently sound or satisfactory unless it is based upon a recognition of the principle, established by international practice, that

SESSIONAL PAPER No. 180

no permanent diversion should be permitted to another watershed from any watershed naturally tributary to waters forming the boundary between two countries.

In drawing your attention to the attitude consistently taken by the Canadian Government upon this question, I venture to express the confident hope that the United States Government will not give their approval to the application of the Chicago authorities or take any steps in this matter which so closely affects Canadian interests without in the first instance arranging for a discussion of the matter with the Canadian Government.

I have etc.,

The Honourable CHARLES H. HUGHES,  
Secretary of State of the United States,  
Washington, D.C.

*From His Majesty's Ambassador at Washington to the Governor General*

No. 156

BRITISH EMBASSY,

WASHINGTON, May 17, 1921.

MY LORD DUKE,—I have the honour to transmit to you, herewith, copies of the paper mentioned in the subjoined schedule.

I have the honour to be,

My Lord Duke,

Your Excellency's most obedient, humble servant,

(For the Ambassador)

MAURICE PETERSON.

His Excellency

The DUKE OF DEVONSHIRE, K.G.,

etc., etc., etc.

Governor General of Canada.

NAME AND DATE.	SUBJECT
Note from the Secretary of State, Washington, D.C., May 11, 1921.	Diversion of Water from Lake Michigan.

*Reference:* Canada telegram of April 15, 1921.

*From the Secretary of State of the United States to the Governor General*

No.

DEPARTMENT OF STATE,

WASHINGTON, May 11, 1921.

EXCELLENCY,—I have the honour to acknowledge the receipt of your note No. 285, dated April 22, 1921, by which you inform me that recently statements have been made public to the effect that the authorities of the city of Chicago are about to approach Congress with a view to obtaining legislative authority for the withdrawal of water from Lake Michigan for the use of the Chicago Sanitary Canal, and bring to my attention the solicitude of the Canadian Government that no diversion of the waters of Lake Michigan may be permitted which will prejudicially affect the navigation of the boundary waters between Canada and the United States.

14 GEORGE V, A. 1924

I have the honour to inform you that it had been ascertained that no bill has been introduced in either House of Congress with the object of authorizing the diversion of additional waters from Lake Michigan, and that no information, other than that afforded by your note, has come to the attention of this Department that proposals are under consideration which may lead to the introduction of such bills. The Department will be pleased to watch for developments in this situation and to give further consideration to the suggestions of your note in connection with any proposals that may be made touching this matter or bills that may be introduced in Congress concerning it.

Accept, Excellency, the renewed assurances of my highest consideration.

(Sgd.) CHARLES E. HUGHES.

c. 711.4216 M 58/16.

*From His Majesty's Ambassador at Washington to the Governor General*

No. 155

BRITISH EMBASSY.

WASHINGTON, June 6, 1922.

MY LORD,—With reference to my despatch No. 156 of the 17th of May 1921. I have the honour to inform you that my attention has been drawn to the following statements which appear in a report entitled: "Report on the Diversion of Water from the Great Lakes and Niagara River 1921" by Colonel Warren of the United States Corps of Engineers:—

"The diversion through the Chicago Sanitary Canal averaged 8,800 cubic feet per second in 1917, although some daily averages were 10,000 cubic feet per second or more. Of this diversion, 6,800 cubic feet per second is incidentally used in the development of power." (page 19).

"It is definitely known that the diversion of the amount of water authorized to be taken by the terms of the permit of 1903, namely, 4,167 cubic feet per second, at mean stages would lower the level of Lakes Michigan and Huron about 0.2 foot, of Lakes Erie and Ontario about as much, and of the St. Lawrence River at Lock 25 about 0.28 foot. The average diversion for 1917, 8,800 cubic feet per second, being uncompensated, has lowered the level of Lakes Michigan and Huron about 0.43 foot, of Lakes Erie and Ontario about 0.41 foot, and of the St. Lawrence River at Lock 25 about 0.57 foot. Damage varying in amount with the locality extends from the lower miter sills of the locks at Sault Ste. Marie through all the lakes and connecting channels to tide water in the lower St. Lawrence River, and its amount increases in the same proportion as the diversion at Chicago increases." (page 20).

"... To this total loss of earnings the diversion of the Chicago Sanitary Canal, an average of 8,800 cubic feet per second in 1917, contributed \$2,866,000 annually, and even the diversions for power in the Chippawa-Grass Island pool far below the foot of Lake Erie, lower it nearly one-tenth foot and cause a loss of about \$526,000 each year." (page 44).

"The general estimate arrived at was that the present diversion of 8,800 cubic feet per second has a value to the City of Chicago of about \$7,000,000 a year, or \$800 per cubic foot per second per annum." (page 93).

It is, I believe, the understanding of the Canadian Government that the diversion of water through the Chicago Sanitary Canal should not exceed

SESSIONAL PAPER No. 180

4,167 cubic feet per second whereas, according to Colonel Warren's report, the diversion averaged 8,800 cubic feet per second in 1917, some daily averages rising as high as 10,000 cubic feet per second. Later on Colonel Warren speaks of the "present diversion of 8,800 cubic feet per second."

It will be seen from the earlier correspondence that, in the note which I addressed to the State Department on the 22nd of April, 1921, (No. 285), I made representations in regard to the alleged intention of the City of Chicago to approach Congress with a view to obtaining legislative authority to increase the diversion of water from Lake Michigan for the use of the Sanitary Canal up to, and even possibly beyond, a rate of 10,000 cubic feet per second. In their reply the State Department stated that no bill had been introduced for this purpose in either House of Congress and that, so far as the State Department were aware, no proposals were under consideration which might lead to the introduction of such bills.

Judging from Colonel Warren's report, the Chicago authorities have persistently exceeded the limit of 4,167 cubic feet laid down in the American War Department permit of 1903 and accepted, if I am correctly informed, as the basis for the Boundary Waters Treaty of 1909, Article 3 of which provides that no further.....diversions.....shall be made except.....with the approval.....of a Joint Commission.

I have the honour to enquire whether it is the desire of the Canadian Government that representations in the above sense should be addressed to the United States Government.

A bill introduced in the House of Representatives on April 18th by Mr. Shaw and referred to the Committee on Rivers and Harbours is also enclosed. The purpose of this bill is to limit to 4,167 cubic feet per second the quantity of water which may be withdrawn from Lake Michigan by the Sanitary District of Chicago. I understand that the motive which inspired Mr. Shaw to introduce this measure was that the present excessive diversion of water has caused floods in the District of Illinois which he represents.

I have forwarded a copy of this despatch to His Majesty's Principal Secretary of State for Foreign Affairs.

I have, etc.,

(Signed) A. C. GEDDES.

HIS EXCELLENCY,

The LORD BYNG OF VIMY.

Enclosure in No. —

H. R. 11348

67th Congress, 2nd Session.

IN THE HOUSE OF REPRESENTATIVES

April 18, 1922

Mr. Shaw introduced the following bill; which was referred to the Committee on Rivers and Harbours and ordered to be printed.

#### A BILL

*Governing the withdrawal of water from Lake Michigan by the Sanitary District of Chicago.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War is hereby authorized and directed to prescribe regulations to govern the withdrawal of,

14 GEORGE V. A. 1924

water from Lake Michigan by the Sanitary District of Chicago, a municipal corporation organized and existing under the laws of the State of Illinois, or its legal successor, through the Chicago and Calumet Rivers, and through artificial channels which have been heretofore or may hereafter be constructed: Provided, That no greater quantity than four thousand one hundred and sixty-seven cubic feet of water per second shall be withdrawn from Lake Michigan by the said Sanitary District of Chicago: Provided further, That the Secretary of War is hereby authorized to construct, at suitable points in the Chicago and Calumet Rivers, such controlling works as may be necessary to regulate the flow in accordance with the provisions of this Act.

*From the Counsel for the Dominion Marine Association to the Prime Minister*

KINGSTON, ONT., June 7, 1923

SIR,—I am instructed by the Executive Committee of the Dominion Marine Association to refer to a letter which I had the honour to write to you on the 10th April, 1922, regarding the Chicago Drainage Canal, and to ask you whether it is not possible for the Dominion Government to take some action to assist in preventing the further improper diversion of water at Chicago. The Present continued low levels on the lakes seriously decrease the carrying capacity of the fleet and as the lack of necessary depth of water is undoubtedly due in part to what is going on at Chicago, vessel owners fear that conditions will go from bad to worse.

Having regard to the treaty of 1910 and with due regard to the restriction imposed by the Secretary of War in 1912 limiting the diversion to 4,187 cubic feet per second, and to the fact also that the process of dilution and flushing at present adopted by the Sanitary Trustees at Chicago is wasteful and, in the opinion of this Association, not justified by the terms of the treaty relating to the priority of rights of user, it is submitted that some representation should be made with a view to asserting the rights of the Dominion on the Great Lakes and St. Lawrence now so seriously prejudiced.

I beg to commend the matter to your earnest consideration and shall hope to be favoured with advice as to what action is considered proper.

I have etc.,

(Sgd.) FRANCIS KING

Right Hon. W. L. MACKENZIE KING, C.M.G., &c.,  
Prime Minister, Ottawa, Ontario.

*From the Under-Secretary of State for External Affairs to the  
Counsel for the Dominion Marine Association*

OTTAWA, June 12, 1923.

DEAR SIR,—I am desired by the Secretary of State for External Affairs to acknowledge the receipt of your letter of the 7th instant, on the subject of diversion of water from the Great Lakes at Chicago, and to inform you that the matter will be referred to the technical officers of the Government for consideration and report.

(Sgd.) JOSEPH POPE

FRANCIS KING, Esq., K.C.,  
Counsel for the Dominion Marine Association,  
Kingston, Ontario.

SESSIONAL PAPER No. 180

*From the Counsel for the Dominion Marine Association to the Under-Secretary of State for External Affairs.*

KINGSTON, ONT., September 26, 1923.

SIR,—I am directed to inquire on behalf of the Dominion Marine Association what action, if any, is being taken by way of active protest against the diversion of water from the Great Lakes at Chicago. The Association has been deeply interested in the question since 1912 when it was represented at the hearing by the Secretary of War at Washington, on which occasion the limitation of 4167 c.f.s. was maintained, and on repeated occasions since then it has urged the Dominion Government by letters and representations made to the Prime Minister for the time being, and to various Departments, the need of intervention to maintain for Canada the water levels essential for safe navigation. The difficulties heretofore experienced are accentuated by conditions prevailing at the present time as the loss of an inch of available draft of water results in the corresponding loss of carrying capacity measured in tons of freight. Canadian vessel owners, and in fact all transportation interests in the country, are deeply concerned.

Recently the Trustees of the Sanitary District of Chicago waited upon the Executive Committee of this Association to outline their proposals for establishing compensating works in consideration of being allowed to withdraw 10,000 c.f.s. The Association has not seen any plans and is greatly in doubt as to the possibility of applying remedies satisfactorily in the manner proposed even without increasing the amount of water withdrawn. It has made inquiry again in certain quarters and it has been informed that your Department would be able to give advice.

I would, therefore, ask you to be so good as to let me know for the benefit of the Association what attitude is being taken by the Dominion in the matter and whether the subject is receiving the consideration which its importance appears to demand. I shall be glad to be favoured with an early reply.

I have, etc.,

(Signed) FRANCIS KING.

Sir JOSEPH POPE, K.C.M.G.,  
Under-Secretary of State for External Affairs,  
Ottawa, Ontario.

*From the Under-Secretary of State for External Affairs to the Counsel for the Dominion Marine Association.*

OTTAWA, October 6, 1923.

SIR,—I have been out of town for a few days, and only received a day or two ago your letter of the 26th September last, enquiring on behalf of the Dominion Marine Association what action, if any, is being taken by way of active protest against the diversion of water from the Great Lakes at Chicago.

As you are aware, the Secretary of State for External Affairs is at present in England, attending the meetings of the Imperial Conference. I am, therefore, not in a position to afford you any information on the subject, nor do I know how far the consideration which the Government no doubt has given thereto may have resulted in any concrete decision. I shall, however, make it my duty to enquire among the Departments of Government most likely to know something of the matter, and will communicate with you again.

I have etc.,

(Signed) JOSEPH POPE

FRANCIS KING, Esq., K.C.,  
Counsel for the Dominion Marine Association,  
Kingston, Ontario.

14 GEORGE V, A. 1924

*From the Managing Secretary of the Hamilton Chamber of Commerce to the Acting Premier.*

HAMILTON, ONT., September 26, 1923.

SIR,—I am directed to communicate with you with regard to the statement made by Sir Adam Beek, Chairman of the Hydro Electric Power Commission, with regard to the illegal diversion of water from the Great Lakes by the Sanitary district of Chicago and to advise that at a regular meeting of the Board of Directors of the Hamilton Chamber of Commerce held this date, a resolution was passed placing ourselves on record that the Federal House should be urged to press for an immediate adjustment of this matter with the United States.

Ontario has had within the last week or so a visit from a number of officials of the sanitary district of Chicago, the object of which was to facilitate negotiations urging towards an adjustment of the difficulty in which the sanitary district of Chicago finds itself by reason of its illegal diversion of water from the Great Lakes system to the Mississippi River. We are told that this action is equivalent to a loss of \$35,000,000 a year in water-power or 5,000,000 tons of coal annually. In addition it must be clear that such action must materially affect the level of the Great Lakes producing as a consequence a most serious effect upon navigation.

We believe that this is a subject of great importance and one which should be dealt with very promptly. The Government's serious consideration is therefore respectfully requested.

I have etc.,

F. P. HEALEY,

*Managing Secretary.*

Honourable W. S. FIELDING,

Acting Premier,

Parliament Buildings, Ottawa, Ont.

*From the Assistant Private Secretary of the Acting Premier to the Managing Secretary of the Hamilton Chamber of Commerce*

OTTAWA, September 27, 1923.

DEAR SIR,—In the absence of Mr. Fielding, I beg to acknowledge receipt of your letter of the 26th instant, in regard to diversion of water from Great Lakes to Mississippi River.

Your letter will be brought to the attention of Mr. Fielding upon his return to Ottawa.

Yours faithfully,

*Assistant Private Secretary.*

F. P. HEALEY, Esq.,

Managing Secretary, the Hamilton Chamber of Commerce,

Hamilton, Ontario.

*From the Counsel for the Dominion Marine Association to the Under-Secretary of State for External Affairs.*

KINGSTON, ONT., October 19, 1923.

SIR,—I have the honour to refer to your letter of the 6th instant with reference to the diversion of water from the Great Lakes at Chicago, and to inform you that at a meeting of the Executive Committee of the Dominion Marine

SESSIONAL PAPER No. 180

Association held in Toronto on the 17th instant the matter was further considered and the following resolution was unanimously adopted:—

"That the Dominion Marine Association protests in the most emphatic terms against any compromise with the Sanitary District of Chicago in its demand for diversion of water from the Great Lakes in excess of the 4,167 cubic feet per second authorized by the United States Secretary of War in 1912, and urges upon the Canadian Government the need of more active measures than have been apparent to date, with a view to securing from the United States Government enforcement of the existing order of the Federal authorities."

I was directed to communicate this resolution to the proper departments of the Government of Canada, and I am, accordingly addressing letters containing copies to the Rt. Honourable the Prime Minister and to the Honourable the Ministers of Public Works, Railways and Canals, and Marine.

The question, however, is of such general importance that there are doubtless many other departments of the Government directly interested and I am, therefore, communicating direct with you and would ask you to be so good as to forward the resolution in the proper direction.

I shall be very grateful to you also for such information as you may find available in pursuance of the terms contained in your letter of the 6th instant, and shall be very pleased to lay before the Executive Committee of this Association any advice you think proper on the subject.

I have, etc.,

(Signed) FRANCIS KING.

Sir JOSEPH POPE, K.C.M.G.,

Under-Secretary of State for External Affairs,  
Ottawa, Ontario.

*From the Under-Secretary of State for External Affairs to the Counsel for the Dominion Marine Association*

OTTAWA, October 21, 1923.

SIR,—I am in receipt of your letter of the 19th instant, on the subject of the diversion of water from the Great Lakes at Chicago, and in reply to inform you that the matter will be referred to the appropriate officers of the Government for consideration.

Yours very truly,

(Signed) JOSEPH POPE.

FRANCIS KING, Esq., K.C.,

Counsel for the Dominion Marine Association,  
Kingston, Ontario.

*From the Mayor of Collingwood to the Acting Prime Minister*

November 23, 1923.

Honourable W. S. FIELDING,

Acting Prime Minister,  
Ottawa, Ontario.

DEAR SIR,—It is proposed to send delegates from interested Municipalities to Ottawa to wait on the Federal Government asking that the United States—

14 GEORGE V, A. 1924

Government be memorialized at Washington with a view to having the City of Chicago prevented from diverting the waters of Lake Michigan, contrary to treaty between Canada and the United States.

From estimates made and submitted at various meetings held to protest against the actions of Chicago it would appear that lake levels and consequently lake navigation are being seriously affected by such action.

We are interested in this matter in Collingwood and are prepared to support a peaceful but firm protest against, what appears to us, a violation of treaty rights and a serious menace to Canadian Lake Transportation and Canadian Industry.

May I ask whether the Federal Government has yet decided to make representations of any such character at Washington? We are interested enough in this matter to join the delegation to Ottawa but if the Government has already decided on the action to be taken I can perceive no reason for action on our part at this time.

Yours very truly,

(Signed) J. ROBERT ARTHUR,

Mayor.

*From the Private Secretary of the Acting Prime Minister to the Mayor of Collingwood*

OTTAWA, November 26, 1923.

DEAR SIR,—In the absence of Mr. Fielding I beg to acknowledge receipt of your letter of 23rd instant in regard to the diversion of the waters of Lake Michigan by the city of Chicago.

Your communication will be placed before the Minister upon his return to Ottawa.

Yours faithfully,

Private Secretary.

His Worship MAYOR ARTHUR,  
Collingwood, Ontario.

*From the Governor General to His Majesty's Chargé D'Affaires at Washington*

No. 170.

GOVERNMENT HOUSE,

OTTAWA, December 19, 1923.

SIR,—I have the honour to inform you that numerous communications have been received by the Canadian Government from various interests and corporate bodies directly concerned, protesting vigorously against the diversion of water from Lake Michigan. The position of the Government of Canada in opposition to and in protest of the injurious effects of this diversion, both to navigation and water power, has been fully declared in representations which have been made to the Government of the United States. The attitude of the Canadian Government was clearly made known in a brief filed with the Secretary of War of the United States on the 27th March, 1912, and in Governor General's despatches No. 145 of the 23rd November, 1912, No. 16 of the 25th February, 1913, telegram of the 8th of June, 1916, No. 135 of the 9th June, 1916, and Secret telegram of the 15th April, 1921, to His Majesty's Ambassador at Washington for transmission to the Government of the United States.

SESSIONAL PAPER No. 180

In connection with the aforementioned representations, it has been brought to the attention of the Canadian Government that on or about the month of June, 1923, the Government of the United States was granted an injunction restraining the Sanitary District of Chicago from diverting water from Lake Michigan and, further that this injunction would not become active for a period of six months, to permit the Sanitary District time in which to appeal to the Supreme Court of the United States.

I shall be grateful if you will inform the Government of the United States that the declared attitude of the Government of Canada in the above matter is unchanged.

My Government request that appropriate enquiries may be made regarding the legal proceedings undertaken by the Government of the United States, which the Canadian Government confidently trusts will be vigorously pressed.

I have, etc.,

(Signed) BYNG OF VIMY.

His Majesty's Chargé d'Affaires,  
British Embassy, Washington.

*From the Under-Secretary of State for External Affairs to the Mayor  
of Collingwood*

OTTAWA, December 20, 1923.

SIR,—With reference to your letter of the 23rd ultimo, addressed to the Rt. Hon. W. S. Fielding, at that time Acting Prime Minister, regarding the diversion of the waters of Lake Michigan by the Chicago Drainage Canal, I beg to say that this question is now engaging the attention of the Government.

I have, etc.,

(Signed) JOSEPH POPE.

His Worship the Mayor,  
Collingwood, Ontario.

*From the British Charge d'Affaires at Washington to the Governor General*

BRITISH EMBASSY,

WASHINGTON, D.C., December 21, 1923.

No. 447.

MY LORD,—I have the honour to report that during the last session of Congress a special Senate Committee was appointed by the Vice-President to investigate the problem of a nine-foot channel in the waterway from the Great Lakes to the Gulf of Mexico and to enquire into the navigability of the Mississippi, Ohio and Missouri rivers, with a view presumably, to exploring the possibility of establishing direct maritime communication between the Great Lakes and the South Atlantic and Pacific Oceans.

This project continues to interest the Senate, and a sum of \$10,000 has now been allotted to the Committee, which consists of five senators and seven Representatives, for expenses connected with the calling of witnesses, the collection of relevant data, etc., in connection with their investigations.

I understand that the proposals mentioned above have long been of considerable interest to the Dominion Government since, if carried into effect, they must necessarily entail the use of large volumes of water drained from

14 GEORGE V, A. 1924

the Great Lakes. I shall not fail, therefore, to keep Your Excellency informed of all further developments in the matter.

A copy of this despatch is being communicated to His Majesty's Principal Secretary of State for Foreign Affairs.

I have the honour to be, my Lord,

Your Excellency's most obedient humble servant.

His Excellency,

The LORD BYNG OF VIMY, G.C.B.,

etc., etc., etc.,

Ottawa, Canada.

(Sd.) H. G. CHILTON.

*From Sir Adam Beck to the Prime Minister*

Canadian National Telegram

HON. MACKENZIE KING,

OTTAWA, ONT.

TORONTO, ONT., February 2, 1924.

I am informed what is known as the McCormick Bill purporting to authorize the construction of a canal and diversion of water from the Great Lakes to the Gulf of Mexico has been referred to a special committee for investigation and report the committee are meeting to hear evidence on Monday February eleventh the commission considers this diversion of water a serious interference with the power projects administered by the commission on behalf of the municipalities and the province of Ontario who are vitally interested and have an investment approximately two hundred and fifty million dollars I hope you will take the necessary action to properly protect and safeguard all interests concerned and greatly oblige.

ADAM BECK.

D'Affaires at Washington.*

CANADA

No. 19

GOVERNMENT HOUSE,

OTTAWA, February 9, 1924.

SIR,—With reference to your despatch No. 447 of the 21st December, on the subject of a special Committee of the United States Senate appointed to investigate the problem of a nine-foot channel in the waterway from the Great Lakes to the Gulf of Mexico, I have the honour to transmit, herewith, a copy of a letter from the Department of the Secretary of State for External Affairs setting forth the views of my Government on the matter and requesting that you will be good enough to communicate the sense of this letter to the Government of the United States.

It is upon the last paragraphs of this letter that my telegram No. 15A. of the 8th February was based.

I have the honour to be, Sir,

Your most obedient, humble servant,

(Sgd.) BYNG OF VIMY.

His Majesty's Chargé d' Affaires,

British Embassy, Washington.

February 8th

SESSIONAL PAPER No. 180

*From the Under-Secretary of State for External Affairs  
To the Governor General's Secretary*

OTTAWA, February 8, 1924.

No. 447.

SIR,—With reference to a despatch from His Majesty's Charge d'Affaires at Washington to the Governor General, dated 21st December, 1923, on the subject of a special Committee of the United States Senate appointed by the Vice-President to investigate the problem of a nine-foot channel in the waterway from the Great Lakes to the Gulf of Mexico and to enquire into the navigability of the Mississippi, Ohio and Missouri Rivers with a view presumably to exploring the possibility of establishing direct maritime communication between the Great Lakes and the South Atlantic and Pacific Oceans, I have the honour to represent that Bills before both the United States Senate and the United States House of Representatives, after defining the nature of the work to be done in the stretch above mentioned, proceed to confer upon the Sanitary District of Chicago the legal right to divert for sewage dilution and navigation 10,000 cubic feet of water per second from Lake Michigan upon condition that the said district shall pay into the Treasury of the United States such sums as may be estimated to be its reasonable share of the cost of constructing compensating works at several points for the purpose of controlling and restoring to the lakes above mentioned, the levels lost by reason of this diversion.

In that connection it is observed that no provision is made for the restoration of the levels of the St. Lawrence River from its head to tidewater. In other words, the restoration to be provided is to be in the waters where United States navigation predominates but none is provided for the waters so extensively used by Canadian shipping.

Representations that have been made to the Department of Marine and Fisheries refer not only to the loss of levels that affect navigation but also to the diversion of water for power purposes both in the international stretches where compensation may be determined and in the international stretches below Cornwall, in the Province of Quebec. In that connection it is submitted that the limit of 10,000 cubic feet of water per second, as contemplated by the proposed legislation, is about 1,500 c.f.s. more than is being diverted at present and it is possible that the proposed legislation may mean that the 10,000 c.f.s. is allowed for diversion and power at Lockport whilst the amount that would be required for lockages may be extra.

Having regard to the foregoing, I have the honour to represent that the Canada Government is unalterably opposed to the proposed diversion of water from the Great Lakes watershed to that of the Mississippi to the great detriment of navigation from Sault Ste. Marie to tidewater. The diversion that has already taken place at Chicago has lowered the waters of the Great Lakes to an extent that is now well known. It affects harbours that have cost many millions of dollars to deepen by dredging. It affects the locksills of the Sault Ste. Marie Canals, the Welland Canal and the St. Lawrence Canal, and it also injuriously affects the ocean shipping channel between Montreal and the sea, where the Government of the Dominion of Canada have spent many more millions of dollars in dredging operations. How great the injuries sustained by navigation interests are may be gathered from the fact that every inch of navigable water means an additional 60 to 80 tons of carrying capacity. The waters of the Great Lakes are the heritage of both the people of the United States and the people of Canada and quite obviously they should be conserved for the interests of both peoples.

14 GEORGE V, A. 1924

It is therefore sincerely to be hoped that the Government of the United States will not only not permit any further diversion of water from Lake Michigan but will intimate to, and if necessary insist, upon the Sanitary District of Chicago adopting some more scientific method of sewage disposal.

I am to request that His Excellency may be humbly moved to ask His Majesty's Chargé d'Affaires to communicate the sense of this communication to the Government of the United States.

I am to add that this Government is in receipt of information that the hearings on the Bills now before the United States Senate and House of Representatives, dealing with the matter, will commence at Washington on Monday of next week, and I am further to request that His Excellency may be humbly moved to cause His Majesty's Chargé d'Affaires to be informed by telegraph that it is proposed to send Mr. W. J. Stewart, Chief Hydrographer, to Washington to be present at these hearings on behalf of the Canadian Government, and asked that the necessary arrangements for Mr. Stewart's attendance at these hearings should be made.

I have the honour to be, sir,

Your obedient servant,

(Sd.) JOSEPH POPE,

*Under-Secretary of State for  
External Affairs.*

The Governor General's Secretary,  
Ottawa.

NAME AND DATE.	SUBJECT.
To the Department of State, Washington, D.C., February 13, 1924.	Views of Canadian Government on the subject of a special Committee of the United States senate appointed to investigate the problem of a nine-foot channel in the waterway from the Great Lakes to the Gulf of Mexico and to enquire into the navigability of the Mississippi, Ohio and Missouri Rivers.

*Reference: Ottawa despatch No. 19, of February 9, 1924.*

Enclosure in No.

*From His Majesty's Chargé d'Affaires at Washington to the Secretary of State of the United States*

No. 144.

BRITISH EMBASSY.

WASHINGTON, D.C., February 13, 1924.

SIR,—I have the honour to inform you that the Government of Canada have recently noted that a special Committee of the United States Senate has been appointed by the Vice-President to investigate the problem of a nine-foot

channel in the waterway from the Great Lakes to the Gulf of Mexico and to inquire into the navigability of the Mississippi, Ohio and Missouri rivers, with a view presumably to exploring the possibility of establishing direct maritime communication between the Great Lakes and the South Atlantic and Pacific Oceans. The Dominion Government further understand that certain legislation now before Congress proceeds, after defining the nature of the work to be undertaken in the stretch above mentioned, to confer upon the Sanitary District of Chicago the legal right to divert for sewage dilution and navigation purposes, 10,000 cubic feet of water per second from Lake Michigan upon condition that the said district shall pay into the Treasury of the United States such sums as may be estimated to be its reasonable share of the cost of constructing compensating works at several points for the purpose of controlling and restoring to the lakes in question the levels lost by reason of this diversion of water.

In this connection, the Dominion Government observe that no provision is made for the restoration of the levels of the St. Lawrence River from its head to tidewater. In other words, the restoration to be provided in the legislation above-named is to be in the waters where United States navigation predominates but no such restoration is provided for the waters so extensively used by Canadian shipping.

Reports submitted to the Canadian Government during recent months refer not only to the loss of levels that affect navigation, but also to the diversion of water for power purposes both in the international stretches where compensation may be determined and in the international stretches below Cornwall in the province of Quebec. In that regard, Lord Byng of Vimy desires me to point out that the limit of 10,000 cubic feet of water per second, as contemplated by the proposed legislation, is about 1,500 cubic feet per second more than is being diverted at present, and His Excellency considers it possible that the proposed legislation may mean that 10,000 cubic feet per second is allowed for diversion and power at Lockport, while additional water power will doubtless be required for lockages.

In view of the above, I have the honour to inform you that the Government of Canada are unalterably opposed to the proposed diversion of water from the Great Lakes watershed to that of the Mississippi, to the great detriment of navigation from Sault Ste. Marie to tidewater. The diversion that has already taken place at Chicago has lowered the waters of the Great Lakes to an extent that is now common knowledge. This affects harbours upon which many million dollars have been expended in deepening operations. It also affects the lock-sills of the Sault Ste. Marie Canals, the Welland Canal and the St. Lawrence Canals and, further, this diversion of water has a most injurious effect upon the ocean shipping channel between Montreal and the sea, where the Government of the Dominion have spent many more millions of dollars in dredging operations. How great have been the injuries sustained by navigation interests may be seen from the fact that every inch of navigable water means an additional 60 to 80 tons of carrying capacity. The waters of the Great Lakes are the heritage of both the people of the United States and the people of Canada, and the Dominion Government are of opinion that it is quite obvious that these waters should be conserved for the interests of both peoples. The Government of Canada, therefore, sincerely hope that the Government of the United States will not only not permit any further diversion of water from Lake Michigan, but will intimate to, and if necessary insist upon, the Sanitary District of Chicago adopting some more scientific method of sewage disposal than is foreshadowed at present.

SESSIONAL PAPER No. 180

I have the honour to request that I may in due course be furnished with an expression of the views of the United States Government upon the contents of this note, for communication to His Excellency the Governor General of Canada.

I have the honour to be,

with the highest consideration, Sir,

Your most obedient, humble servant,

## THE FIGHT FOR LAKE MICHIGAN

A question of very great physical importance, and one having both inter-state and international complications, has arisen on our Great Lakes. It is the question whether, for sanitary and other reasons, the Sanitary District of Chicago shall be empowered by a proposed act of Congress, introduced by Representative Hull, to withdraw 10,000 cubic feet of water per second from Lake Michigan and turn it into the Illinois and Michigan canal for the proper drainage of the city of Chicago and for purposes of navigation and of hydro-electric power. This proposition is being actively pressed by the Illinois representatives in Congress, and it is said that this amount of water is actually being taken at the present time, although by the existing permission, which rests only on an order of Secretary Alger twenty-five or more years old, only 4,167 cubic feet may be taken. The new proposition, and the present actual over-stepping of the law, are earnestly opposed by all the States on Lakes Michigan, Huron and Erie, on the ground that the diversion of the water into the Mississippi watershed, through the canal, is steadily lowering the level of the lakes named, and consequently shallowing the harbours and interfering with commerce. Chicago urges the proposition not only (and principally) for the people's health and the lives of the children of Chicago, but to improve the navigation between the lakes and the Mississippi and to furnish hydro-electric power. It is urged by the other States that Chicago is taking for this purpose, so desirable to her, the water that belongs to others. Two cases, one of them instituted by the State of Wisconsin, are now before the Supreme Court challenging the power to do this and the Dominion of Canada, which is interested in the supply of water that comes down the Niagara and the St. Lawrence, is also opposing the diversion of the waters of Lake Michigan.

SESSIONAL PAPER No. 180

The question, of course, would never have arisen but for the geographically striking fact that the Mississippi River, at the point where the Illinois River comes into it, is less than five hundred feet above the sea level, whereas the level of Lake Michigan is 581 feet above sea. The Des Plaines River, which flows southward (and into the Illinois River) just west of Chicago, is only sixteen miles from the shore of Lake Michigan. The result of this condition is that the sixteen-mile strip of land between the lake and the Des Plaines River is a natural dike, and as soon as it was pierced to a sufficient depth by the construction of the canal, the water began to flow from the lake toward the Des Plaines, the Illinois, and the Mississippi. The flow through this canal is capable of control, and it is declared that at the present time the flow is fully equal to the ten thousand cubic feet per second which the Hull bill would permit. Lake Michigan, in the condition, becomes an affluent of both the Mississippi and the St. Lawrence, and it is obvious that it cannot continue to be so extensive a feeder of the Mississippi and also be able to supply so fully the lower lakes and the St. Lawrence. And in fact, the level of the lakes has been perceptibly falling, with the result that the harbours of Lakes Huron and Erie, as well as those of Lake Michigan itself, are shallowing, to their detriment and danger. The level of Lake Huron is the same as that of Lake Michigan. There is a descent of eight and seven-tenths feet in the St. Clair and Detroit rivers between Lake Huron and Lake Erie, and a Niagara plunge of 226.3 feet from Erie to Ontario. If the level of Lake Erie is depressed—as perceptibly it has been—the volume of water flowing over Niagara is by that much diminished, and its power lessened.

The struggle between the States and cities below Chicago on the lakes, and the City of Chicago and State of Illinois, will be watched with interest, even by those not immediately concerned. Naturally the Mississippi valley interest, which is very powerful, will tend to cast itself into the balance on Chicago's side. This with regard to the proposed legislation. The attitude of the United States Supreme Court on the question whether Chicago has already taken what does not belong to her will be based on the law and on justice, presumably with due regard for the natural right of all who dwell on navigable waters to their normal flow.

*From the Governor General to His Majesty's Ambassador at Washington*

No. 39.

GOVERNMENT HOUSE,

OTTAWA, March 13, 1924.

SIR.—With reference to Mr. Chilton's despatch No. 70 of the 19th February, enclosing a copy of a letter dated the 16th February from Mr. Leland Harrison, on the subject of the Chicago Drainage Canal, I should be glad to receive, for the use of my Government, a copy of the note addressed to the United States Department of State on the 29th December, 1923, to which Mr. Harrison's letter is the reply, and also a copy of the previous reply in this matter which, it would appear from Mr. Harrison's letter, was sent to Mr. Chilton.

I have, etc.,

(Signed) BYNG OF VIMY.

His Excellency

The Right Honourable SIR ESME HOWARD, G.C.M.G., K.C.B., C.V.O.,  
H.B.M. Ambassador at Washington.

14 GEORGE V, A. 1924

*From the Governor General to His Majesty's Ambassador at Washington*  
Telegram

OTTAWA, March 17, 1924.

34 A.

The question of the diversion of water from the St. Lawrence watershed into that of the Mississippi by the Sanitary District of Chicago is still causing great concern in Canada, particularly in view of the bill on the subject which has been introduced into Congress, and my Ministers desire that the Government of the United States be informed of their hope that no action will be taken either to confirm or permit the extension of the claims of the Sanitary District to continue any diversion and thus adversely affect important interests in the navigation of the great Lakes and the St. Lawrence River and the development of power, actual or prospective, upon the river or upon interlake connecting waters.

The position of the Government of Canada in opposition to and in protest against the injurious effects of this diversion has been consistently maintained, and is still held, and my Ministers venture to suggest that it would be unfortunate if, now that the development of the St. Lawrence waterway for navigation and power purposes is under consideration, any action should be taken which might adversely affect the possibility of such development. They sincerely trust that this view will commend itself to the Government of the United States.

(Sd.) BYNG.

*From His Majesty's Ambassador at Washington to the Governor General*

BRITISH EMBASSY,

WASHINGTON, March 18, 1924.

No. 111.

My LORD,—I have the honour to acknowledge the receipt of Your Excellency's despatch No. 39 of the 13th instant, and in accordance with the request contained therein, to transmit to Your Excellency herewith copy of a note which Mr. Chilton addressed to the United States Government on December 29th last on the subject of the diversion of water from Lake Michigan by the Sanitary District of Chicago, together with a copy of the reply which was received from the United States Government to this communication.

I have etc.,

(For the Ambassador)

His Excellency,

The Lord BYNG of Vimy, G.C.B.,  
etc., etc., etc.

Governor General of Canada,  
Ottawa, Canada.

(Sgd.) JOHN CECIL.

*From the Secretary of State of the United States to His Majesty's Ambassador at Washington.*

DEPARTMENT OF STATE, WASHINGTON, January 21, 1924.

EXCELLENCY,—I have the honour to acknowledge the receipt of your Embassy's note No. 1111, of December 29, 1923, regarding the diversion of water from Lake Michigan by the Sanitary District of Chicago.

SESSIONAL PAPER No. 180

A copy of the note has been referred to the proper authorities to ascertain the status of the legal proceedings pending against the Sanitary District of Chicago and a further communication in regard to the matter will be addressed to you upon receipt of their reply.

Accept, Excellency, the renewed assurances of my highest consideration.

For the Secretary of State:

(Sgd.) WILLIAM PHILLIPS.

HIS EXCELLENCY

The RIGHT HONOURABLE

SIR AUCLAND GEDDES, G.C.M.G., K.C.B.,

Ambassador of Great Britain.

*From His Majesty's Chargé d'Affaires at Washington to the Secretary of State of the United States.*

No. 1111.

BRITISH EMBASSY, WASHINGTON. December 29, 1923.

SIR,—My attention has been drawn by the Government of Canada to the fact that about the month of June last the Government of the United States were granted an injunction restraining the Sanitary District of Chicago from diverting water from Lake Michigan, but that this injunction would not take effect for a period of six months in order to allow time for the Sanitary District of Chicago to appeal to the Supreme Court of the United States. I understand that such an appeal has been lodged but that the Supreme Court has not yet acted upon it.

I have the honour to inform you that the Government of Canada have received numerous communications from various bodies and interests directly concerned with this question, protesting against this diversion of water from Lake Michigan and I would further explain that, owing to the injurious effect of such diversion both upon navigation and water-power, the Dominion Government still maintain their attitude of opposition as already explained to the United States Government in Sir Auckland Geddes' note No. 285 of April 22, 1921, and previous correspondence.

In these circumstances, the Governor-General of Canada has asked me to enquire the present status of the legal proceedings instituted by the Government of the United States with a view to preventing any increase in the diversion of water from Lake Michigan, and to add that the Dominion Government confidently hope that these legal proceedings will be vigorously pressed by the United States Government.

I have etc.,

(Sgd.) H. G. CHILTON.

The Honourable CHARLES E. HUGHES,

Secretary of State of the United States,  
Washington, D.C.

Consideration of Methods in Relation to Canadian Conditions.. . . . .	85

## INTRODUCTION

On the authority of a letter from the Minister of Finance, dated August 23, 1923, I undertook to make an enquiry into the subject of Rural Credits. The above mentioned letter intimated that the enquiry should be along the lines suggested in the Report of the Special Committee appointed to enquire into Agricultural Conditions, dated January 19, 1923. The report is as follows:—

"As to the necessity of credit on more advantageous terms to the farmers of this country, there can be little room for difference of opinion. Well selected and secured farm loans should be among the safest and most attractive of investments, while the security offered through the pledging of non-perishable and readily marketable farm products is certainly comparable to that offered by merchants and manufacturers. Notwithstanding these facts, the agriculturist of Canada, in certain parts at least, pays considerably more for long term credits secured by his property than many of his competitors in other lands as well as more than is paid by many of his fellow citizens in other walks of life for similar accommodation.

"Your committee are of the opinion that after consideration along the lines hereinafter respectfully suggested, the Government should promote the obtaining by agriculturists of this country of long term credits, as well as intermediate credits, and that action should be taken, and, if necessary, legislation enacted to this end at the earliest possible date.

"The attention of your committee has been forcibly brought to the fact that the operations of the Federal Farm Loan Board system in the United States offer, through the National Farm Loan Associations, the Federal Land Banks and the Joint Stock Land Banks, facilities for long term credits to the farmers of that country, which when prudently availed of, are of immense advantage to them. Likewise, it would appear that the farmers of certain European countries, as well as of other parts of the commonwealth of British nations, enjoy credit facilities of an advantageous nature.

"The Federal Farm Loan Board system, operating through the Federal Intermediate Credit Banks and the Agricultural Credit Corporations in the United States, is designed to supply to a very large extent, to agriculturists, intermediate credits, that is to say, credits running from nine months to three years.

"It will be remembered that there are at present operating in Canada certain provincial systems. As to the success of some of these, serious differences of opinions have been expressed. It would appear that some are suffering from inadequate loaning funds.

"To what extent the Federal Government should inaugurate a federal system of long term and intermediate term loans to farmers; how such system, if inaugurated should be related to the different provincial systems; what features of, or other systems of, farm credits could, with advantage, be adopted, are all matters requiring further searching investigation.

"Your committee have heard a number of witnesses and have devoted a considerable amount of study to the question. They feel, however, that the system is of such paramount importance that further investigation and study should take place before definite legislation is brought down.

All authorities apparently agree that there is a barren area of credit unsupplied by either the banks on the one hand or the loan companies on the other.

"We, therefore, recommend the investigation by the Government into the question of long term and intermediate term rural credits; the operation of existing schemes in Canada, the United States and elsewhere; the examination of the question as to whether and to what extent systems of agricultural credits should be fitted into and related to our present banking system; as well as the operations of mortgage and loan companies; and that to this end, and in such manner as may appear best to the Government, the views of agriculturists, bankers, representatives of loan companies, officers of the present Canadian provincial loan system, as well as of the officers of the Federal Farm Loan Systems in the United States, should be obtained, in order that adequate and well-founded action for the relief of the present situation may be taken.

"In this connection also, the attention of your committee was drawn to the question as to whether it would be advisable and in accordance with sound economic and banking principles to extend to those provinces which desired to obtain money for their rural credit systems, facilities for obtaining of credit such as are afforded to the chartered banks under the provisions of the Finance Act of 1914, under the provisions of which Dominion notes are issued to the banks against the deposit of certain approved securities with the Treasury Board."

Taking, therefore, the report of the Special Committee as a basis for the enquiry, the procedure in obtaining information was as follows:—

First, all the documents, legal enactments and reports of the Dominion Government and the Provincial Governments, not already in my possession, were obtained and studied. Following this the central provinces, Alberta, Saskatchewan, Manitoba and Ontario were visited, and the schemes in actual operation were gone into with the officials responsible for their administration. Wherever possible ministers of Provincial Governments were consulted, especially those having already had experience in the creation or the working of legislative enactments. The province of British Columbia and the Maritime Provinces have not yet been visited as time did not permit, but the laws in operation and the reports of the provinces have been studied.

In order to get first-hand information of the condition of affairs in the United States of America, some time was spent in the offices of the Farm Loan Board in Washington, under whose supervision both the Federal Land Banks and the Intermediate Credit Banks are functioning. Through the offices of this Board the fullest information was made available to me both by means of documentary evidence and personal interviews with those responsible for the administration of the affairs of these great organizations.

Further, letters of introduction were given me to the presidents of the Federal Land Banks in all the centres of the country where they now operate. I was able by visiting some of these centres to get information on the actual working of their plans in the most intimate way.

In selecting points for detailed study, banks operating in parts of the country bordering on Canada, the problems of which would be similar to our own, were selected. These were the Land Bank of Springfield, Mass., which operates in the states of Maine, New Hampshire, Vermont, Massachusetts and northern New York and the Bank at St. Paul, the operation of which covers northern Michigan, Wisconsin, Minnesota, North Dakota and Montana. The Bank at Baltimore was also visited and studied intimately as presenting somewhat contrasting conditions to the others

## SESSIONAL PAPER No. 142

At this point I wish to express my grateful appreciation for the generous treatment accorded me by all the officials of the organizations in the United States and especially to Commissioner Cooper of the Farm Loan Board at Washington, through whose kindness the doors of the organizations all over the country were opened to me.

A good deal of documentary evidence was collected first hand at the centres visited. Many of the foreign documents were made available through the kindness of Mr. Doherty, of the International Institute of Agriculture, Ottawa, while valuable assistance in the same way was given by Mr. Lynch, of the Department of the Interior.

The problems involved in the enquiry were also discussed with bank managers in the United States and Canada, as well as with managers of loan companies and insurance companies in both Eastern and Western Canada.

In addition to the information thus obtained, I drew upon the evidence which I collected when in Europe in 1913 with the American Commission, and the reports which grew out of the work of the commission. As far as possible, documents have been obtained showing the recent trend of rural credit organization in Europe and in Great Britain. Documents have also been obtained from New Zealand, Australia, South Africa and South American countries where systems of rural credits are already in existence. So far as the time at my disposal would permit, I have tried to cover the field of the practical application of rural credit principles, as distinguished from mere theorizing about the matter.

One further word by way of explanation. The usual method of holding public sessions of enquiry has not been followed. The facts collected were from responsible people whose statements were substantiated by documents, legislative enactments and official reports. Many expressions of opinion were received by letter and from individuals personally. These opinions, however extreme, have been duly considered and carefully weighed.

In what follows a precise presentation of the facts gathered is attempted. Technical terms and statistical information have been avoided, unless considered absolutely necessary for a proper understanding of the issues involved. In the interest of clearness the report is divided into six sections as follows:—

Section I—General Considerations.

Section II—Rural Credit in Europe.

Section III—Rural Credit in the British Empire, outside Canada—

(a) Great Britain.

(b) Australia.

(c) South Africa.

(d) New Zealand.

Section IV—Rural Credit in the United States.

Section V—Rural Credit in Canada.

Section VI—Consideration of Methods in Relation to Canadian Conditions.

I have tried to make every section of the report complete in itself, so that, after reading section 1, those interested in the study of the special problems of the individual country may do so without reference to other parts.

It is hardly necessary to point out that the movement for Rural Credits on this continent is not an incident in the history of an individual country, but is part of a movement covering the whole civilized world, and would appear to be a normal development growing out of the conditions of modern agriculture.

## SECTION I

## GENERAL CONSIDERATIONS

The terms Rural Credit, Short Term Credit, Long Term Credit, and Intermediate Credit, require definition as they are used ambiguously in much of the current literature in which the terms occur.

The term "*Rural Credit*" is used in both Europe and America in a general sense to include all forms of credit which have to do with the production and distribution of farm crops. It will be used always with that meaning in this report.

The term "*Short Term Credit*" has a different meaning in Europe from that which it has in the United States. In Europe it means all forms of credit in relation to agriculture other than mortgage credit and in which the security is personal or easily negotiable collateral. In the United States the term is used generally in reference to ordinary banking transactions of from three to six months. In Canada it is used in the same sense, except in legal documents referring to Rural Credits where its meaning is the European one. When discussing European methods, therefore, it will be necessary to use the word with the European meaning as comprehensive of the two American terms, "*Short Term Credit*" and "*Intermediate Credit*." In discussing Canadian documents it will be necessary, in order to avoid confusion, to define the term when used.

The term "*Long Term Credit*" is everywhere used to mean mortgage credit and in relation to agriculture, farm mortgage credit for terms of five years or over. The only exception is in France where a special meaning is given by the use of the terms "*Long Term Collective Credit*" and "*Long Term Personal Credit*." The context, however, will be found to give sufficient explanation in these cases.

The term "*Intermediate Credit*" is always used to mean credit for a period longer than the ordinary banking transaction of from three to six months, and yet shorter than the ordinary mortgage term. The period may vary from six months to five years. The security is non-perishable farm commodities or stock security but is not based on land mortgage. As worked out in the United States where the term is now official, it is a banking operation but done through a bank specially regulated to cover the longer term stated above. In this sense only will the word be used.

The problem which the Rural Credit organizations seek to solve is how to safeguard and promote the economic interest of those engaged in agricultural pursuits, especially by providing them with such facilities for obtaining credit that they may be able to acquire the means of production and to dispose of their produce on such favourable terms as to make farming a profitable enterprise.

One great reason why all countries have found it necessary to solve in some measure this problem is that agriculture is everywhere regarded as the fundamental industry, which if not prosperous reflects its lack of prosperity on every other national activity. This is especially true of all those countries which seek to become even approximately self-supporting.

In order to make possible the instruments of production to those whose only capital is the land, the Long Term or Mortgage Credit systems arose. To make possible the seasonal operations by means of which production and disposal could be profitably undertaken, the Short Term and Intermediate Credit systems came into being.

## SESSIONAL PAPER No. 142

The aims of the Long Term or Mortgage Credit systems, so far as they relate to agriculture, are:—

1. To free the landowner from the necessity of borrowing directly from the individual creditor.
2. To regulate the payment of interest and principal so as to free the borrower from the danger and anxiety associated with demands for repayment under circumstances which made payment impossible.
3. To get rid of usurious rates of interest, putting agriculture in this regard on the same basis as other business equally secure.

From the effort to meet these conditions arose—

1. Land mortgage bonds.
2. Amortization, the repayment of the principal with the interest at a fixed rate over a series of years.
3. Co-operative land mortgage credit, the combining of the security of the many to secure a reduction in the rate of interest.

The reasons advanced in favour of the land mortgage bond are briefly as follows:—

1. It makes possible the long term mortgage, otherwise impossible, as the individual money lender would not as a rule be willing to take a mortgage for a term of fifteen or twenty or thirty years. This can be done by the creation of a corporate body, the Land Bank, whose existence does not terminate with the death of the individual.
2. It places between the lender and the borrower an intermediary whose business it is to safeguard the loan and whose security is unquestioned.
3. It makes a more flexible arrangement for the lender, as his bonds are always available for sale in case of need or as collateral security of a high order, if desired.
4. It makes possible the use of the amortization principle, that is the repayment of the principal of the debt by means of small annual instalments along with the interest, the payment of principal and interest alike coming out of the annual proceeds of the land.
5. It recognizes also the fact that the mortgage is to be redeemed by production from the land, thus establishing the security on a rational basis. The mortgage is not strictly a real estate mortgage otherwise.
6. It allows that combination of security which makes low rates of interest possible, if correct principles are followed. In so doing it establishes a reasonable limit for a mortgage and thus protects both borrower and lender.
7. If the fixed capital is raised in this way, free from personal or other kind of guarantee, it leaves the total remaining assets of the farmer free as security for his seasonal requirements for immediate production. This can be used with the ordinary bank or through the special banks at the will of the borrower.

The aims of the Short Term Credit systems as they exist in Europe and the Intermediate Credit system as it exists in the United States are:

1. To give to the agriculturist a credit system suited to the seasonal requirements of his occupation.
2. To secure for him rates of interest for this requirement consistent with the security of his business.

With regard to the first of these aims, it is claimed everywhere by those who advocate such credit systems that the ordinary banks are not organized to meet in a normal way the claims of agriculture. It is not necessary in this report to go over the arguments advanced, as they are quite well known. Briefly it amounts to this.

The farmer's business does not usually give him a quick return. His period of investment is at least nine months or a year as he has to await the processes of nature to give him his dividends. He is subject to losses by accident, disease and fluctuations in prices, causes over which he has no control and which make special financial arrangements necessary often covering a period considerably longer than that required to produce his yearly crop. Short Term Credit of three months even with the right of renewal is to him both inconvenient and embarrassing, as although renewal may be promised the difficulty in obtaining it is much greater if crop difficulties in the meantime have arisen. Further, the ordinary commercial banks, organized especially to suit commercial and industrial conditions, to a large extent fail to appreciate the position of the farmer, who, because of his inability to meet specific banking practises, finds himself, particularly if he is a small farmer, regarded as an undesirable customer, not because of any fault of his own, but because he is unable to marshal his assets in a manner to satisfy the bank. Hence the claim that a special financial organization with a different purpose from that of the ordinary bank is required.

With regard to the second aim mentioned above, the difficulty to be overcome arises naturally out of the conditions just stated. If the ordinary commercial bank is incapable of meeting legitimately the farmer's needs, then he must either do without working capital or resort to some other means of obtaining it. To do without renders him helpless, unless he has already acquired a surplus of his own. The only other sources open to him are the private money lender or the local merchant through whom he may buy his supplies. In either case, while the credit may be obtained for the length of time required, the cost is very great, often too great in proportion to his productive capacity. The private money lender is often more hard-hearted than the banker, while the local dealer's credit is generally the most expensive of all. The latter usually considers it necessary to protect himself against loss by increasing the price of his goods, if sold on credit or by charging a higher rate of interest, if he advances money.

The Short Term Credit Banks of Europe, the Intermediate Credit Banks of the United States and a great variety of state supported financial organizations in other civilized countries have sought to overcome the difficulties stated above by organizing the security of the farmer on a co-operative or semi-co-operative basis in such a way as to make possible credit at reasonable rates of interest and for a length of time suited to his needs.

The foregoing is not to be interpreted as an argument but as an effort to state in the briefest possible way the point of view and purpose of the Rural Credit movement. The extent to which these organizations have succeeded will be apparent later on in this report.

## SECTION II

## RURAL CREDIT IN EUROPE

One of the outstanding facts about modern Europe is the number and variety of its financial institutions. Private, public and co-operative organizations have grown up everywhere, often with a view to meet special needs or to solve special financial problems. In every country the ordinary joint stock bank is, of course, to be found. Side by side with these are to be found savings banks working under definite restriction; rural banks specially suited to do business with the rural communities; public utility banks, that is banks doing a non-profit-making business; land mortgage banks whose activities are often confined to land mortgage business or to credit based on land mortgages; general joint stock loan companies; state banks doing business on a profit-making basis in the interest of the State; and finally co-operative banks specially regulated to assist and stimulate co-operative institutions.

Institutions of all of the above mentioned types give consideration to the problems of agriculture and make loans on the basis of farm land security. I shall discuss, however, the agricultural credit institutions only; that is, institutions whose function is to deal with problems of agriculture specifically and whose aim is to give the agriculturist money at rates of interest in relation to the security offered. These institutions give to the farmer the advantage of their knowledge of the value of his security and have resulted in establishing agricultural credit on what is regarded as a rational basis. As a consequence of their operation the small farmer has been taken out of the hands of the usurers, whose rates of interest fifty years ago ranged from ten per cent to fifty per cent, and has been made the cheapest borrower in the country. These institutions have done more than this. They have had a regulating influence on the rate of interest charged by all the other financial institutions doing business with the farmer. As an illustration, one might take the position of the Land Mortgage Credit Associations or the *Landschaften* in Germany. At the end of 1912, the financial institutions in Germany lending money on mortgages had invested about \$6,500,000,000 in various types of mortgage security. Of this amount over \$2,000,000,000 was in farm mortgages. Of this latter amount the *Landschaften* held \$850,000,000, about 13 per cent of the whole, or about 40 per cent of that invested in farm mortgages. The rate of interest, however, was practically that fixed by the *Landschaften*. The above figures stood practically unchanged in 1920. In this section of the report attention is devoted to a description of those institutions whose special aim is to facilitate agricultural credit, dealing with those of a co-operative or state-aided type, or a combination of both.

Studied with respect to their purpose, these institutions fall under two general heads:—

1. Those giving Long Term or Mortgage Credit.
2. Those giving Short Term or Personal Credit.

### 1. Long Term or Mortgage Credit

Of the institutions giving Long Term or Mortgage Credit the following are the most important and will be described in some detail:—

- (1) The German *Landschaften* or Land Mortgage Credit Associations.
- (2) The German Mortgage Credit Banks.

- (3) The German Savings Banks.
- (4) The *Crédit Foncier* of France.
- (5) The Co-operative Mortgage Credit Banks of Denmark.
- (6) Institutions in other Countries of Europe.

Similar institutions found in other parts of Europe which have a local application or which are varieties of one or the other of the above will be referred to only when by so doing points of special significance make it necessary.

#### (1) The German *Landschaften* or Land Mortgage Credit Associations

The German *Landschaften* or Land Mortgage Credit Associations were called into being at a time so like our own, so far as the difficulties of the agriculturist are concerned, that to quote from the discussion of the time seems like reading current literature on the subject. They had their origin in the period following the Seven Years' War (1755-1763). The land owners who belonged largely to the nobility and who had depending on them the peasant population found themselves in great difficulties. "Agriculture was in a disastrous state; fields lay untilled, dwelling-houses had been destroyed by fire, cattle had perished. The landowners lacked the means to carry out any reconstruction inasmuch as their credit was no longer good and the difficulties in the way of procuring necessary capital were very great. Interest was not paid punctually, debts were not discharged, mortgages were foreclosed and insolvency resulted. The confidence of investors in respect to the landowners was completely shaken. Many mortgage loans were withdrawn. The owners ran the risk of losing a considerable portion of their property." In 1759 a moratorium was declared. This was revived six years later. "But this moratorium merely acted as a palliative as soon as it ceased to be operative, the deficiency of credit made itself felt with landed proprietors in a still more aggravated form. Many estates were sold by auction. In addition, there was the circumstance that the price of cereals, very high during the war, fell sharply after the peace, and besides the export of wool was forbidden on pain of death. This meant that even where it had been possible to keep up farms or to restore them to working order the owners were plunged in difficulties. Credit could only be obtained from private individuals, at a high rate of interest, since there were at the time no institutions that could act as intermediaries between landowners seeking credit and capitalists seeking investment for their money." Such were the circumstances which led to the devising of the first land mortgage scheme in Europe. The landowners of the Prussia of that day were very much in the position of those in Western North America to-day. They had land in abundance but money was scarce and hard to get. Interest charges were abnormal and ruin stared many of them in the face.

Within a very short time after the establishment of the *Landschaft*, the following statement from a report to the King indicates the change that had taken place. "Thanks to the most benevolent support of your Majesty the credit of the *Landschaft* is now in an extremely satisfactory state. A remarkable number of families who for want of money and credit were on the brink of ruin and are now in a secure position and thoroughly rehabilitated and will in consequence ever cherish admiration and reverence for your Majesty."

The credit for the scheme belongs to Buhring, a Berlin merchant. He presented his scheme to Frederick The Great in 1765.

The general idea of the scheme was that the land represented the best conceivable security, if there could be created by some sound system a quotable security, that is if the real value of the land could be made a basis for a sound negotiable security it would cause money to flow again freely into the required

## SESSIONAL PAPER No. 142

channels. In order to realize his scheme he advised that there be created with the approval of the state authorities a credit association (*landschaft*) by persons in need of credit, which on the basis of mortgages issued in its favour would issue mortgage bonds bearing interest payable to bearer. In this way, the liability of the individual would not be direct to the investor, the bonds being guaranteed by the central authority.

The actual scheme as put into operation in 1770 was a modification of this suggestion. The fundamental idea, that of placing an intermediary, the credit association, between the individual borrower and the investor remained as a foundation stone of the whole structure.

As it stands to-day the *Landschaft* is an association of borrowers for the purpose of securing loans by the issue of bonds secured by mortgages registered collectively against their properties. The bonds are not chargeable against any individual mortgage but against the mortgages taken together. For this borrowing, the landowner is debtor to the association and the association is debtor to the investor. The borrower pays interest to the association, and the association to the investor.

The bondholders are secured in the following manner:—

(a) Mortgages must not be granted beyond two-thirds of the value of the land. The valuation is fixed after careful appraisement by independent officials, the basis being the annual productive capacity of the land as shown by experience.

(b) Bonds must not be issued in excess of the total amount of the mortgages bearing equal interest.

(c) The amount of debt is being constantly reduced by amortization at least until a certain definite portion is paid off.

(d) The organizations themselves are non-profit-seeking, and possess no share capital upon which profits are paid.

(e) The bonds are secured not only by total mortgages of the association, but also by its reserves and the accumulated sinking fund payment of mortgages.

(f) Finally, should all other sources fail the incorporated landowners are responsible in some cases to full value of their property, in others to a given limited liability.

These associations are public corporations and are under state supervision. This supervision is exercised by a Royal Commission and the articles of the Credit Association and the regulations must be sanctioned by the Government, much as our railroad companies are in Canada. They possess certain special privileges. One of the permanent officials must have passed the State examination qualifying him for the office of judge so that they are permitted to distrain without having recourse to ordinary civil procedure. Within the limits mentioned above they are autonomous and manage their affairs on the principle of self-government. The employees have the standing of state officials. It cannot be over-emphasized that these associations are associations of borrowers, not lenders; their aim is to save money for their members, not make money for others. Apart from paying interest on bonds, they have no relation to the investor who buys his bonds on the market in the usual way. The landowner becomes a member of the Credit Association when it acquires a mortgage on his land and ceases to be a member when his mortgage has been paid off, so that no pressure for dividends enters into the conduct of the business.

The special merits of these associations are summarized by Mr. J. R. Cahill in his excellent report for the British Government in the following terms:—

(1) They enable landowners to mobilize, as it were, their landed possessions by the creation of bonds passing into the general system of securities; instead

of only being able, like English landowners to provide a mortgage security of very restricted currency, German landowners have the advantage of being able to convert a mortgage charge into a security realizable at any time in the general market.

(2) Loans granted are not subject to recall.

(3) The rate of interest is as moderate as possible, being closely related to the prevailing market rates for money.

(4) The bonds being irredeemable by the holder, the rate of interest may not be raised.

(5) The right is conceded to reduce the debt by payments made at the mortgagor's convenience.

(6) The necessary extinction of the capital debt is accomplished gradually.

(7) The costs for valuation and other charges are low.

(8) Their administration is at once relatively inexpensive and their office holders highly qualified for their work.

Of these associations there are twenty-three in Germany having a total of outstanding loans in 1920 of 3,255,000,000 marks equal at par to about \$850,000,000. The average pre-war interest was about 4 per cent. That is 4 per cent bonds were selling at par in 1914. These bonds have always maintained a strong position in the market. At the time of the Napoleonic Wars when Prussian four per cents were quoted at twenty, the land bonds never fell below fifty. In 1920, the Central Landschaft four per cent bonds were quoted at one hundred, while in certain of the provinces they were above par. These facts show how firm a hold, after one hundred and fifty years of experience, these securities have on the investing public in Germany.

## **(2) The German Mortgage Credit Banks**

The Mortgage Credit Banks, of which there are sixteen in Germany, are all established under the guarantee of some public authority, either a State, a Province, or a District within a Province. While not restricting their operations to farm mortgages, they all do a large farm mortgage business. They had in 1913 a total of outstanding loans of \$500,000,000, one half of which is in land mortgages, the other half being to local municipal or communal authorities. The funds of these institutions are obtained,—

(a) By the issue of bonds guaranteed by State, Province or District in which it operates. These are recognized by law as trustee securities.

(b) By deposits.

(c) By grants or loans from the State or authority concerned.

(d) Payments by borrowers into sinking fund account.

(e) Accumulated funds.

These banks were specially designed to serve the needs of the medium or small landowner to whom loans are made at moderate rates of interest, on an amortization plan and not subject to recall.

These banks are usually managed by a special committee in some cases appointed by the State, in others either wholly or partially by the Assembly or Council of the public authority guaranteeing the liabilities of the bank. They are, strictly speaking, public institutions. Any profits accruing from the operation go to the guaranteeing authority.

I have not been able to obtain information of the standing to-day of these institutions. In normal times, they were functioning greatly to the advantage of the guaranteeing authority and to the borrowers, mostly small farmers and communal organizations.

SESSIONAL PAPER No. 142

**(3) The German Savings Bank**

The German Savings Banks are mortgage credit institutions of very great importance to farmers. Their total investments in farm mortgages in 1913 were about \$850,000,000. In some parts of Germany they were the chief source of mortgage credit for the small farmer. Most of these institutions are public savings banks, established, managed and guaranteed by the public authority. In 1913 there were 2,844 public savings banks of this type in Germany with 7,404 branches.

The deposits in these banks reached the sum of over \$4,000,000,000.

These institutions, being usually under local control and management and not subject to central control are allowed to fix a rate of interest to suit their own convenience.

The result is they pay comparatively high interest on deposits, as high as four per cent. There is no combine to fix rates paid on deposits. The result is the savings of the district go to the banks and loans are made to those people living in the same district. The guarantee of the District Authority makes them absolutely safe.

The charges made on loans are also slightly higher than in the case of the *Landschaften*.

Of the total deposits of over \$4,000,000,000 in 1913, over \$2,500,000,000 was invested in mortgages, of which \$850,000,000 was invested in farm mortgages. The exchange in all the figures in this report is based on gold values of the coinages used.

These institutions are of such great importance in connection with agricultural credit that the following brief statement concerning them, taken from the report of Mr. Cahill, will not be without interest:—

"The earliest German savings banks were founded to serve as institutions for safeguarding the poorer classes against absolute poverty by providing a place for the safe deposit of small sums of money until such should be required in bad times. Established in connection with the efforts to reform the poor laws they were regarded rather as philanthropic institutions. But the savings banks lost this character of philanthropy early in the nineteenth century, and have developed along the more general lines of institutions for the furtherance of thrift. They have been established usually by and under the guarantee of public authorities; and in normal cases do not aim at profits beyond the obtaining of an adequate interest upon money deposited with them and the payment of the expenses of management. Any surpluses remaining after paying these charges and making suitable appropriations to reserve are applied to objects of public welfare. In primary aim they are distinguishable from banks in the ordinary sense of the term; they seek deposits, not in order to be in a position to grant credit for their own profit, but to foster thrift, and only to utilize deposits for investments in the interests of the depositors themselves. But while there is this distinction in their aims, German savings banks constitute, by reason of their un-examined development and freedom of investment credit sources of great importance. Not being obliged to deposit their funds at interest with the State Treasury, or invest in stocks and shares only as such banks are constrained to do in some other countries, but seeking to obtain on investments the best returns consistent with the absolute security of their funds, they have lent a very large percentage of their deposits on mortgages, a considerable proportion of which have been on rural property."

The special advantage of these banks is that they provide farmers with a public mortgage institution in their immediate vicinity and facilitate personal relations between borrower and lender. Its local character and the knowledge its officers possess of the conditions of the borrowers makes it possible to dispense with costs in obtaining a loan, especially that caused by a special valuation. The disadvantages are higher rates of interest, liability of rates of interest to rise or of recall of loan and the limited facilities for reducing mortgages.

The German Mortgage Credit Banks and the Savings Banks correspond somewhat to what is now being done in Ontario and Manitoba through the public credit institutions.

#### (4) The *Crédit Foncier of France*

Mortgage credit in France is provided through the agency of the *Crédit Foncier*, a Land Credit Bank established in 1852 for that purpose. It is a joint stock institution subject to legislative control by the French Government.

When organized the *Crédit Foncier* was given a monopoly for a period of twenty-five years on all land credit business over a large portion of France. The monopoly was later extended to the whole country. The period expired in 1877 but no new competing organization has yet been established, so that land credit still remains a monopoly in France.

The following article of the constitution shows the scheme of capitalization and the relation of normal capital to loans:—

"The Society's capital is fixed at 200,000,000 francs. It is designed as a guarantee of the society's obligations and especially of the land (mortgages) and commercial obligation.

"It shall be divided into 400,000 shares of 500 francs each, entirely paid up.

"The amount of the normal capital of the shares shall be maintained in the proportion of one-twentieth at least of the capital realized by the issue of bonds in circulation."

The capital has since been permitted to be raised to 250,000,000 francs on condition that loans are made in like proportion. Originally the government subsidized the society to the extent of 10,000,000 francs.

It will be seen that this system in its organization differs from the *Landschaft*, in that it is a joint stock organization doing business for profit; the rate of interest, however, is controlled by the Government and must not exceed the rate of interest on the bonds by more than six-tenths of one per cent. As we shall see the Joint Stock Land Bank which forms a part of the system existing in the United States under the Federal Farm Loan Board, corresponds somewhat to the *Crédit Foncier* in that the capital may be subscribed by private investors; the interest is regulated by law; and the twenty to one ratio of capital to loans is also fixed:—

The *Crédit Foncier* grants loans:—

- (a) On mortgage security,
- (b) To municipalities.

Mortgage loans are made on the security of houses and town property and on agricultural land.

These loans are made in one of the following forms:—

(a) Short term loan on mortgage, not to exceed nine years, not repayable by amortization and not repayable till the end of the term. The present rate of interest on these loans is approximately 5%.

## SESSIONAL PAPER No. 142

(b) Long term loans, which run from ten to seventy years; repayable by amortization or at the pleasure of the borrower. The rate of interest at present on these loans is, including amortization, approximately 5%. Such loans are made for a maximum of not more than one-half the value of the property mortgaged. In the case of vine-yards, it is only one-third.

(c) Current account loans on mortgage guarantee by opening what is called a mortgage line of credit. The rate on these loans is about one-third higher than that on ordinary mortgages, and the loan is repayable in six months.

In addition to the loans made on mortgages, loans are made to municipalities and public institutions. The rate of interest on these loans is less than on either of the foregoing. These loans are made for a period of from one to nine years.

Since its origin in 1852, the *Crédit Foncier* has loaned more than 9,000,000,000 francs, and, in 1913, had outstanding 5,000,000,000, the full amount allowed under its capitalization. An additional capitalization may have been permitted since this information was obtained. More than half the loans are in mortgages.

The share capital of the bank was created to give security to the land mortgage operations. All mortgage loans are covered by the issue of bonds, which are sold in the open markets of the country. The borrower is paid in cash at current price of bonds. *The bonds are not guaranteed by the Government.* They are repayable in a maximum of seventy-five years.

The feature worthy of special attention, is that the *Crédit Foncier* provides both the Short Term and Long Term Credit. A mortgage credit being established by a property valuation for any client, money can be borrowed against this, interest being charged only on the money advanced. This is a feature not found in Germany nor is it copied in the system now in operation in the United States. The *Crédit Foncier* thus in a measure serves the purpose for certain clients of both long term and short term credit bank. The *Crédit Foncier* is allowed to take deposits from its clients. *It is also permitted, in default of payment of interest and amortization to sell without notice and without civil procedure in the courts, as in the Landschaften.*

#### (5) The Co-operative Mortgage Banks of Denmark

The Co-operative Mortgage Banks of Denmark are fashioned after the German *Landschaften* and do not therefore demand a lengthy description.

A mortgage bank in Denmark is a credit association composed of landed proprietors (from the Danish speaking provinces) founded by the sanction of the King with a view to making it easier for its members to borrow money upon easy terms upon the mortgage of their estates and by degrees to repay the sum borrowed. Only borrowers are admitted to the association. The borrower becomes a member when he delivers to the cashier of the association a mortgage upon his property and receives his loan in the shape of debentures of the association. The bonds are then sold to anyone who may wish to buy. The relationship is specifically defined by regulations in conformity with which the loan is made. The security for the principal and interest of the mortgage bond is the sum total of all the mortgages effected by the association.

Bondholders may have their bonds cashed on giving six months' notice. Should the demand, however, exceed the amount at the disposal of the bank through its sinking and reserve fund, the bondholder must wait until payments become due from the mortgages. When a bondholder gives notice of his desire to cash his bond, he is notified the date he can secure payment. Mortgages

are paid by an amortization scheme in forty-seven years, the amortization being three-quarters of one per cent of the loan annually. Payment of a larger amount may be made at the regular payment date, should the mortgagor desire it. Should the sinking fund thus formed exceed the bonds presented for cash at any given time, a drawing is made for other bonds to be redeemed.

The members of the association may borrow up to three-fourths of the value of the property and must pay four per cent interest on mortgages, three-quarters per cent amortization and one-quarter per cent for expenses, making altogether 5 per cent. The value of the property is based directly on the revenue which the borrower can show as accruing annually to him from the property.

The association is managed either directly by the members through a general meeting or by a board of directors chosen by a general meeting. The general meeting is held at least once a year. Full details of their methods are available if desired.

There are 14 associations of the *Landschaft* type in Denmark doing first mortgage business and 9 for second mortgages on small estates. The latter are the only ones of their kind in Europe.

#### (6) Institutions in other Countries of Europe

In nearly all other countries in Europe facilities exist in some form for mortgage credit based either on the German or French model. In HOLLAND the government authorized the creation of Joint Stock Mortgage Banks for the purpose of affiliating the small savings organizations which had arisen in the villages and country places and were doing mortgage credit. They were not subsidized by the government and found their money for loans out of the savings deposited in the small village banks which affiliated with them. Mortgages are issued for forty years on an amortization plan.

In AUSTRIA in pre-war days, the mortgage credit business was mainly in the hands of the savings banks. Of these six hundred and sixty-nine were in operation in 1914, mostly in towns and cities. At that date these banks had invested in mortgages 3,700,000,000 crowns, about 55 per cent in agricultural property.

Institutions based on the German *Landschaften* also prevailed and were rapidly growing in 1914.

In HUNGARY, a system of state-supported though not state-owned institutions exist. Mortgage bonds are issued against mortgages in the usual way. In 1911, \$500,000,000 worth of such bonds were in circulation, redeemable under definite regulations. Many of them had been sold in France.

In ITALY, a great number of institutions do agricultural long term mortgage business. Land Credit Institutions, Land Credit Banks, Savings Banks and Mutual Societies all exist for the purpose. They grant loans on first mortgages on a fifty per cent valuation. The amortization period is ten to fifty years. The annual payments include (a) Interest, (b) Amortization instalments, (c) Income tax, (d) Commission and management expense, (e) Revenue and stamp duties. Bonds are sold, where possible, against the total security of mortgages held.

In SWEDEN, there are ten distinct land mortgage associations of the *Landschaften* type created by authority of the Government. These have a monopoly of the land mortgage business. For these there is a central institution known as the Swedish General Mortgage Bank which advances money to the district associations upon the assignment of mortgages taken from the members of the associations. Members of each association are jointly and severally liable for all loans made. The central bank is a semi-public institution closely associated with the government and enjoys a monopoly.

With regard to the security of the land mortgage systems described, it may be said that the land mortgage bonds are everywhere regarded as the safest kind of security available for both large and small investors. The payment of interest and principle is assured by strict government supervision which prevents over-issue and which sees that all repayments made by borrowers are reserved for repayment of bonds. Their record of accomplishment is so high that money sufficient for their needs flows freely into their treasury.

## 2. Short Term or Personal Credit in Europe

The expression "Short Term or Personal Credit" is used everywhere in Europe to include all types of agricultural credit other than mortgage credit. This form of credit is based mainly on the security of the borrower as indicated by his general standing in his community and on his personal assets apart from land.

Only such institutions as devote their attention mainly to agriculture will be discussed. The ordinary commercial institutions, joint stock banks and savings banks therefore will not come under review, except as they are part of an agricultural credit system.

Under the section devoted to general observations I have set forth briefly the reasons advanced for the development of the institutions herein described. I quote here only one short paragraph from a document which was prepared by a distinguished European authority to set forth the reasons for their creation in Europe.

"Urban bankers being naturally more conversant with commercial or industrial undertakings are less capable of judging the standing of a farmer and his business capacity. Credit implies confidence and facility of supervision; but the banker is unacquainted with farming and farms are comparatively isolated units, usually more or less remote from the banking office. Ordinary commercial tests are not often applicable, especially where small farmers whose book-keeping is apt to be very incomplete and unmethodical, are concerned. The same difficulty presents itself as to proposed sureties who are also likely to be farmers. Other banking security is often out of the question and the procuring and bringing of sureties to the bank involves great loss of time and expense. The world in which the bankers or bank manager moves is not that of the farmer so that personal knowledge is infrequent. The whole situation is rendered even more unfavourable by the supplanting of small country banks by branches of great banks which are directed on fixed lines from headquarters and whose managers are frequently changed. Commercial banks cannot, moreover, be brought nearer than small towns....The smaller farmers offer also little attraction to the ordinary commercial banks as borrowers, and, apart from other disadvantages, pay for the small loan they require an unduly high percentage as interest and commission. As a result, farmers cannot obtain from banks, organized mainly to serve industry and commerce, credit in suitable amounts at reasonable interest and on security which they can usually provide. Yet while commercial banks have become less satisfactory from the standpoint of the farmer, his need for working capital has greatly increased. More scientific and intensive farming, made necessary by competition which has been facilitated by improved and cheapened transport, refrigerating processes, and other causes, requires more capital expenditure on labour, fertilizers, feeding stuffs and machinery; payment in kind being entirely superseded by payment in currency, while money wages are higher; and other expenditure including cash payments to the state and other public authorities has increased"

The quotation is from a European document and may be taken as a reasonable statement of the conditions which gave rise to the institutions about to be described.

Of the institutions in Europe giving short term or personal credit to farmers the following, of which a short description is given, are the most important:—

- (1) The Raiffeisen System of Banks or Credit Societies of Germany.
- (2) The Crédit Agricole of France.
- (3) Modifications of 1 and 2 found in other parts of Europe as the Rural Banks and Popular Banks of Italy, Hungary and other countries.

#### (1) The Raiffeisen System of Banks or Credit Societies of Germany

There are two distinct steps to be taken to complete the organization of credit on Raiffeisen lines. First the formation among the farmers of local credit societies and second, the organization of a group of societies into a collective body federated into a central bank. These societies are based on what are known as the "Raiffeisen Principles".

(a) Their legal foundation is the unlimited liability of all their members for all liabilities of their particular society.

(b) Their aim is to improve the condition, alike material and moral, of their members.

(c) They admit only members from a distinct district, which is advisedly as narrowly circumscribed as is consistent with its being self-supporting; therefore, there can be no persons members of more societies than one at any one time.

(d) They collect no entrance fee.

(e) So far as the law of the land permits, they issue no shares; wherever the law makes shares obligatory, they limit a member's holding to one share only, which must be small; and should dividend be declared on such share, such dividend must not in rate exceed the interest charged upon loans.

(f) The only officer remunerated for his services is the "accountant" (the employee who keeps the accounts and actually handles the money); members of the managing committee and the council of inspection are expected to discharge their duties without remuneration.

(g) All profit resulting is conscientiously carried to an indivisible common fund belonging to the society as such.

The following statement prepared by the general secretary of the Union of Co-operative Societies in Germany will serve to make clear their purpose and mode of operation:—

"The task which credit societies set themselves is to provide the cash required for advances and credits to be accorded to members; furthermore, to provide for the supply of goods required by members and to make any other arrangements for the promotion of the material welfare of their members which may appear desirable; and the aim which they pursue is to come to the aid of those who are materially weak and to further the intellectual and moral well-being of their members rather than to earn a profit. The foundation upon which they are built up is that of christianity and loyalty; it is a standing rule that at society gatherings neither denominational nor political subjects may be touched upon in discussion.

"These societies are not allowed to engage in any speculative business whatever. Advances and credits are permitted only to members on personal security, and for objects held to be economically legitimate, in

## SESSIONAL PAPER No. 142

the shape either of specific loans or else of current accounts. Adequate security must be provided for every loan or credit to be granted. And in respect of every loan the term for repayment is fixed in advance, the length of time and the amount of the instalments for repayment are in every case proportioned to the object of the loan and the power of the borrower to repay within a given time. No loan is granted without consideration of the object for which it is asked and the capacity and title of the borrower to answer for a credit. Borrowers are, on their side, entitled to repay at any time. In respect of certain contingencies the societies reserve to themselves the right of calling in the loan."

When the system is fully organized, it consists of a group of these local societies, each as independent unit, but federated into a Central Bank. The central Bank acts as a clearing house for the group. It makes it possible to confine the action of the local society to a small group in a fixed district, thus making collective action possible. The Central Bank also serves as a purchasing agency for agricultural requirements and a selling agency for agricultural products.

The Central Bank is a joint stock company, but its shares are held only by the local societies or certain officials of the institution.

The objects of the Bank are:—

(a) To carry on banking and credit business, more particularly as a means of equalizing temporary shortness or over-supply of cash in local banks.

(b) To provide for collective purchase of agricultural requirements, as well as for collective sale of agricultural produce.

The money required for the business of the Bank is provided as follows:—

(a) By the issue of shares to local societies.

(b) By deposits received and loans raised.

(c) By commissions charged and a margin of interest on business transacted.

(d) By profits on the dealing in goods and by similar income.

The money so raised is applied as follows:—

(a) In credits given in current account to local co-operative banks, societies, central banks formed for particular counties or provinces, co-operative societies.

(b) For carrying on a business in goods.

(c) For discounting acceptance and making advances in approved securities in conformity with the practice of the Imperial Bank.

(d) For any other purpose in harmony with the general objects of the institution.

The profits realized are applied as follows:—

(a) To the accumulation of a reserve fund.

(b) To the payment of a dividend on shares, which must not in any case exceed four per cent.

Each local society has a credit fixed by the managing committee of the Central Bank. This credit is based on the valuation of the possessions of the members of the society, the liability being unlimited, that is, each member is jointly responsible for the whole of the obligations of the local society to which he belongs. The borrowing power of each member of a local society is fixed by the local society.

The adjustment of assessment to determine the maximum credit of the local society is made every three years.

The business transacted between the local society and the central bank is as follows: "Should the funds collected locally by the branch offices prove insufficient for their daily requirements, those offices are to apply to the central bank for the balance needed. Such amount is furnished either in cash out of the balance in hand, or else by means of a draft on the Imperial Bank. Sur-

plus funds held by the branch offices are in the same way paid in to the Central Bank. Each branch office is required to send in to the Central Bank every week a return of its transactions and holdings in cash, and every month a full return showing the whole state of its business. By such means the Central Bank is enabled to exercise a steady and effective control over the branches. In addition, each branch office is subjected once every year to a minute inspection carried out, in conjunction with the chief inspector of the union, by a committee nominated by the Council of inspection of the central bank.

"In this manner the Agricultural Central Bank for Germany has, in spite of its formation as a joint stock company, been enabled to retain its genuinely co-operative character, transacting business in its wider sphere practically on the same co-operative lines as the local credit societies do on a smaller scale. Its being registered as a joint stock company facilitates its business with the money markets, and provides for it, through its share capital, a working fund which cannot be affected by any changes occurring which influence local societies. Keeping the money transactions with societies in its own hands, it is in a position to charge lower rates than societies would be saddled with, were the business to be carried on through the medium of independent provincial intermediate institutions; and by means of its branch offices it secures to itself all that information respecting the financial status of local societies which is imperatively needed for the appropriate apportionment of credit. It is, therefore, a central bank based entirely upon self-help and self-government, and combining in itself all the advantages both of a centralized and a decentralized clearing house for money."

As already mentioned, these societies are not only co-operative agencies for obtaining credit, but also for the purchase and supply of farm requirements, and for the sale of farm produce. Within it are organizations for the purchase of fertilizers, feed, farm machinery and the collective sale of all kinds of farm produce.

In Germany there is a general Union of the Raiffeisen Societies with other types of co-operative societies such as co-operative dairies, etc., All these are under the caption of the "General Union of Rural Societies". Its aim is education. At the close of the year 1913 there were 25,576 of these societies in Germany, of which 16,927 were loan and savings banks of the type described above.

These credit societies have practically banished usury from the communities where they are organized. Any farmer of good standing in his community, who has established a reputation for honesty, may obtain his working capital on reasonable terms. In 1913 these societies had out on loan 1,800,000,000 marks at rates from four to five per cent.

All this was not accomplished by magic. It followed on a determined and systematic effort running through a long period of years to establish credit on a basis of security which reduces to a minimum the liability of loss. In other words, this has been made possible because the security offered is of such a character as to make serious loss to the lender almost impossible. The three essential facts of the security are:—

- (a) The unlimited liability of all members of the society.
- (b) The money borrowed must be put to productive uses.
- (c) The operation of the individual society is limited to a small, well defined area.

## (2) The Crédit Agricole of France

The agricultural credit system as worked in France is the outstanding example in Europe of a credit system involving co-operation among borrowers, either on the principle of limited or unlimited liability, and state aid. It is a state-aided co-operative system.

## SESSIONAL PAPER No. 142

This system was created by a law passed in 1894 which took for its nucleus of organization the small unions and agricultural syndicates already in operation in local communities. The following statement from Senator Albert Viger of France, for some years President of the National Federation of Agricultural Co-operative Associations, indicates the idea behind the scheme:—

“The first step toward the establishment of an Agricultural Credit System in France was to organize rural credit from below, to see that the roots were firmly fixed in the agricultural population itself. An idea formerly prevailed in France as in other countries that agricultural credit could only be established by the formation of great central banks from whence credit could flow out to all the local centres. When the government of France finally took up the question of agricultural credit in earnest, it was planned on an entirely different principle. It was decided that agricultural credit should begin with the lowest group; that the co-operative agricultural society or syndicate should form its own credit bank and that these should grow from below. Under the French system we therefore have the credit syndicate and out of these the departmental banks (Regional Banks) usually located in the principal towns and finally the Central Federation of credit over which I preside. The development of the system has been from the growth of the small unit.”

It will be seen, therefore, that the unit of organization like that of the Raiffeisen system is the small group in the community organized for the purpose of facilitating the credit of the group. There are 4,000 of these local groups or banks organized in France; 1,000 on the principle of unlimited liability; 3,000 with limited liability. A bill is now before the French Parliament compelling the principle of unlimited liability. The system is highly specialized and includes only the farmers of the community.

In 1899, a system of Regional Banks was founded of which there are 100 now in operation. These correspond to the Central Banks of the Raiffeisen system. Each of the four thousand local banks functions through one of the Regional Banks. These are joint stock banks fostered by the state but not state-owned. State aid is granted on condition that they submit to state supervision. This aid stimulates their development so that to-day the system embraces the whole nation.

The Regional Banks were organized for two reasons:—

(a) To discount the bills of the local bank and to endorse them for the Bank of France. This was necessary because the Bank of France is not permitted by law to discount bills with less than three signatures. The endorsements of the farmer, the local bank and the regional bank, fulfill this condition. Further, it places between the Bank of France and the local unit an intermediary capable, from intimate knowledge, of valuing the security offered.

(b) The regional banks were further necessary as a medium for distributing the funds placed at the disposal of agricultural credit, by the Government. Each one receives from the government through the Bank of France four times the amount of its paid-up capital. This amount it uses as a reserve fund on deposit with the Bank of France to secure its credit for discounting purposes. The money for this is found as follows:

The charter of the Bank of France having expired in 1896, was renewed by the Government under certain conditions favourable to agriculture. The conditions were:

First, that the Bank of France must advance to the Government the sum of 40,000,000 francs, free of interest, to use in subsidizing the rural credit organizations.

Second, that it pay annually a certain portion of its yearly profits as an advance for agricultural credit. This conditional advance was to be not less than 2,000,000 francs. It has varied between 4,000,000 francs and 5,000,000 francs annually.

The law of 1896 fixed the annual advance from profits as twelve and one-half per cent. of the net profits on discount business done by the Bank of France. In 1911, when this charter was again renewed this percentage was increased to  $14\frac{2}{7}$  per cent when the discount rate was  $3\frac{1}{2}$  per cent and to  $16\frac{2}{3}$  per cent when the discount rate was 4 per cent. The money provided in this way up to 1920 amounted approximately 200,000,000 francs.

When the charter of the Bank of France was renewed a committee was appointed composed of members of the Senate, representatives of the local banks, directors of the Bank of France and certain other persons through whom the funds provided as above should be distributed to the Regional Banks.

In the operation of these banks three forms of credit are granted:

- (a) Short term personal credit.
- (b) Long term collective credit (non-mortgage).
- (c) Long term personal credit.

#### **(a) Short Term Personal Credit**

This form of credit is given generally for one year. It is strictly personal; only the endorsement of someone of known responsibility is required. The local association endorses and recommends to the Regional Bank which in turn, should it not have the money, endorses to the Bank of France. As the Bank of France is not allowed to make a loan for a longer period than three months, the advance is made for that period subject to renewal. In one year 85,000,000 francs were loaned in this way, of which 60,000,000 were from money provided by the state.

#### **(b) Long Term Collective Credit (Non-Mortgage)**

The main purpose of this form of credit is to promote the prosperity of the farmers with small holdings. It makes it possible for a group to unite for the production, conservation or marketing of the products actually produced by the members of the association. The members must be really engaged in production. The rate of interest on this form of credit must not exceed 4 per cent. The period of the loan must not exceed twenty-five years. The total loans to one society are limited to twice the capital of the society. This form of long term credit is not found in any other country in Europe.

#### **(c) Long Term Personal Credit**

The following statement from M. Vinreux, of the Crédit Foncier, will explain this kind of credit:

"The law of 1910, providing for personal long term agricultural credit, is the latest stone in the structure of agricultural credit in France. This form of credit is granted by the local banks through the Regional Banks, which receive money for this purpose out of the advance made for the purposes of agricultural credit by the Bank of France. It is only granted to small agricultural holdings, for the purpose of the law is to attach the small peasant farmer to the soil."

The maximum period for which the loan runs is fifteen years and is only allowed in the case of young farmers. The purpose is to assist the small farmer to purchase holdings and to encourage young men who have finished their military service to take up a farm.

The loans are extinguishable by amortization, and the rate of interest is, as a rule, two per cent. A mortgage on property may be taken but life insurance policies and surety security are accepted.

The French local societies differ from the German ones in certain particulars. They sell shares but only to persons who are already members of some professional agricultural syndicate or agricultural co-operative insurance association. While they may receive deposits a definite maximum is fixed in relation to paid up capital.

Unlike the German societies, the withdrawal of a member does not terminate his liability until the obligations assumed during his membership have been settled. Further, the principle of one man one vote does not apply, voting being based on shares held. In addition, loans may be made by the local society from its own funds for productive uses to farmers who are not members. The Regional Bank, however, with which the local society is affiliated, is not permitted to discount loans made to non-members. Lastly, no state aid is given to the local bank as such. All state aid is given to the Regional Banks which make loans directly to the person endorsed by the local society. As these organizations have a monopoly with respect to Government assistance, co-operation on the part of the farmer is almost compulsory.

Reference has been made so often in the foregoing to the Bank of France, that a word of explanation seems necessary. The Bank of France is a bank of issue; that is, its function is to issue paper money and re-imburse it. It issues notes either against deposits or on the guarantee of credit operations. It is prohibited from issuing loans on any other basis. The repayment of the paper francs in circulation is guaranteed either in coin or commercial paper protected by bonds.

The Bank of France assists agriculture in three ways. First, in conformity with regulations mentioned above it assists the individual agriculturist by facilitating loans and discounts. Second, it makes possible the work of the agricultural banks by rediscounting for the Regional Banks and other commercial banks. Third, it provides the government with funds with which to supply the needs of the agricultural credit banks.

### **(3) Modifications of (1) and (2) Found in Other Parts of Europe**

Many variations of the foregoing types of credit institutions for personal credit are found in various parts of Europe. Nearly every country has found some modification necessary to suit its own requirements. In Italy personal credit is granted by both state and co-operative institutions. The aid of the state, as in France generally finds its way to the borrower through these co-operative institutions, and not directly to the individuals. By means of special legislation the Government of Italy has made provision to the extent of over \$14,000,000 for agricultural loans at reasonable rates of interest, a maximum of six per cent being charged.

The co-operative banks of Italy are based on the ideas before mentioned. As applied to Italy they are known as—

(a) The People's Banks, organized by Luigi Luzzatti.

(b) The Rural Banks, organized by the Leone Wollenborg.

The inspiration in each case came from Germany and is but the application of known principles. There are about 2,000 banks of the second class in Italy of which two-thirds are under the control of the church.

In nearly every other country of Europe similar institutions exist for the promotion of agricultural credit. It is not too much to say that these institutions have been one of the most important factors in improving rural conditions in Europe. As stated by one who is an enthusiastic admirer of them, "The use of credit in agriculture may be compared to the use of water. If the water is brought into the field at the right time, in the proper way, and in proper quantities, it will be valuable; but if the field is flooded or if the water is applied at the wrong time, it will be destructive." These societies have aimed to apply credit to productive purposes and without question have attained their object.

## SECTION III

## RURAL CREDIT IN THE BRITISH EMPIRE OUTSIDE OF CANADA

## The United Kingdom

Co-operation for the purpose of promoting agriculture and carrying with it the organization of co-operative credit, began in the United Kingdom in the year 1895. At first, it was mainly confined to Ireland, where the Irish Agricultural Organization Society was promoted. Development began in England in 1901 and in 1905 in Scotland, where societies were established following the Irish pattern established by Sir Horace Plunkett. The following statement from Sir Horace Plunkett indicates the principle on which the institutions were organized—"The keynote of our proposals is in the proposition that the farmers must work out their own salvation, and, further, that this can only be done by combination among themselves."

The objects set before them were "to secure the co-operation of all connected with the land, whether owners, occupiers, or labourers, and to promote the formation of agricultural co-operative societies for the purchase of requisites, for the sale of produce, for agricultural credit banking and insurance and for all other forms of co-operation for the benefit of agriculture."

Under the Agricultural Organization Society, all organizations were allowed to affiliate, which aimed at co-operation. By 1914, out of 495 co-operative societies organized in Great Britain and affiliated, there were 48 credit societies and one central co-operative agricultural bank. It is with the activities of the agricultural co-operative credit societies that we are specially concerned.

The following statement issued by the Board of Agriculture and Fisheries in 1912 indicates the point of view of the British authorities with respect to these societies:—

"It is possible to form an agricultural co-operative credit society under the Industrial and Provident Societies Act, with shares and share capital and limited liability; but, as a matter of fact, all the societies of this character now in existence in England and Wales have been registered under the Friendly Societies Act, 1896, and the special authority granted by the treasury in accordance with section 8(5) of that Act. A society registered under that authority must have for its object the creation of funds by monthly or other subscriptions, to be lent out to, or invested for, the members of the society, or for their benefit, and must have in its rules provisions that no part of its funds shall be divided by way of profit, bonus, dividend or otherwise among its members, and that all money lent to members shall be applied to such purpose as the society or its committee of management may approve."

**Unlimited Liability**

All the societies organized under the Friendly Societies Act in Great Britain are unlimited liability societies, that is, every member of the society is, equally with every other member, jointly and severally liable for all debts incurred by the society and for any loan which any member or his sureties may fail to pay. No one is admitted as a member to a society unless he lives within a certain prescribed area, such as a parish or two or more adjoining parishes. He must

also be approved by the committee as a man of good character, worthy of admission to the society. All the members have an equal voice in the election of the committee of management.

Through these societies, loans are made to members on approved security for a specific purpose of such a productive nature that the loan may be repaid through the activity in which it is invested. The maximum loan is £50.

### **Deposits**

The societies are permitted to receive deposits either from members or non-members and to pay interest on them. All profits are carried to a reserve fund for the purpose of meeting possible losses and no dividends are permitted. The only benefit which any person receives by becoming a member of the society is the special benefit of receiving loans.

The loans are taken out for any purposes likely, in the opinion of the loaning committee, to prove profitable, such as the purchase of sheep, pigs, cattle, horses, to procure seed, plants or manure, or for the employment of extra labour, and are made repayable at the time when the borrower may expect to reap the return of his expenditure, generally running from six to twelve months. Loans are granted for a period of two years under certain special conditions.

The rate of interest varies from  $4\frac{1}{2}$  per cent to 6 per cent.

The total amount of loans under these societies is not large and they have not played a very large part in the development of agriculture in Great Britain. Perhaps the chief reason for this is the unpopularity in Britain of the principle of unlimited liability and the fact that Great Britain is served so thoroughly by joint stock banks as compared with other countries on the continent of Europe.

Some of the joint stock banks have been willing to assist in financing these societies; in fact, many of them have offered their co-operation but even this did not assist the growth to any considerable extent.

In Ireland, organization of credit societies of the type just described has been much more rapid. In 1913, there were 236 of these credit societies in Ireland, with a total membership of 19,105 and a loan capital of approximately \$275,000 and a turnover of about the same amount.

This probably represents the position in the United Kingdom at the outbreak of the war so far as Short Term Credit was organized among the farmers.

### **Long Term Credit**

Long term credit in Great Britain has always been regarded as a field for private enterprise. In order that permanent improvements might be carried out by land owners, special corporations were organized, under government regulation, but without government assistance, for the purpose of making loans to farmers. For example, the General Land Drainage Company was formed in 1849, the Land Improvements Company in 1853, the Scottish Drainage and Improvement Company in 1856 and the Land Loan and Enfranchisement Company in 1860. The first and last of these just mentioned were absorbed into the Land Improvements Company in 1864.

All these companies were authorized under statutory authority which permitted charges to be made against estates. The interest was limited to 5 per cent. Since the war, it has been found necessary to remove the 5 per cent limit and to allow the rate of interest to be fixed by the Board of Agriculture.

The Improvement of Lands Act of 1864, authorized land owners to raise loans on mortgages against their estates. From its inception the Land Improvements Company authorized under the Act advanced approximately £13,000,000 for various improvement purposes.

## SESSIONAL PAPER No. 142

There was a similar organization for Scotland.

Under these schemes, money is advanced for the erection of farm buildings and cottages, for the making of roads, sewers, drains and for the erection of silos. Before the loan is made, the application must be submitted to the Department of Agriculture and Fisheries for inspection and approval. The loans are repayable by an annuity for a prescribed period, which varies from 15 to 40 years, according to the nature of the improvements.

The mortgage given ranks prior to existing mortgages, but not as against statutory taxes. As these mortgages are usually assignable to insurance companies, who seek them for investment purposes, the resources of the company are very great and money has always been easily available.

Under a general statute of Great Britain, machinery is created for the organization of other companies to do corresponding work so that there is a basis for the development of regulated private enterprise in this connection to a very considerable extent.

During the war, the position of agriculture in England underwent a great change. There was an increase in England and Wales of over 21,000 landholders as compared with 1914, and in Scotland an increase of 1,600. The majority of these purchases took place between June, 1919, and June, 1921, the total involving a change in ownership of approximately 2,000,000 acres of farm lands.

There were two reasons for this—(a) There was a desire on the part of many landowners on account of heavy taxation to dispose of their land, and (b) a keen demand for the purchase of farms for the purpose of land settlement, due to the increased price of farm products. In October, 1919, the then Prime Minister gave the farmers an assurance that the prices of staple products would be maintained in case of the markets falling, so as to safeguard them against serious loss. This was put upon the statute book in 1920, a sliding scale being fixed, based upon the 1919 cost of production. This was the period during which so much land was purchased and at prices beyond normal values. The following year, 1921, conditions had arisen which made it impossible to carry out the provisions of the statute of 1920 and it was repealed.

A committee was appointed by parliament in 1923 to make an investigation into the whole matter and decided that "the plea that the farmer was induced to buy land by the representations made by the Government has undoubtedly a solid foundation", and, therefore, some scheme of relief was necessary.

The fall in prices further produced generally a condition with regard to the farmers in England that was brought about by the fall of prices in both Canada and the United States. A great deal of the money used in the purchase of lands had been borrowed from the banks by means of overdrafts and, as the banks were not allowed to take mortgages, the position of both banks and farmers was considered precarious.

The same committee went into the whole question of short term credit for farmers to meet their current needs and examined the facilities that were offered by the banks and the conditions under which loans were made. It is not necessary in this report to go into the details of the enquiry. Suffice it to say that the relation of the banks, the credit of merchants and dealers were all inquired into. It was found that there was outstanding approximately £46,000,000 on loans to farmers from the banks, of which £26,000,000 had been advanced for the purchase of land and £20,000,000 for normal current production. The committee was of the opinion that bank facilities were, in the main, available to farmers in good standing, but that a large class of small

farmers, who did not easily have access to the banks, had not credit facilities necessary to make a success of their occupation. Recommendations were, therefore, made covering both the long term and short term credit and were incorporated into an act of parliament, which was passed July 31st, 1923.

#### **Provisions under Act, July 1923, for Long Term Loans**

Under this Act, power is given to the Public Works Loan Commissioners to lend money to associations created for the purpose of making advances upon farm mortgages at any time within five years after the passing of the Act, the total amount to be subject to the approval of the Treasury and under conditions which the Treasury may prescribe. The borrower must be a person who had agreed to purchase the land comprised in the mortgage not earlier than the 5th day of April, 1917, and not later than the 27th June, 1921. The object of this is to cover the period of inflated land prices.

The land comprised in the mortgage must be wholly or mainly agricultural land.

The amount of the loan must not exceed 75 per cent of the value ascertained to the satisfaction of the Commissioners, or exceed an amount equal to thirty times the annual value of the land as ascertained for income tax purposes.

The rate of interest is to be fixed by the Treasury.

The loan is repayable in sixty years by yearly instalments of the principal advanced, together with interest charges.

The land must be free-hold or copy-hold land.

The advance is made by the Commissioners to an Approved Association, which, in turn, secures the mortgage on the property.

"For the purpose of the Act, the expression 'Approved Association' means an association which is approved by the Treasury for the purposes of this Act and which does not trade for profit and by its constitution or otherwise is restricted in relation to the rate of interest on loan capital and the distribution of profits among its members, so as to comply with regulations made in that behalf by the Treasury."

The sections of the act referring to Long Term Credit, as previously stated, are designed to assist recent purchasers of land.

#### **Provisions under Act, 1923, for Short Term Loans**

The Act further calls upon the Minister of Agriculture and Fisheries to "take such steps as are practicable to promote the formation or extension of Agricultural Credit Societies, that is to say, societies approved by the Minister and registered under the Industrial and Provident Societies Act, 1893, having for their object or one of their objects, the making of advances to members of the society repayable within a period not exceeding five years for such agricultural purposes as may be approved by the Minister."

The Minister of Agriculture and Fisheries is authorized at any time within three years after the passing of the Act, or during such additional period as the Treasury may prescribe to make advances to such societies to an amount equal to the amount of shares held by members of the society and of which at least 25 per cent has been paid up. This is clearly an effort to create a greater interest in the Agricultural Credit Societies mentioned earlier in this section.

The Act is made, subject to certain modifications, to apply to Scotland.

The Act is cited as the "Agricultural Credits Act of 1923."

In this report I have not taken cognizance of special Acts for the purchase of land from landowners, such as the enactments for the purchase of land in Ireland.

It is expected that, under the stimulation of government assistance, the Credit Societies will have a rapid development, especially among small farmers. The overcoming of the individualistic tendencies of the British farmer, however, is likely to be a slow process.

### The Commonwealth of Australia

In all the States of the Australian Commonwealth, provision is made for loans from government sources to farmers, both for short term and long term credit. In most of the States, advances are made as loans to settlers, advances for the purchase of farms, and advances under the Returned Soldiers' Settlement Act. The Commonwealth government has contributed by advances to the various States to meet the requirements of the Returned Soldiers' Settlement Act. These advances to the States up to June 30th, 1923, amounted to approximately £32,866,000.

#### New South Wales

In New South Wales, there is a Government Savings Bank with a Rural Credits Department. Through the Rural Credits Department all advances are made to settlers. For Short Term loans, these advances are made as overdrafts on current account. For Long Term loans they are made on first mortgages with an amortization period of 31 years. The limits of the loans made under the Act are £50 to £2,000. They may be made,—

- (1) for the purchase of farms, in which case advances must not exceed 80 per cent of the valuation of the security and are limited to £1,250;
- (2) for land held in fee simple; the loan must not exceed 66 per cent of the security;
- (3) not exceeding £500 in the case of homestead lands, provided that this does not exceed the value of the improvements on the land;

Loans may also be made on land leased for a period of years on a basis of 50 per cent of the security which the borrower can offer.

The savings banks are under a Board of Commissioners, to whom is given the authority to make loans.

As the advances to returned soldiers are under a special act for a special purpose, I am not entering into a discussion of these loans.

#### Victoria

In the State of Victoria, the State Savings Bank is the institution through which money is advanced to settlers. Under this bank there is a loan mortgage department created for the express purpose of making loans to settlers. This department is authorized to borrow up to £10,000,000 for the purpose of making loans. The bank is controlled by a Board of Commissioners on whom is conferred the authority to decide on loans.

The limits of the loans are the same as in New South Wales, viz., £50 to £2,000, a limit of two-thirds of the value of the security offered.

In the case of special land used for vineyards, hop-grounds, orchards, etc., advances may be made to a much larger limit, subject to the will of the commissioners.

Mortgage bonds may be sold for the purposes of the Act and the loan may be made in cash or in mortgage bonds at a price fixed by the commissioners.

Victoria has, in addition to this State Savings Bank Act, an Act called "The Closer Settlement Act," which is under a board known as "The Closer Settlement Board," through which loans, so far as agriculture is concerned, may be made,—

- (1) to agricultural labourers on allotments in aid of the cost of fencing and erecting dwelling houses;
- (2) to lessees of crown lands for carrying on farming or grazing pursuits and to owners of land for the purchase of fencing, etc.

The interest fixed is 5% and the repayments are made on the basis of forty half-yearly instalments.

### Queensland

In Queensland, advances are made under a State Advances Act and the Co-operative Agricultural Production Act. Under the State Advances Act, the board of management may make advances to property owners for any of the general purposes of agriculture against first mortgage on property. The limit of advances is £1,200 and in no case to exceed 75 per cent of the value of the property.

Advances may be made to purchase property or to refund indebtedness for agricultural purposes, to purchase stock and implements, to effect improvements or any general agricultural productive purposes.

The loan is repayable in 20 years in half-yearly instalments.

The interest rate is 5%. Interest only is payable during the first five years, amortization beginning after the end of the five year period.

Under the Act known as "The Co-operative Agricultural Production Act", advances may be made to any co-operative organization engaged in manufacturing processes relating to agriculture. These loans may be made up to two-thirds of the entire cost of the machinery and buildings necessary for the process.

This Law calls for the organization of associations with capital shares of which at least two-thirds must be held by producers. Upon the shares no dividend greater than six per cent is permitted. The security in this case is a first mortgage on property.

### South Australia

In South Australia, there are a number of Acts, under which advances may be made to farmers out of government funds, of which the most important are:—

(1) The Crown Lands Act. Under this Act, advances may be made to homestead holders for erecting buildings and making improvements on their land. The limit of loan is £50.

(2) The Advance to Settlers on Crown Lands Act. Under this Act there is a Board known as the Advances to Settlers Board, which is authorized to make advances to any settler on the security of his land and improvements, for the purpose of making improvements, the limit being £400. An additional loan of £250 can be made provided this is not greater than three-fourths of the excess value above £400 of the property. The loan may be made for discharging existing mortgage or for any other productive purpose, if satisfactory to the Board.

Interest only is required on the loan for the first five years and from that time it is amortized by half-yearly instalments in thirty years.

(3) The State Advances Act. The State Advances Act is similar to the State Advances Act previously described. Loans under this act cannot exceed £5,000 and must be repaid within 42 years. The loan is based on a three-fifths value of the property.

(4) The Irrigation Act. Under this Act, there is a Commission known as The Irrigation Commission, which may make loans on leased property for the purpose of clearing, fencing, constructing channels or drains, or for erecting buildings. A limit of £600 is fixed. In addition to this, £200 may be advanced for the purpose of improvements, stocks, etc. An additional loan may be made for refunding in the case of mortgaged property.

(5) Under the Loans to Producers Act, the Minister of Agriculture may, on the security of a mortgage on the property, make loans to any registered co-operative society, three-fourths of whose members are engaged in agriculture. This money can be applied to the erection of factories, packing houses, etc., etc., the Minister being protected by first mortgage on the property.

## SESSIONAL PAPER No. 142

(6) There is one other Act, known as The Agricultural Graduates Land Settlement Act. So far as I am aware, this is the only act of its kind in existence. Under the provisions of this Act, the government is authorized to purchase land with a view to the settlement of graduates of agricultural colleges. Loans under this Act may be made up to £3,000 for each graduate and an additional £500 for the purpose of purchasing seed, implements, etc. During the first three years, interest only is payable and the capital in half-yearly instalments during the following six years.

**Western Australia**

In Western Australia, an Agricultural Bank was established in 1895. The management of this Bank has authority to make advances up to £2,000 on the security of first mortgages to persons engaged in agricultural pursuits. Advances are repayable over a period of 30 years. Interest only is payable during the first ten years and the principal on an amortization plan with the interest during the remaining 20 years.

**Tasmania**

In Tasmania advances are made to farmers and producers under three separate Acts, functioning in a manner similar to those in the other States. Those are (1) The Advances Act, (2) The Closer Settlement Act, and (3) The Advance to Fruit Growers Act.

Under the various Acts described there was loaned, during the year 1922, in the Australian States . . . . . £12,801,731  
The total advances to date were . . . . . £77,323,766  
And the outstanding balances in all the states amounted to . . . £53,913,716

**The Union of South Africa**

For the purpose of promoting agricultural credit, the "Land and Agricultural Bank of South Africa" was established in 1912. Before the establishment of the Union of South Africa, a number of the parts which entered into the Union had loan banks of their own; for example, the "Transvaal Land and Agricultural Bank," "The Land and Agricultural Loan Fund of the Orange Free State," "The Land and Agricultural Loan Fund of Natal," "The Agricultural Credit Bank in the Cape of Good Hope." The latter bank had, however, never been operated. With the establishment of the Land and Agricultural Bank of South Africa in 1912, all the provincial banks ceased to exist and their assets and liabilities were transferred into the new bank, cited as "The Union Land Bank."

When the Union Land Bank started business, it had a capital of £2,735,000, derived from the provincial banks on the basis of the settlement under which the amalgamation was effected. In addition to this, its capital consists of—

Such monies as the parliament may from time to time appropriate and such amounts as may be recovered from loans under certain old enactments which become part of the general scheme, and such further amounts as the bank may be able to raise for the purpose of financing co-operative societies by means of—

- (1) discounting with other banks bills of co-operative societies.
- (2) overdrafts with other banks,
- (3) issuing Land Bank bills.

Up to the end of 1922, Parliament had authorized advances to just over £4,000,000. On account of the war, however, all of this had not been paid into the funds of the bank, but £3,060,361 were actually paid in by the Minister

of Finance. In the meantime, approximately £340,000 has been added to the bank as the result of collections under the arrangements mentioned above. The total capital of the bank, therefore, at the end of 1922 was approximately £6,000,000.

On this amount Parliament has authorized the payment of  $3\frac{1}{4}$  per cent, but by resolution of Parliament, the interest charges varied during the period of the war. At the moment, the bank is returning to the state an amount in excess of the cost of the money raised by the state.

This bank is under the management of a central board, appointed by the Governor General, consisting of a general manager and four other members. In addition, local boards have been established at Cape Town, at Port Elizabeth and at Bloemfontein, for advisory purposes only, the headquarters of the bank being at Pretoria.

Under the Act, every magistrate, field cornet and police officer and the Postmaster General and any officer under him are by law agents of the bank when required by the central board to give assistance.

The main objects of the Bank, in so far as they affect agriculture, are—

- (1) to make advances to farmers against the security of first mortgage on agricultural and pastoral lands. Advances cannot be greater than 60 per cent of the appraised value of the land nor greater than a maximum of £2,000;
- (2) to make advances to agricultural co-operative societies against the security of the joint liability of the members for the society's debts;
- (3) to make advances to farmers to construct dipping tanks, silos and other contrivances for the making or storage of ensilage and to erect boundary fences;
- (4) to make advances to settlers who hold land from the Crown under lease or license. In addition, advances made to farmers by Parliament for purposes of relieving distress from time to time have been administered by the Bank;
- (5) to promote co-operation among farmers.

The bank's relation to the co-operation societies, is that of a lending agency. Legally the Bank is not responsible for the formation of these societies. They are formed under a special Act for the Promotion of Co-operation, administered by the Department of Agriculture.

These co-operative societies at first were unlimited liability, but, by an Act passed in 1922, the Bank is authorized to make advances to these societies with limited liability, to receive money on fixed deposits for the purpose of financing co-operative societies and to make advances with respect to fencing of boundaries and public roads.

Prior to 1921, the Bank was authorized to charge only 5 per cent interest; since 1921, 6 per cent interest has been charged on all loans.

It will thus be seen that this Bank serves the purpose of the Long Term Credit and Short Term Credit organizations in other countries, that is, it makes capital loans on first mortgages to farmers, and, in addition, makes short term loans for seasonal purposes through the co-operative societies organized within the Union.

Since its inception in 1912, the Bank has shown a net profit of £355,596, being 5.14 per cent on the capital invested.

"While the bank is conducted on ordinary commercial lines, its object is not to make large profits and the law provides that as soon as the reserve fund and the capital of the bank total such an amount as is in the board's opinion adequate

## SESSIONAL PAPER No. 142

to enable the bank to fully carry out its objects, an amount determined by the board will be paid to the Minister of Finance out of the profits and the reserve fund of the bank, but the amount of the reserve fund may not be reduced below £350,000... It is anticipated that the time is not far distant when the bank will be fully able to carry out its objects on its own resources and that it will be in a position to commence the repayment of its capital."

On the 31st of December, 1922, the co-operative societies owed the Bank £750,565, while the turnover of the co-operative societies for the same year was £1,237,400.

The amount of loans on mortgages on 31st December, 1922, was £5,858,824. These figures will suffice to show the relation between Short Term Credit to co-operative societies and that of Long Term Credit on mortgages.

It will thus be seen that under the South African plan, agriculture is called upon to carry itself financially, the government borrowing the money, thus giving security to the lenders and making possible reasonable interest rate, while the business of the bank is supposed to be conducted so as to secure a business-like return to the State.

### The Dominion of New Zealand

The effort to promote agricultural settlement through government support began in New Zealand many years ago and has been worked out with greater detail with respect to the classification of land and the kind of security offered for loans than in any other part of the British Empire.

Under the authority of an Act passed in 1892, the government began the purchase of lands in order to make provision for their sale or lease to private individuals. In 1894, an Act was passed, known as "The Advances to Settlers Act," the first of a considerable number of enactments having for their object the lending of money to settlers and workers for the purchase and improvement of farms and for the general development of the resources of the Dominion.

Two general ideas lie behind all these schemes:—

- (1) The providing of money on security direct to settlers, and
- (2) The providing of money by the government itself in the survey and improvement of purchased lands with the intention of recouping themselves from the sale of the land.

Under the Advances to Settlers Act of 1894, an Advances to Settlers Office was established and authority was taken to raise £3,000,000 within two years for the purposes of the Act.

A number of other Acts were passed prior to 1913 relating to the subdivision of the land, all of which were embodied in a new Act passed in 1913, known as "The State Advances Act."

This Act is of a general character relating to many things other than advances to agriculture, making provision for advances to settlers, for advances to workers and for advances to local authorities. In this report, except incidentally, only the agricultural phases of the Act are dealt with.

#### Advances to Settlers

With regard to advances to settlers, the Act authorizes the establishment of an office, called the State Advances Office, managed by an officer called the Superintendent, who in his own right becomes a corporation. He holds office at the pleasure of the government.

Under this Act, the Advances to Settlers Branch is authorized to make first mortgages on lands in New Zealand when free from all encumbrances, liens and interest, other than leasehold interest. The Act defines freehold land

as land registered under the Registration Act of 1908 and describes a great many other types of land, which, under special forms of lease, are also eligible as security for loans.

Advances are made between the limits of £25 and £2,000, but loans not exceeding £500 are given priority. In the case of freehold lands, loans are granted to three-fifths of the value of the security, or two-thirds, if the land be first class agricultural land. In the case of lands where the security is leasehold, loans are granted to three-fifths of the value of the lessee's interest.

Loans are made at the rate of 5 per cent interest per annum, and are repayable in 36½ years on the amortization principle. The borrower is permitted, however, to repay from time to time part of the principal in amounts not less than five pounds or a multiple of five pounds.

In order to encourage early payment, one-tenth of the interest is rebated, if the mortgagor, not being in arrears for previous instalments, pays his interest on or before the date due.

#### Funds for Loans

Section 18 of the Act sets out the process by which money for the purpose is raised:

- (1) For the purpose of the Advances Office, the Minister of Finance, on being authorized by the Governor in Council so to do, may from time to time raise on the security of and charge upon the public revenue of New Zealand, such sums of money as he deems fit, not exceeding in any one financial year the amounts hereinafter specified.
- (2) The maximum amount that may be raised in any one financial year for the business of the several branches of the Advances Office shall be as follows:

For the Advances to Settlers Branch. . . .	£1,500,000
For the Advances to Workers Branch. . . .	£ 750,000
For the Advances to Local Authorities. . .	£1,000,000

- (3) The sum so raised shall bear interest at such rate, not exceeding five per cent per annum, as the Minister prescribes.

Since the inception of the scheme in 1894, loans have been advanced to 53,228 people amounting to £19,826,000, of which £12,155,812 has been repaid, leaving outstanding £7,670,188. These figures are as at December 31, 1921. Of the loans outstanding at the above date, 14,166 are for sums not exceeding £500.

Of the amount outstanding approximately £4,500,000 is on rural land, the balance being on urban or suburban land.

It may be of interest to note that under the Advances to Workers Branch (and a "worker" is defined as a person whose income does not exceed £200), there has been loaned out £4,446,685, and under the Advances to Local Authorities Branch, there has been loaned out £4,661,000.

In addition to the money raised as described above, the Act authorizes the lending to settlers of the amount paid in to the Public Debt Sinking Fund and the amount also paid in to the Advances Office Sinking Fund.

Sir George Elliott, Chairman of the Board of Directors of the Bank of New Zealand, the government bank, recently stated that the total mortgage indebtedness of New Zealand was not less than £200,000,000. Of this amount approximately £7,000,000 is outstanding under the State Advance Act, which, after all, is a very moderate amount in comparison with the whole. He states that of the £200,000,000 loaned on mortgage, by far the largest proportion has been obtained from sources within the Dominion of New Zealand and represents money in the possession of persons of moderate means.

As a large proportion of the loans under the Advances to Settlers Act is in amounts not exceeding £500, it would appear that advantage has been taken of

## SESSIONAL PAPER No. 142

this Act by a considerable number of persons of moderate means, who, at the time of taking the loans, were in the process of establishing themselves.

A Moratorium Act has been in force in New Zealand with respect to repayment of the principal of mortgage loans for nine years and will expire on 31st December, 1924.

During the war period, the same conditions with respect to the prices of land which existed in England and the United States, and, to a limited extent, in Canada, existed in New Zealand, giving rise to after war hardships which made the moratorium necessary.

**Short Term Loans**

The Bank of New Zealand, which is a bank conducted by a Board for the State also does a very large business with the farmers. £10,000,000 of the outstanding obligations as at March 31, 1922, were advances on short term loans made to farmers. A very large proportion of the loans were under £100, and, therefore, were probably made to farmers of moderate means.

During the session of the Parliament of New Zealand of 1922, an Act providing for the incorporation of local associations of the usual co-operative character was passed. The objects to which loans under these organizations could be applied were as follows:—

- (a) Clearing, fencing, drainage and improvement of a piece of ground occupied by the member;
- (b) Construction of buildings on these grounds;
- (c) Purchase of tools, livestock, seed, plants, trees and other things useful for the occupation or exploitation of land;
- (d) Purchase of professional implements;
- (e) Payment of mortgages, debts, and other obligations of the member;
- (f) All the other objects which the Governor General in Council may declare as approved in the sense and for the purposes of the present law.

No associations had been formed under this Act up to 31st July, 1923.

In all the British Dominions, agriculture has felt very heavily the after effects of the war and special consideration has been granted it. Reports would indicate that the institutions described above and designed to aid agriculture are functioning as satisfactorily as could be expected.

## SECTION IV

## RURAL CREDIT IN THE UNITED STATES

## 1. Long Term or Mortgage Credit

The agitation for rural credit in the United States began many years ago. During periods of prosperity it would lie dormant but would spring into life again during periods of depression. The whole movement which led to the establishment of the small state banks with authority to do mortgage business was a result of the conviction that the large national banks under federal regulations were so commercial and industrial in their spirit and organization that the state system of small banks was necessary to agriculture. It was an effort to solve the problem of mortgage credit from within the state. The fact is that almost without being recognized agriculture had become so enormous in its industrial and commercial relations that old methods of financing its operations were felt to be inadequate without the real reason becoming quite apparent. This state of affairs was brought about by the permanent settlement of the enormous areas of good agricultural land and the disappearance of cheap new lands capable of easy settlement; the consequent rise in value of the lands in the settled area and the difficulty of securing, without being possessed of considerable capital, good farms; the better education of the farming population and the consequent application of modern science to agriculture.

With regard to available lands it may be noted that by 1915, six-sevenths of all the free land of the United States had been taken up and what remained was mostly desert, dry or swampy land which could not be brought under cultivation without great capital expenditure. This was brought about by the passage of the Homestead Act of 1862. Long before 1900 therefore land in the settled areas had so advanced in price that the difficulty of obtaining good land by those who desired to cultivate it became very great and larger capital expenditures were necessary. This fact is indicated by the enormous increase in the price of land as shown by the United States census and by the rapid increase in the number of tenant farmers. Land which had been bought originally for \$1.25 an acre was worth in 1915 from \$150 to \$250 per acre. The average price of plow land in the United States in 1919 was estimated by the United States Bureau of Crop Estimates as \$74.31 per acre, while since 1900 the average value of the farms in the country had increased approximately 400%.

Parallel with this rise of values and as a consequence of it was a great increase in the number of tenant farmers. In 1880, 25.6% of the farmers of the United States were tenants; in 1920 this had increased to 38%. The high prices meant either becoming a tenant or removing to the centres of industry.

During the same period and prior to the establishment of the Farm Loan Board in 1916, there had been an enormous growth of farm mortgage business through the agencies established under state and federal laws for the purpose. In 1913, the estimated total value of farm mortgages in the United States was \$3,599,000,000. In the seven years following, this had increased to the enormous total of over \$8,000,000,000, the figure at which it now stands approximately. The agencies granting these mortgages were the Farm Mortgage Banks, Farm Loan Companies, Insurance Companies, local investors, private lenders and State Banks and Savings Banks.

## SESSIONAL PAPER No. 142

**Farm Mortgage Banks**

The Farm Mortgage Banks were really the pioneer institutions. They came into being after the Civil War following the development of the western states, because of the necessity for an intermediary between the eastern capitalists seeking investments and the western farmer. Men living in the new centres of populations, familiar with the country and confident of its future loaned their small capital to farmers on first mortgages and then sold the mortgages to the men of means in the East who possessed larger means and who desired good investments. From such a small beginning larger farm mortgage banks came into being, the bank taking the place of the intermediary instead of the individuals. In 1921, Farm Mortgage Banks and Farm Loan Companies organized on the same principles had over \$3,000,000,000 of mortgages. These institutions put their own money into the loan, sell it either directly or by means of bonds to the capitalist, collect the interest and principal and in general act as agents for the secondary investor, while carrying the responsibility for the transaction in case of failure on the part of the borrower.

**Insurance Companies**

Next in importance came the Insurance Companies. These had invested in farm mortgages in 1921, \$1,250,000,000. Many of these mortgages were purchased from the Farm Mortgage Banks. As their aim is security as well as profit, they will doubtless be heavy buyers of the bonds of the Farm Loan Board. A number of these companies are now making loans on the amortization plan.

**National Banks**

Prior to 1913 the National Banks were not permitted to lend on the security of land. They were primarily commercial institutions and required liquid assets. Many of these, however, acted as agents doing the work of a Farm Mortgage Company for private persons and insurance companies. Since 1913 National Banks, when not situated in a Federal Reserve City, may make loans on farm lands under certain definite restrictions. For example, such a loan can only be a first mortgage on improved property and the total loans at any time must not exceed one-fourth of the capital and surplus of the banks.

**State Banks**

Since 1890 a very large part in mortgage credit business has been played by the State Banks. Of these there are now nearly 20,000 in the United States. As previously stated they grew rapidly after the free lands had been settled and the demand for rural credits became somewhat insistent. They depend mainly on the farming community for their business and are planned to meet its needs. Many of them prefer the State charter to the National charter for the reason that the former carries with it more privileges in the direction of the mortgage business. It is estimated that the mortgages held by the State Banks amounted in 1915 to at least \$1,000,000,000. They are, however, definitely restricted by the fact that most of them have small capital and are provincial in their character and outlook.

**Trust Companies and Other Organizations**

In addition to the foregoing a considerable amount of farm mortgage business is done by Trust Companies, Building and Loan Associations and a great variety of saving banks operating under state laws. Probably one-third of the total mortgage business is done through these agencies.

With all these agencies at work it would seem that all legitimate claims for money on farm mortgage security would be met.

That such was not the case was due to following causes:—

(1) The high average of interest rates which prevailed, when compared with the European farmers with whom the American farmer must compete, especially in the newer settled parts of the country, the parts least able to pay.

(2) The excessive costs connected with the making of loans, namely legal costs, commissions, and incidental expenses.

(3) The impossibility of meeting mortgage payments out of production of the land because of the short terms for which the mortgage was made. This is emphasized when the increased cost of the instruments and methods of production are considered.

(4) The knowledge that in other countries schemes of a national character had been found to work well both in the national interest and the interest of the farmer.

### Interest Rates

With regard to the interest rates, the facts are that the average rate of interest on first mortgage loans in thirty states of the Union was 7 $\frac{1}{2}$  per cent in 1915.<sup>1</sup> To this must be added legal expenses, commissions and other charges. In the different states the averages were as follows: Alabama, 8.8 per cent; Arkansas, 8.8 per cent; Arizona, 10 per cent; Illinois, 5.5 per cent; Indiana, 5.6 per cent; Iowa, 5.6 per cent; Massachusetts, 5.5 per cent; Minnesota, 6.2 per cent; Montana, 9.3 per cent; Ohio, 5.7 per cent; Oklahoma, 7.2 per cent; Pennsylvania, 5.3 per cent; Texas, 8.5 per cent; Utah, 8.7 per cent; Wisconsin, 5.6 per cent; Wyoming, 9.2 per cent. In comparison the average in Europe does not exceed 5 per cent.

Not only was there a variation between the states but just as great a variation within the individual states. In Minnesota, an extreme case, it varied from 5 per cent in the south to 9 or 10 per cent in the north. Without question these variations represented to a certain extent variations in the quality of the security. Soil and climatic conditions, the type of farming, the distance from markets, also played a part, but it was firmly believed that the public were being exploited by the money-lender especially in the new districts where there was not much competition. It was recognized that this could not be corrected by the small banks whose facilities for getting money were limited and by whom a rediscounting was absolutely necessary if considerable business was to be done.

With regard to (2), excessive costs in obtaining money, it is only necessary to say that for short term mortgage loans, two to five years, a commission of 5 per cent or over was often charged; this added to the interest rate one or two per cent. When it is added that two-fifths of the total mortgage debt is in the west north central states where the average rate is high, it seems reasonable to assume that the average interest charges of the thirty states were not far from 8 $\frac{1}{2}$  per cent interest, with legal charges still remaining to be accounted for, while in many of the states it greatly exceeded that sum.

With regard to (3), the impossibility of meeting mortgage payments under the short term conditions of payment, especially by those whose original capital was small, was everywhere apparent. It is hardly necessary to repeat that mortgage payments on land at \$50 to \$75 per acre are an entirely different thing from such payments at \$10 per acre. In the latter case payments from production might be possible; in the former it would be impossible unless the mortgage was on a small percentage of the value. New methods had to be devised.

To this was added (4) the knowledge, that schemes less oppressive to the borrower, of greater security to the lender and at lower rates of interest were working well elsewhere, and this created the demand for careful consideration of the whole subject.

<sup>1</sup>Investigations made by the Rural Organization Service of the United States Government.

## SESSIONAL PAPER No. 142

A distinguished authority on agriculture, the Assistant Secretary of Agriculture in 1915 stated the matter to a body of bankers in the following terms: "I believe I am not overstating the matter when I say that a satisfactory system of Rural Credit is as necessary to the development of agriculture in the country as is a widespread application of scientific methods to agriculture. As a matter of fact, it is impossible for the farmers to make use of the latest scientific discoveries without better credit facilities." It is hardly necessary to state that the two go hand in hand.

In 1913, two commissions were sent to Europe from the United States to study and report on European methods. These were the "United States Commission" and the "American Commission on Rural Credits." The former was appointed by the United States Congress, the latter was assembled by the Southern Commercial Congress, an organization in the southern states interested especially in the industrial, commercial and agricultural development of the southern states. The reports of these commissions were published by the United States Senate and became the basis of future legislation. If I were to select one fact as impressing the American mind more profoundly than any other as the result of the studies in Europe of these commissions, I would say it was the fact of farm mortgage bonds or debentures coupled with amortization.

One observer, a member of Congress, stated this conviction thus "One of the most important discoveries in the world was the invention of the farm mortgage bond or debenture as an instrument to promote land credit. There never has been a successful system of land credit established in any country that does not use the mortgage bond or debenture as an instrument of credit to mobilize and liquefy land values. Through the mortgage bond the farm mortgage has been made easily negotiable and put in such a form that the holder may realize thereon immediately."

The result of all this agitation was the passing of a number of acts for the purpose of promoting Rural Credit. Of these, one was especially designed to promote *Long Term Mortgage Credit*, viz:—

#### THE FEDERAL FARM LOAN ACT

The Federal Farm Loan Act was approved by the President of the United States on July 17th, 1916. It is described in the Act itself as an act "to provide capital for agricultural development, to create a standard form of investment based on farm mortgages, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to create government depositories and financial agents for the United States, and for other purposes."

Under this Act, there is established at the seat of government in the Department of the Treasury, a Federal Farm Loan Bureau, under the supervision of a

#### FEDERAL FARM LOAN BOARD

This Federal Farm Loan Board consists of seven members including the Secretary of the Treasury, who is Chairman, ex-officio. The remaining six members are appointed by the President of the United States, by and with the consent of the Senate. Of the six, not more than three are to be members of one political party and all must be citizens of the United States. They all devote their entire time to the work of the Board and are paid \$10,000 per annum for their services. The term of office is eight years and members are only removable for cause; they cannot be connected with any mortgage or bonding business and must certify to this under oath before appointment.

### FEDERAL LAND BANKS

Under the Act, the Federal Farm Loan Board is instructed to divide the United States, into twelve districts, to be known as Federal Land Bank districts, the districts to be apportioned with regard to the farm loan needs of the country.

In each of these districts, they are authorized to establish a Federal Land Bank "with its principal office, located in such city within a district as the Board shall designate." The name of the city in which the bank is located is included in the name of the bank. These banks are now located in the cities of Springfield, Mass., serving Maine, New Hampshire, Vermont, Massachusetts and New York; Baltimore, Md., serving Pennsylvania, Maryland, Delaware, Virginia, and West Virginia; Columbia, S. C., serving North Carolina, South Carolina, Georgia and Florida; Louisville, Ky., serving Kentucky, Indiana, Ohio and Tennessee; New Orleans, serving Louisiana, Mississippi and Alabama; St. Louis, Mo., serving Illinois, Missouri and Arkansas; St. Paul, serving Minnesota, Wisconsin, Michigan and North Dakota; Omaha, serving South Dakota, Nebraska, Iowa and Wyoming; Wichita, serving Kansas, Oklahoma, Colorado and New Mexico; Houston, serving Texas; Berkeley, serving California, Nevada, Utah and Arizona; Spokane, serving Montana, Idaho, Oregon and Washington.

Only one Federal Land Bank is allowed in each district. Each bank is a separate corporation independent in its organization and management, but is under the general supervision of the Farm Loan Board. In the case of each bank there is a directorate composed of seven persons, three of whom are elected by organizations to be described hereafter, known as National Farm Land Associations, three are appointed by the Farm Land Board and a Director-at-large, also selected by the Board from a list of three persons having the greatest number of votes cast for them by the National Farm Loan Associations.

#### Capital

When each Federal Land Bank was organized, it was organized with a capital stock of \$750,000, supplied by the Federal Government. Under the Act, this is automatically increased by five per cent on each loan made. This five per cent is derived by the compulsory sale of stock to each member of a local association who must subscribe, and pay for in cash, five per cent of the amount he desired to borrow. The capital stock, therefore, of each bank goes up and down automatically, depending upon the amount of outstanding loans.

### NATIONAL FARM LOAN ASSOCIATIONS

In each federal district, National Farm Loan Associations must be organized by persons desiring to borrow money on farm mortgage security. The persons so desiring must sign articles of association, specifying in general terms the objects for which the association is formed and the territory in which it desires to operate (generally a county). These National Farm Loan Associations thus become incorporated and are the only medium, excepting in very special cases, through which persons desiring to borrow money from the Federal Land Bank can do so. These are, in reality, local semi-co-operative associations, associations of borrowers, who become responsible for initiating all loans in their district. Only persons desiring to borrow money from a Federal Land Bank can become members of one of these associations.

A National Farm Loan Association must consist of ten or more farmers, whose joint applications for loans are not less than \$20,000. Each borrower, as

## SESSIONAL PAPER No. 142

before stated, must subscribe for stock equivalent to five per cent of the desired loan and assume a liability, in case of loss, for an additional five per cent. In other words, the local associations are double liability corporations. For example, should a borrower desire to borrow \$1,000 he must buy fifty dollars' worth of stock in the local association and become liable for an additional fifty dollars, in case of failure of members of the local association to meet their obligations. If the farmer has not the money to buy stock, it is deducted from his borrowings.

The affairs of a local association are administered entirely by officers appointed by the association itself. Each borrower has a vote for each five dollar share of stock he holds up to twenty. No one stock holder in the local association has more than twenty votes, no matter what the amount of stock he holds.

**Loans Through Agents**

In addition to making loans through the local associations, the Federal Farm Loan Act provides that a Federal Land Bank may make loans on farm lands through agents approved by the Board. Such agent must be a bank, a trust company, a mortgage company, or a savings institution, chartered by the state in which it is operating. This privilege may be taken advantage of in sections of the country where there are not enough farmers desiring loans to organize a local association. In the case of a loan through a local association it is endorsed by the association, which becomes liable to the extent of the double liability clause. In the case of an agent, however, the agent must endorse the loan and assume full liability for it. In return for this liability, the agent is allowed a certain percentage per annum on the unpaid capital. This is supposed to give to the agent a security corresponding at least to the double liability security of the association.

It will, therefore, be seen that under the Federal Farm Loan Act, loans are not made by the Federal Land Banks directly to individuals, but only to individuals applying through associations and recommended by them for loans. Every member of the association making the recommendation becomes responsible to the extent of ten per cent of his own borrowings for the total indebtedness of the association. The definite aim of the Federal Land Bank is to keep itself free from direct relationships with the individual and to force the organization, wherever possible, of the National Farm Loan Associations.

**Organization of Farm Loan Association**

The following illustration will make the process or organization clear. Let us assume that a farmer wishes to borrow the sum of \$2,000. He must get at least nine other persons in the community, the total of the borrowings asked for being not less than \$20,000, to join him in forming an association.

A meeting of the borrowers is then called and each applicant subscribes for stock to the extent of 5 per cent of the loan he desires. The law requires that five directors be elected each member having the privilege of voting, one vote for each share of stock up to twenty shares. A directors' meeting must then be held and a president, vice-president, secretary-treasurer and loan committee of three members elected, the directors themselves not being members, of the loan committee. All officers must be members of the association, excepting the secretary-treasurer, who must be a person selected especially for his suitability for the work, very often a local bank manager. He is the only officer who receives compensation for his services. When the foregoing has been completed, the group is ready to enter into articles of association. These articles can be obtained from the Federal Land Bank. The signed articles of association

with the applications for loans are then sent to the Bank, which sends an appraiser to investigate the security carried with the loans. After this investigation, if everything is satisfactory, the decision of the Bank is forwarded with a recommendation to the Federal Farm Loan Board, which, although almost always following the advice of the Federal Land Bank, nevertheless has power to refuse the charter. When the Board grants the charter, however, it is forwarded to the association from the Federal Land Bank of its own district. When the appraisals and applications have been fully approved and the charter granted, the loans are forwarded to the secretary-treasurer of the local association, who distributes the funds according to the applications made. As has already been stated, membership in the local association is confined to actual farmers who wish to borrow on a first mortgage basis.

After an association has been formed in a district, should another person desire to become a borrower under the system, he must make application through the Secretary-Treasurer of the local association and be accepted by a two-thirds vote of the board of directors. By purchasing the amount of stock representing 5 per cent of the desired loan, he becomes a member of the association and his application is forward with recommendation to the Federal Land Bank of his district. An appraiser of the Farm Loan Board is then sent to pass judgment on the loan. This appraisal is submitted to the Federal Land Bank and compared with the appraisal of the local committee. It is then sent to the Farm Loan Board for approval before the loan is made. If the money is granted, the money will be forwarded to the individual from the Bank through the secretary-treasurer of the association of which he has become a member.

Non-resident landowners, landlords, land speculators, or other persons who are not bona fide farmers, are not admitted to membership in these associations, and therefore cannot borrow from these banks.

#### **Dividends on Stock**

The money paid in for stock is deposited with the Federal Land Bank as additional security for the loans, but dividends are paid upon this stock through the secretary of the association, generally at a rate equivalent to the rate of interest paid for mortgages. The association has the right to allocate a part of this for the expenses of the association. It is a custom in many of the associations to use these dividends entirely for local expenses.

#### **Amount of Loan and Interest Rate**

The maximum amount which a farmer may borrow on his farm is 50 per cent of its appraised value for agricultural purposes plus 20 per cent of the permanent insured improvements.

The interest charges of all loans are fixed by law at a maximum of 6 per cent not, however, to exceed the interest charges paid on mortgage bonds sold by more than one per cent. For example, if the last sale of mortgage bonds was made at  $4\frac{1}{2}$  per cent then the interest charges could not exceed  $5\frac{1}{2}$  per cent. This prohibits the sale of bonds at a rate par of greater than 5 per cent.

#### **Terms of Repayment—Amortization**

All loans are repaid on an amortization basis, the borrower having the right to select the number of years for repayment, provided it is not less than five nor more than forty. The working of the amortization plan can, perhaps, be made more clear by taking an illustration. A borrower has \$1,000 at  $5\frac{1}{2}$  per cent, to be repaid in half-yearly payments in  $34\frac{1}{2}$  years. To do this requires an amortization rate of one per cent, in addition to the ordinary interest charges. Assuming the interest charges to be  $5\frac{1}{2}$  per cent then the charge, including amortization, would be  $6\frac{1}{2}$  per cent. Under the plan,  $6\frac{1}{2}$  per cent, of the original

## SESSIONAL PAPER No. 142

loan of \$1,000 viz., \$32.50, would be collected every six months. The difference between the interest requirement of  $5\frac{1}{2}$  per cent. on the sum due at any given time and the  $6\frac{1}{2}$  per cent. on the total borrowing would be credited as an instalment on the principal. The following table will show how it would work out in this particular case:

Principal, \$1,000. Rate,  $5\frac{1}{2}$  per cent. Semi-annual Instalments, \$32.50. Final Instalment, \$32.42.

The form of note taken in this case by the bank is as follows, and it is held along with a mortgage registered against the property of the borrower:—

Loan No.....

\$1,000.00

.....19....

For value received.....promise to pay to the order of THE FEDERAL LAND BANK OF SAINT PAUL at its office in the city of St. Paul, Minnesota, the sum of

ONE THOUSAND DOLLARS

with interest at the rate of five and one-half per cent per annum, payable semi-annually in manner and form as follows:

In sixty-eight semi-annual instalments of  
THIRTY-TWO DOLLARS AND FIFTY CENTS

each, payable on the.....day of.....and.....in each year, and a final instalment of

## THIRTY-TWO DOLLARS AND FORTY-TWO CENTS

payable on the.....day of.....19.... unless this note shall be sooner matured by extra payments on account of principal, such method of payment being on the amortization plan and in accordance with the amortization tables printed on the back hereof which are hereby accepted and made a part of this note. Extra payments can only be made on the regular instalment due dates. This note is secured by real state mortgage of even date herewith.

If default is made in the payment of an instalment or instalments as herein provided, the same shall bear simple interest from the date of such default at the rate of eight per cent per annum, as provided by the Federal Farm Loan Act.

If default be made in the payment of any instalment or instalments of this note, or if default be made in respect to any condition or covenant contained in the mortgage which secures the payment hereof, then the entire principal of this note remaining at that time unpaid, together with the accrued interest shall, at the option of the holder hereof, become immediately due and payable.

.....  
 .....

Under the Farm Loan Act, however, the borrower has the right after five years to repay at any interest payment date such additional instalments of the principal as he may desire.

Section 9 of subsection 12 of the Act, which reads as follows, defines the position of the borrower in relation to defaulted payments and other legal charges:—

“Every borrower shall pay simple interest on defaulted payments at the rate of eight per centum per annum, and by express covenant in his mortgage deed shall undertake to pay when due all taxes, liens, judgments, or assessments, which may be lawfully assessed against the land mortgaged. Taxes, liens, judgments or assessments not paid when due, and paid by the mortgagee, shall become a part of the mortgage debt and shall bear simple interest at the rate of eight per centum per annum. Every borrower shall undertake to keep insured to the satisfaction of the Federal Farm Loan Board all buildings the value of which was a factor in determining the amount of the loan. Insurance shall be made payable to the mortgagee as its interest may appear at time of loss, and, at the option of the mortgagor and subject to general regulations of the Federal Farm Loan Board, sums so received may be used to pay for reconstruction of the buildings destroyed.”

### Type of Security

Loans are made only on first mortgages on farm lands and the purposes to which the proceeds of the loan may be put are defined in the Act, as follows:—

“To provide for the purchase of land for agricultural uses.

“To provide for the purchase of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm. The term “equipment” to be defined by the Federal Farm Loan Board.

“To provide buildings and for the improvement of farm lands, the term “improvement” to be defined by the Federal Farm Loan Board.

“To liquidate indebtedness of the owner of the land mortgaged, existing at the time of the organization of the first local farm loan association established in or for the county in which the land mortgaged is situated, or indebtedness subsequently incurred for purposes mentioned in this section.”

The term “equipment” has been defined by the Farm Loan Board to include “the implements needed in the conduct of a farm to facilitate its operations. It may consist of teams, as well as machinery, tools and like articles.

## SESSIONAL PAPER No. 142

The term "improvements" has been defined by the Federal Farm Loan Board as including "anything in the form of a beneficial structure, or any useful, permanent physical change tending to increase productive value, such as clearing, tilling, draining, fencing, building."

**Loans Limited**

In the original Act, the size of the loans was limited, viz., a minimum of \$100 and a maximum of \$10,000. In March, 1923, an amendment was passed to the law permitting a maximum of \$25,000.

**Legal Charges**

Certain charges are permitted by the Farm Loan Board to be collected by the association from borrowers as follows:—

- (1) An application fee of \$10.00 to cover cost of appraisal and the expenses of the local association.
- (2) The cost of title research.
- (3) The preparation of an abstract.
- (4) The recording of papers.

These costs will vary somewhat, depending upon the position of the title of the individual borrower. In the case of clear title, they will be small. Where there are difficulties to overcome and title to be cleared, the cost would necessarily be higher. On the other hand, there are no renewal costs, no bonuses and no recording or mortgage taxes.

**Reasons for Share Stock of Local Association**

It would appear that there were three main objects in having the purchase of stock made compulsory upon the borrowers:—

- (1) To make the local associations more careful in their appraisal of lands and in the persons to be recommended for loans, as all the members are obligated to the extent of ten per cent. of their own borrowing for mistakes made. They would thus be made more anxious to recommend loans with a reasonable appraisal of lands and to insist upon payments of interest and amortization charges on the part of persons who might otherwise be careless.
2. As the sale of farm mortgage bonds was fixed to not exceed twenty times the capitalization of the bank, the collection of 5 per cent. in cash from the borrower for capital stock made it possible for each borrower to capitalize his own loan, so that the capital stock of the bank increases and decreases just in proportion to the amount of the loans issued.
3. To bring into the association only persons of good standing. Special enquiry is made concerning a man's standing in his community and the personal element enters into decisions regarding loans.

As previously stated, the Government originally capitalized each one of the twelve Banks with a sum of \$750,000 making a total of \$9,000,000 in all. This capitalization does not receive dividends. It is really a loan by the Government without interest to the Banks. All the additional capital is raised by the sale of mortgage bonds, the amount issued not to exceed twenty times the capitalization of the bank. The additional capitalization required in order to increase the sale of the bonds is provided as stated above by the sale to the borrowers of stock representing one-twentieth of the amount they borrow. It will thus be seen that the whole organization is essentially an organization of

borrowers following the German *Landschaft*, as distinguished from the French *Credit Foncier*, where the capital of the organization is provided by selling stock to persons seeking investments. There are no outside capitalists making dividends by means of profits. Investors are guaranteed the interest on the bonds by the Federal Land Bank. All other profits, after expenses have been paid, go into a common fund in the interest of the Bank and to pay dividends on the stock held by the borrowers. All bonds issued under this system are exempt from taxation.

#### **Deposits**

These Federal Land Banks are not banks in the ordinary sense of the word. They are not permitted to accept deposits of current funds payable on demand, excepting from their own stock holders, nor are they permitted to do ordinary banking business; they are not allowed to loan money on mortgage, excepting through the Farm Loan Associations or under the special provision for agents in districts where there are no Farm Loan Associations; they are not permitted to demand or receive any commission of any kind not specifically authorized under the Act; they are mortgage corporations limited to acting as intermediaries between investors wishing to buy bonds and borrowers wishing to secure money on mortgage. Under the Act, however, the Secretary of the Treasury is authorized, in his discretion, upon request of the Farm Loan Board, to make deposits of federal funds for the temporary use of any Federal Land Bank out of unappropriated money in the Treasury. For such deposit the bank must pay the usual Government deposit rate and must give satisfactory security to the Treasury. A limit was originally fixed at \$6,000,000 as an aggregate for such deposits.

During the years 1919, 1920, 1921, the United States Treasury, under authorization of Congress, was permitted to purchase \$100,000,000 annually of the bonds of the Farm Loan Board the reason given being that as the Government was selling bonds in enormous quantities for war purposes it preferred to monopolize the market for the time, and so included the Farm Loan Boards' demands with its own. Without question it established a rate for the sale of the bonds.

#### **Sale of Bonds**

At first it was arranged that each of the twelve Banks would issue its own bonds in its own market. At the same time the Farm Loan Board fixed the rate of interest to be charged at a maximum of 6 per cent, and required uniformity in rates as far as possible. It was soon seen that these two things were inconsistent with one another. Bonds offered for sale, for example, for the Bank operating in Oregon, could not meet the prices that could be obtained for bonds offered for sale for the Bank in Baltimore or in Springfield. The same general motive that causes interest rates to be higher in the West than in the East, as demanded by mortgage companies, became apparent with respect to the sale of these bonds, and that, as a common rate of interest was to be charged, it would be necessary that some common scheme for the sale of bonds should be arranged. The Act was amended, therefore, unifying the responsibility of the twelve banks for each other's issues, and making possible a central agency, under the authority of the Farm Loan Board, for the purpose of selling all the bonds issued by the various Banks. The selling agency has been organized. The head of it is one of the great bond houses of the United States with which are associated 5 others forming a Syndicate. Under this Syndicate are some 800 smaller bond houses and banks operating through approximately 8,000 selling agents, distributed in all parts of the United States. The Syndicate re-

## SESSIONAL PAPER No. 142

ceives 1 per cent for selling the bonds and pays  $\frac{3}{4}$  of 1 per cent to the sub-agencies for the amounts of their sale. There is now no trouble disposing of all the bonds offered at from  $4\frac{1}{2}$  to 5 per cent interest rate for par.

## JOINT STOCK BANKS

In addition to the Federal Land Banks operating through the local associations, the Federal Farm Loan Act provides for the incorporation of Joint Stock Land Banks for the purpose of carrying on mortgage business through the issuing of farm loan bonds. These are private corporations, although definite limitation is placed by the Act upon their activities. These banks may be organized by ten or more persons forming themselves into a corporation. They must have a subscribed capital of not less than \$250,000, half of which must be paid in cash, the balance subject to call by the Board of Directors. Their charter is issued by the Federal Farm Loan Board on their complying with these conditions, just as in the case of the Federal Land Banks. They are not allowed to issue bonds until their entire capital stock is paid up.

Further, they are exempt from certain of the provisions laid down in respect to the Federal Land Banks; for example, they are freed from the control of the Farm Loan Board with respect to revisions and alterations of interest rates from time to time, and with respect to the nature of the mortgage. They are also permitted to make loans for purposes other than the purposes defined for the Federal Land Bank, and may operate outside a fixed district. They are allowed also to lend larger amounts than the Federal Land Banks, the limit being \$37,500 for Banks with a capitalization of \$250,000 and \$50,000 for those with larger capital. On the other hand, instead of being permitted, as in the case of the Federal Land Banks, to issue bonds aggregating twenty times their paid-up capital, they are not permitted to issue bonds to exceed fifteen times their paid-up capital and surplus, nor are they aided by grants directly made from the Treasury of the United States. It was intended apparently in the creation of these banks to provide a method of securing farm loans based on a security slightly different from that which the Federal Land Bank was authorized to accept and to trust to the initiative of private enterprise to take risks that could not be permitted under the Federal Farm Loan System. These profit-making institutions were, therefore, created with rather strictly defined modes of operating to enable loans to reach persons who could not be reached by a Federal Land Bank. They may lend to individuals. They function in a slightly different way from the Federal Land Banks, and on the whole are charging higher rates of interest, and, in all probability, taking risks which, as a private enterprise, they feel they can afford to take. They correspond somewhat to the *Crédit Foncier*.

## Growth of Business—Federal Land Banks

Since their inauguration, seven years ago, the business of the Federal Land Banks has had a very rapid development.

On February 29, 1924, the Assets of the Federal Land Bank System stood at.	\$936,694,908.00
Mortgage Loans had been made valued at.	832,202,914.00
While the total capital stock was.	44,684,777.00
Of this amount there had been collected from National Farm Loan Associations.	42,432,667.00
In addition there had been paid back into the United States Treasury of the original loan of \$9,000,000 for capitalizing the twelve Banks.	7,014,000.00
Dividends had been paid to the National Farm Loan Associations of.	8,828,173.00
And there is a total Reserve and Undivided Profits of.	7,814,341.00
During the months of January and February, 1924, loans were made to the extent of.	35,378,000.00
Farm Loan Bonds were outstanding to the amount of.	865,206,665.00

The loan was distributed to the various banks of the system as follows:—

Springfield.. . . .	\$ 30,967,968.00
Baltimore.. . . .	41,553,691.00
Columbia.. . . .	52,292,055.00
Louisville.. . . .	78,981,846.00
New Orleans.. . . .	74,885,917.00
St. Louis.. . . .	60,233,912.00
St. Paul.. . . .	104,154,746.00
Omaha.. . . .	97,417,171.00
Wichita.. . . .	73,690,608.00
Houston.. . . .	93,516,680.00
Berkeley.. . . .	36,254,955.00
Spokane.. . . .	87,908,359.00

Every state in the Union and Porto Rico have received financial assistance through these banks the amount varying from \$254,200 for Delaware to \$93,-516,680 for Texas. Broadly speaking, the Western States and the newer States on the southwest have benefited most.

#### Growth of Business—The Joint Stock Land Banks

The Joint Stock Land Banks, under the Federal Farm Loan Board, have been very keen rivals of the Federal Land Banks as the following figures given below will show.

Eighty of these Joint Stock Land Banks have organized since the system began operation.

On February 29, 1924, their assets stood at.. . . .	\$138,397,336.00
They had capital stock paid in to the amount of.. . . .	34,233,520.00
There were outstanding mortgage loans to the amount of.. . . .	400,988,343.00
They had Farm Loan Bonds outstanding to the amount of.. . . .	368,176,900.00

Combining the figures Federal Land Banks and the Joint Stock Banks they show the number of loans made from beginning to be 351,183 and the amount of loans made from beginning, \$1,318,843,548.00.

As the total outstanding farm mortgages indebtedness of the United States is now approximately \$8,000,000,000 it will be seen that the Banks operating under the Farm Loan Board now hold about 16 1/3 per cent. of the whole. The loans under the system will have to increase materially before the 40 per cent. ratio of Germany will be reached. There can be no doubt, however, but that there has already been a regulatory influence on interest rates.

One further word with regard to the Federal Farm Loan Associations. Approximately 5,000 of these have been organized in the United States and through these have been issued the major part of the loans under the Federal Land Banks as distinguished from the Joint Stock Banks. As previously stated, the object of organizing these local associations was to create a spirit of co-operation among the farmers and to ensure that the administration of the whole system should ultimately be in the hands of the borrowers themselves and not, as in the Joint Stock Company Banks, in the hands of private individuals for the purpose of making profit. I found a good deal of difference of opinion as to the value of these associations, depending, I think, to a considerable extent, upon the temperament of the management of the Land Bank. For example, one bank president quite openly stated that he did not believe that the local associations were of any real value, that the persons in them did not co-operate, that at times it was difficult to get them to meet, in order to pass upon loans that were urgent, and, on the whole, he would prefer to deal with the individuals through the other appointed agencies allowed under the Federal Farm Loan Act. On the other hand, other bank presidents were strongly in favour of the local association, but I found in such cases they had been spend-

## SESSIONAL PAPER No. 142

ing a good deal of time trying to bring about a spirit of co-operation among the borrowers and were convinced that as the days went by these associations would become a strong conservative influence in maintaining the integrity of the Bank. In the beginning, there was a disposition on the part of the local association members to over-value their property, having, doubtless, the feeling that it was government money they were using and, therefore, were disposed to take as much as would be allowed. This, I was informed, very rapidly disappeared when they began to realize that, in case of loss, they would be called upon under the double liability clause, so that, with the passing of years and a better understanding, these local associations are becoming helpful, not only in their own communities, but helpful also in relation to the Bank.

The two things that stand out as having been definitely accomplished by the Federal Farm Loan system are:—

(1) Equalization of interest, viz., a maximum of six per cent, from the Atlantic to the Pacific. This was only made possible by the establishment of mutual responsibility between all twelve banks and the fact that the scheme being under the supervision of the Federal Farm Loan Board gave confidence to the investing public.

(2) The second is the firm establishment under this system of the principle of amortization of farm loans. It seems worth repeating a statement previously made that the scheme of amortization would not have been valuable in the days when there was plenty of cheap land and farmers could move easily from one place to another for purposes of settlement. Under these circumstances, it might be possible by means of production, in a short period of years, to repay mortgages raised on land at these cheap valuations, but with the increasing valuation of land, the increased capital investment necessary for the purchase of a farm, the old system of short mortgage made the redeeming of a mortgage impossible out of farm production and the United States farmers found themselves in exactly the same position that the farmers of Europe found themselves in one hundred years ago. The establishment of this principle without question will enormously strengthen the position of the American farmer in competition with Europe.

On the other hand, I think it is wise to point out that the Federal Farm Loan scheme was conceived as a business scheme intended to be self-supporting and ultimately free from any lien upon the Government. The result is loans have only been made where the security was of a class to warrant the loan, and under very rigid terms. While the advantage of interest rates and of amortization were made available to the farmers, there was no slackening in the demand for a proper security for the money loaned. This, in my judgment, is the real reason why the Federal Land Banks of the north-western states have not been able to meet the financial needs of these communities. In parts of these states, at least, a condition of affairs has been reached with regard to income from land that makes it impossible for money to be loaned by the Federal Land Banks or any other bank with the security which the law demands. I feel confident that the major part of the complaints made, and there are many, against the operation of the Federal Land Banks, is due to the fact that they have refused to make loans of money against properties that could not offer sufficient security. In other words they have refused to become philanthropic institutions.

## 2. Short Term and Intermediate Credit

Before entering into a discussion of the organization of the Federal Intermediate Credit Banks, it seems necessary to look broadly at the way the problem of Short Term Credits for Agriculture has been faced in the United States. As stated previously, the agitation for a better scheme of rural credits

involving both mortgage credit and short term credit began many years ago. In fact, the whole movement for the establishment and maintenance of small State Banks had behind it the desire to take advantage of the commercial opportunities which agriculture offered, and, at the same time, to provide better facilities for agricultural credit. An illustration of this can be seen in the Bank Law of the State of Kansas, passed in 1897, which grew out of the agitation which followed the period of depression from 1891 to 1895. The objects and methods of the System, as set forth by one of its authors, is as follows:—

- (1) To finance the farm efficiently.
- (2) To oversee the investment of money in farms so that it would be made productive.
- (3) To supervise the farming operations of the borrower so as to ensure profitable return.
- (4) To compel the majority of the directors of the bank to live at the place where the bank is located.
- (5) To make the capital small so that it could be put in rural communities, yet having the competition of nearby banks.

It was believed that, with proper local organization and oversight, risks could be taken on individuals which a large bank, without the local knowledge could not afford to take. These banks were deposit banks only, and aimed at using the local capital available in the development of the local community. That these banks have flourished side by side with national and private banks, there is no doubt, and their local intimate relation to the local community has been of immense value. Similar statements could be made with regard to the other State Banking Systems, at least as operated in most of the Western States of America.

The whole matter was brought into prominence again during the crisis of 1907 when so many of the small banks of the United States closed their doors. This was due largely to the absence of a plan by which the banks in the country could adjust themselves in relation to each other. Corresponding to the agitation which led ultimately to the establishment of the Federal Farm Loan Board, there was also an agitation for the securing of better facilities through which capital might flow from one part of the country to another in times of stress. In 1909 a Monetary Commission was appointed by the United States which, after a very intensive study of banking methods in other countries, ultimately brought about the system known as "The Federal Reserve System." It was felt at that time that the scheme of small banks scattered throughout the country, of which there were nearly 30,000, was very effective, in so far as they related to the local community in which they operated. The absence of some centralizing agency was very severely felt, however, especially in times of depression. A competent authority has stated these difficulties as follows:—

- (1) Decentralization.
- (2) Inelasticity of credit.
- (3) A cumbersome exchange and transfer system.
- (4) Defective organization as regards relation to the Federal Treasury.

With regard to the first of these, it will be only necessary to point out that the 30,000 banks, each with its cash reserve without any exchange relations other than through the Clearing House, made the flow of capital from one part of the country to another almost impossible, and, as few of these banks had any definite relation to the Treasury, even Government help in emergency times was unavailable.

The Federal Reserve Act which was approved December 23rd, 1913, aimed at overcoming these difficulties. It provided for the establishment of twelve

## SESSIONAL PAPER No. 142

Federal Reserve Banks, each to operate in one of the twelve Federal Reserve Districts into which the country was divided. In determining the boundaries of these districts, regard was had to the convenience and customary course of the business of the country. Each district was made large enough to provide for the operation of a bank with a minimum capital of \$4,000,000. Under the scheme all National banks were required to become members of the System, and State Banks and Trust Companies, which complied with certain provisions laid down by the law, were encouraged to join. Member banks were required to subscribe to the capital stock of the Federal Reserve Bank in their district to an amount equal to 6 per cent of the member bank's capital and surplus.

Only a portion of this has yet been called up, but on November 21st, 1923, the total capital paid into these banks amounted to \$110,103,000.

Less than a quarter of the banks of the United States have become members of the Federal Reserve System, but this represents approximately 50 per cent of the total capitalization of the banks of the United States.

Each of the twelve Federal Reserve Banks is managed by a Board of Directors elected from the member banks by a special method devised to be equitable, and are, therefore, democratic in their management.

Above these twelve banks is a central board at Washington known as "The Federal Reserve Board." This Board consists of seven members, including the Secretary of the Treasury, the Comptroller of Currency and five appointed by the President of the United States with the advice and consent of the Senate. In addition, there is a Federal Advisory Council consisting of twelve members appointed by the Board of Directors of the twelve Federal Reserve Banks. The Federal Reserve Board appoints three of the nine directors of each of the Federal Reserve Banks, while in turn each Federal Reserve Bank appoints a member of the Federal Advisory Council, the object being to give complete inter-communication of ideas within the whole system.

Every bank, or banking association, belonging to the Federal Reserve System is required to maintain its entire legal reserve in the form of a deposit in the Federal Reserve Bank of its district. The Federal Reserve Law recognizes only one form of legal reserve, that is, a member bank's deposit in its Federal Reserve Bank. They may keep balances in other banks, but their legal reserve, the reserve which the Government looks upon as the minimum below which the public interest demands that banks should not go, must all be kept on deposit in the Federal Reserve Banks, which thus become the reservoir of the reserve money of the nation. The great purpose to be served by this is that the reserves are so mobilized in the centre of great districts that they are available at points in the country where the demand is greatest for them, the Federal Reserve Banks being permitted to re-discount for one another and for all the member banks of the system.

Much discussion has taken place with regard to the relation of the Federal Reserve to agricultural credit. It is sufficient for our purpose to say that the Federal Reserve Bank, as the other general institutions described in this report, does not do business either directly with individual farmers or with individuals in any other walk of life. The Federal Reserve scheme presupposes that the farmer or other person borrows through his local bank, which, if they are members of the Federal Reserve system, may, in turn, rediscount with the Federal Reserve Bank, the paper received from customers. The Federal Reserve Act places certain limitations on the character of the paper to be discounted, but in reality, as amended in 1919 and 1923, special provision is made for its banks providing a short term credit for agricultural purpose. For example, any Federal Reserve Bank may discount "notes, drafts and bills of exchange issued or drawn for agricultural, industrial or commercial purposes, or the proceeds of which have been used, or are to be used, for such purposes." The law does not permit the

reserve banks to discount paper, the proceeds of which are to be loaned to some other borrower, or to be used for current investment or for speculation.

"Agricultural paper is given by the Act an important advantage over commercial paper, since the latter can be discounted only for a period not exceeding 90 days, while paper which is issued or drawn for an agricultural purpose, or is based on live stock, may now be discounted by Federal Reserve Banks even though it has nine months to run from the date of discount. The Federal Reserve Board has made appropriate provision for this in its new regulations in which the definition of agricultural paper has been clarified and broadened so as to incorporate the latest and most liberal principles adopted by the Board in determining what constitutes agricultural paper. Nine months' paper will thus be eligible for discount if the proceeds have been or are to be used by a farmer in any one or more of the steps of planting, cultivating, harvesting, or marketing a crop, or of breeding, fattening, or marketing live stock, and the Federal Reserve Board has held that the marketing of crops or live stock includes carrying them for a reasonable time in order to market them in an orderly manner instead of dumping large quantities on the market at one time in order to get money with which to meet current expenses. Under this provision of the law, member banks which have loaned money for nine months to wheat growers and other farmers for the purpose of raising, carrying, and marketing their crops, will be able to rediscount the farmers' notes with the Federal Reserve Banks."

Further, under the Federal Reserve Act, as amended by the Agricultural Credits Act passed March 4th, 1923, co-operative marketing associations can issue paper which is eligible for discount with maturities up to nine months, if the proceeds of the paper are advanced to members of the association for an agricultural purpose, or are used to pay members for agricultural products delivered to the association, or to finance the association in packing, preparing for market, or marketing products grown by its members. Co-operative marketing associations are permitted to borrow money to be loaned to the individual members of the association under certain restricted conditions. In all cases, credit for agriculture is extended to nine months instead of ninety days, the assumption being that the local bank holds the paper for three months and it is carried by the Federal Reserve Bank for the additional six months. Further, as amended in 1923, the Federal Reserve Banks are permitted to discount sight or demand drafts drawn to finance shipment within the country of nonperishable and readily marketable agricultural products. A limit, however, of ninety days is placed upon such paper. In order to extend the credit facilities of the Federal Reserve System to smaller banks under the Agricultural Credits Act of 1923, provision was made to admit small banks whose capital was 60% of the original requirement, provided that within a given time the capital was built up to the necessary requirement under the Act, and for this purpose such banks were authorized to set aside 20% of their earned income for the purpose of increasing the capital to the necessary standard.

The most important provision, however, of the Federal Reserve Act, insofar as it affected farm loans, was the authorization given to national banks to make loans for a period up to five years secured by land mortgage. I have referred to this previously in discussing the question of the national banks. This was only made possible to the national banks through the Federal Reserve System. The farmers who need long time loans, therefore, can borrow for five years from the national banks on the security of their farm lands, and the Federal Reserve Board has provided in its regulations that at maturity such loans may be renewed for an additional five years, although a national bank is not permitted to obligate itself in advance. I think there can be no doubt that the Federal Reserve System sought to live up to its responsibilities in connection with short term loans to

## SESSIONAL PAPER No. 142

farmers. When the prices fell for farm products in 1920, they immediately began to increase their loans through the members of the system to help steady agricultural conditions.

For example, it was many months after the great price decline began before the loans made from the bank in Minneapolis to the northwest farmers reached its peak. During the period from March to November, 1920, there was more than \$30,000,000 increase in loans made under the system in the country centering on Minneapolis, and at the end of the period, loans had reached the sum of \$115,000,000. During the same period the Federal Reserve Banks, located in agricultural districts, increased their loans by more than \$500,000,000 and their issues of Federal Reserve notes by a nearly equal amount.

There were two principal causes why the Federal Reserve System did not satisfy the demands of the agricultural districts.

(1) Because a large percentage of the small state banks which do business with the farmers did not become members of the Federal Reserve System, and, therefore, were not able to get the required rediscounting privilege.

(2) Because the length of time for which the rediscounting privilege was allowed was too short to satisfy the farmers's requirements.

The former was the fault of the small banks; the latter, if a fault, the fault of the law itself and not of the administration.

It was because of these circumstances that the agitation took place which brought about the foundation of the Federal Intermediate Credit Banks described on the following pages.

#### THE FEDERAL INTERMEDIATE CREDIT BANKS

The Intermediate Credit Banks were organized for the purpose of providing credit for periods longer than that granted by ordinary banking operations. They were intended to cover what was spoken of as the barren area of credit between the three to six months provided under the Federal Reserve System and the minimum mortgage term. The Act creating them calls for loans between the period of six months and three years. The Act was passed in the closing days of the 67th Congress, March, 1923. As the transactions of the Intermediate Credit Banks are real banking transactions as distinguished from mortgage transactions, their operations are merely time extensions of the ordinary banking systems of the country, but related specifically to the service of agriculture. It would appear for that reason that they might have functioned more easily under the Federal Reserve System and the reason for not so doing is not quite apparent. They are associated, however, with the Federal Land Bank scheme and under the direction of the Federal Farm Loan Board. Perhaps the chief advantage of this arrangement is the fact that they will be making banking loans to the same people who will be taking mortgages under the Federal Land Banks and there will be some advantage in having the same persons supervising and determining upon credits to be granted for current account that have already dealt with the individuals from the point of view of capital loans. From information which I obtained I concluded that that was the chief advantage of the connection with the Federal Land Banks and perhaps the further reason that the Federal Reserve Board wishes to disassociate itself entirely from the operation of loans made for a longer period than the ordinary term allowed to the Federal Reserve Banks.

Under the Act creating the Intermediate Banks, the Farm Loan Board is given power to grant charters to twelve institutions to be known as Federal Intermediate Credit Banks. It instructed the Board to establish these institutions in the same cities as the twelve Federal Land Banks. The officers and directors of the Federal Land Banks were made ex-officio officers and directors of the several

Federal Intermediate Credit Banks. Such officers were given authority to create the necessary machinery and employ the necessary officers for conducting the business of the Bank as a separate organization from the Federal Land Bank. These Banks were given authority to act as fiscal agents for the United States Government and to perform such duties as the Secretary of the Treasury may prescribe. Accordingly, acting under the authority of the charter, twelve separate institutions were founded in the summer of 1923.

#### **Capital Stock**

In order that capital might be provided for the business of these Banks, the United States Government was authorized to subscribe capital stock to the extent of \$5,000,000 for each bank and the Secretary of the Treasury was given authority to take up such portion of this stock as might be deemed necessary at any given time. This gave a possible capitalization of \$60,000,000 subscribed by the Treasury. On the organization of the banks, the Treasury took up one million dollars capital stock of each of the banks, holding the balance of \$4,000,000 in reserve to be taken as needed.

The Federal Farm Loan Board was authorized to apportion the joint expenses incurred in behalf of the Federal Land Banks, the Joint Stock Land Banks and the Federal Intermediate Credit Banks, all under their jurisdiction, among the three institutions. After all the necessary expenses are paid, it is provided that the net earnings shall be divided in equal parts, one-half to be paid into the United States treasury and the balance into the surplus fund until the amount of such surplus shall be equal to the subscribed capital stock of the bank. After this has been accomplished, ten per cent. only of the earnings is paid into this surplus, the balance being paid to the United States as a franchise tax. The monies paid from earnings into the United States treasury are to be used at the discretion of the Secretary of the Treasury, either to supplement the gold reserve held against outstanding United States notes, or to be applied to the reduction of the outstanding bonded indebtedness of the United States. Should a bank be dissolved, its whole assets become the property of the United States.

#### **Debentures**

Under the Act, each Federal Intermediate Credit Bank is allowed to issue debentures up to ten times the original paid up capital and the surplus of the bank. As the original capitalization of the twelve banks was \$60,000,000, when fully in operation, they could issue debentures for \$600,000,000, making a total available capitalization when the stock is fully paid up of \$660,000,000. It is provided, however, that the issue of debentures shall be subject to the approval of the Federal Farm Loan Board and no debenture is to be issued for a period of longer than five years and only as against cash or discounted paper held by the Bank. The rate of interest on debentures was fixed, at most not exceeding six per cent.

#### **No Government Liability**

It is specially provided that the United States Government shall assume no liability, direct or indirect, for any debentures or other obligations issued under the authority of the Act. To make this absolutely clear, provision is made that all debentures or other obligations shall contain in "conspicuous and appropriate language" a definite statement that there is no liability upon the treasury of the United States.

#### **Rate of Interest**

With regard to the rate of interest charged, definite restrictions are placed upon it. The maximum rate at which debentures may be issued is fixed at six

## SESSIONAL PAPER No. 142

per cent, although the Farm Loan Board is given the power to determine whether it shall be lower than that, while the Bank itself must not charge a rate of discount of more than one per cent in excess of the last debenture issued. This fixes a maximum of seven per cent on discounted paper. In discounting paper for such organizations as shall be described hereafter, the Federal Intermediate Credit Bank is not permitted to discount for any borrower who charges a rate of interest of more than one-half of one per cent above the discount rate fixed by the Intermediate Credit Bank. The Bank is permitted to purchase in the open market at par, or below, its own debentures before maturity.

**Discounting Privileges**

These Banks are allowed a very considerable discretion in the matter of bank business. For example, they are allowed to discount for or purchase from any National Bank or any State Bank, trust company, agricultural credit corporation (hereafter described) incorporated live stock loan company, savings institutions, co-operative bank, co-operative credit or mortgage association of agricultural producers, organized under the laws of any State, with their endorsement, any note, draft, bill of exchange, etc., or other such obligation, the proceeds of which have been advanced in the first instance for any agricultural purpose or for the raising, breeding, fattening or mortgaging of live stock.

They are further authorized to make loans or advances direct to any co-operative association organized under the laws of any state and composed of persons engaged in producing, or producing and marketing staple agricultural products or live stock, if the notes or other such obligations representing the loans are secured by ware-house receipts, or shipping documents, or both, covering such products, or mortgages on live stock, provided that the loan does not exceed 75 per cent of the market value of the product. The only restriction placed upon the amount of such discounted paper which the Federal Intermediate Bank can hold is the limitation (1st) of its own capitalization, and (2nd) no institution can rediscout for more than twice the amount of its unimpaired capital and surplus.

**Mutual Liability**

As in the case of the Federal Land Banks, mutual liability is established as between the twelve Banks. Clearly, the purpose of this is to enable the banks to secure equal credit facilities in the money markets of the country. This liability is set out in Section 207 of the Act, as follows:—

"That any Federal Intermediate Credit Bank issuing debentures or other such obligations under this title shall be primarily liable therefor, and shall also be liable, upon presentation of the coupons for interest payments due upon any such debentures or obligations issued by any other Federal Intermediate Credit Bank and remaining unpaid in consequence of the default of the other Federal Intermediate Credit Bank. Any Federal Intermediate Credit Bank shall likewise be liable for such portion of the principal of debentures or obligations so issued as are not paid after the assets of such other Federal Intermediate Credit Bank have been liquidated and distributed. Such losses, if any, either of interest or of principal, shall be assessed by the Federal Farm Loan Board against solvent Federal Intermediate Credit Banks liable therefor in proportion to the amount of capital stock, surplus, and debentures or other such obligations which each may have outstanding at the time of such assessment. Every Federal Intermediate Credit Bank shall, by appropriate action of its board of directors duly recorded in its minutes, obligate itself to become liable on debentures and other such obligations as provided in this section."

The tax exemption privilege accorded to debentures issued under the Federal Land Banks is also granted to the debentures issued under the Federal Intermediate Credit Banks. This is set forth in Section 210 of the Act, as follows:—

"That the privileges of tax exemption accorded under Section 26 of this Act shall apply also to each Federal Intermediate Credit Bank, including its capital, reserve or surplus, and the income derived therefrom, and the debentures issued under this title shall be deemed and held to be instrumentalities of the Government and shall enjoy the same tax exemptions as are accorded farm loan bonds in said section."

The scheme of the Federal Intermediate Credit Banks with regard to the individual borrower is identical with that under the Federal Land Banks, that is to say, no individual can have direct access for borrowing purposes to the Bank. All loans made must be rediscounted loans made to a responsible corporation which in itself assumes responsibility for the repayment of the loan, so that a borrower must find his way to the Federal Intermediate Credit Bank through other organized financial machinery. In order to make comprehensive machinery for this purpose, the Act authorizes the creating of

#### NATIONAL AGRICULTURAL CREDIT CORPORATIONS

These are organizations corresponding to the local associations under the Federal Land Bank. These National Agricultural Credit Corporations, however, are much more highly organized institutions than the local associations under the Federal Land Banks.

The manner of the formation of these organizations is described in the Act as follows: "That corporations for the purpose of providing credit facilities for the agricultural and live stock industries of the United States, to be known as National Agricultural Credit Corporation, may be formed by any number of natural persons, not less in any case than five. Such persons shall enter into articles of association which shall specify the object for which the corporation is formed. Such articles of association shall be signed by the persons intending to participate in the organization of the corporation and be forwarded to the Comptroller of the Currency to be filed and preserved in his office."

The organization certificate and the articles of association must be acknowledged before some judge of a court of record or notary public before submission to the Comptroller of the Currency for approval. On the approval of the Comptroller of the Currency, such an association becomes a corporate body with well defined powers in relation to financial operations. For example,, they are allowed:—

(1) To make advances upon, to discount, rediscount, or purchase and to sell or negotiate, with or without its endorsement of guarantee, notes, drafts, or bills of exchange and to accept drafts or bills of exchange, which (a) are issued or drawn for an agricultural purpose or the proceeds of which have been or are to be used for agricultural purposes, (b) having a maturity at the time of discount, purchase, or acceptance not exceeding nine months, and (c) are secured at the time of discount, purchase or acceptance by warehouse receipts or other like documents, conveying the title to non-perishable and readily marketable agricultural products, or other instruments of like guarantee.

(2) To make advances upon, or to discount, rediscount, or purchase and to sell or negotiate with or without its endorsement or guarantee, notes secured by chattel mortgages, conferring on first lien upon maturing, or breeding live stock or dairy herds and having a maturity at the time of discount, rediscount, or purchase not exceeding three years.

## SESSIONAL PAPER No. 142

(3) To subscribe for, acquire, own, buy, sell and otherwise deal in treasury certificates of indebtedness, bonds or other obligations of the United States to such extent as its board of directors may determine.

(4) To act when requested by the Secretary of the Treasury as a fiscal agent of the United States and to perform such services as the Secretary of the Treasury may require in connection with the issue, sale, redemption or re-purchase of bonds, notes, treasury certificates or other obligations of the United States.

There is much additional authority given for conducting ordinary business, but the most outstanding one is their right, subject to regulation of the Comptroller of the Currency, to issue collateral trust notes or debentures with maturity not exceeding three years and to pledge as security for such notes or debentures financial paper held by the corporation. It is specially stated, however, that "the United States Government shall assume no liability direct or indirect for any debentures or other obligation issued under this title and all such debentures and other obligations shall contain in conspicuous and appropriate language to be prescribed in form and substance by the Comptroller of the Currency and approved by the Secretary of the Treasury, a clear indication that no such liability is assumed."

**Capital Stock**

The National Agricultural Credit Corporation is not permitted to do business until it has paid up capital of \$250,000; which must represent at least 50 per cent of the authorized capital stock of the corporation. The remaining 50 per cent must be paid within six months after the beginning of business. Such a corporation is allowed to make loans to the extent of ten times its paid up capital.

**Rate of Interest**

With regard to interest rates, it must submit to the laws of the state in which the corporation is located. A special penalty is imposed, should at any time, or by any means, direct or indirect, a rate of interest be charged greater than that allowed by the State law. If this is knowingly done, the corporation forfeits the entire interest of the debt and has no power of collection and, further, the person who was charged the interest, if paid, has the right to recover in action twice the amount of the interest thus paid to the corporation, provided legal action is commenced within two years—a very definite and rigid provision.

I think sufficient has been said to show that the National Agricultural Credit Corporations are intended to occupy a very large place in the financing of agriculture. While they function through the Federal Intermediate Credit Banks and constitute an intermediary between the bank and the individual, they differ entirely from the local associations under the Federal Land Bank in that they are private corporations for profit-making purposes, doing business for agriculture under certain definite restrictions with regard to interest charges and security placed upon them by the Treasury of the United States.

**Credit Corporations Formed by Banks**

There is one special provision to which, perhaps, attention should be called, viz., that any particular bank of the Federal Reserve System may file application with the Comptroller of the Currency for permission to invest an amount not exceeding in the aggregate ten per cent of its capital stock and surplus in the stock of one or more of the National Agricultural Credit Corporations. As a matter of fact, while it may have been intended originally that these corporations should be corporations formed from among the larger producers on the land

and local financial men, in many localities the banks have taken the initiative in their organization, the reason for this probably being that while the banks themselves are only permitted to rediscount with the Federal Intermediate Credit Banks up to twice their paid up capital and surplus, these institutions are permitted to re-discount up to ten times their paid up capital and surplus. The debentures issued by these corporations are not free from taxation, but are subject to the laws of the state in which they operate.

There has not yet been time to determine to what extent these institutions will function as practical institutions. So far as I know the only ones operating were organized through the agency of the banks for the purpose above mentioned.

The twelve Federal Intermediate Credit Banks were promptly organized after the passage of the Act, March, 1923. The following figures will show how far they have functioned as business organizations. The statements are as at February 29, 1924.

Direct loans and discounts have been made to the amount of. \$41,409,368.00  
This amount was loaned out at the banking centres as follows:—

Springfield.. . . .	\$ 627,950.00
Baltimore.. . . .	6,511,150.00
Columbia.. . . .	4,683,355.00
Louisville.. . . .	2,210,406.00
New Orleans.. . . .	6,161,816.00
St. Louis.. . . .	1,176,607.00
St. Paul.. . . .	2,659,620.00
Omaha.. . . .	3,262,258.00
Wichita.. . . .	4,465,676.00
Houston.. . . .	3,433,177.00
Berkeley.. . . .	5,061,240.00
Spokane.. . . .	1,163,107.00
These banks had outstanding on the same date debentures amounting to.. . . .	31,750,000.00

These debentures are short term debentures and are sold generally to banks for short time investments. The price so far has been good, as the Government capitalization of \$60,000,000 gives them special security. No one can foretell what would happen should their sale greatly exceed that amount. It is difficult to say what the future has in store for them, as the lengthening of the Federal Reserve discount time to nine months may greatly interfere with their development.

#### War Finance Corporation

In the foregoing I have not discussed the operation of the War Finance Corporation, which, by assisting the small banks, and co-operative organizations and Live Stock Loan Companies, has co-operated in carrying agriculture for the past few years. It is not part of the permanent financial system of the country. It was intended to close its operations on the 1st of February, 1924, but because of agricultural conditions in the Northwestern States, Congress recently extended its life until 31st December, 1924. The figures in connection with its work will, however, be of significance as during its existence it has been a very great assistance in financing agriculture.

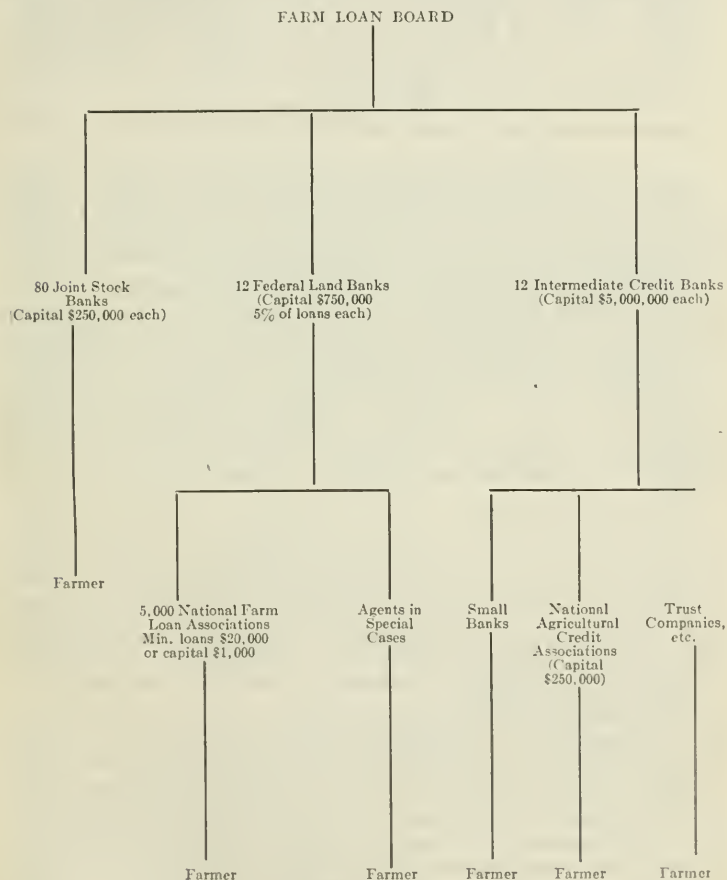

From the time authority to make loans to agriculture was granted in August, 1921 to November 20, 1923, advances in the interest of agriculture were made as follows:—

To banking and financial liabilities.. . . .	\$169,708,000
To Live Stock Loan Companies.. . . .	80,096,000
To Co-operative Marketing Associations.. . . .	37,936,000
Making a total of.. . . .	287,740,000
Of this there has been repaid.. . . .	211,345,000
Outstanding.. . . .	76,395,000

## SESSIONAL PAPER No. 142

Like all the other institutions described, the War Finance Corporation acts only through organized financial institutions.

The following diagram shows the relation of the various institutions to the Farm Loan Board and to each other, with the minimum capitalization. Tracing backward, it also shows the steps through which the application of the borrower must go to secure final action. It will be seen that except in the case of the Joint Stock Banks which are private institutions under special regulations, the farmer only gets access to the lending authority through local organizations.

### Rural Credits by State Governments

In addition to the provisions made, as set forth in the foregoing, under the Federal Government, many of the State governments of the United States have arranged for mortgage loans, some of these making provisions to raise money by debentures and others authorizing the State Treasury to make loans from special funds, generally from the permanent educational funds of the state.

The States of Idaho, Indiana, Iowa, North Dakota, Oklahoma, Oregon, South Dakota and Utah have made provision in their constitutions for loaning money to farmers on mortgage credit. Most of these make their loans out of certain specified funds, generally, however, the permanent educational funds of the State, or monies derived from the sale of State lands. Considerable sums of money have been lent out under these various provisions. There are a few, however, that I think deserve special mention.

The State of Arizona, in 1915, passed a law authorizing loans to be made in farm mortgages from the monies secured from the sale of lands owned by the State.

A State Land Settlement Act was passed in the State of California in 1917, having for its purpose 'the permitting of closer agricultural settlement, assisting deserving and qualified persons to acquire small improved farms, providing homes for farm labourers, increasing opportunities under the Federal Farm Loan Act and demonstrating the value of adequate capital and organized direction in subdividing and preparing agricultural land for settlement.'

Perhaps the most conspicuous examples of this sort of effort are to be found in South Dakota and Minnesota. In South Dakota, the State constitution provides that permanent school funds may be invested in first mortgages on farm lands and, under this provision, over six million dollars had been loaned on mortgages before 1912. In 1917, however, the legislature passed an Act establishing a system of rural credits for the State, creating the Rural Credits Board for the purpose of "maintaining a system of rural credits and providing for the loaning of money by the State of South Dakota upon real estate within this State," and, in addition, "authorizing the State of South Dakota to borrow money on its warrants and bonds secured by the good faith and credit of the State."

The purposes for which these loans may be made are almost identical with the purposes stated in the Act creating the Federal Farm Loan Board. There is this distinction, however, that loans may be made up to *seventy per cent* of the value of the land and forty per cent of the insured value of the improvements as against fifty per cent and twenty per cent under the Farm Loan Act. Loans run from five to thirty-five years and are paid on the amortization principle. I have not been able to get the exact amount of loans under this scheme, but I was informed that it probably amounts now to \$40,000,000. As the interest charges must be paid by the Government, the State is at the present moment embarrassed, as a consequence.

The State of Minnesota, in 1923, passed an Act creating a rural credit system "for the loaning of money by the State of Minnesota upon real estate within the State, authorizing the State of Minnesota to borrow money on its certificates and bonds secured by the good faith and credit of the State for the purpose of maintaining such system of Rural Credits." Here again the provisions regulating the purposes of loans are almost identical with those of the Federal Farm Loan Board. They provide for the purchase of equipment and live stock, buildings on improved farms, liquidating indebtedness on farms, and for part payment of the purchase price of improved farms, provided always that the property is occupied by the owner. Loans are limited to sixty per cent of the value of the land plus thirty-three per cent of the value of the improvements and the limits between

## SESSIONAL PAPER No. 142

which loans may be made are \$500 and \$15,000. The money in this case, as in South Dakota, is raised directly by the State Treasury and made available to the board of management for loans. This system has been in operation for less than a year, but has already loaned out approximately eight million dollars with a limit to their borrowings for the time being of forty million dollars. In January, 1924, Minnesota was disposing of its bonds at  $4\frac{1}{2}$  per cent par and was making an additional bond issue for this purpose of ten million dollars. Loans were being made to farmers on an amortization scheme for  $35\frac{1}{2}$  years at  $5\frac{1}{2}$  per cent interest plus amortization charges,  $\frac{1}{4}$  per cent less than the Federal Farm Loan Board. In reality, this Minnesota system is just duplicating the work of the Farm Loan Board and was brought about because of the conviction on the part of some people in the legislature that the Farm Loan Board was not generous enough in its lending policy and because the machinery through which it was working was said to create delays in the securing of loans.

The total amount advanced on Farm Mortgages under the various State systems is at the present moment not far short of \$100,000,000.

In concluding this section, I think a word about the general financial condition of agriculture in the United States may be permitted. In spite of all that has been done to provide credit, great distress still prevails, especially in the western and north-western states. As none of the larger organizations under Government auspices are permitted to deal directly with the individual, an effort is now being made to find a more direct way to help, especially in assisting those in the grain growing areas, who wish to develop diversified farming. A bill to grant \$50,000,000 for this purpose was recently defeated by the Senate of the United States. The President has appealed to the Chairman of a new financial organization known as the Agricultural Credit Corporation, capitalized at \$10,000,000, to undertake the responsibility of individual loans, suggesting that under proper regulations, the War Finance Corporation would be willing to make substantial advances for the purpose.

In the meantime, there is a great exodus from the land to the cities, especially in the above mentioned states. In his report to the President on the matter, Mr. Henry C. Wallace, Secretary of Agriculture for the United States, stated that over a million people left the land in 1923. Recently, representatives of a number of the leading farm organizations in the United States have published an open letter to "the President, the Congress and the People of the United States", in which the statement is made that farmers were forced from their homes during 1923 at the rate of 100,000 per month and "the process still is under way in all its cruelty". "Country conditions", it is said, "cannot be told in words. The hundreds of broken banks are real, but the suffering which followed them is hidden in the haze of distance. Unceasing toil of millions of people, futile attempts to protect family and property is lost without recognition. The reason for all this remains unchecked, although it has existed for five years.

"The cause is evident. A disordered world emerging from war and handicapped by man-made barriers across channels of international trade proves unable to absorb the surplus production of our farms and our industry at prices commensurate with American standards. An elaborate structure of economic protection is provided for industry and labour but does not reach the farmer.

"The remedy is as obvious as the cause. It rests in the application of effective protection of the farm equally with those of other industry. The establishment of domestic markets for farm crops on an American basis, apart from world conditions, to conform with like markets already provided for American manufacture and American labour."

The remedy proposed is that the United States should shut herself off from trade contact with the outer world. This would appear to be the remedy of

despair. In reality, there are two causes, one of which is touched upon in the foregoing quotation, viz., the disorganized state of the world markets, resulting from the world war and the inability of Europe to feed herself at the American cost of production. The second cause, however, is found in the fact that during the war, the high prices of products led to the purchase of land under conditions which made profitable cultivation impossible in normal times. This was further accentuated by the agricultural development of areas for cereal crops, hitherto unused and wholly unsuited for the purpose. I would respectfully suggest that in this there is a lesson here for Canada.

## SECTION V

## RURAL CREDIT IN THE DOMINION OF CANADA

The discussion of the problems in connection with rural credit in Canada is of long standing. Many years ago, in some of the provinces of Canada an effort was made to meet the requirements of the small town and country districts by means of a system of small banks. For reasons which it is unnecessary to discuss in this report the scheme failed in Canada and our banking history, as a consequence, runs along a line entirely different from that of our friends in the United States. Canada followed the European especially the English tradition of establishing large central banks, operating through branches established in localities where the establishment of such branches appeared to be warranted economically. The Canadian banking system went through a period of ups and downs as did the banks of the United States, having its times of great success and periods of prosperity and its times of failure in periods of great depression. In the early days the demand among the farmers for credit from the banks was not great, but, as the days went by, the same kind of conditions that produced the increased demand for Agricultural Credit in the United States increased the demand in Canada and the agitation in favour of a special system for financing agriculture followed closely the history of the same movement in the United States.

Up to the present time no general system of Agricultural Credit either for Long Term or Short Term Credit has been established. Efforts have been made from time to time to secure legal standing for Co-operative Credit Societies on the European model, but have so far failed of recognition, as far as the Federal Parliament is concerned.

On three occasions bills have been presented to Parliament, but did not secure authorization. These bills were:—

1. Bill 26, 1909-10. An Act Respecting Co-operative Credit Societies.
2. Bill 11, 1910-11. An Act Respecting Co-operative Credit Societies.
3. Bill 194, 1914. An Act Respecting Co-operative Credit Societies.

So far, therefore, as the Federal Parliament is concerned, organized Long Term Credit is a private enterprise in the hands of the mortgage companies and insurance companies and Short Term Credit in the hands of the banks. No effort to meet the requirements of what is called Intermediate Credit has been made, except by the banks.

In most of the provinces of Canada, however, efforts have been made to organize all these forms of credit. These efforts are discussed in what follows.

**British Columbia**

So far as I am aware, the first effort to establish some system of Rural Credits in Canada was tried out in British Columbia. In 1897-8, a demand was made in the Province of British Columbia for cheaper money than that provided by the ordinary banks and loan companies for agricultural purposes and an Agricultural Credits Act was passed by the British Columbia Government in 1898. This Act was based on the agricultural system of Germany. Its author was Mr. R. E. Gosnell, who was then in the service of the British Columbia Government. Under this Act, the Government of British Columbia took power to loan money to associations of farmers of twenty or more members

for specific purposes, including fencing, draining, purchase of live stock, farm implements, etc., to persons, who, having pre-empted land, had worked upon it long enough to secure their grant from the Crown as well as to other farmers who had already had their lands under cultivation.

The scheme was an unlimited liability scheme. The money was to be loaned to an association of borrowers, who, following the practice of the Raiffeisen system in Germany, were authorized to loan money to members on the endorsement of two or their number. The Government undertook to loan to the Association at  $3\frac{1}{2}$  per cent and to allow the Association to charge its members 5 per cent, the  $1\frac{1}{2}$  per cent margin being allowed for expenses and to create a reserve fund for possible losses. This Act was passed as a result of a good deal of agitation, but no loans were ever made under it for the simple reason that the farmers were not prepared to accept the co-operative principle involved in it.

Later on, two special Acts affecting agriculture were passed and, with amendments made from time to time, are still in operation in the province. The first was passed on March 6th, 1915, and is entitled "An Act Respecting Agriculture and Providing for the Incorporation and Organization of Agricultural Associations and Making Provision for Agricultural Credits". It is cited as "The Agricultural Act, 1915". The other, passed in May, 1917, is entitled "An Act to Promote Increased Agricultural Production" and is cited as "The Land Settlement and Development Act". Both of these acts provide for Long Term Mortgage Credit and also for Short Term Credit under certain specified conditions.

#### **Agricultural Act, 1915**

Under this Act, there is created an Agricultural Credit Commission, consisting of a superintendent who shall be, ex-officio, a director, and four other directors, who together constitute a body corporate with the usual powers to conduct a lending business as described in the Act. The superintendent holds office for ten years, unless removed as the result of action in the Legislative Assembly. Two of the directors are appointed for a period of ten years under the same conditions, but they must be engaged in the occupation of farming; the other two directors are the Deputy Minister of Finance and the Deputy Minister of Agriculture.

All regulations made by the commission for the conduct of business, all fees payable, etc., are subject to confirmation by the Lieutenant Governor in Council. Provision is made for the usual methods of carrying on the business of such an organization.

#### **Working Capital**

The Working Capital of the Commission is such as is raised from time to time by the issue of securities and such money as may be appropriated from time to time by the Legislative Assembly and such money as otherwise becomes available under repayment and other funds. All securities sold are sold by the Department of Finance of the Province and are unconditionally guaranteed by the Province. The Board works in the closest possible association with the provincial authorities. It, however, is authorized to keep its own accounts and to make its own banking arrangements subject to the approval of the Government. Provision is made in the usual way for sinking funds and reserve funds to cover accruing securities.

Under the Act, the Commission is authorized to accept as security for loans first mortgages upon agricultural land in the Province of British Columbia free from all encumbrances, liens, and other interests, except where special provision is made to the contrary.

## SESSIONAL PAPER No. 142

The loans are made for the following purposes:—

- (a) The acquiring of land for agricultural purposes and the satisfaction of encumbrances on land used for such purposes;
- (b) The clearing of land, draining, dyking, water-storage and irrigation works;
- (c) The erection of farm buildings;
- (d) The purchase of live stock, machinery and fertilizers;
- (e) Discharging liabilities incurred for the improvement and development of land used for agricultural purposes and any purpose calculated to increase land productivity;
- (f) And any purpose which in the opinion of the Commission will increase the productivity of the land in respect of which the loan is proposed;
- (g) Carrying out the objects of any association, subject to approval by Order in Council as hereinafter provided;
- (h) Taking over in whole or in part and with the approval of the Lieutenant Governor in Council, by Order in Council, any existing loan by the Crown in right of the Province of British Columbia to any association or any debentures issued by any association.

No loan is granted for an amount exceeding sixty per cent of the appraised value of the land offered as security for the loan, the value to be calculated on the basis of productivity.

Loans are granted only to persons engaged in agricultural pursuits, and all officers and directors of the company are prohibited from receiving loans.

Loans may be made as long term loans or as short term loans or for a single season, in every case being covered by the mortgage. The rate of interest is not fixed, but it must not exceed more than one per cent of the actual interest paid on the securities upon which the money was raised. Long term loans must be paid back by amortization in either 36½ years, 30 years or 20 years. Short term loans must not exceed in amount \$2,000 to an individual or \$10,000 to an association. Such loans must not be for less than three years or more than ten. Single season loans may be made secured by promissory note and by a mortgage, the total amount to a person or individual being the same as above.

Power is given under the Act for increasing loans on a basis of improved condition of property or in recognition of instalments already paid.

Rigid provision is made in case of a loan not being applied to the definite purpose for which the loan was granted. The Commission may by giving one month's notice enter upon the property and sell either by private sale or public auction without recourse to law the property of the borrower.

Up to the end of 1922, loans were granted under the Act amounting to \$1,073,300.00, and there was outstanding \$691,250.00 with overdue interest amounting to \$32,152.53.

Most of the money loaned has been used in refunding accumulated debts. The Act has not produced satisfactory results.

When the Agricultural Act of 1915 was passed, previous Acts bearing upon the same subject were repealed.

#### Land Settlement and Development Act, 1917

The Land Settlement and Development Act was passed in May, 1917, and amended in 1918, 1919 and 1920. Under this Act, there was created in the Department of Agriculture or in the Department of Lands, as might be determined by the Lieutenant Governor in Council, a Land Settlement Board, consisting of one or more members appointed by the Lieutenant Governor in Council.

To this Board, on the authority of the Lieutenant Governor in Council, the Minister of Finance is authorized to pay from time to time, out of the consolidated revenue of the Province, any monies appropriated by or under authority of the Legislature for the purposes of the Board. These advances are to bear interest at a rate fixed by the Lieutenant Governor in Council from time to time.

All salaries and other expenses incurred by the Board for the administration of the Act are paid out of the money so advanced.

The Board is authorized to make loans, subject to the regulations of the Board to any person or association on first mortgage security upon agricultural land in the province, if it be free from encumbrances other than liens to the Crown, that is to say:—

- (a) Land held in fee simple.
- (b) Land held by record of pre-emption under the Land Act.
- (c) Land held by certificate of purchase on deferred payment.

Further, the Board is authorized to make loans by security on mortgage to Associations incorporated under the Act of 1915 of a sum not exceeding 60 per cent of the cash value of the Association's property.

Under this Act, loans are made for the following purposes:—

- (a) For any purpose which in the opinion of the Board will maintain or increase agricultural or pastoral production;
- (b) For carrying out the objects of any association, subject to approval by Order in Council;
- (c) For taking over in whole or in part, subject to approval by Order in Council, any existing loan advanced by the Crown in right of the province to any association or any debentures issued by any association.

Before the granting of a loan, certain definite regulations with regard to valuing security have to be carried out.

All mortgages under this Act contain the personal covenant of the borrower. The borrower is also required to keep insured all destructible property.

The rate of interest on these loans is fixed from time to time by the Lieutenant Governor in Council, but must not exceed by more than one-half of one per cent the actual amount paid by the Government for the money.

Two kinds of loans are made:—

- (1) Loans which may run either 25, 20 or 15 years, the annual collections being sufficient to amortize the loan within the period.
- (2) Loans which may run from three to ten years and are described as short-dated loans.

These loans are limited in amount not to exceed \$5,000 to an individual or \$10,000 to an association. They are not amortizable, but are subject to the conditions created by the Board.

Under this Act, in case of default in making payment, the Board may enter upon the property for collection without recourse to a court of law.

Under this Act, there was outstanding at the end of 1922, on principal, \$627,615.00, and overdue interest of \$34,486.00.

Under both of these Acts, the money borrowed has been used largely in paying off existing liabilities, generally in favour of mortgage companies.

It is stated by the British Columbia authorities that the most satisfactory borrowers are those starting on new land with a certain amount of capital, in which case the loan is made for some specific improvement.

These organizations are apparently not destined to play a very important part in the farm mortgage business in British Columbia.

## Quebec

The first successful effort to introduce the principle of the small bank for rural purposes in Canada was made in the Province of Quebec. The late M. Alphonse Desjardins, a resident of the town of Lévis, after a careful study of the systems of small banks in operation in Europe, decided to introduce into Quebec a system of "People's Banks", the "Caisses Populaires" after the model of the "People's Banks" in Italy.

The first bank was organized under the scheme on December 6th, 1900, in the town of Lévis.

The conditions making possible the success of such a scheme were present in the Province of Quebec as in no other province in Canada. The social, racial and religious unity that exists there made it easy for groups of people to co-operate on a common idea.

These banks were finally organized by law and operate under the Quebec Syndicates Act passed in 1906 and amended in 1919. Since 1915, they are obliged to make an annual report on their operations to the Secretary of the Province and the Bureau of Statistics is obliged to collect and compile reports for publication in the statistical year-book.

These banks are not strictly rural institutions, that is to say, they admit to membership persons who are other than farmers, but, in reality, they work out to be more largely in the interest of farmers than any other class, because of the high percentage of farmers composing the membership. While they do not specially aim to do mortgage business, loans are made on first mortgage on immovable property. In addition, they make loans to their members on personal security.

Each bank works in a small restricted area, where the personal character and integrity of the individuals are well known, so that the risk on loans is exceedingly small. The capital for the individual banks is raised by selling shares of five dollars each and by receiving deposits, upon which savings bank interest rates are paid. Both shares and deposits may be withdrawn on demand. The liability of the shareholder of the bank is limited to the value of his shares in the bank. It was believed by Mr. Desjardins that it would be impossible to have an unlimited liability scheme in Quebec as in Europe and that was probably his real reason for selecting the Italian model rather than the German model for his banks.

### Management

Each bank is administered by a board of management composed of at least five members. There is a committee on credit composed of at least three members. This committee examines and approves, or disapproves, the loans requested by shareholders. None but shareholders are allowed to borrow. There is a board of supervision composed of three members, who are responsible for checking the value of the securities and checking accounts. No member of any board is permitted to borrow. They give their services gratuitously. All officials are obliged to reside in the parish or city where the bank is founded. The manager may be paid a salary.

Each bank is required to deposit at least ten per cent of its annual net profit in a reserve fund. The balance is distributed among the shareholders as a bonus or dividend. The shareholders receive a dividend on their investment, varying from  $4\frac{1}{2}$  per cent to 8 per cent. Depositors are paid from three to four per cent. on their deposits.

In 1922, there were 111 of these banks in existence in Quebec, with 32,173 shareholders or members. 30,583 persons held deposits in these banks. Loans

were granted that year to the number of 13,367 and to the amount of \$2,891,092. The total business transactions for that year amounted to \$11,148,323.00 and the profit realized on the transactions was \$334,395.00

The one thing necessary to make this system complete, following the European model, would be a central bank through which the individual banks could co-operate in the interests of each other.

When it is recalled that, when the first bank was started at Lévis on December 6th, 1900, the total first collections amounted to \$26.00 and that this bank in 1922 had on loan \$304,043.84 to over one thousand borrowers and showed a gross profit for the year of \$64,243.00, while the entire system had done business as stated above, I think it would be admitted that this is a financial achievement of a very high order and justifies the faith of Mr. Desjardins and his associates when, in order to relieve the small farmers and working people of the Province of Quebec from the pressure of high interest rates, they undertook to found the system of People's Banks.

### Nova Scotia

The next legislation in Canada in the direction of organizing rural credit was passed in Nova Scotia in 1912, entitled "An Act for the Encouraging of Settlement on Farm Lands". This Act was amended in 1913 and again in 1915 and again in 1919. In addition, a special Act was passed in 1919 entitled "An Act to Provide Loans to Agriculturists upon the Security of Farm Mortgages".

#### Long Term Loans

Under the Act of 1912, "An Act for the Encouraging of Settlement on Farm Lands", and its amendments, the following methods are provided for making loans to settlers or farmers:—

- (a) Through the medium of a loan company through which a borrower can obtain up to eighty per cent of the appraised value of the farm land to be mortgaged, the Governor in Council giving the company a guarantee against loans up to forty per cent of the appraised value of the farm.
- (b) The Governor in Council is authorized to purchase real estate in farming districts, sub-divide it into farms or lands, repair, alter, or erect buildings and till and seed the land and sell the real estate, stock and improvements to settlers. Any approved loan company may be employed to act as agent in the taking of securities and the taking of principal and interest. There is also a provision giving the Governor in Council power to purchase stock and improvements on chattel mortgage. Under this Act loans to the amount of \$152,000 have been made to seventy-one farmers.

The Act of 1919, "An Act to Provide Loans to Agriculturists Upon the Security of Farm Mortgages," provides for the appointment of a Board of three,—

- (a) To lend money to agriculturists on the security of first mortgage on farm lands.
- (b) To acquire, hold and dispose of real estate as may be required.
- (c) To borrow money to carry out the objects of the Board, to hypothecate, pledge and mortgage its real property, and to sign bills, notes and contracts and for evidences of debt or securities for monies borrowed by the Board for the purposes aforesaid.

## SESSIONAL PAPER No. 142

- (d) To make provision for the placing of returned soldiers or other persons with farmers, in order that they may be instructed in farming, and
- (e) To make loans to a farmer who desires to erect a dwelling house on his farm for the occupation of any person employed by him as a farmer.

The period of a loan can be for thirty years, the amount loaned not more than seventy per cent of the value of the property, the interest at a rate sufficient to pay the interest on the money borrowed and the cost of raising the money by the Provincial Treasurer. This latter Act, has, however, never been put into operation.

### New Brunswick

The New Brunswick Legislature passed in 1912 "An Act to Encourage the Settlement of Farm Lands." This Act created a Farm Settlement Board with powers to purchase land in the Province suitable for farming, to improve the same, to erect houses and farm buildings thereon and to sell these lands to bona fide settlers. Settlers were required to pay 25 per cent of the purchase price in cash, where the property was valued at less than \$1,000, and 35 per cent if valued at more than \$1,000. The interest rate was fixed at 5 per cent. The purchase price must be paid at stated periods, the limit for final payment being ten years.

Under this Act, in the last five years, about fifty loans have been granted. At the end of 1922, \$80,439.55 was outstanding in loans. At no time have the outstanding loans under this Act exceeded \$130,000.

In April, 1923, a new Act was passed in the province of New Brunswick, known as the "Farmers' Relief Act." Its aim was to relieve farmers from financial embarrassment, to encourage agricultural development by providing for loans upon farm mortgages at reduced rates of interest. Under this Act, municipalities are authorized to borrow up to 75 per cent of the total value of the real estate in the municipality for the purpose of making loans to farmers residing within the municipality. A Farm Loan Board is authorized, consisting of three persons, two of whom may be members of the Municipal Council. This Board makes all necessary regulations regarding loans. The loan to the individual must not exceed 75 per cent of the value of the farm land owned by the borrower within the municipality; must be secured by a first mortgage and repayable by an amortization plan not exceeding thirty years. The maximum interest allowed is 6 per cent *par annum*.

Loans are made for the following purposes:—

- (a) The discharge of liability incurred for the improvement of land used for agricultural purposes;
- (b) The acquiring of land for agricultural purposes and the satisfaction of encumbrances thereon;
- (c) The clearing and draining of land, the erection of farm buildings, the purchase of live stock and implements.

Money is raised under the provisions of the Municipality Debentures Act of the Province.

I have not been able to obtain information as to the number and amount of loans made under this Act.

### Ontario

Three separate acts with respect to Rural Credit have been passed in the province of Ontario, all during the session of the Legislative Assembly of 1921. The first is entitled "An Act for the Promotion of Agricultural Development" (amended in 1923), the second, "An Act Respecting Short Term Farm Loans in Ontario" and the third, "An Act to Finance Agricultural Development."

### Long Term

The first of these Acts provides for long term or mortgage credit, the second provides for short term personal credit, and the third provides special means by which the Treasurer of the Province may use savings funds in financing the other two Acts. The Acts are based on the legislation of the Province of Manitoba described later.

### Capital Funds

Under the first Act, there is established a Board, to be known as the Agricultural Development Board, which consists of three persons appointed by the Lieutenant Governor in Council. This Board is a body corporate and has for its duty the promotion of agricultural development as provided in the Act. The Board, with the approval of the Lieutenant Governor is permitted to issue bonds to the amount of \$500,000 in such denominations and such rate of interest as the Board itself may see proper. Provision is made for the purchase of these bonds by the Province of Ontario, the money for purchase being deposited with the Board for its own use. In addition to the above, with the approval of the Lieutenant Governor in Council, the Board is permitted from time to time to issue debentures in such denominations as it may deem advisable. These debentures are to be issued as mortgage bonds, that is, against the security of mortgages held by the Board. The money so raised may be used in the following manner:—

- (a) Acquiring land for agricultural purposes;
- (b) The erection of farm buildings essential to production;
- (c) To pay off charges existing against land at the time of acquisition by the borrower under a will or by descent;
- (d) To pay off encumbrances in which cases loans shall not exceed 50 per cent of the valuation;
- (e) For the purpose of providing tile drainage;
- (f) To purchase breeding live stock;
- (g) To consolidate outstanding liabilities incurred for agricultural productive purposes.

The applicant for loans must submit evidence to the satisfaction of the Board;—

- (a) That he is a British subject of at least twenty-one years of age, and has been resident in Canada for at least three years;
- (b) That he has had at least three years' experience in farming and has displayed average ability and capacity;
- (c) That he is of good character;
- (d) That he is actually engaged or intends to engage upon the land upon the security of which the loan is to be made.

The limit to which a loan can be made is \$12,000 and it must be secured by first mortgage upon lands suitable for agricultural purposes.

Provision is made for repayment in annual instalments of principal and interest sufficient to discharge the debt within a period not exceeding twenty years.

The expenses of the conduct of the Board, including salaries, are paid out of the consolidated revenue of the Province.

This Act has only been in operation for two years. Over 1,500 applications have been received for loans, of which 1,411 have been granted. The total amount of loans made up to October 31st, 1923, was \$5,769,955.00.

The Ontario system of long term loans is distinguished from the American system in that the individual deals directly with the Board and not by means of a local association.

SESSIONAL PAPER No. 142

**Short Term Farm Loan Associations**

The second Act provides for short term loans. This scheme operates under the Agricultural Development Board, as does the scheme for long term loans. Under this scheme, local associations, known as Farm Loan Associations, are required. Any person resident within a described territory, which has been approved by the Board, and engaged in farming operations or agreeing to become so engaged within one year, is eligible for membership.

In order to form a local Farm Loan Association, certain provisions with regard to capital stock must be complied with, viz.:—

- (a) Thirty members are necessary and each member must subscribe for one share at a par value of \$100.00;
- (b) One-half the amount subscribed by the members must be subscribed by the corporations of local municipalities in the territory where the Association is formed;
- (c) An amount equal to that subscribed by the municipalities must be subscribed by the Ontario Government.

This arrangement for capitalization of the Local Association differs entirely from the American system.

Each member must pay in 10 per cent of the par value of his stock at the time of subscription and the balance when called for, the payments by municipal corporations and the Ontario Government being made in the same proportion. Provision is made for the combination of two or more municipalities under one organization.

The board of management consists of two directors appointed by the municipal corporations subscribing, two directors appointed by the Lieutenant Governor in Council; the subscribing members elect from among themselves a president, vice-president and one director, who, with the four previously named, constitute the board of management.

Under this Act, short term loans are made for one or more of the following purposes:

- (a) Purchase of seed, feed, fertilizer and other supplies;
- (b) Purchase of implements and machinery;
- (c) Purchase of cattle, horses, sheep, pigs and poultry;
- (d) Payment of cost of carrying on any farming, ranching, dairying or other agricultural operations;
- (e) Payment of the cost of preparing land for cultivation;
- (f) Fire or life insurance where required, in the opinion of the directors, as collateral security for a loan made for any of the above-mentioned purposes.

No loan is made to exceed \$2,000.00.

The maximum rate of interest allowed is 7%, one-seventh of which goes to the local association for expenses.

Fifteen associations had been formed in Ontario up to October 31st, 1923, and 399 loans were made amounting to \$310,875.00.

The capital required for carrying on the business of the association may be obtained in two ways:—

- (a) The Treasurer of Ontario may, with the approval of the Lieutenant Governor in Council, make loans to the Board; and
- (b) The Minister of Agriculture may, with the approval of the Lieutenant Governor in Council, enter into agreement and guarantees with banks, loan companies and other corporations for securing money for the purposes of the associations, and may fix interest rates and terms of repayment.

I doubt if this scheme will play a very large part in the business organization of the farmers of Ontario.

The third Act, to finance agricultural development, authorizes the Treasurer of Ontario to borrow money by means of deposits in any amounts from any person or corporation and to open offices for this purpose in such parts of Ontario as seem to him wise.

In so far as this Act affects agriculture, it provides that the money raised in this way may be available;—

- (a) To make loans to members of associations under the Ontario Farm Loans Act; and
- (b) To purchase bonds or debentures issued under the Agricultural Development Act.

By this Act, savings bank deposits are made available through the Agricultural Development Board for agricultural purposes.

It has resulted in a considerable share of the savings deposits in Ontario going to the Government.

### Manitoba

In the Province of Manitoba, three Acts respecting Rural Credit have been passed and are now in operation. One of these, "An Act to Foster and Encourage Agricultural Development by Providing for Loans upon Farm Mortgages at Reduced Rates of Interest", is a long term mortgage scheme; the second, "An Act Respecting Rural Credits," provides machinery for the making of short term personal credit loans; and the third is entitled "An Act to Encourage Savings, to Authorize the Borrowing of Such Savings and the Issue of Securities Therefor."

#### Long Term

Under the first Act, there is established in the province a body corporate under the name of the Manitoba Farm Loans Association, to which, from the management point of view, is given all the general powers of a financial corporation.

The affairs of the Association are managed by a Board known as the Manitoba Farm Loan Board, consisting of five members appointed by the Government. Of these members, one, the Commissioner of Manitoba Farm Loans, is directly appointed by the Lieutenant Governor in Council and at pleasure, one may be nominated by the Union of Municipalities of the province and one by the Grain Growers' Association. The period of service is designated by the Lieutenant Governor in Council. All the expenses, including salaries, together with all other proper expenditure incurred by the Board, must be paid out of the funds of the association.

#### Capital Stock

The capital stock of the Association, which was originally \$1,000,000, is now fixed by an amendment to the Act at \$550,000, divided into 110,000 shares of five dollars each. These shares can only be owned by borrowers on farm loan mortgages under the provisions of the Act, and by His Majesty in the right of the Province. Every borrower must purchase capital stock of the Association equal to five per cent. of the value of the desired loan, the same to be paid in cash or deducted from the loan. The certificates of shares issued are not transferable, unless the property on which the mortgage is held is sold, in which case the shares may be transferred with the sale.

## SESSIONAL PAPER No. 142

Under the Act, one-half the share capital of the Association is purchased by the Government, which also is authorized to advance to the Association an amount equal to the paid up capital of its members, the total not to exceed \$550,000.

The rate of interest charged on loans made by the Association, which was originally 6 per cent, was fixed by an amendment to the Act in 1921, at 7 per cent per annum.

The amount of the loan must not exceed 50 per cent of the estimated value of the land mortgaged together with the value of the improvements upon the land, the appraisals being made on a valuation for agricultural purposes only.

Loans are made only for the following purposes:—

- (a) The acquiring of land for agricultural purposes and the satisfaction of encumbrances on land used for such purposes;
- (b) For the cleaning and draining of land;
- (c) The erection of farm buildings;
- (d) Purchase of live stock and implements;
- (e) Discharge of liabilities incurred for the improvement and development of land used for agricultural purposes and any purpose calculated to increase land productiveness.

Loans are made only to those actively engaged or intending to engage in the cultivation of the land and the Board may require borrowers, if in their judgment they deem it necessary, to insure crops against damage by hail, storm, etc., in a company approved by the Association. Should any borrower at any time use the money loaned for purposes other than the purposes for which it was borrowed, the mortgage at once becomes due and payable.

#### Sale of Bonds

The Lieutenant Governor in Council is authorized to empower the Board, on behalf of the Association, to raise by the issue of bonds against first mortgages, a sum not to exceed twelve million dollars. The issue at any one time must not exceed 95 per cent of the value of the mortgages held as security. The rate of interest at which these bonds can be issued must not exceed 5 per cent per annum. These bonds are guaranteed as to principal and interest by the Government of the Province, and, in case of the Association not being able to meet interest charges, they become at once a direct charge upon the revenues of the Province.

Further, it is provided that, pending a sale of bonds by the Association, which have been authorized by the Lieutenant Governor in Council, the Province may advance or guarantee a loan to the Association at any bank for a sum not exceeding at any one time \$1,000,000.

All the securities, including the capital shares issued under this Act, are free from all kinds of taxes other than federal taxation and the succession duties.

All mortgages are repaid on an amortization plan covered by 30 annual instalments, the debt to be extinguished in 30 years.

Up to the 31st December, 1923, approximately \$3,000,000 had been loaned under this Act. There has been a great demand for further loans, but the Government did not feel like going further into the scheme for the present.

It is hardly necessary to point out that this plan, like the Saskatchewan plan, differs materially from the farm loan scheme in the United States. While the Farm Loan Association is a corporation for the purpose or doing business, all the money acquired is acquired through an arrangement with the Government and with Government guarantees, while the officers who manage it are

subject to the direct action of the Lieutenant Governor in Council. In reality, individuals receiving loans are receiving Government monies with all the disadvantages of the sense of close contact with the Government.

### Short Term Loans

The second Act, The Rural Credits Act, is an Act authorizing the making of short term loans. The Act authorizes the organization of Rural Credit Societies in any part of the province. Such a society is organized on the basis of a petition presented to the Lieutenant Governor in Council, signed by not less than fifteen persons engaged in agriculture, setting out—

- (a) the names, addresses, occupations, and lands owned or occupied by them;
- (b) that the petitioners desire to organize a Rural Credit Society in a given locality within the Province;
- (c) the name of the municipality or locality which is to be the place of business;
- (d) the proposed name of the society;
- (e) the amount of capital stock and the number of shares into which the stock is divided with the amount paid on each subscription;
- (f) the names of not less than three nor more than seven of the subscribers who shall be provisional directors of the society.

The Lieutenant Governor in Council may then issue letters patent, incorporating the society with the prescribed powers under the Act, after which the organization of the society can be completed.

The society is not permitted to commence business until it has received subscriptions in capital stock from at least 35 persons engaged in farming of \$100 each and of which not less than 25 per cent has been paid.

The Government of the Province is authorized to subscribe an amount equal to one-half of the total amount subscribed by the individual shareholders, the amount to be paid in in like proportion to the individuals. The Government may borrow \$500,000 on debentures for this purpose. Any municipal corporation or combination of two or more municipalities may also subscribe an amount equal to that subscribed by the Government of the Province. The municipalities subscribing may issue debentures for the purpose of paying their subscription.

The business management of each society is vested in a board of directors composed of nine members, three elected annually by the individual subscribers, three appointed by the council or councils of the municipalities subscribing to the capital stock and three by the Lieutenant Governor in Council, each to serve for three years. It is necessary that at least one of the directors shall be a graduate of the Manitoba Agricultural College, or otherwise specially qualified in agriculture.

The officers of the society are appointed by the directors and registered by the Provincial Secretary and all the subscribing municipalities in the usual way. The secretary is the only paid officer and he may not be a member of the society, but is appointed because of his suitability for the work. The annual meeting is called for once a year.

The objects of the Rural Credit Societies organized under the Act are:—

- (a) To procure short term loans for members for paying the cost of farm operations of all kinds and increasing the production of farm products;
  - (1) and, particularly, for purchase of seed, feed and other supplies;
  - (2) purchase of implements and machinery;
  - (3) purchase of cows, hogs, sheep, pigs and other animals;

## SESSIONAL PAPER No. 142

- (4) payment of the cost of carrying on any farming, ranching, dairy-ing or other like operation;
- (5) payment of the cost of preparing land for cultivation;
- (6) payment of not more than one-half the cost of erecting silos.
- (b) To act as agents for members in purchasing supplies and selling products;
- (c) To promote co-operation for the improvement of conditions of farm life and to extend its operation to all residents of the district.

The moneys loaned under the Act are arranged for either with a chartered bank or with private individuals. Loans are made on a note signed by the applicant, approved by the directors and endorsed by the secretary, on behalf of the society, which thereby becomes responsible to the extent of the assets of the society, in case of default. The rate of interest is fixed so as not to exceed 7 per cent per annum, of which  $\frac{1}{7}$  is paid to the local association for the purposes of the business of the society, so that only 6 per cent is paid to the lender. All loans terminate on the 31st day of December of the year in which the loan is made, but application for renewal for one year beyond that date is admissible, provided the loan was made for purposes not productive within a year.

Under an amendment to the Act in 1923, the Province is authorized to lend to any society from the treasury, "to the extent of, but not exceeding, twenty times the paid up capital and surplus assets of such society, provided that no society shall incur liabilities, whether direct or contingent, in excess of the amount of its capital and surplus assets."

As security for the loan, so far as the individual is concerned, all animals, machinery, or goods of any kind purchased with the proceeds of the loan, together with the offspring of such animals and crops or any products produced as the result of the loan are subject to lien without documentary specification.

For default in payment or dishonest practices on the part of the borrower, there are very rigid enactments.

The capital stock of any society must be invested in Government bonds or bonds guaranteed by the Government and all the income derived must be paid into the society to be applied:—

- (a) in payment of the necessary expenses of the society;
- (b) in payment of dividends on the stock of not more than 6 per cent;
- (c) in accumulating a reserve which may, in the discretion of the directors, be invested in the same way as the capital stock.

Over and above all the societies there is a supervisor appointed by the Lieutenant Governor in Council, known as the Supervisor of Rural Credit Societies. His duties are defined by the Lieutenant Governor in Council.

In 1923, an investigation of the working of these societies was authorized by the Government and a report made upon them by Professor Jackman and Mr. Collier. The report was very condemnatory of the handling of the business of the societies and indicated the possibility of a very large loss to the Government. Approximately \$3,000,000 is outstanding in loans made under this system of which at least three-quarters are renewals of loans with outstanding interest charges of approximately \$30,000.

The Act originally did not place a limit to the borrowings, the result being that some individuals have received very large loans. Amendments have since been passed, however, restricting loans to \$2,000.

The third Act, "An Act to Encourage Savings, to Authorize the Borrowing of Such Savings and the Issue of Securities Therefor," is similar to the corresponding Act in Ontario.

### Saskatchewan

A Long Term or Mortgage Credit plan has been in operation in the province of Saskatchewan for some years. It is worked under an Act named "The Saskatchewan Farm Loans Act." The Act is administered by a Board called the Saskatchewan Farm Loan Board, consisting of one commissioner and two other members appointed by the Lieutenant Governor in Council. The Board is a corporation and, while receiving its moneys from the Government, works independently.

The Board has power—

- (a) to lend money on the security of farm mortgages;
- (b) to invest disposable funds by depositing same with any chartered bank, or in any other manner in which the trustees are permitted by law to invest trust funds;
- (c) to acquire and hold real estate for the purposes of the Board and to dispose thereof when no longer required for such purposes;
- (d) to borrow money as required for the purposes of the Board and to perform such transactions by way of security as are necessary;
- (e) to do all the necessary and incidental business resulting from the operation of a money lending agency on farm property.

The Farm Loan Commissioner holds office for ten years, unless removed for cause as the result of action in the Legislative Assembly. The other two members hold office during the pleasure of the Lieutenant Governor in Council.

No loan is permitted excepting on the security of a first mortgage on farm lands situated within the Province. Encumbrances, however, may be upon the land in the nature of legal priorities under the laws of the province.

Loans are made for the following fixed purposes:—

- (1) For permanent improvements to the property mortgaged, which, in the opinion of the Board, will assist in the productive development of the property;
- (2) Payment of liabilities which, in the opinion of the Board, have been incurred for any of the above purposes;
- (3) In special cases and under special conditions for the cultivation of land for agricultural purposes.

No loan is made for an amount greater than 50 per cent of the Board's valuation of the security offered.

Loans are made for a term of 30 years and are payable by amortization.

The rate of interest charged is to be sufficient to pay the interest on and the cost of raising the money as well as the expenses of conducting the business of the Board and other incidental expenses.

The working capital necessary is advanced from time to time by the Provincial Treasurer under the authority of the Lieutenant Governor in Council. The total sum permitted to be so raised under the Act is \$10,000,000, the securities used for raising it being Provincial securities. The term of years and the rate of interest to be paid by the Province is left to the determination of the Lieutenant Governor in Council.

The amount of advances made by the Provincial Treasurer is limited by the amount of the mortgages held by the Board and hypothecated to the Provincial Treasurer as security for the advance.

The Board is authorized, pending the disposing of securities, to borrow from any bank or corporation with the approval of the Lieutenant Governor in Council.

## SESSIONAL PAPER No. 142

In the working of the Act, the Government has not authorized the selling of debentures at a rate greater than 5 per cent and has fixed the rate of interest for loans at  $6\frac{1}{2}$  per cent. The Government charges the Board  $5\frac{1}{4}$  interest for the money,  $\frac{1}{4}$  being assumed to be sufficient to cover the expenses of sale and other incidental expenses to the department. The Board has thus a margin of  $1\frac{1}{4}$  per cent to cover expenses of administration and possible losses. This is regarded by the Farm Loan Board of Saskatchewan as sufficient for the purpose.

Up to December 31st, 1923, approximately \$9,000,000 was loaned out under the scheme.

It will be seen, therefore, that in Saskatchewan, while the money is raised directly on the credit of the Province, it is passed over to a Board which is a separate corporation, through which all the business is handled. Further, the Saskatchewan plan does not use the local association in any way, so that the individual borrower comes in direct contact with the Board. The relation of the borrower to the Government, therefore, is much nearer than is the borrower to the Government under the American farm loan scheme and the plan resembles more closely the plan recently inaugurated by the state of Minnesota.

Most of the loans were made prior to 1922. The difficulty of securing money at 5 per cent has retarded the growth of the scheme.

### Alberta

There are two Acts on the statute books of the Province of Alberta, dealing with rural credit, one entitled "An Act to Foster and Encourage Agricultural Development by Means of Standard Forms of Investment upon Farm Mortgage and the Equalization of Rates of Interest." It is cited as the "Alberta Farm Loan Act." The other, entitled "An Act Respecting Co-operative Credit" is cited as the "Alberta Co-operative Credit Act." The first of these is to provide, as its title indicates, Long Term or Mortgage Credit; the second is intended to provide Short Term or Personal Credit.

#### Long Term Loans

The Alberta Farm Loan Act, which was passed in 1917, is, in its general outline and purpose, much like the corresponding Act in Manitoba. As it has never been put into operation, I do not think it necessary to go into a detailed description.

Provision is made for the advancing of money by the Government to a body known as the Alberta Farm Loan Board, a body incorporated for the purpose of making farm loans. The limit of the loan is fixed at 40 per cent of the appraised value of the land offered for security calculated on its productiveness as farm land, the maximum amount, however, not to exceed \$5,000.

The purposes for which a loan is made are clearly defined and are related entirely to farm production. Provision is made for the issuing of bonds to be known as the Alberta Farm Loan Bonds, the same being unconditionally guaranteed by the Government of the Province. The mortgages are to be repaid through the usual amortization scheme, covering a period of thirty years. The rate of interest is not fixed. It must be sufficient to pay the interest on the bonds and to cover the current expenses of the organization.

#### Short Term Loans

The Act respecting co-operative credit in the Province of Alberta is also similar to those in the other Provinces of Canada. It provides for the organization of Co-operative Credit Societies in the Province. A Co-operative Credit

Society can be organized on the presentation of a petition to the Lieutenant Governor in Council of not less than fifteen persons, who are engaged in farming operations and who subscribe for stock in the society at par value to the amount of not less than \$1,500, of which not less than 20 per cent must have been paid up, the balance to be covered by the subscriber's promissory note payable to the society at 6 per cent interest. The society, however, cannot commence business until there are thirty members with subscribed stock equivalent to \$3,000, being paid under the same conditions as above.

After the society has become duly incorporated, an additional 20 per cent of the stock becomes due on the following first day of January and so on in each successive year, until the full value of the stock has been paid up.

The society is organized to exercise its function in a specific district.

The management of the society is vested in a board of directors, four of whom must be elected at the first meeting and annually thereafter by the subscribers, three of whom are named by the Provincial Treasurer and one by the municipality giving a guarantee to the society.

Provision is made in the Act for the guaranteeing of the securities, obligations and financial undertakings of any society by the Lieutenant Governor in Council. Further, the Council of any municipality in the Province may also guarantee the securities, obligations, or financial undertakings of any society, for an amount equal to one-half the total amount of stock subscribed by the shareholders. On assuming a guarantee for an amount of money to the society, the municipality is permitted to advance the money out of the general funds of the municipality without taking a vote of the rate-payers.

All the societies under the Act come under definite regulations and by-laws approved by the Lieutenant Governor in Council.

The objects of the Co-operative Credit Societies are:—

- (1) to procure short term loans for its members for paying the cost of farming operations of all kinds and increasing the production of farm products;
  - (a) the purchase of seed, feed and other farm supplies;
  - (b) the purchase of implements and machinery;
  - (c) the purchase of cows, horses, sheep and other live stock;
  - (d) payment of the cost of carrying on any farming, ranching, stock raising, dairying and other operations;
  - (e) payment of the cost of preparing for cultivation;
- (2) to act as agent for the members for purchasing goods, chattels, effects, stock, grain, coal, wood, lumber, merchandise and any other article or commodity required by subscribers and in selling any products produced by subscribers and in placing hail and fire insurance;
- (3) to promote co-operation among its members for the improvement of conditions of farm life.

Loans are made only to members of the society and at a rate of interest not exceeding 7½ per cent, of which one-half of one per cent is returned to the society for the purpose of meeting the expenses of the society.

All applications for loans must be accompanied by a statement of assets and liabilities and the endorsement of the local society. Before the monies are advanced, the borrower must sign a note for the amount of the money to be advanced, together with the interest on it, which, being endorsed by the society, can be used to obtain money from any bank or company approved by the Lieutenant Governor in Council, by whom, as stated above, it is also guaranteed.

Provision is made in the event of the borrower not being able to pay the amount at the date of maturity, to renew the note for one year, provided the

## SESSIONAL PAPER No. 142

purposes for which the loan was granted are not fully productive within one year. Should it become necessary because of the default of the borrower to seize any property of a borrower, the secretary-treasurer may act as bailiff and seize and sell the property without any other authority than that of the directors of the society.

Provision is also made for the retirement of a shareholder on payment of his obligation.

Any profits accruing to the society from interest or other sources are applied:—

- (a) in the payment of the necessary expenses of the society;
- (b) in the payment of dividends on paid up stock held by subscribers of not more than 6 per cent per annum; and
- (c) in accumulating a reserve which may be invested in the same manner as the paid up capital.

During the year 1923, \$830,560.00 was advanced to these societies, of which \$245,712.00 was outstanding at December 31st, 1923.

In some of the provinces of Canada, there are, in addition to the foregoing, special Acts dealing with special phases of agriculture. I have not deemed them of such importance as to require description for this report.

### Summary—Canadian Provinces

There are no available statistics regarding the amount of farm mortgage loans in Canada so that it is not possible to state the ratio of loans made under Provincial Government Organizations to the whole mortgage indebtedness of the country. The total loans made through the Provincial machinery, just described, is about \$23,000,000, an amount probably not more than 10 per cent of the whole, and certainly not enough to regulate interest rates on mortgages, but enough to prove the value to the farmers of the Amortization Principle. It is an unfortunate fact that most of the organizations described have for the moment ceased to function because of the difficulty of obtaining money at sufficiently low rate of interest, and because of the danger of embarrassing the Provinces by increasing too greatly their bonded indebtedness.

One other matter deserves special mention. In all the Provinces the Boards of Management have had difficulty in overcoming a disposition on the part of a considerable proportion of borrowers to regard lightly obligations to the Government. "It is Government money, they can wait" seems to be altogether too common an idea. The Administration Boards as well as ministers in charge of the Provincial Treasuries have had to call attention repeatedly, to this attitude of mind. It is being overcome but only by the use of rigid and decisive means. In the United States the same difficulty was encountered at first. It has been largely overcome by educational methods, by selling the bonds of the Land Banks in the districts where the borrowers themselves lived, thus showing to the borrowers that the money loaned was also borrowed in their interest, and where necessary by a rigid enforcement of the regulations regarding repayments.

With regard to interest rates in Canada there is little to add to the information brought out by the special committee of the House of Commons last year. The report of the Alberta Commissioner, made in 1922, after a careful study of that Province stated that the rate for short term loans from the Chartered Banks varied from 8 to 10 per cent "according to the condition of the district and the degree of competition present." The rate of interest on mortgages has been estimated to be 8 to 9 per cent the variation being due to similar causes.

14 GEORGE V, A. 1924

These figures would probably hold for Western Canada as a whole. In the Eastern Provinces the interest charges would be lighter. The aim of the Provincial Credit Organizations has been to lighten this burden by fixing rates varying from 6 to 7 per cent. They have succeeded only in proportion to the business done as the total loans have not been enough to afford effective competition. It remains for consideration whether agriculture can prosper under such charges.

## SECTION VI

## CONSIDERATION OF METHODS IN RELATION TO CANADIAN CONDITIONS

**Long Term Mortgage Credit**

Even a casual study of the foregoing description of the various methods of dealing with the problem of long term or mortgage credit will show that, with variations in detail, three methods have been employed:

- (1) The private investor, under which should be included the private corporation restricted only by common law conditions;
- (2) Public corporations working under special legal restrictions with or without government support—
  - (a) conducting business in the interest of the borrowers;
  - (b) conducting business in the interest of lenders; both within restrictions fixed by law;
- (3) Direct government loans.

With regard to (1), it is probably true that a very large share of the mortgage business in every country is in their hands. Under this I would include the private individual who loans directly himself and companies organized under general laws, such as insurance companies and corporations without legal restrictions with respect to interest charges. I think it may be truthfully said that wherever the mortgage business has been left entirely in the hands of persons or companies operating in this way, the claim has ultimately been made that rates of interest have remained high. So far as I am aware, no country in the western world continues to leave the solution of the farm mortgage problem entirely in the hands of organizations developed in such a way. In times of special prosperity, things may work out all right under such a plan, but in times of depression, in nearly every country in the world other methods have always been resorted to, at least within the last century. As has already been pointed out, it was the demand for more reasonable interest and government supervision that led to the whole scheme of Farm Mortgage Bonds in Europe, which has since been copied in the United States and in the Provinces of Canada. It should be stated, however, that those who claim that at the present time there is no necessity for government co-operation—and that claim is made everywhere on the American continent—base their claim on the belief that competition in money lending will sufficiently regulate the business.

(2) (a) In every civilized country, corporations have been developed of the second type. The *Landschaft* in Germany, for example, is a public corporation organized under special legislation with definite restrictions upon its business, which aims to so improve and regulate farm mortgage security, so as to be able to secure cheaper rates of interest and to conduct its business solely in the interest of the borrowers.

There is no declared purpose in the foundation of the *Landschaft* to force people to lend money at unremunerative rates; the express purpose was to so liquefy the mortgage as an investment, to give it such backing, that as a security, it would rank in its call for money with the best kind of public investment. There is absolutely no question that they succeeded in doing this and by the institution of Long Term Mortgage Bonds, secured for the owners of farm lands loans in competition with governments and municipalities and at rates of interest equal to that which they obtained. The persons so investing

invested on their own initiative, because they were convinced of the value of the security offered. The only public assistance granted to them was supervision, so as to give public confidence as to the soundness and honesty of their methods of carrying on their business.

Under (2) (b) come such organizations as those authorized in Great Britain under the older Acts which are described earlier in this report. For example, the Land Improvements Company Act of 1853 gave to the Company authority to carry on business in land mortgages for long terms of years in connection with definite operations for the improvement of agriculture. In doing so, the British Government put the stamp of its approval upon the undertakings and, in order to give public confidence, insisted that every such undertaking should be subject to proper expert inspection and carried out by well established methods. In return for this approval, which, while it may appear to have been a restriction, in reality gave security to the undertaking, they made a rate of interest greater than 5 per cent illegal. The fact that all the monies have since been forthcoming to carry out the projects entered into by this Company, which is still operating on a large scale, shows that the regulation did really not work out as a restriction and that in all probability investors were glad of the opportunity to place their money in investments made secure by the regulations of the Act.

The *Crédit Foncier* of France is an organization of a similar character. The business is being conducted really in the interests of investors. It has been given a practical monopoly in France of public mortgage business and received, in addition, definite support from the Government in getting started. In return for the privileges granted and for the assistance given, the Government fixed a definite limit of interest charges to be made on mortgages, namely, not to be greater than six-tenths of one per cent above the rate at which bonds for the purpose could be sold to the public. The French Government does not guarantee these bonds, but the supervision and control, which have been exercised by Government experts have stabilized security and given such confidence to the French investor that he is willing to accept the rates of interest offered. In this case, inspection and supervision were established because it was demanded by the public and because without it, security of land mortgages could not be established in the minds of the public so as to give the necessary confidence to secure rates of interest commensurate with the security. It was firmly believed that private enterprise did not offer the necessary competition to give agriculture, because of its lack of organization, interest rates commensurate with the security, and that by organization the security could be so improved as to attract the attention of the investing public.

With regard to institutions organized under the Farm Loan Board of the United States, it has already been pointed out that, the Federal Land Banks function somewhat as the *Landschaft* in Germany, while the Joint Stock Banks of the same system resemble the *Crédit Foncier*. That is to say, they are institutions organized under public control and supervision in such a way as to give confidence to the investing public in the security offered for loans, but, at the same time, doing business in such a way that the profits beyond a guaranteed return to lenders go to the benefit of the institutions and, therefore, of the organized borrowers in the case of the Federal Land Banks but to the investors in the case of the Joint Stock Banks.

While the United States Government put behind the Federal Land Banks \$9,000,000 free from interest charge for a period of years, nevertheless, the policy pursued has been to bring them to a state of independence and to make agriculture, through them, guarantee its own financial well-being.

Already, these institutions have returned to the United States Government three-quarters of the capital originally granted to them and are now financing

## SESSIONAL PAPER No. 142

the whole administration out of their own funds without any charge upon the public treasury. The Federal Farm Loan Board continues its supervision and care in the interest of the investing public. A definite restriction is placed by law upon interest charges and to assist them in living within these charges, a national selling agency has been authorized. The only other special privilege which they have in competition with other lending institutions is the freedom from the taxation of their bonds, a much discussed and controversial subject. With respect to that, I may say that I heard the principle of tax-free bonds universally condemned in the United States by all shades of opinion, but the Federal Farm Loan Board maintained that so long as state governments and municipalities, including towns and cities, had their bonds free from taxation, it was only fair that the bonds issued on farm mortgages should also be free from taxation. I think there can be no question that the issuing of tax-free bonds is working out enormously to the benefit of the well-to-do. Without question, also, it has been a benefit to the municipalities, and it has greatly assisted the Federal Land Banks in the sale of their bonds.

(3) The third method previously described is that of direct government loans. This has not been practised to any great extent, so far as my knowledge goes, elsewhere than on the American continent and in the British Dominions. In Great Britain, the New Act permits governments loans for a short period of years and is intended to give direct assistance to persons who, having bought lands on the basis of the stability of certain legislation, suffered because that legislation was repealed.

In most of the States of the United States, where loans are being made by the State governments, they are being made either directly or indirectly from the State Treasury. Even where bonds are only guaranteed by the governments, the officers administering the funds derived from them are State officers. The same is true, in the main, of what is being done in the Provinces of Canada.

There can be no question, I think, that in the administration of institutions dealing directly with governments, the dangers of political interference and of consequent loss to the public treasury is very great. Even in the United States, the work of the Farm Loan Board, removed as it is from the direct control of the Government, has suffered because men in public life have deemed it to be to their political advantage to speak critically of its policies without making an effort to get a knowledge of the facts.

When we come to consider the question of long term credit from the point of view of Canada as a whole, we are faced with the fact that no organization of a truly Canadian character has been developed. It is freely stated by those engaged in the farm mortgage business that none is necessary, that there is sufficient competition already in this business to take care of all the requirements of the country.

It is further claimed that the restrictions by way of taxes and priorities over mortgages have become so great in some, at least, of the Provinces of Canada that freedom of action is practically denied mortgage companies in carrying on their business. It was even suggested to me that with greater freedom of action and freedom from restrictions, the mortgage business of the country could be done at one to two per cent less cost than at present. Whether this be true or not, it is difficult to exactly determine. I have not yet found any lender who was willing to commit himself definitely to an agreement that, if restrictions were removed, prices on mortgages would be reduced. My judgment is, this is a matter of such serious importance that a conference between representatives of the mortgage organizations of Canada and the governments responsible for the legal limitations complained of and the leaders of the farmers' organizations in the country should be held to discuss the whole

matter and to see whether some scheme could not be devised that would remove the suspicion and doubt that have arisen in connection with it.

I think it cannot be denied, referring especially to Western Canada, that the mortgage business is conducted in an exceedingly expensive manner and that reasonable co-operation between loan companies might greatly reduce the present cost of administration. The Federal Land Banks of the United States are to-day conducting their business on a margin of one per cent and are setting aside out of that a considerable margin for possible losses. Figures are not available for Canada as to the cost of administering the farm mortgage business, but I think there can be no doubt that it is much beyond these figures.

Further, there is without question, a considerable number of farmers in Canada, who, following the urgent advice given during the war and at the close of the war to continue production, find themselves, due to the heavy deflation, in the same position that farmers found themselves in England and the United States, and for whom some plan of amortization of loans is absolutely necessary, if they are to be able to continue on the land. This demand is being met to-day only in a very limited degree. It is very doubtful whether the Provinces alone can continue to develop long term mortgage business without taking risks greater than they should take in connection with their own financing.

Now, while I am firmly of the opinion expressed by Sir Horace Plunkett and already quoted, that agriculture must be a self supporting industry, I believe with equal confidence that there is a need in Canada for some organization co-ordinating the credit which the farmer has to offer in such a way as to make it more attractive to the man who wishes to loan his money at a reasonable rate of interest with proper security. Every country in the civilized world has ultimately been compelled to take such a step. When it is remembered that two per cent, under the ordinary amortization scheme, will amortize a farm mortgage in 20 years, therefore, a reduction of two per cent in interest is equivalent in 35 years to the capital debt, the significance of the foregoing statement will be apparent.

#### **Short Term Loans**

With regard to short term loans, as already pointed out, two things have been aimed at—

- (1) to organize the security offered for them so as to secure more reasonable rates of interest, and
- (2) to increase the time of the loan, consistent with the seasonal production of agriculture.

It is quite apparent from the facts already related that three methods have been employed in securing these aims—

- (1) the better regulation of the security offered by means of co-operation with either limited or unlimited liability and government supervision;
- (2) by direct government assistance;
- (3) by a combination of the above.

With regard to (1), on the European continent, generally, the better organization of security so as to enable agriculture to be self-sustaining is the aim of the co-operative credit movement.

The Intermediate Credit Banks of the United States have been organized with the same idea in mind. They have been granted public organization and supervision and a portion of their capitalization, in order to make it possible that all charges shall ultimately be borne by the business in the interest of which they were instituted. A special regulation in the Act of incorporation prohibits the United States Government from guaranteeing any of their obligations.

## SESSIONAL PAPER No. 142

With regard to (2), direct government assistance, broadly speaking, all State loans in the United States are being made through organizations having direct contact with the government, although in some of these, the principle of establishing local co-operative associations is followed.

In so far as short term loans are made under the Australian and New Zealand organizations, I think they may be considered as direct government loans.

(3) In many countries, government assistance and co-operation are combined. In France, as has been pointed out earlier in this report, the Bank of France, functioning as a Bank of Issue, is compelled to make annual grants for the support of the co-operative banking institutions. Theoretically, these advances are made by way of a loan, but I do not think that the possibility of their return is seriously contemplated.

In a limited sense, the Federal Intermediate Banks would come under this classification, as the capital of the banks has been provided by the Federal Government. On the other hand, these institutions are required to pay interest on the money borrowed and, further, a rather remarkable provision, that while the Government refuses to guarantee the securities of the banks, all the profits beyond a certain amount must be returned to the United States Treasury as a franchise tax for the right of doing business or to be applied to the United States debt.

The organizations in Canada, in the main, come under this classification, that is to say, they are based on the organization of co-operation, but are directed and supported by the Government.

With regard to the organization of short term credit in Canada, I think there can be no doubt that some reorganization in connection with it must take place. I do not wish any statement I make to be taken as a criticism of the operation of the banks in Canada. That is not my business. I have no doubt that the statement made by bank organizations as to the losses they have had in the last few years are absolutely true, but I think it is equally true that, excepting in the case of well established farmers, the short term bank loan at present is not sufficient to carry the farmer's operations. Many of the leading bankers of the country admit this to be so. The General Manager of the Canadian Bank of Commerce in the following statement recently made in an address, shows that the great bankers of the country are cognizant of the problem with which agriculture is confronted:—

"The discussion of the problem of financing the operations of Canadian farmers, especially in the West, occupied much of the time of the last session of Parliament, much evidence was submitted, but as yet no practical scheme seems to have been evolved. Unquestionably, in an ordinary industry, if the capital already invested cannot be profitably employed it is useless to look for more. But the importance of agriculture as a basic industry and the plight of so many farmers during recent years force the problem to be approached from no ordinary angle. During the discussion in Parliament this Bank suggested that a possible solution might be found in money borrowed by way of the issue of long term securities, the marginal risk to be carried by the issue of stock of a corporation to be formed for the purpose, the money for which would be found in such proportion as might be agreed upon by the Dominion Government, the Governments of the various Provinces interested, the banks and other large corporate interests who share in financing the farmers. The details might prove difficult to work out, but the plan of financing such requirements by long term securities, rather than from moneys repayable on demand, is unquestionably sound from the economic point of view."

There can be no doubt that the establishment in Canada of a Short Term Credit System based on the formation of Local Associations for co-operative purposes would be much more difficult than in most European countries, or even in the United States. The uniformity of the population and the permanency of family relations create in those countries the exact conditions under which co-operative methods flourish. Yet, I think that experience has already shown that a sound plan along these lines could be worked out under proper supervision and control. It would be a definite step toward the realization ultimately of financial control and, therefore, independence by the farmers themselves. Discounting facilities would have to be provided by some central agency, either a corporation specially created, as suggested by the President of the Bank of Commerce, or organized and to some extent, at least, capitalized by the Government, as in the United States and in France. This would be absolutely necessary, unless, through the organization of Provincial Savings Banks, sufficient money could be found, a very doubtful contingency for some years to come.

One word in conclusion—It ought to be clear to anybody that Canada is slowly passing through the stage in her agricultural development that the United States was passing through some years ago, viz., the best lands of the country have been taken up, wealth accumulating from the rise in land prices will, in a large measure cease, and land mortgages based on growing prices will be harder to carry. I have no doubt that competition from the United States so far as cereals are concerned will grow less and that, in spite of high tariffs, the United States must buy from us eventually, but competition from a revived Europe and other parts of the world will increase. If we desire to have Canadian agriculture maintain its place in world competition in the future, the time to begin to plan for the rational administration both of its finances and its scientific development is the present.

Should the Government deem it wise, during the present session of Parliament, to take action with regard to the establishment of a plan for the development of long term and short term credit, I would respectfully urge that an intensive study of this problem be continued. If it is considered wiser to wait for further maturity of opinion on the subject, then I would respectfully suggest that, as the period given for the preparation of this report has hardly been sufficient to study the problem from the point of view of the communities seeking benefit, that I be permitted to continue the study of the problem in the interim.

CLEVELAND, OHIO, OCTOBER 22, 1923.

Hon. THOMAS A. LOW,  
Minister of Trade and Commerce,  
Ottawa, Ontario, Canada.

Mister Rathbone's circular notice to vessel managers of October nineteenth  
has been received and has to-day been considered by the majority of United  
States Managers who have authorized me to send you the following message  
Stop. Your notice that you are prepared to accept as a compliance with section  
three of the Inland Water Freight Rate Act of Nineteen twenty-three either (a)  
the filing with the Board of Tariffs by the vessel owners or (b) the filing by  
the shippers before loading of copies of charters or contracts for space Stop.  
The vessel owners here represented will decline to file such tariffs Stop. We  
can have no objection to the filing by the shipper before loading of copies of  
charters or contracts for space as this so far as the vessel is concerned restores  
and preserves her right of contract and places no obligation on the ship and  
would of course not affect the reasonableness of the rates because we assume  
before the shipper definitely closes his contract with the vessel he has due  
approval of the Government Stop. With this understanding see no objection  
to United States vessels taking Canadian grain as in previous years Stop.  
Please confirm.

W. H. McGEAN,

GEO. MARR, Esq.,

Secretary-Treasurer, Lake Carriers' Association,  
Roeckefeller Bldg., Cleveland, Ohio.

For your information I beg to advise the following wire has been sent to the principal United States vessel owners operating on Great Lakes; Stop. The Board of Grain Commissioners for Canada, which is charged with the administration of the Inland Water Freight Rates Act recently passed by the Parliament of Canada, and copy of which is doubtless now in your possession, is desirous of ascertaining if it is your intention to charter boats for the movement of Canadian grain ex Fort William and Port Arthur under the provisions of said Act, more particularly Section Three relating to the filing of a tariff, Please wire reply to Leslie H. Boyd, Chief Grain Commissioner, Department of Trade & Commerce, Ottawa, Can.

F. J. RATHBONE,  
*Sec., Grain Commission.*

MARINE CITY, MICH., August 10, 1923.

LESLIE H. BOYD, Chief Grain Commissioner,  
Dept. Trade and Commerce, Ottawa.

We cannot see our way clear to comply with the new regulations of your parliament regarding the carrying of grain from Canada.

CLEVELAND, OHIO, August. 10, 1923.

LESLIE H. BOYD, Can. Grain Comm.,  
Dept. of Trade and Commerce, Ottawa, Ont.

Replying to F. J. Rathbone's message believe American vessel owners will object filing tariffs in accordance with provisions Section Three but see no objection filing copy of charter personally believe charter should be filed with hopes this will expose and stop speculation on part of vessel brokers who are responsible to neither grain shipper or vessel owner and who have done tremendous harm to vessel interests some of these vessel brokers not being satisfied with their proportion of bout half million dollars a year on insurance commissions and charter fees try and scalp the market on rates this is pernicious practice and should be stopped charters can be made between vessel owners and grain shippers direct in which case both are responsible to each other and any default on either side can be properly taken care of.

Secretary.

T.  
Enclosure.

SESSIONAL PAPER No. 162

September 21, 1923.

File No. 1316.

The Oriental Navigation Co.,  
New York, N.Y.

GENTLEMEN,—In case you have not already received copies, I am enclosing circular letters issued operators of steamship carrying cargoes of grain from Fort William and Port Arthur to other ports in Canada and United States.

Up to the present time we have not received tariffs covering a shipment of grain on the steamer *T. L. Church* on September 10 as follows: Wheat 107.545-30. It may be that this grain was a local shipment made in the province of Ontario for consumption or milling and under section 9 of the Inland Water Freight Rates Act the steamship company is not obliged to file the tariff therefor. At the same time I would point out that the same section of the Act places the burden of proof upon the steamship company. I would, therefore, appreciate the receipt from you at an early date of either a copy of the tariff covering this shipment and also further shipments which you expect to make from time to time on this vessel, or a statement in writing establishing beyond question that the shipment referred to comes under section 9 of the Act.

Yours very truly,

EAU/S  
Encl.

(Sgd.) F. J. RATHBONE,  
Secretary.

CLEVELAND, OHIO, September 21, 1923.

LESLIE H. BOYD,  
Grain Commissioner,  
Fort William, Ont.

Over five million bushels American vessel space for October and November towing is now offered also vessel space for storage. At Buffalo and side ports these offerings are not being accepted at comparative to the bay the nontaking of this tonnage would indicate that there is not the stress for the movement of grain which is bought before the public by propaganda from irreconcilables. Hope to wire you some favourable news later in day.

(Sgd.) A. E. R. SCHNEIDER.

NEW YORK, N.Y., September 22, 1923.

Fort William, Ontario.

We have three Norwegian boats here with grain from Fort William Final destination grain cargoes United Kingdom Custom Authorities Fort William Had Captain sign papers stating if cargoes forward via Montreal cargoes and boats would be confiscated in this scarcity of tonnage Can you give us authority to forward this grain via Montreal transferring cargoes at Buffalo to other boats and assuring us that cargoes and boats would not be confiscated Tariff has been filled for this grain via Montreal Please answer quick.

BOLAND

FORT WILLIAM, Ont., October 1, 1923.

BOLAND & CORNELIUS,  
Buffalo, N.Y.

Subject matter your wire referred Customs Department, Ottawa. Will advise as soon as possible.

(Sgd.) LESLIE H. BOYD,  
*Chief Commissioner.*

CLEVELAND, OHIO, Oct. 1, 1923.  
Via OTTAWA, ONT., Oct. 1, 1923.

LESLIE H. BOYD,  
Chairman, Bd. of Grain Commr.,  
Fort William, Ontario.

J. A. Speers Fort William advises nine million bushels wheat in store but elevators cannot keep up with cleaning account grain being exceptionally dirty over twenty boats loading yesterday morning and will be Tuesday night before can find sufficient clean grain to take care of them stop more capacity would be available if shippers would not charter so many boats until grain is cleaned the quicker boats are loaded the quicker they will return for more grain according to Speers report if fifty more boats were put in the service it would not help the situation.

(Sgd.) A. E. R. SCHNEIDER.

CLEVELAND, OHIO, October 2, 1923.

LESLIE H. BOYD,  
Grain Comm. of Canada,  
Fort William, Ontario.

Figures given you total estimated movement grain were conservative expect to do much better some boats have been chartered which were not previously figured on.

(Sgd.) A. E. R. SCHNEIDER.

FORT WILLIAM, October 2, 1923.

A. E. R. SCHNEIDER, Esq.,  
Kirby Bldg.,  
Cleveland, Ohio.

On return Fort William have your wire. Condition as stated by Speers correct. Crop dirty and must be cleaned, stop. I figure your forty-four boats have a total capacity of eleven million. You state we could only count on thirty million for the season stop Is the reason for this that most Cleveland-Cliffs will only make one trip.

(Sgd.) LESLIE H. BOYD.

14 GEORGE V. A. 1924

L. H. BOYD, 291 Grain Exchange,

Winnipeg, Man.

On my return from Europe am familiarizing myself with Canadian grain situation Cleveland Plain Dealer of yesterday morning carried news dispatch stating that your commission contemplates changing application of Grain Rates Act so as to have shippers file charter instead of vessel owner thus avoiding objections raised by American vessel owners understand our company suggested this plan to you in Cleveland September nineteenth I strongly urge its adoption as a practical reasonable working basis on which all American vessel owners can act without sacrificing their rights as stated in our protest filed with you and I feel ought under the circumstances be carried into effect failure to do so would in my opinion be most unfortunate.

WM. G. MATHER,

LESLIE H. BOYD.

CLEVELAND, O., October 18, 1923.

L. H. BOYD.

Fort William, Ont.

Confirming telephone conversation of to-day I do not hesitate to restate the opinions contained in my telegrams of fifth and eighth namely that if you can adopt basis of having shipper instead of vessel owner file copy of charter that majority of American owners will resume placing of their vessels in Canadian grain trade stop Although it is not practicable to state how many American vessels would enter that trade on account of their present contracts to carry ore and coal yet as freedom of taking Canadian grain will be resumed without interference unquestionably the supply of vessels will be increased stop With reference to rates this situation would also be correspondingly eased by resumption of these natural conditions we recognize if rates should raise unreasonable that we might use your right of fixing a maximum but we trust that this power will be exercised with discretion as the possibility of so doing was as you know obnoxious to American vessel owners I understand that you will be able to communicate with me your decision in this matter tomorrow and I will then communicate it to local press and Cleveland vessel owners.

WM. G. MATHER,

*President Cleveland Cliffs Iron Co.*

FORT WILLIAM, ONT., October 19, 1923.

WM. G. MATHER, President, Cleveland Cliffs Iron Company,  
Kirby Building, Cleveland, Ohio.

Your wire. Board has today decided to accept as a compliance with the Act the filing of tariffs by the vessel owners or the filing by the shippers before loading of copies of charters or contracts for space Will send you Night Letter.

LESLIE H. BOYD,

*Chief Commissioner.*

Charge Board.

FORT WILLIAM, ONT., October 19, 1923.

WM. G. MATHER, Esq.,

President, Cleveland-Cliffs Transportation Co.,

Kirby Bldg., Cleveland, Ohio.

The Board of Grain Commissioners for Canada hereby notifies all shipping companies, ship owners and shippers of grain that it is prepared to accept as a compliance with Section three of the Inland Water Freight Rates Act, nineteen twenty-three, either the filing with the Board of tariffs by the vessel owners or the filing by the shippers before loading of copies of charters or contracts for space. The Board has the assurance that a large number of American vessels are prepared to come into the grain carrying trade, and believe that this increased tonnage and competition will, of itself, regulate rates. If, however, under these conditions, fair and reasonable rates do not result, the Board may find it necessary to prescribe such maximum rates as it may consider reasonable.

Charge Board.

## BOARD OF GRAIN COMMISSIONERS FOR CANADA

FORT WILLIAM, ONT., October 19, 1923.

File No. 1316.

The Board of Grain Commissioners for Canada hereby notifies all shipping companies, ship owners and shippers of grain that it is prepared to accept as a compliance with Section 3 of the Inland Water Freight Rates Act, 1923, either

- (a) the filing with the Board of tariffs by the vessel owners,
- or
- (b) the filing by the shippers before loading of copies of charters or contracts for space.

The Board has the assurance that a large number of American vessels are prepared to come into the grain carrying trade and believe that this increased tonnage and competition will of itself, regulate rates. If, however, under these conditions, fair and reasonable rates do not result, the Board may find it necessary to prescribe such maximum rates as it may consider reasonable.

By Order of the Board.

(sgd.) F. J. RATHBONE,

FJR/T.

*Secretary.*

#### SHIPPERS' INDEMNIFYING CLAUSE AND AGREEMENT

This charter is made with the understanding that the Board of Grain Commissioners of Canada, with approval of the Canadian Government, has duly ruled that the Inland Water Freight Rates Act of Canada will be so complied with as to authorize the shipment of grain from Canadian ports, if the shipper shall, before loading, file with said Board copies of charters or contracts for space entered into for grain shipments. And it is agreed that the shipper shall and will on his own behalf and not as representing the vessel owner (the vessel owner assuming no responsibility therefor), promptly, upon the execution hereof and before any loading takes place, file copies of charter or contract for space as required by the Board of Grain Commissioners of Canada, so as to render all shipments herein provided to be made fully authorized by Canadian authority—so that each vessel employed hereunder may, in every case, freely enter the port or ports of shipment and receive its cargo, and that clearance may be obtained and the vessel may leave port, without prevention, hindrance or liability because of or under said Inland Water Freight Rates Act of Canada; and that the shipper shall and will indemnify and save and keep the vessel owner harmless from all loss or damage resulting from any failure

14 GEORGE V, A. 1924

to so file this charter; or, having so filed the same with the Board of Grain Commissioners, in case any liability shall be asserted against the vessel, her owner, agents or servants, by reason of any shipment or proposed shipment hereunder, because of or under said Inland Water Freight Rates Act of Canada, the shipper shall and will, through the Board of Grain Commissioners, or otherwise, indemnify, save and keep harmless therefrom the vessel, her owner, agents and servants. And in consideration of all the foregoing on the shipper's part, the vessel owner agrees to perform his part of the charter to carry the cargo as above provided.

TO HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL.

MAY IT PLEASE YOUR EXCELLENCY:

We, the Commissioners, appointed by Royal Commission dated July 22, 1922, issued pursuant to Order in Council P.C. 1525 of the same date, to investigate, inquire into, and report upon:—

Firstly, the matters referred to in complaints made by certain officials of the Great War Veterans Association as contained in a certain telegram; and

Secondly, certain questions relating to pension, medical treatment and re-establishment needs of Canadian ex-service men and their dependents;

have the honour to present to Your Excellency in Council our Second Interim Report in respect of the Second Part of such Investigation, (being report No. 3 of the Commission.)

The subject matter of the reference concerning the Second Part of such Investigation is as follows:—

1. To consider and make suggestions in respect of the procedure by which disabled ex-members of the Canadian Expeditionary Force are enabled to make application for pensions and medical treatment, or submit an appeal in respect of decisions thereon.

2. To recommend means for ensuring that suitable provision is made for those ex-members of the forces and dependents who are under serious handicaps by reason of war services, in conformity with the recommendations now made, and for whom definite legislative provision has not yet been made.

For the above purposes the Commission shall:—

1. Survey existing re-establishment needs among Canadian ex-service men and dependents.

2. Investigate available data in respect of phases of the Parliamentary inquiry as yet incomplete.

3. Obtain information as regards suitable provision for those classes of ex-service men described in Section 7, Chapter 2, of the Committee's report.

4. Investigate the question of Canteen Funds.

In the Second Report presented by the Commission it was indicated that instead of delaying all matters until a complete Final Report could be presented it was considered best to forward Interim Reports from time to time treating the various subjects in the order of those considered urgent. The Commission has made every effort to complete the whole reference to avoid further Interim Reports, but it has been found impossible to do so, without involving a delay of probably one month. This Second Interim Report on the Second Part of the Investigation is therefore forwarded, in view of the fact that the matters therein referred to are particularly subjects for legislation.

The subjects dealt with in this Report are:—

*Part One: Re Amendments to Pension Act and Interpretation of various Sections.*

*Part Two: Re Soldier Settlers.*

The Final Report which will, it is expected, be presented within one month, will deal with such evidence presented and suggestions made under the following headings: Procedure, Sheltered Employment (including Vet Craft Workshops, Selected Industrial Employment and Home Industries), Vocational Training, Soldiers' Homes, Relief, Matters presented *re* Disabilities from certain classes

## SESSIONAL PAPER No. 203

of ailments (including Mental, Blind, Tuberculous, Amputations, Syphilitic, Premature Old Age) Canadian ex-service men now residing in the United States. Matters referred to generally as Existing Re-Establishment Needs, Canteen Funds, and Matters mentioned on the Hearings but not within the scope of the Inquiry, such as Imperials, R.N.W.M.P., and Burials.

In this Report the Board of Pension Commissioners has been referred to as the "Pensions Board," the Soldier Settlement Board is spoken of as the "Settlement Board", and the Royal Commission, now reporting is designated "The Commission". In giving references to the pages of the record of evidence, duplication has been avoided, where possible, by not repeating the name of the place where the Sitting was held. Where, therefore, a reference to evidence consists of simply a number shown in brackets, it refers to the evidence given at the place next previously mentioned by name.

A copy of the evidence taken on the various Sitzings of the Commission at Halifax, St. John, Montreal, Vancouver, Calgary, Regina, Winnipeg, Toronto, and Ottawa, consisting in all of 5,800 pages is forwarded herewith. Some 210 exhibits referred to but not incorporated in the evidence will be forwarded with the Final Report.

## ROYAL COMMISSION ON PENSIONS AND RE-ESTABLISHMENT

## SECOND INTERIM REPORT

ON

## SECOND PART OF INVESTIGATION

## PART ONE

AMENDMENTS TO PENSION ACT AND INTERPRETATION  
OF VARIOUS SECTIONS

There were presented to the Commission suggestions as to amendments to the Pension Act referring to upwards of twenty different subjects. The Commission has considered these as coming within Paragraph 2 of the reference (P.C. 1525) under which the Commission is authorized to recommend means for ensuring that suitable provision is made for handicapped ex-service men and their dependents, and for whom definite legislative provision has not yet been made. The Commission has dealt with these suggestions by treating together those which, though made at different hearings, closely resemble each other. There are suggestions which, although not recommended favourably, were thought important enough to warrant being discussed at some length in this Report, so that the considerations which influenced the Commission might be understood and the way be open for further presentation of these suggestions to Parliament, in case the reasons adopted by the Commission were thought insufficient. The suggestions are dealt with in the order in which the Sections affected appear in the Act.

**Re Section 11 (1) (b) (formerly 25 (3))**

Pre-enlistment disabilities not to be deducted from disability at discharge

This was formerly Section 25 (3). It was amended (1923, Chap. 62, Section 3) and became clause (b) of sub-section (1) of Section 11 of the Pension Act. It now reads as follows:—

“No deduction shall be made from the degree of actual disability of any member of the Forces who has served in a theatre of actual war on account of any disability or disabling condition which existed in him at the time at which he became a member of the forces; provided that no pension shall be paid for a disability or disabling condition which at such time was wilfully concealed, was obvious, was not of a nature to cause rejection from service, or was a congenital defect.”

The United States provision (Sec. 300 War Risk Insurance Act) is that a member of the forces—

“shall be . . . taken to have been in sound condition when . . . enrolled for service, except as to defects, disorders, or infirmities.”

recorded at the inception of active service and then only to the extent so recorded.

*Suggestion by ex-service men re Section 11 (1) (b)*

That this provision be extended to ex-service men who served in England or Canada. (Halifax 88; Toronto 188.)

The spirit of Section 25 (3) was that all those who reached a theatre of actual war should be presumed to have been physically fit on enlistment, and the Pensions Board could not minimize the degree of disability existing at discharge by showing that part of such disability existed on enlistment. (See Report No. 1, 56, 57.)

This Section is admittedly a generous one, and the Commission considers its further extension not warranted.

*Recommendation of Commission.*

None.

*Suggestion by ex-service men re Section 11 (1) (b)*

That steps be taken to insure that so long as some disability remains pension is not discontinued to men who have served in a theatre of war, on the ground that aggravation incurred on service has disappeared. (Halifax 83; Winnipeg 57-63; Toronto 631.)

This has been discussed exhaustively in Report No. 1, P. 70-73. The final word on the subject is contained in an Instruction issued by the Chief Medical Adviser of the Pensions Board stating specifically that the "*whole disability*" must have disappeared before pension ceases."

The cases cited in Winnipeg (57 and 61) convince the Commission that notwithstanding all the discussion which has been had and the corrective instructions which have been issued, there is still lacking a clear and definite understanding that the terms of the Instruction above quoted mean what they say.

*Recommendation of Commission.*

That necessary steps be taken to ensure that the interpretation and practice indicated in the Instruction above quoted is invariably followed.

*Suggestion by ex-service men re Section 11 (1) (b)*

That all the exceptions in Section 11 (1) (b) (formerly Section 25 (3)) be struck out. (Toronto 188.)

These exceptions apply to cases in which the disability was: (a) wilfully concealed, (b) obvious, (c) not of a nature to cause rejection from service, (d) congenital.

The Commission is of opinion that these exceptions are not at all unreasonable nor strict in their intent.

The complaint has arisen, almost invariably, in reference to the interpretation of the word "obvious" as applied to certain cases. This was dealt with in Report No. 1 (P. 73, 75). The word has now been defined in the 1923 amendment to the Pension Act (C. 62, S. 1) as follows:—

"'obvious' means that which would be apparent, clear, plain, evident or manifest to the eye, ear or mind of an unskilled observer on examination."

The phrase excepting disabilities "not of a nature to cause rejection from Service" is taken as referring to ailments or defects so trivial in nature as not to justify rejection from service. The reason for urging the elimination of this exception is simply that its meaning is obscure and therefore causes apprehension. The Commission has had no case brought to its attention in which this provision was ever invoked as a ground for refusing pension. Assuming it means what is suggested above, it is at least innocuous and was evidently considered desirable in order to obviate any possible doubt.

The Commission considers that there is no good reason for eliminating the other exceptions, viz., disabilities which were "wilfully concealed" or "congenital."

## SESSIONAL PAPER No. 203

*Recommendation of Commission.*

None.

**Re Section 12 (1)**

## Improper Conduct Syphilis

"Section 12 (1).—A pension shall not be awarded when the death or disability of the member of the forces was due to improper conduct as herein defined; provided that the Commission may, when the applicant is in a dependent condition, award such pension as it deems fit in the circumstances and provided also that the provision of this section shall not apply when the death of the member of the forces concerned has occurred on service prior to the coming into force of the Pension Act."

The law and practice in awarding pension where syphilis has been a contributing factor to the disability has been complained of. It is claimed:—

(1) That the Pensions Board is in error in treating syphilis which originated previous to enlistment, as due to "improper conduct," which in turn is defined as including "vicious or criminal conduct."

(2) That even if this construction is correct, then the Statute should be amended, so that if the origin of the infection is prior to enlistment then the right to pension should be the same as in the case of any other pre-enlistment disease.

(3) The other claim is that even if syphilis comes under the ban of the Act, the Pensions Board is too strict in the exercise of its discretionary power to pay pension to applicants in a dependent condition.

Previous to the coming into force of the Pension Act, it would appear that in awarding pension, no distinction was made between disabilities resulting from syphilis and those from any other disease (Vancouver 113). The evidence shows that the Pensions Board considers that the Pension Act changed the rule so as to prohibit pensions for disabilities arising from syphilis. The section relied on is Section 12, which is quoted in full above.

"Improper conduct" is defined in Section 2, subsection (h) and it

"includes wilful disobedience of orders, self-inflicted wounding and vicious or criminal conduct."

As to the first complaint the Commission considers that the terms of the Section are broad enough to preclude even cases where the infection took place previous to enlistment.

As to the second complaint the Commission appreciates the force of the fact that this provision has been in the Act since its inception. The memorandum issued at the time the Act was passed contained no intimation that it effected a change in the law, which up to that time had made no distinction between this disease and any other which originated while the man was in civilian life. The regulation of the Pensions Board which is now in force concerning the practice under this Section shows that what was in mind was that the Section applied at least primarily to misconduct on service. The first two paragraphs of this regulation are:

**"Disability due to Misconduct"**

"1. Section 12 of the Act provides that pension shall not be awarded when the disability of a member of the forces is due to improper conduct.

"2. No pension, therefore, either for the disability or aggravation thereof can be paid when the disability or aggravation thereof is due to misconduct on service. (Vancouver 114)."

This of course does not exclude the interpretation that the section applies also to pre-enlistment infection and later, in the same regulation, is a provision which shows that the Pensions Board considered that it did so apply because the Pensions Board treats disabilities which were due to "misconduct which pre-existed enlistment" as only pensionable under the discretionary clause of the section. The subject is naturally one which has not received much public discussion, and claimants, especially dependents, may often hesitate to press their claims through dread of disgrace. Those who are affected are no less entitled to have an expression of the opinion of the Commission. The effect of the section as construed is that the State indirectly, but no less effectively, fines not only the ex-soldier but his dependents for an indiscretion which occurred before he took on any duty whatever as a soldier. For example; The man who had T.B. on enlistment, but who was accepted and served in France gets pension for his condition on discharge, and this pension increases as his disability grows worse, and if he dies his dependents of course get pension. On the other hand, the man who as a result of an indiscretion in his youth, has, on enlistment, the smouldering embers of V.D.S. but nevertheless is accepted and, like the other man, performs the duties and takes the risk of a fit man, and whose latent trouble would be just as much or more affected by service in the line as the T.B. man, gets no pension for any increase after discharge. What is even more striking is that his widow gets no pension as of right but only if she is in a dependent condition, and then it is entirely in the discretion of the Pensions Board to grant her such pension as it "deems fit." There is one exceptional case where she gets pension as of right, and that is if the husband dies within five years after discharge while pensioned for eighty per cent or over. In that case Section 33 (2) which applies to all pensioners drawing pension to that amount, authorizes pension to the widow, no matter what is the cause of his death.

The example given illustrates the discrimination which the Act makes between these two soldiers. The country availed itself of the services of both of them and put them to all duties and dangers of fit men. They both may have given flawless service and this service probably had a more serious effect on the health of the "immoral" man than on that of the other, but the State rids itself of its responsibility to him and his dependents because of his ancient indiscretion. The answer must be that the ailment of the V.D. man was voluntary while that of the T.B. man was not, but it appears like an attempt to mete out *ex post facto* punishment. The subject was considerably discussed before the 1920 Parliamentary Committee (Proceedings page 212) but this discussion had more reference to the case when the infection was contracted on service. This case is of course different in that the man was in uniform and subject to stringent prohibitory regulations.

It may also be said that the provisions of Section 11 (1) (b) (formerly 25 (3)) which, in effect, authorize pension for pre-enlistment disability, are generous and that a case of this kind should not have the same consideration. But that section was drawn on the principle that if, on enlistment, a man was taken on as "fit" for service purposes, he was entitled to be considered as "fit" for pension purposes and if this is the true principle it applies to the V.D.S. man.

The rigors of the section were mitigated somewhat by the last proviso which was added in 1921.

As to the third complaint, which is as to the policy laid down by the Pensions Board in exercising its discretion to award pension, the following are the regulations (in addition to those already quoted):—

"3. However, Section 12 provides that when the applicant is in a dependent condition the Board may award such pension as it "deems fit" in the circumstances."

## SESSIONAL PAPER No. 203

"4. The Board considers that a fit and proper pension in the cases of those who saw service in a theatre of actual war and whose disabilities were due to misconduct which pre-existed enlistment would be the total disability at the time of discharge without any deduction for the pre-existing condition, provided that it "was not obvious nor wilfully concealed." No increase in the disability after discharge will be pensionable. In the cases of those who did not see service in a theatre of actual war, pension can be only awarded for that portion of the disability actually aggravated by service." (Vancouver 114).

Assuming the statute deprives the man, with the pre-enlistment infection, of his right, the Commission considers that no criticism can be made of the policy laid down in the above regulations.

There is nothing however in these regulations showing what is done in the case of a man, who is infected on service and who is in a dependent condition. According to the evidence before the 1920 Parliamentary Committee (page 214) this man does not get pension at all and, neither do his dependents.

The Commission considers that there must be cases where the plenary authority given to the Pensions Board by Parliament should be used. It will not do to say that Section 12 prohibits pension for misconduct on service, because that only refers to pensions as of right. The discretionary power then comes into operation and the qualification for pension is dependency. When that qualification is present the power should, in the opinion of the Commission, be exercised.

An argument always made for the man whose misconduct occurred during service is that it was really service conditions which contributed largely to his downfall, and that, while his strict right to pension is gone, he should not be left in want particularly if his service has been good.

*Recommendation of Commission.*

1. That Section 12 (1) be amended so that the prohibition there imposed shall only apply to improper conduct after enlistment; and
2. That the discretion to award pensions should be exercised in case of dependency, even where the misconduct was on service.

**Re Section 12 (2)***Compassionate Pension or Allowance*

"Section 12 (1).—A pension shall not be awarded when the death or disability of the member of the forces was due to improper conduct as herein defined; provided that the Commission may, when the applicant is in a dependent condition, award such pension as it deems fit in the circumstances and provided also that the provisions of this section shall not apply when the death of the member of the forces concerned has occurred on service prior to the coming into force of the Pensions Act."

"Section 12 (2).—Any individual case which, in the opinion of the majority of the members of the Pension Board and the Appeal Board acting jointly, appears to be especially meritorious and for which in said opinion no provision has been made in this Act, because such case did not form part of any class of case, may be made the subject of an investigation and adjudication by way of compassionate pension or allowance irrespective of any schedule to this Act".

Subsection 2 was enacted in 1923. It is believed that the purpose in mind was to permit of consideration of cases of special merit and hardship on joint deliberation by the Federal Appeal Board and the Pensions Board. (See Report of Special Committee of the Senate 1923, p. 6). The Commission is advised that, after a close study of the subsection, the members of both these bodies

consider that under the provision as framed, no cases can be dealt with by them. Following is an extract from an official memorandum forwarded to the Commission by the Chairman of the Federal Appeal Board:—

"The members of the Pension Board and the Appeal Board have met on two occasions for the purpose of considering cases which might be deemed to come properly before them on the terms of the sub-section. They were prepared to give such fair, large and liberal consideration and interpretation as would best insure the attainment of the object of the subsection according to its true intent, meaning and spirit. The marginal note appended to subsection 2 in Chapter 62, 13-14 George V reads: 'Compassionate pension or allowance.' The view was considered that the section might be held to apply to cases where no provision had been made either for or against, and in which cases, in the opinion of the joint board the conditions were such as to warrant a pension being granted because of such exceptional circumstances. Closer reading of the Act forced the members of the Joint Board to the conclusion that the compassionate pension or allowance could be made only in cases where pension had been refused because the death or disability of the member of the forces was due to improper conduct. It was afterwards decided that even under that restricted interpretation of the enactment, no action would be possible by the Joint Board on account of the words used in the enactment 'because such case did not form part of any class of case.' Provision is made in the first part of the Section for cases arising out of improper conduct, consequently they do not form part of the class of case for which no provision has been made in the Pension Act. The words quoted also exclude the interpretation that the discretion vested in the Pension Board is to be exercised by the members of the Pension Board and of the Appeal Board sitting jointly.

"If it were the intention of Parliament that the Joint Board should deal with cases worthy of consideration, of exceptional hardship and for which no provision had been made in the Act, then an independent section of the Act should vest in the Joint Board authority for dealing with such cases.

"If on the other hand, it is the intention of Parliament that only cases arising out of improper conduct are to be considered by the Joint Board, the language of the sub-section should be amended to show to what extent the discretion now vested in the Pensions Board is to be exercised by the Joint Board, and the words of the sub-section 'for which no provision has been made in this Act because such case did not form part of any class of case' might well be struck out.

"Your Committee is therefore of the opinion that the Joint Board cannot consider any cases under the language of Section 12.

"Your Committee does not recommend that any representations be made to Parliament by the Federal Appeal Board or Board of Pension Commissioners for Canada. It does recommend however, that the Chairman of the Federal Appeal Board and the Chairman of the Board of Pension Commissioners for Canada submit this report to the Ralston Commission for the information of the Commission and for such action as it may deem advisable.

"This report will be submitted separately to the Federal Appeal Board and to the Board of Pension Commissioners."

(Sgd.) JOHN THOMPSON,  
C. B. REILLY.

## SESSIONAL PAPER No. 203

In Great Britain provision is made for deserving cases by means of a Royal Warrant of 1884, whereby the Secretary of State with the concurrence of the Treasury Board is given discretion to make payments in exceptional cases. This power is used after what is regarded as a deserving case has been refused by the Pensions Ministry and by the Appeal Tribunal.

The provisions of this Warrant (referred to in the evidence as the "dispensing warrant"—Toronto, 118, 129) are:—

Pensions 73-a.

## "APPENDIX E (1)

"COPY OF DISPENSING WARRANT 27TH OF OCTOBER, 1884

"(Clause 225 of Army Circulars 1884)

"ROYAL WARRANT  
VICTORIA R.

*Issue of Pay, Non-effective Pay and Allowances*

"Whereas it has been represented to us that it is expedient to make further provisions in respect of the issue of Pay, Non-effective pay and allowances of Our Army and its department.

"Our Will and Pleasure is that it shall be competent for Our Secretary of State, with the concurrence of the Lords Commissioners of Our Treasury, to grant, in exceptional cases, Pay, Non-effective Pay and other Emoluments or Allowances, at rates or to persons other than those mentioned or under conditions other than are laid down in any of Our Warrants or Regulations

"Provided Always that a list of such of the grants thus approved as the Lords Commissioners of Our Treasury may direct, and a statement of the grounds on which they have been made, shall be annually laid before Parliament.

"It is Our Further Will and Pleasure that our Warrant of the 17th August, 1881, be cancelled.

"Given at Our Court at Balmoral, this 27th day of October, 1884, in the 48th year of Our Regin.

"By Her Majesty's Command.

HARTINGTON."

Nothing was indicated in the evidence to show what would be regarded as a case to be dealt with under this unusual authority. All that was said was that recommendation would be made to the Treasury that this power be exercised "if it was a deserving case" (Toronto 112) and that the person to be benefited must be in a "needy circumstance" (114).

The Commission has frequently commented on the difficulty in administering an Act of Parliament hemmed in by well known principles of legal interpretation, and at the same time making allowance for special meritorious cases which the country would consider come within the spirit if not the letter of the provision which was intended to be made for ex-service men and their dependents.

*Recommendation of Commission re Section 12 (2)*

That any provision deemed necessary for permitting the grant of a compassionate pension or allowance in an individual case of exceptional merit and hardship be made by way of an entirely independent and substantive section, the constitution of the body empowered to make such grant to be as in Section 12 (2). The maximum amount of such grant to be fixed and the necessary procedure to be laid down.

## Re Section 13

### Limitation of time for Application

"Section 13.—A pension shall not be awarded unless an application therefor has been made within three years, (a) after the date of the death in respect of which pension is claimed; or (b) after the date upon which the applicant has fallen into a dependent condition; or (c) after the date upon which the applicant was retired or discharged from the forces. . . . or (d) after the declaration of peace. Provided that the provision of sub-section (d) as above shall not apply to an applicant claiming dependent's pension who was not resident in Canada at the date of the soldier's death and has not continuously resided therein."

### *Suggestion by Ex-Service Men*

To eliminate this section and permit applications so long as it can be shown that the disability is connected with service or, in the alternative, to extend the time prescribed. (Vancouver, 497; Regina 61; Winnipeg 195.)

The obvious argument is that a man with a disability which he can clearly show as connected with service should not be told "you applied too late." The answer is that medical opinion should be able to specify some period of time within which it can be assumed with reasonable certainty that all disabilities which could have any reasonable likelihood of being connected with service must have shown themselves. Certainty is desirable not only for the Country but for the man. To leave the door open to a claim that a disability is connected with service which does not manifest itself until six, seven or ten years after discharge, is to invite attempts to abuse the Statute in order to provide for a possible case which medical opinion agrees would be most isolated and rare.

In Great Britain there is no limitation of time for application. In the United States it is required that the death or disability should occur within one year after discharge, or that a certificate be obtained from the Director to the effect that the soldier was at the time of discharge suffering from injury likely to result in death or disability, and the time within which such certificate must be obtained is limited to one year after the passing of the Legislation.

It was repeatedly stated on the hearing that if there was an entry on the man's medical documents referring to the injury or disease which later is claimed to be causing a disability, that would be regarded as an application. (Regina 62; Winnipeg 445; Calgary 119.) The adherence to this practice should take care of practically every meritorious case. The limitation period which will apply must generally be the period ending September 1st, 1924, three years after the declaration of peace. (See Section 13 (d) and if the injury or disease has not shown itself in that long period sufficiently at least to cause the applicant to apply to some Unit of the D.S.C.R. for treatment, it hardly seems to be within the bounds of possibility that any manifestation afterwards should reasonably be regarded as having been present continuously from the time of discharge. If there is such a case, the Commission considers that it is one which would fairly come within the spirit of the remedial section passed in 1923, (Chap. 62, Sect. 4), to be dealt with by the Pensions Board and the Appeal Board jointly, or it might even be made the subject of a special item in the estimates.

The practice of treating an entry on the documents as an application is sufficiently important to warrant its inclusion in the Statute.

### *Recommendation of Commission.*

That Section 13 be amended to provide that where there is an entry on the service or medical documents of the ex-service men by, or in respect of, whom pension is being claimed, showing the death, or the existence

## SESSIONAL PAPER No. 203

of an injury or disease which has contributed to the disability or death, in respect of which pension is claimed, such entry shall be considered an application as of the date thereof for pension in respect of such disability or death.

## Re Section 17

### Pensions Suspended on Imprisonment

"Section 17.—When a pensioner has been sentenced to imprisonment for a period of six months or more the payment of his pension shall be discontinued and no pension shall be paid to him for or in respect of the period of his imprisonment; provided, however, that the Commission shall have discretion to pay the pension or part of it to any person who was being or was entitled to be supported by the pensioner at the time of his arrest. Upon the pensioner's release from imprisonment payment of his pension shall be reconsidered as from the date of his release and in accordance with the extent of his disability then shown to exist, or in the case of a pensioner pensioned on account of the death of a member of the forces in accordance with the rates set out in Schedule B of this Act."

### *Suggestion by ex-service men*

That provision be made whereby the pensions Board may pay the whole or part of a prisoner's pension to him when considered to be for his benefit. (Montreal 469; Calgary 88; Toronto 602, 928.)

The type case cited in Montreal (467) appeared to be of unusual hardship. A non-commissioned officer who lost his leg on service was on pension of \$45 a month. It was alleged that he was the subject of a "framed-up" prosecution arising out of a brawl in which he had unfortunately become involved. He was convicted of house-breaking and sentenced to ten years on the evidence of the agent of a bawdy house who had been the cause of the soldier's undoing, and was himself sentenced to seven years in penitentiary. The man, it was stated, was helpless, and had no funds with which to take any proceedings to have his case re-considered, his pension having automatically stopped as soon as sentence was pronounced. There was nothing against his character previously.

The contention was that a pension was a payment as of right and should not be discontinued on account of collateral circumstances having nothing to do with the man's service out of which the right to pension arose. It was claimed that otherwise the country would benefit by a man's misdeeds in a case where the pension which was discontinued was greater than the cost of his keep in prison. The ground on which pension is discontinued is apparently that pension is to compensate for loss of earning power, and if the man by reason of wrongdoing has to be incarcerated and therefore has no earning power, pension is not payable. This reasoning does not always hold true, however, for example, a pensioner who becomes ill from some other disability than that for which he is pensioned loses his earning power, but his pension still goes on.

The theory of pensions was set out in a Memorandum prepared for the purpose of stating the principles on which the Pension Act had been drafted.

This Memorandum concludes:—

"The pension payable to a soldier or sailor or to his legal wife and legitimate children is to be awarded because the soldier or sailor has *earned the payment of a debt* to his wife and children, and this pension will not be reduced or discontinued because these persons are, or have become, self-supporting."

On this basis, pension would be payable whether the soldier were in or out of prison, so long as the disability remained.

It is claimed that to cut off an ex-service man's pension because he commits a crime is to impose on him a punishment additional to that imposed on other members of the community for a like offence. While this is the result, it is only incidental. Although pension may, in one sense, be the payment of a debt, it is a debt arising out of an agreement to indemnify against pecuniary loss. The pensioner who is ill from a disability unconnected with service could, on the strict theory of indemnity, be denied pension during such illness, but because his incapacity is involuntary it is overlooked and pension is paid. The man, however, who has voluntarily and wilfully deprived himself of his earning capacity by committing crime is not in the same position to claim generosity and have his self-imposed incapacity disregarded.

Section 17 gives the Pensions Board discretion to pay the pension to—

“any person who was being or was entitled to be supported by the pensioner at the time of his arrest.”

This provision is not conditional on the person to whom the payment may be made being in need. It is however for the benefit of the dependent and not of the ex-service man himself. In Great Britain, in the case of a married pensioner his pension is stopped, but payment is made automatically to the wife, of one-half the stopped pension, in addition to her regular pension. If the prisoner is unmarried his pension is stopped, and one-third of it may, on application, be paid to a pre-war dependent. Any portion of the stopped pension not so paid to the wife or dependents is entirely forfeited. (Ministry of Pensions Manual, July 1, 1923, Part IX, Section 9401, 9403.) In the United States, if a man is drawing compensation and is sent to jail, his compensation does not stop. It is paid to him while he is incarcerated, unless his disability is shown to have decreased by medical examination or unless it is impossible to examine him, in which latter case compensation is discontinued. (Letter to D.S.C.R. from Asst. Director, U. S. Veterans Bureau, May 3rd, 1923.)

There are circumstances under which it would be to the substantial and genuine benefit of a man who is a prisoner to have some part of the pension made available, and the Commission considers that the Pensions Board should have discretion in these cases.

### *Recommendation of Commission*

That Section 17 be amended to provide that where in the opinion of the Pensions Board it appears that it is of exceptional benefit or advantage to the pensioner, the Board may in its discretion pay the pension or part thereof to or for the pensioner himself.

### **Re Section 23 (2)**

#### *Pension to Child Maintained by Member of Forces*

“Section 23 (2).—No pension shall be paid to or in respect of a child unless such child was acknowledged and maintained by a member of the Forces in respect of whom a pension is claimed at the time of the appearance of the injury or disease which caused the disability for which he is pensioned or which resulted in his death; provided, however, that a legitimate child born subsequent to the appearance of the injury or disease shall be entitled to a pension. Provided also that the Commission may, in its discretion, award a pension to or in respect of any child entitled in the opinion of the Commission to be maintained by the member of the Forces in respect of whom pension is claimed.”

## SESSIONAL PAPER No. 203

*Suggestion by Ex-Service Men re Section 23 (2)*

That pension be payable to a child of a deceased soldier if any part of its maintenance was being provided by the soldier at the time of the appearance of the injury or disease which resulted in the death. (P.E.I.-St. John 80.)

In the type case cited, the child was, at the time her soldier father's illness appeared, living with her uncle. Her father was at most only supplying her with clothing and boots. The Pensions Board discontinued her pension on the ground that she was not being "maintained" by her father at the time of the appearance of the injury or disease. (P.E.I.-St. John 78.) The suggestion made at the Hearing was that children of a soldier whose death is connected with service should be entitled to pension whether they had been maintained by him or not. (P.E.I.-St. John 78-79.) It was pointed out that the latter part of Section 23 (2) gives the Pensions Board discretion to award pension to children "entitled to be maintained" by the soldier. The case cited could have been dealt with under this discretionary clause, or it might have been ruled that the child had been "maintained" by the parent even though not *wholly* maintained by him. The evidence is that in practice it is not required to be shown that the child has been wholly maintained by the father, but that there are—

"many cases in which a pension has been awarded where there has been a very small contribution to the child's maintenance." (St. John 80.)

An examination of the type case shows that the Pensions Board considered that the contributions by the father were only casual and not as part of any regular system of maintenance, and that it was further considered that the case was not one which warranted the exercise of discretionary power to award pension when the child was "entitled to be maintained" by the father.

*Recommendation of Commission*

None—on the assumption that "maintained" is construed in practice to mean "maintained to a substantial extent," and that the discretion is freely exercised in cases where the child was "entitled to be maintained."

**Re Section 23 (4)***Increase of Children's Pension to Orphan rate*

"Section 23 (4).—When a child has been given in adoption or has been removed from the person caring for it, by a competent authority, and placed in a suitable foster home, or is not being maintained by and does not form part of the family cared for by the member of the forces or the person who is pensioned as the widow, divorced wife, or parent of the member of the forces, or by the woman awarded a pension under subsection three of section thirty-three of this Act, the pension for such child may, in accordance with the circumstances, and in the discretion of the Commission, be continued or discontinued or retained for such child for such period as the Commission may determine, or increased up to an amount not exceeding the rate payable for orphan children. Any such award shall be subject to review at any time."

*Suggestion by ex-service men re Section 23 (4)*

That on the re-marriage of the widow, pension to children should be automatically increased to full orphan rates. (Regina 19; Winnipeg 797.)

The contention was that the State had substantially benefited by the re-marriage of the widow in that payment of future pension beyond the one year's bonus was saved, and that the children in the home of a step-father would not be in quite as favourable position as if their soldier father were living. (Winnipeg 798.)

It was stated that the Pensions Board had power under Section 23 (4) to award pension at orphan rates on the re-marriage of the mother and that it had been done in many cases. (Winnipeg 798; Toronto 669.)

If this power is contained in the Section it must be by reason of the provision that, when the child "is not being maintained by" the widow, then the rate may be increased to orphan rates. The widow having re-married a man who is unable to support the children would, it is supposed, be regarded as not "maintaining" them. The Section is none too clear in this respect, but in view of the interpretation which is put on it by the Pensions Board, as indicated in the above reference, it is considered that no amendment is called for.

If provision were made for the automatic increase of the children's pension to orphan rates in all cases of re-marriage of the widow, it would be a direct discrimination against children whose mother saw fit to remain a widow, and it would be an additional attraction for mercenary suitors.

### *Recommendation of Commission*

None.

### **Re Section 23 (5) and 33 (2)**

Pension to dependents of pensioners in receipt of 80% pension or over, who die from other causes within five years after discharge or commencement of pension.

"Section 23 (5).—The children of a pensioner who was pensioned in any of Classes 1 to 5 mentioned in Schedule "A" and who has died, shall be entitled to a pension as if he had died on service, whether his death was attributable to his service or not, provided that the death occurs within five years after the date of the commencement of pension."

"Section 33 (2).—Subject to paragraph one of this Section, the widow of a pensioner who, previous to his death, was pensioned for disability in any of the Classes 1 to 5 mentioned in Schedule "A" shall be entitled to a pension as if he had died on service whether his death was attributable to his service or not, provided that the death occurs within five years after the date of retirement or discharge or the date of commencement of pension."

### *Suggestion by Ex-Service Men*

That the time limit of five years as fixed by Sections 23 (5) and 33 (2) be Removed. (Vancouver 310, 311; Toronto 686.)

This Section in effect authorizes a pension to dependents of an ex-soldier who dies from ailments not connected with military service, provided he was pensioned at 80 per cent or over at the time of death and also provided he dies within five years after discharge or five years after his pension commenced. An amendment to strike out the time limit was embodied in Bill 205 (Sec. 16) introduced in the House of Commons in 1923, but did not become law. The grounds for this unusual feature in pension legislation were apparently: (1) The impossibility of a man with an 80 per cent disability being able to lay up anything for his family and children; (2) The circumstance that the necessary care of the almost totally disabled husband would prevent the wife from earning anything to increase the family income; (3) The helpless position of the wife and children who had acquired a certain sense of security from this regular though restricted pension income, and who were abruptly deprived of it by the death of the father; (4) The probability that the total or nearly total disability would weaken the resistance of the pensioner and thus contribute toward hastening his death, even though the immediate cause was not associated with his service disability; (5) It is also said that the provision had reference to men severely handicapped

## SESSIONAL PAPER No. 203

by a war injury such as the amputations and blind who were particularly liable to accident in civil life and for whom the Section provided a form of insurance for a limited time until they accommodated themselves to their new condition.

These grounds, when summarized, show two general reasons for giving relief to the dependents even though the death was not due to service; (1) because the magnitude of the husband's disability prevented making ordinary financial provision for the future; and (2) because the magnitude of the disability, or the handicap caused by it, may have had some indirect influence in causing death even though definite evidence of this is lacking.

It must not be overlooked that the Returned Soldiers' Insurance Act, under which ex-service men were eligible for insurance no matter what their condition of health, was of great assistance in these cases.

To cover the additional danger of accident to which handicapped men are exposed, it is understood that the Pensions Board award pension to the widow even where the death is not due directly to the service disability and the existence of the disability is merely a contributing factor, unless the man was at the time of the accident engaged in some undertaking which a reasonably prudent man with his disability would not attempt. Thus, a man is blind and is in his home and fire breaks out, and if because of his blindness he is unable to escape in time, pension is awarded even though the war had nothing to do with the fire. On the other hand, if the same man were killed in attempting to cross a crowded thoroughfare without an attendant or without taking the precautions which would be obviously called for in view of his handicap and which might not at all be required of a man who had his sight, the pension would be refused.

Logically this practice is sound and ensures to the dependents a full measure of justice, but there is in the mind of the public generally a certain sympathetic consideration for men heavily handicapped which will not tolerate the idea of the wives or children of these men being in want even though the death of the husband cannot be proved to have had a direct relation to service.

It was evidently this idea which led to the enactment of the Section. In effect it constitutes an insurance policy, covering for a period of five years the death from any cause of heavily disabled men who have families. The Commission has been unable to discover the reason for the imposition of the five year limit. In fact it might be said that the longer the family of the soldier has been solely dependent on pension, the more surely they will require assistance after his death.

The indefinite extension of the period of five years which is suggested should not involve any large financial commitment because it can be fairly anticipated that in practically all cases of 80 per cent disability, except amputations and blind, the eventual cause of death will be the disability for which they are now pensioned, and pension will therefore be payable to the family in the ordinary course. There may be a few cases of accidental death, but these should be almost negligible as men thus pensioned would in most cases be so invalidated as to be confined to their house or bed. There would of course be cases of death of pensioners from epidemic infections, but, in the case of an 80 per cent pensioner it would probably be admitted that his lessened resistance, due to the large service disability, directly contributed to the death and the family would be pensioned in the usual course. The principal group to be benefitted, therefore, are the blind and amputations, the merits of whose claim no one will deny.

To sum up,—the commitment involved in removing the time limit in this Section will, the Commission considers, be confined very largely to the payment of pensions to families of the blind and of 80 per cent amputations, and to the families of the comparatively few men who may die from some other cause than the service ailment from which they are already 80 per cent disabled.

The Section for the first five years has been generous in providing for the payment of the pension automatically no matter what was the financial position

of the family. Whatever the reason for this may have been, the Commission considers that what the public desires is to see that the dependents of these heavily disabled pensioners are provided for in case of need,—not that they should receive a gratuity regardless of financial condition. The Commission considers that this object would be achieved by removing the time limit in these Sections, but limiting the benefits to those who are in a dependent condition.

#### *Recommendation of Commission*

That Sections 23 (5) and 33 (2) be amended by removing the time limit and by providing that the benefits of the section are only to be extended to children or widows who are in a dependent condition.

#### **Re Section 31 (3)**

Payments to ex-soldier who is maintaining parents

“Section 31 (3).—When a member of the Forces, previous to his enlistment or during his service, was maintaining, or was substantially assisting in maintaining, one or both of his parents, an amount not exceeding one hundred and eighty dollars per annum may be paid to him for each of such parents as long as he continues such maintenance.”

#### *Suggestion by ex-service men*

That the fact that the ex-soldier is unable to contribute towards the maintenance of his parents by circumstances beyond his control (such as unemployment) shall not prevent payment by the Pensions Board towards the maintenance of the parents. (Winnipeg 795.)

In the type case cited (795), the soldier (Imperial) was receiving a pension of \$15 per month for loss of use of the right shoulder caused by a gunshot wound. He and his mother lived in a three-roomed shack which was built by the pensioner in his spare time. He had always lived with her and on enlistment assigned half his pay to her. He was given vocational training, and allowances of \$35.00 per month, less \$13.75 per month for pension, were paid to his mother during his training. The report of the person investigating his claim for additional pension on behalf of his mother stated further that—

“Since completing training pensioner has always supported his mother, but for the past two years he has done very little beyond odd jobs. His mother, who is 59 years of age, has as a result had to go out doing work by the day, working on an average of two to three days a week at \$1.50 per day. This week she started work as a sorter in the Clean Towel Supply Co. at \$12 per week, but she says she finds the work too heavy and will have to give it up. At the present time while pensioner is out of work, the money earned by the mother and pensioner's pension of \$15 is all they have to keep up the home.”

The Investigator says of the man himself:—

“Single, lives with mother and always has, supporting her to the best of his ability, giving her all his earnings when he is working, also his pension of \$15 per month.”

The Section is, in terms, not limited to disabled or partially disabled men and as it reads any ex-service man who has been supporting his parents in whole or in part may, so long as he continues such support, draw an amount up to \$180 per year on account of each. This, in the opinion of the Commission, was not the object of the Legislation. The purpose obviously must have been to provide for the parents of the disabled soldier who would, on account of their son's disability, be deprived of the whole or part of his support.

## SESSIONAL PAPER No. 203

The person to be benefited is the parent, not the son, and the effect in practice is or should be that the \$180 is passed on by the son to the parent, with whatever additional assistance he can give. The condition that the son shall "continue such maintenance" cannot be intended to apply when the son is, on account of circumstances beyond his control, unable to supplement out of his earnings the amount paid him for his parents. If he is taken ill and is unable to earn, it would be an obvious hardship if the contribution which was being received for the parents was cut off as well. The Commission considers that confusion would be avoided by paying the parents' allowance to the parent direct and not by way of refund to the son. To be consistent with other provisions for parents, the allowance should only be made if the parents are (or would be if the son did not contribute) in a dependent condition, that is, "without income or earnings sufficient to provide maintenance."

The Section was passed in its present form in 1920. It did not follow the recommendation of the Parliamentary Committee of that year which recommended legislation—

"to provide that a disability pensioner who is maintaining his father or mother or both in addition to his wife shall be entitled to an addition to his pension for each parent not exceeding \$180 per annum when he is totally disabled, and a proportionately less amount when his disability is less than total disability." (Parl. Com. Report 1920, P. 9.)

*Recommendation of Commission re Section 31 (3)*

That Section 31 (3) be amended in the following respects: (a) Limited to pensioners; (b) Limited to cases where the parents are or would be if the son did not contribute, in a dependent condition; (c) Parents' allowance not to be withheld on account of the son being unable, by reason of circumstances beyond his control, to contribute towards his parents' maintenance.

**Re Section 33 (1)**

Refusal of pension to widow in cases where the marriage was after the appearance of the injury or disease resulting in death.

"Section 33 (1).—No pension shall be paid to the widow of a member of the Forces unless she was married to him before the appearance of the injury or disease which resulted in his death . . . ."

*Suggestion by ex-service men*

That the portion of this Section be struck out which prohibits payment of pension to the widow in cases where the marriage took place after the appearance of the disability, or that a broader interpretation be given to the Section, or that an amendment be made permitting the payment where the marriage took place within one year after the appearance of the disability, or permitting payment to the widow in all cases where there are children. (Halifax 349; P.E.I.—St. John 76; St. John 97; Vancouver 139-148; Calgary 100; Regina 19; Toronto 635-648, 763-767; Winnipeg 240-258.)

The important part of the Section is that the marriage must have taken place "before the appearance" of the injury or disease which resulted in his death.

The reasons suggested for this provision are: (1) that it is to prevent the exploitation of the Treasury by the woman who might be willing to marry a disabled soldier on his death-bed for the sake of getting pension; (2) to prevent an attempt by the soldier himself, who knows he is disabled and has an injury

or disease which may cause his death, to benefit his fiancée at the expense of the Country (Toronto 642); (3) that the Country should be under no responsibility to a woman who of her own volition enters into a marriage contract with a soldier in whom injury or disease has appeared and who thus knowingly takes the risk of possible fatal consequences. (Calgary 105, 106; Toronto 766, 767.)

These reasons involve *knowledge* by the parties concerned of the existence of the injury or the disease, and the use of the word "appearance" indicates that the draftsman of the Section had this in mind. The disease might have "existed" without having "appeared." "Appearance" means something which is evident or which manifests itself to the senses of the parties themselves. It is going far beyond the object which Parliament had in view if it is to be said that the parties married after the "appearance" of the injury or disease when neither of them knew nor could reasonably have known of the existence of the disease at that time. (Calgary 102; Toronto 641, 764.)

The following evidence was given to show the distinction which the Pensions Board made between the "existence" and the "appearance" of the disease:—

"WITNESS: We do not go that far, to say clinical signs later show that it must have *existed*, that is not considered; unless it *actually made its appearance* by signs and symptoms to some one, the man himself or some one he consulted."

"Q. You mean that "appeared" does not mean "existed?"

A. "Existed" does not mean "appeared."

"Q. After the disability appeared does not mean after the disability *existed*?"—A. No. it must have made its *appearance*." (Calgary 101, 102.)

"Q. What do you say about that . . . do you say the disability has *appeared* when the T.B. was not known and only *became evident* six months after the marriage?"—A. It has not *appeared* at the time of marriage." (Calgary 101; Toronto 641.)

The following letter to the Chairman of the 1921 Parliamentary Committee sets out and illustrates the practice of the Pensions Board under this Section, and contains an amendment suggested by the Pensions Board to remove obscurity,—

"BPC. 17-7-1, Vol. 4.

MAY 16, 1921.

"HUME CROXYN, ESQ., M.P.,

Chairman, Parliamentary Committee on Pensions,  
House of Commons.

*Section 33 of the Pension Act.*

DEAR SIR,—In accordance with your request to submit a report on the marginally noted section of the Act, the subject has had careful consideration. It is thought that this section is not clear as it might be, and the following examples will show the interpretation at present being placed on it by the Commissioners:—

- (a) A pensioner has lost a leg on service but such disabling condition does not shorten his expectancy. Marriage is contracted after discharge and within a year a sarcoma (which is a malignant tumor) develops on the stump and the man dies. The sarcoma is the direct consequence of the disability which occurred as the result of service. As, however, the actual disease which resulted in death had not manifested itself or been diagnosed at the time of marriage, the Board is of opinion that the dependents are eligible for pension.

## SESSIONAL PAPER No. 203

- (b) Another case is that of a man discharged from the service as fit. He is told that he is fit and believes such to be the case. Within a year tuberculosis appears and obviously was present prior to discharge and prior to his marriage, and yet neither this man nor his wife, being married immediately after discharge, had any reason to know of the presence of so serious a condition. Obviously the marriage was not contracted in order to obtain a pension. On the same grounds as the previous case, the Board considers that the dependents are eligible for pension.
- (c) A more difficult case is that of a man discharged for some slight disability consequent upon bronchitis. He gets married and within a few months a tuberculosis process is superimposed and he dies shortly afterwards. Because he had been awarded pension for bronchitis, which developed into tuberculosis, which latter condition is also pensionable, it is taken as proof that the disease which resulted in death had manifested itself prior to marriage; dependents on this basis are not considered as eligible for pension.

2. It is not thought that the Act should be so amended as to allow pension to widows of ex-members of the forces who have died when at the time of the marriage the member of the forces was being pensioned as a result of the disease which terminated in his death, or, to put it in other words, the purpose of the Act is understood to be to exclude from pension the widow of an ex-member of the forces who marries when medical opinion would have advised otherwise.

3. The Board is of opinion that when a member of the forces is married subsequent to physical impairment attributable to his military service and has died as the direct result of such physical impairment, no pension shall be paid to his widow unless it is fully substantiated—

- (a) that the complication or sequel of the physical impairment was a direct complication or sequel;
- (b) that it was not such as could have been, at the time of his marriage, reasonably anticipated, foreseen or expected to occur; and
- (c) that the marriage was undertaken without any intention whatsoever to obtain unwarranted pension benefits.

4. If your Committee is of opinion that Section 33 (1) of the Pension Act as amended might with advantage be more clearly expressed it is suggested, for your consideration, that this object could be attained by repealing the clause in question and substituting the following therefor:—

No pension shall be paid to the widow of a member of the forces unless she was married to him previous to the time at which the pensionable injury or disease which resulted in his death manifested itself as to be recognizable as such by medical men or prior to the recurrence of a pensionable injury or disease which had been so improved as to remove the resultant disability at the time of marriage; and further unless she was living with him or was maintained by him, or was, in the opinion of the Commission, entitled to be maintained by him at the time of his death and for a reasonable time previously thereto.

Yours truly,

(Sgd.) J. PATON,  
Assistant Secretary."

The following are summaries of the evidence presented as to some of the type cases cited in support of the contention that too strict a construction was being given to the Section by the Pensions Board.

*Case A. (Halifax 349):*

An officer, with three years' service, discharged fit, and appointed to the Permanent Force in December, 1918, after being passed medically fit for that service. He was married in November, 1919, and died May 5th, 1920. In this case it was contended that there could have been no "appearance" of the injury or disease at the time of marriage, because the officer had been passed fit for Permanent Force Service. Pension refused—marriage after appearance of disability.

*Case B. (Regina 20, 21):*

A man who was supposed to be perfectly fit and who married. He applied for insurance, and on the examination heart trouble was discovered. On enquiry the medical examiners considered that the heart trouble could be traced back to the service period as the man had fainted once while in service, although no disability was recorded. This was a case where it was suggested that although the disease had evidently existed during service, yet it had not appeared until after marriage. After the discovery of the heart trouble the man was put on a pension. He died three months after. Pension refused—because the marriage was after the appearance of the disability.

*Case C. (Winnipeg 240-255i):*

An officer, enlisted as a private in October, 1914, obtained commission in Imperial Forces, discharged March 26, 1916, medically unfit, suffering with hæmorrhage. Passed fit and joined C.E.F. January 8, 1917, proceeding to France November 29, 1917. Gassed and admitted to Casualty Clearing Station February 17, 1918, on account of hæmoptysis (spitting blood), invalided to England and admitted to hospital February 25, 1918. Discharged from hospital April 9, 1918, and passed fit for service. In view of the fact that specialists had pronounced him free of the old lung trouble he and his fiancée decided to be married. (Winnipeg 242). Married June 1, 1918. (Winnipeg 255 (f)). Proceeded to France May 31, 1918. Awarded the M.C. for gallantry in the field. Back to England for demobilization March 4, 1919. Admitted to hospital for T.B. May 25, 1919. Discharged in Canada June 10, 1919. Died November 29, 1921. Cause of death hæmoptysis, second lesion upper lobe right lung, not tuberculous. Gassed two or three times during the war. (Winnipeg 255 H). Pension refused as "pension not indicated. Disease resulting in death made its appearance prior to marriage. . . . ." (Winnipeg 255i). Medical Report January 25, 1923: "in my opinion it is obvious that the Medical Board which examined him in May, 1918, just before his marriage, was in error when it stated lungs and heart negative and no findings of T.B." (Winnipeg 255F).

The claim for pension for the widow was put on two grounds:

(1) That the disease which was the immediate cause of death was not the original tuberculosis but was a recurrence which did not take place (and which, therefore, could not be said to have appeared) until after marriage. As to this point, Section 2 (a) of the Pension Act indicates that remote and latent original disease can be separated from the active recurrence. This subsection expressly provides that—

"Appearance of the injury or disease includes the recurrence of an injury or disease which has been so improved as to have removed the resultant disability."

## SESSIONAL PAPER No. 203

There is no question apparently but that in the opinion of the Medical Board in England in May, 1918, the original injury or disease had been improved so as to have removed the resultant disability because this officer was, just previous to his marriage, passed by tuberculosis specialists as being fit for service in France, and rejoined and served accordingly.

(2) The second ground of claim is that by reason of the medical examination in May, 1918, which passed him fit for service and thus sent him back to France, the authorities are estopped from now contending that the injury or disease which resulted in the death had "appeared" before the marriage.

*Case D.* (Winnipeg 255i-256):

Enlistment in June, 1915. Proceeded to France January, 1916, and served over two years. Wounded in right ankle, also had otitis media (running ear). Discharged May 20, 1918, no pension because no disability. Married November 4, 1919. Died in October, 1920, from cerebral hemiplegia (paralysis due to trouble in the brain) due to embolism (blood clot). It was admitted that the death was attributable to service, but pension was refused to the widow because it was contended that the marriage took place after the appearance of the disability. The connection of the death with service was admitted on the ground that the clot in the brain had resulted from the old ear trouble. The specialist who performed the post mortem says:—

"I am of the opinion that the heart condition found at the autopsy must have existed for a year, possibly longer."

There was fair ground for argument that this was a "recurrence" because there had been no pensionable disability at discharge. The same argument as the first contention made in Case C. applied in this case.

*Case E.* (Toronto 635-648):

Soldier discharged August 9, 1918, with pensionable disability, loss of three fingers, married April, 1919. In June, 1919, admitted to hospital for T.B. Discharged July, 1920, as total disability. November, 1920, re-admitted to sanatorium. Died May, 1921. Pension was refused on the ground that the disease resulting in death "appeared" before marriage. The Director of Medical Services said:—

"I do not think it possible that any physician could have overlooked the fact of the man having had tuberculosis at the time he married, and that it would appear to be a reasonable conclusion that, to the *layman* he would appear to have been in anything but ordinary health. I am of the opinion, therefore, that the appearance of the disease in this case should be considered to have been previous to marriage in April, 1919."

Previous to the marriage to this man, the wife had been the widow of another soldier who had been killed in action, and she was in receipt of pension on account of the latter's death which pension was, of course, discontinued on her re-marriage. (Toronto 635, 648.)

Here was a case where the date of the appearance of the disease had to be determined by medical opinion based on the condition of the man when he was admitted to sanatorium in June, 1919 (weight 119 lbs.; height 5' 9½"; T.B., condition fairly general through both lungs). From this condition it was decided, not unreasonably, that the man must have shown distinct signs of ill-health at the time of his marriage two months before, and that the disease had therefore appeared at that time.

In some of these cases the hardship is that the wife did not, and, in view of the medical reports, could not, have anticipated that the injury or disease which was apparently cured would light up later and cause death. In others,

the existence of the disease was not known although subsequent developments indicated that it had been present at the time of marriage. There was in neither class of cases any intention to exploit the Country.

There is another class of meritorious cases, viz., where there has been a bona fide engagement previous to going overseas and the man comes home partially disabled and finds the woman ready to carry out the contract notwithstanding the less attractive outlook. Distressing cases like these were in evidence before the 1922 Parliamentary Committee (Proceedings 119, 120.) A personal instance was given by the ex-soldier himself at Calgary (104)—

"If you will permit me I will cite my own case. I was in Canada nearly four years prior to the outbreak of the war; I had been corresponding with a young lady in Scotland. I left Canada on August 1, 1914, to go home to be married. Before I got home the war broke out and I enlisted on August 30, 1914, realizing that it was my duty to fight rather than get married. I was discharged at the end of 1916, with a 40% disability. I returned to Canada in about six months, but I was unable financially to get married until the end of 1918. Surely my wife is as much entitled to a pension as the widow of a man who married and then went overseas. A man who honestly went overseas before he was married ought to be in the same position as a man who said: 'Well I am going overseas, I will get married before I go so that if anything happens my wife will get the pension.'"

There are, therefore, three classes of cases which have special merit, and in none of them is there any element of mercenary motive:

(1) The case where subsequent developments show that the disease must have existed at the time of the marriage, although its presence was not recognized, or, in other words, it had not "appeared."

(2) The cases where the marriage takes place after the first appearance of the injury or disease, but at a time when the disease has so subsided that there is no reasonable expectation that such injury or disease will be a factor in hastening death. The man subsequently dies of a recurrence.

(3) The cases where there was, before any injury or disease appeared, a bona fide engagement to marry and where the marriage was not in any sense influenced by the prospect of a pension, but to carry out the previous engagement.

As to Class (1), there should be no difficulty if the section is construed so that "appearance" means "evident or that which should be evident to the parties themselves," but if there is the appearance of ill-health and if the parties refrain from making inquiries as to its nature it cannot be said that the disease has not appeared.

The Commission with considerable hesitation suggests an amendment with the object of trying to bring out more clearly the important factor which is: knowledge by the parties of the ailment or knowledge of such symptoms as would have led reasonably prudent people to make inquiries from which they would have learned of the potential seriousness of the ailment. The amendment suggested does away with "appearance" and substitutes "knowledge", express or implied. If with such knowledge the marriage takes place, no pension should be granted if the ailment terminates fatally.

As to Class (2) (recurrences), Section 2(a) in effect allows the parties to disregard an injury or disease which is apparently cured at the time of marriage, and permits pension if death ensues from a subsequent recurrence.

The Commission therefore suggests an amendment perpetuating the spirit of Section 2 (a) and conforming with the amendment above referred to which makes "knowledge" instead of "appearance" the factor which defeats the right to pension.

## SESSIONAL PAPER No. 203

As to Class (3), viz., where the marriage is to carry out a pre-war engagement: While the fidelity shown by the wife in marrying notwithstanding the husband's disability is highly commendable, her position as to pension is distinctly different from that of the woman who marries in ignorance of the existence of any physical impairment. In the former case the wife deliberately takes the risk of the husband's premature death, and it has to be assumed that she is not unprepared for that dreaded possibility. If there are no children it is possible that she may return to her former occupation and may be no worse off financially than before her marriage. Under these circumstances it is difficult to find a sound basis upon which a claim to pension as of right can be established. There are two contingencies, however, in which the Commission thinks this widow merits special consideration: first, where there are children of the marriage, or, secondly, where the widow is in a dependent condition, that is, without earnings or income sufficient for maintenance.

As to the first, although no pension is at present awarded a widow under the above circumstances, pension is nevertheless awarded to the children of the marriage. The State recognizes its liability to them, and as result of the death of the father may provide for them at orphan rates, while the mother receives nothing. She must, therefore, if without means, do one of the two things, either leave the children and seek work outside in order to support herself, or try to eke out an existence for herself and the family on the pension granted to the children. These alternatives involve either the placing of the children in a home if she works, or poverty and under-nourishment if she remains with them. In either case the children suffer, and unjustly so in view of the liability of the State towards them, and its obligations to their deceased father. It is difficult, then, to deny that sufficient pension should be provided to meet the needs of the family, living as a family, and the only way this can be secured—because the present provision for orphan rates will not meet it—is to award pension to the widow, perhaps not as a right due herself, but, even if on no other ground, as the rightful and necessary guardian of her deceased husband's children.

The second contingency under which the woman marrying in pursuance of a pre-enlistment engagement may be entitled to consideration in case her husband dies, is the case where she is in a dependent condition, that is, without earnings or income sufficient for support. There is only one reason which occurs to the Commission for making provision for her when she deliberately married with knowledge of her husband's disability, such reason being that the engagement to marry, made before the disability occurred, constituted a definite relation in honour if not in law, and that the subsequent ratification by marriage sanctioned the bond from the beginning and gave the parties some claim to consideration in respect of a disability suffered after the betrothal. It was argued with some force that the woman honourably betrothed to a man should have no less claim than a woman who, although not married, lives with a man in immoral co-habitation as his wife. The latter may, in the discretion of the Pensions Board, be paid a wife's pension. (Vancouver 141; Pensions Act Sec. 33 (3).)

There is also the consideration, although not a reason, that recognition might well be given to a woman who as a fiancée sees her future husband go overseas and on his return honourably carried out her engagement even though the husband, as the result of service, has become disabled, and her cares and responsibilities are thereby increased. The Commission therefore considers that while no satisfying logical ground appears for granting pension as of right, the circumstances merit recognition at least to the extent of providing for such a woman if her husband dies and she is in a dependent condition.

The problem then is to ascertain the cases in which there have been bona fide engagements previous to the suffering of the disability. Obviously the proof

involved is of so indefinite a character and so difficult to obtain that such an inquiry would be quite impracticable. The only alternative is to provide for marriages within some definite period. It is reasonable to suppose that where there was a pre-enlistment engagement the parties would marry with one year at most after discharge, and, simply with the object of providing for this class, the Commission submits an amendment covering these cases when there are children or when the widow is in need. The Commission realizes that the arbitrary time limit will include, no doubt, a number of cases where there was no pre-war betrothal, and which are therefore not intended to be benefited. There will also assuredly be cases where there was such engagement and where the parties were prevented from marrying within the year from causes beyond their control, but the Commission is strongly of opinion that in the amendment suggested it has gone at least as far as can possibly be justified on any sound ground, and that no further general extension in respect of these cases should be entertained. The Commission's suggestion of limiting the benefits of the "one year" amendment to cases where there are children, or where the widow is in need, is a distinct limitation on the proposals in this respect made at Calgary (104), Regina (19), Winnipeg (240-260), Toronto (636). It is also a modification of a similar provision which was recommended by the Parliamentary Committee in 1922 (see Committee Proceedings, P. XXV and 121), and incorporated in Bills introduced both in 1922 and 1923, but struck out. An estimate of the additional liability involved in an amendment permitting pension to widows married after the appearance of the disability without time limit, and, alternatively, if the period for marriage was limited to one year after the husband's discharge from service, is contained in the following letter:—

"OTTAWA, February 7, 1924.

"H. D. DEWAR, Esq.,  
Secretary, Royal Commission on Pensions, etc.,  
Senate Chambers,  
Ottawa, Ontario.

*Re Section 33 of the Pension Act.*

DEAR SIR:—

I am instructed to refer to your letter of the 2nd instant in connection with the subject marginally noted and to report as follows:—

The Board of Pension Commissioners furnished the Parliamentary Committees of 1921 and 1922 with a rough estimate of increased annual charge on account of pension for widows who were married after the appearance of the disability.

The estimate in 1922 was \$123,000.00 per annum, with an additional increase each year of \$26,000.00.

The estimated additional charge if widows are pensioned who married within one year of the husband's discharge from service would be \$85,000 with an annual increase added to this of \$15,000.

There are no statistics available on these points and the estimates are very rough ones. They are based on the marriage rate of disability pensioners and the subsequent death rate of same.

The estimate is probably a conservative one in view of the fact that a number of badly disabled men, such as those in sanatoria, married almost immediately after discharge and died within a few months of their marriage.

Yours very truly,

(Sgd.) W. E. DEXTER,  
*for Secretary.*"

## SESSIONAL PAPER No. 203

The Commission has no information on which to base an estimate as to the liability involved if the further limitation to cases where there were children, or where the widow was in a dependent condition, were imposed.

In England no pension is paid to a widow unless the marriage took place before discharge or before the end of the war. (Winnipeg 234, 235.) In the United States, pension is paid to the widow if the marriage takes place within ten years after discharge, and the fact of the existence or appearance or knowledge of the injury or disease before the marriage seems to have nothing to do with the widow's right to pension. (See United States "War Risk Insurance Act" Section 300, 301.)

*Recommendation of Commission. Section 33 (1)*

That Section 33 be amended to the following effect: (a) By striking out the words "unless she was married to him before the appearance of the injury or disease which resulted in his death" in sub-section (1), and substituting therefor some phrase in the following sense, viz., "if her marriage to him took place at a time when symptoms existed from which a reasonably prudent man making reasonable enquiries would have known of the existence and the potential seriousness of the injury or disease which ultimately resulted in death, provided, however, that it shall be conclusively presumed that such symptoms did not exist if at time of the marriage an injury or disease previously known was so improved as to have removed any resultant pensionable disability (b) By inserting a provision that the foregoing prohibition shall not apply when the marriage took place prior to a date one year after the discharge of the member of the forces if (a) there are children of the marriage of pensionable age, or (b) the widow is in a dependent condition.

**Re Sections 33 (2) and 23 (5)**

Pension to dependents of pensioners in receipt of 80% pension or over who died from other causes within five years after discharge or commencement of pension

"Section 33 (2).—Subject to paragraph one of this Section, the widow of a pensioner who, previous to his death, was pensioned for disability in any of the Classes 1 to 5 mentioned in Schedule A shall be entitled to a pension as if he had died on service whether his death was attributable to his service or not, provided that the death occurs within five years after the date of retirement or discharge or the date of commencement of pension."

"Section 23 (5).—The children of a pensioner who was pensioned in any of Classes 1 to 5 mentioned in Schedule A and who has died, shall be entitled to a pension as if he had died on service whether his death was attributable to his service or not, provided that the death occurs within five years after the date of retirement or discharge or the date of the commencement of pension."

*Suggestion by Ex-Service Men*

That the time limit of five years as fixed by sections 33 (2) and 23 (5) be removed.

*Recommendation of Commission*

See discussion and recommendation under Section 23 (5).

**Re Section 33 (2)**

Widows of Disability Pensioners—Death not connected with service—Continuing pension

*Suggestion by Ex-Service Men*

That in case of the death of an ex-service man, receiving less than 80 per cent pension for a disability, whose death is not connected with service,

the pension be continued to the widow if she is in need. (P.E. I.—St. 71, 74).

As an example a case was cited where the soldier who had four years' service was on pension for bronchitis and injured knee, caused by gunshot wound. He became ill, went to hospital, was operated on for obstruction of the bowel and died of heart failure. Dependents were refused pension on the ground that the obstruction was not connected with service. (P.E.I.—St. John 72). The claim was that the dependents, if in need, should at least get pension to the amount which the soldier had been receiving, on the ground that on account of his disability he was not able to lay up anything for his family, (P.E.I.—St. John 74-5) and that the greater his disability the less his power to accumulate any surplus (75).

The rule is that if the service disability was a material factor in hastening death, although there were other contributing causes, the dependents get full pension, but if the death was not connected with a service disability the dependents get nothing. There is no such thing as proportionate pensions on account of death. (P.E.I.—St. John 73).

The hardship in these cases arises particularly where the family have become accustomed to rely on the disability pension as an aid to support and where the death occurs from other causes and the pension abruptly ceases.

This situation has been met, in cases where the pension is 80 per cent or over, by the provisions of Sections 33 (2) and 23 (5).

An amendment for the benefit of the children of the man who was getting less than 80 per cent disability pension was recommended by the 1922 Parliamentary Committee and added as sub-section (6) to Section 23. Under this amendment the Pensions Board is authorized to pay for the benefit of the child a bonus equal to the child's pension for one year. The ground for this recommendation by the Committee was that:—

"the pension which his children were in receipt of ceases on his death, and as a result the children are suddenly deprived of the benefits accruing to them during the lifetime of the father. The Committee considers that this works a hardship on the children." (1922 Par. Com. Report, P. XXV).

But the reasoning applies with equal or greater force to the widow. She suddenly loses the benefit of the amount which was being paid on her account as the wife of the pensioner and she also loses the benefit of the husband's partial earnings in which she would naturally share.

The suggestion is that the pension be continued to the dependents in case of need, but, basically, pensions are not granted because of the need of the applicant but because service was a material factor in the death or disability.

The Commission considers that to continue disability pensions after death, from a cause not connected with service, is such a radical departure from well-recognized pension principles that it is not warranted in recommending the further extension of the exceptions already created by Sections 23 (5), 23 (6) and 33 (2).

#### *Recommendation of Commission re Section 33 (2)*

None.

#### **Re Sections 34 (1), 34 (3), 34 (4), 34 (5), 34 (7)**

Pensions to widowed mothers prospectively dependent—Deductions for earnings and income

"Section 34 (1). A parent or any person in the place of a parent with respect of a member of the forces who has died shall be entitled to a pension when such member of the forces left no child, widow, or divorced wife who is

## SESSIONAL PAPER No. 203

entitled to a pension.... and when such parent or person is in a dependent condition and was, at the time of the death of such member of the forces, wholly or to a substantial extent, maintained by him."

"Section 34 (3).—When a parent or person in the place of a parent who was not wholly or to a substantial extent maintained by the member of the forces at the time of his death, subsequently falls into a dependent condition, such parent or person may be awarded a pension provided he or she is incapacitated by mental or physical infirmity from earning a livelihood, and provided also that in the opinion of the Commission such member of the forces would have wholly or to a substantial extent maintained such parent or person had he not died."

"Section 34 (4).—In cases in which a member of the forces has died leaving more than one parent or person in the place of a parent who were wholly or to a substantial extent maintained by him, the pension for one such parent or person may be increased by an additional amount not exceeding one hundred and eighty dollars per annum and the total pension apportioned between such parents or between the parent and such other person."

"Section 34 (5).—The pension to any parent or person in the place of a parent shall be subject to review from time to time and shall be continued, increased, decreased or discontinued in accordance with the amount deemed necessary by the Commission to provide a maintenance for such parent or person but in no case shall such pension exceed the amount of pension prescribed for parents in Schedule B of this Act."

"Section 34 (7).—The pension to a widowed mother shall not be reduced on account of her earnings from personal employment or on account of her having free lodgings or so long as she resides in Canada on account of her having an income from other sources which does not exceed two hundred and forty dollars per annum....."

"Section 2 (p).—Widowed mother may, in the discretion of the Commission, include a mother deserted by her husband when the circumstances of the case are, in the opinion of the Commission, such as would entitle her to a pension."

### *Suggestion by Ex-Service Men*

That the provision for widowed mothers who become dependent after the soldier's death be the same as for widowed mothers who are actually dependent at the time of death. (Winnipeg 265, 438, 792).

The effect of the Statute as administered is that there are two classes of widowed mothers, viz.:

(1) The dependent widowed mother who was being wholly or partially maintained by the son at the time of his death. This widow has no deduction made from her pension on account of any earning she may have from her personal employment and she may also have income up to \$240 per year without any reduction being made on that account.

(2) There is also the dependent widowed mother who, although not being maintained by the son at the time of his death, can show to the satisfaction of the Pensions Board that she would have been maintained by him if he had lived. Both the earnings and income of this widow are taken into account before pension is allowed.

To discuss the involved provisions of the subsections above quoted would only becloud the point. The distinction is there. (Winnipeg 438.) This was recognized when the Pension Act was passed, because in an annotation issued by the Pensions Board in 1919, it is clearly pointed out that—

"This proviso" (meaning the proviso prohibiting deduction of earnings from pension) "does not apply to cases of prospective dependency."

The contention is that if the Pensions Board comes to the conclusion that the needy mother would have been maintained by the son if he had lived, then the case is exactly the same as where the mother was at the time of death actually being maintained by the son. The fact of her actually having been maintained is only evidence that he would have continued to maintain her, and the claim is that the real inquiry in all these cases should be: Would the son have supported the mother if he had lived? If so, the Country should reasonably make up to her what she has lost.

If the son at the time of his death was actually supporting the mother, that is definite evidence that he would have continued to do so, and compensation is readily made. When the son was not actually supporting the mother at the time of death the Pensions Board naturally want some evidence that he would have done so, but having become satisfied on that point it is difficult to see why the Act should prescribe that the mother's earnings should be taken off the pension in the latter case and not in the former.

The object of the legislation must be to ensure that widowed mothers of soldiers, who have lost their lives on service, should not be forced to earn their living, and that if they voluntarily take up some remunerative occupation, the Country should not profit by reducing the pension. The present provision for those mothers who have only become dependent since the son's death plainly puts on them the burden of earning so long as they have the physical and mental strength. Section 34 (3) only permits pension when the parent is—

“incapacitated by mental or physical infirmity from earning a livelihood.”

This might quite properly apply to fathers but not, in the opinion of the Commission, in the case of mothers.

In Great Britain the distinction was made between parents dependent on the son at the time of his enlistment and parents who—

“*at any time . . . . .* are wholly or partly incapable of self-support from age or infirmity.” (Royal Warrant, Article 21 (1) (a) (b), and there also, if the soldier was unmarried and had no other dependents, a small pension was paid to the parent “*irrespective of pre-war dependence, age, infirmity or pecuniary need.*” (Royal Warrant, Article 21 (c).)

These distinctions have since been done away with in Great Britain and the only provision now, for parents, is in case of need, and in that case earnings and income are deducted. (Winnipeg 210; Toronto 122.) This change in the regulation did not however cut off pension which had already been awarded on the ground that the parent had been dependent on the son at the time of enlistment. This pension was at a fixed rate regardless of need, earnings, or income.

In the United States no distinction is made between widowed mothers actually dependent at the time of the son's death and those who become dependent afterward. The provision is—Article III, Sec. 301 (g), War Risk Insurance Act:

“Such compensation shall be payable whether her widowhood arises before or after the death of the person and whenever her condition is such that if the person were living the widowed mother would have been dependent upon him for support.”

On the question of deducting income, a case was cited (Regina 35) where the widow had sold a property to be paid for in equal monthly instalments which included both principal and interest. Apparently this whole sum was treated as income and was deducted in fixing the pension. It was the contention that in cases like this a calculation should be made as to how much was capital and how much income, and only the latter deducted. The Commission considers

## SESSIONAL PAPER No. 203

there is no necessity for any further regulation to cover a case of this kind. The Statute, as it stands, expressly specifies "income," not "capital," and a calculation would readily show the amount of "income" which is to be deducted.

*Recommendation of Commission re Sections 34 (1), 34 (3), 34 (4), 34 (5), 34 (7)*

That provision be made so that widowed mothers who fall into a dependent condition after the soldier's death and who, in the opinion of the Pensions Board, would have been wholly or to a substantial extent maintained by the soldier had he lived, will be in the same position regarding pension as the widowed mother under Sections 34 (1) and 34 (7), so that personal earnings will not be deducted from pension.

**Re Section 34 (1), 34 (3)**

Widowed Mother's Pension to be granted as of right

(The Sections are quoted ante.)

*Suggestion by ex-service men*

That provision be made so that a widowed mother will be pensioned irrespective of her having been previously maintained by the son and regardless of whether her earnings or income are sufficient for her maintenance; in other words, that she be pensioned as of right and not on the basis of need. (Winnipeg 265, 540; Toronto 649).

The claim was that the pension for the widowed mother should be awarded on the same grounds as pension to the wife. The rule in Canada (Sec. 34 (3) ), Great Britain (R.W. Sec. 21), and the United States (War Risk Insurance Act, Sec. 301, as amended) is that, to be entitled to pension, dependency must be shown. There was one exception (in Great Britain) whereby if the soldier was unmarried and under 26 years of age, and no pension was paid to any other dependent, a small pension of 5s per week was paid to the parents irrespective of dependence, infirmity or pecuniary need. This provision has now been done away with. It was proposed in Winnipeg that the above suggestion might be made to apply to the case of the unmarried son at least. (Winnipeg 265.)

The subject of pensions to mothers was discussed in the House of Commons on May 1, 1922 (Hansard, 1305, et seq.), and a resolution was passed approving the principle: (a) that pension to widowed mothers should not be reduced on account of her income; and (b) that pension should be granted as of right, and not simply when in need. The Parliamentary Committee of 1922 (See 1922 Parl. Com. Report, page XVII) did not accept the principle of the resolution but considered that Section 34 of the Pension Act as it stood was equitable and should not be altered. The latter part of the resolution (as to pensions to widowed mothers being granted as of right) was also the subject of a proposal made by representatives of ex-service men before the Commission at Winnipeg. (Winnipeg 265, 538).

The Commission has carefully studied the observations made in the debate on the above resolution and the instances cited, and is of the opinion that the hardship for which a remedy was sought would be largely cured by doing away with the practice of deducting earnings from the pension of a widowed mother who did not happen to be dependent at the time of her son's death. This the Commission has already recommended. The Commission considers that the underlying principle of pensions to widowed mother is different from that of pensions to wives and children and this is borne out by both the British and United States provisions. The basis of a widowed mother's pension might, as before stated, be put on the ground that she should not be forced to go out into the world to earn her living, but if, without having to engage in personal employment, she is in receipt of an income from investment or from contributions made,

by any other children, the Commission considers that it is not improper to assume that the son, if he had lived, would have taken into consideration the amount of revenue which his mother was receiving from these other sources, and would have felt justified in regulating his contribution accordingly. The aim of the Country is to make up, in reasonable measure, to the mother what the deceased son would have contributed. The general principle that dependency and need should be shown in these cases has been adopted and practised on what the Commission considers to be sound grounds. The fact that no deduction is made from the pension for earnings and that income up to \$240 per year is also not taken into consideration in awarding the pension, shows substantial recognition of the merits of this class.

*Recommendation of Commission re Sections 34 (1), 34 (3).*

None.

## Re Section 38

*Time for payment of pensions for deaths*

"Pensions awarded with respect to the death of a member of the forces shall be paid from the day following the day of the death except,—(a) in the case in which a pension is awarded to a parent who was not wholly or to a substantial extent maintained by the member of the forces at the time of his death, in which case the pension shall be paid from a day to be fixed in each case by the Commission; and, (b) in the case of a posthumous child of a member of the forces, in which case the pension for such child shall be paid from the date of its "birth."

*Suggestion by Ex-Servicé Men.*

That on the death of a pensioner one month's pension be paid to the dependents automatically in order to tide over the period during which the question of whether the death was connected with service is being investigated. (Fort William, Winnipeg 772.)

Many pensioners may die from ailments other than those for which they are pensioned, and consequently because a pension has been paid in the pensioner's lifetime it does not at all follow that pension is payable to his dependents after his death. Some investigation has to be made, therefore, in every case of death to determine whether the death itself is connected with service. Often the cause of death as stated in the death certificate is sufficient evidence to convince Head Office that it is connected with the service disability for which pension was being paid. In other cases reports have to be obtained to show connection of the death with service, and the date of marriage, family particulars and other facts, have to be procured to ensure that the death is pensionable under the many and intricate provisions of the Act.

In the type case cited (Ft. William, Winnipeg, 773) the man had been on pension for tuberculosis and died from obstruction of the bowel on April 3, 1922 (Winnipeg, 773). The first payment of pension was made on June 7, 1922 (Winnipeg, 776). This delay would not have been unreasonable if any extended investigation had been required but as the man was receiving 100 per cent pension his death was pensionable whether it was connected with service or not (Winnipeg, 777, Pensions Act, Sect. 33 (2)). Although death took place on April 3, word was not received from Ottawa until May 20, that the Pensions Board had ruled that as the deceased was a Class One pensioner his widow, if otherwise eligible, was entitled to pension. (Winnipeg 776.) Investigation was made on May 3, and request was made on June 9, that the widow fill out an application. (Ft. William, Winnipeg 776.) This delay is obviously rather extended and financial circumstances were apparently distressing (773, 775).

## SESSIONAL PAPER No. 203

The evidence as to the general practice in dealing with death claims is:

"of course an odd case (of delay) does come up. We give these death claims preference over everything else and frequently telegraph."

In Great Britain provision is made for a special payment to tide over financial distress while the question of the right to pension for the death is being considered. This payment is made on the recommendation of the Local Committee and care is taken to ensure that the widow understands that the payment is not to be regarded in any sense as indicating that pension will eventually be paid. The Committee before recommending the payment, however, must satisfy themselves that the prospect of pensions being awarded is reasonably clear. (Local Committee's Hand-book, p. 39, para. 101). Such a provision would obviate serious hardship in some cases especially where a large disability pension has been suddenly cut off by the death.

*Recommendation of Commission re Section 38.*

That provision be made that, in case of the death of a pensioner and pending consideration of a claim for Pension on account of such death, payment of an amount equal to Pension for death shall be made to the dependent in weekly instalments for a period not exceeding one month, such amount to be refunded if Pension is eventually awarded.

**Re Section 41**

Allowance to widowed mothers and widows on re-marriage

"Section 41.—Upon the marriage or re-marriage of the mother, widow, or divorced wife of a deceased member of the forces who is receiving a pension, or of a woman awarded a pension under sub-section three of section thirty-three of this Act, her pension shall cease, and she shall then be entitled to be paid one year's pension as a final payment."

*Suggestion by Ex-Service Men*

That if the widow who has re-married is deserted or again becomes a widow within five years after the re-marriage she should be restored to pension. (Toronto 666, 679, 1136; Regina 15).

Under Section 41, one year's pension is paid as a bonus to a woman who has been receiving pension as the mother, widow, etc., of the ex-soldier. Cases have arisen—not so infrequently as might have been supposed—where it turns out that the re-marriage has been induced to some extent by the attraction of the one year's bonus and later the woman has been deserted. There are also cases, much more deserving, where the second husband has died within a short time after re-marriage. In either case the woman's right to pension has been terminated by the bonus payment. The Pensions Board have authority to, and, in certain cases where the step-father was unable to earn a livelihood, did increase the children's pension to orphan rates (Toronto 669). The right of the children to pension is not affected by the re-marriage.

The reasoning is that the woman has, by her re-marriage, ceased to be the dependent of the soldier, and that consequently the obligation of the State to her, as such dependent, has terminated. The opposing consideration is that the undertaking of the State with the soldier was to make up reasonably to his dependents the pecuniary assistance he would have supplied had he lived. The State also makes the liberal presumption that had the soldier not lost his life on service he would have supplied this assistance to the dependents during their life time.

There are, the Commission is convinced, cases of genuine hardship to soldiers' female dependents who have re-married and thus lost their pension,

and whose husbands have died in a comparatively short time, leaving them with no means of support. It is strongly urged that the fact that they have tried unsuccessfully to restore themselves to normal life by re-marrying does not discharge the State from its revived responsibility.

In Great Britain there is a different practice as between officers and other ranks. In the case of the female dependent of an officer no bonus is paid on her re-marriage, but if she becomes a widow, pension is revived. In the case of other ranks, one year's pension is paid as a gratuity on re-marriage, but on the death of the second husband pension is not restored.

The attention of the Commission has been called to the Act respecting the Royal Northwest Mounted Police (R.S.C. 1906, C. 91, S. 56 (2)). This provides that on the re-marriage of a widow the pension is simply suspended, and on the death of the second husband it is restored, but under this Act no bonus is paid on the re-marriage.

The Commission considers that there is sound reason for an extension of the present provision of the Pensions Act. As the Act stands the prudent woman is faced with a serious question when an opportunity for re-marriage presents itself. If she marries she gets a home and a cash bonus, but she forfeits forever an assured maintenance for the rest of her life. The Commission considers that it is in the interest of the Country as well as of the dependent woman that her misgivings be removed and the re-marriage encouraged by some financial assurance for the future. The advantage from the general social standpoint is clear and, in addition the children of the soldier, who are to a certain extent wards of the State, have the benefit of paternal care. The financial liability involved is not absolute, but purely contingent on the death of the husband within five years. Against this can be placed the probability of a greater number of marriages, and the consequent probable relief of the State from subsequent pension payments. There would also be a reduction in the amount paid for children's pensions which, if the mother remained a widow, might have to be increased to orphan rates. All the foregoing applies to cases where the re-marriage is terminated by the husband's death.

But it is further urged that provision be made for cases of desertion by the second husband. The Commission considers that while there are cases of hardship under these circumstances, it would only open the door to fraud to make any such general provision. The woman who re-marries should take some responsibility, and the fact that in case of desertion pension will not be revived may have a good influence in preventing hasty and ill-considered marriages. If the claim for provision on desertion were admitted it would follow that there would be an even stronger claim in case the second husband was prevented by illness from supporting his wife. For the State to provide for these cases would, in effect, completely disregard the new marriage relation, and in the result, benefit a man who has no claim, viz., the second husband, both by making him careless of his responsibility for the maintenance of his family and by providing indirectly some part of his own support.

The Commission does not consider that, on the death of the second husband, the woman should be entitled as of right to be reinstated to pension. The husband may have left her a substantial estate. The provision should only cover cases of need and be for so long as such need continues. The limitation in the suggestion to cases of death within five years of the re-marriage is, it is assumed, based on the idea that, if the second husband has lived for that period, it can be presumed that he has made some provision for his wife. This ensures that the necessity for the husband and wife providing for the future is not done away with by undue reliance on the bounty of the State. It also adds the qualification of thrift to those which the woman may reasonably require of the man before accepting him.

## SESSIONAL PAPER No. 203

*Recommendation of Commission re Section 41*

That provision be made that in case of the death of the husband of a woman married or re-married, as contemplated by Section 41, and if such death takes place within five years after such marriage or re-marriage, pension be restored if and so long as the widow is in a dependent condition, and the final payment previously made under Section 41 be refunded in instalments as fixed by the Pensions Board, such instalments not to exceed 50 per cent of the amount of the restored pension being paid from time to time.

**Re Lump Sum Final Cash Payments**

(Footnote to Schedule "A" re Scale of Pensions for Disabilities)

**GENERAL CONSIDERATIONS AS TO LUMP SUM FINAL CASH PAYMENTS**

Provision for the above was introduced in 1920. Pensions rated at less than 15% were discussed by the Parliamentary Committees of 1919 and 1920. (1919, Par. Com. Proceedings, p. 201), (1920, Par. Com. Proceedings, pp. 11, 48, 67). The monthly pension for a single man was \$3.00 for 5% to 9% disability and \$6.00 for 10 to 14%. These small periodical payments caused vexation and discontent and it was decided to give the option of accepting a lump sum in final payment. It is immaterial now to discuss whether ex-service men or the Pensions Board took the initiative in suggesting this remedy. Some statements in the evidence were that it was urged by ex-service men contrary to the opinion of the authorities (St. John, 17, 123, 125; Calgary 28), but it seems quite clear from the proceedings of the Parliamentary Committee of 1919 (p. 201) and 1920 (p. 11 and 48) that the idea of the optional final payment was considered practicable and desirable both by members of the Committee and by the Pensions Board as well. Obviously there can be no room for criticising anyone who advocated this system which was accepted by everyone concerned in an attempt to promote satisfaction. The benefit was not all one sided however. There was the clear advantage to the Country in eliminating the expense of the examinations, and of the mass of accounting detail incident to the periodical payments. There was also the prospect in many cases of a substantial saving in the amount paid.

The lump sum payment was not computed on any actuarial basis. (Vancouver 95; Calgary 28). In one case disability which turned out to be permanent, and for which a pension of \$7.50 per month (including wife's allowances) was being received, was settled by a final payment of \$120.00. It is evident that for a man of 30 years of age permanently disabled to the extent of 10% and thus entitled to a life annuity of \$90.00 (subject to possible reduction if the pension bonus were discontinued) the maximum of \$600.00 would be a very inadequate present worth.

The Parliamentary Committee recommended final payment only in cases up to 14% pension (Par. Com. Report 1920, p. 11) and this was adopted by Parliament with the rider that if the disability increased, the pensioner might be reinstated on the monthly payment basis, but these payments were to be applied first to refunding the sum already paid. (Footnote to Schedule "A" to Pensions Act, Regina 127-8; St. John 127.)

The scale of lump sum payments was as follows:—

Where disability is permanent and pension is between 10 and 14%, the final payment is \$600.00.

Where disability is permanent and Pension is between 5 and 9%, the final payment is \$300.00.

Where disability may disappear and pension is between 10 and 14%, the maximum final payment is \$600.00.

Where disability may disappear and pension is between 5 and 9%, the *maximum* final payment is \$300.00.

Pursuant to this provision notice was sent by the Pensions Board to ex-service men with disabilities under 15% advising them of their right to the lump sum payment if desired. (Toronto 484, 488-9; Vancouver 102; Winnipeg 117, 118, 121). Some suggestion was made that the Pensions Board officials "induced" or "advised" the acceptance of the lump sum payment, but this is, the Commission finds, wholly unsupported by the evidence. (St. John 17; Vancouver 50, 98, 102; Winnipeg 120; Toronto 485.)

Where the disability was not permanent the Unit Pension Medical Examiners simply had to do the best they could in estimating the gradually vanishing degree of disability and its probable duration. (Regina 46; Toronto 484; Calgary 31). Assistance was obtained from instructions sent out by Head Office as a guide. (Pensions Board Routine Order 216; Vancouver 50; Toronto 490; Calgary 32, 33). Report was then made to Head Office and the man was advised direct as to the percentage of his permanent or non-permanent disability, and was told that he had the right to accept a stated amount as a final payment. (Vancouver 50, 102; Toronto 484; Winnipeg 117.)

As was said on the hearing:—

"It was a case of the country and the men gambling on the length of the disability, and in some cases it had turned out badly for the men, and in others I suppose the country has paid more than if he had been put on a non-permanent basis and paid while the disability lasted." (Calgary 27.)

The trend of opinion at most of the hearings where the subject was discussed was that experience had shown that the soundness of the policy of lump sum payments was at least questionable, and at St. John (p. 123) and Vancouver (p. 97), the opinion was frankly expressed that the adoption of this policy had been a mistake. (St. John p. 16, 122; Vancouver pp. 50, 98, 102; Calgary p. 27; Regina pp. 44, 48; Winnipeg p. 117; Toronto p. 482, 912.)

#### *Suggestion by ex-service men*

Re-open all cases of lump sum payments

It was urged repeatedly that all these cases be re-opened and that if any disability exist, the pension be revived on a periodical payment basis making deduction for the cash payment received. (See references above).

This proposal the Commission does not recommend. For the authorities to take the initiative and do this would be in the great majority of cases to simply raise false hopes. Men would be led to expect some change to their advantage; whereas, in many instances the net result would be that they would simply be put back on their former \$4.00 or \$6.00 per month allowance, and for months and perhaps years, this small amount would be eaten up in refunding the cash payment already received.

#### *Recommendation of Commission re lump sum payments*

None

#### *Suggestion by ex-service men*

Do away with lump sum payments for the future

That for the future the system of lump sum final payments be done away with. (St. John 123; Vancouver 97; Calgary 27.)

While this was suggested at the hearings mentioned above, the representative of ex-service men at Winnipeg declined to express an opinion on the suggestion

## SESSIONAL PAPER No. 203

without further consideration, (121), and the fact that this drastic step was not more generally urged indicates that the principle of lump sum payments is not regarded by any means as wholly bad. There is nothing to show that the provision has not been beneficial to the ex-service man in the general run of cases. The complaint has usually arisen in cases where it was not the scheme which was at fault, but rather some lack of elasticity in the regulations which affected individual cases. The option of getting a substantial lump sum at once, rather than in trifling instalments, must in many cases be distinctly beneficial and the Commission considers that it should not be withdrawn without more substantial reasons than have been given. The real remedy is to improve the legislation so as to take care of cases of obvious hardship.

*Recommendation of Commission re lump sum payments*

That the system of lump sum final payments be continued with the modifications recommended hereafter.

*Suggestion by ex-service men*

Re-open final payments where error in estimating degree or duration of disability

That all cases of final payment be re-opened where the pensioner can show that in arriving at the amount offered him as final payment, the duration or the degree of the disability was underestimated. (Winnipeg 119; Toronto 482).

For example: Supposing a man had synovitis (water on the knee) and the disability was rated at 10%. The Local Pension Medical Examiner estimated, as best he could, how long the trouble would continue. Supposing he reported to Head Office that it was gradually improving and that his opinion was that in two years it would have disappeared. Head Office, taking the estimate of 10% and of two years as a basis, fixed the amount of the lump sum final payment and advised the man of his option to accept a specified lump sum in lieu of periodical pension. The form of the letter sent to the Pensioner was that he had the "right to accept" a final payment in lieu of the pension then being paid and that it "appeared" that his disability was 10% "non-permanent" (no number of years mentioned). The notice then specified the periodical instalments to which he would be entitled if he continued on pension, and concluded by stating the amount of final payment which was "offered" to him. There was no compulsion about it, some men chose to continue the periodical payments, while of course the larger number took the lump sum.

No doubt, experience has shown that some men would have received more money in the aggregate if they had continued on periodical pension, trifling though it was, but that possibility was the chief thing to be weighed when deciding which plan to accept. The uncertainty was the very reason for making the scheme optional instead of imperative. It is equally probable that, in many cases, the settlement amounted to more than the pension which would have been paid. The benefit of the scheme was in its finality. It ended the bother of periodical re-examinations, and it did away with administration expenses which were necessarily out of all proportion to the amount involved; but more than this, it provided a fund of usable amount, it put a premium on quick recovery and gave the man an incentive to overcome his slight disability. It was in line with the principle of pensions legislation in other countries where disabilities under 20% are considered more suitable for final settlement than for perpetual pension.

In Great Britain, men with these minor disabilities are, with rare exception not entitled to pension, and have no alternative but to accept a gratuity payable in weekly instalments, for a period not exceeding three years. In Canada the scheme was not compulsory and only those whose disability does not increase

are precluded by the final payment. This very fact that the only exception to the scheme is where the disability increases, shows that it was understood to be final in all other cases.

No suggestion has been made that there was any lack of good faith in connection with the estimate of the degree or duration of the disability on which the offer of final payment was made.

Having regard to the circumstances leading up to the formulation of the scheme, and the intention of all those concerned in promoting it, the Commission cannot recommend the adoption of a suggestion which would in effect entirely disregard the basic features of the arrangement.

*Recommendation by the Commission*

None.

*Suggestion by ex-service men*

Gradual deductions to refund lump sum payments

That where, after final payment, the pension is derived, the absorption of the final payment should not be made at a rate greater than 50% of the monthly pension. (St. John 122; Regina 48; Calgary 30).

Following is an instance of the practice under the reinstatement provision of Schedule "A"—Supposing a married man had a 10% pension, (\$90 a year) and he accepted a final payment of \$300. At the end of one year he claims that his disability has increased. He is examined and it is found that his disability is 20%. This carries a pension of \$180 per year. This increase in disability only dates, however, from the time of examination. He would be dealt with as if he had been on the 10% pension for the past one year. That would put to his credit \$90. Against this would be charged the \$300 lump sum payment leaving him in debt \$210. He would then be credited each month with \$15 per month (his new 20% pension) but nothing would be paid him for 14 months until the \$210 had been refunded. The contention is that the man is incapacitated 10% more than the lump sum payment represented, and this his pension should not all be confiscated to repay the lump sum which might have been intended to cover three years. The whole of the first 10% should, of course, be withheld as that has already been covered by the Final Payment, but a portion of the remainder, if substantial, should, the Commission considers, be paid the pensioner.

*Recommendation of Commission re Lump Sum Payments.*

That provision be made so that in cases of final payment where pension is subsequently revived, the deductions from the current pension to refund the final payment previously made shall not exceed 50 per cent of the increase of pension, unless such increase is less than 10 per cent.

*Suggestion by Ex-Service Men.*

Pension not to be discontinued where pensioner has declined to commute, relying on statement that pension is permanent

That pension should not be discontinued where the Pensions Board has notified the pensioner of his option to accept final payment and has designated the disability as "permanent," and the pensioner has elected to continue the pension. (Winnipeg 118).

A case in Winnipeg, (117) illustrated the point. The man was advised (August 31, 1920) on the printed form used by the Pensions Board (p. 117, 121), that he had the right to accept the final payment in lieu of his pension, and that after examination of his medical documents it appeared that his disability was

## SESSIONAL PAPER No. 203

ten per cent "permanent." The amount of final payment offered was \$600. Presumably the man realized that a permanent 10 per cent pension (\$6 per month if single and \$7.50 if married) was better than a present payment of \$600. He elected to continue the pension. About 2½ years afterwards, although the District Office pointed out that the man was shown "permanent" according to their records, Head Office ordered re-examination and pension was discontinued. (118).

The form used in this case was the regular printed form of the Pensions Board and in cases which were not permanent the word "non" was inserted in the space before the word "permanent" (121). It was quite possible, therefore, that pensioners might be misled by this bald statement that the disability was "permanent." It was stated in evidence that a considerable number of cases were marked permanent and treated as permanent under the Regulation for final payment (Toronto 489). As a matter of pension regulation there is no such thing as a "permanent" pension in the sense that the Pensions Board is precluded from requiring a re-examination (Winnipeg 116-117); but the man cannot know this. He naturally assumes that the word "permanent" means that the instalments will be payable for life. In ordinary business affairs the party who represented that instalment payments were to be permanent and thus led the other to forego his right to a lump sum payment would be estopped from afterwards discontinuing those payments without reviving the lump sum offer. The Commission considers that the same right should be given to pensioners in these circumstances. Deductions should be made as provided in the footnote to Schedule "A" of the Pension Act.

*Recommendation of Commission re Lump Sum Payments.*

That provision be made that in cases where the Pensions Board has notified the pensioner of his option to accept a final payment in lieu of pension and has designated the disability as "permanent" and the pensioner has elected to continue the pension, the latter shall not be discontinued without paying to the pensioner the amount of the final payment previously offered less the amount which has been paid since September 1, 1920, or since the date when an award of 14 per cent or under was made, whichever is later.

**Re Pension Ratings Schedule.**

Pension rates to be based on pre-war occupation

*Suggestion by Ex-Service Men.*

That pension should be rated on the basis of loss of earning power of the applicant measured by his pre-war occupation. (Montreal 345.)

The argument was that the foundations of our present system of Pensions were laid when all soldiers were regulars, "who had no other profession than the profession of arms. They had no specialized instruction which had prepared them to exercise a determined profession when they were discharged and returned to civil life. It was thus quite natural that the laws and regulations applicable to these professional armies considered a diminution of the working faculties without paying attention at all to the previous aptitudes of the wounded soldier to a determined profession or trade. They were making a gross estimation of his value as a non-specialized individual."

Further reason offered for the change was that the present Workmen's Compensation Acts award compensation on the basis of previous earnings, and also that in England provision has been made—although to a limited degree—for alternative pensions based upon pre-war earnings as compared with the present ability of the man to make a living. This principle was stated to have

been recently pressed by Senator Benazett in the French Senate, where it was being discussed with considerable interest.

When the Canadian Pensions Legislation was being framed, the introduction of this principle was discussed and was rejected for reasons which appear in the following extract from a memorandum prepared by those who had in charge the drafting of the Act:—

"Upon what principles are scales of pensions made? How is the amount of pension to be decided? When the principle of gratitude formed the basis of the pension law, no set scale of pensions was ever made. A smaller or larger amount was given in accordance with the supposed value of the service rendered. When it came to be believed, however, that the pension was the payment of a debt upon contract, the amount of that debt had to be considered and scales of pension were made. One School argued that the debt should be calculated upon the basis of loss of earning power in the civilian capacity from which the soldier was drawn, in other words compensation for damage suffered. Another school considered that a soldier was a soldier. If through injury in the country's service he had become unfit to continue in his military capacity, he immediately became entitled to support, his compensation being gone. A third school took a more or less intermediate point of view. This school considered the soldier both from the point of view of his soldierhood, and from the point of view of his civil life, and it asked the questions—What qualifications are necessary for soldier-hood? In civil life what class of persons has these qualifications? What is the soldier's rank at discharge? The answer was as follows:—The soldier brings to the service of his country the healthy mind and body of a man in the class of the untrained labourer. If he shows ability, he will gain a higher rank. If he shows none, he will remain a private. If he has not gained promotion he will return, upon discharge, to civil life with nothing more than the healthy body and mind he brought with him into the service. If he is not incapacitated he is as valuable to himself as he was previous to enlistment. If, on the contrary, he is incapacitated, he has lost a certain degree of earning power, which is to be calculated only from the point of view of his earning power in the market for untrained labour. The earning power of a man in the class of the untrained labourer will be sufficient to provide decent comfort for himself and his family, that is to say a little more than enough for subsistence. The point of view of this third class has been adopted almost universally, and the scales of pension in the various countries have been calculated more or less in accordance with it."

This principle has remained fixed, and all Canadian (Great War) pensions are based on it.

*Recommendation by Commission.*

None.

## **Re children's Pensions**

*Suggestion by Ex-Service Men*

Pooling children's pensions

That where there is more than one child receiving pension, the pensions of such children be pooled and divided between, or for, the children in such proportions as the Pensions Board may consider just. (Regina p. 14; Toronto p. 666).

## SESSIONAL PAPER No. 203

As the Schedule stands, \$15.00 per month is definitely allocated for the first child, \$12.00 per month for the second, and \$10.00 per month for each of the others. One child may be in a home where little is required for its maintenance, another may be in an institution and another under the care of some organization. It does not seem desirable to put a premium on caring for the first or second child and thus indirectly discriminating against the third. No rule of thumb can quite meet the situation and the proposal seems advantageous.

*Recommendation of Commission re Schedules "A" and "B."*

That Schedules "A" and "B" be amended to provide that when there is more than one child the sum of the amounts payable to or for them for pension may, in the discretion of the Pensions Board, be distributed between such children equally or in such proportion as may be considered equitable under the circumstances.

**Re Pension Bonus***Schedule "A" and "B"**Suggestion by Ex-Service Men*

That the present bonus paid in addition to the Prescribed Pension be made permanent.

As is perhaps not generally understood Schedules "A" and "B" of the Pension Act fixed certain specified sums for Pension and later, on account of economic conditions, an increase was granted by way of a maximum bonus of 50 per cent. This bonus has been continued from time to time for limited periods. At every centre where the Commission met it was strongly advocated that this bonus be made permanent, or in other words that the minimum total disability pension be \$900.00 instead of \$600.00, and the minimum pension for widows be \$720.00 instead of \$480.00. The plea in support of this was everywhere substantially the same, viz., the high cost of living and the necessity of security of income for the future if the pensioner was not to be shut out from investing in a home, obtaining insurance, and various other arrangements looking to permanent provision for his family.

The theory upon which the Pension bonus was introduced, namely, that it was intended to cover a period of high prices which might be, and was hoped would be, transient, precludes the Commission from expressing an opinion as to whether or not it should be made permanent. Such a recommendation would pre-suppose that the cost of living would not decline below the present level, something of course impossible to foresee, but this does not remove the necessity of stabilization, nor meet the argument that without some degree of security for the future, commitments cannot now be entered into for the protection of the pensioner in his old age, nor for the protection of his family.

*Recommendation of Commission*

The Commission recommends that provision be made so that the present Pension Bonus will not be cancelled or reduced for at least five years.

**Re Table of Disabilities***Suggestion by Ex-Service Men*

That the table of disabilities be revised

Schedule "A" of the Pension Act fixes the amount of money payable for any given percentage of disability. Any injury or disease which can be accurately described, such as amputations, total blindness, &c., &c., have been rated as creating a certain fixed percentage of disability and this rating is contained

in what is known as the Table of Disabilities which is authorized under Section 25 (2) of the Pension Act.

In 1916, before the passing of the present Pension Act, a Table of Disabilities (Toronto 1189) was prepared by a committee consisting of a number of prominent medical men of Toronto and Montreal with an official who had been identified with Pension legislation from the beginning. It was revised in December 1917 by the Medical advisers of the Pensions Board and was submitted for criticism to various consultants and others familiar with Pension matters and in July 1918 the Table of Disabilities practically as now in use was adopted after consideration of the suggestions thus obtained. Since then there have been some minor changes but in most points the Table remains the same (Calgary 66, 1920 Parl. Com. Report p. 437). This Table of Disabilities obviously must deal principally with injuries which can be accurately described and the effect of which will be identical in every case. This is not possible as to disease. The use of this Table as an exact guide for the rating of a definite percentage of disability as resulting from a given injury must be confined to a condition which can be so clearly pictured as to be visualized from the description, by a man who never saw the patient. The vast majority of such cases is amputations, and, as might have been expected, for this reason, requests for the revision of the Table of Disabilities came almost entirely from the Amputation Association representatives. The question which is immediately asked is how does the Canadian Table compare with that of Great Britain for instance. The answer is shown in the comparative Table of Disabilities which was put in evidence in Toronto (p. 1189A) and it can fairly be stated that, while the differences are on the whole not great, leg and foot amputations particularly are rated lower in Canada than in Great Britain. It is further pointed out that in Canada the disability from a leg amputation is more serious than in Great Britain because of the increased difficulty in walking through snow or on icy sidewalks which is encountered for several months of the year in most parts of Canada.

Another factor urged as not being fairly provided for is the additional wear and tear of clothing caused by artificial appliances. Nowhere has the Commission been able to find any satisfying evidence that this feature was considered in preparing the Table of Disabilities. In Great Britain a special allowance for clothing is made on application in individual cases where actual loss on that account is shown. A letter from the Pensions Board dated February 13, 1920, to the Secretary, Amputation Club of Vancouver, was put in evidence, one paragraph of which was

"In the matter of wearing apparel there appears to be very fair cause for further consideration in all cases where pensioners must of necessity be burdened with an orthopedic appliance. It is felt that this matter should be dealt with along lines similar to the supply of surgical boots and appliances. Your communication is, therefore, being passed to the Department of Soldiers' Civil Re-establishment for consideration."

A letter from a Toronto surgeon was put in at Winnipeg (706) which cast some doubt on the probability of there being any serious loss on account of wear of clothing, but, without referring in detail to the evidence, the Commission is convinced that the claim has merits and is one of the matters which calls for reconsideration of the Table of Disabilities. Reference is made to the evidence at Calgary 170; Winnipeg 674, 705; Toronto 1155.

A further claim is made that the Table of Disabilities as at present framed is too rigid. The opinion of the Commission is that it contains too many fine distinctions and that, in amputations, too great importance has been attached to length, in inches, of the stump. This, in turn, has tended to magnify the importance of measurements in the eyes of the officials administering the Act. As an example, in case of amputations below the knee, the minimum is 40%,

## SESSIONAL PAPER No. 203

but it is stated that up to 60% may be allotted. As a matter of fact very few such amputations receive more than 40% and in one Unit (Toronto) only three below-knee amputations receiving as high as 50% could be produced. (1,199). While, as has been said, length in inches of a stump may be used as a guide, the only common-sense rule upon which to base pension is not the length of the stump but its value to the pensioner. Take a thigh amputation: of what possible use is an inch or two of bone if the stump is too short for leverage and the man is therefore unable to wear an artificial leg? But the possession of that bit of bone cuts off 5% from the pension (Toronto 664). In the opinion of the Commission the ability or inability to wear an artificial limb should, rather than the length of stump, determine the assessment in a leg case. In amputations below the knee, if the stump is too short to exert sufficient leverage to swing the leg, or, if the scar tissue or other conditions which give rise to pain and discomfort are sufficient to prevent the use of an artificial leg, pension should be paid as for amputations through the knee. If, on account of shortness of stump above the knee, or the presence of some condition which precludes pressure, the stump is useless, pension should be granted as if the amputation had been performed at the hip.

The same criticism applies to forearm and arm amputations. Your Commission is convinced that in amputations above the elbow no use can be made of the stump except to hold an object between the stump and the chest wall. No satisfactory artificial upper arm has as yet been produced and, with few exceptions, such arms are never worn by arm amputations, except, as the men describe it, for dress purposes. In forearm amputations, length of stump sufficient for fitting and leverage is essential and of far greater importance than whether amputation is just "below the elbow," which entitles to 70% assessment, or "one and a half inches or less below the insertion of the biceps," which is rated at 65%. To attempt to differentiate in percentage between amputations and one and a half inches or less below the insertion of the biceps, and amputation through the elbow joint is an unnecessary refinement. The Table could safely jump the middle third to the elbow and thereby arrive at a standard which men suffering arm amputations could readily appreciate and understand. The English rule allows plenty of latitude and still is clearly defined. It provides: Amputation of leg below knee with stump exceeding 4 inches, 50%; amputation below left elbow with stump exceeding 5 inches, 50%. Anything above is regarded as an amputation through the knee or elbow.

Another reason advanced for revision of the Disability Table is that frequently, under the present practice, only 80% or 90% is awarded for more than one amputation (referred to as multiple disabilities) where the total of such disabilities, estimated separately, is over 100%. The method by which a rating of less than 100% for these cases is arrived at may be theoretically correct, but has given rise to considerable complaint. Take the case of a man with two legs off, one at the knee and the other below the knee. The former entitles him to 60% pension, the latter, 40%, a total of 100%. The Disability Table provides for "Loss of two extremities, up to 100%" but this maximum is seldom allowed. The pensioner is told: amputation of one leg at the knee entitles you to 60%, therefore, you are now only 40% fit. Amputation below the knee entitles you to 40%, but as you are already only 40%, we will only allow 40% of the remaining 40% which is 16%, and 16% added to 60% is 76%—say 80%. There are only 150 such cases in Canada, some of whom, it is true, may still have a slight earning power in the general labour market, but despite this and the mathematical method by which the final award is arrived at, your Commission feels that where the total of multiple disabilities is 100% or greater, 100% should always be awarded. The Canadian Table also provides only 85% for loss of a hand and foot. The English Table makes no distinction and permits no departure from the rule that loss of two extremities gives 100% certain.

Strong representations were made to the Commission that since the Disability Table had so largely to do with amputations, one member of the tribunal making the revision should be an amputation case having experience in wearing an artificial limb, and that opportunity should be given to the Amputations Association to make representations respecting the subject matter of the revision.

Representations were also made on behalf of the Blind that the helplessness allowance specified in the Table of Disabilities at \$300.00 be increased to \$400.00. The reason advanced for this is that a dependable guide cannot be procured for less. This matter will be further discussed in connection with other requests from the blind, but the Commission considers that the representations made constitute strong ground for favorable consideration in connection with any revision of the Disability Table.

#### *Recommendation of Commission*

The Commission is of the opinion that, while no radical change in the present Table of Disabilities is either indicated nor desirable, the necessary steps should be taken to examine and revise the Table of Disabilities in the light of the experience of the past six or seven years, with special reference to the matters hereinbefore discussed as well as any other matters which may appear to call for remedy.

### **Tuberculosis**

#### *Suggestion by ex-service men*

That pensions granted in tuberculosis cases be stabilized at 100% for an extended period.

The subject of Tuberculosis among ex-service men will be discussed fully elsewhere, but the above request made by representatives of the Tubercular Veteran's Association at practically every sitting of the Commission is dealt with here as any favorable action would probably be considered as involving an amendment to the Pension Act.

Rightly or wrongly, every representative of the Tuberculosis Veterans' Association is convinced that if adequate pension were granted and fixed for a period of at least two years, the patient being placed upon his own resources and no further responsibility accepted by the Department, except examination at sufficiently frequent intervals to insure proper advice and treatment, a considerable amount of money would be saved and the pensioners placed in a much more favorable position.

It has been contended and much emphasis has been placed on this, that security for the future and peace of mind of the pensioner can only be brought about by the latter knowing for a long period in advance just how much money he can count upon receiving. Instead of being isolated he could return to his family, where the risk of infection is so slight as not to seriously enter into consideration, and he would have the opportunity of training and moulding his children, together with the companionship of his wife. He could much better plan his financial future. It would be unnecessary to live in a city, where living expenses are high and the risk of inter-current infection great. He might purchase or rent a small place in the country where he could undertake some form of light employment which would permit him to work or rest as his strength dictated, a condition impossible to secure if he were forced to enter into any competitive occupation. On discharge from Sanitarium, if the disease is clinically active, pension is invariably awarded at 100% for six months and no reduction of more than 20% is made at any one time thereafter. Even this 20% reduction is not imposed in the great majority of cases. The Pensions Board has drawn, at the request of the Commission, 100 files in which a pension

## SESSIONAL PAPER No. 203

of 100% was awarded on discharge, and in which the pension being paid after a lapse of two years was calculated. It is found that the average pension to a man who was a total disability on discharge, is still, two years later, 90.26% which may be regarded as showing an average of about 95% for the whole two years. The Commission has had the opportunity of visiting seven sanatoria, meeting the patients and discussing and observing various phases of the work among the Tuberculous at first hand. The Commission has further had the benefit of discussion with Sanatoria Superintendents and T.B. Specialists and besides this has heard the evidence of two of the outstanding authorities on Tuberculosis in Canada.

In connection with this Suggestion it has been shown to the satisfaction of the Commission that, if adequate pension were assured for a sufficiently long period in advance, many cases now in sanatorium could, without risk to themselves nor danger to their families, return to their homes.

The Commission has endeavored to get information on the point as to whether applications for re-admission to Sanatorium are increased as a result of pension being reduced. There is nothing sufficiently definite on which to base a reliable conclusion. The Commission does point out, however, that it can be reasonably expected that the maintaining pension at 100% will at least remove any possible financial inducement to re-admission. The Commission also feels that the therapeutic effect of freedom from worry and dread of a cut in pension must show itself in less re-admissions. As the maintenance of a patient, in a Sanatorium, with pay and allowances, costs at least twice the amount of 100% pension, every Sanatorium patient who (having once received the requisite training as to the nature and care of his ailment) is enabled to leave or remain out of the institution means a distinct saving to the Country. If the patient is not cured at the end of a two year period, then he is probably a chronic for life and will require a permanent total disability pension.

#### *Recommendation of Commission*

The Commission recommends that such provision be made that on discharge of from Sanatorium of pensionable T.B. cases showing the presence of Tubercle Bacillus in the Sputum, or, if this cannot be demonstrated, in cases proved by X-Ray examination, if moderately advanced and clinically active during the period of observation, pension shall be awarded at 100% for a period of at least two years. (Reservation at end of Report.)

#### **Re Jurisdiction of Federal Appeal Board**

1923, C. 62, S. 11 (1) )

"Section 11 (1) . . . . an appeal shall lie in respect of any refusal of pension by the Board of Pension Commissioners on the grounds that the disability resulting from injury or disease or the aggravation thereof or that the injury or disease or the aggravation thereof resulting in death was not attributable to or was not incurred during military service".

The Commission made certain recommendations on this subject in its Report No. 2. These recommendations have in part been adopted in the amendment above quoted.

The question as to what cases should be heard by the Federal Appeal Tribunal was reported on by a Select Committee of the Senate. As appears, the question discussed was whether there should be appeals on both "entitlement," (right to pension) and "rating" (amount of pension) or whether the appeals should be confined to "entitlement" alone. The recommendation of the Committee favoured the latter course,—

"The Committee recommended that this Board shall have jurisdiction in cases of entitlement only. The question of entitlement is the

larger question and is dealt with at considerable length in the report of the Royal Commission. There is the further question of the dissatisfaction in ratings of pensions after entitlement is admitted. The evidence laid before the Committee would seem to indicate that the question of rating is normally, if not wholly, a question of medical testimony. It is thought that if the Board of Appeal were to engage in discussing questions of rating it would seriously interfere with the work of the Board in determining questions of entitlement. Your Committee, therefore, think that it will be well to leave the matter of rating as it now is and confine the appeals to be brought before the Board of Appeal to the question of entitlement only".

Entitlement includes not only the question as to the connection of the disability with service but also the question as to whether the applicant is within the class of persons for whom the Act provides.

The Section before quoted is much narrower than the recommendation of the Committee. The Section only permits appeals on one element of entitlement, viz., the connection of the disability with service.

The jurisdiction of the Federal Appeal Board thus limited, excludes not only all review in respect of assessment but it also prevents appeals such as those of widows, widowed mothers and parents refused under the provisions of Section 34 (1) and (3), children under Section 24 (1) and (2), and the soldier himself under Sections 12 and 13.

This is referred to in view of the possibility that, in specifying the cases to be dealt with by the Federal Appeal Board, it was assumed that decision as to attributability included all questions of entitlement, and to ensure that it is not overlooked that there are many grounds on which pension may be refused, even though the disability or death was connected with service. As the Act stands now, if a pension is refused on any of these other grounds there is no appeal.

## PART TWO

### SOLDIER SETTLERS

Carefully prepared and well digested statements on this subject were presented to the Commission, particularly in the West. Except as to the matter of revaluation, these statements had to do with specific suggestions for improvement of conditions in matters of detail and these are the things to which the Commission has confined its attention. It was not considered that they called for any general inquiry as to the success or failure of the salient features of the scheme or of its administration. The Commission has had to approach the suggestions made with practically no first-hand knowledge of conditions, and the conclusions reached necessarily represent a wholly detached view of the situation derived primarily from the evidence and the discussions to which the Commission has listened. The Commission has, however, considered that its main function on this subject was to bring together and discuss the evidence produced so that there might be on record for future consideration a resume of the case made by the representatives of the soldier settlers.

Soldier Settlement was introduced as a means of effecting increased settlement on the land by a system of state aid confined to ex-members of the Canadian, Imperial, and Allied Forces. Canadian soldiers in this way were given another means of re-establishment. It differed, however, from all other re-establishment measures, in that it was not instituted as a means of compensating ex-soldiers for disabilities resulting from war service, nor of granting them aid in accordance with the extent of such disabilities, as is done in the matter of pensions, treatment and vocational training. It is based, rather, on the ability of the ex-soldier to make good as a land holder.

The Soldier Settler has been given financial and other assistance, such as has been accorded no other settler on the land. Capital is provided by the Government at a low rate of interest, and no charge is made for the appraisal of the land, legal costs or other expenses. Once established, every help is given him through District Offices, Field Supervisors, etc.

The present condition of soldier settlers must of course be considered in the light of the general agricultural conditions from the time of re-establishment to date. It is authoritatively stated that during the past three years there have been more abandonments by civilians than soldier settlers and that seventy-five per cent of the soldier settlers have, by patience, diligence and hard work, been overcoming the handicaps of the general agricultural depression. Of the other twenty-five per cent the larger portion have been handicapped by personal or family illness, or by poor land, or crop failures, and in most cases personal factors and failings have contributed to the lack of progress.

When further considerations or concessions are considered, it should be not because of those twenty-five per cent who have more or less failed to overcome the conditions common to all, but in the light of the fact that seventy-five out of every hundred holders have made substantial progress. They are the settlers who truly represent the situation and who merit every reasonable consideration.

#### *Suggestion by Ex-Service Men*

##### *Appeal or Adjustment Boards*

The establishment of local or appeal boards with power of final decision for adjustment purposes. (Vancouver 409, 411, 429, 445, 449, 463; Calgary 273; Winnipeg 493).

While the necessity was stressed of providing some means through which settlers' grievances as regards the Settlement Board's decisions could be remedied, there was considerable divergence in the methods suggested but they all involved the intervention of an independent tribunal or Board.

Some proposals went so far as to suggest that the decision of such a Board on the matters within its scope should be binding on the Soldier Settlement Board. In Vancouver (409) and in Calgary (273) the tribunal suggested was called an Appeal Board. In Winnipeg it was suggested, apparently as an alternative proposal, that the settler have a Soldiers' Friend (519). In Vancouver and Winnipeg the suggestion was made that in the selection of the personnel of the Soldier Settlement Board the desirability of having some one entirely familiar with Western conditions had not been fully recognized. (Vancouver 129; Winnipeg 517).

The sum of the discussion at these different places was that the soldier settler desired some intermediary so as not to feel that he was entirely in the hands of the officials, but the scope of this intermediary's intervention was to be principally on the question as to whether, under a given set of circumstances, the settler should go into temporary or permanent salvage, that is, whether he should be allowed to suspend payments and keep on operating the farm in the hope of ultimate recovery, or should be finally and definitely closed out. (Vancouver 445; Winnipeg 493).

It was admitted that there was no wide unrest (Vancouver 448) but that there was a feeling, among the soldier settlers, of need for improvement in present conditions, and the Appeal or Adjustment Board was proposed as the remedy. (Vancouver 449). In British Columbia it was claimed that the present unfavourable conditions arose, to some extent at least, out of a too vigorous collection campaign in 1920. (Vancouver 462, 463).

The Commission does not feel called upon to go into the merits of this campaign. The situation was that about 1,900 settlers had been taken on up to the autumn of 1920, and the necessity for impressing these settlers with the fact that they were undertaking definite contract obligations was apparently in the mind of the Settlement Board. The Commission does not consider, however, that the instructions issued at that time indicate any overstepping of the true functions of the Settlement Board, neither does the Commission find any evidence that the action taken at that time is the cause of conditions calling for remedy now.

It was frankly stated that there was no criticism of present-day methods but that the Adjustment or Appeal Board was sought with the fear in mind that there might be a possible recurrence of the 1920 attitude. (Vancouver 462, 463; Calgary 259).

It was contended that conditions in British Columbia were essentially different from those in other provinces and were not clearly appreciated in administering the Act. (Vancouver 408, 411, 420, 452, 463).

An enumeration of these special local conditions as extracted from the evidence includes the following:—

(1) The special adaptability which was claimed for British Columbia in respect to small fruit farming and other operations requiring a much more limited area than that ordinarily dealt with under the Soldier Settlement Act. (Vancouver 385, 436).

(Note: A somewhat detailed investigation was made by a British Columbia official of the Settlement Board and by a Department official from Ottawa, whose findings were concurred in by a British Columbia man who was apparently regarded on all sides as an authority, and the report showed, the Commission thinks, that generally speaking the Settlement Board had a thorough appreciation of the possibilities in British Columbia and of the conditions necessary to their successful exploitation (Vancouver 408);

## SESSIONAL PAPER No. 203

(2) The heavy floods in the Fraser Valley and the bad weather conditions in the interior during 1920 (Vancouver 408);

(3) Extremely bad market conditions in 1921 (Vancouver 408);

(4) The fact that 1922 brought the longest drought in the history of British Columbia (Vancouver 408);

(5) The fact that partially handicapped men from other provinces were attracted in large numbers to British Columbia on account of its climate, thus imposing an extra load on the machinery in looking after applicants for loans under the Soldier Settlement Act (Vancouver 458);

(6) The delay in establishing the British Columbia Offices and the consequent abnormal rush and possibly less thorough investigation of applicants in 1920 (Vancouver 407).

The Commission was impressed with this unusual combination of conditions in British Columbia and considers that these conditions may call for the exercise of the discretion of the Settlement Board along lines which may be at variance with, or at least a departure from, the policy practiced elsewhere. Undoubtedly special conditions call for special consideration, but that does not necessarily support a proposal for the intervention between the Settlement Board and the soldier settler of an entire stranger in the person of an Adjustment or Appeal Board.

The relations between the soldier settler and the Settlement Board are essentially contractual and in this they differ in a very marked degree from the matters which are the subject of pensions administration. To justify the radical course of imposing on either party to the contract, the view of an outside tribunal on the question as to whether the express terms of the arrangement are to be lived up to, would require strong evidence that there is injustice which is irremediable under present procedure. Such evidence is entirely wanting.

In the first place there exist methods of checking the Settlement Board's activities. Under the Soldier Settlement Act, the Board is only the agent of the Crown. In cases calling for relief from what are considered to be drastic rulings, direct application may be made to the Minister of Immigration and Colonization. Special cases may also be dealt with on Inquiries authorized by the Settlement Board under Section 55 of the Act.

In the second place there is no evidence of undue severity. The question which it was suggested should be decided by an Adjustment or Appeal tribunal was whether the settler should go into temporary or permanent salvage. The impression might be that the Soldier Settlement Board exercised the functions of a mercenary collection agency. The evidence at Winnipeg was that ninety-nine per cent of the cases which went into salvage did so voluntarily. (Winnipeg 486.) This does not mean that the voluntary action was not at times induced by the attitude of the Board in requiring payments, but the evidence showed that the Settlement Board had only received payment of all instalments due from about one-third of the settlers (Vancouver 436; Winnipeg 486), and further that another third had only made partial payments on their instalments and any amount no matter how small, was considered as a partial payment. The remaining third had made no payment whatever. This forbearance was in addition to the exemption from interest which had been granted as a result of the recommendation of the 1922 Parliamentary Committee (1922 Parliamentary Committee Proceedings, p. XXXV).

The attitude of the representatives of the Settlement Board who appeared before the Commission was all which the Commission feels could have been asked of men who had a responsibility both to the settler and to the State, and there was no indication of any intention to do otherwise than encourage the settler in every possible way to continue his endeavour towards successful and permanent settlement.

The Commission approves the principle of giving the settler the benefit of the services of a Soldiers' Friend. (Winnipeg 519.) This does not disregard the contractual basis of the parties, but the settler is assured of an opportunity of referring his difficulties and his rights to an interested and sympathetic adviser and advocate.

*Recommendation of Commission.*

As to Appeal or Adjustment Boards—None. The Commission recommends, however, that such arrangements be made that Official Soldier Advisers appointed by the Department of Soldiers' Civil Re-Establishment be qualified and authorized to deal with and for soldier settlers where so requested.

*Suggestion by Ex-Service Men.*

*Collateral Security*

That greater latitude be given to the settler in dealing with such of his private property as has not been purchased for him by the Soldier Settlement Board. (Calgary 269; Winnipeg 475, 496; Halifax 343.)

Section 32 of the Soldier Settlement Act empowers the Board to require, "if the Board considers the security otherwise insufficient," that the settler who obtains advances shall furnish security on any property owned or held by him. Section 34 (4) also authorizes the Board to require the execution of a mortgage securing any charge imposed by the Act or agreed on between the Board and the settler. Section 34 also prohibits any alienation by the settler of property which is charged in favour of the Board so long as any amount remains due to the Board. Section 18 specifically charges the settler's own land and the increase of his stock as security for loans made for stock and equipment.

There are thus two cases in which the settler's own personal property may be charged: (a) The increase of stock is automatically charged by Section 18; and (b) Other personal property may be charged by specific mortgage when required by the Settlement Board as additional security.

The argument is that the settler in thus tying up his property is hampered in trading and in obtaining local credit. (Calgary 269; Winnipeg 475, 496; Halifax 343.)

The facts are that the policy of taking additional security is gradually being abandoned. In Calgary the evidence was that in only two cases, out of the last hundred loans made, was additional security taken. (Calgary 255.) In Winnipeg, out of 2,820 loans, additional security by way of chattel mortgage was only taken in 273 cases, i.e., about 9 per cent. The evidence is that the settler is given permission, under any reasonable circumstances, to dispose of personal property if it does not endanger the security. (Halifax 344; Calgary 274; Winnipeg 480.) The proposal was made at Calgary (274, 293) and at Winnipeg (479, 480) that it be definitely understood that a settler should be entitled to deal with \$500 worth of personal property free from the security of the Board. It was recognized in presenting the proposal that such a rule could not be laid down unconditionally, and it was proposed that in order to be entitled to this privilege the settler should show that he had lived for a reasonable time on his farm and complied with the regulations, and that the giving up of the right to this \$500 worth of stock would not jeopardize the security of the Board. (Calgary 273, 294; Winnipeg 479, 480.)

The proposal made is, in effect, very similar to the present practice. The only difference would be the existence of an express regulation under which the settler could be assured that on complying with definite conditions he would receive a release or certificate of exemption of \$500 worth of stock. Section 18

## SESSIONAL PAPER No. 203

is, the Commission considers, sufficiently wide to enable the Board to thus release property en bloc.

*Recommendation of Commission.*

The Commission recommends that a regulation be adopted recognizing the right of the settler to apply for and receive a release or exemption certificate as to personal property to the value of \$500 where at least one year has elapsed and all payments have been met and regulations complied with, and it is shown to the Board's satisfaction that the value of the remaining security will continue to bear a proportion to the amount due on the loan at least as great as at the time the loan was made.

*Suggestion by ex-service men*

Right of settler to be repaid portion of his investment in case of salvage

That where the settler gives up, and the property is sold, the settler should receive a proportion of what he has paid in for machinery, stock and for his deposit. (P.E.I.—St. John 94).

There are cases of real hardship where a man has invested his small amount of capital and has lost it all. These cases where there has been a genuine effort towards success deserve every consideration. From the facts, it would appear that the most which has been done is that the Settlement Board has not called on the Soldier to make good any deficit between the amount for which the property is sold and the amount which he has borrowed. The evidence at St. John, Winnipeg and Calgary was to the effect that in the majority of cases there has been no deficit and that the property has realized more than the amount against it, in which case the settler is given the benefit of any surplus.

Having regard to the contractual relations of the parties and the responsibility which the soldier settler takes in common with the Settlement Board, the Commission does not feel that it is justified in recommending any general regulation or practice whereby, notwithstanding there may be a substantial deficit, the settler will receive a proportion of the proceeds of the sale. The Commission believes that in a deserving case real hardship can be met through special adjustment by the Board.

*Recommendation of Commission*

None—except for consideration by special adjustments in exceptional cases.

*Suggestion by ex-service men*

Terms on which settler is given permission to sell property

That permission to sell property be granted more readily and on more generous terms as to the settler sharing in proceeds of sale. (Halifax 350; Winnipeg 487, 494).

There are instances in which the land purchased has proved to be of special value on account of unsuspected mineral deposits. From the evidence, the Commission considers it can fairly be concluded that the Settlement Board does and will give permission to the settler to make sales of property which are manifestly for his benefit and which will provide him with some ready money, so long as the security of the Board is not depreciated and so long as reasonable amounts are applied by the settler in reduction of the loan. One opinion expressed in the evidence was that there was danger to the settler in too much credit. (Winnipeg 475, 487, 494, 495, 497.)

The Commission considers that the regulations now in force and the policy of administration ensure to the settler the benefit of a fair proportion of sales of property consistent with the preservation of the security.

#### *Recommendation of Commission*

None—in view of the present practice.

#### *Suggestion by ex-service men*

##### Revaluation

That there be a general revaluation of lands purchased by soldier settlers (particularly in years 1919 and 1920) with a view to writing off subsequent deflation resulting from general economic depression. (Vancouver 445; Winnipeg 498-517; Montreal 575; Calgary 257, 272.)

The claim is that land was bought at abnormal prices in 1919 and 1920 and that the soldier settler has constantly over his head the discouraging effect of a capital liability, which has, by the deflation in prices, become quite out of proportion to the actual present value of the property which, if it were disposed of at the moment, would probably, in most instances, bring considerably less than the price paid by the soldier. The position, however, as it appears to the Commission, is that the handicap is more contingent than actual. The value of the farm is not to be taken as of this or any arbitrary date for the purpose of measuring the loss or profit of the soldier farmer. The farm is bought to be worked and paid for gradually. The only definite date for testing the improvidence or otherwise of the bargain is the date on which the purchase was made. At that time the settler himself, who was assumed to have some knowledge of the value of farm lands, decided that the farm was worth the price and in this the best available judgment of the Settlement Board officials concurred. If the subsequent fluctuations in value are to be looked at to see whether the bargain was a good one, then the date which is at least as important as any other is the date when the farm is to be actually and finally paid for, twenty-five years hence. At least, it cannot be said that the price was too high until the average value of the farm in the market year by year during the period of payment has been ascertained. Possibly the settler may in some certain year be paying interest on a larger amount than it would otherwise have been necessary to invest in that particular year to secure the production obtained, but the next year values may have so increased that it would be impossible for him to go into the market and find a farm of equal productive value, except at a much higher price with the consequent higher annual interest charge. It follows that if the right to readjustment in valuation were admitted, it would not be possible to make it until considerable time had elapsed in which to determine from the fluctuation in values a basis on which the revaluation were to be made. No possible injury could result from the delay. On any reasonable basis of values there will be instalments payable for a long time to come, and if a readjustment were found necessary in the course of a number of years there would still be ample instalments from which any reduction could be made. The figure mentioned for general deflation was roughly 30%, Winnipeg (510, 499) but a qualifying statement was made that the average deflation on farms still in the hands of settlers—

“would not amount to anything like that. For instance there would be farms where they would not have to make any change, at least not a change of more than five or possibly ten per cent.” (512).

The average loans on farms was \$1,600 (462). Assuming even a 30% deflation in the loan on the land, there would be an overpayment, until revaluation, of possibly \$35 per annum, and if there were a readjustment eventually, any annual

## SESSIONAL PAPER No. 203

overpayment made previously would automatically reduce the final indebtedness.

But even assuming that the original price had to be compared with present values and some adjustment made, Parliament on the recommendation of the 1922 Parliamentary Committee (1922 Parl. Com. P. XXXV) provided for:

(a) Putting stock and equipment loans on a 25 instead of a 20-year basis, notwithstanding the non-permanent nature of the property represented by these loans;

(b) A consolidation of arrears up to April 1, 1922;

(c) Total exemption from interest payments for 4 years for 1919 settlers, for 3 years for 1920 settlers and for 2 years for 1921 settlers.

This exemption was not an inconsequential concession. It represented in many cases a complete cancellation of interest amounting to about 16% of the principal sum, or in other words by spreading it over the 25 years, it meant that the interest-bearing principal was reduced by 16%. This adjustment was regarded by the great majority of soldier settlers as a practical benefit, at a very opportune time.

It is only fair to remember that the effect of the proposed revaluation is to ask the Country to agree to forego its claim under the terms of a solemn contract admittedly much more liberal than would be entered into by any private interest, and that the settler was himself satisfied as to the value of the land which was the basis of the contract and the security for the loan.

The Commission fully recognizes the great impetus in the development and colonization of Canada to which soldier settlers are contributing, and it is also convinced that Settlement Board officials are fully aware of the importance of their work both in the settlement of the Country and the re-establishment of ex-service men. It must not be forgotten, however, that the Soldier Settlement Act is not by any means an exclusively re-establishment measure. If it were, then soldiers in many other vocations would be warranted in complaining that discrimination was being shown in favour of the farmer class. One of the principal justifications for the special provision for soldier settlers as against other vocations is that it is a two-sided contract, under which the State has definite rights and receives unmistakable benefit.

From the evidence given it is by no means proved that there has been a permanent depreciation in values. The reference to revaluation in Quebec arose out of a special situation on account of some badly bought farms in the early days of the Act (564 and 576.) There was also an individual instance of stock for which too much was paid (563). The stock and implements were stressed more than the farms (575-576). The impression left by the evidence was that the exemption from interest provided for in 1922 pretty well met the case (577). The situation in Quebec would, the Commission considers, be fairly provided for if the Settlement Board investigated any specific complaints and considered for readjustment any case where it was found that the settler had been misled into paying exorbitant prices by some fault of the officials. There was nothing to indicate any necessity for a general revaluation.

In Vancouver, (445) the opinion was definitely expressed by the representative of ex-service men that "the question of land values will adjust itself as conditions improve." It was rather the general depression which was regarded as affecting the position of settlers adversely. The evidence goes on (445):

"Our settlers have faced these three difficult years and while land values have not dropped to a great extent the value of produce has seriously affected their position."

In Calgary, the representative of the Soldier Settlement Board gave it as his opinion that land values had not depreciated but simply that their saleability had decreased and that this was only a temporary condition (257).

In Winnipeg, the presentation of the case was much more comprehensive. It was accepted that the value of land was based—

“on its productivity and carrying power when developed to a reasonable extent.”

It was also recognized that the value of land could not be determined by its record for one year, but should be considered over a period of years, and the value of the products, less operating expenses, should be regarded as the interest on the investment (499). The evidence dealt specifically with comparative values of commodities in which the settler was interested, but the evidence as to land values was very general. Tables were presented showing comparative prices of commodities before the war and in the years 1919, 1920, 1921 and 1922. These tables covered produce (500), wheat and oats (501), equipment and implements (502), lumber (503), freight rates (503), comparative purchasing power of farm produce (504), and the contention was made that, despite improved crop conditions, the purchasing power of farm produce was still on the decline (504). The Commission did not consider these statistics as directly relevant on the main point which was as to whether the settlers' land had permanently decreased in value and, if so, whether that loss should be borne by the Country, but these figures were useful in showing some of the existing conditions which had contributed to the settlers' anxieties.

On the question of the comparative values of land, and the permanency of any depreciation, the evidence is not sufficiently certain to justify any assured conclusion. The general statement which formed the foundation for the whole contention as to necessity for revaluation was:

“During the years 1918, 1919 and 1920, and part of 1921, the farm lands of Western Canada were sold at prices never before dreamed of, and which are not likely to be realized again for many years so long as the land is not of value for other than agricultural purposes. These farms cannot now be made to produce sufficient to carry the great burden of debt accumulated as a result of purchases made during the period of abnormal prices.” (Winnipeg 499).

It was stated that on the Portage Plains where prices were \$100 an acre in 1919-20, the lands could be bought to-day for \$50 to \$60 an acre, (508) and that the same thing applied to the Dauphin District (508). It was admitted that if the prices of 1919-20 were to come back there would be no necessity for an adjustment, but it was stated that there was no hope whatever of their coming back (508). Again, the evidence of the selected representative witness dealing with this subject was:

“I do not think that in the West there is the opinion that land values will be restored for years to come. It will not be in our times, unless there is another war.” (514).

This was practically all the tangible evidence which was given as to the permanency of depreciation in values. The evidence by the representative of the Settlement Board was that 154 farms which had been salvaged were sold and that they cost, including the initial payment made by the settler, plus the permanent improvements put on them, \$563,298.86. The aggregate sale price was \$558,851.26, and shows a depreciation on the farms of \$4,447.66 (514). It was suggested that obviously those which were sold would be the best farms (514), but it was said that this was not always true, and that no less than 200 farms owned by the Board had been considered sufficiently good to be taken under lease during the previous summer on the usual profit sharing basis (515).

The evidence already referred to (499) recognized the inaccuracy of arriving at a value for the land, except by taking its record for a period of years (499). The suggestion, that in view of this it was too early to arrive at any conclusion

## SESSIONAL PAPER No. 203

as to revaluation was met by the contention that the discouraging effect on the farmer, who carried at least a nominal indebtedness out of proportion to the present productivity of his farm, would result in the settler abandoning further effort and the holdings consequently being thrown back on the Settlement Board which would have to find a fresh purchaser for the land, and bear the expense of salvage operations and of re-settling the new farmer and almost inevitably have to write off any resulting loss. (Winnipeg 499, 504, 505). The case was put as follows:—

“A number of soldier settlers in this province have already abandoned their holdings and, although of the farms that have been taken back by this Board in this Province, some have been sold at their cost price, many have been sold at prices considerably below cost, and a great many more are still on the hands of the Board with little prospect of selling them at anything like cost.

“A large number of the settlers still on the land in this province are considerably in arrears, and their present prospects are far from encouraging. Under existing conditions the prospects are that an appreciable percentage of these will have to abandon their efforts sooner or later. The vast majority of these men have nothing but what is invested in their farms; they are desirous of making a success of their undertaking, but should they through being unable to earn a livelihood and pay their way, be compelled to relinquish their holdings back to the Board, then the Board would have to find a fresh purchaser for the land and would be only able to secure the market price for the land, stock, etc., and would have to write off the loss. They would have the expense of salvage operations, and the work of securing a new settler. In view of this, would it not be better to have a complete readjustment with the man now on the land, take the loss now, and retain these worthy settlers where they will be an asset to the country generally?

“It seems to me that from a purely business viewpoint and from the viewpoint of colonization, this is the only sound and practical solution of this grave situation.”

The conditions described have already been encountered elsewhere, and a statement by Premier Massey of New Zealand was quoted at Vancouver (443) as an example of the practical steps which were urged as necessary to afford relief. The statement was as follows:—

“The Government, in these difficult circumstances,—(that is referring to the depreciation in value of stock and equipment and farm products) has proved itself an exceedingly generous landlord. Its first step was to authorize the Land Boards, which are composed of practical farmers, to postpone the payment of rentals and instalments where sufficient cause was shown.

“‘No man who is a tryer is going to be put off his farm,’ said Mr. Massey. ‘I tell the soldiers to stay on their land and do their best. The Government is not going to see them fail if there is a reasonable method of helping them through this passing trouble.’

“These concessions have eased the situation. But it has been apparent all along that some of the soldier settlers would have to have their capital values reduced. The Government, in other words, would have to write off some part of the money that it had paid for the land. The Ministers have admitted that this measure would be necessary in cases where the productive value of the land, on the basis of reduced prices, was less than the price paid when the land was bought for the soldiers. But they have argued, very reasonably, that the Government should not be asked to make this adjustment in haste. Produce prices

fell in 1920 to an exceedingly low level and have since been moving up again gradually. Wool and meat are still increasing in value.

"The soldier farmers, however, are not to be kept in suspense much longer. The Government has made the first step towards the adjustment of the land values by appointing a number of practical independent farmers to visit the farms and make recommendations. Every soldier on the land will be given an opportunity to state his case to one of these men. The inspecting farmers will confer with the Land Boards, and recommendations will be placed before the Government. The final decision will rest with Parliament, but there is no doubt that the representatives of the people will endorse whatever action the Government proposes. New Zealand may lose a million or two but it will gain thousands of contented producers."

The subject of Soldier Settlement only comes within the purview of the Commission in an accidental way as related to existing re-establishment needs.

While the Commission makes such recommendations as it considers warranted by the evidence on certain minor phases of the subject, it realizes that the far reaching effect of a decision as to revaluation requires close knowledge of local conditions, experience with agricultural and settlement matters, particularly in the West, and a detailed and critical examination of the financial operations and outlook of the whole project. The Commission has primarily and principally to do with matters of pension and re-establishment of the disabled and their dependents and does not consider itself in a position to make any definite recommendation, especially when the proposal involves a declaration of a new principle of general national policy rather than the working out of details and improvements in connection with a policy already laid down.

The Commission therefore submits the foregoing summary of the evidence given and contentions put forward and calls attention to the following considerations:

(a) To compare prices paid for the land with the values as of any arbitrary date, except the date of purchase, would not be an accurate criterion as to whether the bargain was a good one. A fair test would be the value of the land on an average during the 25-year payment period. The evidence affords no information on which to base a prediction as to when or in what degrees land values will fluctuate.

(b) If, after an experience of years, a capital loss is clearly indicated, the question as to whether the State shall bear the whole or part of the loss can then be determined and, if decided affirmatively appropriate action can be taken for a readjustment on instalments still unpaid.

(c) There is, however, a consideration which may be less logical than the foregoing, but will probably be found to be more practical, and that is, that the discouraging effect of having a large capital debt over his head for a much greater sum than the present value of the farm, may lead the settler to give up rather than take chances on an uncertain future. Thus, the country may lose the colonization benefit which the scheme had in view; it would also, almost inevitably, lose the amount of any depletion in value and be put to the trouble and expense of getting a new settler. To obviate this contingency, it may be desired to assure the settler that, in case capital loss is demonstrated eventually, some reciprocating adjustment by way of forbearance of interest or otherwise will be made by the State. This could be done by a declaration of principle, leaving the question as to whether there has been a loss, and the amount, if any, to be determined after the necessary lapse of time.

#### *Suggestion by Ex-Service Men*

Extending the Act to cover those who served in Canada only

That the Act be amended to include those who served only in Canada.

(Halifax 326; Winnipeg 517; Vancouver 400).

## SESSIONAL PAPER No. 203

Of those who served in Canada, only men who incurred some pensionable disability in service are at present eligible for loans under the Soldier Settlement Act. As was pointed out in the evidence, if the Soldier Settlement Act is to be regarded as primarily a settlement project with a collateral benefit to ex-service men, there seems no good reason why the experience and efficiency of soldiers who remained in Canada should not be taken advantage of. Many of those who undertook military service during the later months of the war, as well as soldiers held on instructional, transport or other necessary work in Canada, were sons of farmers or were experienced agriculturalists and would undoubtedly constitute excellent agencies for land settlement. The proposal involves a large additional financial commitment and the consideration of Parliament as to whether what has already been accomplished justifies further extension of the principle of the Act.

*Recommendation of Commission*

From the standpoint of re-establishment the Commission considers there is no objection to the proposed extension; apart from that, the question is one of policy respecting colonization depending in part on whether the results already obtained warrant further commitments.

*Suggestion by ex-service men*

Vendor's warranty of fitness of land

That the vendor of property to the Soldier Settlement Board, for a Settler, be required to give a warranty as to the condition of the property. (Halifax 327; Winnipeg 481).

The recommendation in Halifax had to do with personal property, particularly cattle, and was to the effect that these cattle should be warranted free from tuberculosis or that the vendors should sell them subject to the tuberculin test.

The recommendation in Winnipeg was as to the condition of the land—that it be free from weeds and stone, that the sub-soil be suitable, that the amount of ploughing to be done was as represented, and that it be free from black alkali and sourness.

The difficulty presented was that such a warranty would simply increase the cost of the property purchased by the amount which the vendor would add to insure the absence of these undesirable conditions. The soldier settler is a party to the transaction and no stock or land will be purchased without his consent. If such a warranty is desired in a particular case he may require that the Settlement Board insist on it before purchasing.

*Recommendation of Commission*

None.

*Suggestion by ex-service men*

Extending age limit

That the age limit for those who may take advantage of the Act be extended. (Halifax 325.)

The practice now is that those who have not had previous agricultural experience will not be granted loans if they are over forty-five years of age. (Halifax 326-327.) As a matter of fact, the age limit in practice is regarded as forty years. There is no age limit in the Act.

*Recommendation of Commission*

The Commission considers that age qualification should not be the subject of any hard and fast regulation, but that the general practice of limiting the benefits of the Act to those under forty-five years of age affords a good working rule.

14 GEORGE V, A. 1924

*Suggestion by ex-service men*

## Payment of taxes

That the Board should pay taxes on any lands which have been given up by the soldier settler and salvaged by the Board. (Winnipeg 469).

The hardship aimed at by this suggestion arises when the Settlement Board, in the right of the Crown, repossesses lands from a soldier settler in default. On account of the Crown's Immunity from taxation, an additional burden thus falls on the other residents of the locality. Not infrequently the lands are those which had, previously to their occupation by the soldier settler, been under cultivation and depended on by the local authorities for taxes. The case was put as follows:—

"There are 50 settlers go into this Municipality and take up land; they have roads graded, schools erected, and other improvements made; then half of them leave the land, and the burden for the roads and schools falls upon those who are left . . . . We farmers have to contribute our share of the taxes on the abandoned sections or quarter-sections." (Winnipeg 470).

The Settlement Board pays the taxes up to the time when they re-take possession from the settler, but after that time no taxes are payable. In 1922, on account of the consolidation of interest, etc., resulting from the recommendation of the Parliamentary Committee, all arrears of taxes were paid up (472). As a matter of law, if the taxes had not been paid up while the land was in the possession of the settler, the lands would, on repossession, revert in the Settlement Board free of any lien or claim for taxes. (Section 22 (3), Chap. 71, 1919). The Board contends that the taxes on lands held by it are more promptly and more fully paid up than the average of civilian-held lands. (Winnipeg 472.)

The question was discussed before the 1922 Parliamentary Committee (Parliamentary Committee Proceedings 1922, P. XXXVII) and arises from an application of a well-established constitutional principle. The Commission can do nothing more than make the contention a matter of record. There is no doubt that in municipalities where a large number of farms have been repossessed a great burden falls on the other property, but the remedy can only be through representations with a view to securing the consent of the Crown authorities to making these lands an exception to the general rule, possibly by consenting (with an express reservation of the general principle of exemption) to allowing the taxes or some proportion thereof to be considered a first charge on the proceeds of a re-sale, particularly in a case where the re-sale produces a surplus over the amount owing to the Settlement Board.

*Recommendation of Commission*

None.

*Suggestion by ex-service men*

## Postponing standard date of payment

That the standard date for payment of instalments be December 1st instead of October 1st. (Winnipeg 474-S).

The contention is that the soldier settler is generally the last to have his grain threshed and that he does not realize on his crop in time to make his payment on October 1st. The answer is that there are at least some cases in which payments can be made on October 1st and that the standard date should be the time of the earliest possible payment rather than the latest, in order to ensure that the crop proceeds are directly and immediately devoted to payment of instalments due to the Board. It is pointed out that no interest is charged if payments are made on or before December 1st. The reply is made that this

## SESSIONAL PAPER No. 203

provision as to exemption from interest is not a matter of standard regulation but is an instruction issued from year to year.

The Commission considers that the standard date as now fixed, with a period of grace not exceeding two months, without interest, to be granted in all cases where it has not been reasonably possible to make payment on the standard date, affords due consideration to the settler.

*Recommendation of Commission*

None.

*Suggestion by Ex-Service Men.*

Allowances for clearing on Dominion lands

That on Homestead lands or soldier grants the Board should break at least 50 acres for each settler or should make a special allowance up to \$500 for breaking. (Winnipeg 458-465; Vancouver 401.)

The practice is that the maximum loan in addition to the loan for the land is \$1,000 for improvements which cover buildings, and \$2,000 for stock and implements. (Winnipeg 460.) A man is granted a breaking loan very frequently out of the \$1,000, i.e., the total \$3,000 is treated as fluid. The amount generally allowed for breaking is \$5 per acre and it was pointed out that on homestead lands this would not cover the cost (459).

The suggestion was that a further \$500 be provided, making the maximum possible loan \$3,500 instead of \$3,000.

While it was argued that the settler would be much better off with 50 acres of broken land, it was replied that this was more than was necessary for him in the early stages on which to grow feed for his stock (463), and that 25 acres was all that was needed for that purpose. The aim of the Board was to have settlers go slowly in clearing so that they might take on this work themselves and thus get the direct benefit of the cash outlay instead of attempting a large clearing operation and having the cash go to others (465). The idea is to have the settler proceed gradually with his clearing and augment his farm revenue by labour elsewhere at those seasons of the year when labour is in demand and his earnings will be proportionately great. It was suggested at the hearing that if the settler had a large breaking proposition and wanted to be assured that sufficient cash would be forthcoming from the Board for that purpose the sum of \$500 might be specifically ear-marked out of the \$3,000 combined improvement and stock and equipment loan. Even if that were done the policy of the Board would not permit of the whole \$500 being utilized for breaking the first year. (Winnipeg 465.)

The provision for clearing land and disposal of timber and wood on farm lands is shown in the Halifax evidence (345).

The Commission considers that no general rule can be laid down. Each case must be determined on its merits having regard to the man and the conditions and prospects of the particular farm.

*Recommendation of Commission.*

None.

*Suggestion by Ex-Service Men.*

Drainage loans

That the Soldier Settlement Board take the initiative in promoting the establishment by the proper authorities of drainage districts where co-operative drainage is needed. (Winnipeg, 488-490.)

The case put was a local condition in the Hudson Bay and Howardville districts where the settlers were troubled with floods every year. The problem was one of conflicting jurisdictions. Action was not taken by the Provincial

authorities on the ground that an Indian Reserve was affected, and the Federal authorities took the ground that drainage was a local and provincial matter. (Winnipeg 488-9.)

The Settlement Act deals generally with individual farms and not with community settlements. Once the Settlement Board has purchased the land for the settler it is obviously to its interest to initiate and promote any project which will improve the property. The point made was that the average settler was not sufficiently familiar with regulations to know how to take the first steps toward getting co-operative drainage (489). The evidence is that in the case referred to the Settlement Board had taken the initiative and pressed the claims of the locality (488-9) and that the Indian Department had early in 1923 agreed to advance \$300,000.

*Recommendation of Commission.*

None.

*Suggestion by Ex-Service Men.*

Transfer of settlers from unsuitable lands

That the Board give to settlers another opportunity of borrowing where the lands on which they have originally settled have proved unsuitable. (Winnipeg 484-8.)

There is no express provision in the Act preventing the Soldier Settlement Board from making a second loan to a settler who has been salvaged. It is the practice not to do so, however, although the Board has, in special cases, transferred a settler from one farm to another and in cases of illness has taken a farm back and on recovery has given the settler another loan (Winnipeg 485). The evidence at Calgary showed that in very special cases this had also been done in Alberta (259). These are called transferred loans however. An Order-in-Council is required before making a second loan to the same settler on a different farm.

The whole consideration is how far the Board can or should go in determining or agreeing that the present holding is unsuitable. So much depends upon the determination and efficiency of the settler himself. The fact that the venture is unsuccessful does not necessarily prove that the farm is unsuitable. Where one settler by hard work and thrift makes progress under conditions which are far from ideal, it would not be fair to grant a new loan to his neighbour who because of less industry and application has allowed the conditions to master him. It must be remembered that the settler had an active part in selecting the land and that the Board purchased the land for him and at his request. If the settler who attributes his ill success solely to the condition of the land is to be reinstated in a new location, it follows that those settlers who have stuck to just as difficult propositions and who are showing evidence of permanent success should be entitled to even greater consideration.

*Recommendation of Commission.*

None, in view of the present regulations.

*Suggestion by Ex-Service Men.*

Provincial settlers—Merville and Lister Camp (Creston, B.C.)

- (a) That all settlers under provincial arrangements at Merville, Vancouver island, and Lister Camp (Creston), in the Kootenay Valley, B.C., should be taken over by the Soldier Settlement Board; (b) That the Soldier Settlement Board consider favourably applications of those settlers who have left the above districts on account of the unsuitability of provincial arrangements. (Vancouver 440-460.)

## SESSIONAL PAPER No. 203

This matter was the subject of discussion before the 1922 Parliamentary Committee (See Committee Proceedings, p. 394, and Committee Report, p. XXXVII). The above report recommended that an official of the Settlement Board be authorized to investigate the conditions with a view to having the settlers brought, if possible, under the jurisdiction of the Board. The claim is that in 1919, before the Federal organization was fully completed, some 600 ex-service men were desirous of taking up land in British Columbia on the principle of organized communities. Representatives of these men came to Ottawa and the Federal authorities, it is claimed, endorsed certain plans which were presented whereby the Province of British Columbia brought into existence a land clearing organization and carried out the initial development. The statement is made that the understanding was that the Federal government would take over the work and complete it when the Provincial authorities had reached their limit of financial strength (1922 Parliamentary Committee Proceedings, p. 393-4). If this statement were correct, there can of course be no doubt as to the course to be followed.

Pursuant to the recommendation of the Parliamentary Committee, Mr. Mabey, a representative of the Settlement Board, made an investigation and report which is set out in the Vancouver evidence (441). The report is dated December 27th, 1922, and the following is an extract therefrom:

"It is doubtful, however, that the Board could depart from its general policy of settling returned soldiers on lands ready to farm, and participate in land clearing or irrigation projects. Even were a departure made by the Board from this policy in the case of the Merville and Lister settlements, it is difficult to see in what way the Board could, at this stage materially help the settlers any better than the assistance being afforded by the local government. Buildings have already been provided; many advances for equipment, live stock, poultry, etc., have already been made where the Government in its opinion, considered it justified. The most of the holdings are not yet in shape to require or justify the loan of the stock and equipment advances such as the Board could make in the ordinary cases."

Apparently, even if these settlers were taken over by the Settlement Board, the only advantage would be a lower rate of interest and whatever improvement in administration might be afforded by the Settlement Board organization. The project, as appears from the report of Mr. Mabey, is quite outside the usual operation of the Settlement Board. As he puts it, "It is a land clearing and irrigation project rather than a farm settlement scheme."

Since the hearing at Vancouver, further representations have been made to the Commission setting out the position in detail and proposing assistance in clearing land by way of a special loan, not to exceed \$150.00 per acre. The following letter furnishes particulars which are, as far as the Commission is advised, not a matter of record elsewhere.

The Secty.,  
Royal Commission on Pensions,  
The Senate, Ottawa.

"B.C., April 4th, 1923.

SIR.—In answer to your letter of March 7th, 1923. The Merville Soldier Settlement consists of some 15,000 acres of logged off lands occupied at present by 110 men, 75 per cent of whom are married. The scheme is under the control of the Prov. Govt's Land Settlement Board who commenced operations in this locality in the spring of 1919. The intention was to clear 10 acres in each holding which consisted on the

average of 50 acres, rough clear between the stumps, another 10 acres, build a small house, fence the cleared portion, advance by way of loan to the settler, stock, implements and necessary material so that he would have a fair start towards becoming independent. Donkey engines and motor power were used at the commencement and a good start was made towards the objective, some twenty farms being put more or less in the condition as originally intended. Owing to faulty methods of supervision, political interference, and large overhead expenses the scheme broke down and settlers were all placed after fifteen months on their holdings and told they would be advanced a progress loan to enable them to develop the farm individually. This went on smoothly for another year, but the Prov. Govt., evidently were not enthusiastic over their plan and gradually withdrew their support, which up to the present has been very spasmodic and causing a great deal of dissatisfaction among the settlers, no one knowing just where he stood in regard to obtaining assistance. The Prov. Govt. recognizing that the debts piled up against the farms are such that it is impossible for any man to repay them in a reasonable time, have now in agreement with the settlers appointed three local farmers of ability and experience to revalue all the holdings, and all that they contain, both sides to abide by their decision.

In view of the fact that none of the 110 farms can support their prospective owners for some considerable time yet, and that owing to the great number of men requiring work and wages in one locality, it is impossible for more than a very few to obtain employment in the vicinity (there are some score of S.S.B. settlers adjoining us) and that owing to the natural conditions of our land if any progress is to be made towards development a man must be enabled to spend the greater part of the year working on his farm.

We submit that providing the Dom. Govt. or the Dom. Prov. Govts. combined, would adopt the scheme as here outlined, not only would the serious situation which now exists in the settlement be solved, but a way opened up for settling vast areas of otherwise waste land by contented men of the best type, who, however, enthusiastic at the commencement of their undertaking in time get disheartened by the enormous natural difficulties of placing the timbered acres in B.C. in this method of acquiring a farm.

We submit the following scheme for land clearing and at the same time providing a man with wages and keeping him in the vicinity of his farm. To obtain the services of H. M. Fraser and his 75 H.P. tractor for stump pulling, piling the stumps and breaking the land. A loan to be advanced the settler at the rate of \$150.00 for the acre cleared.

The work to be done by contract.

The amount of land to be cleared and its locality to be decided upon by the settler and the Govt. representative. The proposition is that the settler would clear away himself windfalls and debris among the stumps.....\$ 10.00  
 Stump blasting per acre..... 30.00  
 Stump pulling and piling per acre with tractor..... 75.00  
     burning..... 10.00  
     levelling and breaking..... 15.00  
 Clearing of rocks, etc., and putting in shape for cultivation .. 10.00

\$ 150.00

## SESSIONAL PAPER No. 203

H. M. Fraser is well known and has handled large contracts for the Prov. Govt. He has looked over the Merville area and is satisfied his tractor can manage the work. He has placed the figures for tractor work at the outside cost, this to be governed by the amount of work available. the tractor to clear not less than one acre on each holding the cost of moving the outfit including wages is \$1.00 per mile.

We beg to point out that this district has been proved as an ideal locality for the raising of small fruits, poultry and dairying; we refer you to the Prov. Horticulturist, Mr. White, who pronounced the strawberry crop of a Merville settler to be the best one inspected at a certain stage, of any in B.C. for the season 1922.

There are some 40,000 acres of similar logged off lands adjacent to Merville, which if settlers are given a little help and encouragement to clear would be quickly populated. Through all their discouragements the Merville settlers have stuck it out for they have faith in the district and what it can produce.

Merville is situated eight miles from the railway and connected to it by the Macadamised Island Highway, the markets are excellent. The Comox Creamery, a co-operative concern, handles the chief varieties of farm produce; the projected extension of the E. & N. Railway would serve the adjacent logged off lands to which we refer.

We can do no more than leave this proposal in your hands, knowing that it will receive your serious consideration. We shall be only too pleased to meet any commission of inquiry you may appoint to go into further details of the matter with you.

Yours truly,

(Sgd.) R. G. KER,

*Secy. Merville Com. Assn."*

That there is a complication on account of the settlement being at present under Provincial auspices, is apparent. According to this letter the Provincial Authorities have taken an important step for the benefit of the settlers in connection with a revaluation of the land. There is in this statement no claim as to any undertaking on the part of the Federal authorities, but there is to be considered the circumstance that these men are ex-service men who have undertaken a Canadian settlement proposition which has taxed severely their application, industry, and perseverance. The fact that they have stuck to it in spite of extremely discouraging conditions is a very genuine indication of their faith in the eventual possibilities. The "stake" which they have in the property by their hard work should furnish considerable of their continued endeavour to make the venture a success ultimately. Whether it would be feasible for the Federal authorities to intervene, with some assistance toward clearing land, and if so what arrangement could be made with the Province, which it is understood holds a first charge on the land, so that reasonable security would be made available to cover the suggested advances on any part thereof, and what are the actual chances of success, are all matters as to which the Commission has no information.

A proposition which really involves taking over a number of settlers en bloc, does not come within the Soldier Settlement Act, which deals primarily, with individuals. The Soldier Settlement Board would however, be the best agency through which to afford special assistance if such could be given. Any relief can only come as the result of investigation and conference at first hand with the settlers and the Public Authorities concerned. The Commission submits the case with the supporting statements and is of the opinion that the situation merits further consideration with the object of verifying the claim

14 GEORGE V, A. 1924

that there was an undertaking by the Federal authorities to assume certain responsibilities, and also to ascertain whether some action in the nature of the special assistance suggested may be feasible or warranted under the peculiar and exceptional circumstances.

#### *Recommendation of Commission*

Further consideration as above.

#### *Suggestion by ex-service men*

Settlers on Nicoamen Island, B.C.

That settlers on Nicoamen Island (50 miles East of Vancouver) be given an opportunity to take up other lands. (Vancouver 438).

This is another case which was brought to the attention of the 1922 Parliamentary Committee (Report 1922 Parliamentary Committee, p. XXXVI). The recommendation was that on sympathetic grounds the settlers be given an opportunity of establishing themselves on other lands, if they so wished, and further, that, in the event of the lands being again flooded, leniency be shown in the matter of payments.

The locality is one in which there is very rich land but which is constantly threatened with flooding by the Fraser River. The Settlers located there in the expectation that the dikes would be improved and the water kept out. The land is stated to be the best to be found in British Columbia. The settlement began in the spring of 1919. The lands were flooded in the summers of 1920, 1921 and considerably in 1922. (Vancouver 438-9). An \$80,000 expenditure was made but it was estimated that it would require another \$250,000, and the Provincial and Federal Governments were, for reasons of jurisdiction which they considered sufficient, unable to give the necessary assistance (Vancouver 439).

It is understood that during the past year, owing to representations made by Local authorities and by the Soldier Settlement Board, the Federal and Provincial Departments of Public Works in conjunction have commenced certain dike repair work which, it is suggested will probably solve the difficulties of the settlers.

#### *Recommendation of Commission*

The Commission considers that if the diking facilities prove insufficient, the circumstances in connection with this unfortunate venture by the settlers in that locality might properly be considered by the Settlement Board as coming within the class of extraordinary cases for which provision should be made by granting a second loan.

#### *Suggestion by ex-service men*

Local fire insurance companies

That the Settlement Board should accept policies in Mutual Fire Insurance Companies thus reducing the cost of insurance to the settlers. (Vancouver 437, 460).

The reason given for refusing policies in the local mutual companies was the failure, in some parts of Canada, of companies similarly organized which circumstance was considered by the Board as justifying its declining to jeopardize the interests of the soldier settler and of the State by the acceptance of policies in these companies. It is understood that the action of the Board in a matter of this kind is based on the opinion of the Superintendent of Insurance.

## SESSIONAL PAPER No. 203

*Recommendation of Commission*

The Commission considers that this is a matter as to which the opinion and advice of the Superintendent of Insurance should be followed.

*Suggestion by ex-service men*

Assistance to cattle industry

That salvaged lands be used for the purpose of cattle ranching. (Winnipeg 492).

Certain land between Lake Winnipeg and Lake Manitoba was referred to as being suitable for ranching and it was suggested that such of this land as had been salvaged be used by the Settlement Board for that purpose. It was pointed out at the hearing that it would require much more than a half section if the project of a cattle and dairy business were to be successfully operated. (Winnipeg 492). The project was not discussed in any detail.

The Commission considers that the matter is one entirely for decision by the officials of the Settlement Board who know the locality and possibilities.

*Recommendation of Commission*

None.

*Suggestion by ex-service men*

Small holdings for reasonably fit men

That the soldier Settlement Act be amended to permit of purchasing plots of less than 5 acres suitable for market gardening and similar agricultural pursuits requiring comparatively small acreage. (Halifax 331; Toronto 1832, 1841; Winnipeg 448; Vancouver 393).

The proposals along this line took several different forms and in some instances failed to distinguish between what the Commission considers are radically different projects, viz.; (a) Small holdings to be operated by intensive cultivation by physically fit men, such holdings to afford an exclusive occupation; (b) Small plots of ground to be operated by men partially disabled by war service, the revenue from which would be supplementary to pension and which, without the addition of pension, would be insufficient to ensure a living (these will be discussed under the next following proposal); (c) Small holdings near towns, which holdings would be simply sufficient for an artisan working at his trade to supplement provision for his family by raising a certain amount of garden truck, and on which poultry, etc., might be kept (these should properly be dealt with as Suburban Housing rather than as a Settlement or development project); (d) The provision of a house, and possibly a small lot of land apurtenant, for the benefit of disabled or partially disabled men, particular reference being made to tubercular men (this also is more distinctly a Housing rather than a Settlement scheme).

As has been said, the underlying principle of the Soldier Settlement Act has to do primarily with settlement and land development rather than with re-establishment. Project (a) above means simply that the plot of land to be worked is to be reduced in size with a corresponding intensification of operation. This idea was stressed particularly at Vancouver.

It was pointed out that a large percentage of men, whose physical capacity had been affected to some extent by war service, had received Vocational Training under the D.S.C.R. in agricultural pursuits, but that of these a comparatively small number had been accepted by the Settlement Board as fit to carry on under the Act. It was stated that of 539 men vocationally trained in agriculture, only 97 were placed by the Settlement Board, most of the remainder being regarded as unsuitable generally because of physical disabilities (Vancouver 393). These cases constituted for a time what were regarded as

serious problems, and after this had been pointed out, closer co-ordination was achieved between the D.S.C.R. and the Settlement Board, so that men could know, with some reasonable certainty, as to whether, on the termination of their vocational training course, they would be regarded as eligible as Soldier Settlers (Vancouver 394).

It was pointed out that the Soldier Settlement Act was a declaration primarily of a national land policy, the benefits being open to those who could qualify with agricultural experience, physical fitness and some financial ability. This left unprovided for a large number of men who felt that they could carry on successfully in agricultural pursuits on a small area of ground in such occupations as market gardening, poultry farming, small fruit farming, tree fruit farming, intensive dairying, bee keeping. The possibilities of men not physically strong successfully engaging in these pursuits has apparently been the subject of a great deal of discussion, and these occupations have been regarded by the men themselves as having considerable attraction.

Evidence before the Commission leads to the conclusion that the cases are very exceptional in which those who are not at least reasonably fit can hope to engage in any of these lines of work with commercial success. The restriction of the area of operation demands increased application and most thorough knowledge of the business in hand. The fact that a man had had some experience in mixed farming was not regarded by the Settlement Board as justifying his embarking in some of these more technical occupations without at least a year's experience with some one who had made a success of the business (Vancouver 395 and 464; Winnipeg 450). As was said at Winnipeg, "In order to make a success of a small holding a man has to know his trade thoroughly and he must hustle from dawn till dark". (Winnipeg 454).

A Committee consisting of a representative of the Settlement Board and an official from Ottawa made a survey of the situation in British Columbia and their conclusions are found on pages 454 to 457 of the Vancouver evidence. One of the conclusions was

"That the growing and marketing of small fruits is an exacting business and requires a special knowledge of fruit culture and market conditions".

And again that

"Successful poultry farming involves the greatest care, patience, knowledge of the work, long hours all the year around and strictest attention to minute details. To use the words of a practical successful Danish poultryman, who had built up from a small flock:—'You must like your work; know it from A to Z; have patience, work constantly and neglect not the least thing, for a little slip may mean the loss of a whole year's profits'".

And again for dairy farming

"That most farmers regard 20 acres of good bottom land or its equivalent as the minimum on which one should attempt dairy farming ... that in very exceptional cases dairy farming can be carried on successfully on 10 acres of cleared bottom land—this implies first-class men, the best of land and high producing cows".

This report went into considerably more detail and is, the Commission believes, entitled to careful consideration. It was concurred in by a prominent resident of British Columbia who had twenty-five years' experience and who states:—

"I consider it gives a fairly accurate idea of small farming as built up and carried on. I fully agree with the findings of the Committee

SESSIONAL PAPER No. 203

based upon the evidence submitted. My personal experience of twenty-five years here leads me to a similar conclusion. I would emphasize two things in connection with small or specialised farming—first, the man, second, the quality and location of the land". (Vancouver 457).

As to market gardening, a statement was made by the representative of the Settlement Board at Winnipeg who said that what had given rise to the idea that the Soldier Settlement Board was opposed to small holdings was

"That it is so difficult to find a man who is proficient. A man who has only had experience with a back-door garden is not qualified for market gardening. It is very intensive and you must be prepared to find your market in the city and to find people who will trust you." (Winnipeg 451.)

Speaking generally of the possibilities of successfully operating small holdings, this same representative said: (450)

"Our view is that small holdings are perfectly feasible, provided you have two things. One is a man who is thoroughly experienced in the work of small holdings farming which he wishes to pursue. The second thing is the market. It is idle to put a man on a small holding unless he has a good market."

When asked how long a man should have experience in either bee keeping or poultry-raising, he said:—

"We do not lay down any hard and fast rule. He must have followed that line of farming before the war or since the war to an extent that might be called successful."

When asked what period he considered necessary, he said:—

"Probably not less than two or three (years), or preferably more than that . . . . If a man has been employed say with a market gardener who can say that the man has worked successfully with him . . ." (Winnipeg 450.)

He says further:—

"In the first place we discourage the average man who takes small holdings to us because, as I say, about 50 per cent of the men who have had some agricultural experience and do not know what they can do, would like to try a small holding because it sounds pleasant. You have to discourage them in order to sift out the men who have a real proposition in view and who have had real experience." (Winnipeg 453.)

It was intimated that around Winnipeg there were 17 men who had small<sup>1</sup> plots of ground, as to 11 of whom there was very little reason to doubt that they were probably succeeding. Of these, one was a TB man who was getting 100 per cent pension and another was a blind man.

In Vancouver some figures were given showing the financial success of some men who had engaged in small fruit farming. The witness did not know whether any of these men were returned soldiers, but did not think so (397-8). It was said that this statement showed that the average returns per acre for 5 men for 5 years were \$1,158. This was without making any allowance for labour. Some evidence was given, however, by the representative of the Soldier Settlement Board at Vancouver tending to show that the revenue from small fruit farming, in an instance which he quoted where exact records had been kept, showed for the first two years, in strawberry production, a yearly profit of \$371.75 per acre. (Vancouver 457.)

It was pointed out in Vancouver that of all those settled under the Soldier Settlement Act, the poultrymen led in the percentage of those who had made payments, the figure being that 83.6 per cent of poultrymen had paid in full or on account, whereas the average, taking all agricultural occupations, was only 66 per cent (Vancouver 436).

The above detail is given in order to indicate the increased difficulties which may be anticipated in carrying out successfully agricultural work on small holdings. The evidence shows that these difficulties are not insurmountable, and the Commission considers that, particularly in British Columbia, there is considerable opportunity for operating small holdings successfully.

#### *Recommendation of Commission.*

The opinion of the Commission is that small holdings can not be successfully operated except in selected localities and by specially trained, industrious and reasonably fit men. The question as to whether the Act shall be extended to include plots of less than 5 acres for such purposes is a matter of general policy depending in part on whether the operation of the Soldier Settlement Act to date warrants further activity along these lines.

#### *Suggestion by Ex-Service Men.*

##### **Small holdings for seriously disabled men**

That the Soldier Settlement Act be extended to permit of the acquiring of holdings of less than 5 acres by men with substantial disabilities with the idea of supplementing pension and providing occupation to the extent to which it is possible for them to work. (Halifax 331; Vancouver 396.)

The problem of finding suitable occupation in which partially disabled men may engage for the purpose of utilising their remaining percentage of working capacity is probably one of the most difficult in the whole programme of re-establishment. One of the attempted solutions has been the establishment of Vets' Shops and the provision of Sheltered Employment in Government-aided industries. The proposal now made cannot be differentiated from the provision for Sheltered Employment for men in urban centres. The only distinction is that the employment on small holdings is out of doors. There was frequently presented to the Commission the possibility of partially disabled men engaging in market gardening, bee keeping, poultry farming and small fruit farming and it was very often assumed that all that was necessary was to provide a small plot of land for the soldier, and the problem of part time employment would be solved by his engaging in an occupation which seemed to offer considerable attraction. It was suggested that such an occupation was peculiarly suitable for men injured and incapable of hard work, and that the pension of men who were weak, gassed and incapable of heavy lifting could be supplemented by their keeping a cow, pigs, hens, and having a little garden and doing light work. (Halifax 331 and 332.)

The same idea was expressed at Winnipeg where it was suggested that men whose lives before the war had been devoted to agriculture, stock-raising or dairying but who had become injured through war service might operate three or more acres in poultry raising, bee keeping or gardening, or in any other work of this nature (Winnipeg 448). This was suggested as a means of permanently re-establishing men not physically fit for Soldier Settlement (Winnipeg 449), and it was further urged that such provision would assist disabled men who have a pension and would go a long way in helping to carry them through (Winnipeg 458). The same idea was expressed at Toronto (Toronto 1832).

## SESSIONAL PAPER No. 203

The views of residents of the Okanagan Valley, to the effect that opportunity was afforded there for men with asthmatic tendencies to engage in the small fruit industry, were also put forward (Vancouver 396).

Sufficient has been said under the next preceding suggestion to indicate the conviction of the Commission that the operation of a small holding cannot hope to be commercially successful unless the man is equipped both occupationally and physically to give the project his undivided attention. There may be those who are partially disabled but whose experience will be considered by the Soldier Settlement Board as being sufficient to offset physical handicap. These would properly come within the class previously discussed. Outside of these, the Commission considers it would be out of the question to expect the successful operation of a small holding, and if the proposition is not *prima facie* sound commercially, it is not one which properly comes within the spirit of the Soldier Settlement Act. In other words, it is not a settlement or development project but purely a re-establishment measure. It is simply the creation of artificial employment and the subsidizing, in the most expensive way, of an occupation which has no sound commercial foundation. If the man's health is sufficiently good to permit the venture being a commercial success then he is provided for by the next previous recommendation, but if he is physically handicapped to such a degree as to make this impractical then the provision of a small holding means nothing less than the State investing in a separate open air Veteraft Shop for each individual applicant.

The Commission is acutely conscious of the need of such men but no feasible proposition has been put forward which would overcome the obvious impracticability of the country deliberately investing in individual holdings under these circumstances.

The Commission thinks that one possible solution may be the establishment of Soldiers' Homes (to be discussed in the Final Report) with sufficient land to provide employment for these men in such outdoor activities as are within their capabilities. Such institutions might bear, to ex-soldiers in rural localities, the same relation as Veteraft Shops to ex-soldiers in the cities.

*Recommendation of Commission*

None.

*Suggestion by Ex-Service Men*

Service to count whether entry is before or after date of enlistment

That military service is to count as residence on homestead and pre-emption entries regardless of whether the entry has been made before or after date of enlistment. (Regina 197 205; Calgary 293).

Under the Dominion Lands Act (Chapter 20, 1908, Section 22) it is provided that

".....the time during which an entrant is absent from his homestead while he is a member of a military force enrolled.....in the defence of the British Empire against a foreign power, or is a member of a company or contingent of Canadian Volunteers enrolled under the authority of the Minister of Militia for active service and also for a period not exceeding three months after his discharge.....may be counted as residence upon his homestead....."

The interpretation given to this section is that the residence does not count if the entrant was, at the time of filing, actually enlisted for military service. The point raised is that there is apparently no logical reason why a man who filed a week before enlistment should have his total military service count as residence, whereas a man who filed a week after enlistment should not get any

credit at all for the time spent on such service. The reason given for this construction of the Act is that, if it were otherwise, it would mean that every soldier who served three years and had a minimum of cultivation done either by himself or some one else would, in effect, get a free grant of land, that is to say, he could virtually get a homestead and never see the property although the obvious reason for providing these homesteads was that the country should be settled and developed. There were, no doubt, those who applied for homesteads in deliberate contemplation of enlistment, and thus succeeded in getting the benefit which is denied to those who are putting forward this remedial proposal. But such a situation is almost bound to happen in connection with the interpretation of any statute and the only way to completely prevent possible exploitation would have been to amend the Statute so that the exemption from residence duties to men on military service would only count in respect of those who had secured entry a considerable period before enlistment and who had carried out certain development work. The fact that this was not done has, no doubt, worked out for the benefit of a number who applied just previous to enlistment, but the Commission does not consider that this justifies its extension still further. The adoption of the suggestion made would not benefit the real soldier settler, but would only permit those who had their entries cancelled by reason of non-residence to now press their claim on the Department and demand patent for the quarter section originally held or, if the same had been disposed of, some other quarter section in lieu thereof. It is obvious that if the entrant had been a *bona fide* settler the residence duties would have been done by this time, and a provision that he could come in now and obtain the same rights as had been earned by the hard work of his comrades who stuck to the land, would, the Commission feels, give rise to unfair discrimination and justifiable dissatisfaction.

There are, no doubt, some who, notwithstanding they did not get credit for their military service, have stayed on the land at least a portion of the time and are gradually working out their actual residence duties. These would, of course, be benefited in the sense that they would immediately get a patent, if the suggestion made were adopted; but, in an attempt to benefit these, the class already spoken of with no meritorious claim would automatically be let in. The Commission is convinced that no settler, giving any reasonable evidence of good faith and intention to settle, would have his entry cancelled by reason of not having completed his residence duties in the required time or to the extent prescribed each year and if this is so, having in view the object of the Act, the Commission considers that the only class whose claim has some merit is taken care of.

#### *Recommendation of Commission*

None.

#### *Suggestion by ex-service men*

Refund to ex-service of fees paid on pre-emption

That in the event of a soldier not having had a soldier grant and where he has, subsequent to enlistment, paid pre-emption or purchased homestead fees, he be permitted to convert his pre-emption into a soldier grant and that the fees so paid be remitted.

The rights to Dominion Lands include at least three different classes of entry:—

(a) Homesteads, of 160 acres, available to every one, and subject to six months residence in each year for three years and to a certain amount of cultivation;

## SESSIONAL PAPER No. 203

(b) Pre-emptions, of 160 acres, subject to payment of \$3.00 per acre, and to residence and cultivation duties similar to a homestead. Pre-emptions only obtained in certain districts and were abolished on March 16, 1918;

(c) Soldier grants, free grants of 160 acres to soldiers, subject to residence and cultivation duties similar to homestead. These grants were first created on May 14, 1918.

Under the Soldier Settlement Act 1917 every eligible soldier settler was entitled to make a Soldier grant entry. By the Soldier Settlement Act July 7, 1919, a limitation was imposed and a man was shut out from obtaining a soldier grant if he held a homestead and pre-emption, unless these holdings were not sufficient to make a good average farm for the district. Settlers were, however, permitted to convert pre-emptions already held into soldier grants, and thus secure immunity from future payment, if not paid up, and a refund of any moneys already paid on account of the pre-emption. A further restriction was made on December 13, 1921, when written instructions were issued by the Department of the Interior to the effect that no conversion of a pre-emption into a soldier grant was to be allowed unless the pre-emption was paid up (Regina 192). It is understood that the Department has not strictly adhered to this regulation and that conversions have been permitted in certain cases, the position, generally speaking, being that while conversion would still be permitted as to pre-emptions unpaid on July 7, 1919, the same considerations did not apply to pre-emptions paid up previous to that date, the amendment to the Soldiers' Settlement Act having altered the situation. Probably the strictly logical way to deal with the matter would be to lay down a general policy under which, in connection with pre-emptions not fully paid on July 7, 1919, the conversion would be permitted and a refund made; and, as to those which had on that date been paid, to issue to the soldier an attestation certificate and permit him even now to take up a soldier grant. There is this to be said, however, that to permit a man now holding a homestead, and a pre-emption, to take up an additional 160 acre soldier grant, would be in most cases a doubtful privilege because of the probability that there would be no suitable vacant land available in the vicinity. The Department of the Interior naturally want to be assured that genuine settlement has taken place and the Settlement Board is in a position to obtain and give definite information on this point.

*Recommendation of Commission*

The Commission considers that in order to provide as far as possible for uniform treatment and to encourage the bona fide soldier settler it would be advisable to allow conversion in all cases where a soldier has not had a soldier grant and where he has, subsequent to enlistment, paid pre-emption or purchased homestead fees, but that, in order to insure that this privilege is being given those whom the Country particularly desires to encourage, such conversion be allowed, as to cases prior to July 7th, 1919, only where the Settlement Board certifies that the settler is actually in occupation and satisfactorily using the land which it is now proposed to convert, and that in all cases of conversion as above the fees paid in connection with the pre-emption be remitted.

*Suggestion by ex-service men*

Military service to count on soldier grant

That in the case of a conversion of a pre-emption into a soldier grant military service should count on the soldier grant to the same extent as it would have counted on the pre-emption. (Regina 204; Calgary 272).

Military service counts as residence in the case of a pre-emption but does not count in case of a soldier grant. The claim is that, since the pre-empted land is by a fiction turned into a soldier grant in order to escape acreage fees, it should also carry with it the homestead privilege of counting military service as residence.

The general considerations which have been discussed in connection with the proposal respecting military service where the entry is after enlistment apply here. To virtually exempt soldier grants from residence duties by counting military service in lieu thereof would be to revive a claim for soldier grant by men whose entries have been cancelled by reason of failure to perform residence duties and who by that very circumstance indicated that they were not those for whom the privilege of soldier grant was created.

There are instances in which soldiers on account of physical unfitness are unable to fulfil the residence duties, but these have been provided for by Order-in-Council P.C. 1471 dated May 23, 1921, whereby, on payment of \$1.00 per acre, patent may issue notwithstanding residence duties may not have been done.

*Recommendation of Commission*

None.

*Suggestion by ex-service men*

Field supervisors to receive proof of duties

That any field supervisor of the Soldier Settlement Board be empowered to receive from ex-service men, proof of duties leading to patent.

It was represented to the Commission that the Soldier settler in some cases was delayed in filing his proof of duties because of having to await the attendance of the Homestead Inspector (Regina 195).

The matter is largely one of qualification and while it is quite possible that the Field Supervisor of the Settlement Board would in most cases be competent, at the same time unless there is some real hardship it would seem inadvisable to inaugurate a system whereby the regular duties of Homestead Inspector would be usurped by another official who is not necessarily familiar with the requirements.

*Recommendation of Commission*

None.

*Suggestion by Ex-Service Men*

Time in hospital to count as residence

That time spent by a soldier in hospital on account of war disability should count as residence duties on homesteads taken up before January 1, 1921. (Regina 116).

The Departmental regulations provide that, on submission of necessary documentary proof that any settler is physically unfit to carry out his residence duties, such duties may be waived. On the other hand a man temporarily or intermittently ill is not given exemption from residence duties because it is assumed he will eventually be able to carry them out. An allowance is made for him by extending the time within which residence duties can be done. A man temporarily in hospital from a war disability is drawing pay and allowance, and there is no real hardship in requiring that, after he has recovered his health, he complete his residence. The provision mentioned for men who are permanently physically unfit leaves, the Commission considers, no condition which calls for further remedial regulation.

## SESSIONAL PAPER No. 203

*Recommendation of Commission*

None.

*Suggestion by Ex-Service Men*

Fix definite price for reservations

That a definite price be fixed for the reservations in connection with soldier grant entries in the tracts withdrawn from the Riding Mountain and Porcupine forest reserves. (Winnipeg 466-469).

The settlers have already the right to use these lands, erect improvements and cultivate the same as if legal rights to the property had been acquired. The moment price is fixed and the settlers obtain legal rights, the lands would become subject to taxes to the extent of the settler's interest which would be a further drain upon the settler. In addition to this, there is the point that so long as the price is not fixed no interest is charged. It is understood it is the intention of the Settlement Board to recommend the sale of these lands at a small nominal price as soon as the men become established. Some men may prefer to save annual charges even at the expense of certainty as to the ultimate price. Others may desire to have a definite contract.

*Recommendation of Commission*

That provision be made so that such of the settlers holding these reserves as desire it, be given definite assurances as to price.  
All the above is respectfully submitted.

J. L. RALSTON,  
*Chairman.*

WALTER McKEOWN,  
*Commissioner.*

A. E. DUBUC,  
(with reservation below).  
*Commissioner.*

*Reservation by Colonel Dubuc as to recommendation contained in the body of the Report, respecting stabilization of Tuberculosis pensions*

The present practice of the Pensions Board with regard to T.B. cases clinically active while in sanatorium is:—

- (1) If incurred on service and whether the man has served in a theatre of war or not, 100 per cent for 6 months on discharge from sanatorium.
- (2) If an exacerbation of a pre-enlistment condition:
  - (a) If service in a theatre of war, pension 100 per cent for 6 months:
  - (b) If no service in a theatre of war and, if no exacerbation within 3 months of enlistment, pension 90 per cent (aggravation) for 6 months.
  - (c) If no service in a theatre of war and, if exacerbation within 3 months of enlistment, pension for aggravation only in accordance with the circumstances of the case.

Colonel Dubuc recommends, in substitution for the recommendation made on the above subject in the body of the report, that in cases (1), (2a) and (2b) above, whatever rate may be awarded by the Pensions Board on discharge from Sanatorium shall continue without deduction for a period of at least two years, provided the symptoms specified in the recommendation contained in the body of the report are found.

SESSIONAL PAPER No. 203a

## TO HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL

MAY IT PLEASE YOUR EXCELLENCY:

We, the Commissioners, appointed by Royal Commission dated July 22, 1922, issued pursuant to Order-in-Council P.C. 1525 of the same date, to investigate, inquire into, and report upon:—

Firstly, the matters referred to in complaints made by certain officials of the Great War Veterans Association as contained in a certain telegram; and

Secondly, certain questions relating to pension, medical treatment and re-establishment needs of Canadian ex-service men and their dependents;

have the honour to present to Your Excellency in Council our Final Report in respect of the Second Part of such Investigation (being report No. 4 of the Commission.)

The subject-matter of the reference concerning the Second Part of such Investigation is as follows:—

1. To consider and make suggestions in respect of the Procedure by which disabled ex-members of the Canadian Expeditionary Force are enabled to make application for pensions and medical treatment, or submit an appeal in respect of decisions thereon.

2. To recommend means for ensuring that suitable provision is made for those ex-members of the forces and dependents who are under serious handicaps by reason of war services, in conformity with the recommendations now made, and for whom definite legislative provision has not yet been made.

For the above purposes the Commission shall:—

1. Survey existing re-establishment needs among Canadian ex-service men and their dependents.

2. Investigate available data in respect of phases of the Parliamentary inquiry as yet incomplete.

3. Obtain information as regards suitable provision for those classes of ex-service men described in Section 7, Chapter 2, of the Committee's report.

4. Investigate the question of Canteen Funds.

## PART ONE

### RESUMÉ OF THE COMMISSION'S WORK

The Commission was authorized by Order-in-Council (P.C. 1525, July 22, 1922) to conduct two separate investigations. The first part was to investigate certain charges against the Pensions Board contained in a telegram sent out by the G.W.V.A. This inquiry continued with intervals from July to November, 1922. Public sittings were held on 29 days, 3,800 typewritten pages of evidence were taken and over 200 individual files were examined. The report was presented in February, 1923.

The second part was to hear evidence, suggestions and complaints respecting pensions, treatment, and re-establishment, particularly as affecting handicapped men. Public sittings were held at nine different centres from Halifax to Vancouver for 38 days, 160 witnesses gave evidence, a further 5,800 pages of evidence was taken with over 200 exhibits, and visits were made to the following institutions:—

- Seven General Hospitals,
- Six T.B. Sanatoria,
- One Hospital for the Insane,
- One Children's Home,
- Two Orthopedic Workshops,
- Three Red Cross Shops,
- One Vetract Shop.

The First Interim Report on the second Part (being Report No. 2 of the Commission) was presented in April 1923.

The Second Interim Report (being Report No. 3 of the Commission) was presented in May, 1924, and this Final Report (being Report No. 4 of the Commission) completes the second Part of the Investigation and the Commission's work.

The last public Hearing relating to the charges in the G.W.V.A. telegram was held on November 17th, 1922, and immediately thereafter the Commission entered on the work of preparing its Report on that subject, and also making the necessary plans for the second part of the Investigation.

There was some misapprehension concerning the Commission's function under the second half of the Reference. Many thought that the Commission had authority to revise and reverse decisions of the Pensions Board and of the D.S.C.R. and to operate general as a Super-Tribunal, not only to suggest, but to put summarily into force any remedial measures which it considered called for. As had been pointed out many times, however, the scope of the Commission was limited to receiving and presenting evidence concerning alleged defects and short-comings of the existing system and suggestion for improvement.

To ensure a clear understanding the Commission prepared and circulated a Memorandum outlining the scope of the Second Part of the Inquiry, (see Appendix). As the Memorandum indicates, the Commission acceded to a very generally and insistently expressed desire that Hearings be held in the various Provinces and in order to give opportunity for preparation, the itinerary was not to begin before January 15th, 1923. Copies of this Memorandum were sent out to all Veteran's Organizations and all offices of the D.S.C.R. and were

there made available to everyone interested. The Memorandum was also published early in December, 1922, in the form of a notice, which appeared in every Daily Newspaper and Veteran's Magazine throughout the Dominion.

At the request of the Dominion Veterans' Alliance, the Commission authorized Mr. C. Grant MacNeil to precede the Commission in every Province and confer with ex-service men in the various centres to advise them as to the scope of the Investigation and the procedure proposed to be adopted and to assist the local committee to prepare for the public Hearings. In this advance work, Mr. MacNeil travelled from coast to coast in November and December, 1922 and January, 1923. To ensure that evidence and representations made to the Commission would be well considered and concise and to prevent repetition as far as possible, a procedure was outlined in the Memorandum to the effect that evidence and views on behalf of ex-service men should be presented at the public Hearings by not more than six duly accredited witnesses, and ex-soldiers generally and Veterans' Organizations were asked to co-operate in calling meetings and instructing and selecting these witnesses. This method of procedure was wholeheartedly accepted and the evidence and suggestions were presented at all the hearings by selected witnesses thoroughly prepared on the various branches with which they had to deal. There were instances where the Commission, on its own motion or at the request of ex-service men, called additional witnesses.

To leave no source of information untapped and realizing that there were individuals who might not be in touch with Veteran Organizations or with the Central Committees or who felt that they had special views to present, the Commission prepared a questionnaire, (see Appendix), 150,000 copies of which were made universally available by being placed in every Post Office in the Dominion. 3,442 of these questionnaires were answered and returned and a tabulation of the answers has been incorporated in the Appendix. To give general advance notice of the Hearings and of the procedure, a Poster (see Appendix) was displayed in all Post Offices and Veterans' Clubs. All this publicity was in both English and French.

Prior to each sitting, a further notice was inserted in all the local Daily Papers, giving full particulars of the place, date and time of sitting. These latter notices were printed in English, French, Chinese, Japanese and Yiddish.

The itinerary of the Public Hearings of the Commission opened at Halifax on January 24, 1923, and closed at Ottawa on May 24, 1923. Dates and places and institutions visited are shown in the Appendix.

During the itinerary, the Members were also engaged in preparing the Report on the first part of the Investigation concerning the charges in the G.W.V.A. telegram, which Report was presented in February, 1923, as before stated. Concurrently also, the preparation of the First Interim Report on the second Part of the Investigation was begun and same was presented in April 1923 as Report No. 2 of the Commission. This report dealt with:—

- (a) Two urgent matters relating to procedure.
- (b) Appeals from decisions as to pensions and medical treatment.
- (c) Returned Soldiers' Insurance Act.
- (d) Employment of Handicapped men.

After the completion of the public Hearings on the Second part of the Investigation, the Commission set about gathering and studying a large amount of further documentary material along with the evidence and exhibits, which had been received. Information was obtained on various matters, the evidence relating to which, as given on the Hearings, was not sufficiently complete on which to base conclusions.

SESSIONAL PAPER No. 203a

The Commission went into joint session in connection with the Second Interim Report on the Second Part of the Investigation (being Report No. 3 of the Commission) in January, 1924. There was considerable interruption, and that Report was presented on May 8, 1924. It dealt with:—

- (a) Suggested amendments to the Pension Act.
- (b) Soldier Settlers.

Since that date the Commission has been engaged in the preparation of this Final Report which has required a much longer time for its completion than was estimated. In compiling the Report, the aim has been to provide a compendium, under appropriate headings, of the mass of evidence and suggestions presented, giving the necessary references to the pages of the Record.

It was inevitable that the Commission should be regarded as exercising functions something akin to those of a Travelling Parliamentary Committee before which any matter which had the remotest connection with ex-service men's problems could be presented, and not only ex-soldiers but public men and even officials, brought to the attention of the Commission, matters of the most diversified character.

A perusal of the evidence given on the public Hearings will show that the sittings were conducted and regarded as conferences rather than as a judicial Investigation. The opportunity offered for full and frank discussion has resulted, it is believed, in removing much misunderstanding, and so silencing unjust or misinformed criticism. Such discussions were frankly entered into by Returned Men's representatives, the representatives of the D.S.C.R. and of the Pensions Board. Any observer would be struck by the spirit of fairness exhibited and the readiness with which what might be regarded as opposing parties, admitted their error, if such were shown, after a subject was thoroughly threshed out. Anyone who followed the proceedings throughout would readily agree that despite an occasional explosive utterance by an individual or small group, the average returned soldier once properly informed is instinctively fair and reasonable.

The Commission fully realizes the difficulties of the Local Committees, overwhelmed as they must have been with complaints and suggestions from those who did not understand the nature of the Investigation, in selecting and condensing the material pressed upon them. Evidence which must have involved a great deal of work, research and discussion on the part of the Committee preparing it had been collected with care and accuracy, and it was presented effectively and with a full sense of responsibility.

The Commission feels a very deep sense of obligation to these Committees and representative witnesses who so enthusiastically and thoroughly did their part in making the sessions of the Commission useful as a clearing house for ideas and a means of concentrating and disseminating information on the important subjects being discussed.

The attitude of the representatives of the D.S.C.R. and of the Pensions Board, who have had to be referred to constantly for information, has been uniformly courteous and helpful both at headquarters and throughout the units. They have stood ready at all times to furnish freely and unreservedly the assistance which their intimate knowledge of the subjects discussed afforded. This cordial co-operation has been extremely valuable.

Information which could only be secured from other departments was often required and always available. The Commission desires to express its thanks to the officials of these departments who so carefully and willingly prepared and presented it.

All those interested in the matters under consideration are indebted to the representatives of the British and the United States Pensions organizations who gave evidence at the hearings concerning the system and procedure prevailing in their respective jurisdictions. These representatives were:—

Mr. Kenneth J. Milne, of London, England, Assistant Secretary to the Ministry of Pensions of Great Britain.

Dr. L. B. Rogers, of Washington, D.C., Assistant Director Medical Division, United States Veterans' Bureau.

Dean Evans, of Washington, D.C., Chief of Training in the Rehabilitation Division of the United States Veterans' Bureau.

The Commission acknowledges the consideration of various Public Bodies in providing suitable and commodious accommodation for the hearings.

In this report, the Department of Soldiers Civil Re-establishment is spoken of as the "D.S.C.R.", and the Royal Commission, now reporting is designated as the "Commission." In giving references to the pages of the record of evidence, duplication has been avoided, where possible, by not repeating the name of the place where the sitting was held. Where, therefore, a reference to evidence consists of simply a number shown in brackets, it refers to the evidence given at the place next previously mentioned by name.

A copy of the evidence taken on the various sittings of the Commission at Halifax, St. John, Montreal, Vancouver, Calgary, Regina, Winnipeg, Toronto, and Ottawa, consisting in all of 5,800 pages was forwarded with Report No. 3, and some 210 exhibits referred to but not incorporated in the evidence are forwarded with this final report.

## PART TWO

### EMPLOYMENT OF HANDICAPPED MEN

The plan of this portion of the report will be as follows:—

#### A. General Statement.

#### B. Methods of assistance adopted in Canada.

##### I. As to Government undertakings.

- (1) Preference in Government service.
- (2) Sheltered employment.

##### II. As to civilian industry.

- (1) Employment agencies.
- (2) Toronto Rehabilitation.
- (3) Vocational Training.

#### C. Methods adopted or proposed elsewhere.

- I. Activities of International Labour Bureau.
- II. Voluntary Employment.
- III. Compulsory employment.
- IV. Fundamental principles.

#### D. Extent of Problem in Canada.

SESSIONAL PAPER No. 203a

E. Suggestions concerning the principle to be followed and the nature of possible further effort.

I. Principle to be followed.

II. Suggested possible extension of present methods of assistance.

(1) As to Government undertakings.

(2) Civilian industrial undertakings.

III. Possible new methods of absorption.

(1) Manufacturing or trading monopolies.

(2) Compulsory employment.

F. Unemployment Relief Activities.

## A. GENERAL STATEMENT

In its first Interim Report on the second part of the investigation, under the subject of employment service for handicapped men, the Commission stated that this matter had to do with one of the most important soldier questions which the country is now facing, and one which must become increasingly difficult as time goes on. The Commission added that it could not hope, even after there had been an opportunity for the further consideration which the subject required, to find a satisfactory solution for a problem which still remained unsolved in every country which had engaged extensively in the war and which was the result, not only of war service conditions, but of an abnormal economic situation which is world wide.

In discussing this matter, reference will necessarily be made to employment measures in which fit men participate, but the main theme concerns those physically handicapped on account of war service.

## B. METHODS ADOPTED IN CANADA

### I. AS TO GOVERNMENT UNDERTAKINGS

(1) *Preference to ex-soldiers in respect of vacancies in the Government service.*

At the end of the war the Canadian Government was not slow in recognizing in its own services the preference which it owed to ex-service men, particularly those disabled by the war.

The Civil Service Act as amended in 1918 and as further amended in 1921 contains the following clauses:—

“ 39 (2) The Civil Service Commission shall prepare and maintain a special list of persons in receipt of pensions by reason of their services in the war, Nineteen hundred and fourteen to Nineteen hundred and eighteen, who

“ (1) have from causes attributable to such service lost capacity for physical exertion to an extent which makes them unfit efficiently to pursue the avocations which they were pursuing before the war,

“ (2) have not been successfully re-established in some other avocation and

“ (3) desire to be placed on such list.

“ The Commission shall obtain as full particulars of each person on such list, including particulars of his age, education, physical and mental condition, resources and responsibilities, as it is possible to obtain from all available records.

" In all examinations for entrance into the Civil Service, the persons named on such list who are found to possess the necessary qualifications shall be placed in the order of merit on the list of successful candidates above all other candidates.

" (3) In all examinations for entrance into the Civil Service, all persons other than those mentioned in sub-section 2 of this Section who have been on active service overseas on the Military Forces, or who have served on the High Seas in a seagoing ship of war in the Naval Forces of His Majesty, or any of the Allies of His Majesty, during the war, 1914 to 1918, who have left such service with an honourable record or who have been honourably discharged, or when any persons who have served as aforesaid have died owing to such service, the widows of such persons, and who in either case obtain sufficient marks to pass such examinations, shall, irrespective of the marks they have obtained, be placed in the order of merit on the list of successful candidates next after any candidates who are on the special list mentioned in subsection 2 of this Section and above all other candidates.

" (4) The provisions of any statute or regulation prescribing the age limit and physical requirements with respect to any appointment in the Civil Service shall not apply to any person with the Military or Naval Service mentioned in subsections 2 or 3 of this Section if the Commission certifies that he is of such an age and in such a satisfactory physical condition that he is then able to perform the duties of the office and will probably be able to continue to do so for a reasonable period after his appointment."

On June 29, 1922, P.C. 1053 was passed approving the suggestion of the Civil Service Commissioners that certain classes of positions, generally skilled and unskilled labourers, be exempt from the operation of the Civil Service Act under Section 38B and that the selection of employees for the above classes be left entirely in the hands of the Departments but subject to the express condition, amongst others:

" (b) That the preference extended by Section 39 of the Civil Service Act, 1918, as amended, shall be observed."

And the proviso:—

" That a report shall be made by every Department to the Civil Service Commission in the months of January, April, July and October in each year, setting out the name, duties, salary, place of residence and place of employment of each person appointed under the authority of those Regulations during the preceding three months, with the date of commencing duty and the probable duration of employment. In each case where the employee has been on military service overseas the letters 'O.A.S.' should be added after the name."

That the legislation was highly beneficial to ex-service men is proven by the following statistics furnished by the Civil Service Commission:—

APPOINTMENTS MADE BY THE CIVIL SERVICE COMMISSION INCLUDING ALL POSITIONS, PERMANENT AND TEMPORARY

Year	Grand total	Total Males	Ex-service men	Percentage of ex-service men out of male appointments
1920.....	13,470	11,226	5,552	49·46
1921.....	10,951	9,271	4,655	50·21
1922.....	6,442	5,335	2,837	53·18
1923.....	5,016	4,036	2,335	57·85
1924.....	1,379	1,066	721	67·63
(first four months)				

## SESSIONAL PAPER No. 203a

Included in the above, appointments to permanent positions, which were obviously the more important, figured as follows:—

Year	Grand total	Total Males	Ex-service men	Percentage of ex-service men out of male appointments
1920.....	1,765	1,323	922	69.59
1921.....	2,447	2,172	1,434	66.02
1922.....	1,855	1,576	1,161	73.67
1923.....	1,768	1,548	1,166	75.32
1924..... (first four months)	652	481	382	79.41

Which shows that, out of all male permanent appointments made by the Civil Service Commission since 1920, from 69 per cent to 79 per cent were ex-service men, with the percentages increasing each successive year.

In April 1923, the Civil Service totalled 40,000 employees under the Civil Service Commission. Since the beginning of the preference, 35,000 ex-service men have received appointments from the Civil Service Commission. The whole Civil Service comprises about 55,000 employees, out of which about 20,000 are returned men.

As to the number of ex-service men appointed to the positions exempt from the operation of the Civil Service Act by P.C. 1053, the claim is made that such statistics as are available show only 15.8 per cent of these appointees as ex-service men. (Toronto 1817). The Commission has endeavoured to procure more additional data but is informed by the Civil Service Commission that no sufficiently complete records are yet available.

Under P.C. 2944 of August 31, 1921, provision was made whereby disabled soldiers might be trained to occupy vacancies occurring in permanent positions throughout the Civil Service. Up to December 31, 1923, 66 placements had been made, mainly in the Post Office, Public Works, and Trade and Commerce Departments.

## (2) Sheltered Employment.

Sheltered Employment may be defined as employment under conditions where the hours of work are more or less determined by the physical condition of the worker, and where the work itself is of such a character as to fit in with the man's disability. The term "sheltered" does not necessarily connote sheltered from the elements, but sheltered from the strain of competing with fit men. It particularly suits those handicapped ex-service men who, in organized industry under normal active conditions, are permanently or temporarily unemployable.

Following is a summary of classification and description of those handicapped men by a witness who had had large experience in retraining ex-soldiers (Halifax 212):—

1. Mental defectives and morose. Such men should not have been accepted for war service, but authorized agents of the Government attested some of them and they were duly placed in various military units and rendered some or little service before they were discharged. They would probably have been partially dependent on some one, but, because of their service as soldiers felt they have a claim for help from Government agencies. Unless they are imbeciles or idiots they are capable of performing simple routine duties under direction or supervision and, if properly placed, may be wholly or partially self-supporting.

2. Men with mental aberrations, recurrent insanity or other troubles of a like kind produced or aggravated by war service often necessitating a period of treatment in an institution for the insane. Such disabilities always create a prejudice against a man in the mind of the prospective employer. Almost invariably a period of training, closely supervised employment, readjustment and restoration of self confidence should follow the discharge from treatment for serious mental trouble.

3. Neurasthenic and neurological cases. Men with such disabilities often have them aggravated by being turned loose from treatment to face the perplexity of earning enough money to support themselves and dependents by ordinary methods. In many instances supervised congenial employment for part-time is the only efficacious method of treatment.

4. Epileptics. These unfortunate men seem to be almost entirely unemployable in the ordinary sense of the word, because of the prevalent use of machinery in production, even though they may be useful and efficient most of the time.

5. Men who enlisted over age, or with some disability such that a comparatively small additional war disability has produced a person who is not wanted by ordinary employers. These men misrepresented the true state of things when they enlisted but were usually applauded for their bravery and courage at the time.

6. Men seriously shattered and crippled by the war so as to be unable to carry on in an ordinary occupation but who still have a partial productive capacity left if the proper tasks and working conditions are provided.

The question of the need of additional care for the above type of cases was considered, since the end of the War, by the different Parliamentary Committees dealing with the re-establishment of ex-service men. The Parliamentary Committee of the Second Session of 1919 reports (p. 49):—

"During the course of the investigation by your Committee into matters relating to Re-establishment, it was repeatedly brought out that special provision should be made for those functionally neurologically, and mentally subnormal men who cannot be completely taken care of under existing regulations.

"Your Committee recognize that there is an urgent necessity for the establishing of a means to take care of these problem cases. In view of the highly technical and difficult nature of the question they recommend that the Department S.C.R. should take immediate steps to institute a thorough inquiry to determine the need and to recommend the means of best dealing with this difficult problem.

"They further recommend that in the interim, or until such time as proper provision is made for the care of such cases, the Department be authorized to expend the money necessary to make provision for these cases."

This recommendation was embodied in P.C. 2328 of 21st November, 1919, which is the main authority for the expenditure of

"such money as, in the discretion of the Minister, may be deemed necessary to make provision for the cases referred to."

An investigation was started immediately throughout the Dominion and a special investigator was sent to England to gather information relative to sheltered employment and after care work being conducted there.

SESSIONAL PAPER No. 203a

The Special Parliamentary Committee on Pensions and Re-establishment in June 1920 reports (p. 20):—

"With regard to problem cases in general, the time the experiments referred to in the Report of the Sub-committee have been in force, is not sufficiently long to warrant any definite recommendation. Your Committee considers that it would be in the interests of the work, that the matter be left where it is for another year, when it may be possible to submit a concrete proposal embodying plans of a permanent character."

During this time, the D.S.C.R. conducted the experimental handling of these so-called "Problem Cases," and established workshops under Government Control, providing occupation under special conditions, in Toronto, London, Hamilton, Brantford and Kingston. In Montreal, without any assistance from the Department other than providing a building, various Societies (Canadian Red Cross, Y.M.C.A., and Knights of Columbus) acting in co-operation, established a memorial workshop for taking care of "Problem Cases."

The 1921 Parliamentary Committee reviewing the various activities of the D.S.C.R. Reports (p. XIX):—

"The value of the work done in this connection by the Department is evidenced by the large number of men who were felt to be unemployable, having been placed in employment. It is possible that some of these will again come on the strength, but an effort is made as soon as a man is capable of taking employment outside, to provide same for him.

"It should also be borne in mind that for a considerable number of years, men who are now in employment will be unable through their disabilities to continue in competition with fit men, in the ordinary labour market, and *many need a period of sheltered employment before being able to go back to outside work.*

"It is felt, however, that in view of the nature of the provision required, some agency other than Governmental should conduct workshops similar to those being operated at the present time by the Department of Soldiers' Civil Re-establishment. Further, the matter of the cost of operating these workshops will have to be gone into very carefully with the organization to take up this work.

"19. The Department has already examined into the possibility of agencies outside the Government conducting the necessary special workshops or other provisions that may be approved from time to time in accordance with the needs of various centres, and the Canadian Red Cross, who have distinguished themselves in the carrying on of war work, and who it is believed are still anxious to have their organization continue in peace work were thought of and approached. To date, the proposals, which were general in character, have not been replied to by the National Executive, but the Department has been led to believe that the proposals were well received, and that action in the way of further and more detailed negotiations may be expected at an early date.

"Apart from the national organization, however, certain branches have already interested themselves and indeed started to engage actively in the establishing of definite centres of occupation. The work of the Quebec branch in Montreal has been outlined above. The Red Cross of British Columbia have signified their intention of embarking on a similar project within a short time, if, indeed, they have not already commenced operations.

"20. Your Committee has given careful consideration to resolutions forwarded in connection with this subject, and is of the opinion that the need for sheltered employment has been established. Your Committee, therefore, goes on record as being in agreement in principle with the requests submitted by the G.W.V.A., the G.A.U.V. and the Victoria Branch of the Canadian Red Cross.

"From all evidence submitted, it would appear that experiments conducted in other countries, as well as Canada, are not such as to lead to the belief that farm colonies under supervision would have any prospect of success. Your Committee, therefore, was unable to agree that the Government should embark on a definite scheme of farm homes. Your Committee believes that in the "Veteraft" shops, now being operated by the Department of Soldiers' Civil Re-establishment lies the most feasible scheme for the provision of sheltered employment in the larger centres of population.

"21. The recommendations of your Committee, therefore, are as follows:

"1. (a) That the Department of Soldiers' Civil Re-establishment continue negotiations with the Red Cross or other organization, to provide for the establishment under the administrative control of the Association or Organization, such undertaking as may, in the opinion of the Department, be considered to be advisable.

"(b) That until an organization of a definite nature is established, the Department continue to care for these cases as at present.

"2. As respects financial assistance by the Government additional to pension payments to individuals, it is felt that any decision can only be made after further negotiations with the Red Cross or other organizations undertaking the work. It is, therefore, recommended that such negotiations continue, and so soon as a definite basis of assistance is reached the proposal be placed before the Government for final approval".

As the result of a conference held in December 1921 between officers of the D.S.C.R. and members of a Special Committee appointed by the Red Cross, an agreement was entered into by which the Red Cross agreed to operate workshops in certain centres with Departmental co-operation in capital expenditures and operating loss.

The 1922 Parliamentary Committee investigating the same re-establishment needs, classified the ex-soldier for whom relief was sought into (p. XII):—

"1. Those whom real old age has at the time of discharge with or without other disability rendered unfit for employment on the open labour market, and those who are prematurely old from causes either arising out of or entirely unassociated with service. It is needless to say that this group will increase as time goes on.

"2. Those handicapped by severe physical disabilities which are the results of deformities, amputations, or arise otherwise from injuries due to service.

"3. Those with some chronic condition due to service, but who are not included in the tuberculous.

"4. Those who are suffering from some mental or nervous condition in whole or part due to service.

"5. The Tuberculous.

"6. Those who owing to various other causes due at least in part to service are unable to give to any fixed occupation the same extent of efficiency as is expected from a man 100 per cent fit."

## SESSIONAL PAPER No. 203a

The Committee, after reviewing the experimental work in the workshops mentioned above and reporting the opening of new workshops at Victoria and Vancouver, B.C., through arrangements between the D.S.C.R. and the Canadian Red Cross, and after considering whether it was preferable that the conduct of such workshops would be better in the hands of some non-governmental agency, subject in so far as necessary to departmental examination, or whether such workshops should be operated entirely by the Department, expressed the opinion that where it may be considered by the Department better to enter into agreements with non-governmental organizations, it should be authorized to do so, and that the Department should equally be authorized at the outset to assist in the establishing of the shops on a proper basis by providing the capital necessary in the premises, including equipment.

The Committee further stated:—

“that while it might be justly argued that the State has no direct responsibility beyond the payment of pension as awarded, the subject is better treated from a more broad viewpoint but it should be understood that those seeking or participating in the advantages herein expressed, should be responsible on their own efforts and not in the receipt of pay and allowances”.

Negotiations between the Canadian Red Cross and the D.S.C.R. progressed to the point that on December 31, 1923, the Canadian Red Cross Society was operating workshops in Halifax, St. John, N.B., Montreal, Winnipeg, Vancouver and Victoria. In each case the agreement is on the following basis:

(a) That capital invested or involved, including the rental of premises and equipment is borne 85 per cent by the D.S.C.R., and 15 per cent by the Canadian Red Cross. If any alterations or repairs are required in rented premises, not borne by the landlord, the cost of same is included in capital expenditure.

(b) The interest of the two parties in the equipment, property, and buildings is in proportion to the expenditure made by each.

(c) In the event of any deficit in the cost of operation, in which cost is included, among other items, the costs of material, wages of staff, pay to men, lighting, power, gas, and marketing expenses, the Department contributes 75 per cent of such deficit up to a maximum contribution of \$30 (formerly \$25) per man per month, provided that such deficit is only applicable on account of men admitted to the shops under the provisions set out under the agreement. For the purposes of this apportionment the standard month is reckoned as of 175 working hours.

(d) Only pensioners of not less than 20 per cent actual nor more than 80 per cent pensionable disability are eligible for admission to workshops.

(e) Authority for admission is granted through an eligibility board of three members, two of which are appointed by the Department.

(f) Subject to the standing orders of the branch, the operation and control of the shops is totally under a committee of not less than three appointed by the Canadian Red Cross Society. This Committee decides the type of occupation to be provided, the wage to be paid, the purchase of supplies and disposal of product and all disciplinary measures necessary.

(g) Rate of pay by the hour, not exceeding standard rate paid to common labour, pension not being taken into consideration. Working day of eight hours, subject to individual consideration in consultation with Medical Adviser.

The scope of the work undertaken includes wood work of all kinds such as desks, step-ladders, tables, repairing including grass and wicker woven furniture, picture-framing, furniture, boat-making, etc. Other occupations are

weaving of scarves and homespun, knitting, manufacture of poppies distributed on Armistice Day, upholstering, basketry, toys, etc. The work is generally carried on mainly on order from the trade. The selling is helped by several clubs, newspaper advertising, etc. The utilization of the Red Cross organization for the disposal of the products in outside districts by putting on periodical sales is being considered.

The number of men on the strength of the Red Cross workshops on December 31, 1923, totalled 150, distributed as follows: Halifax, 15; St. John, N.B., 22; Montreal, 25; Winnipeg, 28; Vancouver, 31; Victoria, 29.

The average operating cost per man per month (exclusive of capital and rental charges) for the period February 1, 1923, to April 30 last, varied from \$36.41 in Halifax (the whole borne by D.S.C.R. but \$11.87 of which was charged to the local Red Cross pending final agreement) to \$46.50 in Montreal (out of which \$23.86 was paid by D.S.C.R.).

Besides, the D.S.C.R. operate separately Vetaft shops mainly at Toronto and Hamilton with smaller shops in London and Kingston. The total number employed in these Departmental Vetaft Shops on December 31, 1923, was 169, distributed: Toronto, 108; Hamilton, 35; Kingston, 12; London, 14.

The average cost per man per month is very variable depending largely on the price received for the finished product. The D.S.C.R. states that to February last the average cost has been \$58.12 at Toronto and \$48.57 at Hamilton.

As the average pay per man per month in Vetaft shops is possibly \$58.50 exclusive of pension and the average pay in the Red Cross shops is probably higher, it would, thus appear that even under the present poor selling conditions, it has been possible to pay men \$58.50 at a cost of probably \$35.00 to \$55.00 a portion of which cost is absorbed by the Red Cross Society.

To April 30, 1924, the capital costs have totalled \$120,390.23 (\$4,803.45 paid by Red Cross), the rentals \$39,647.72 (\$1,495.55 paid by Red Cross), and the net operating costs \$432,137.80 (\$42,974.59 by Red Cross), or a grand total of \$592,175.75.

Since starting the operation of workshops up to the end of the last calendar year, 954 men have been struck off strength, out of which more than one-half have gone into regular employment, or, owing to increase in their pension, have taken their discharge from the shops. Over 25 per cent have been transferred to the Treatment Branch or have been struck off strength on account of sickness or death, the remainder being apparently still unemployed.

The fact that all the men employed in workshops would be entitled to participate in unemployment relief were they not so employed, must not be lost sight of in considering the cost of these workshops.

Sheltered employment provides valuable assistance in fitting disabled men, otherwise, at least partially unemployable, for regular employment. In the majority of cases these men after long hospitalization have lost all confidence in themselves and in their ability to again successfully take their place in the regular labour market. A few months' experience in the shops in the majority of cases changes his mentality. The man, possibly even to his own surprise, finds that he has a certain earning capacity, his confidence in himself gradually increases and he finally finds himself keener to accept responsibility. Certain classes will never come to this stage and will remain permanently unemployable on the normal labour market.

## II. AS TO CIVILIAN INDUSTRY.

### (1) *Employment Agencies.*

The Federal Department of Labour has a Branch called the Employment Service of Canada, the main function of which is to assist in the solution of the unemployment problem generally. Advising the Minister there is an Employ-

## SESSIONAL PAPER No. 203a

ment Service Council of Canada including representatives from the Federal Department of Labour, the D.S.C.R., the various Provinces, the Trades Labour Congress, G.W.V.A., Manufacturers Association, etc.

Through the agency of the Employment Services Co-ordination Act, accepted by all the Provinces except New Brunswick and Prince Edward Island, the Federal Government undertakes, under certain conditions of supervision and the rendering of certain returns, to contribute up to 50 per cent of the cost of maintenance and operation of the Provincial Employment Offices. (P.C. 954 of May 25, 1923). These returns facilitate the establishment of clearing house methods allowing the transfer of labour from one Province to another, etc. No regulations are in force in these offices for preferential treatment to ex-service men, although as the Commission is informed (Ottawa p. 249), a tacit understanding exists under which, all things being equal, such preference is given. The foregoing only applies to fit men.

With the object of facilitating the absorption of disabled ex-service men into the labour market, the D.S.C.R. has also maintained for a number of years a Handicap Section in the different Unit Offices. At the Annual Conference of the Employment Service of Canada in June 1923 at which provincial representatives were present, it was recognized that the placement of the handicapped ex-service men would be greatly facilitated, on account of their larger number and dissemination, if the activities of the whole Handicap Section were transferred to the Provincial Employment Offices. It was arranged that, when the provinces agreed, efforts would be made that positions suitable to handicapped men would, as far as possible, be preferably made available to them and that the Federal Government through the Employment Service would reimburse to the Provincial Government the whole of the increased expenditures.

Up to date, the provinces of Alberta, Saskatchewan, Manitoba, Nova Scotia and Ontario, have agreed to the scheme. The Department of Labour is still carrying on negotiations with the Province of British Columbia and an agreement is expected sometime this summer. With the Province of Quebec an agreement has also been signed but the Provincial organization is not felt to be sufficiently developed for the present to substantially help in placing disabled ex-soldiers. The D.S.C.R. still keeps employment offices in Ottawa, Kingston, Toronto, Hamilton, London, Montreal, Quebec, Vancouver and Victoria.

## (2) *Toronto Rehabilitation Scheme.*

On the 8th of February, 1924, a conference was held in Toronto between the Honourable the Minister of D.S.C.R. and a committee of leading business and professional men of the city of Toronto, looking towards providing a combined training and employment scheme for the rehabilitation of the partly disabled ex-service men, with a small pensionable disability and a possibly large actual disability not due to service, making them unfit, without help, to compete successfully in the open labour market.

The proposed scheme contained the following points:

1. Partially disabled ex-service men will be placed in permanent employment at a fair cost to the employer and a minimum cost to the Federal Government.
2. Partially disabled ex-service men will receive a living wage during the learning period.
3. The diligent partly disabled ex-service men will be given ample assistance to become rehabilitated, and the persistently indolent men will eventually be eliminated from this section of the labour market and from general relief.

4. All partly disabled ex-service men will eventually be given assistance to become rehabilitated without prejudicially affecting the Federal Government's interpretation of war disabilities.

5. The cost of relief for unemployed partly disabled ex-service men will eventually be reduced to a minimum.

6. The problem of unemployment may become more flexible.

This scheme was favourably received by the Government and, to give it effect, P.C. 798 of the 14th of May, 1924, was passed embodying the main features mentioned above. It provided that those in charge of the work will interview prospective employers and will arrange for the placement of men according to their ability and earning capacity. The amount earned by a man thus placed, plus pension, will be increased by the addition of a bonus to a living wage of 32½ cents per hour during a probationary period. As soon as wages and pension reach 32½ cents per hour the bonus will be discontinued, but the progress of the man will be watched until he is able to earn this amount or more without reference to his pension.

Some 29 prominent business and professional men of Toronto are formed into a general Committee of Rehabilitation in charge of the work. From this committee the government appoints a Board of Trustees of three which is put in charge of all expenditures with a provision that on a resignation, if any, from this board, the ministers are empowered to appoint a successor on recommendation of the General Committee of Rehabilitation.

All regulations and methods of procedure in connection with the operation and general working out of the proposals are left in the hands of the ministers. The D.S.C.R. is authorized to allow the expenditures necessary, such expenditures to be charged against any appropriation granted by Parliament to the department for the relief of ex-service men.

It is estimated that for a twelve month period the cost of the scheme exclusive of administration will not exceed the amount that would be required for the provision of unemployment relief, and that eventually it will result in an appreciable reduction, besides materially relieving the unemployment situation in Toronto in so far as it affects the disabled men. The cost for the first year is figured at \$300,000 out of which \$50,000 would be for administration.

The D.S.C.R. agrees to deposit the sum of \$30,000 at the beginning of the first month of operation to the credit of the Board of Trustees and to, thereafter, meet monthly the expenditures of that Board after making a complete audit as in the case of Departmental accounts.

### *(3) Vocational Training.*

The subject of Vocational Training has been frequently mentioned at the Hearings but, as would be expected, it has largely become a thing of the past so far as re-establishment efforts are concerned.

The principle on which this form of assistance was taken up was that since the ex-service men had become unfitted on account of injury or disease on service to resume his pre-war occupation, and although any loss of earning capacity in the unskilled labour market was presumed to be made up to him by pension, the country considered that he should have assistance in order, if possible, to utilize the remainder of his earning power in some remunerative form of employment. The extent of the responsibility thus assumed has been, it would appear, frequently misunderstood. The intention was, not to provide sustenance for a man and his family for whatever period was necessary to retrain him as a fully qualified journeyman, but to permit him to select, or to select for him, a trade or calling in which his disability would handicap him to

SESSIONAL PAPER No. 203a

the least extent and to afford opportunity for training and instruction in this particular occupation. His earning power at first might be nil and accordingly pay and allowances were granted to ensure the comfort of himself and family. These payments were continued, not until he had been completely trained as an expert craftsman, but until such time as his progress and proficiency made his work sufficiently valuable to enable him to secure employment outside as a useful workman in the particular trade which he had selected. The length of time necessary to accomplish this varied with the trade and the aptitude of the man. Generally eight months was allowed with a minimum of three months and a maximum of twenty-two.

A most extensive scheme of training was entered upon and over 53,000 ex-service men were passed for training from the year 1917 to date. The peak of the work was reached in February 1920 at which time some 26,000 men were in training. This training was not confined to men with a pensionable disability, but many who had minor war disabilities were also extended the privilege if, in medical opinion, their condition was such as to preclude them from taking up their pre-war occupation. While the average length of the training course given was eight months, no special limit to the period of training was laid down by the regulations. The length of course depended on the requirements of the individual case, provided he was doing his full share and taking advantage of the training received.

The basis upon which pay and allowances were calculated was the number in the family. A man with a wife and three children received \$137 a month. When the time came that he was regarded as sufficiently trained to be placed on his own resources, except in the most highly skilled trades, he found, if married a sudden decrease in his income because the employer made no difference between the married and unmarried man. This, no doubt, led to disappointments and in some cases to an unfounded inference that the training must have been insufficient or badly chosen.

Up to the time when the training of the large percentage of those entitled terminated, namely in 1921, the D.S.R.C. maintained, in connection with this work a "follow-up system" for the benefit of the trainees in order to ensure that they were properly placed and to note their progress and the sufficiency of their training as demonstrated in actual work. When from this follow-up system it was found necessary to change the training, action was taken accordingly in cases where the individual himself was not at fault.

A feature which should be mentioned, and which may not be generally known, is that, even in the early days of the system, nearly fifty per cent of the training was done by placing the man in the industry itself, rather than by giving him theoretical instruction in Departmental Schools. This percentage has steadily increased from 1919 so that, at the present time, of the comparatively few who are still on training, probably ninety per cent are being trained in the actual jobs which they expect eventually to take up.

The suggestion most strongly pressed was that there should be a resurvey of all vocationally trained men and that further consideration should be given to men who had been trained in what have since turned out to be for them unsuitable occupations, and to men who had found in practical work that their training was insufficient (Calgary 237, Winnipeg 408,433, Regina 168, Toronto 857 et seq.).

The argument in support of the necessity for these remedial measures was that Vocational Training was necessarily done at high pressure, the work was new, and there must have been a certain percentage of error which only a review could correct. This seems to have been taken into account however. The report of the D.S.C.R. for the year ending December 31, 1922, (p. 21) shows that 5,500

were permitted to change their courses after the commencement of training and that 9,000 were given training for a course longer than eight months. In about 10,000 cases (exclusive of the cases in which the course was automatically extended to eight months) extension of time was granted.

Obviously the best time to consider the suitability and sufficiency of the training was during the period when it was being received, and the figures above would indicate that full consideration was given to proper claims under this head when they were presented. There may be cases which on account of exceptional circumstances were either not considered or through no fault of their own were unable to present conditions which are now apparent, but those must be the rare exception and for these, under the practice of the Department the door is not yet closed if real merit can be shown. (Winnipeg 332).

The general practice now is that training is only given to men in one of the three following classifications:—

1. Released from hospital after long period of treatment.
2. Inability to carry on in previous vocation by reason of increase of disability.
3. Inability to carry on in the occupation for which they had been previously trained on account of an increase of disability.

but as stated, in cases where there are other exceptional circumstances further consideration is still extended.

This provision for individual cases of merit should take care of the class referred to in the evidence, without the heroic measure of a general re-opening of the whole activity, in which Forty-three million dollars have already been spent for training and for pay and allowances while instruction was going on.

Many men are not working at the occupation for which they were trained but it could not otherwise under the sub-normal economic conditions which exist. It must, in the opinion of the Commission, be frankly recognized that the fact that the vocational training student was able to depend on pay and allowances for a substantial period of his transition from military to civil life was in very many cases almost as genuine a benefit as the instruction actually received. It gave him the opportunity to look round and get his bearings and at the same time had in it none of the elements of a gratuity or bonus since he was pledging his time and energy in exchange

## C. METHODS ADOPTED OR PROPOSED ELSEWHERE

### I. ACTIVITIES OF THE INTERNATIONAL LABOUR BUREAU OF THE LEAGUE OF NATIONS

The representatives of the principal National Federations of disabled ex-service men in Great Britain, France, Italy, Poland, Germany and Austria, at a meeting at Geneva in September 1921, requested the International Labour Office of the League of Nations to undertake the study of questions relating amongst others to international protection for disabled men and their re-absorption into industry. The Governing Body of the International Labour Office decided, in April 1923, to give an affirmative reply to the above request and authorized the office to consult and to summon a meeting of experts on the problem of finding employment for disabled men.

On July 31, 1923, the experts met at the International Labour Office of the League of Nations at Geneva under the chairmanship of Mr. Albert Thomas, director of the International Labour Office with Mr. Tixier, chief of the Disablement Service acting as secretary. The following countries were represented: Australia, Austria, Belgium, Canada, Czecho-Slovakia, France, Germany,

## SESSIONAL PAPER No. 203a

Great Britain, Italy, New Zealand, Poland, South Africa. From the British Empire, Australia was represented by Mr. Loftus Hill, Member of the Federal Executive of the Returned Sailors' and Soldiers' Imperial League of Australia; Canada by Mr. R. B. Maxwell, former President of the Great War Veterans' Association of Canada; Great Britain by Mr. J. R. J. Passmore, Training Department, Ministry of Labour, and Lt.-Col. G. Crossfield, Vice-Chairman of the British Legion; New Zealand by General Sir A. H. Russell, President of the New Zealand Returned Soldiers' Association, and South Africa by Brig. General J. S. Wylie, South African Branch of the British Empire Service League. The Permanent Inter-Allied Committee for the study of questions concerning war disabled men was represented by its General Secretary. Others were also present in an advisory capacity.

The experts considered that the question of the employment of disabled men is governed by two essential considerations:

1. Work is an absolute necessity to the majority of disabled men;
2. Although disabled men are obliged to support themselves by their earnings, they are ill-equipped to compete on the open labour market. They cannot hope to succeed against uninjured workers, especially if their working capacity is largely reduced by their disability. Employers are more willing to engage an uninjured worker upon whose output they can rely than a disabled man whose efficiency is presumed to have been more or less reduced and who appears to be more specially liable to the danger of accidents which may have special serious consequences in view of the disability which already exists. Again, the disabled worker sometimes encounters difficulties in his relations with the other workers who feel some apprehension lest the disabled man who is in receipt of a pension should accept work at less than the trade union rate and should thus contribute to the lowering of wages.

In consequence of these difficulties, the disabled men find it hard to obtain employment and are more seriously affected by periods of unemployment than are other workers.

The worldwide problem of re-absorbing disabled men into industry was rendered still more perplexing by the initial errors which were committed and by the general economic crisis. During the war and the months which immediately followed, business was extraordinarily active, and all workers could easily find employment, even those whose output was below normal. These workers were found employment but they were not re-absorbed. As soon as the first signs of the economic crisis appeared those undertakings which were compelled to discharge some of their workers naturally kept the most skilled and thus the majority of disabled men who had taken posts as unskilled workers, were thrown on the labour market. Another error was the failure to recognize the value of vocational training and the supply of suitable limbs and instruments for working. Until the end of the war, it was generally considered that the majority of seriously disabled men could not be made capable of performing any appreciable amount of work and that it was the duty of the State to provide for their maintenance. It has now been proved, however, that owing to the technical and scientific progress which has been made in supplying suitable instruments for work and in organizing vocational training on systematic lines, nearly all disabled men, even if they have suffered very serious mutilation, can work nearly as efficiently as uninjured workers provided they have been suitably guided in the choice of an occupation. When the disabled men found that it was very difficult to obtain work they naturally turned in the first place to the State, in whose services they had received their wounds or contracted their illness. All the belligerent countries laid down by legislation or by regulation that disabled ex-service men were to have preference in obtaining posts in the

public services. The right of preference is organized in widely divergent ways in the various countries. This, though, was found as only a part of the solution of the problem, as vacancies were not nearly sufficient to provide for all the applicants and employment had to be found in private undertakings as well.

In the latter case, two widely different methods were adopted, the first based on the collaboration of the employers, and the other on the adoption of legislation making it compulsory to engage a certain percentage of disabled men. Great Britain adopted the former (voluntary) scheme, nearly all the other countries adopting the latter (compulsory) scheme.

## II. VOLUNTARY SYSTEM—BRITISH NATIONAL SCHEME—KING'S HONOUR ROLL

This form of providing for the employment of disabled men by appeal to the voluntary co-operation of the employers is known in Great Britain as the "National Scheme" or "King's Honour Roll" and was initiated in September 1919.

The object of the scheme is to insure the permanent absorption of disabled men into industry as well as their equitable distribution among the several branches of industry.

The beneficiaries under the scheme are disabled ex-service men only, who are meant to be:

(a) Any man who is in possession of a disability pension, or who has been in receipt of a disability pension while in his present employment but has ceased to receive such a pension while in that employment.

(b) Any man who has received from the Ministry of Pensions a gratuity for a minor disablement or aggravation of a complaint and who is adjudged by the local committee to be incapacitated, either wholly or in part, from following his normal occupation.

(c) Any man who has had a disability pension commuted by the Ministry of Pensions.

All private employers and all public authorities national and local are invited to co-operate in the National Scheme. All employers are asked to employ as many disabled ex-service men as possible, with a minimum percentage of all employed to be fixed by agreement, but normally 5 per cent. It was realized, however, that a lower percentage might be regarded as sufficient in certain cases, as example in industries in which the work is arduous or of a kind on which a substantial proportion of female labour is normally employed. This general percentage of 5 was fixed by taking into consideration the total number of disabled men to whom the scheme applied, compared with the total number of wage earners in the country.

In the case of a firm owning branch establishments or controlling subsidiary firms, it is preferred that a comprehensive undertaking be given by the head office covering the total employees involved. For this purpose the percentage of disabled ex-service men is based upon the number of employees taken as a whole, it being not essential that each branch or subsidiary firm should employ that percentage. The negotiations are carried out by the local Committee in whose area the head office is situated. An employer is allowed to count toward his quota of disabled ex-service men, any disabled ex-service men training in his establishment and any vacancies as to which he gives the Minister of Labour a definite guarantee that they will be filled by disabled ex-service men trained elsewhere.

SESSIONAL PAPER No. 203a

The wages are governed either by agreements between the employers and the National Trade Advisory Committees set up by the Ministry of Labour, or through arrangements in trades where a mode of settling questions of wages is in operation. In other trades, except in cases where his earning capacity is very considerably reduced, the disabled man as a rule has a right to the average district rate of wages. The disability pension is not taken into account in computing the disabled man's rate of wage.

This National Scheme is administered by the Ministry of Labour through the King's Roll Committee or local Employment Committees, to which applications to enroll are submitted. If the local committee recommends the acceptance of the application and the Department agrees, the Minister of Labour issues a certificate to the employer and the employer's name is entered upon the King's National Roll. Employers who agree to co-operate in the National Scheme sign an undertaking in a form drawn up by the Ministry of Labour. The latter issues to the employer a certificate recognizing the undertaking given, and the name of the employer is inscribed on the King's National Roll, which is kept at the Ministry of Labour. When an employer has thus given an undertaking, he is entitled to use on his business stationery a Special Official device, "the Seal of Honour," indicating that he is a participant in the National Scheme for the employment of disabled ex-service men. The Certificate is issued on the understanding that the holder will be prepared at any time to satisfy the Minister of Labour that he is conforming to the undertaking. The Minister of Labour may withdraw the certificate and use of the die at any time if he is not satisfied that the terms of the undertaking are observed. When an undertaking under the Scheme has been in existence for a period of twelve months, it is renewable for a further period of two years.

The Roll contains the names of His Majesty the King, Her Majesty Queen Alexandra, His Majesty's Treasury on behalf of all Government Departments and Government industrial establishments, leading County, Municipal and other local authorities, and most of the largest industrial and commercial undertakings in the Country.

Since June, 1921, Government Contracts are limited, except in very exceptional circumstances, to firms which are on the King's Roll. A number of local authorities have followed the Government's example and have adopted resolutions restricting the allocation of contracts to firms on the Roll.

The National Scheme was put into execution at the end of 1919, with the result that from 1920 to June, 1923, the number of firms enrolled varied from 20,000 to over 30,000 and the number of disabled men employed reached 367,521 with a maximum in early 1922 and a tendency to decrease since. From October 1922 to July 1923 the number of employed remained fairly constant in the neighbourhood of 300,000.

In August 1922, it was estimated that the number of unemployed disabled men in Britain was still between 70,000 and 100,000 and the British Legion, by far the largest ex-service men's Association in Great Britain, claimed that the appeal to the voluntary co-operation of employers under the National Scheme had failed. In May, 1923, the Legion in Annual Conference adopted a resolution calling upon the Government to bring forward a Bill embodying the principle of compulsion in order to secure employment for all disabled men out of work. The House of Commons set up a Select Committee,—

"to examine and report upon the systems adopted in other Countries to provide for the employment of disabled ex-service men and to recommend a system which men who have suffered disablement in the service of the Country may be secured employment."

After many meetings, the Committee found that the voluntary system was failing and that it was necessary either to await a revival of trade or to constitute the voluntary system on a different basis or to adopt compulsion. It recommended amongst other measures:—

"1. That a further effort should be made to obtain employment for disabled men on a voluntary basis by partially recasting the existing voluntary system.

"2. That the principle to be adopted should be that of decentralization and devolution of duties and responsibilities to local bodies, with local knowledge and local enthusiasm, whose services in general should be honorary.

"7. That a Central Statutory Body, a King's Roll National Council should be set up to control generally, supervise and co-ordinate the activities of the County and County Borough Committees, and that it should be composed of representatives of both Houses of Parliament, of all Government Departments concerned, of employers, Trades Unions, and ex-service men's organizations. This body should work under the aegis of and derive its power from the Ministry of Labour, which would be responsible for the provision and regulation of public funds.

"8. That the problem of the severely disabled ex-service men should be dealt with by the King's Roll County and County Borough Committees . . . . . by the encouragement of voluntary institutions and home industries with limited State assistance. . . . .

Its general conclusions were:—

"So urgent is the problem that the Committee recommend that their proposals should be carried into effect forthwith, and the necessary legislation passed during the autumn session. But should the figures show that the problem has not, by the first of May, 1923, been successfully dealt with on the lines proposed, recourse should then be had to a form of compulsion modified in character and scope as circumstances may dictate".

The giving effect to a majority of the above recommendations improved the situation to some extent. The National Council, instituted in February 1923, reported in June following that the system of decentralizing voluntary effort for the benefit of disabled men, and of interesting the local authorities in the matter, is the right one. The essential principle of its work was to appeal to local enthusiasm, to the local personal interest of the employers and to the spirit of local competition. The Council concluded:

"that if the winter does not bring another unemployment crisis and if local enthusiasm was kept up, it will be possible with the assistance of the local committees and the press to improve the facilities for the employment of disabled men without having recourse to compulsion".

That the National Scheme as far as it went has been useful, there can be no doubt, but that it has permanently solved the problem of providing employment for an adequate number of disabled ex-service men, is still at least very doubtful as seems proven by the fact that, in June 1923, a Bill for the Compulsory employment of disabled ex-service men was introduced in the British House of Commons by a private member but later withdrawn and that, in May 1924, a second bill

"to compel all employers to employ a certain percentage of disabled ex-service men, the employers to be given two years to adjust their establishments to the new requirements."

was introduced in the same House, and although not disposed of to date had, at last reports, been unanimously given a second reading.

SESSIONAL PAPER No. 203a

## III. COMPULSORY EMPLOYMENT OF DISABLED EX-SERVICE MEN

In France, Germany, Austria, Poland, Italy and the Kingdom of the Serbs, Croats and Slovenes, legislation has been adopted with a view to making it compulsory for employers to engage a certain percentage of disabled men. In Hungary the Government has included a clause relating to compulsory employment in a bill concerning assistance for disabled men. In Czechoslovakia the Ministry of Social Affairs has drafted a bill of the same character.

The arguments brought forward in these countries in favour of the system of compulsory employment may be summarized as follows:—

“Disabled men are entitled to compensation for the disadvantage under which they are placed owing to their disabilities or ailments contracted in the service of the nation. The right to work is only one form of the general right to compensation. The realization of this right to work cannot be obtained without legal intervention because disabled men are placed in an altogether disadvantageous position by the free play of the forces of supply and demand of a general labour market”.

The system of voluntary collaboration of employers does not secure the permanent absorption of all disabled men. On the one hand, it is very difficult for the seriously disabled to find employment, and a number of them remain out of work. On the other hand, the periodical renewal of the undertakings entered into by employers, undertakings which may moreover be cancelled at any time, do not offer disabled men guarantees of the security and stability which they need and to which they are entitled.

The system of compulsory employment alone can secure the fair distribution of disabled labour among employers. Further, compulsory employment, by imposing on employers a definite and lasting obligation, leads them to investigate the possibilities of adapting their equipment and of placing disabled men in posts in which their output is likely to be normal or almost normal.

*1. Persons covered by Legislation.*

In Germany, the legislation applies to ex-service men as well as to persons disabled in industrial accidents and other disabled persons, whatever the origin of their infirmity. In Austria, the legislation applies to seriously disabled ex-service men and to a few limited categories of persons seriously injured in industrial accidents. In Poland and Italy, the legislation applies exclusively to seriously disabled ex-service men. In France, the bill adopted by the Chamber of Deputies grants the right to compulsory employment to members of the Land and Sea Forces who hold a final or temporary pension.

*2. Scope of Application of Legislation and Regulations and Percentage of Disabled Men to be Employed.*

(a) In Germany the compulsion applies both to private undertakings and to public departments whether Federal, State or Municipal, and it covers agricultural as well as industrial and commercial undertakings. In practice, the obligation has only been applied to public services employing at least 25 manual and non-manual workers and private undertakings employing at least 20 workers. The proportion of disabled men which must be employed is normally 2 per cent.

(b) In Austria, the legislation applies to industrial undertakings of all kinds, mining, agricultural and forestry, and in general, all undertakings carried on for the purpose of gain, and employing not less than 20 workers. The number of disabled men to be employed in each undertaking averages 4 per cent of the total staff.

(c) In Poland, the legislation applies to agricultural, commercial, industrial and transport undertakings employing not less than 50 manual or non-manual workers. The compulsion averages 2 per cent.

(d) In Italy, the legislation applies to public services and private undertakings, of whatever nature, employing more than 10 male paid workers, and the average compulsion is 5 per cent.

(e) In France, the legislation applies to all industrial and commercial undertakings employing during the current part of the year more than 10 paid workers of either sex over 18 years of age, whether of French or other nationality, and all agricultural undertakings which similarly employ more than 15 paid workers. The general proportion of compulsion is 10 per cent.

### 3. *Administrative Organization.*

In practically all cases the administering organizations for the finding of employment, in the above-mentioned countries, is through public or provincial employment exchange and in certain cases through special employment agencies attached to central offices.

### 4. *Conditions of work.*

The conditions of work including wages and periods of notice for dismissal, are variable in the different countries, but, generally speaking, the wages are fixed without taking the pension into consideration. In many instances the disabled man whose output is normal must receive the normal wage of his category and in many cases special regulations apply as to period of notice, two to four weeks being necessary before dismissal.

### 5. *Bodies responsible for application and supervision, appeals, penalties, fees and other compensatory taxes.*

Equally provisions vary considerably on these matters. The Ministry of Labour is generally the body responsible for the application of the Act. Appeals as to wages are in some instances decided by the ordinary courts. The penalties vary from, in France, 3 francs per working day per disabled man not employed to, in Poland, 1,000,000 marks or not less than six week's detention. The fees and compensatory taxes in certain cases, as in Poland, apply to all; in Austria, to those exempt from the application of the Act; and in Germany, Italy and France these fees and taxes do not apply to those totally or partially exempt.

## IV. FUNDAMENTAL PRINCIPLES

As the foregoing situations in different countries were being placed before and explained to the experts in Assembly, they were asked to summarize fundamental principles and formulate conclusions which might serve as the ground work for a satisfactory organization for the employment of the disabled. The points to be considered were:—

### " 1. *In defining the persons entitled to compulsory employment:*

" (a) Should legislation be of a temporary character and apply exclusively to ex-service men, or should it be of a permanent character and apply to persons disabled in industrial accidents and all disabled persons?

" (b) Should legislation apply to all disabled persons or only to certain categories, and, if so, what are the principles according to which the categories should be determined?

## SESSIONAL PAPER No. 203a

" 2. *Relative to problems connected with the scope of application of legislation and the fixing of the percentage of disabled men to be compulsorily employed:*

" (c) Should compulsory employment apply to all undertakings or to certain categories only?

" (d) In the latter case, in what manner should the undertakings exempted from the obligation be defined? Should exemptions be allowed to undertakings in which, owing to their nature, it is difficult to employ disabled men? Should the obligation apply to small undertakings, and is it desirable to fix a minimum number of workers below which the obligation does not apply?

" (e) Should the undertakings exempted from compulsory employment be required to pay fees or compensatory taxes? If so, on what principles should such fees or taxes be calculated?

" (f) Should legislation fix a general percentage applicable to all undertakings, or should a special percentage for each category of undertakings be fixed by decree or administrative regulation.

" (g) If a general percentage is fixed, on what basis should it be calculated?

" (h) In what manner should the special percentage for each category of undertakings be fixed, and on what basis? Have any trustworthy technical investigations been made into the percentage of disabled men which can be employed by the various categories of undertakings without injuring their efficiency?

" 3. *Relative to the administrative organization for finding employment for disabled men:*

" (i) Should it be entrusted to the public employment exchange responsible for finding employment for ordinary workers, or to special organizations attached to the offices, dealing with questions especially affecting the disabled?

" (j) Should it be made legally compulsory for employers to notify the employment exchanges of vacancies which have to be allocated to disabled men?

" (k) Should any period be fixed within which the vacancies must be notified to the employment exchanges?

" (l) Should any period be fixed within which the employment exchanges must submit candidates to fill the vacancies notified to them and after which employers become free to engage disabled or other workers?

" (m) Should it be made compulsory for employers to have recourse to the employment exchanges to obtain the statutory number of disabled workers or should they remain free to engage such disabled workers (1) before notifying the employment exchanges of the vacancies (2) before and after notifying the employment exchanges of the vacancies.

" 4. *As to the protective measures relating to the wages and discharge of disabled men:*

" (n) Is it desirable to adopt legislation regulating the wages of disabled men?

" (o) Should employers be forbidden to take disabled man's pension into account in fixing his wages?

"(p) Should the wages of the disabled man be fixed without regard to his vocational capacity, or should a certain relation be established between the wages paid and the vocational capacity, and, if so, what should the relation be?"

"(q) Should legislation be adopted laying down special regulations for the discharge of disabled men, and if so, what special measure for the protection of disabled men are necessary?"

"5. *Finally, as to the Application and supervision of the legislation, Appeals Penalties and Fees or Compensatory Taxes:*

"(r) Is it desirable to set up special organizations for the application and supervision of the finding of employment for disabled men, or is it desirable to make use either of disabled men's committees, or of the officers responsible for the welfare of disabled men, or of the administrative organizations responsible for supervising the application of the legislation and regulations relating to labour in general?"

"(s) Is it desirable to set up special courts to deal with disputes arising out of the employment of disabled men, or should such disputes be submitted to existing courts (civil, commercial and industrial courts, etc.)?"

"(t) Should undertakings which are not subject to the obligation of employing disabled men be required to pay a fee or compensatory tax?"

The experts carefully considered all the above questions, and after six sittings and much discussion, came to the following general conclusions:

*A. Fundamental Principles:*

"1. In the firm conviction that the nations are unanimous in desiring that the men who have suffered in their service should enjoy the facilities for obtaining an adequate and steady means of livelihood which they would have had if they had not been disabled, independently of the pension which they receive, by their own productive work, and further that in view of the immense amount of wealth consumed by the war, it is in the interest of society that all makes of production should be fully utilized by a rational organization, and that in consequence disabled men should be enabled to work to the fullest extent of their capacity.

"The experts are definitely of the opinion that it is *pre-eminently the duty of the State to assume complete responsibility for the means of livelihood and welfare of those disabled during the war*, and are further of the opinion that such responsibility may be discharged by introducing legislation and otherwise devising means whereby disabled men shall be enabled to find employment and to contribute to the fullest extent of their capacity towards national production.

"2. While agreeing that during the years immediately following the war a system of employment based upon the voluntary collaboration of employers by means of renewable agreements has yielded, and may still yield important results, the experts consider that in densely populated countries with a large proportion of disabled men this system cannot ensure an equitable distribution of disabled labour among employers, and does not furnish to the disabled the necessary permanent guarantees of employment in the future to which they are entitled. They declare that in order to insure definitely and finally the permanent employment of the disabled man, it is absolutely necessary to have recourse to the

SESSIONAL PAPER No. 203a

legal obligation of employment, taking into account the varying conditions of labour prevailing in different countries, and call the attention of the governments to the fact that neither such a system of legal obligation nor the system of voluntary collaboration will adequately provide for the care of disabled men in their old age and consider that it is primarily the duty of the State to take the necessary steps for attaining this object.

*"B. Essential Provisions to be Included in all Legislation, Regulations or Agreements relating to finding employment for disabled men:*

*"1. Persons entitled to benefit:*

*"(a)* All legislation, regulations or agreements should be applicable to all disabled men in receipt of pensions whatever methods of compensation are adopted by the Pensions Legislation;

*"(b)* All legislation, regulations or agreements should be of a permanent character;

*"(c)* The experience acquired in safeguarding the employment of the war-disabled could appropriately be applied for the benefit of disabled workers and other disabled persons.

*"2. Undertakings covered by Legislation, Regulations or Agreements:*

*"(a)* All legislation, regulations or agreements should be applicable to all undertakings in which the minimum number of workers employed reaches or exceeds a certain figure to be fixed in each State;

*"(b)* Undertakings subject to such legislation, regulations or agreements by virtue of the number of persons employed therein should, however, be able on application to obtain exemptions when it is proved that the employment of disabled men in such undertakings is impossible or particularly difficult. Such exemptions should be granted by authorities entrusted with the application of such legislation, regulations or agreements, in which the associations comprising disabled men and the trade organizations affected should be represented;

*"(c)* Undertakings subject to such legislation, regulations, or agreements which obtain exemptions should be liable to the payment of a compensatory tax or charge, the produce of which should be applied for the benefit of the persons entitled to the benefit of such legislation, regulations, or agreements.

*"3. Percentage of disabled men to be employed:*

*"(a)* All such legislations, regulations or agreements should fix a general percentage of disabled men to be employed. Such percentage should, in each State, be calculated having regard to the total number of wage earners, the number of disabled men entitled to benefit and the variations from the general percentage which it may be necessary to allow to certain undertakings or certain classes of undertakings;

*"(b)* Variations from the general percentage should be allowed to undertakings applying for the same, when it is proved that it is impossible or very difficult for them to attain the general percentage. Such variations should be granted by the authorities entrusted with the application of such legislation, regulations or agreements, in which the associations comprising disabled men and the trade organizations concerned should be represented.

*"4. Administrative organization of employment agencies:*

*"(a)* In Countries which, in conformity with the decisions of the International Labour Conference at Washington, have established a

general and complete system of public employment agencies, under the control of a central authority, with provision for the joint consultation of employers and workers, it would be desirable to entrust the application of such legislation, regulations and agreements to such public employment agencies;

"(b) Such public employment agencies should, wherever necessary and particularly in the larger towns, establish special sections for finding employment for disabled men. Such sections should act in close co-operation with any Government Department dealing with disabled men and with the Associations comprising disabled men;

"(c) The Committees administering the public employment agencies should include representatives of any Government Department dealing with disabled men and of the Associations comprising disabled men, who should be directly entrusted with application of the legislation, regulations or agreements relating to the employment of disabled men;

"(d) The action of the public employment agencies should be supplemented, wherever it is considered necessary, by the action of any Government Department dealing with disabled men and of the associations comprising disabled men;

"(e) In States possessing both a system of public employment agencies and a general system of social welfare institutions for the benefit of all classes of disabled persons, whatever be the origin of their disability, such institutions which possess great experience of the medical and vocational aspects of the problem of the disabled, might be entrusted with finding employment for disabled men. Such institutions should, in the matter of finding employment, act in close collaboration with the public employment agencies.

#### "5. *Wages of disabled men:*

"(a) The amount of the pension of a disabled man should not have any effect on wages, but wages should be fixed independently of the pension;

"(b) In principle, the wages of a disabled man should be equal to the normal current wages of ordinary workers carrying on the same vocation in the same district, and should be subject to the additions of every kind payable to ordinary workers according to the same methods of calculation. Nevertheless, in Countries in which, owing to the economic situation, the employment of all disabled men on full wages is not possible, and in very exceptional cases in which, notwithstanding the efforts made to secure adequate vocational re-education and vocational guidance, the vocational capacity of the disabled remains appreciably reduced, it is admissible that such disabled men should not receive the whole of the basic wages of ordinary workers, but subject to the following reservations:

"(aa) Such reduction shall not apply to cost of living bonuses and increments on grounds of seniority, or to any payment based on other considerations than output. (bb) The conditions in which and the limits within which such reductions of wages may be allowed shall in each State, be the subject of provisions contained in legislation, regulations, and agreements, and agreements of service, involving such reductions shall be subject to approval by authorities including representatives of the associations comprising disabled men and the trade organizations concerned; (cc) The associations comprising disabled men shall be empowered to take legal proceedings for enforcing the penalties and

## SESSIONAL PAPER No. 203a

damages imposed by the general labour legislation and the legislation, regulations or agreements especially applicable to the employment of disabled men.

*"6. Dismissal:*

"In all such legislation, regulations and agreements, disabled men shall be especially protected against wrongful dismissal, both by the provision of a period of notice and by providing for the submission of disputes between a disabled man and his employer to one of the authorities entrusted with the application of such legislation, regulations or agreements in which the associations comprising disabled men and the trade organizations concerned shall be represented".

#### D. THE EXTENT OF THE PROBLEM IN CANADA

The number of disabled ex-service men unemployed to-day in Canada cannot be much better than guessed at.

It was stated in the evidence (Toronto p. 1422) that a survey was made in early 1922 of the unemployment conditions in the Province of Ontario and statistics were obtained from 15 cities (outside of Toronto and Ottawa) in which the Provincial Government operated Employment Bureaux. The survey showed that in the above cities, out of the total unemployed, from 58 per cent to 80 per cent were ex-service men.

It is further stated (1423) that from a report submitted to the Federal Government from 6,000 firms, representing 743,128 men, 156,000 less men were employed at the beginning of 1922 than during the standard year 1920. Out of these, 101,400 or 65 per cent would have been returned men; or, in other words, while unemployment amongst the civil population only represented  $2\frac{1}{2}$  per cent, amongst ex-soldiers it represented 20 per cent.

This high percentage of ex-service men unemployed may be partially explained by the fact that the Government Relief payments being then made, might have induced employers, who were reducing their staffs, to start by dismissing ex-service men, knowing that they would be helped anyway. (1422).

In reply to a questionnaire, the various Superintendents of the Employment Bureaux of Ontario supplied the information that in 1922, while the Civil Unemployment had been practically absorbed in industry, the percentage of unemployed ex-service men remained stationary. In April, 1923, it was reported (1433) that the total number of ex-service men, heads of families, assisted by the City of Toronto through the House of Industry was 2,104 from April, 1921, to April, 1922, and 2,137 or an increase of 2 per cent during the following year, whilst during the same period the Civilian Relief had decreased 35 per cent. Reports of the Dominion Bureau of Statistics would show that taking January, 1920, as normal, employment in March, 1921, was 12 per cent, in March, 1922, 18 per cent, in March, 1923, and January, 1924, 10 per cent below normal. In Toronto, statistics showed March, 1921, as 18 per cent, 1922,  $11\frac{1}{2}$  per cent and 1923, 14.3 per cent below normal.

On the other hand, the number of disabled ex-service men who had applied to the D.S.C.R. and who were classed pending placement on February 2nd, 1924, was 2,841, distributed as follows: Halifax, 53; St. John, 12; Montreal, 779; Quebec, 38; Ottawa, 177; Kingston, 35; Toronto, 948; Hamilton, 169; London, 40; Winnipeg, 232; Regina, 34; Calgary, 33; Vancouver and Victoria, 291.

The figures of the above distribution are an absolute minimum, as a probably large number of unemployed disabled ex-service men in addition, possibly over 3,000, had not at that date, applied to the D.S.C.R. offices for employment.

This last estimation is based on the fact that the Department of Labour, as in February, 1923, from returns submitted by 5,768 firms employing 729,950 persons, estimates that 11.3 per cent of the labour market in Canada is unemployed. The total number of living disabled pensioners of all classes as at December 31st, 1923, is 43,289. The number of pensioners who accepted final payment is 24,618 but it is estimated that 500 have since died and 1,200 have been reinstated, leaving a total number of men who have received final payment 22,518. 2,888 disability pensioners reside in the British Isles and 3,864 in the United States. Of those who received final payment 3,680 reside out of Canada. The total number of disability pensioners and final payment pensioners still living in Canada may be thus estimated at 55,375, 11 per cent of which would represent over 6,000 disabled unemployed.

Notwithstanding the Toronto figures first mentioned, it may be fair to assume that the percentage of unemployed disabled ex-service men is probably lower than that of the general labour market in view of the preference given in the Civil Service, but, on the other hand, it must not be lost sight of that many disabled men with relatively low pensions are classified as employed although possibly deriving a very small and inadequate remuneration for their services, and should better opportunities for them be offered, they would undoubtedly become candidates for more remunerative employment. It is equally fair to call attention to the fact that the number of unemployed increases gradually yearly, during December, with signs of improvement only with the start of building operations in April.

## E. SUGGESTIONS CONCERNING THE PRINCIPLE TO BE FOLLOWED AND THE NATURE OF POSSIBLE FURTHER EFFORT.

### I. PRINCIPLE TO BE FOLLOWED

The Commission has hereinbefore collected expressions which might be taken to indicate the extent of the State's responsibility for the employment of the man who is partially incapacitated by war service. To determine the principle which is to govern is extremely important. The Commission has not found any absolutely clear and distinct pronouncement in Canada, but the efforts which have been made to assist in the employment of the partially disabled by Vetacraft and Red Cross workshops and by Vocational Training recognize the moral, if not the legal responsibility of the State to provide facilities for utilizing the residuum of earning power even though compensation is made, by pension, for the loss of earning power which service has caused. The Parliamentary Committee of 1922 called attention to the distinction between the legal responsibility for pension and the much more indirect obligation to provide employment, but the report of that committee (p. xiv) seems to concede the latter liability, at least by implication. It says:—

“Your Committee expresses the opinion that while it might be justly argued that the State has no direct responsibility beyond the payment of pension as awarded the subject is *better treated from a more broad viewpoint* but it should be understood that those seeking or participating in the advantages herein expressed should be responsible on their own efforts and not be in receipt of pay and allowances”.

The 1921 Parliamentary Committee in considering the necessity for sheltered workshops says (p. xix):—

“It should also be borne in mind that for a considerable number of years, men who are now in employment will be unable through their dis-

## SESSIONAL PAPER No. 203a

abilities to continue in competition with fit men, in the ordinary labour market, and *many need a period of sheltered employment before being able to go back to outside work*".

Further down in the same Report the Committee definitely adds:—

"Your Committee has given careful consideration to resolutions forwarded in connection with this subject, and is of the opinion that the need for sheltered employment has been established. Your Committee, therefore, goes on record as being in agreement in principle with the requests submitted by the G.W.V.A., the G.A.U.V., and the Victoria Branch of the Canadian Red Cross".

The conclusions of the experts, consulted by the International Labour Office of the League of Nations, quoted previously in this Report, very clearly and definitely state the liability which they consider the State should accept, as follows:—

"The experts are definitely of the opinion that it is pre-eminently the duty of the State to assume complete responsibility for the means of livelihood and welfare of those disabled during the war, and are further of the opinion that such responsibility may be discharged by introducing legislation and otherwise devising means whereby disabled men shall be enabled to find employment and to contribute to the fullest extent of their capacity towards national production."

But this general principle is somewhat modified in considering:—

"Countries in which, owing to the economic situation, the employment of all disabled men on full wages is not possible. ...."

The claim which was made at Montreal (222) on behalf of ex-service men was stated as follows:—

"My conception of it is whatever the man's disability is, and he cannot get a job on the labour market, he should be given employment by the Government under Government supervision. If he has a 40 per cent disability, the Government should find him employment so that he may earn the other sixty per cent".

And again (547):—

"It is up to the Government to look after him in some way or other. If he does not get a pension sufficient to keep him and his family, there is no doubt that he should be given sheltered employment so as to make up the difference between the pension he is getting or should get. .... and enough to keep his wife and family".

(See also Calgary 236-8, Winnipeg 153, Toronto 858, 919, Vancouver 248).

The Commission considers that these claims are too broad. An enunciation of an equitable principle to govern these cases would be, in the opinion of the Commission, that where ex-soldiers, receiving over 20 per cent pension are, after reasonable and diligent efforts, unable to secure employment, the State is not absolved from liability until employment opportunity in proportion to that enjoyed by the normal man for his 100 per cent capacity is provided for whatever substantial remnant of working capacity the pensioner may have.

## II. SUGGESTED POSSIBLE EXTENSIONS OF PRESENT METHODS OF ASSISTANCE

### (1) As to Government Undertakings:

(a) *Civil Service Preference*.—The Commission has already referred to the large percentage of positions given ex-service men under the provision for them in the Civil Service Act and has called attention to the percentage of disabled

men who have received the benefit of the super-preference provided for this class. As has been stated, a large number of positions in the outside service were by P.C. 1053 exempt from the jurisdiction of the Civil Service Commission and placed entirely under departmental control. As to these, it is definitely laid down that the preferences prescribed by the Civil Service Act are to be observed. The transference, therefore, would not deprive soldier applicants for these positions of the priority previously enjoyed. Reference has been made to the claim that this special treatment has only been accorded to a comparatively limited degree.

The suggestion was made (Winnipeg 314) that there should be less stringency in examinations for ex-service men in connection with non-technical positions. The Commission can only assume that the examinations for these positions are not more strict than the qualifications for the position demand and, if that is so, the fact that the ex-service man who passes an examination is placed above all the other applicants no matter what his standing in the examination may be, ensures to him, from the examination standpoint, as much preference as can be reasonably expected.

(b) *Other Suggestions as to Government Employment.*—On this point a great variety of proposals were brought forward ranging all the way from the proposal that Government contracts should not be awarded except to contractors who employed a certain percentage of disabled men, to a suggestion that 10 per cent of ex-service men should be employed in all Government offices and that dismissals of men who had not served be made so far as necessary to create the requisite vacancies. The Commission summarizes herewith the references to some of the suggestions received:—

That there be a pool of all ex-service men in the Civil Service (Toronto 1819).

That war service be considered in fixing seniority (Montreal 600).

The more general employment on the Canadian National Railways of disabled ex-service men (Winnipeg 781).

The transference of Rural Postmasterships to the jurisdiction of the Civil Service Commission (Regina 92).

The amputations representatives, in discussing employment, very fairly put the problem not only of their group but of all the partially disabled. Their summary of suggestions as to employment was equally applicable to all handicapped men.

They did not attempt to advocate any new system or any radical change in existing facilities. They concentrated on the necessity for activating and improving principles already accepted, such as Government and Civil Service preference, training for departmental positions, and further efforts towards absorption of these men into industrial enterprises. Three other matters were mentioned by them:—

(a) The precarious position of ex-service (as well as other) employees of the Soldier Settlement Board, D.S.C.R. and Income Tax office under P.C. 2958, which excludes them from the list of employees occupying what are regarded as permanent positions (Toronto 1271).

(b) Compulsory employment of a certain percentage of disabled men on all State contracts (Toronto 1294).

(c) Representation of Amputations on the Civil Service Commission organization (1277).

The Commission can only make the foregoing proposals, suggestions and representations matters of record for the consideration of the authorities concerned. It is convinced that every reasonable effort is made by the D.S.C.R.

SESSIONAL PAPER No. 203a

to forward the claims for employment of partially disabled men and any improvement along almost any of the lines indicated in these proposals must come primarily through negotiation rather than by legislative enactment.

The Commission does, however, consider that further efforts are warranted to improve the position of ex-service employees of the Soldier Settlement Board, D.S.C.R. and Income Tax Office with a view to having a certain length of service together with a certificate of efficiency taken as entitling them to special consideration for employment without examination, in other branches of the service. The Commission is also of the opinion that there must be opportunities for absorbing more disabled men in the organization of the Canadian National Railways where the variety of occupations permit the useful employment of almost every class of handicapped man.

Regarding the proposal by the Amputations Association for representation on the Civil Service Commission organization, the Commission is of the opinion that, while this cannot be applicable to any one group, there is good ground for direct representation there of ex-service men as a class, in view of the fact that that organization is the agency through which Parliament has provided the machinery to make effective the cardinal principle of the priority of ex-service men.

(c) *Sheltered Employment.*—The system of sheltered workshops now in operation in Canada has already been described. The extension of sheltered employment establishment and facilities was urged with a great deal of force, particularly at Vancouver (264-5 et seq), where it was discussed with considerable detail. It was advocated that there be some Central Federal Service for purchasing and marketing the products of sheltered workshops and that a Central Research section be created analogous to the Rural Industrial Intelligence Bureau affiliated with the Development Commission in England, for the purpose of making investigations regarding the economic possibilities of establishing new industries, studying market intelligence, technical matters including designing processes, the possibilities of manufacturing goods now largely imported, and generally gathering information which would be of value in connection with these industries. Such a Bureau, it was suggested, might form part and make use of the present machinery and organization of the Department of Trade and Commerce. The establishment of any Central Agency will not, however, lessen the desirability of fostering special industries not hitherto carried on in the locality concerned in order to eliminate as far as possible the objection to Government assistance of workshops in competition with private undertakings.

The Commission is convinced that the most satisfactory method of operating workshops for the employment of partially disabled men is through civilian agencies such as the Red Cross, and its opinion is that active steps should be taken for the completion of the chain of Red Cross workshops across Canada including the provinces where workshops entirely under Departmental operation now exist. The Report of the 1921 Parliamentary Committee previously referred to, points out very definitely the need for facilities for sheltered employment which these workshops fill.

## (2) *Civilian Industrial Undertakings*

(a) *Employment Office Service.*—Frequent suggestions were made that there should be close liaison between the D.S.C.R. and the local employment bureaux to ensure that ex-service men were being given first consideration through those agencies. The Commission has no reason to doubt that close touch is kept in this respect although the official connection is necessarily indirect on account of the fact that the D.S.C.R. is not a party to the agree-

ments respecting the operation of employment offices entered into between the Department of Labour and the Provincial Authorities. The Commission is of the opinion that Provincial Employment offices should be asked to keep a record and make a return periodically of the number of ex-servicemen, disabled and otherwise, who apply for or are placed in employment. It was stated (Ottawa 252) that such record was abandoned with the idea that the knowledge that the applicant was an ex-service man might act as a deterrent with prejudiced employers. This does not prevent, however, the keeping of the office record.

The Commission recommended in its First Interim Report on the Second Part of the Investigation (p. 26) that the co-ordination of the D.S.C.R.'s Handicap Section with the Provincial Bureaux be completed and put into operation without delay. This has been done except respecting the province of British Columbia, and the completion of negotiations to that end is highly desirable.

(b) Government Contracts.—Suggestions were made that a requirement be exacted of Government tenderers and contractors that they employ a certain percentage of disabled ex-service men (Vancouver 258, Calgary 238-9, Ottawa 293). This proposal is, the Commission thinks, well worthy of consideration. It would only mean, in effect, that these collateral services would be brought under the terms of the preference already afforded within the Government organization proper.

*(c) Voluntary Absorption into Civilian Industry:*

(aa) King's Honour Roll.—It is by no means certain that the method of procuring the co-operation of employers in Canada by persuasion and inducement to take on more disabled men in existing industries has been exhausted (Vancouver 248). As it was expressed at Vancouver (244,345) there is a niche for each man with a substantial (although impaired) degree of working capacity. The difficulty, particularly in times of trade depression, is to find the appropriate niche. An outstanding example is the Ford Plant at Detroit where there are said to be (Vancouver 345) nearly 10,000 sub-standard men employed, some of them very heavily handicapped, including one with both arms off and four with amputation of both legs or feet.

The King's Honour Roll Scheme, which has been described in discussing activities in other countries, and which for a considerable period worked so successfully in Great Britain, may with necessary modifications still be found to be effective in Canada. The D.S.C.R. has already removed the objection made by employers to taking on disabled men, on account of increased liability under the Workmen's Compensation Acts, by paying the assessments in respect of such men (see 1922 Parliamentary Committee Report XX and XXV).

(bb) Local Committees.—A suggestion which particularly appealed to the Commission was made at Vancouver (297) in which it was proposed that local Committees of prominent citizens be organized to take special interest in assisting disabled men by conferring with local employers, acquainting them with the needs of the situation, and ascertaining from them the possibilities of their particular business or industry in helping to absorb such men. The official appointment by the Government throughout the country of Local Boards of prominent public spirited citizens for this purpose would, it is believed, reawaken public interest and have beneficial results. These local Committees should only be utilized with the full concurrence of the Provincial Employment agencies with which they would be co-operating, their function being to bring their local influence and interest to the support of these agencies in placing handicapped men.

## SESSIONAL PAPER No. 203a

(cc) *Toronto Rehabilitation Scheme.*—This has already been outlined. It represents a considered and promising step in relieving the situation. The basis of this project is that a local body of citizens investigates and secures opportunities for employment, not necessarily at the ordinary rate of wages, but at a rate commensurate with the disabled man's capabilities. The State co-operates, by applying the money previously paid out for unemployment relief towards bringing up the pay of the man so employed to a minimum wage scale. The practical working out of the Scheme by the influential body of citizens which has taken it up should be studied with serious interest elsewhere because if successful it offers almost a complete solution for the present problem.

(dd) *Financial Inducements.*—Suggestions were also made for pecuniary inducements to firms which employ a certain percentage of disabled ex-service men (Vancouver 257). The particular consideration mentioned was a graduated reduction in the percentage of income tax depending on the proportion of such men employed. The fact that the taxable income of an individual or firm has no relation whatever to the number of men employed makes this scheme, the Commission thinks, entirely impracticable. If persuasion fails the only effective financial inducement would be to make up to the employer the discrepancy between the workers earning capacity and a certain standard wage. This is the essence of the Toronto Scheme.

## III. POSSIBLE NEW METHODS OF ABSORPTION

(1) *Manufacturing or Trading Monopolies.*

Naturally, in connection with a problem so universal there could hardly be any solution which has already been put forward. Suggestions have been made that there might be created a monopoly in favour of disabled ex-service men for the manufacture and distribution of certain commodities now largely imported from foreign countries (Winnipeg 286). A solution also suggested was to give to these men the exclusive right to retail some special line of merchandise (Regina 183, Ottawa 224). Both of these involve serious considerations of interference with legitimate and established industries and businesses and possibly of confiscation.

(2) *Compulsory Employment.*

However, the situation is one which has to be met and if efforts for voluntary co-operation fail, the country must be prepared to face a condition similar to that which exists in Great Britain and which led to the declaration (previously set out) by the Committee of the British House of Commons of 1922 to the effect that the Country was within measurable distance of compulsory legislation.

If the methods reviewed and suggested above, such as preferential employment in the Government services, sheltered workshops, employment bureau service, the King's Honour Roll Scheme, the Toronto Rehabilitation scheme and any other special arrangements with or inducements to civilian employers, all prove inadequate to permanently absorb into industry disabled ex-service men, who after diligent effort have failed to find employment, there appears to be no other solution than a compulsory employment enactment which would require all industries to employ a certain percentage of these men. As has been pointed out such legislation exists to-day in practically all continental countries. The various forms which such measures take have been already briefly summarized. It is significant that for a second time within a year the British House of Commons is now considering a Bill introduced for the purpose of bringing into effect in Great Britain this compulsory feature.

14-15 GEORGE V, A. 1924

## F. UNEMPLOYMENT RELIEF

At the beginning of the winter of 1919 the economic crisis and the large number of soldiers recently demobilized who had not been able to obtain employment and who were without sufficient means of support for themselves and families, rendered necessary the innovation of relief measures, and a large sum of money, called the Federal Emergency Appropriation, was made available by Parliament.

All applicants for work were required to register with the D.S.C.R. and those for whom no positions were immediately available and who claimed to be in need, were referred to the Canadian Patriotic Fund for investigation of each individual case. If this need was established, they were assisted, to March 31st, 1920, a single man with dependents or a man and wife, \$75 per month, with an additional \$12 for the first child under 16 (girl 17) and another \$10 for the second child. The single man with dependents was given a maximum allowance of \$50 per month. All this relief was in cash.

The unemployment situation of the winter of 1920-21 rendered necessary the combination of some relief measures and authority was granted to D.S.C.R. to grant medical and surgical treatment to unemployed ex-service men until March 31st, 1921, and to grant relief, but in kind only, to the unemployed pensioners or vocationally trained on account of disability. This relief was extended from April 1 to December 1921, but the monthly allowance was reduced from \$75 to \$65 and the single man without dependents cut out altogether.

From January 1922 the unimproved trade conditions rendered necessary the continuance of relief measures with a gradually decreasing schedule rate as follows:—

	1922	1923
Man and wife, maximum amount .....	\$60 00 per month	\$45 00 per month
First child under 16 (girl 17) .....	12 00 "	12 00 "
Second child under 16 (girl 17).....	10 00 "	10 00 "
Maximum to any family.....	85 00 "	67 00 "
Single man without dependents (maximum allowance for winter months only).....	45 00 "	30 00 "

Single men with dependents, same as married man.

In all cases any income received by the family by way of earnings, increment or pension was deducted.

Assistance granted was limited to expenditures by the Department on behalf of the pensioner of such amounts as might enable him and his dependents to carry on for the period indicated.

Although the last Order in Council extended relief only up to May 31, 1922, the D.S.C.R. has carried on the practice of granting relief under the last schedule set forth above. Some exceptions are made in regard to single men, the general practice being to leave it to the discretion of the Unit Director of Administration of each Unit.

The expenditures of the D.S.C.R. for actual relief and administration of same until the end of last fiscal year were:—

Year	Actual Relief	Administration
	\$ cts.	\$ cts.
1919-20.....	5,043,188 90	256,068 71 (by Canadian Patriotic Fund)
1920-21.....	842,403 02

## SESSIONAL PAPER No. 203a

Outside of cash allowances in 1919-20, actual relief expenditures were mainly for food, fuel and rent. During the calendar year 1923, the number of men who received relief for the first time was 1,268, the total number of men who received relief, 4,558, the number of times relief was granted, 35,748, the average amount to each individual \$85.38, the average amount to men with dependents \$102.34 and the average number of times relief was granted to each man 7.84.

Assistance is only granted to men who are in destitute circumstances and who are in receipt of a pension payable by or through the B.P.C. or the D.S.C.R. for a disability due to or aggravated by service, or have been paid a lump sum by agreement in settlement of pension. Former members of the Imperial and Allied Forces may be granted relief under the conditions laid down for former members of the Canadian Forces subject to their having been residents of Canada for three months prior to making application.

## PART THREE

**THE DISABLED SOLDIER WITH SMALL PENSION  
OR NO PENSION****Section 1. Substantial Natural Disabilities Added to Pensionable Disabilities***Suggestion by Ex-Service Men.*

That provision be made for ex-soldiers without means and who are wholly or partially incapacitated by the combination of a non-pensionable ailment with a previous pensionable disability. (Montreal 508, 514, 519, 548; Toronto 176, 178.)

The granting of a pension for a small service disability cannot be urged as a reason for paying pension for some superimposed condition which has no relation whatsoever to military service. The two must, from a pensions viewpoint, be kept absolutely separate, but the two combined may render the victim helpless. These cases cannot, in the opinion of the Commission, be distinguished from the handicap cases dealt with under the heading of employment. If, however, earning power is destroyed for practical purposes by the combination of disabilities, then the applicant comes within the class entitled to the privileges of a Soldiers' Home. Which method is to be pursued depends, therefore, on the total degree of disability, pensionable and otherwise, which exists. It must be distinctly remembered, however, that the provision of either employment or the Home is on different principles from those underlying pension, and should not be taken as admitting nor creating responsibility for pension for the portion of disability which is unconnected with war service or for death resulting therefrom.

*Recommendation of Commission.*

That in the case of ex-soldiers without means and who are wholly or partially incapacitated by the combination of a pensionable disability with a subsequent non-pensionable ailment (a) The general principles applicable to the employment of war handicapped men apply. (b) If no substantial working capacity remains the pensioner should have the benefit of maintenance in a suitable Soldiers' Home.

## Section 2. The Indigent, Old and Disabled not Pensionable.

### *Suggestion by Ex-Service Men.*

Further provision for indigent and incapacitated not eligible for pension.

That provision be made for ex-soldiers who through lack of resources and physical incapacity due to advancing age are unable to support themselves. (Vancouver 245).

The representative appointed by the Central Committee at Vancouver to speak of handicapped men put forward the problem of the old man and the man, who, possibly as the result of war, was physically ten years older than his age in years. He is described as chronically sub-standard. Although it is impossible to put one's finger upon any disability induced by war service, his strength is equal to the demands of but few occupations. It is stated that the number of these men is large, and it is certain that it will increase as time goes on, and that most of them will ultimately become a permanent charge on the community.

While impossible to disprove that war may have been in some degree responsible for the present physical condition of this type of ex-soldier, it is equally difficult to bring forward sufficient proof to justify an award of pension. Most were over age on enlistment, many stating they were younger than was really the case. Eight to nine years have since elapsed, and in the ordinary course of events many would have become unfitted for competitive employment had they remained in civil life. During their period of military service their age and lack of necessary physical strength generally precluded their assignment to any duty which required severe exertion or undue exposure, so that they were employed largely as batmen, cooks, orderlies, or for light duty, etc. Except those in the labour battalions, no great number of these went beyond England where their living conditions were comparatively hygienic and comfortable. Admitting all this and that war service has not produced the condition in which the middle-aged ex-service man may now find himself, it is hard to escape the conclusion that the country, having inadvisedly accepted his services, is now under a moral obligation based in a large degree upon recognition of service rendered, but also on the possible, although not provable, effect of service, to see that he does not become dependent upon public charity.

Not only does the proposal apply to the man who was old in years or physique on discharge, but, as advancing age accompanied by impaired health comes on men now in the prime of life, there is bound to be a claim by them that the exertion and strain of service has been a contributing and hastening factor and such a claim will be hard to disprove. The Commission is of the opinion that the State will not see these men in want.

How is this moral obligation to be met? Not by pensions, because there is no means of proving a clear relation between the present condition and military service. It may be contended that while proof is impossible, yet conversely, it cannot be stated with certainty that military service has not hastened the advent of old age and its concomitant disabilities. But if this lack of negative evidence were considered sufficient, practically everyone could demand pension, because a time must invariably come when physical disability renders them unfit to compete successfully with the young and strong. Another very serious objection to placing these cases on a pension basis arises, namely, that if the right to pension is once admitted the pension must be increased as the disability increases, and after death be continued to the dependents.

The conclusion is: first, that the group composed of old and prematurely old men, suffering from diseases incident to or commonly found in middle life and later, and whose impaired condition cannot reasonably be ascribed to service,

## SESSIONAL PAPER No. 203a

should not be dealt with on a pension basis, and secondly, that these men cannot be allowed, through no fault of their own, to become dependent on charity.

The Commission has, throughout all the discussions which have taken place, heard of nothing, and it can suggest nothing which will meet the situation more fully or effectively than the establishment of Soldiers' Homes. There is admittedly no novelty in the suggestion. Such institutions have been successfully operated for many years in other Countries. Chelsea was established nearly 300 years ago. Into these homes could be admitted any man who has served and who through physical incapacity and lack of resources is unable to support himself.

These Homes would accommodate at once a substantial number of those in hospital whose principle qualification for remaining there is, not that further treatment can improve their condition, but because they are permanently disabled and require food, shelter and care. The saving in expense of a Soldiers' Home compared with a hospital adds a further argument. The 1922 Parliamentary Committee Report p. XVIII recommended—

"that consideration be given to the providing for homes where ex-soldiers during old age may reside in comfort subject to being there provided with the necessary subsistence and reasonable comforts which the pension awarded, if any, might not be sufficient to give".

The Commission considers that the number of men in the category being discussed is now sufficiently large to warrant immediate steps to provide such institutions.

The possibility of the establishing by Canada of Old Age Pensions was repeatedly mentioned as affording provision for this class (St. John 61, Vancouver 303, Calgary 237, Winnipeg 289, Montreal 188). Such a scheme involves a great deal more than provision for indigent soldiers. The Commission does not profess to have given the subject the consideration which would warrant the making of a recommendation on a project which, in its most usual form, takes in every individual in the country, ex-soldier and civilian, after attaining a certain age. It is to be remembered that the age at which Old Age Pensions generally become effective is much too far advanced to be of benefit to the prematurely old soldier.

The 1922 Parliamentary Committee also made a recommendation (Report p. XVIII) suggesting some form of pensions for those who were not provided for in Homes. The recommendation was as follows:—

"That where ex-soldiers reach a stage in life considered to be old age and are not in receipt of such reasonable pension under the regulations at that time existing, and are not in receipt of care or treatment in homes which may be provided for the purpose, that consideration be given to the establishment of pensions or other help as may be considered reasonably necessary for the purpose of assisting ex-soldiers in their old age".

This seems to contemplate Special Old Age Pensions for ex-soldiers but when taken up for practical action it would probably be part of a general Old Age Pension scheme similar to those in force elsewhere. The whole subject is now being considered by a special Committee of Parliament, and indigent and aging ex-soldiers will, no doubt, be one of the groups referred to as indicating the desirability of adopting some such scheme.

*Recommendation of Commission.*

That provision be made, by the establishment in suitable localities of Soldiers' Homes, for the maintenance and care of ex-soldiers who from lack of resources and physical infirmity are unable to support themselves.

### Section 3. Soldiers' Homes

The need for the establishment of these institutions has been dealt with under the two preceding headings in this Report.

The plan of the Homes themselves, their distribution throughout Canada and the conditions of admission thereto are all subjects of administration respecting which, it goes without saying, the best available advice should be obtained and the experience of other countries examined. The Commission has suggested (see Report No. 3 p. 73) that in connection with these Homes there might be sufficient land to provide employment for men physically handicapped who live in the country and have been unable to find employment for their remaining degree of earning capacity, the idea being that this would take the place of the separate small holdings which have been advocated for these men, and would permit the ex-soldier to try out his capabilities without committing him to the risks of an independent proposition. Such institutions might bear to disabled men in rural localities somewhat the same relation as Vetscraft shops to ex-soldiers in cities.

## PART FOUR

### SPECIAL DISABILITIES

#### Section 1. The Blind

##### GENERAL STATEMENT

With the exception of a discussion at Montreal concerning travelling expenses, the whole evidence concerning the blind was presented at Toronto by two representatives, one of whom was the President of the Arthur Pearson Club for Blinded Soldiers and Sailors, which includes all ex-Canadian Soldiers wherever resident, and the other was the General Secretary of the Canadian National Institute for the Blind and Vocational Adviser to the D.S.C.R. for blinded cases.

The evidence showed (Toronto 1314) that there were 171 blinded Canadian ex-service men, of whom 135 reside in Canada, 32 in England, 3 in the United States and 1 in Belgium. Of this total, 127 were completely blind and receiving \$300 per year helplessness allowance in addition to their total disability pension. 44 men, partially blind, did not receive any helplessness allowance, but were paid total disability pension.

5 of the totally blind had died after the compilation of the above figures, and the occupations in which the remaining totally blind were engaged were given as follows:

##### TOTALLY BLIND

Agent, insurance.....	1
Boot repairing and matmaking.....	2
Broom making.....	1
Book Agent.....	1
Business for themselves.....	9
Employed in business firms, etc.....	2
Employed with C.N.I.B.....	2
Farming.....	10
General Secretary.....	1
Joinery.....	4
Massage.....	18
Matmaking and netting.....	4
Piano Tuning.....	1
Poultry farming, netting, etc.....	14
Reed and willow articles, rattan, etc.....	21
Returned to former occupation.....	4
Stenographer with Government.....	6
Stenographer with business firms.....	1
Translating and teaching French.....	1
Unable, unwilling or waiting for work (living on pension).....	19
Total.....	122

## SESSIONAL PAPER No. 203a

One of the partially blind had died after the compilation of the statistics and the remaining 43 partially blind had been trained and were employed as follows:—

Boot repairing and mat making.....	1
Broom making.....	2
Business for themselves.....	4
Commercial salesman.....	2
Employed with business firms, etc.....	10
Employed with C.N.I.B.....	2
Farming.....	1
Instructor with C.N.I.B.....	1
Massage.....	3
Matmaking and matting.....	1
Piano Tuning.....	1
Poultry farming, netting, etc.....	3
Reed and willow articles, rattan, etc.....	4
Unable, unwilling or waiting for work (living on pension).....	7
Working in Government Department.....	1
Total.....	43

The above tables are misleading in that the conclusion must not be drawn therefrom that five out of six have found profitable employment. In many cases the work performed is of little value in adding to the pensioner's income and in forty per cent of the cases nothing whatever of marketable value is produced. Despite this, the work taken up offers an opportunity to keep occupied and is regularly performed. Diversion is, of course, the primary object.

As a rule the blind man has been unable to make any substantial addition to the income provided by his pension, notwithstanding vocational training freely offered by the D.S.C.R. and as gratefully acknowledged by the blinded veterans.

The only occupation in which success has been attained is the practice of massage. Stenography as a rule has not been successful, nor has piano-tuning for which very few are primarily fitted in that they have not the necessary apprehension of pitch which is possessed, on the average, by but one out of every fifteen individuals. It also appears that, on account of the age at which the blinded soldier takes up his training, as good results cannot be obtained as might be looked for as if similar effort were spent in early life. This is illustrated nowhere more clearly than in the study of "Braille." Facility in touch reading is rarely obtained by soldiers, whereas, with those blind from birth and trained in youth, proficiency is the rule.

### *Suggestion by Ex-Service Men on Behalf of the Blind.*

#### Stabilization of Pension

That pensions be stabilized at an amount not less than the sums specified in schedules to the Pension Act plus the amount of pension bonus now paid. (Toronto 1326).

This was the first request put forward and was stressed throughout as of the greatest importance. The strong argument in support of the suggestion was the depressing mental effect of the future, unless a definite income was assured. It was stated that the blind are particularly susceptible to discouraging influences and that for this reason the dread of a future cut in pension weighs more heavily upon them than others. Further, with rare exceptions, the hope of improving his present position and the expectation of promotion as years go on, which are always open to normal men, are, to the blind, a closed door.

#### *Recommendation of Commission.*

This consideration has already been discussed in Report No. 3 of the Commission (p. 45), and the advantage of removing uncertainty and ensuring freedom from anxiety has been endorsed.

*Suggestion by Ex-Service Men on Behalf of the Blind.*

## Increased Helplessness Allowance

That the present helplessness allowance should be increased from \$300 a year to \$400, for those totally blind and who, in addition, have amputations of either arm or leg or who have an immovable knee joint. (Toronto 1328).

The Pension Act (Section 27 as amended) gives the Pensions Board discretion to add to the pension an amount, not less than \$250 and not more than \$750 per annum (subject to review from time to time), where a man is totally disabled and helpless and is, in addition, in need of attendance. The provision applies, of course, to many other pensioners besides the blind, but the Pensions Board in exercising this discretionary power concede that a man totally blind is helpless within the meaning of Section 27 and have made a definite rule as to the amount to be paid him. This rule has been incorporated into the Table of Disabilities. The practice thus laid down provides for payment of attendance allowance at the rate of \$350 per annum for the first 6 months and at the rate of \$300 per annum subsequently.

The Commission has already (Report No. 3, p. 48) recommended a revision of the Table of Disabilities with special reference to the claim for increase in attendance allowance. The claim there dealt with, however, was based on the difficulty in getting a competent attendant for less than \$400. The special claim here made for increased attendance allowance to one who is blind and has other disabilities as well deserves even greater consideration.

These cases of this kind were cited: The first was a man with his left arm off, a fracture of his jaw and a piece of bone missing from his forehead. Extra allowance was asked for and \$50 was granted. He was stated to be uneducated and "absolutely helpless as far as following any occupation goes." (It was pointed out that even if this man had an artificial hand it was quite useless without the eye to guide it. In the second case the knee joint was fixed and the claim for increased helplessness allowance was based on the fact that one so incapacitated could not go down stairs unattended without serious danger of falling. One man, so handicapped, fell from the top to the bottom of a stairway leading to the underground railway in London. The third case had a right arm amputation just below the elbow.

To such men a reliable guide is essential. While others may manage to get about alone with a degree of safety and may possibly at times, although not without danger of injury, be willing to run the risk, these men with additional disabilities require constantly a dependable attendant if they are to move about with any degree of security.

*Recommendation of Commission.*

The Commission recommends that, at least where the blind pensioner suffers from a serious additional disability which increases his difficulty in moving about or guarding against accident attendance allowance be increased to \$400 per annum.

*Suggestion by Ex-service Men on Behalf of the Blind.*

## Helplessness Allowance to be merged in Increased Pension

That instead of \$900 pension and \$300 helplessness allowance a straight pension of \$1,200 a year be granted to the totally blind. (Montreal p. 537).

There was a case instanced where the helplessness allowance had been withdrawn (Montreal 1537) after having been previously awarded. There was no suggestion, however, that it was at all typical and as the Table of Disabili-

## SESSIONAL PAPER No. 203a

ties expressly provides for a minimum of \$300 per year in the case of total blindness (Toronto p. 1189A) the case must have been dealt with under special circumstances. The Commission considers that it is preferable to make provision for exceptional handicaps incident to certain disabilities by way of special additional allowance rather than by increasing the Pension as such. Pension is fixed primarily on the basis of loss of earning power. The necessity for an attendant in these cases is in addition to such loss, and is intended to permit the man to experience, at least to a limited extent, the ordinary privileges of life.

*Recommendation of Commission.*

None.

*Suggestion by Ex-service Men on Behalf of the Blind.*

## Travelling Expenses

That some more favourable arrangement be made for the travelling expenses of the blind and of an escort when necessary. (Montreal 537, Toronto 1339).

The present regulations provide for transportation for an escort accompanying a totally blind pensioner. As already stated, a minimum allowance at the rate of \$300 per annum is made to reimburse the pensioner for the wages and expenses of the escort. The claim for an increase in this allowance has been dealt with previously in this Report and in Report No. 3, (p. 48). Three suggestions are made for greater consideration to the Blind when travelling:

1. That transportation for the escort should be granted by any ticket agent of the Canadian National Railways on the production of a certificate from the General Secretary of the Canadian National Institute for the Blind and without the necessity of application to the D.S.C.R. (Montreal 542, 543).

2. That some method should be devised whereby the full expense of the escort's maintenance, while travelling, will not fall upon the pensioner (Montreal 538).

3. That a totally blind pensioner should have free transportation at least for limited periods and purposes (Montreal 541, 543, Toronto 1340).

As to the first, the Commission considers that so long as the present regulations are in force and the right to transportation applies only to the escort, some assurance would have to be given to the D.S.C.R. Officials that an escort was actually necessary and employed, and the responsibility for issuing transportation accordingly could not be fairly assigned to any outside body or official. The adoption hereafter, of the recommendations made in respect of the second and third suggestions, will obviate any difficulty or inconvenience.

As to the second suggestion, with respect to reducing the pensioners obligations for the escort's maintenance, the principle of which the fare of the escort is supplied is that it is an additional expense to which the pensioner is put by reason of his blindness, and carrying the same reasoning a step farther, it is asserted that the State should also be liable for the escort's maintenance. On the other hand, a provision of this sort does not fall within ordinary pension principles. The 100 per cent disability allowance is presumed to have been discharged the country's obligations to recompense the soldier for loss of earning power. These additional concessions are simply to make ordinary living conditions more bearable, and to permit the soldier, even though he has been compensated for loss of earning power, to move about and mingle with his fellow men without actually endangering his life. The concession as to escort's fare

can, therefore, hardly be invoked as creating a legal liability for the escort's maintenance. It is said that frequently the provision of fare for the escort works for the benefit of the pensioner's wife, the latter travelling as escort.

The Commission does not consider that the liability of the Country in respect of the escort can fairly be extended beyond the allowance now made for the escort's wages and transportation. It was recognized at the Hearing, that if any contribution was to be made by the State towards the escort's maintenance while travelling, such contribution could in fairness only be asked for some special occasion and covering a limited period of time. A period of one week was mentioned. (Montreal 541).

As to the third suggestion, namely the provision of free transportation for the totally blind pensioner, it was stated that in most countries the blind have free transportation. (Montreal 540). The Commission has not been able to verify this statement.

The Parliamentary Committee of 1922, (See 1922 Parliamentary Committee Report Page XIV, Section 8) made the following recommendation on the subject:—

"The Committee has carefully considered the disabilities suffered by ex-soldiers who are totally blind and who have suffered disabilities necessitating the employment of an escort. The Committee recommends that free transportation in Canada be granted to *any member of the forces* who has been pensioned for total blindness or for a disability which necessitates an escort accompanying on a journey such ex-soldier—in cases where an escort does so accompany such ex-soldier. The provision only to apply to cases of irregular travel or where the ex-soldier is travelling on account of his annual vacation, and in no case where the travelling is ordinarily at frequent intervals. In all cases the Department to be given discretionary power when or when not to accord this privilege."

It is not altogether clear from the above whether it was intended that the transportation was to be for the man or for the escort but it was construed to be the latter, and in September, 1922, Order-in-Council P.C. 1929 was passed reciting the above recommendation and providing for the issue of free transportation to ex-members of the Forces totally disabled and requiring an escort, but providing that such transportation should cover the fare of the escort only, and not that of the ex-member of the Forces, and should only be issued where an escort was actually employed. The Order was further limited to annual vacations or other infrequent trips, the previous approval of the D.S.C.R. had to be obtained, and the granting of such transportation was to be wholly in the discretion of that Department.

If a blind man be compelled to visit another district with which he is unfamiliar, he must necessarily either have the aid of a friend or employ somebody to direct him. As has been said, if he took an escort with him, the State supplies the latter's transportation but the blind man pays his other expenses. Whether then he takes an escort with him or relies on somebody in the place he visits to help him about, he is under expense which does not fall on the ordinary man. In consideration of this, the Commission suggests that the blind ex-soldier might be granted the privilege of free transportation up to one thousand miles annually, leaving it to him to make his own arrangements as to an attendant, and allowing himself or for the escort when accompanying him or for both as he sees fit. Some one might object that as much as one half of the transportation could thus be improperly used for the benefit of a person not a bona fide escort who accompanied the pensioner, but the Commission considers that these men may be safely relied on to honorably observe the purpose of the concession. The pensioner would thus be on his own resources and

## SESSIONAL PAPER No. 203a

quite independent of regulations, which under the most favourable conditions are irksome. This policy would be directly in line with the training which these men receive at St. Dunstan's, the outstanding principle of which is to make a man rely upon his own efforts, and, as was expressed no one of the hearings, "to believe and make his fellow citizens believe in the words of the late Sir Arthur Pearson that the blind man can see, and that they can do things as well and sometimes better than people with sight." (Montreal 542).

*Recommendation of Commission.*

That provision be made for the issue, to any ex-member of the forces in receipt of a total disability pension for blindness, of free transportation for the use of the pensioner and of an escort when actually accompanying him, the combined mileage for pensioner with escort not to exceed one thousand miles in any one year.

**Section 2. Amputation Cases**

## GENERAL STATEMENT

As with the Tuberculous Veterans, the Amputations Association left no stone unturned to thoroughly prepare and present their case. Their organization in the larger centres is very complete, and witnesses chosen to advocate their claims were carefully selected and well informed. No argument which might support a claim for increased recognition was overlooked. Amputations form the second largest group of Pensioners in the Dominion.

The total number of Canadian amputation cases on Pension is 3802 of which 1143 are arm amputations and 2,659 amputations of the leg. These include a number of double or multiple amputations.

The Canadian war amputations are divided, as to disability, as follows:—

Right leg amputated.....	1,190
Left leg amputated.....	1,300
Right arm amputated.....	485
Left arm amputated.....	528
Both arms amputated.....	95
Both arms amputated.....	7
Both legs and both arms amputated.....	1
Both legs and right arm amputated.....	1
Both legs and left arm amputated.....	2
Right leg and right arm amputated.....	2
Right leg and left arm amputated.....	3
Left leg and left arm amputated.....	2
Left leg and right arm amputated.....	6
Both arms and right foot amputated.....	1

These are cases into which the question of entitlement does not enter because it can be at once admitted. The only subject for consideration as regards pensions is the percentage of disability. The Commission has already (Report No. 3, p. 46) dealt with the Table of Disabilities upon which the amount allowed for various amputations is based and has mentioned certain considerations which should be kept in mind by those to whom the revision of the Table may be entrusted.

There are other factors which were not discussed in detail in the previous Report some of which might fairly be considered on such revision after an opportunity has been afforded to representatives of the Amputations' Association to describe and present them. These matters are summarized in the brief presented by Amputations' Association at Toronto, as follows:—

*Climatic Conditions*

Handicaps of amputation cases.

- (a) Heat causing chafing.
- (b) Additional weariness from artificial limbs and difficulty in moving about.
- (c) Extra protection needed for stumps to protect from frost-bite.
- (d) Inability to walk in slippery weather and deep snow.
- (e) Delay in getting to work.

*High Cost of Living*

- (a) Necessity for clothing allowance.
- (b) Necessity for living close to transportation lines.
- (c) Necessity for hiring others to perform ordinary chores such as ashes, snow shovelling, etc.
- (d) Increased cost of transportation.

*Limitations as to health*

- (a) Insomnia.
- (b) Pain.
- (c) Nerve ends.
- (d) Irritability and indigestion.
- (e) Organic complaints.

All these exist whole 24 hours, not simply during working hours.

*Employment Handicaps*

- (a) Prejudice of employers has to be overcome by persuasion or practical demonstration.

*Recreational Handicaps*

- (a) More expensive.
- (b) Extremely limited, most recreations being prohibited.

There remain several suggestions which the Commission feels should be discussed and dealt with.

## ORTHOPAEDIC APPLIANCES

The request was made (Regina 146, also Calgary 154) that orthopaedic boots should be supplied with every limb, and it was also claimed at Regina that the boots supplied were too heavy. The average artificial leg case does not require an orthopaedic boot but wears the same sort of boot as on the sound limb. In any case, where an orthopaedic boot is required, as, for instance, to compensate for shortening, such boots are now readily supplied.

The sox were said to be of poor quality and it was also claimed that the supply was inadequate (Regina 146, and Calgary 149). Both complaints were admitted by the D.S.C.R. representative to be justified on account of a temporary condition, and a promise made that the matter would be set straight. It was claimed at Winnipeg that the present allowance of sox is insufficient. This may have been due to their wearing out more quickly on account of the poor quality. To remedy this, it was asked that new sox should be issued on turning in the old ones. It is a small matter and the Commission recommends that the request be granted if the practice is not already in force.

SESSIONAL PAPER No. 203a

## ARTIFICIAL LIMBS

Few complaints were heard in reference to the quality of artificial limbs supplied. It was stated that scarcely any above-elbow arms were used except for dress purposes, yet it is admitted that the only reason for this is that no satisfactory arm has yet been produced. At Toronto (1303) it was stated that the request of the Amputations' Association to the Parliamentary Committee that the Canada convertible arm made by N. O. Handigord, Regina and the Gawley arm devised by Mr. Gawley, who is himself a double arm amputation case, be given a thorough test, had not so far been acceded to.

As regards the general question of the quality and efficiency of the artificial limbs provided, the Commission considers that those at present in use are unquestionably the best obtainable and that no expense is being spared to maintain this standard.

Toronto endorsed the request of Regina Branch that the Research Department be re-organized and an amputation case be placed in charge. Regina further asked that research should not be confined to Toronto but developed at other centres. (Regina 162).

The Commission visited the Toronto workshops and was impressed with the pride shown by the workmen in their products and the ambition manifested to perfect and improve them. The Commission is confident that research work carried on is constant and thorough and that every facility exists for trying out new ideas. Work of probably real value has been done in developing a new method for the utilization of raw hide as a light and strong material for construction. Nearly the whole staff of this institution are amputation cases.

As to the suggestion that research centres be established in the various provinces (Regina 162) the Commission does not consider that this is either necessary or justified. Practically every country in the world is engaged in this work and the exchange of ideas is constantly going on. This is one matter in respect of which centralization is desirable because only by a concentration of ideas and ample facilities for investigation and demonstration can any substantial progress be made. There is not the slightest difficulty for anyone with an idea in connection with the perfecting of orthopædic appliances to have his suggested improvement promptly brought to the attention of the present Research Department and, if it shows possibility of merit, in having it thoroughly tested. The various D.S.C.R. units afford ready and accessible channels of communication if the inventor does not deal directly with Headquarters.

The establishment of additional research centres would not, in the Commission's opinion, serve any good purpose.

A request was made at Winnipeg that a limb fitter should be sent periodically to Port Arthur.

The question as to whether the case should be brought in or the fitter sent out obviously depends considerably on comparative convenience and expense and above all the relative facilities for satisfactory treatment of the patient. The feasibility of this suggestion must, therefore, be decided locally. In this connection a claim was also made that the per diem allowances to amputations called in for examination or limb fitting were insufficient. This has been discussed under the subject of Procedure and concerning the contention made generally for increased allowances to all cases (amputation or otherwise) brought in by the unit officials.

## HOMES

A group exists among the amputation cases as among all others which is for various reasons, aside from their war disabilities, unemployable, and for this

group it was asked at Toronto (1257) that further provision be made by establishing Soldiers' Home. As this subject has reference to a much wider constituency than the amputations, it is considered, in its broad aspect, elsewhere in this Report.

### *Suggestion by Ex-service Men.*

Impaired general physical condition directly consequent upon the injury, to be considered in addition to actual disability from amputation itself

That in estimating the degree of disability, the history and progress of the patient between the time of the injury and the award of pension should be taken into consideration where this has so affected his general health as to constitute an additional impairment to his earning power. (Winnipeg 661).

The type of case referred to in this suggestion is well described by a witness at Winnipeg (661) as follows:—

"Two below knee amputation cases may have a similar length of stump at the time of final board, one of them we find gets along exceedingly well and has no further trouble, the other, has for a time a continual recurrence of trouble with his stump and is forced to take treatment resulting in numerous surgical operations for a long period of time, the consequence is that when finally discharged he is not in as good a physical condition as the other who has had no trouble with his stump, and is unable to attempt the same physical functions that he otherwise would have been able to do if he had had no trouble, such functions that the previous individual is able to accomplish with ease. Further, one being able to take his discharge and have no stump trouble is able to apply himself far better to any system of Re-establishment that may be provided for him, I might explain that, in regard to how this applies to Vocational Training, an amputation might be taking up some form of training and after he has been going about 6 weeks or 2 months, his stump breaks down and he has to go into hospital, he may be taking treatment for 6 months before he is again discharged and able to take up his training, the result is he has forgotten all he previously learned, and generally has to start all over again, in other words, he has gone stale, and does not get the full benefit of what that training might mean to him thus we claim that a recurrence of disability should have the greatest consideration in regard to the percentage of disability. It is reasonable to assume that one has a greater disability than the other, but both are rated the same owing to the fact that they are both below knee amputation cases, and we sincerely think this matter should have your consideration, and a recurrence of disability taken into account when awarding percentage of disability".

There can be no doubt that long-continued residence in hospital, with its consequent idleness and encouragement to look to others for assistance, must have, in a large proportion of cases, a permanent lowering effect upon earning power, and where this is shown, the percentage representing such diminution should be added to the percentage representing the physical disability, as shown by the Table. This additional handicap could be adequately covered if, when a definite percentage is stated for a particular amputation, that percentage could be regarded as a *minimum*. There could then always be added the necessary percentage for impairment to general health or other additional disability contributed to by the injury. The Table of Disabilities of February 1921 seems

## SESSIONAL PAPER No. 203a

to leave room for such allowance to be made. The following clause appears therein:—

“The Table of Disabilities exists only to assist the Board of Pension Commissioners and Medical Officers in fulfilling their responsibilities. It does not offer final nor absolute values. Every disability must be considered on its own merits.”

What the Commission has in mind is the exceptional case of a disability arising out of long continued illness which leaves the man permanently sub-normal in general health, vigour and initiative.

*Recommendation of Commission.*

That in assessing the degree of disability for amputations covered by the percentages specified in the Table of Disabilities further allowance be made when there is in addition a permanent impairment of general health or other lasting disability directly consequent upon the injury and that in any revision of the Table of Disabilities provision be made accordingly if not regarded as sufficiently covered by the Table and Instructions now in force.

*Suggestion by Ex-service Men.*

Disabilities claimed to be either the remote cause or the remote effect of amputations

That provision be made for payment of pension for amputations remotely connected with service disabilities, or for disabilities remotely connected with service amputations. (Toronto 1231).

This class of cases was repeatedly referred to under the obscure captions “Eligibility of Disability” and “Attributability of Disability.” Recognition is asked for various disabilities claimed to be the result of the original disability and in all these cases either the cause or the effect was an amputation. As examples of cases where amputation was claimed to be the remote cause, there were presented

- (a) a case of insanity developing in a man who was on pension for an amputation;
- (b) the case of a man pensioned for a leg amputation who, while at work, tripped and lost a hand by crushing.

Examples of cases where amputations were claimed to be the remote effect of service disabilities were

- (a) the case of a man pensioned for neurasthenia who had his hand taken off while working at a machine;
- (b) the loss of a leg in a motor cycle accident by a man drawing pension for a wound of the hand.

Each of these cases depends on evidence of the relation between the service disability and the ultimate ailment or accident. The Pensions Board does not take the position that in awarding pension for a service disability it thereby compensates for everything which may result therefrom. It is ruled that the pension compensates the soldier for the normal loss of working capacity and for the things which may happen to him in what would be the usual every day life of a man in his condition. But the intervention of some unforeseen and unusual event or combination of circumstances may give rise to increased liability. The question is whether the original disability was a contributing factor and, secondly, whether the activities and surroundings of the pensioner, at

the time of the accident, were safe for a man suffering from his disability. If these two essentials are present, pension will be granted. But if either the new disability was not the result of the old, or, if the pensioner was running a risk which one in his physical condition should not have taken, pension will be refused. The pension awarded for the original disability is supposed to have compensated him for refraining from doing certain things which a normal man without his disability could safely have done. An instance of the effect of this practice is given in Report No. 3, p. 21.

The Commission finds that, assuming the above correctly outlines the principles adopted, it fairly covers the cases entitled to consideration.

Bearing upon the same subject, claims were made at almost every hearing for additional pension on the assumption that leg amputations may give rise to flat foot, spinal curvature, hernia, appendicitis or kidney and liver diseases. No evidence whatsoever was advanced in support of this nor does the Commission know of the existence of any such evidence. That an idea so erroneous should be so widely accepted is psychologically interesting.

#### *Recommendation of Commission.*

None.

#### *Suggestion by Ex-service Men.*

##### *Employment of Amputation cases*

That increased facilities be provided for the employment of amputation cases. (Regina 138, Toronto 1260.)

Unemployment among amputation cases is not as widespread as might, at first thought, be expected. Their representative at Regina (138) stated:—

“There are, I am led to believe, only some 400 cases actually out of employment at the present time.”

This number is cut in half by the Toronto representative (1260) who states that in the whole of Canada

“as far as we know there are only 200 men who are either out of employment or are engaged temporarily”.

In Winnipeg, a number varying from 25 to 42 had been out of work, many for a year or more, and 75 were unemployed out of a total of 687 in Toronto. We may take it that in general not more than 10 per cent are unemployed, which percentage contains a group recognized and admitted by the witnesses themselves as unemployable. The amputations as a class, considering their severe disabilities, have succeeded in re-establishing themselves to an extent that is most commendable.

The great difficulty to be overcome was to try and place three to four thousand amputations suddenly thrown on the labour market and to find for them suitable employment. Such positions were few, barely sufficient to absorb peace-time casualties.

It was claimed, although not further substantiated (Toronto 1164), that Amputations and Blind were unable to take any form of vocational training which has added materially to their earning capacity, and that the whole problem would have proved insoluble had not the municipal authorities, and the Provincial and Dominion governments united to meet it.

Thirty-four amputations are employed in the Orthopaedic Branch and 21 in the Administrative Branch of the D.S.C.R. in Toronto. 4 amputations are employed in the Toronto Post Office as switchboard operators. The City of Toronto employs 34 and the Ontario Civil Service 60, these latter not including those employed by the Legislature or Sessional employees (1290).

## SESSIONAL PAPER No. 203a

The Commission, while believing that more can yet be done, feels that, on the whole, better results have been secured than the most sanguine could have anticipated three or four years ago.

The representative witnesses insisted that a distinct difficulty in securing employment, even where the work sought is suitable, is the fact that an amputation disability is at once noticed by the employer who fears additional risk as regards accident to men so afflicted. The "Visibility of the Disability" is the phrase which the amputation representatives use to describe this special handicap which they suffer on account of the prominence of their defect, and for this reason at least, the problem of employment of amputation cases differs from that of other classes. But the opposite is true as well, and the visible deformity may often ensure a preference.

Although it may not be generally known, the employer's risk is covered by the provisions of P.C. 4432 whereby the Government discharges the employer's liability for Workmen's Compensation Board assessments in respect of pensioners. Transportation and Railway Companies, however, refuse to employ amputation cases, one reason probably being, aside from public safety, that they must first provide for their own injured workmen.

The amputations representatives, in discussing employment, very fairly put the problem not only of their group but of all the other partially disabled. Their summary of suggestions as to employment was equally applicable to all handicapped men. They did not attempt to advocate any new system or any radical change in existing facilities. They concentrated on activating and improving principles already accepted, such as Government and Civil Service preference, training in Government departments, and further efforts towards absorption of these men into industrial enterprises.

Three other matters were mentioned:—

- (a) The precarious position of ex-service (as well as other) employees of the Soldier Settlement Board, D.S.C.R. and Income Tax office under P.C. 2958 which excludes them from the list of employees occupying what are regarded as permanent positions (Toronto 1271);
- (b) Compulsory employment of a certain percentage of disabled men on all State contracts (1294);
- (c) Representation of amputations on the Civil Service Commission organization (1277).

On account of their applicability to all classes, these matters will be dealt with in discussing the problem of employment of handicapped men generally.

### Section 3. The Tuberculous

#### GENERAL STATEMENT

No group presented its claims more effectively or thoroughly than the tuberculous veterans. The evidence as to the difficulties under which they laboured and the redress claimed, was substantially the same at every session where their representatives appeared. Close association of the tuberculous over a long period of time while undergoing treatment, Provincial organizations between which a constant interchange of views takes place, and a Dominion Convention held in August, 1922, have permitted a survey of individual opinion which is practically complete. They have apparently a large and efficient organization and had selected, for the purpose of presenting their arguments, members fully informed upon the subjects which they discussed and capable of presenting their facts in a most convincing manner.

Tuberculous pensions form the largest of any group. Of a total of 43,289 pensions, 4,962, or 11.4 per cent of the total, are awarded on account of tuberculosis. This large percentage would alone indicate the importance, from a pension standpoint, of this disease, but it is further emphasized by the high percentage of pension necessarily awarded which is, on the average, seventy per cent.

#### EFFECT OF WAR SERVICE IN INCREASING THE INCIDENCE OF TUBERCULOSIS

Speaking broadly, tuberculosis is twice as common among Canadian ex-service men as in the civilian population. From this fact, at first glance, the conclusion might be drawn that the exposure and strain incident to war was responsible for the increased prevalence and that, therefore, one-half the ex-service men now classified as tubercular had developed the disease as the result of war service. Closer examination does not bear this out.

Both during service and frequently for a greater or less period following discharge, ex-service men were under medical supervision much more intimate and constant than obtains in civilian life. Should the slightest suspicious symptom develop, investigation immediately followed and, if any doubt still existed, the patient was immediately referred for examination to men specially trained in chest conditions and who had at their command every auxiliary means by which a correct diagnosis might be arrived at.

Although incapable of proof, it seems a fair inference that were the civilian population subjected to the same careful scrutiny and combed over with the same care, a large number now unsuspected would be discovered to be tubercular. How great this number is, it is impossible to tell but it would probably be sufficiently large to considerably alter the present two to one tuberculosis ratio between the ex-soldier and civilian population. The present accepted incidence of tuberculosis in the civilian population can, with certainty, be regarded as low. One can also, the Commission feels assured, regard the ex-soldier incidence as high. It is particularly difficult to escape the latter conclusion when it is considered that, despite repeated efforts, the presence of the tubercle bacillus has been demonstrated in but 44 per cent of those now in receipt of pension for tuberculosis.

But putting the above considerations aside and admitting, for the moment, that war service is responsible for the total increase of tuberculosis among soldiers, it is clear that, although we are unable to ear-mark them, one-half the soldiers now receiving pension for tuberculosis would have this disease were the war never fought nor a single soldier ever enlisted.

#### ENTITLED TO TREATMENT AND PENSION. THE EVIDENCE REQUIRED TO RAISE A PRESUMPTION THAT THE DISEASE WAS INCURRED DURING SERVICE

The impossibility of fixing the exact date of the beginning of such a slowly progressive disease as tuberculosis naturally has led to great difficulty in co-relating symptoms present to-day with military service rendered five to nine years ago. All those competent to express an opinion are apparently agreed that no case iron rules designed to guide medical examiners and others in reaching a correct conclusion can, with advantage, be promulgated. On the other hand, it is but fair to admit that in a disease in which early symptoms may be so easily overlooked, a certain period of time must necessarily have elapsed between the inception of disease and the time when it first made its appearance so as to be recognizable.

To provide a working rule and subject to certain limitations it has been arbitrarily, but after careful consideration, laid down that this period is to extend until one year after discharge, and a concession is thus extended to

## SESSIONAL PAPER No. 203a

patients suffering from tuberculosis which is not granted in the case of any other disease. It is true that in conditions such as mitral stenosis, ulcerative endocarditis, nephritis and other like diseases, a similar presumption may be admitted, but each case is judged on its own merits.

Even the regulation as to tuberculosis creates no conclusive presumption that the disease appearing within one year after discharge was incurred during service. It states that:—

“Cases of pulmonary tuberculosis with signs and symptoms becoming apparent within one year after discharge, shall be considered as due to service.”

But it goes on to suggest circumstances which may quite negative this seemingly imperative rule. The rest of the regulation is:—

“It is assumed that the length of service shall form a reasonable ratio to this term, and the conditions after discharge have not been such as would be more likely to predispose to tuberculosis than would those of service.” (St. John 52, Chapter 4, Section 4, Clause 15.)

The difficulty, even in the hands of the most expert, of diagnosing certain cases as tuberculosis, particularly in the early stages, may necessitate observation over a more or less lengthy period and this in turn can be best accomplished by admission of the patient to hospital. Twenty per cent of all suspects have been so admitted in order to confirm or disprove the suspected infection, and if confirmed, to determine the relation between the patient's then present condition and his military service. This generally turns upon the date at which symptoms first appeared.

Up to this point, no complaint has been offered by the T.V.A. representatives and thorough investigation has never been denied. Wherever reasonable doubt existed, treatment has been instituted but whether pay and allowance would be granted in addition, has apparently proved a subject of great difficulty to the Department on the one hand and of serious complaint from the men on the other.

That the difficulty is a real one is clear from the fact that of a tubercular hospital population of 910, 832 were in receipt of pay and allowances and 78 were not. The presence of the latter group in hospital is justified upon compassionate grounds.

BASIS OF DIAGNOSIS—LARGE NUMBER OF CASES IN WHICH DIAGNOSIS OF T.B.  
QUESTIONABLE

It is stated by the Assistant Medical Adviser of the Pensions Board who deals with tuberculosis pensions that only 44 per cent of tuberculosis patients now drawing pension have shown the presence of tubercle bacillus in the sputum, even after repeated examinations. While the Commission has evidence which leaves no doubt that pulmonary tuberculosis may exist without the bacillus being demonstrable, it has great difficulty in convincing itself that 56 per cent of tuberculous patients, pensioners or others, are in this position. In other words there must be in this group a fair percentage placed there as the result of over-diagnosis. It is always difficult, even in the hands of the most expert to say that a suspected case is absolutely free from infection. It has been regarded as an easier and safer path to tread to diagnose the case as tuberculosis and if wrong, to correct the diagnosis subsequently.

No rule bearing upon this has been set out by the Board of Pension Commissioners. The diagnosis of the Sanatorium Superintendent or of the medical officer delegated by him to make the chest examination is invariably accepted. Without some definite regulation concerning the presence or absence of the

bacillus, it could not be otherwise for the reason that the physician at Ottawa who determines the acceptance or rejection of the claim never sees the applicant. There thus may be a lack of uniformity dependent upon the relative importance placed upon the absence of tubercle bacillus by different experts.

Bearing upon the point as to the correctness of T.B. diagnoses the following evidence (Ottawa 666-668) is of interest:—

(Witness:.....“I am going to be perfectly frank because you gentlemen want to get all the information you can. There are lots of cases in the army to-day categorized as tuberculosis and you cannot change them because they are on the military documents as such. Conditions are absolutely different now from what they were during the war. I had cases at Ste. Agathe that I have discharged; saying—This man has not tuberculosis; he has got chronic bronchitis—and I have discharged them knowing they were getting a pension for tuberculosis, and I also knew that those men would be equally well at home. Well, they were back sometimes in ten days. Why did you discharge him?—This is the army—I discharged him because he wasn't tuberculous. Well, the instructions during the war were to keep them off the street, not to let those poor boys go around the streets, and I suppose the sanatorium was the best place for them. I know of two instances, both categorized as tuberculosis and drawing pension for that. Well, I was morally certain that it was not tuberculosis and I said so in my Boards but it was decided that they were clinically tuberculous. They are both living to-day and I am delighted that they are receiving compensation because I think they deserve it just as much as if they were tuberculous”.....

(Second Witness):.....“There are a number of cases of a certain type that can be established by X-Ray evidence, by that I mean showing involvement of lung tissue or fibrous changes and I think those might be considered in the same group as your positive sputum cases that you are suggesting giving the longer period”.

(First Witness): “For the reason that they were very positive cases, active cases. .... These additional classes would not add a very great number ..... In practice, by saying positive sputum cases, we have covered the vast majority of cases. ....

Q. “Does it resolve itself into this that you two gentlemen would rather concur in the idea that there should be some definite and prolonged period over which 100 per cent should be paid for moderately advanced cases without showing positive sputum, say of the class you have mentioned, that is, moderately advanced, and for an incipient case showing positive sputum?”

(Second Witness): “That is exactly the definition.

Q. “In other words, you carve out the incipient case that doesn't show positive sputum but you both agree on moderately advanced?”

(First Witness): “That is right because it is those very incipient cases that are the stumbling blocks”.

A letter from the superintendent of the Kentville (N.S.) Sanatorium, put in at Vancouver (319) is illuminating. He says:—

“In the first place, a large proportion of the cases counted as re-admissions do not require treatment, and are kept at the institution only for the seven to twelve days necessary for examinations, study and report upon their condition. In 200 patients (D.S.C.R.) re-admitted to the Nova Scotia Sanatorium, we find 37 who had no tuberculosis and 54 in addition whose tuberculous disease was well arrested or apparently

## SESSIONAL PAPER No. 203a

cured. For example, one patient who has been admitted here four times and as yet has never had a diagnosis of tuberculosis established. All patients sent to us from Camp Hill for observation are admitted or re-admitted to this institution."

We have, therefore, a group in which, despite the absence of tubercle in the sputum, diagnosis is made certain by X-Ray examination and also by the fact that the disease is "moderately advanced" and, while under observation, active. It is a group which everyone will admit to entitlement as far as diagnosis alone is concerned, but to assume that such a group would furnish 56 per cent of all pensions need only be stated to show to any one informed on the subject the absurdity of the assumption.

But it may be argued—what difference does it make? One of the specialists says he is glad these poor boys have pension, because they are sick and deserve it. It may, in the opinion of the Commission, make very considerable difference. Many may have been admitted under the one-year presumptive concession who would otherwise have been refused, others may be in receipt of pension on account of the prohibition imposed in tubercular cases, quite out of proportion to their disability as measured by the ordinary standards, they may be able to work all day even if unable to perform heavy work, and finally, it is not satisfactory to feel that pension has been granted upon an incorrect diagnosis.

It is on account of the considerations which have just been discussed that the Commission has, in its recommendation for full pension for two years, specified that this shall be confined to genuine T.B. cases proved by the presence of tubercle bacillus in the sputum, or X-Ray evidence of pulmonary infiltration, with the additional evidence in the latter case that the disease, at some time during the period of observation was clinically active.

According to a statement of the medical correspondent of the *London Times* in an article published therein and copied into the *Ottawa Morning Journal* of May 6, 1921, the London County Council has been reviewing cases of suspected tubercle by placing them for examination in Brompton and the London Chest Hospital, during the year of 1920. He states that in 72 cases accepted as tuberculous by the Ministry of Pensions but queried by the tuberculosis officers, only 11 were found to be tubercular and 63 not tubercular, and that of 16 cases of civilians diagnosed by tuberculosis officers as tuberculous only 2 were found to be tuberculous. He characterizes these results as "remarkable" as he very well may.

## PHTHISIOPHOBIA—DREAD OF T.B. CONTAGION

When a patient is once diagnosed tuberculous and this information becomes generally known, phthisiophobia becomes a serious difficulty to him. Through ignorant fear of contagion, fellow-workmen avoid him in the workshop and others refuse to live under the same roof with him. The general public should be instructed that their fears are unfounded, and this, which would be such an evident and humane solution, is probably not more generally taken up by Boards of Health and others through fear that people may go to the other extreme and become lax or indifferent even in cases undoubtedly dangerous. The public has for years been instructed and exhorted to avoid contagion. This has, erroneously been interpreted to mean to avoid the consumptive who for this reason has, in many communities, been led to feel that he is a pariah and outcast. That education of the public would remove this prejudice without in any way increasing the danger of contagion, is proved by the fact that many residents of St. Agathe are willing to take as boarders patients discharged from the Sanatorium and that this is frequently done with no ill effect. On the other

hand the suggestion that a T.B. colony was about to be established in the vicinity of one of our largest cities gave rise to sudden panic on the part of the surrounding residents.

The Commission considers, however, that public education in this respect is making substantial progress but is of opinion that active and constant efforts should be put forward by co-operation between the Federal and Provincial Departments of Health and the D.S.C.R. to see that the unjust handicap under which the trained ex-sanatorium patient suffers, through ignorant dread of contagion is removed.

#### *Suggestion Ex-Service Men.*

##### *Early discharge from Sanatorium*

That after a period in sanatorium reasonably sufficient for the education of the patient as to the care of himself and the prevention of contagion, he be allowed to return to his home if he so desires. (Montreal 362, Ottawa, 663).

Not a single serious complaint has been heard regarding the conduct of hospitals, nor of the treatment and consideration shown patients during their stay therein. Any discomfort suffered by patients has been unavoidable and attributable generally to monotony, homesickness or unrest caused by the difficulty of providing distracting occupations.

But the vexed question is, how long should hospital treatment continue? The most frequently voiced complaint has been that on account of this monotony and, in the case of married men, their enforced absence from their families over long periods, the stay at these institutions of the average patient, under the present regulations, is needlessly prolonged. A great deal of evidence upon this very important subject was submitted, both by the representatives of the Tuberculosis Veterans' Associations and by hospital Superintendents. It seems rather extraordinary that, after what seemed at first a considerable divergence of opinion, the discussion of the relative advantages of home and hospital treatment at different stages of the disease and under other varying conditions demonstrated that the Hospital Superintendents and their patients were not very far apart in their views. The patients spoke, of course, as laymen but they proved a highly intelligent and well-informed group.

It would appear, in order to secure a course of conduct which is necessary for successful treatment and also for the protection from infection of the hospital personnel, that instruction must be given and education effected which would be unnecessary with any other common disease. Some witnesses showed a knowledge of Tuberculosis even in technical details which was remarkable. The Commission nevertheless has taken care to check up their viewpoint by presenting it for revision and necessary criticism by experts.

The necessity for the admission of every case of Tuberculosis to a sanatorium in the first instance is admitted. The point is how long should he stay there? Two elements are to be considered viz., the welfare of the man and the protection of his fellow citizens. Once these two can be secured it is unquestionably the unanimous desire of the Tubercular Veterans that the patient, if he so wishes but not otherwise, should be awarded pension and allowed to go and live his own life as an ordinary member of the community.

The most important function of a Sanatorium is to so educate a patient so that he ceases to be a menace to his fellows, and at the same time instruct him as to the mode of life necessary to promote recovery. Actual supervision in hospitals is necessary to compel patients to follow the rules laid down but with rare exceptions, patients are anxious to learn and willingly follow instructions. It is found that as a rule those who are intractable while in Sanatorium are care-

less and indifferent after discharge while those who were willing to co-operate during their hospital residence can be depended on to follow advice given for the ordering of their lives at home.

The desirability of discharging suitable cases at as early a period in their Sanatorium life as possible has been already recognized and acted upon by the Superintendent of one of the largest Sanatoria in Canada. He states as follows (Ottawa 633):—

"Q. We are asking you to give us any help you can in considering a proposition which was made to us on behalf of the Tuberculous Veterans of Canada to the effect that a man after having had a reasonable amount of Sanatorium treatment should then be discharged if he desires to be discharged and permitted to go to his family, or his own home, and receive 100 per cent pension. I am putting it to you just briefly?—A. Well, broadly speaking, sir, that has been our practice in our area. A man who has conscientiously put in treatment in the sanatorium for a year or longer, who had reached a certain, definite stage in his disease, and had perhaps got into what we might call a chronic stage, it was felt that the sanatorium, if you forced it on the man, was failing to accomplish its duty, and we took advantage then of a ruling that was made seven years ago that if, in the judgment of the medical Board sitting on his case, it was reasonable that he should do this thing, and the Board coincided and concurred as a whole, that it was reasonable, then we stated in the Board, that we concurred in his request.

"We always made him insert in the Board's proceedings why he was requesting it, a definite request stating his reasons why he wished to forego treatment; we caused him to write something like this:

"I have completed a year or two years' treatment. I know the state of my health. I know how careful I must be. I have a suitable place in which to live and I request to be discharged on these reasonable grounds'. . . . We then ask the Social Service Department to investigate the home conditions, and if they said they were all right sanitary and proper conditions, we felt more convinced that we were justified in concurring and allowing the man to try a period at home. We felt that that man had been well trained and had been careful and that even if he was discharged from the sanatorium he would continue to be so. On discharge, he was informed that in doing this he need have no fear that he would be in any way penalized, because we were practically discharging him from the sanatorium but definitely at his request. . . . .

"Q. You are speaking of all cases now in which a man has spent a year or more in sanatorium?—A. Yes.

"Q. Would you discharge a bed case?—A. Very rarely unless we had every assurance that the people at home were willing to assume the control of that patient. Many times I have been asked by patients to give them reasonable refusal of treatment, because a brother or a sister had said or told them that they were welcome home. Before concurring in such a discharge, I always write a letter to the exact party who had been quoted as saying they were welcome, and they must furnish me, in writing, a statement saying that their home was open and that the patient was welcome, and that they knew how to take care of that man and assume the responsibility.

A. They were more chronic types. The infirmary case rarely wanted to be discharged.

"Q. The infirmary case, that is the bed case?—A. Yes. I have a case in mind now, a boy from Prince Edward Island. He was under

treatment and wanted to go home, so I wrote to his father and mother and told them exactly his condition and they wrote back and assumed full responsibility for taking care of him, and then that boy was sent home in care of a nurse and delivered to his own people. I have another instance away out in British Columbia where a mother and father said they were willing to take their boy and were willing to take care of him. I had it in writing that they would assume full responsibility".

Looking then to the welfare of the patient alone it may be taken for granted that if he has proper living quarters to which he may remove, if in receipt of adequate pension and not too far removed to be able to obtain medical advice when necessary, he may with safety be allowed to go home after one year's sanatorium instruction and treatment.

But the welfare of the public is also involved, and until a tuberculosis patient has been educated or until the tubercle bacilli have completely disappeared from the sputum, it is imperative, especially where the patient is in contact with young children, that he should be isolated.

The length of time necessary to educate a patient sufficiently that he may with almost complete safety return to his home varies with the intelligence of the patient and his willingness to learn. It should prove, in the case of an intelligent man anxious to co-operate, a comparatively short period. The evidence presented is to the effect that once a patient is educated, he may live at home and not expose his relatives to any greater danger than by periodical visits home on leave. Your Commission is convinced that the danger of contagion is, in the case of the trained patient, much exaggerated by the public. The answers to inquiries as to whether there were instances of infection in the families of Canadian pensioners returned home from sanatorium would lead to the conclusion that these cases were exceedingly rare, and even nurses, physicians and attendants in sanatoria had been practically free from infection unless predisposed by subnormal physical condition.

It follows from the above that if proper medical supervision can be maintained and the patients regularly examined and advised by a capable physician, once education is completed and the home conditions found to be satisfactory, patients not confined to bed can be as effectively treated at home as in a sanatorium.

#### *Recommendation of Commission.*

That the practice be adopted of permitting tubercular patients, if during treatment they have shown a proper sense of responsibility, and if they so desire, after one year's sanatorium treatment, to leave the institution unless outside living conditions are unsuitable.

#### *Suggestion by Ex-Service Men.*

No deductions for maintenance in Sanatorium

That pay and allowances should be paid to patients for maintenance. (Winnipeg 629).

If while on pension an ex-soldier is readmitted for treatment, \$30 per month is deducted from his pension, and applied to the cost of his maintenance in sanatorium. Objection was made to this practice on the ground that, while the ex-soldier is compelled to contribute to the up-keep of the sanatorium, very few civilians who are receiving identical treatment and privileges, pay anything, and that the ex-soldier should receive at least as much consideration as the

## SESSIONAL PAPER No. 203a

civilian. The obvious reason however for not asking certain civilians to contribute is that they are penniless, whereas the pensioner has an income, part of which, at least, is conserved by living in an institution, and he is thus saving his cost of living at home.

*Recommendation of Commission.*

None.

*Suggestion by Ex-Service Men.*

Suitable employment or, preferably 100 per cent

That provision be made by means of sheltered workshops or home industries or other suitable periodically intermittent employment so that tubercular pensioners may supplement their pension by earnings, or preferably that in cases moderately advanced or of a greater degree of severity 100 per cent pension be paid for life, or that incipient or moderately advanced good type cases 100 per cent pension be paid for one year, and that reductions be not made at a greater rate than 20 per cent at any one time, with an irreducible minimum of 50 per cent. Halifax 124, St. John 90, Winnipeg 521, 536, 631, Calgary 324, Vancouver 323, 324, Regina 79, Toronto 1618, 1619, 1625, Montreal 372, 376, 394, 396).

First, as to sheltered workshops. Even in advocating this, the difficulties and limitations were recognized by their advocates. The great difficulty facing such a proposal is that on account of phthisiopobia, such workshops would necessarily have to be limited to men suffering from tuberculosis. Even the Red Cross Society will not, on account of the opposition of its non-tubercular workmen, admit tubercular cases into their workshops. Again, sheltered employment could only be provided in large centres. This would either compel the congregating in cities of the tubercular who wished to take advantage of the opportunity offered, something not at all to be desired, or shut out a number equally well entitled.

There was no unanimity of opinion; witnesses at Montreal (376), Toronto (1625) and Winnipeg (536) were either indifferent or opposed to institutional or supervised employment. Two specialists who gave evidence at Ottawa (188 and 657) were of the opinion that sheltered employment might have some therapeutic value but were not at all strong in its support, in fact the principal advantage mentioned by both was that it provided a means of increased income.

There are many difficulties in maintaining and operating Vetreft and Red Cross workshops even under the most favourable conditions, and when those difficulties are increased by the necessity of having to maintain such institutions exclusively for one class and further when many of the representatives of that class are themselves not by any means unanimous as to its efficacy or desirability and in some cases opposed this form of re-establishment, the Commission considers that its adoption is not warranted.

Secondly, as to Home Industries. These, like sheltered workshops, are not applicable alone to the tubercular. If the establishment of such industries were feasible they would be particularly suitable for tubercular pensioners because the necessity for associating with other workmen who may fear infection is eliminated. The evidence before the Commission on this phase of re-establishment is exceedingly meagre and such as it is will be dealt with in connection with the employment of the disabled generally.

The alternative to providing part time employment for tubercular cases was that 100 per cent pension should be paid for life in moderately advanced or more serious cases and that in the less severe cases there be 100 per cent for a

substantial period with reductions of not less than 20 per cent at any one time down to an irreducible minimum of 50 per cent. The Commission has tried to weigh the varying and sometimes conflicting considerations involved in these proposals. Immediately there arises the suggestion that to make any such arbitrary provision would be apparently to discriminate against those suffering from other disabilities. On the other hand the peculiarities of this disease make rest, quiet and freedom from anxiety a necessary part of treatment.

There is, the Commission considers, a disadvantage suffered by many tuberculous pensioners as compared with those assessed at just as great a percentage of disability on account of other ailments. The T.B. pensioner in many cases is required to take absolute rest for a considerable portion of his working day while the other man may put in a certain percentage of work without interruption during the whole day. The disability of the T.B. man is total for a portion of the time while the active man has a limited working capacity all the time, consequently the jobs for the T.B. men are more difficult to find. Employers would rather have a man whose percentage of working capacity can be spread out evenly over the whole working day than one who must put in his work at intermittent periods even though at greater intensity while actually working.

Another point brought up is that while the object of the 100 per cent pension is to permit the man to have complete rest and thus promote recovery and cure, this does not always work out for the reason that men not conscious of illness and ambitious to add to their income go to work and thus defeat the very purpose for which the total disability pension is given. There are undoubtedly cases where this has occurred and the man has broken down. All that can be said is that naturally these cases would be even more frequent if the pensions paid were less and the inducement to work that much greater.

There were many other considerations discussed but the argument of the T.B. representatives rested on two main contentions: (1) That all efforts to provide suitable employment and sufficient income consistent with proper after care were ineffective and sheltered employment, home industries and T.B. colonies were one by one eliminated; (2) That the cost to the country of 100 per cent pension would be less than the cost of maintaining the men in hospital to which they would (it was said) have to return on account of break-downs resulting from being forced to work to earn a livelihood at the expense of health.

As to the first contention, the Commission has already indicated its opinion that the country may as well recognise the futility of trying to seek, as substitutes for pension, occupations which will be remunerative and yet be suitable for the inconstant nature of the working capacity of the tuberculous pensioner. An extract from an article by an eminent specialist on tuberculosis and published in the 22nd Annual Report of the Canadian Tuberculosis Association (p. 78 Record p. 399-402) clinches the argument. He says:—

“Though many attempts have been made to furnish lists of suitable and unsuitable employment, it must be recognized that the problem is an individual one, and that rigid and uniform rules are impossible of general application....

“What is bad for one tuberculous man, in view of his condition and many sets of circumstances, may be good for another, differently placed and in a different physical condition....

“While this is the case and definite white and black lists are impossible, it should be pointed out that popular ideas are especially wrong about farming and gardening as suitable occupations for the consumptive. Both the living and working conditions on the average farm are emin-

## SESSIONAL PAPER No. 203a

ently unsuitable for the ex-Sanatorium patient unless he is an experienced farmer, whose physical condition is particularly good and who in the position of owner with some capital, can select his own duties or develop one of the less laborious lines of farming.

"Market gardening which has been looked on as an easy, suitable and even poetic form of farming, is perhaps even more undesirable as a means of livelihood.

"How very rarely indeed is the opportunity for suitable employment afforded the average type of ex-Sanatorium patient, if, to the conditions existing in the ordinary labour and industrial markets, the complex of principles involved be applied as a standard. As a rule he is hopelessly handicapped and not infrequently permanently so....

"Indeed it has been found that actually the great majority of employers would far rather be called upon for a direct financial contribution than be asked to find employment for the sub-standard tuberculous man....

"Even the 75 per cent efficient physically are practically 100 per cent disabled as far as opportunities for suitable employment under ordinary conditions are concerned. It is seldom that a full day's work is not demanded from an employee if he is to expect to retain a position permanently. It was the realization of the great paucity of opportunity for suitable occupation in which the tuberculous ex-patient could earn a reasonable livelihood without unduly jeopardizing his unstable health that justified the conclusion of Varrier-Jones that '*a consumptive with moderate disease is as utterly incapable of earning a living under present economic conditions as an epileptic.*' Apparent exceptions to this sweeping statement will of course at once occur to everyone. When these are carefully analyzed, however, it will almost invariably be found that either the character of the work or the conditions under which it is performed have been materially modified by a considerate employer, frequently a relative. Occasionally also a higher degree of skill may mitigate the handicap of the patient's physical limitations."

Further on in this Report the Commission will deal with T.B. Colonies but only as a possibility in improving living conditions rather than as an aid to earnings.

As to the second contention that 100 per cent pension will cost less, the Commission has already intimated its opinion (Report No. 3 p. 49) that this will in the end be found to be true.

The establishing of these two contentions does not however inexorably point to the conclusion that there should be an arbitrary award of 100 per cent pension for life.

Admittedly a convalescing tuberculous man is not fit from a practical standpoint, because of the prohibition imposed on him as part of his treatment, to take up remunerative employment. But while this contention of the representatives of the tuberculous men is sustained, it does not follow that the prohibition imposed will be necessary for all time and the Commission has not found in the evidence the necessary factors to support that claim.

It is readily recognized that there should be ample liberality in rating T. B. disabilities because of the beneficial effect of contentment of mind and freedom from anxiety in accelerating cure. Restoration of health and earning power is what is sought. With this in mind the Commission has already recommended an arbitrary rating in designated cases of full pension for 2 years after discharge from Sanatorium (Report No. 3, p. 49).

In addition to this there is the practice of the Pensions Board in accordance with the recommendation of the Parliamentary Committee of 1922, as follows:—

"The Committee recommend that pension awarded an ex-soldier by reason of tuberculosis should not be in any event whatsoever reduced with too great suddenness; and recommend that a reduction in pension awarded for tuberculosis be not made at any one time to any extent greater than 20 per cent."

This practice of arbitrarily limiting the reduction of pension is inconsistent with the provisions of Section 25 (1) of the Pension Act, since the latter requires the pension rating to conform to the actual degree of disability. The Pensions Board have, however, readily accepted and put into operation the policy recommend (Montreal 372) and the Commission's conclusion hereafter on this proposal as to pension allowance for life for the tubercular is based on the assumption that this practice will continue and that reductions will not take place more frequently than half yearly.

Assuming the Commission's recommendation as to full pension for two years were adopted the practice would work out as follows: After the T. B. pensioner had received his 100 per cent for two years, he would still be entitled, no matter how much he might have improved, to have 80 per cent for the following 6 months, with subsequent half yearly reductions of not more than 20 per cent, so that his pension could not possibly entirely cease until  $4\frac{1}{2}$  years after discharge from Sanatorium. But a further practice has been adopted by the Pensions Board to ensure to the pensioner the benefit of adequate medical supervision. A regulation (Routine instruction No. 236, Montreal 368) is in force which prevent T. B. pensioners being cut off entirely and provides that the pension must continue at at least 15 per cent for 2 years from the time when the pensioner arrives at the stage known to T. B. Specialists as "apparently cured." This classification is never made until a patient has been, under ordinary living conditions free of symptoms for a period of 2 years and the regulation itself sets out that in effect it ensures pension and medical supervision for an approximate period of 5 years at least after discharge. The maintenance of the pension, of course, automatically involves periodical re-examinations which are desirable to detect recurrences.

The foregoing has in mind a pensioner who has so improved that the arbitrary percentage of pension awarded under these provisions is really considerably greater than his actual bodily disability. As to the man who does not improve, it must be remembered that nothing in the foregoing prejudices his right to receive pension commensurate with his disability, for example, if at the end of the 2-year period he is still a chronic invalid, the 20 per cent reduction is not made, and he may be paid a pension according to his total or partial disability for the rest of his life. Neither is it to be assumed that even if a man has substantially recovered there is anything in the recommendation made or the practice in force to prevent the Pensions Board giving full effect to any handicap which he may suffer by being prohibited on account of fear of recurrence from engaging in activities open to a normal man of his age.

It should also be remembered that if a relapse should occur and symptoms of renewed activity develop, the patient would automatically be restored to 100 per cent and continue, as in the first instance, at that rate for a period of two years. In other words after a relapse, the right to full pension for a 2-year period becomes again operative and the same system of limited reductions resumed.

## SESSIONAL PAPER No. 203a

*Recommendation of Commission.*

1. The Commission is convinced of the futility of attempts to provide special employment for the convalescing tuberculous in an endeavour to afford opportunity for earning wages to supplement partial pension.
2. The Commission refers to the recommendation as to the payment under the circumstances set out in Report No. 3 (p. 49) of full pension to the tuberculous for 2 years after discharge from Sanatorium.
3. The Commission further recommends the continuance of the practice of not reducing T.B. pensions by more than 20 per cent after any re-examination and that these reductions be not made more frequently than half yearly.

*Suggestion by Ex-service Men.*

Specialists to state opinion as to rating

That in the province of Manitoba the decision as to pensions for tuberculosis be made by the local chest clinic. (Winnipeg 534).

One situation for which a remedy was sought was the delay due to the roundabout procedure of applications made to the sub unit office having to go to the unit at Winnipeg and thence to Ottawa. The idea was that since these cases were, under the present practice, dealt with at the local chest clinic acting in an advisory capacity, it would increase neither the work nor the expense of the clinic to have it make actual decisions instead of reports. This would be to adopt the principle of local autonomy. Canada's unique position in vesting exclusively in the authorities at Ottawa the power to make effective decisions has already been pointed out and the opposite practice in other Countries indicated (Report No. 2 p. 15). Unless the policy of decentralization is to be adopted nation wide the above suggestion could not be favourably entertained.

There is another element in the proposal and that is, the desirability of having the opinion of experts as to the degree of disablement under which the man suffers instead of confining their function to describing the stage of progress or of cure of the disease. It cannot be denied that the Specialist in the clinic is in a more favourable position to estimate the percentage of disability because it is he who, instructing his patient, fixes the hours of rest or work and who, therefore, directly determines his capability to earn a living. In other words, the prohibition imposed upon a tubercular patient should be the basis for pension, and not the classification now used of "quiescent," "apparently arrested," etc.

The suggestion is, not that the chest clinic specialist should take the place of the local pensions medical examiner, but that the specialist in expressing his opinion should do so in terms of percentage of disability and not solely in an abstract description of the patient's condition. Exactly the same principles apply concerning the reports of the sanatorium specialists. If, however, the recommendation of the Commission as to full award on discharge is adopted there would be no necessity for sanatorium reports to state percentages.

*Recommendation of Commission.*

That Tuberculosis Specialists in reporting on pensioners coming up for re-examination should not only describe the physical condition of the patient and the stage of the disease but should definitely state what, in their opinion, is the percentage of the pensioner's disability.

*Suggestion by Ex-Service Men.*

## One-third increase in T.B. Pensions

That the present standard of pension be increased by one third in cases of tuberculosis. (Calgary 329).

Obviously this suggestion could not be adopted. It would be regarded, and rightly so, as discrimination. In principle the standard of pension rates is based on average living costs and like all averages must apply equally to all, and cannot be altered to fit each individual case or class.

The ground for the request was that those suffering from Tuberculosis require more expensive food and better living quarters. While there is to a minor degree some merit in this contention, the Commission has tried to make its recommendations in connection with pension ratings sufficiently ample and unmeasured as to fairly make allowance for such special conditions as surround the tubercular.

*Recommendation of Commission.*

None.

*Suggestion by Ex-Service Men.*

## Retroactive Pension for T.B.

That when pension is awarded for tuberculosis it be made retroactive for the period during which the ailment must have previously existed as indicated by the progress which the disease had made at the time of the application. (Vancouver 332).

It is a fair presumption that if the disease has progressed sufficiently to have caused a disability the ex-service man would apply for treatment, and therefore pension dating from that time would cover all actual disability. Under these circumstances to allow retroactive pension would be to base pension upon the presence of the disease and not, as is the rule, on the disability arising therefrom. This principle was recognized when the Pension Act was passed and is embodied in Section 28(b) as follows:—

“28. Pensions awarded for disabilities shall be paid from the day following that upon which the applicant was retired or discharged from the forces except,—

“(b) In the case in which a pension is awarded to an applicant the appearance of whose injury or disease which caused his disability was subsequent to his retirement or discharge from the forces, in which case the pension shall be paid from the day upon which the application for pension has been received”.

In the opinion of the Commission there are no special considerations in the case of the tubercular which justify an alteration in this general and long standing statutory provision.

*Recommendation of Commission.*

None.

*Suggestion by Ex-Service Men*

## Extension of time for presumptive attributability

That regulations be adopted to the effect that, if signs and symptoms of tuberculosis appear within three years after discharge, it shall be presumed that the disease was incurred during service, or in the alternative, that the period of one year now generally allowed for the purpose of such presumption be extended. (Ottawa 684, 597, 656, 328, St. John 44, Calgary 328, Vancouver 313, Regina 67, 71, Montreal 57.)

SESSIONAL PAPER No. 203a

In some places the representatives of the T.V.A., even went the whole length of advocating that the burden of proof be shifted entirely, and consequently that T.B. in an ex-soldier be presumed to be connected with service no matter how long after discharge it appeared. The suggestion above summarized was a modification of this much more drastic proposal. (Halifax 121, Montreal 56, Calgary 322, Regina 63). The general request as to shifting the burden of proof is dealt with under the heading of "Procedure" since this applies not only to T.B. but to all other disabilities as well.

The serious difficulty in T.B. cases is to determine whether the disease began before or after discharge. If before, then it was "incurred" or "aggravated" "during service" and is pensionable, while if after, it is like any other ailment suffered by the ex-service man in civilian life. The progress of the disease varies remarkably in different persons even in the same environment, and, with the most efficient aids to diagnosis, expert and experienced specialists find in numbers of cases great difficulty in expressing any assured opinion as to the time of onset. In view of the far-reaching effect which these opinions have on the rights of an applicant and the indistinct nature of the conditions on which they have to be based, it has been thought well by the Pensions Board to adopt a working practice under which a presumption is generally made that if signs and symptoms appear within one year after discharge the disease can be fairly said to have been present during service. This does not take the form of a hard and fast regulation but is an instruction issued for the guidance of pension medical advisers and examiners to aid them in coming to a conclusion as to whether the disease was present at discharge. It states that: —

"Cases of pulmonary tuberculosis with signs and symptoms becoming apparent within one year after discharge, shall be considered as due to service. It is assumed that the length of service shall form a reasonable ratio to this term, and the conditions after discharge have not been such as would be more likely to predispose to tuberculosis than would those of service." (Chapter 4, Section 4, Clause 15.)

It was sought on the hearings to get from the specialists some reasonably definite idea as to how long the disease could have existed without being apparent. If any definite opinion could be expressed on this point then it would at least be possible to reason back from the date when the symptoms were discovered in any given case and say whether the disease could have existed at discharge. The specialists considered that the variations in the onset and progress of T.B. made it impossible to fix any term which would reasonably cover all cases. Naturally, they contended that from the medical standpoint the scientific way in which to decide when the disease began was to investigate each case on its own history and symptoms and express an opinion on the facts of that case alone. When asked their opinion as to the advisability of fixing a period within which, if disease appeared, it should be presumed to have been incurred on service they considered that such a presumption should be a matter of expediency for legislators rather than of expert opinion by professional men. (Ottawa, 622, 681, 683, 686.)

Legislators would naturally be governed by the law of averages. In making the present rule the Pensions Board no doubt considered that, since a very large proportion of the cases in which T.B. appeared within the one-year period after discharge were, after investigation, granted pension, then the few who were unable to produce the required evidence might as well be admitted also, particularly since it never could be said with positive certainty that they were not entitled. Admittedly the one-year presumption is made as an expedient and not as a scientifically exact rule.

The question as to whether this one-year period should be made longer depends, then, on whether the underlying basis of expediency will still obtain.

If it is found that nearly all cases in which the symptoms do not appear until two or three years after discharge are pensioned, then the delay and annoyance and expense may as well be eliminated and pension be conceded on the simple fact being shown that the disease manifested itself within that time. There is a great dearth of information as to this crucial point.

The consensus of opinion of those most competent to judge as expressed before the Commission was that practically all tuberculosis first presenting symptoms during service or within a short period of discharge were cases of reactivation of a condition present in childhood or youth. Further proof of this is furnished by the fact that the ratio of incidence of tuberculosis among ex-soldiers is practically the same as the incidence of tuberculosis in the province from which they enlisted. It is unreasonable to assume if the disease originated on service that soldiers from Nova Scotia would develop, as is the case, tuberculosis three times as frequently as soldiers from Alberta because on the whole, each group was faced with the same strain and exposure and lived under the same conditions. If then it is true, that in almost all cases where pensions are now being paid, attributability is based on "aggravation" during service, it is at least probable that such aggravation would reveal itself by clinical evidence within one year following the exciting cause.

No figures have been obtained so far which indicate what proportion of the cases admitted to pension showed their first signs and symptoms of T.B. after one year from discharge. The general statement was made by the Director of Medical Services in 1923 (four years after demobilization) that of the cases applying at that late date, only about 10 per cent were rejected and this estimate was corroborated by one of the assistant medical advisers (Ottawa 593). One of the foremost specialists in Canada (Ottawa 684-5) told of his investigation of a residue of cases which had been the subject of controversy and which were getting into the two year period after service. The result of his examination of 71 cases was that only 11 were rejected and of this 11 some were afterwards admitted. It might be argued that of those who wait four years after discharge before applying there must be a large number whose symptoms have only recently appeared and that the fact that 90 per cent are still admitted shows that T.B. appearing long after discharge can be presumed to have existed on service; but there are too many chances for other factors to operate to warrant using these figures as a basis for anything more than they indicate on their face. First, they are only impromptu estimates. Secondly, the 10 per cent rejected may be largely made up of these very cases where the disease manifested itself after one year and the admission of the other 90 per cent would, therefore, prove nothing, and thirdly, the disease when it was discovered may have been so well developed as to indicate unmistakably that symptoms must have appeared within the year even though they were unnoticed.

Whether it is likely that a disease, the symptoms of which have just now been discovered, existed on service, depends on at least two things, first, how long a period has elapsed since discharge, and the second enquiry necessary is, what headway has the disease made, because the condition might be so incipient as to show clearly that it could not have existed ever since discharge and not have made further progress. While the present presumption affords a good working rule for a period which is close to discharge it is not exact since it omits to take account of this second factor, viz., degree of progress at the time of application. This is evidently because it is always barely possible that even incipient T.B. may have been smouldering for a year and that consequently it was thought not worth while to draw distinctions between the different stages of the disease found within that short period. But if the period of presumption is to be lengthened a reciprocating requirement would have to be introduced as to the stage of development. It could hardly be urged that incipient disease discovered say two years after discharge is so invariably found to be connected

## SESSIONAL PAPER No. 203a

with service as to warrant a general regulation admitting that conclusion in all cases.

In the United States both the stage of development and the lapse of time are considered and definite statutory rules are made. (Montreal 64, Regina 67). Under these rules if the patient shows active T.B. to a 10 per cent degree within two years it is presumed to have been incurred "in line of duty." In other words, that condition is considered severe enough to warrant the presumption that it existed back to the period of service and has been progressing since that time. But in the United States they go a step farther to provide for the man who does not present himself until long after the two years. Since they are without first hand knowledge of his condition within the two years they have made elaborate provisions for judging from the present condition what the previous condition was. For example, if there is cavity formation to the extent of two entire lobes of the lung three years after discharge, it will be presumed therefrom that the 10 per cent was present within the two year period. If, however, the present condition is less serious, namely, "moderately advanced," then it must show itself within two years and nine months to give the applicant the benefit of the presumption, and in cases still milder, namely, "minimal stage," the appearance must have been within two and one-half years. The plan is, that a certain stage of progress of the disease within a certain time raises a presumption that at least a 10 per cent degree existed within two years after discharge, and this presumed existence of 10 per cent within two years raises a further presumption that the disease must have existed at discharge and is therefore pensionable.

The difference between the United States and Canada is that, in the former, in order to prove that the disease was connected with service the T.B. patient must show within two years a condition of active T.B. to the extent of 10 per cent, while in Canada no certain stage of development is required to have been reached so long as some symptoms no matter how incipient have manifested themselves within one year. In the United States the rule is absolute, in Canada it is only a presumption.

In Great Britain T.B. cases are dealt with similarly to any others and no presumption is made.

On the basis of the United States regulations any change in the Canadian provision would be by way of making a certain present degree of severity conclusive or at least presumptive evidence that there were signs and symptoms within a year after discharge and thus by a process of relays tying the present condition up with service. If the Commission had any definite reliable evidence whatever that where conditions such as those described in the U.S. regulations are found, the disease must with rare exceptions go back from two to three years then it could fairly recommend that all such cases be admitted. The saving to the other (say) 95 per cent of the worry of painfully gathering the required evidence to show that their ailment was connected with service would quite justify letting in an odd case which would have been shut out if examined on its merits. But no such evidence has been forthcoming. Two Specialists were asked by the Commission to speak on this point. Both of whom enjoy, the Commission believes, not only the confidence of the profession but of the Tubercular ex-service men as well. One on being insistently pressed for an opinion declined to generalize and always came back to the statement that

"every case is an individual case and must be established on its own merits." (Ottawa 686).

and again,

"every case is a case unto itself and I think ought to be dealt with on its own merits." (Ottawa 683).

The general effect of his evidence that from a medical viewpoint no set period after discharge could be fixed for the appearance of service Tuberculosis and his only experience cited from which any average could be deducted was in the examination of the residue of 71 cases spoken of above (Ottawa 681-3-4-5).

The other Specialist when asked as to the practicability of establishing an arbitrary time limit said

"I can think that many patients would come under the three year clause who would have no right whatever to come on the Country." (Ottawa 597, 617).

And this was reiterated later (Ottawa 617).

Without any evidence whatever (except the United States regulations) that Tuberculosis found three years after discharge is generally recognized as having been incurred during service the Commission feels that it is not warranted in recommending that a statutory presumption do duty for clinical and historical evidence in the individual case. The Commission does feel, however, that there is not a clear appreciation of the fact that in order to connect up Tuberculosis existing to-day with service, or in other words to show "continuity," it is not always necessary to show actual intervening manifestation of the disease. "Continuity" only means the continuous existence of the disease, and if the clinical findings and opinions as expressed by experts are to the effect that, from the condition found, the history and other circumstances which are regarded as valuable in diagnosis, the disease now shown existed during service, that should be regarded as showing continuity although interim symptomatic evidence is wanting.

#### *Recommendation of Commission*

None—further than the recognition of the above principle in deciding as to continuity.

#### T. B. COLONIES AND HOUSING

Not only does the Commission consider that the establishment of T.B. colonies with any idea of providing an opportunity to supplement partial pension is impracticable as being unremunerative, but the scheme is not favoured by representatives themselves. Even where sheltered employment was favoured. (e.g. Calgary) Colonies were opposed. Aside from the fact that Colonies offer no advantages which cannot individually be obtained, is the objection to supervision common to all men and perhaps particularly so to the hyper-sensitive consumptive. Rules and regulations will only be submitted to if self-interest or the good of one's fellow-man is dependent upon their observance. The representative at Winnipeg (Winnipeg 536) gives as his opinion that any organized system of after care is undesirable; the Montreal representative insists (Montreal 323) that even social service and follow-up activities are of little value and the whole is summarized (Toronto 1625) by the Secretary of the T.V.A.:—

"A. In discussing 'Sheltered Employment' one is met with the deep-rooted conviction in the majority of T.B. patients that these necessarily take the form of Colony Schemes, Segregated Areas, or Vetscraft Shops, so I propose to state the objection to all these. Firstly, the impression of Colony Schemes is a 'large community centre governed by irksome, strict rules and regulations that would suggest an Army Camp.' A hot bed of social strife owing to the limited change of environment, boredom from monotonous routine, and officialdom necessary for the maintenance of said rules and regulations. . . .

"I think the Colony Scheme is very desirable in this part of the Country and in many other parts, but there is a deep-rooted objection

## SESSIONAL PAPER No. 203a

to it. Because the Scheme has been advocated in different parts of the Country it has been shown that because of the climatic conditions being different the needs of the men should receive different treatment and they should be permitted to make their own presentation as to their needs. . . .

"Q. Do I understand you to say that no Colony Scheme in the Province of Ontario would be practicable?—A. It would be absolutely impracticable and undesirable."

It has been represented however to the Commission by tuberculous patients at Tranquille Sanatorium and by members of the local Red Cross Branch at Kamloops that some patients particularly those from the coast cannot return to the moist atmosphere and low altitude of their homes without detrimental effect upon their health. The conditions at Kamloops which is situated in the so-called Dry Belt are claimed to be unique on account of the dryness of the air. Persons treated for tuberculosis in this atmosphere must in some instances remain a considerable time in the locality after the disease is arrested.

A rather ambitious plan was worked out two or three years ago aiming at the establishment at Kamloops of a model village but the aversion as already noted of the Tuberculous men to colonies or segregation destroyed any hope that such a scheme would prove successful. Men unwilling to live in Colonies or model villages are, however, quite anxious to remain in the vicinity of Kamloops and would do so if ordinary places of residence were available for their accommodation. It is claimed that there are none such—practically every house is occupied and the number built annually is insufficient for the ordinary demand. Under these circumstances, it is asked that a small number of houses suitable for families, one member of which is tuberculous, should be erected and rented to ex-patients of the sanatorium at a rate sufficient to carry the cost of the land and construction. The Red Cross Branch at Kamloops undertakes to look after the selection of tenants, collection of rents, and general supervision of the properties. It is said that suitable houses can be erected for three thousand dollars each, or less.

The Commission recognizes the danger of recommending an innovation which may elsewhere be pointed to as a precedent but believes that the conditions at Kamloops are really, as claimed, unique in Canada and that there is no other district with Sanatorium facilities where similar conditions prevail. The Commission with this in mind feels that the request should be granted but, as there is no certainty of the number who would avail themselves of the chance to rent such houses, that not more than five be erected, and on the understanding that the Red Cross Society agrees to become responsible for the general direction of the whole project.

Various other suggestions respecting special housing facilities for the Tuberculous were made but the Commission is not prepared to go farther than to recommend the above as an experimental project under special conditions and not as a commitment to any general policy.

#### **Section 4. The Chronic Pulmonary Conditions Not Tuberculous**

##### *Suggestion by Ex-service Men.*

That a minimum rate of pension varying from 50 per cent to 100 per cent be granted to men suffering from chronic bronchitis, asthma and kindred ailments, for a fixed period of not less than six months following their discharge from hospital. (Halifax 123, Montreal 482, Regina 72, Calgary 336).

At Halifax the recommendation was simply that these cases be adequately pensioned. At Montreal, Calgary and Regina it was requested that they be considered as total disabilities for at least six months and that the pension be

not reduced more than 20 per cent at any one time thereafter. The representations on behalf of these men were based largely on the contention that sufficient recognition was not given to the severe effects of asthmatic and bronchitic conditions on working capacity. Cases of bronchitis are not infrequently admitted to Sanatorium for observation as suspected tubercular cases and the men, after having been allowed prolonged residence there, have been discharged as non-tuberculous. While for the first six months after discharge the Bronchitis case may be severely handicapped, after that time improvement may be more confidently looked for than in the case of the tuberculous. Bronchitis and tuberculous cases having however been associated for a long time in the Sanatorium, not unnaturally, come to the conclusion that there is some relation between the bronchitis and tuberculosis and that following discharge both should receive the same consideration as regards pension.

The fact is that the only relation between tuberculosis and other pulmonary conditions such as asthma, bronchitis, emphysema, etc., is that they all occur in the chest. Otherwise there is no connection whatsoever.

The Commission can see no reason why pulmonary conditions other than tuberculosis should be considered for pension upon a basis different from that of other diseases. It fully recognizes however that many asthmatics and chronic bronchitis cases are handicapped as completely as the tubercular and may, in addition, suffer keen distress upon the slightest exertion. There is the further fact that they may be completely incapacitated for outdoor work during the winter months. All these elements emphasize the necessity that generous consideration be given in assessing the degree of their disability.

#### *Recommendation of Commission.*

None—further than as indicated by the above.

### **Section 5. The Insane**

Considerable discussion took place on the Hearings before the Commission with regard to the regulations in force relating to the insane. There apparently exists some misunderstanding of the principles and practice due in no small degree to the complexity of these special provisions. The regulations particularly referred to are contained in P.C. 580.

As would be expected, cases of insanity are dealt with somewhat differently from other disabilities. For instance, when an insane ex-service man is in an institution, sufficient money is paid for incidental expenses but his general pay and allowances are withheld. His dependents are paid what they would have received in case of his death, and on discharge from the institution an adjustment is made. If the amount which he would have received for pay and allowances is greater than the amount paid to the dependents the difference is paid and the man is put on pension; on the other hand if the amount paid to the dependents has been greater than pay and allowances no refund is asked for. (Vancouver 130).

Contrary to the practice which is followed respecting other ailments, cases of insanity are not put on pension when further treatment appears to be hopeless. Even though the case is incurable the man is kept on a basis of "Treatment with Pay and Allowances" for life. This only applies, of course, to those whose insanity is connected with service.

There are cases where the patient is entitled to pension for some disability other than the insanity; under these circumstances the pension may be paid to the D.S.C.R. and be applied by that Department on account of maintenance, but more often it is paid by the Pension Board to the man's dependents when necessary for their support.

SESSIONAL PAPER No. 203a

## CLASSIFICATIONS FOR TREATMENT

P.C. 580 contains no less than five different classifications of ex-service men suffering from mental derangement. These classifications depend on the time of onset of the trouble and its relation to service. The man is examined and placed in one or other group and the classification so made determines whether or not he shall receive pay and allowances together with treatment, or whether treatment alone shall be given, or whether he shall be entitled neither to pay and allowances nor treatment but handed over to a Provincial Institution. The net result of these classifications is that institutional care and treatment are given to certain men whose insanity is not related to service.

Those who are interested in these men are not unnaturally confused by this prolixity of regulations. It should be remembered that they only apply to treatment and that pension for mental afflictions rests on exactly the same principles as for other disabilities. The pension is applied somewhat differently on account of the applicant's unfitness to handle it personally but the grounds of entitlement and the amount of award do not differ from other cases. The practice is for the Pensions Board and the D.S.C.R. officials to confer so that it may be known whether the Pensions Board will, if the question of pension comes up for decision, concede that the disability is connected with service. This enables the D.S.C.R. officials to place the applicant in the appropriate classification under P.C. 580 and to give him treatment and allowances to the extent to which the classification entitles him.

## RECURRENCES

It developed in a discussion in Montreal (77-80) that if a man was pensioned for mental trouble incurred during service which became apparently cured, and if after September 1, 1920, the mental trouble appeared again, pension would not be restored unless the ailment was shown to have been attributable to service. This ruling comes about from the interpretation placed on the Pension Act to the effect that the "Insurance principle" was abrogated after September 1, 1920, (see Report No. 1, p. 44-47). This has been corrected by the 1923 Amendment to Section 11. It is assumed that the ruling that the recurrence must be shown to be "attributable" would not now be made and that in mental cases as in all others the fact that the disability is one resulting from injury or disease incurred on service would be considered as entitling the applicant to pension.

*Suggestion by Ex-service Men*

Old Section 25 (3) as applied to mental cases

That the classification which permits of refusing pay and allowances to a man who is discharged owing to a mental disability be modified so as not to affect those entitled to pension under section 25 (3) (now 11 (1) (b).) (Toronto 1739).

P.C. 580 divides those who are not mentally responsible into five classifications: (a) those suffering from a mental disability which either developed during or after service, but which is admittedly attributable to or was contracted on service; (b) those suffering from a mental disability which either developed during or after service but which was aggravated on or by service; (c) those discharged from service owing to a mental disability not attributable to or contracted on nor aggravated on or by service; (d) those who, while on pension or undergoing treatment for some disability other than mental, have developed mental disability not attributable to or contracted on service; (e) those discharged A-1 who have subsequently developed a mental disability not attributable to or contracted on service.

Further on the Order in Council sets out the extent of the treatment and allowances to which each of these groups is entitled. The provision for those in classification (c) is that they are maintained in an institution, and their clothing and money enough for incidental expenses is provided, but they are not entitled to pay and allowances.

The point is made that the terms of classification (c) are broad enough to include a man who served in France and who was discharged with a mental disability. This man would be entitled to more than is specified for group (c). He would be entitled under Section 25 (3) (now 11 (1) (b) to pension for his full disability on discharge and would, of course, be entitled to have full pay and allowances while under treatment; but if he were tied down to the benefits which the Order in Council gives to those in class (c) he would be deprived of pay and allowances.

Perhaps exception was made for most of the men who got to France and the Order in Council was not regarded as excluding them from the benefits to which they are entitled quite irrespective of its provisions. Possibly some were put in classification (a) since their disability although not *in fact* attributable to service was so attributable *in law*, by reason of section 25 (3). The wording of the Order in Council does justify apprehension, however, that some men who served in a theatre of war may have been treated no differently from the others who are covered by group (c), and that on account of their insanity, and there being no one with the same interests in the matter, the error has remain uncorrected. This apprehension is strengthened by the circumstances that statistics furnished to the Commission show that over 50 men who served in France are classified under group (c).

#### *Recommendation of Commission.*

That careful examination be made to see that those who served in a theatre of war and are entitled to the benefits of Section 25 (3) now 11 (1) (b) ) have not been deprived of pay and allowances nor of pension on account of their special statutory rights being overlooked.

#### *Suggestion by Ex-service Men.*

Insurance principle to apply to Insane

That clause 9 of P.C. 580 be amended so that the benefits of treatment, etc., will be extended to cases of mental derangement incurred during service as well as attributable to or aggravated by service. (Toronto 1743).

This suggestion arises, it is thought, from a misunderstanding of the effect of the provision of P.C. 580. The sections in Clause 9 which confer certain benefits on mental cases refer to disabilities "attributable to" or "entirely attributable to service". This was evidently taken to mean that the service must have caused the disability or, in other words, as not recognizing the "insurance principle" which has been so often discussed. This contention overlooks the fact that the definition of a "disability attributable to service" includes, according to Clause 1 (G), "an injury suffered or disease contracted on service or the result of an injury or disease aggravated on service".

There is, therefore, no intention apparent in this Order in Council to eliminate the "insurance principle" in dealing with these cases.

#### *Recommendation of Commission.*

None in view of existing regulations.

SESSIONAL PAPER No. 203a

**Section 6. The Neurasthenics**

Like the more serious mental cases, special provision has been made for those suffering from neurasthenic or hysterical conditions. When treatment was first instituted for these men it was early recognized that compensation in the form of pension was unsatisfactory for the reason that it induced the men to lean upon this and make no effort to recover their nervous stability. Accordingly, it was laid down by Section 29 (12) of the Pension Act that a lump sum not to exceed \$500 could be granted to such men with the idea, which was conveyed to them, that this was a final payment. Placed upon their own resources in this manner, the system proved of great value and many men, who might otherwise have dragged along for years on pension, succeeded in recovering their health and their capacity to earn a livelihood.

An attempt was also made, following the recommendation of the Parliamentary Committee of 1919, to further assist these men by providing employment. There were probably two ideas in mind: firstly, to afford distracting occupation, the effect of which would be to promote the man's recovery, and secondly, to afford relief in cases of need without the badge of actual charity.

It was urged at the hearings at Regina (22) and at Winnipeg (155-171) that employment be continued to these men and, in effect, that the D.S.C.R. take full responsibility for seeing that they receive a living wage. Cases were cited of which it was complained that the remuneration which had been allowed men in this category was too low. It was overlooked, however, that the very essence of the provision was therapeutic and that allowances for work were on a relief basis.

Those who framed Section 29 (2) of the Pension Act evidently quite clearly foresaw the situation which has, during the past five years, developed. The stages contemplated by that Section were: first, an attempt to cure by making to the men a lump sum final payment and thus putting him on his mettle; secondly, if such payment did not produce the desired effect, giving him further treatment with a small living allowance; thirdly, if this did not result in cure recognizing the futility of further effort and awarding pension.

The Commission is of the opinion that in view of the fact that five years has elapsed since demobilization, all the good effect which could have been expected from treatment of these neurasthenics, either by way of institutional care or of employment, must by this time have been obtained and that further effort along this line except in the most unusual circumstances, is valueless. The Commission therefore believes that these cases should be now considered for pension on the principles applicable to all disabilities.

The representative who advocated departmental responsibility for employment and maintenance, recognized that if the authorities were willing to substitute pension in these cases, and to assess the disability in the same manner as for any other disease this would meet the difficulty quite as well. (Winnipeg 169).

The general complaint was that the ratings for disabilities of this class did not fairly represent the degree of working incapacity present. The Commission considers that there is evidence that some of these cases have not been rated as liberally as was warranted. The excuse may be offered that it was feared that recognition of subjective symptoms would militate against recovery and tend to perpetuate the very condition it was sought to cure. Once a case is regarded as not capable of further improvement by "suggestion," this excuse disappears and there can be no reason for rating the disability otherwise than according to loss of earning power which the condition causes. As above stated, in the Commission's opinion this time has now arrived.

The Commission has already indicated its strong conviction that despite the absence of objective symptoms, neurasthenia produces a lack of earning power which is just as actual as that from an injury which might be described in a Table of Disabilities. (Report No. 1, p. 116).

## Section 7. The Syphilitics

### *Suggestion by Ex-Service Men.*

Diagnosis and effect of V.D.S.

That more adequate safeguards be provided to prevent any error of diagnosis of V.D.S., and that when estimating the disability arising from other diseases less emphasis be placed on a positive Wassermann test (Toronto 390).

The Commission has already dealt with the provisions of Section 12 (1) of the Pension Act which prohibits pension when the death or disability was due to "improper conduct." The Commission has made recommendations for amendment to this Section, confining it to improper conduct on service, and for a change in the procedure so that the discretionary power to award pension, even in the latter case, should be generally exercised. (Report No. 3, pp. 11-13).

The witness presenting the above suggestion had particularly in mind the undue importance ascribed by Pension doctors to a positive Wassermann test in diseases in which the influence of syphilis could not be positively disproved but in which syphilis may have had no influence whatsoever.

It is contended that far too frequently when a Wasserman test is shown to be positive, other conditions, particularly diseases of the heart and of the arteries, are immediately assumed to have been due to syphilis and pension is refused.

There were instances presented from which the Commission has formed the opinion that the presence of syphilis no matter how latent instinctively creates a tendency to rest the case there and not to pursue the enquiry, as to the real cause of the disability, with the same open-mindedness as would otherwise be shown.

There has been in fact a general inclination, not only on the part of the authorities, but by the public generally, to regard disabilities in which syphilis might have played some part as not worthy of the same diligent and enthusiastic investigation as other cases, and the Commission is satisfied that in the result, men have been prejudiced.

The general application of the Wasserman test and its sensitiveness in discerning the presence of syphilis, which could not be detected otherwise, increases the necessity that the utmost caution be used in ascribing to syphilis any portion of the disability for which pension is asked, because many men whose spinal fluid would give a positive Wassermann reaction are in perfect health, are no more subject to disease than others, and might live quite as long as if never infected.

Refusal of pension on the ground that the disability is due to syphilis, should be confined to cases where the relation between syphilis and the condition presented is direct and clear, rather than a possibility which perhaps cannot be refuted.

### *Recommendation of Commission*

That steps be taken to ensure that the considerations above mentioned are given full effect in dealing with cases where there is a suggestion that the disability has been contributed to by syphilis and further that pension should not be refused except in cases of recognized syphilitic origin, or where other evidences of syphilis aside from blood reaction are present.

SESSIONAL PAPER No. 203a

**Section 8. Dentures.***Suggestion by Ex-Service Men*

That when teeth are extracted as part of treatment for a disability connected with service dentures should not only be furnished in the first instance but should be renewed when necessary. (Toronto 839).

Complaint was made that in some cases, although dentures were furnished, they were not replaced as would be done in the case of an artificial limb. The rule now is that if the teeth are lost as the result of service, the denture is supplied and repaired or replaced whenever necessary. If, however, teeth have been extracted for treatment purposes only, the denture while supplied in the first instance is not renewed. It is urged that if teeth are extracted in order to minimize the disability and, as a result of this, improvement follows and pension is decreased the State having gained to the extent of the reduction in pension is thereby made liable for supplying and maintaining a denture.

*Recommendation of Commission*

That dentures supplied as part of treatment for a disability connected with service be maintained and renewed by the D.S.C.R. except where such maintenance or renewal has been made necessary by the negligence of the applicant.

## PART FIVE

**VARIOUS MATTERS PRESENTED AS RELATING TO PROCEDURE ON APPLICATION FOR PENSION OR TREATMENT**

Upwards of Seventy-five suggestions were made on this subject by the representatives of ex-service men. Many of these proposals were covered or partially covered by existing Regulations or practice—others were, after discussion, modified or not pressed—and again others were not at all within the scope of the Commission's work. It would extend the Report unnecessarily to refer to each separate suggestion, good, bad or indifferent, and discuss and dispose of it. The Commission has, therefore, endeavoured to consolidate those which appear to it to be similar in general character although they were presented at different places and contain differences in detail. Generally speaking, and with the above eliminations, only those proposals will be discussed which contain some point sufficiently meritorious to be entitled, in the opinion of the Commission, to favourable consideration.

There are instances, however, in which there is some discussion of suggestions which are not recommended favourably, but the Commission has tried to confine these instances to matters which were thought to be too important to dismiss summarily. The references to the pages of the evidence will show the particular local form in which the suggestion on the general subject was put forward at the various Hearings. The suggestions are dealt with in the order in which they would likely come up in the case of an applicant who is seeking treatment or pension.

*Suggestion by Ex-Service Men**Publicity as to Regulations*

That more effective action be taken to inform ex-soldiers and their dependents as to their rights and privileges in connection with treatment and pension. (Halifax 352, St. John (P.E.I.) 65-66, Montreal 24, Calgary 106, Winnipeg 443, Regina 51).

The immediate necessity for the publication of a non-technical handbook was clearly stated by the Commission in Report Number 2 (p. 9). A similar recommendation was made previously by the Parliamentary Committee of 1922. (1922 Parl. Com. Report, p. X and XI).

### *Recommendation of Commission*

Reference to recommendation previously made in Report Number 2, page 9, as follows: That a handbook be prepared for general circulation, setting out succinctly, and in non-technical language, information:

- (1) As to the rights of ex-service men and their dependents respecting pension and treatment, and outlining the procedure to be followed;
- (2) As to the various other activities of the D.S.C.R. and the rights and privileges of ex-service men and their dependents in respect thereto, and the method whereby these rights and privileges may be exercised.

### *Suggestion by Ex-Service Men*

Access to File of applicant.

That the applicant or his representative have, under supervision, reasonable access to his file for the purpose of preparing his case. Halifax 78, 123, St. John 68, Montreal 30, 34, 37, Vancouver 68, 329, Calgary 322, Regina 7, 71, Winnipeg 98, Toronto 3621.

This matter was strongly pressed at every hearing of the Commission from Coast to Coast, and substantial reasons were given for permitting the applicant to see his file. The practice of refusing access to the files was adopted by the D.S.C.R., from a similar practice laid down by the Department of Militia and Defence (now the Department of National Defence) in a letter issued under date of January 20th, 1920. (Halifax p. 78, 79). Some objections were pointed out at the Hearings to releasing to the applicant information of a confidential nature which might be on his file. It was suggested that medical men would hesitate to express their real opinion of the case if such were to be divulged and that in some cases domestic tranquillity might be disturbed. The Commission considered that the governing principle should be the right of a man to know the grounds on which his case was being decided, so as to be in a position to refute, if possible, anything damaging to his claim. It is the opinion of the Commission that all information on file which has or could have any bearing on the applicant's claim should be accessible to him. The opinions of medical men are expressed every day in open Court without hesitation, and in Pension and Treatment cases the medical men or investigator who furnishes the opinion or the information is generally an officer of the Department and is paid for this very service.

The views of the Commission were set out in Clause (h) of the proposed Appeal Procedure (Report Number 2, p. 17). This was incorporated in the Bill passed by the House of Commons (Bill No. 205, Section 11 (9) ) but was subsequently struck out.

### *Recommendation of Commission.*

Reference to Report Number 2, at p. 17, as follows:—

for the purpose of preparing the case the soldier adviser, the applicant or some one person authorized by him in writing to have reasonable access to the applicant's personal file in the presence of a D.S.C.R. official.

SESSIONAL PAPER No. 203a

*Suggestion by Ex-Service Men.*

Officials assisting applicant as to evidence required.

That D.S.C.R. and Pensions Board Officials should co-operate with the Applicant by advising him, if more evidence is required, of the nature of such evidence, and by assisting if possible in collecting it. (Vancouver 26, 27, 76, 77, Regina 42, Toronto 245, Halifax 53, Montreal 22, 23, 26).

This is already dealt with in Report No. 1, at p. 119. The statement there made is repeated below. Since Report No. 2 was presented, the recommendation of the Commission as to appointing Soldiers' Advisers has been carried out. This, with the adoption (if and where not already done) of the general principles below stated, should ensure an interested and aggressive presentation of all the just claims of applicants to consideration.

*Recommendation of Commission.*

- (a) The desirability for co-operation with and assistance to the applicant is not questioned, and simply to bring that general attitude down to practical terms, the Commission states its opinion that, in both Pensions and Treatment matters the officials should give to the applicant "correct and clear statements as to the principles on which pensions are granted, indicate the lines along which evidence is required, and, where possible, utilize any available staff in assisting the soldier in procuring and putting into shape this information"; (b) That wide publicity be given to the appointment of the soldier adviser so that applicants and their friends will automatically take cases up with him direct and regard him as the most effective channel of communication.

*Suggestion by Ex-Service Men.*

Organization of local civilian Committees.

That the Government initiate and support the organization of local committees to assist ex-service men. (Winnipeg 189, 190, 267, 268).

As was pointed out in Report No. 2 (p. 15), in England applicants are advised and assisted with their claims by local committees of prominent citizens who serve without remuneration, but are allowed a secretary from the local Pensions Office who is paid by the Ministry. A recommendation for a somewhat similar organization was made at the Hearing in Winnipeg.

It is considered that these organizations being purely voluntary cannot be successfully organized or operated except as they may be initiated locally. They would, no doubt, serve a very useful purpose in many instances. It is of advantage to the meritorious applicant to have the support and interest of a responsible body of fellow citizens and this would disseminate more widely a knowledge and understanding of pension and treatment statutes and regulations. It would also be a deterrent to the presentation of unfounded claims.

*Recommendation of Commission.*

In view of the appointment of soldier advisers, the Commission does not recommend any official action in the way of organization or assisting local committees; at the same time, the advantages above suggested would, the Commission considers, fully justify local effort for that purpose.

*Suggestion by Ex-Service Men.*

Requirements now exacted before medical examination is given. Form 819.

That the present requirements governing entitlement to medical examination be made less onerous and that Form 819 be abrogated or substantially amended. (Halifax 70, Vancouver 26, 27, Winnipeg 11, Toronto 771, 776, Ft. William-Winnipeg 772).

*(1) Re Medical Examination*

Evidence was given in Halifax (70) of a ruling in a particular case cited, to the effect that no medical examination would be made until the man established "prima facie" evidence that the disability was due to service. The D.S.C.R. Regulations (Halifax 73) provide for examination by a Medical Board where

"In the opinion of the examining physician the condition *might reasonably be attributed to service.*"

These regulations may in practice be construed very broadly and almost any indication of a possibility that the disability was attributable to service could be accepted as showing a "prima facie" case. It is considered, however, that the wording of the Regulations above quoted might be interpreted to exclude cases which are expressly included in P.C. 1127 as being entitled to treatment, namely, those cases

"where in the opinion of the Department the condition . . . is not attributable to service, but where there is nevertheless a real possibility that the condition might be considered attributable to service though reasonable proof is not obtainable.

*Recommendation of Commission.*

That the regulations above referred to be broadened so as to entitle the applicant to be medically examined in all cases where there is a reasonable possibility that subsequent investigation might reveal that the condition is related to service even though present proof is wanting.

*(2) Re Form 819*

The practice is that when the applicant, particularly from outside, asks for a medical examination, claiming that his disability has increased, he is sent "Form 819" and is required to have this form completed by a medical man (see Routine Instruction No. 128, Winnipeg p. 20) as follows:—

1. Apparently it has been the practice in some district offices to examine ex-soldiers who call on complaint re non-award of pension, or their present assessment of pension. After examination, it is found that the complaint is not well founded and that the time of the Medical Examiner has been needlessly taken.

2. The marginally-noted instruction provides that the man must present prima facie evidence of disability before examination is made. It is considered that this can best be provided in all cases by the submission of form 819.

3. The use of this form will reduce the number of examinations considerably, as only those men who believe they have a reasonable claim will go to the trouble of having the 819 completed, with the possibility of having to pay the charges themselves.

## SESSIONAL PAPER No. 203a

There are three classes of cases which might apply for examination:—

(a) The man ill for the first time who considers his illness to be connected with his service:

(b) The man who has a pension but who considers that his service disability has increased since his last examination, thus entitling him to more pension;

(c) The man who has been refused pension or treatment on the ground that he had no disability but who now claims that his condition is worse.

Form 819 is headed

"to be used when the discharged soldier wishes to submit a description of his disabling condition by his own physician."

The form itself gives some general directions as to what are disabilities and how to describe them. It does not provide for information as to the degree of disability and, therefore, is of little assistance to the Pensions or Treatment doctor in cases (b) and (c) where the important question for determination is whether the applicant's condition is worse than when last examined.

The claim is made that a man should not be put to the expense of procuring an outside medical examination as a condition precedent to having his case investigated or re-investigated; and also that Form 819 is not sufficient in that it does not direct the attention of the civilian doctor, to whom the man goes for this preliminary examination, as to the point on which information is desired. (Winnipeg 12, Toronto 771).

The Commission realizes that there must be some reasonable ground shown for investigation particularly where it may involve substantial Departmental liability for travelling expenses; but the fact that the applicant is an ex-service man, and claims to be ill from a possible service disability, makes it only right that the conditions preliminary to an investigation be reduced to the minimum.

*Recommendation of Commission.*

That completion of Form 819 should not be the exclusive passport to examination. If the Unit authorities have before them information which indicates reasonable possibility that the applicants disability has increased since his last examination or (if he had no previous examination) that he now has a disability which might be connected with service, he should, the Commission considers, be examined under D.S.C.R. or Pensions Board auspices; and that Form 819 be altered to specifically direct the attention of the outside examining doctor to what information is required to enable the D.S.C.R. doctors to judge the extent of the applicant's disability.

*Suggestion by Ex-service Men.*

Expense and time allowances on account of medical examination

That the scale of allowances to men in attendance for medical examination or limb fitting be increased. (Calgary 35, 59, 207, Vancouver 19, 89, Regina 51, 145, Winnipeg 21, Toronto 363, 364).

The Statute (Pension Act 1919, Section 26 (2) ) provided that the pensioner "shall be paid a reasonable amount for travelling expenses and subsistence and loss of wages."

This was amended in 1920 by striking out the word "and" between "expenses" and "subsistence." The Section then read,—

"shall be paid a reasonable amount for travelling expenses, subsistence and loss of wages."

Under the original Statute the per diem amount paid was \$3 for expenses and \$1 for loss of time from work. It was objected that this was too small and the total amount payable per day was increased to \$5, but without any specific division between expenses and loss of time. This is the provision to-day. (Vancouver 20). Certain deductions are made from the \$5 if the pensioner stays with friends or if accommodation is provided for him at a hospital.

It was urged, particularly on behalf of the amputation cases, that the payment of this amount to men who were forced to remain in attendance at a hospital or a limb-fitting establishment periodically, for possibly a week or more, worked a considerable hardship, especially where these men were losing time from good paying jobs. (Calgary 206). \$9 per day was urged as a minimum. The probability of amputation cases being left longer than ordinary cases is recognized by paragraph (10) of Clause 20 of P.C. 580, as amended in 1923 by P.C. 1127. This provides for Pay and Allowances at Treatment rates if the soldier is detained longer than a period which varies from 10 to 14 days according to the distance from home.

Another witness at Calgary urged on behalf of men engaged in occupations such as mining, etc., that their monetary loss was considerably more than \$5 per day. He urged the rate of \$7.50 per day.

The representative of British Ex-service men in the United States also called attention to the loss of wages suffered by men working in Detroit where the average rate of wages was stated to be \$6 per day (Toronto 71).

The Commission considers that as in the case of pensions, so in matters incidental thereto, such as time necessarily spent in awaiting medical examinations, the earning capacity of the pensioner in his civilian occupation cannot be taken into consideration. If wage scales were to be taken as a standard, there would inevitably be invidious comparisons and dissatisfaction due to variation in wages in different parts of the country.

The present regulation cuts down the per diem allowance by dividing the day into four periods and paying for fractional parts thereof.

These Regulations (P.C. 1127, Clause 11) provide

that the ex-service man may receive: Return transportation, first-class with sleeping berth if necessary and *\$5 per day of 24 hours for actual time occupied in travelling by the most direct route to and fro and . . . for actual time detained in the town where the institution or place of examination is situated, made up as follows: 7 p.m. to 1 a.m., \$1; 1 a.m. to 7 a.m., \$1; 7 a.m. to 1 p.m., \$1.50; 1 p.m. to 7 p.m., \$1.50.*

There are provisos to the following effect:—

- (a) \$2 is deducted if sleeping berth is provided.
- (b) \$3 is deducted if subsistence is furnished.
- (c) \$2 is deducted if the man stays with friends.
- (d) This rate of allowance is not to be paid for more than ten days unless the train trip takes more than one-half day, in which case the allowance may be paid up to fourteen days, depending on the time consumed on the train.
- (e) Where the man lives in the same town or within 5 miles and is not away over night, he is allowed only out-of-pocket expenses plus wages actually lost but the whole allowance is not to exceed \$3.

(See also Vancouver 19-20 and P.C. 580, Clause 20).

The above figures include both the time and the expense allowance. The splitting up of the day in an attempt to apportion expenses is likely to be a source of annoyance, and an incentive to evasion, with very slight saving.

## SESSIONAL PAPER No. 203a

The Commission considers that a proper basis for these allowances would be to indemnify the man against reasonable out of pocket expenses and against loss of wages up to a per diem rate equal to 100 per cent pension. If the man is under no expense and loses no wages, no reimbursement is called for.

*Recommendation of Commission.*

That ex-service men called for medical examination or otherwise necessarily attending should receive first-class return transportation with sleeping berth if required and also reasonable out of pocket expenses not to exceed \$4 per day of 24 hours, plus wages actually lost not to exceed \$3 per day of 24 hours.

*Suggestion by Ex-service Men.*

Payment to dependents of men in hospital awaiting decision

That allowances be paid to dependents while an ex-service man is in hospital for a period of observation or awaiting the result of the investigation of his case. (Halifax 35, 43).

The point was raised that in doubtful cases, the man was admitted to hospital, but that no provision was made for the support of his family during what might be possibly a long period of investigation. One of the reasons given for requiring that a man be paid during investigation was that Headquarters would, on that account, treat the case as more urgent and make decision more promptly.

Since the hearing at Halifax, P.C. 1127 has been passed under date of June 26, 1923. The provision as to payment to dependents, pending investigation, is contained in Clause 11, paragraph 6 (c) which amends Clause 20 of Order in Council 580. The extract is as follows:—

“If it is found that he requires treatment for a disability attributable to service, he shall be taken on strength by the Department for treatment and shall be paid the allowances set forth in Clause 4 hereof. If it is found that he requires treatment for a disability not attributable to service, he shall not be entitled to treatment by the Department. If the diagnosis is *uncertain*, and it is considered necessary that there should be a period of observation, he may be placed in hospital but no allowance shall be paid until after the expiry of fourteen days, after which, special dependents' allowances may be payable as set forth in paragraph (13) of this Clause *until the case has been diagnosed*.”

The important part of the foregoing is “if the diagnosis is uncertain”. In that case the Department may pay allowances to dependents after the fourteenth day of observation. This provision hardly meets the case. What is urged is, that delay for *any cause* in dealing with the case may work a hardship on dependents. There seems to be no good reason for refusing to pay dependents where the delay is caused by inability to decide the relation of the disease to service, and on the other hand, paying them when the delay results from inability to diagnose what the particular disease is.

It is understood that in practice, the word “diagnosis” is construed broadly and applies not simply to the identification of the disease, but to its connection with service. The Order in Council, as worded, leaves room for variance and inconsistencies in rulings, depending on whether a strictly literal, or a loosely practical, interpretation is given.

*Recommendation of Commission.*

It is recommended that provision be made for payment of allowances to dependents beginning after the man is in the hospital for more than two weeks and continuing until final decision is given by Head Office as to entitlement to treatment.

*Suggestion by Ex-service Men.*

More ready acceptance for treatment pending investigation

That more leniency be exercised, in admitting men to hospital for treatment, while investigation is being made as to whether his disability is connected with war service. (Halifax 70, 73, Calgary 9, 15, Winnipeg, 133, Toronto 237).

It was urged (Calgary 9, 15) that where men needed treatment, even though the case was not urgent, they should be taken on for treatment while the case was being investigated.

The D.S.C.R. only gives immediate treatment when the case comes within one of the following classes (Toronto 398):—

1. Where the diagnosis is uncertain and a prolonged period of observation is necessary (see P.C. 1127, Clause 11 (6) as follows:—

“ . . . If the diagnosis is uncertain and it is considered necessary that there should be a period of observation, he may be placed in hospital. . . ”

2. In cases where disability requires investigation and the man is in urgent need of some treatment in the meantime. (Toronto 398).

There is apparently no written headquarters rule as to the degree of urgency which must be shown before immediate treatment is given, nor in fact is there any Headquarters Regulation on the subject. It appears in evidence, however, that if the case is dangerous or urgent and there is any reasonable probability that the condition might be attributable to service, the man is taken on for treatment pending decision from Headquarters.

The Montreal unit issued local instructions (39-40) an extract from which follows:—

“ When an ex-member of the Forces applies for treatment and his eligibility for treatment is questionable, he should be given the benefit of the doubt and treatment as indicated, if the case is an *emergency* one.”

It appears that the Unit Medical Directors are allowed a good deal of latitude. The Unit Medical Director at Calgary (13) said:—

“ You can understand the position I occupy is one in which I am ruled by regulations, yet a certain amount of discretion is allowed. If an ex-service man comes into town absolutely down and out, we try to give him help; it may be through the department or it may not. I have, as a matter of fact, sent a good many over for food and rest, that was their requirement. Whether I was within the regulations of the department or not, I would not say; I hardly think I was. It was a matter of humanity; I had to if I could not get him taken care of in some other way.”

The Unit Medical Director at Montreal (41) said:—

“ I am allowed every latitude that is necessary to put the man in and give him whatever treatment is necessary and use our own discretion in the matter. If I admit to hospital a case of doubtful attributability, possibly at the time that man is admitted, I have not any documents. It is on the man's clinical condition and his history has warranted taking action thus far.”

The third class where immediate treatment is given, although the connection of the disability with service is not established, are those admitted on what

## SESSIONAL PAPER No. 203a

is known as "compassionate grounds." No Pay and Allowances are given during Treatment. This is covered (in part at least) by Clause 2 of P.C. 1127, which is as follows:—

"Where, in the opinion of the Department, the condition for which application for treatment is made is not attributable to service, but where there is nevertheless a real possibility that the condition might be considered attributable to service, though reasonable proof is not obtainable, in order that full justice may be accorded, the Department may grant treatment only, without allowances."

The provision as to treatment on compassionate grounds requires the direct authorization of the Deputy Minister and only applies to residents of Canada. The Commission is of opinion that the above provisions, coupled with the latitude allowed the Unit Medical Directors, as indicated in the evidence above quoted, constitute fair and satisfactory provisions for treatment of ex-service men before connection of the disability with war service is established.

*Recommendation of Commission.*

None, in view of the practice now in force.

*Suggestion by Ex-Service Men.*

Re Constitution of First examining Board

That the first examining board should have in its personnel men with industrial experience as well as medical men. (Winnipeg 743, Montreal 216, Toronto 143, 144, 901).

The argument for this proposal is that personnel, so qualified, would be better able to judge how seriously a man's disability interferes with his capacity for work.

There is something to be said for this proposal, but the practice both in Great Britain and the United States is to have the Board which assesses the amount of disability composed exclusively of medical men. The reason is apparently that the almost universal rule adopted, in estimating the percentage of a man's disability, is to compare the physical condition of the applicant with that of a normal man of the applicant's age, and estimate from such comparison the difference between the two men in earning capacity in the unskilled labour market. The question therefore resolves itself primarily into a medical one in which the applicant's physical condition and his consequent fitness or unfitness for work have to be compared with those of a normal man of the same age.

If the question as to the employability of a particular individual in a particular occupation does arise, it is quite feasible for the examining board to procure the opinion of an employer or of an industrial expert.

It is also to be noted that the first examining Board is one which has to do largely with the question of the connection of the disability with service and this involves scientific knowledge as to progress of disease, and as to the possibility of the development of the particular disability from various injuries and illnesses.

*Recommendation of Commission.*

Reference to the Commission's recommendation contained in Report No. 2 (p. 9) as follows: that as a basis for any recommendation for treatment or pension, applicants be heard and medically examined at the local unit by a Board of three medical men, one of whom shall be a pension medical examiner.

*Suggestion by Ex-Service Men.*

Personal appearance of the applicant before first Examining Board

That the first examining body shall actually see and hear the applicant.  
Toronto 621-628, Halifax 293).

The Commission in the next preceding Recommendation expressly states its opinion that the first examining board shall hear and examine the applicant. Generally this is done, but it appears that, in the case of a man coming out of a hospital situated at a distance from the Unit Office, the Pensions Medical Examiner simply acts on the discharge board which has been held at the Institution, and does not actually see the man himself.

The Commission had before it two rather striking cases (Halifax 131-136) where the Pensions Medical Examiner contented himself with an apparently perfunctory examination of the discharge board and neither saw the applicants, nor made enquiries as to previous history, which enquiries would have (according to subsequent decision) demonstrated that the applicants were entitled to pension.

*Recommendation of Commission.*

That the fact that there has been a discharge board held on the man should not in any way be regarded as relieving the Board which makes recommendations as to pension from the invariable obligation of seeing, hearing and examining the applicant for themselves.

*Suggestion by Ex-Service Men.*

Attending doctor to be present at examination

That the civilian or D.S.C.R. doctor who has been treating the applicant should go before the first examining board. (Vancouver 72).

The principal of having the medical man, who knows most about the application, consulted in respect of his entitlement to treatment, or pension, is sound. The Commission considers however, that the proposal cannot be laid down as a hard and fast rule of procedure.

*Recommendation of Commission.*

That in cases where either the civilian Doctor or the D.S.C.R. Doctor has had an opportunity to observe the applicant and where his experience in that respect is, or might reasonably be, of assistance on the question as to whether the disability is connected with service, his evidence should be taken and he should be consulted by the examining Board, at least before an adverse decision is made.

*Suggestion by Ex-Service Men.*

More formal procedure

That official assistance be provided in connection with the presentation of pension applications and that the procedure be analogous to that of arbitration boards. (Toronto 145).

The providing of Soldier Advisers meets the suggested need of official assistance. It is considered that the present informal procedure under which certificates and statements are accepted without the formality of proof or oath enures to the benefit of the applicant.

*Recommendation of Commission.*

None.

## SESSIONAL PAPER No. 203a

*Suggestion by Ex-Service Men.**Burden of proof*

That the burden of proof be shifted so that an ex-service man with a disability shall be presumed to have incurred same on service unless the D.S.C.R. or the pensions board proves the contrary. (Montreal 56, 63, Calgary 24, Vancouver 328, Halifax 121, Regina 63).

The subjects of "burden of proof" and "reasonable doubt" have been much discussed. It has been pointed out that the proposal does not really have to do with procedure, but with a most important matter of substantive rights. The burden of proof in one sense means the onus of bringing forward evidence. This naturally and properly is on the applicant. In another sense it means the degree of proof which the applicant is required to produce. The latter is particularly important in pension cases. It has been repeatedly stated (see Report Number 1, page 114) that if there is any reasonable doubt, the applicant is given the benefit of it. See also Report of 1922 Parliamentary Committee, p. XXIV, which urges

"That every effort be continued so that when any doubt exists on these subjects the exsoldiers be given the benefit....."

The usual rule at law is that the person asserting the claim has to produce a preponderance of evidence. If to give the applicant the "benefit of any reasonable doubt" means any greater concession than that given an ordinary litigant, it must imply that the application for pension is entitled to succeed, not simply if there is more evidence in support of his case than against it, but if he can bring sufficient evidence to create in the mind of the tribunal dealing with his case a reasonable doubt as to whether his pension should be refused. An obvious principle of pensions administration is that it is better to award pensions in some cases not strictly entitled than by a too close application of the rules of proof, to run the risk of depriving those to whom pension should justly be given.

*Recommendation of Commission*

Reference to principle stated in Report No. 1 (p. 114) as follows: that in practice the applicant for pensions be given the benefit of the doubt in the sense that pension is not to be denied if the applicant brings evidence sufficient to create in the mind of the tribunal a reasonable doubt as to whether pension should be refused.

*Suggestion by Ex-Service Men**Insurance principle applicable to Pensions and Treatment*

That any further necessary steps be taken to ensure that all those dealing with pension or treatment matters clearly understand that treatment and pensions are to be granted, if the disability is incurred during service, just as readily as if it were directly due to service. (Winnipeg 27-28).

There has been so much discussion about the "insurance" principle and the "due to service" principle that it would seem as if no further reference were called for. The Pension Act expressly laid down that pensions were to be granted if the disability was "incurred during" service. A question was raised as to whether this was subsequently altered in cases where the soldier had died after a certain date. Report No. 1, (p. 12 to 47) dealt fully with the whole

question. All questions was set at rest in the adoption by Parliament in 1923 of an amended Section 11 of the Pension Act (Acts of 1923, C. 62, S. 3) as follows:—

"Pensions shall be awarded to or in respect of members of the forces who have suffered disability resulting from injury or disease or an aggravation thereof, in accordance with the rates set out in Schedule A of this Act, and in respect of members of the forces who have died in accordance with the rates set out in Schedule B of this Act, when the disability resulting from injury or disease or the aggravation thereof in respect of which the application for pension is made or the injury or disease or the aggravation thereof resulting in the death in respect of which the application for pension is made, was attributable to or was incurred during such military service."

The Commission believes that the "Insurance" principle is generally recognized and acted on, but the possibility of error should and can be absolutely negated by appropriate instructions. The matter came up in Winnipeg when a statement of the procedure followed in that unit and was put in evidence. The first paragraph of the statement is as follows:—

"It is necessary that a man show by medical certificates from outside physicians, that there has been a continuous disability since discharge, and that in their opinion his disability is *due to or aggravated by* service."

This statement of procedure was prepared by an experienced and capable Unit Medical Director. He said they did not take it literally (28) but the danger is that less experienced officials, intent on administering ex-service men's right "according to the book" and not knowing of the verbal understanding as to interpretation, might do an injustice, and the evidence referred to in Report No. 1 shows that this has actually occurred.

#### *Recommendation of Commission*

That steps be taken to make it abundantly clear that pensions are to be awarded in connection with disabilities resulting from injury or disease or the aggravation "incurred during" service as well as attributable to service.

#### *Suggestion by Ex-Service Men*

Assessment of degree of pre-enlistment disability

That assessment of the degree of pre-enlistment disability should only be made upon direct and positive evidence. (Regina 52, Toronto 498, Winnipeg 442).

The evidence (Toronto 498) indicates that it is very difficult for the Pensions Medical Examiner to determine definitely how much of the present disability existed at the time of enlistment, and that, necessarily, resort has to be had to considerable speculation. Fortunately, the extent of pre-enlistment disability is not material except in comparatively few cases (See Section 11 (1) (b) as amended in 1923). The question is primarily a medical one, depending on professional knowledge as to the progress of the disease or injury under service conditions, but it also involves knowledge by the examiner of the degree and intensity of service conditions, such knowledge being acquired by actual experience or from a thorough-going inquiry.

## SESSIONAL PAPER No. 203a

*Recommendation of Commission*

No more definite rule can be adopted than: (1) That the examiner should, from the evidence before him, be convinced beyond a reasonable doubt that the disability or some portion thereof existed before enlistment; (2) That he should be equally certain that the degree of the disability existing on enlistment was as great as the percentage at which he fixes it.

*Suggestion by Ex-service Men.*

Absence of entries on medical documents not evidence against applicant

That the absence of corroborating entries in the applicant's medical documents should not be considered as disproving the applicant's statement (Toronto 42, 365).

The subject, generally, has been discussed and the Commission's opinion recorded in Report No. 1 (page 115). There is an idea abroad that unless a man actually has an entry on his document showing injury or illness during service he is barred from pension for any disability claimed to have originated during service. There is no such rule, but there is a strong tendency to accept the fact of the absence of an entry on service documents as a contradiction of the statement of the applicant. A statement was made at Toronto (42, 363, 372, 373 and 773), as to the circumstances and conditions under which entries were made, indicating that the fact that no entry appears as to treatment for illness or injury on service cannot be relied on as substantive evidence that treatment was not given.

*Recommendation of Commission.*

That the absence of entries should be regarded as nothing more than the absence of corroboration, and not as negating either the statement of the applicant or any other evidence which he may produce in support of the history he gives of illness or injury on service.

*Suggestion by Ex-service Men.*

Applicant to be informed of reasons for adverse recommendation or decision

That the applicant be informed in writing of the recommendation made from the local unit and, in case of an adverse recommendation, of the particular grounds for same, and that he be given similar information in case of a refusal of treatment or pension by headquarters. (Winnipeg 134, 135, Toronto 245, Regina 42, 141, Halifax 59, Montreal 22, 26, 30, 34, Vancouver 70, 75).

In some Units the applicant is told whether he is being recommended favourably or not, and also the percentage of pension in case pension is recommended. In other Units this is not done.

In the evidence given before the Parliamentary Committee of 1922 (page 275 of Committee's proceedings), it was distinctly stated that

"the Medical Examiner in the Unit' tells the man when he examines him what his recommendation will be,"

and that

"the Medical Examiner in the Unit' states what he is going to recommend by way of pension."

See also Routine Instruction 243 (Calgary 26).

The only objection suggested to informing the applicant of what recommendation was being forwarded to Ottawa, was that there was the danger of invidious comparisons being made by the applicant and his friends, between the officials, who deal with the application, depending on whether they take a favourable view or otherwise.

The Commission considers that this objection is not well founded. There need be no more mystery about Pension and Treatment decisions than about a case at law where the view of each individual judge is known. The applicant needs the information to follow up his case.

An instance was cited at Halifax (129) where if the applicant a T.B. man had known of the adverse recommendation he would probably have been saved a delay of three months in getting his pension.

The Commission has already indicated (Report No. 1, p. 119) that

"In case of refusal of pension, the applicant is further entitled to know the correct grounds on which the decision is based."

The above reference had to do with Pensions but the principles laid down apply equally to the D.S.C.R. officials in cases of treatment.

What is complained of is a letter such as the following, which appears in a file referred to at Halifax (129):—

"SIR,—Your letter of the 1st inst. is herewith acknowledged. You are not entitled to pension because of the fact that the disability which you have is not attributable to your military service."

The letter to the applicant should contain the essential information about the case so that the production of it by the applicant to his friends would give them a summary of the situation and enable them to proceed along the lines indicated without the delay and inconvenience, to both applicant and officials, caused by extended preliminary correspondence in order to find out just what the case is about.

#### *Recommendation of Commission.*

That a general and uniform practice be adopted and insisted on in both treatment and pension cases that the applicant be promptly advised in writing by the Local Unit of the recommendation made in his case with a comprehensive statement of the reasons if the recommendation is adverse and that a similar course be followed by Headquarters if Treatment is refused or if Pension is refused or reduced.

#### *Suggestion by Ex-service Men.*

More dispatch in procedure

That action be taken to ensure more dispatch in the various steps connected with the consideration of pension and Treatment applications, (Halifax 45, 57, 59, St. John 29, Montreal 39, Vancouver 77, 314, Calgary 89, Winnipeg 773, Toronto 17).

An example of alleged undue delay was cited at Calgary (89). The application was for treatment. The Local Unit first gave all the circumstances pro and con and asked Headquarters for a ruling as to whether the disability could be considered to be connected with service and whether the applicant was eligible for treatment. Head Office of the D.S.C.R. ruled that he was not eligible. The Local Unit took it up again and forwarded an opinion that the disability was connected with service. Head Office again refused to authorize treatment. Then it was recommended by the Local Unit that, as the diagnosis was obscure, the patient be sent to some centre for examination by a specialist. This led to

## SESSIONAL PAPER No. 203a

further correspondence and to the requirement by Head Office that further information be secured, and, although the recommendation that the patient be taken to Winnipeg for examination was made in November, 1922, it was not until late in February, 1923, that the order came to have the transfer made. The evidence showed (90-91) that the need for a diagnosis was urgent and that eligibility for treatment depended on the diagnosis.

The case was made the basis of a proposal by the representatives of ex-service men that the decision of the local authorities as to entitlement to treatment should be final. There is objection to this course in the danger of lack of uniformity and dissatisfaction which might arise from varying decisions under different jurisdictions, but the case illustrates the very strong argument which can be made for local autonomy in the units on the ground of prompt and effective disposition of the cases.

Cases were cited at several of the hearings which shows lack of persistent and thoroughgoing attention in pursuing the investigation and in making necessary inquiries for further information. It is true that decisions were given promptly denying entitlement, but these were only tentative and while they served as a disposition of the case for the time being, were obviously not final as they were made without full information and had eventually to be the subject of further discussion and correspondence. Failure to obtain full reports in the first instance inevitably causes delay. These reports are gradually procured at spasmodic intervals when, at the instance of organizations or individuals, the case is brought up for renewed consideration. On these occasions there is the necessity for the tribunal to familiarize itself afresh with a mass of complicated detail.

The case thus may be finally decided favourably on an accretion of information resulting from recurring presentations and consequent renewed investigations. The reply may be made that in many instances information only comes to light gradually and a final disposition of the case on all the evidence apparently obtainable at any particular time might often result adversely to the applicant. This is so, but there are before the Commission instances where initiative in instituting inquiries has been noticeably lacking and a case which has turned out to be meritorious has only succeeded because of persistent effort on the part of those outside the official organization to keep up the investigation and exhaust every source of information.

The adoption of the recommendation of the Commission in Report Number 2 (9), to the effect that

"as soon as an applicant is accepted for treatment, the question of his pensionability should at once be dealt with without awaiting discharge from treatment,"

would do much to expedite prompt decision as to pension for those undergoing treatment.

*Recommendation of Commission.*

The Commission can simply make a matter of record the practice which it considers should obtain in dealing with treatment and pension application. The important point generally is the connection of the disability with service. The Commission strongly urges that on the first occasion when the case comes up for consideration, there be a prompt and thorough canvass of all possible sources of information, that inquiries be made from all such sources and that there be a close following up of these inquiries, a digesting of the information collected and an expeditious disposal of the application with the reasons for the action taken.

*Suggestion by Ex-service Men.*

Delay in awarding Pension after discharge from Hospital

That some method be devised for providing income to the ex-service man between the date when he is discharged from the hospital and ceases to receive pay and allowances, and the date when his pension payment begins. (Halifax 129, Vancouver 77, 314, 332, Toronto 610).

The D.S.C.R. and its Medical Staff determine the length of a man's treatment. The Pensions Board, with a separate and distinct Medical Staff, finally decide his right to Pension.

A man has satisfied the D.S.C.R. that his disability was connected with service. He has been admitted to hospital for treatment and has been receiving pay and allowances. When the time arrives when his condition cannot be further improved by treatment, he is discharged from hospital and his pay and allowances stop automatically. He may be unable to work but he gets no monetary assistance until he proves his case over again to the satisfaction of the Pensions Board. This results in considerable delay and, not infrequently, in hardship. A case was cited (Halifax 129) where the man had been receiving treatment with pay and allowances for some 16 months; he was discharged in May and Pension was not awarded until October.

The Parliamentary Committee of 1921 recognized the hardship particularly on men discharged from sanatorium and recommended that

"a man be given a 90 per cent pension out of pay and allowances until such time as his pension was awarded".

This recommendation was never put into effect (Vancouver 316), but no explanation was given for its having been disregarded.

Then there was a provision in P.C. 580, Clause 4 (16), which provided, under certain conditions, for an additional month's pay to a man being discharged from treatment if

"necessary to assist him in obtaining employment or to tide over a period of temporary financial difficulty".

In the London district, the extra month's pay was given to everybody whether needed or not (Toronto 207). In Toronto, no payment was made under this regulation up to September 1921 (202, 212). The evidence is that, generally speaking, the provision was only occasionally put into operation (205). Then it is said that this regulation was cancelled and made to apply to T.B. patients only (209). There is no evidence of actual cancellation but two different regulations were put in evidence which expressly apply the benefits of P.C. 580 to T.B. patients but do not cancel the provision as to hospital patients generally (206 and 210).

In practice, the effect of these regulations is that T.B. men may be paid an extra month's pay and allowances to help bridge the gap between discharge from hospital and pension award. This does not, however, help the man who happens to be suffering from other disease or illness, neither does it fully provide for the T.B. man unless his pension comes through within a month.

Two contributing factors for the delay in payment of pension to men coming out of hospital are:—

(a) The peculiar organization in Canada under which entitlement to treatment and entitlement to pension are determined by two entirely different bodies and at different times. The system has already been briefly described in Report No. 2 of the Commission (10-12). If the system in Canada were as it is in Great Britain and the United States, viz., that there is only one decision and that is as to pension and that this decision automatically determines the right to treatment, there could be no delay;

SESSIONAL PAPER No. 203a

(b) The second contributing factor is that the Pensions Board wait until the man is discharged from Hospital before entering upon a consideration of his right to pension, and after that there are delays which the Commission feels could have been considerably minimized at least in some of the cases presented.

The Commission has already endeavoured to suggest a simple although admittedly not a complete remedy for the situation, by recommending in Report No. 2 (p. 9) that as soon as an applicant is accepted for treatment the question of his pensionability should at once be dealt with without awaiting discharge from treatment. If this recommendation is carried out, it will obviate the delay occasioned by having to decide on a man's right to pension after his treatment is completed. It, of course, will not do away with the anomaly that it may be decided that there is to be no pension, although there has been treatment with pay and allowance.

#### *Recommendation of Commission.*

That so long as the present dual system is maintained, the recommendation of the Parliamentary Committee of 1921 be adopted and that a 90 per cent pension be paid, as pay and allowances, to men who have been discharged from hospital treatment with pay and allowances, until decision is made as to pension; and that the previous recommendation of this Commission as to dealing with the question of eligibility for pension as soon as an applicant is accepted for treatment be carried out.

#### *Suggestion by Ex-service Men.*

Although refused treatment—applicant to be examined for Pension

That an application for treatment should be considered an application for pension and, even if treatment is refused, the applicant should not be dismissed without being examined for pension. (Calgary 75, Toronto 388).

It may be that a man is refused treatment, not because his disability has no relation to service, but because treatment will not benefit him. In that case he obviously should be handed over to the First Examining Board for consideration as a pension applicant.

Again, he may have a disability which the D.S.C.R. refuse to recognize as connected with service and, therefore, treatment is refused. Under the present system this is not conclusive on the Pension authorities who may, as to matters within their sphere, decide that the disability is connected with service. Under these circumstances, the man should, in the opinion of the Commission, be always given this second chance. He runs the risk of having pension refused although treatment has been granted, and he should have the corresponding opportunity of having pension granted even if treatment has been refused.

#### *Recommendation of Commission.*

That an application for treatment should be considered an application for pension and, even if treatment is refused, the applicant should not be dismissed without being examined for pension.

#### *Suggestion by Ex-Service Men*

Superior position of local examiners to judge as to applicant's entitlement

That Head Office should only reverse the decision of the Examining Board which has heard and seen the man when there are palpable and gross errors, and then only after discussion. (Toronto 148, 333, Winnipeg 768, Calgary 94, Fort William, Winnipeg, 78).

While the Pensions Board itself cannot, except in isolated instances, see the applicants, it is presumed to act on the opinion of local medical examiners who have had that opportunity. The Commission's view, as already intimated in Report No. 1, (114-117) is that the examiner who has the

"opportunity of seeing the man, listening to his story, testing his genuineness by means well known to men of experience in this work, and generally sizing him up, is in a far superior position to one whose knowledge of the case only comes from the written reports of another."

The instructions of the Pensions Board are that where there is a difference of opinion between the local office and the medical adviser, at Headquarters the case shall be referred to the Board itself, but this difference of opinion may become infrequent from the fact that the superior position of the Headquarter's officer may unconsciously affect the local official and result in an agreement which is more formal than real but which will be sufficient to obviate a reference to the Pensions Board itself.

Since the expression of opinion quoted above, the Commission has been referred (Vancouver 172) to the portion of the Report of the 1919 Parliamentary Committee of the British House of Commons on the subject. Although it was found that the revision of a pension by a Medical Board was, in the majority of cases, in favour of the man, still they (The British Parliamentary Committee) say—

"the system by which the award of a board, which has seen the men, is liable to revision by medical men who have not seen him, is indefensible and this has now been admitted. All cases of doubt should be sent for re-hearing by the same or by a second board who, in every case, should re-examine the man in person, and he, in turn, should have the right to appeal in every case on amount as well as on entitlement, as explained below. The guiding principle here and indeed throughout pension administration should be that the man should always be given the benefit of any doubt".

This principle has been stated in another form by the 1922 Canadian Parliamentary Committee (see Proceedings p. XXV):

"It is also submitted and recommended as well also as regards the Board of Pension Commissioners as the Department of Soldiers' Civil Re-establishment that soldiers be subjected to a personal examination and that decision be not based on documentary evidence except in unavoidable cases".

### *Recommendation of Commission*

That, where the local recommendation is favourable to the applicant, the more advantageous position of the Local Unit Officials for observing the applicant and satisfying themselves of his good faith and reliability be accepted as a deciding factor in doubtful cases where the decision turns on information or opinion which can best be obtained or formed as the result of personal interview.

### *Suggestion by Ex-Service Men*

Medical Board on discharge from Vocational Training

That a Medical Board should be held on all men discharged from Vocational Training or in hospital even for short periods. (Halifax 88, 202, Vancouver 98).

## SESSIONAL PAPER No. 203a

The regulation (Halifax 91) is that a man, receiving vocational training who falls ill and is detained for less than seven days, or a man detained for observation whose detention does not exceed ten days, is discharged without a Board.

It was urged against the proposal that if men discharged from vocational training were immediately sent before a Medical Board it would have a tendency to deter them from taking vocational training on account of the fear that it would be followed by a re-examination and a reduction of pension. Section 30 of the Pension Act, as originally passed, indicated that there should be a new Board on completion of vocational training, but that Section was amended in 1923 and the practice now, under the Statute, would be that a pensioner discharged from vocational training would not be boarded until he came up for his regular re-examination. There are men, however, who get vocational courses who are not pensioners and are therefore not subject to periodic re-examination.

There may be considerable advantage in the future, both to the ex-soldier and to the State, in having the most complete and constant record of physical condition. It is considered that the opportunity for examination afforded by the presence of ex-service men in hospital, either for observation or pending decision as to entitlement or while temporary ill during vocational course, should not be allowed to pass.

*Recommendation of Commission*

That, except in the case of pensioners who will come up for periodical re-examination, a Medical Board should be held on ex-service men when discharged from vocational training or who may happen from time to time to be inmates of hospital either for observation, or for temporary treatment.

- (a) That an entry showing particulars be made on the file of the individual concerned in connection with any complaint or application for information, or medical treatment, and that in cases of rejection for treatment the reasons for rejection be also recorded; (b) That some system be adopted to ensure as far as possible that a record be made on the medical documents of ex-service men showing any treatment received from either D.S.C.R. representatives outside the centres, or from private doctors, for disabilities which might have possible relation to service. (Vancouver 105, Calgary 98, 99, Winnipeg 9, Toronto 230, 390).

These proposals are for the benefit of both the state and the individual as a check and a help to diagnosis. As to (b) the difficulty is one of method. In Calgary (98, 99) a local form is used which is sent out to be completed by outside doctors and to accompany their account for services. In Vancouver a card record, taken from the record of payment for doctors' service, is kept on the file.

*Recommendation of Commission*

- (a) That an entry be made on the file of an ex-service man of the particulars of any application made by him for information or medical treatment or on complaint, and that the particulars of the way in which such application or complaint has been disposed of and the reasons therefor, be also recorded; (b) That the best method possible be adopted for ensuring that entries are made of all medical examinations and treatment of ex-service men by Local D.S.C.R. representatives or civilian doctors. (The method requiring, as a condition precedent to payment for services, that a detailed form be completed giving full information as to the examination or treatment seems practical).

*Suggestion by Ex-Service Men*

## Sub-office files

That sub-offices should be advised, and their files kept complete, as to all matters affecting ex-service men within the territorial limits of the office. (Vancouver 123. Toronto 388, St. John 68).

There are a few instances in the Dominion, of Sub-offices in the D.S.C.R. districts, for example, Charlottetown, P.E.I., St. John, N.B., Port Arthur, Ont., and Victoria, B.C. These offices are established for the convenience of applicants. One instance was cited where an application was made through the sub-office and subsequently decision was given in connection with the application but the decision was neither filed in the sub-office, nor was the man notified thereof (Vancouver 123). The sub-office, should be, to the applicant for whose convenience it was established, a Unit office.

*Recommendation of Commission*

The Commission recommends that sub-office files should be completed and kept complete in respect of all the essential documents relating to ex-service men within its territorial jurisdiction.

*Suggestion by Ex-Service Men*

## Refund of expenses

That expenses paid out in connection with disabilities which are afterward recognized as connected with service be paid in full. (Vancouver 98, Toronto 492, Winnipeg 132).

The practice as indicated by the cases referred to is that expenses so incurred are taxed according to a scale fixed by the Director of Medical Services.

As pointed out at the hearing, the Commission does not consider that it would be a proper practice to impose on the country the liability for any medical expenses which the applicant may see fit to incur. The practice which was adopted in the cases referred to is considered to be proper under the circumstances.

The real ground of complaint in both these cases was the length of time which was taken before departmental responsibility was acknowledged.

*Recommendation of Commission*

That the present practice of reimbursing medical and other expenses according to a scale based on usual and reasonable fees for the services rendered be adhered to.

*Suggestion by Ex-Service Men*

## Cancellation of Widows Pension because of Immorality—Investigators

Section 40.—“The pension of any female pensioner who is found to be a common prostitute or who openly lives with any man in the relationship of man and wife without being married to him shall be suspended, discontinued or cancelled.”

That a change be made in the methods adopted by investigators in enquiring into the private life of widowed pensioners and the section 40 be construed so that pensions to widows who are considered guilty of immoral conduct will not be cancelled unless these women are clearly shown to come specifically within one or other of the Categories mentioned in the section. Toronto 738, Montreal 527-537, Halifax 359-370).

SESSIONAL PAPER No. 203a

## GENERAL INVESTIGATORS

The staff engaged in this work is a large one. At Toronto ("D" Unit) for example there are three general investigators, three pension investigators and fifteen nurses. One of the latter is at Christie St. Hospital, attached to the chest clinic, and two are at Hamilton. These nurses look after 1,683 tubercular cases, all the relief cases, all the 100 per cent disabled cases and conduct also such investigations as are required by the Pensions Branch of the Department. (Toronto 702).

No good ground of complaint is offered as regards the activity of these Investigators when reporting upon relief cases or on home surroundings in cases of tuberculosis, but serious criticism was made of unnecessary enquiries into the private life of pensioners when seeking evidence bearing on eligibility for pension (709). Information secured by enquiry from outside sources must often be of great value in cases such as disabilities where there are no objective symptoms, or where malingering is suspected. As might be anticipated some Investigators have not shown the best judgment, and have asked questions of an unnecessary, and perhaps unduly inquisitive nature. This has been occasionally resented, but on the whole, the Commission finds no serious ground of complaint as to these general investigations.

## INVESTIGATORS AS TO ALLEGATIONS OF WIDOW'S IMMORALITY

The methods of investigation and the reports presented in the case of widows of deceased pensioners, stand however, on another plane. According to the evidence presented (738, et seq) such investigations, nearly all originate following the receipt by the Department of an anonymous letter. Fifty per cent of these contain information which is untrue and inspired by spite (744). All, however, are investigated with a thoroughness which is undaunted. The widows against whom the allegation is made are not informed of it, and are often given no chance to refute the charges.

Information is secured by quiet methods, some of which are very bitterly resented by the persons involved, and strongly condemned by witnesses who spoke on this subject. Enquiries are frequently made as to whether any man lives in the house, how many beds there are, and where placed. Young children, even those of the widow herself, have been questioned on these and other suggestive subjects. (752).

Your commission feels that the objection taken to these methods is fully justified.

## INTERPRETATION GIVEN TO SECTION 40

Only two considerations (See Section 40 above) enter into the right of the State to supervise or control the private life of the widow drawing pension; first, is she a prostitute, and secondly, does she openly live with a man who is not her husband? In either case her pension may be suspended or cancelled. A woman cannot be classed as a prostitute unless her calling is of common knowledge. Neither can she live openly with a man without the whole household or neighbourhood being aware of the fact; the only thing to determine is are they married. This surely presents no great difficulty.

Several cases were mentioned where despite the fact that no claim was made that the widow was a prostitute, nor any evidence adduced that she had openly lived with a man not her husband, pension was cancelled, not suspended, the only evidence in support of such action being that she had given birth to an illegitimate child (760). It is a well-known fact that prostitutes generally do not bear children, and while the birth of an illegitimate child is proof of immorality, it is absolutely no proof that the widow lived openly with a man who was not her husband.

To confirm the understanding that the Section was not intended to deprive women of pension unless their indiscretions were habitual and public, it is only necessary to refer to the annotated copy of the Pension Act issued by the Pensions Board when the Act was passed in 1919. The note under Section 40 is as follows:—

"This section caused a great deal of controversy both before the Parliamentary Committee and the House. Arguments were made that a woman who was guilty of immorality should lose her pension whether she could be considered a common prostitute or not. It was finally decided that the wording of the section as it appears in the Act must be strictly adhered to. If pension is to be suspended, discontinued or cancelled it must be proved that the woman is a common prostitute, in other words habitually prostitutes herself, is an inmate of a disorderly house, etc., or is openly living with a man as his wife, that is to say, lives with a man in such a way that their relationship is a matter of common knowledge to their neighbours. Pension cannot be suspended or cancelled for isolated indiscretions. It is only when the woman who is definitely leading an immoral life that the question of suspension or cancellation of pension can come up."

Even if the Section did include an isolated lapse from virtue, suspension of pension rather than cancellation would be sufficient, and thus offer the widow a chance for reform. It should also be borne in mind that the penalty, if the widow has children, falls as heavily on the latter as on her. She must, if she is to live and the children are not removed from her care, take from their income to provide for herself, because the total income of the family, even treating the children as orphans and allowing them double rates, would be less than was previously judged necessary for the family support. It seems obvious that if a woman is considered by the State sufficiently moral to be a proper guardian for her children, it cannot be claimed that she is such an immoral character as to be deprived of pension, and yet there are a number of cases where this double standard is set up.

#### *Recommendation of Commission.*

1. That Section 40 be construed and administered on the principle set out in the memorandum of the Pension Board quoted above, viz, that the offences there dealt with are such as are of common knowledge and habitual.
2. That no pension should be cancelled under Section 40 until the widow accused of the misconduct has been advised of what is alleged against her and of the particulars and evidence thereof and has been given full opportunity to meet the charge.
- 3 (a) That investigators should be given clearly to understand that the necessary element is that the misconduct is habitual and is so open as to be a matter of common knowledge and that if this cannot be readily verified it is evident that the essential factor of publicity is lacking and, therefore, the investigation should not be pressed farther;
- (b) That in no case should suggestive inquiries be made of young children;
- (c) That in cases where the investigation is prompted by anonymous letters or by information from sources of doubtful reliability, the investigator should use the greatest caution in making inquiries of others so as to prevent the possible spread of damaging rumours which may turn out to be baseless.

SESSIONAL PAPER No. 203a

*Suggestion by Ex-service Men.*

Co-ordination of Treatment and Pension decisions

That the administrative activities and regulations of the D.S.C.R. and Pensions Board be so co-ordinated as to enable decisions upon the question of attributability for pensions and medical treatment to be made by the same department organization and with consistency. (Toronto 342).

The same idea in different terms was expressed at Regina (13-15) and Winnipeg (65). The Commission has set out in Report No. 2 (10-12) the effect of the dual system which obtains in Canada whereby eligibility for treatment and pension respectively is decided by two entirely different bodies. The regulations under which these respective rights are created are identical but notwithstanding this, a man's disability may be considered by the D.S.C.R. to be connected with service so that he is entitled to treatment, but the same disability in the same man may be considered by the Pensions Board not to be connected with service, and pension refused, or vice versa.

In both the United States and Great Britain there is only one decision and that is as to pension; this automatically determines the right to treatment. Treatment is, of course, simply with the idea of improving the man's condition and thus reducing the eventual liability for pension. The way the Canadian system affects the soldier was put by the witness at Winnipeg (67) as follows:—

“Here is a man suffering from a war service disability and to the amazement of everyone, when he is boarded out and put up for pension, the Pension Board say ‘No, this is not a war service disability’ or ‘There is some reason why we cannot accept it as a war service disability and pension you for it.’ I think if the practice were consolidated it would do away with a great many of the complaints.”

The compensating factors were stated as follows (Winnipeg 67):—

“You know the reason for that. For treatment, they do not have to consult the Pensions Board; the D.S.C.R. does not consult the Pensions Board for treatment. Treatment may be quite temporary and therefore the D.S.C.R. regulations may not be so severe as for pensions. Either the D.S.C.R. regulations will have to be tightened and brought up to the level of the Pensions Board, or you will have to try to get the Pensions Board to loosen their regulations to the level of the D.S.C.R.

“If the D.S.C.R. regulations are the same as the Pensions Board as to attributability, it would mean that it would be much more difficult for a man to get in for treatment. As it is now, the D.S.C.R. are freer, in order to help the man.”

The matter was again brought up at Ottawa (538-544). It involves a most important change not primarily of procedure but in governmental administration and general policy. In effect it means the absorption by one or the other of these bodies of the judicial functions at present exercised by both in making decisions as to rights of ex-service men to treatment and pension, or the establishing of an entirely new body in which would be vested the powers of decision mentioned above.

The Commission considered that under the scope of its reference its duty would be done if it got together, in conjunction with the evidence given on the Hearings, the considered views in writing of the D.S.C.R. and the Pensions Board with any further matters which the representative of the Dominion Veterans Alliance desired to present.

The Commission, therefore, had prepared a circular summarizing the points which had come out on the various hearings with respect to the co-ordination of treatment and pension decisions and giving the appropriate references to the evidence. It asked that any further comments which it was desired to make be forwarded in writing. Copies of this circular were, on January 31, 1924, forwarded to the D.S.C.R., the Pension Board and the Official representative of the Dominion Veterans Alliance. Replies were received from the Pensions Board on February 6, 1924, and from the D.S.C.R. on the 15th of February 1924. The receipt of the memorandum was acknowledged by the representative of the Dominion Veterans Alliance but no representations additional to those contained in the evidence were made.

The Circular and accompanying letter with the replies of the D.S.C.R. and the Pensions Board are incorporated in this Report as follows:

#### ROYAL COMMISSION ON PENSIONS AND RE-ESTABLISHMENT

#### MEMORANDUM—RE PROPOSAL OF EX-SERVICE MEN AS TO CO-ORDINATION OF TREATMENT AND PENSION DECISIONS

On the hearings before this Commission, proposals were made by representatives of ex-service men to the effect that decisions as to the rights of ex-service men to treatment and pension respectively, should be decided by the same Body, and that once the service connection of a certain disability had been conceded, that decision should govern in any future application either for pension or treatment in respect of such disability.

The subject was particularly considered at

Regina (evidence p. 9-15).

Winnipeg (evidence p. 65-76).

Toronto (evidence p. 342-359 and 614-615).

and was further dealt with in a Memorandum read by the Secretary of the Board of Pension Commissioners and followed by a short discussion, (see Ottawa evidence p. 538-544).

It was intimated that there would be opportunity for further representations. The Commission would now like to have any memorandum which the D.S.C.R., the Board of Pension Commissioners for Canada, or the General Representative of ex-service men, would care to submit covering any phase of the matters involved in the discussions above referred to and on which supplementary or further representations are desired to be made.

The points brought out seem to be:—

- (a) The anomaly of diametrically opposite decisions as to service connection of the same disability.
- (b) The duplication of investigations and examinations.
- (c) The delay occasioned by having to make an investigation as to pensionability after discharging the man from hospital, and the consequent inconvenience and possible hardship in cutting off income in the meantime.
- (d) The lack of control of the Board of Pension Commissioners of Canada over the outside medical examiners.
- (e) Whether eligibility for treatment with pay and allowances should be decided on the same principles as eligibility for pension, and the possible hardship to men needing treatment if treatment practice conforms to that regarding pension.

SESSIONAL PAPER No. 203a

- (f) The practicability or otherwise of one Body administering different regulations as to eligibility for treatment and pension respectively.
- (g) What difference (if any) in principle should be adopted in awarding treatment either with or without pay and allowances as compared with awarding pension.

It would be appreciated if the memorandum which is suggested could be filed with the Secretary by the 9th proximo.

(SGD.) H. D. DEWAR.

31-1-24

THE BOARD OF PENSION COMMISSIONERS FOR CANADA.....

OTTAWA, February 6, 1924.

The Secretary,

Royal Commission on Pensions and D.S.C.R.,  
Parliament Buildings, Ottawa, Canada.

SIR:—With reference to your communication of 31-1-24 requesting that a further memorandum be sent from the Board of Pension Commissioners outlining their suggestions with regard to the points brought out in the evidence before the Royal Commission as outlined on the sheet attached to your letter, the Board of Pension Commissioners submits herewith a further memorandum enlarging upon the evidence already given before the Royal Commission by the Secretary of the Board.

The comments follow the order of your classification:—

“ A ”

(1) In respect of diametrically opposite decisions re entitlement by the Board of Pension Commissioners and the Department of Soldiers' Civil Re-Establishment, the Board is of opinion that one decision only should govern entitlement to pension as well as treatment (*with pay and allowances*).

(2) A decision for pension may entail an expenditure continuing perhaps thirty or even forty years for a pensioner and his dependents.

A decision for treatment (*with pay and allowances*) only entails a temporary expenditure.

The decision as to entitlement to pension is the major decision and entitlement to treatment (*with pay and allowances*) should be contingent on entitlement to pension.

(3) Decision as to entitlement to pension and treatment (*with pay and allowances*) could be rendered by the Board of Pension Commissioners with very little extra expense and the Department giving treatment would be under no expense whatsoever with regard to entitlement to treatment (*with pay and allowances*) if the following procedure were adopted:—

The Board of Pension Commissioners to issue on linen paper to every pensioner an entitlement to treatment (*with pay and allowances*) certificate containing:—

- (a) The description of the pensioner for identification purposes;
- (b) The medical nomenclature of the injuries or diseases for which the pensioner is entitled to treatment (*with pay and allowances*).

NOTE.—A copy of this certificate to be sent to the nearest District Pension Office and listed on a treatment list for reference, if necessary.

## " B "

(1) With respect to duplication of investigations and medical examinations, the investigations in respect of pensioners and dependent pensioners are so important and far-reaching in their results that only carefully selected and trained investigators should be engaged in this work. These investigators should be directly responsible to the Commissioners and the Commissioners should have direct communication with them. Pensions investigations should be carried out irrespective of all other investigations.

(2) With regard to the multiplicity of examinations under the present system, these examinations would be very much reduced if entitlement to treatment (*with pay and allowances*) followed as of course a decision giving entitlement to pension.

## " C "

(1) With respect to the delay in deciding entitlement after the man is discharged from hospital and the hardships resulting therefrom, the present procedur  should be revised and the following procedure substituted—

- (a) Pensioners should be conceded treatment (*with pay and allowances*) for the disability for which they are pensioned. (No delay or hardship in these cases).
- (b) In cases of all ex-members of the C.E.F. where entitlement to pension has not been conceded, and whose medical documents may show a possibility of entitlement being established, it is suggested that before admission to treatment these ex-service men should apply to the District Pensions Medical Examiner for a conditional certificate of entitlement to treatment (*without pay and allowances*), and that the District Pensions Medical Examiner should, with the greatest possible expedition from the date the man is admitted to hospital, carry out investigations and examinations to establish whether the applicant is entitled to pension and treatment (*with pay and allowances*) and a decision should be arrived at within the course of two or three weeks and before the man is discharged from hospital, this decision to be confirmed or otherwise by the Head Office of the Board of Pension Commissioners.
- (c) The District Pensions Medical Examiner, after examination of the man's documents should, if he considers there is no reasonable likelihood of entitlement being conceded, refuse to give the man a conditional entitlement certificate to treatment (*without pay and allowances*) but should refer the case to the Head Office of the Board of Pension Commissioners before the man is finally refused entitlement.

## " D "

(1) With respect to control of the District Pension Medical Examiners by the Board of Pension Commissioners, the Board of Pension Commissioners should have complete control of its District Office Medical Examiners for the following reasons.—

- (a) If any of these Medical Examiners prove inefficient the Commissioners may dispense with their services;
- (b) Civility, courteousness and patience is so important in dealing with returned men that the Commissioners should have full authority to discipline or discharge any of the Medical Examiners if it is found necessary;

## SESSIONAL PAPER No. 203a

- (c) The Commissioners could then issue direct to their Medical Examiners regulations and instructions and the Examiners could have direct communication with the Board. This they have not at present;
- (d) If at any time a Medical Examiner is deviating from pension practice and regulations he could be brought to Head Office for instruction and training;
- (e) If the Commissioners consider it advisable, Medical Advisers at Head Office could be interchanged for certain periods with the Medical Examiners from the District Offices so that each could be conversant with the work both at Head Office and in the field;
- (f) Closer co-operation would result in a better understanding between the Medical Examiners and the Commissioners to the mutual benefit of both and in this way bring the Commissioners in more direct touch with the pensioner;
- (g) There are only twenty-seven doctors in the whole of Canada at present engaged in carrying our examinations for pension purposes and this number, with the necessary clerical staff for carrying on office work, would be ample organization for carrying on Pensions' Work in the various districts.

## "E"

(1) With reference to any difference in the regulations regarding entitlement to pension and to treatment (*with pay and allowances*) and the hardship to men if the same regulations for both existed, the Board points out that at the present time—five years after the Armistice—the regulations with regard to pension and treatment (*with pay and allowances*) are practically the same and based on the same requirements, namely that the injuries or diseases were incurred on or aggravated during service. This did not exist formerly as men were treated for any condition within a year of their discharge from the forces. At the present time it would appear that no C.E.F. men come under this treatment regulation. There is no difference, therefore, in the regulations with regard to entitlement to pension and to treatment (*with pay and allowances*) at the present time.

## "F"

(1) With regard to the practicability of one body administering different regulations in respect of entitlement to pension and treatment it would seem that this is practical only in so far as it means treatment (*with pay and allowances*).

When treatment (without pay and allowances) is granted for any other reason, namely compassionate grounds, destitute circumstances, etc., this should be decided by some other body than that administering pensions; otherwise the ex-service man always feels that if he can be admitted to treatment (without pay and allowances) on compassionate or good service reasons he can be admitted to pension or treatment (*with pay and allowances*) on the same grounds.

Entitlement to pension and to treatment (*with pay and allowances*) should be confined to one body for a decision—should be definite—either in or out.

(2) The procedure as outlined in "A" would admit a pensioner to treatment (*with pay and allowances*) for a pensionable condition at any time to any Soldiers' Hospital throughout the country.

## "G"

(1) With respect to the difference in principle in entitlement to pension and to treatment (with or without pay and allowances):—

- (a) No difference in principle should be adopted with regard to entitlement to pension and entitlement to treatment (with pay and allowances) for the same injuries or diseases;
- (b) A considerable difference in principle must necessarily follow with regard to entitlement to pension and entitlement to treatment (without pay and allowances) as the treatment would necessarily be for injuries or diseases not incurred on or aggravated during service, and should depend on regulations outside of the Body deciding entitlement to pension.

(2) Treatment (without pay and allowances) of ex-service men for injuries or diseases not related to service should be a matter for decision for the Minister in charge of the Department. The Board, with some diffidence, suggests that this might be granted by the Minister in the following cases,—

- (a) Ex-service men who are in receipt of pension of forty per cent or over for a war disability.

NOTE:—This would involve a class numbering fourteen thousand, nine hundred and seventy-three pensioners and it is estimated that not more than five per cent per annum of these would require treatment for conditions not related to service. This procedure, if adopted, would extend to pensioners a concession which would be far-reaching in its good results and yet only commit the country to a small extra expenditure. It could be carried out entirely by the Soldiers' Hospitals without any reference as regards entitlement except the required pension credentials which every pensioner would have in his possession.

- (b) Ex-service men in destitute circumstances on compassionate grounds only.

## REMARKS

Although not included in your memorandum, the following suggestions are offered:—

- (1) The system of pay and allowances should be abolished and one hundred per cent pension in lieu thereof substituted therefor.

One hundred per cent pension in the case of privates is slightly more; in the case of Officers and Non-Commissioned Officers with no family or small families slightly less; with large families practically the same as pay and allowances.

It would be necessary to amend the Pension Act otherwise the benefits of Section 33 would accrue to those receiving one hundred per cent pension in respect of treatment.

- (2) The Board of Pension Commissioners should control the payment of all pensions and all correspondence to pensioners with regard to their pensions.

(3) A daily list of pensioners admitted to treatment (with pay and allowances) could be forwarded from all Soldiers' Hospitals to the Head Office of the Board of Pension Commissioners and these be automatically placed on one hundred per cent pension to date from the date of admission to hospital.

(4) Soldiers' Hospitals before discharging any patient should send him with his Hospital Treatment Case Sheet to the District Pensions Medical Examiner for complete examination and recommendation as to his future award of pension.

SESSIONAL PAPER No. 203a

(5) The pensioner following his discharge from hospital should be carried on one hundred per cent pension for a certain number of days after discharge (approximately five to ten) in order that he may be provided with an extra amount of funds pending his resuming his former occupation. At the expiration of that time he automatically reverts to the amount of pension recommended by the District Pensions Medical Examiner.

This would dispense with all pay and allowances and the large accounting and paying staffs in each Unit, and all cheques would be issued monthly from Pay Branch of the Head Office of the Board of Pension Commissioners as is done in the case of all other pensioners. A saving of hundreds of thousands of dollars in administrative expenses would result from this procedure.

(6) The only funds paid to ex-soldiers by the Treatment Branch would be their expenses at a fixed rate for board and lodging in travelling to and from treatment. Travelling warrants would also be issued.

(7) The man on discharge from hospital would be paid at a fixed rate any expenses incurred in travelling to and from treatment and he would receive a cheque for one hundred per cent pension at the end of the month covering a period of treatment and for some days following discharge. The pension for the extra days following discharge from hospital would more than compensate him for any loss of immediate pay at the time he is discharged. It has been shown that a small percentage of pensioners remains in hospital less than three weeks and they and their dependents would be money in pocket by accepting the one hundred per cent pension during treatment together with the one hundred per cent pension for a certain number of days (to be decided on) following pensioner's discharge from hospital.

(8) Out patient, Class One (with pay and allowances) should be discontinued. The number of such cases is negligible.

These suggestions are offered to the end that:—

(1) A large saving in administrative expenses would be made;

(2) The adjustment of claims for pension and treatment would be accelerated;

(3) The arrangements for pension outlined above would afford a financial bridge in treatment cases between discharge from hospital and the resumption of former occupation.

Respectfully submitted,

(Sgd.) W. E. DEXTER,  
*for Secretary,*

*Board of Pension Commissioners for Canada.*

DEPARTMENT OF SOLDIERS' CIVIL RE-ESTABLISHMENT

OTTAWA, February 15, 1924.

DEAR COL. RALSTON,—I have before me a letter dated January 31st, from your Secretary, together with a memorandum regarding the co-ordination of treatment and pension decisions. The memorandum has been the subject of discussion with the executive officers of the Department, and this memorandum being forwarded to you has the approval of the Honourable the Minister.

In giving you these comments I have tried to keep the subject of my remarks in accordance with the various headings of your memorandum, as follows:—

(A) The anomaly of diametrically opposite decisions as to service connection of the same disability.

While there may have been a number of diametrically opposite decisions in the early days during which time the staffs of the Board of Pension Commissioners and the Department of Soldiers' Civil Re-establishment were separated, and for a short time after the amalgamation of the staff of these bodies, amalgamation has effected not an absolute but a practical co-ordination of decisions. I say not an absolute because either body has power to deal with the question of eligibility as respecting treatment with pay and allowances or pension, as apart from the other body. On the other hand, during the past year there has been, at least to my knowledge, no case in which the Department has given a decision which has not been concurred in by the Board of Pension Commissioners, or vice versa. To say, however, that the Department approves of the principle of deciding as to attributability in accordance with the terms of the Pension Act, would be superfluous, since to all intents and purposes this principle is in effect at the present time apart from the question of dealing with specific diseases which are covered in special departmental regulations. Under date of June 26th, 1923, an Order in Council P.C. 1127, providing certain revisions to Order in Council P.C. 580, was passed. In this Order in Council provision was made under Clauses 4 and 6 on Pages 6 and 7 for the payment of special dependents' allowances in cases where immediate treatment is required and (a) where the diagnosis is uncertain and may reveal a condition attributable to service, or (b) where the diagnosis is known but the question of attributability is uncertain. This provision was made in order to obviate distress on the part of those cases where it appeared likely that the condition would eventually be accepted as attributable to service but where there might be delay in obtaining necessary proof or further evidence required before attributability could be accepted or full pay and allowances could be granted. This, as you will note, is an additional provision over and above those found in the Pension Act, and to a great extent obviates any difficulty that might be involved in the acceptance by the Department of the principle of adapting the Pension Act to the department's regulations as respecting attributability. In this connection I would further draw your attention to the provisions in Clause 2, subsection 2, on page 2, granting authority to the Department to provide treatment only without pay and allowances under certain special circumstances.

Since it is obviously necessary for the Department to supervise the treatment examination services of the various districts, it is necessary to have, apart from the Pension Medical Advisors at Head Office, a certain medical staff, which staff is charged with the administration of regulations which fall outside the provisions of the Pension Act. It is not considered that there is any duplication of medical services at Head Office at the present time. There are some eleven or twelve advisors to the Board of Pension Commissioners dealing entirely with pension matters. On the other hand there are only some six medical officers, including the Director of Medical Services, on the strength of the Department, who deal with the administration of Department affairs. They include specialists in the various lines of treatment conducted by the Department such as Dr. Mitchell, specialist in psychiatry; Dr. Carmichael, specialist in chest diseases; Dr. Biggar, who handles the administration of treatment for cases outside of Canada, including the United States and Great Britain; Dr. Filson, who in addition to reviewing the medical history of cases admitted to the strength of the Department, handles certain matters relating to the Federal Appeal Board; and Dr. McCormick, who generally assists Dr. Filson, and in addition deals with recommendations *re* vocational training. Apart from these medical officers, there is only the Director of Medical Services and his assistant, so that the question of reducing the medical staff by centering responsibility for attributability in the Board of Pension Commissioners, would not affect the medical staff in any way at the present time.

## SESSIONAL PAPER No. 203a

Apart from the above considerations if the departmental regulations provided definitely that the Pension Board decisions must be accepted as respecting attributability, there would be certain additional delays on admission since all cases taken on for treatment would have to be first submitted to the board for decision before pay and allowances could be granted. At the present time, as you are aware, the unit officials of the department have authority to take on cases for treatment and to grant pay and allowances, subject only to review at Head Office and later reversal of decision. As I say, however, this feature would not be very serious in view of the additional provisions made under authority of P.C. 1127, above referred to.

New cases are becoming fewer; the majority of cases taken on for treatment at present are old pensioners, where there is very little question as to attributability. On the other hand, there were 400 new T.B. cases taken on the strength in the last twelve month period. There were in addition a few new neuros-thenic and mental cases, and a few coming under other classifications. The total number dealt with in this connection during the period:

Pensioners—Non-pensioners:—(This information not readily available. I can get it for you if required).

(B) The duplication of investigations and examinations.

Those who made the statement as to the above were not informed as to the departmental machinery. Pension award is now made on Form 76, the Medical Discharge Board of the hospital, and is of course required in every case. Prior to the amalgamation it was necessary for a man to be boarded on discharge from hospital, after which he was obliged to report to a separate office operated by the Board of Pension Commissioners, in a different part of the town, where he had to undergo another examination by a pension examiner, and the information was then forwarded on Form 865. This duplication, as indicated above, has been eliminated since amalgamation. As respecting investigations, the same condition applies. When a man is taken on strength for treatment he applies for dependents' allowances, and investigation is made as to his circumstances. The result of this investigation is used later when the question of additional pension on account of such dependents is under consideration. At present there is only one investigating section in each unit, composed of social service nurses and especially trained investigators. All requests for investigation go through one source, and as a result of amalgamation any duplication in this service has been done away with.

(C) The delay occasioned by having to make an investigation as to pensionability after discharging the man from hospital, and the consequent inconvenience and possible hardship in cutting off income in the meantime.

The reply to (A) above pretty well covers suggestion (C) that the Department approves the principle of the application of the Pension Act to eligibility for either treatment with pay and allowances or pension, and furthermore this principle is practically in effect. I would, however, point out to you that there must be a certain amount of delay in certain cases either on admission or after discharge. The new procedure will place this delay on admission, which is probably preferable in view of the fact that provision has been made to take care of cases which appear to warrant same.

(D) The lack of control of the Board of Pension Commissioners of Canada over the outside medical examiners.

No pension medical examiner is at present on the strength of the Department making medical examinations for the Board, who has not been approved of by the Board. No changes are made in the personnel without the Board's

14-15 GEORGE V, A. 1924

approval. Instructions from the Board of Pension Commissioners to the examiners are conveyed direct to these examiners by the Chief Medical Advisor who is also the Director of Medical Services of the Department. Pension Medical advisors on the staff of the Board of Pension Commissioners at Head Office write direct to pension examiners and give instructions to them under authority of the Director of Medical Services and Chief Medical Advisor. Examiners are instructed to accept such instructions as being the direct authority of the Director of Medical Services.

- (E) Whether eligibility for treatment with pay and allowances should be decided on the same principles as eligibility for pension, and the possible hardship to men needing treatment if treatment practice conforms to that regarding pension.

Here again I would draw your attention to reply to (A) above. There are special classes of cases dealt with by the Department which do not come under the Pension Act. I refer to specific diseases, and those covered by the terms of P.C. 1127. In these respects the Department regulations are not in conformity with the Act. The Department has no objection in using the Pension Act as an authority for treatment with full pay and allowances, so that it becomes a question of Government policy. It is considered, however, that the terms of P.C. 1127, providing treatment with special allowances, and treatment only should not be interfered with.

- (F) The practicability or otherwise of one body administering different regulations as to eligibility for treatment and pension respectively.

There should be no necessity for different regulations as respecting pension or treatment with pay and allowances; the Pension Act should govern. The other considerations under which treatment can be granted are covered definitely by regulations and there is no apparent reason why a separate section should not deal with these additional regulations as is being done at present.

- (G) What difference (if any) in principle should be adopted in awarding treatment either with or without pay and allowances as compared with awarding pension.

The principles already adopted by the Government are set out in Order-in-Council P.C. 580, as amended by P.C. 1127, a copy of which is attached hereto.

I trust that the above memorandum will meet your requirements. You will, of course, realize that the various principles involved in your memorandum and reply herewith have been subject to consideration by not only the Departmental officials but by the Government, for a considerable time. The principle that one basis on which the right to grant treatment with pay and allowances or pension should be adopted, was definitely in view at the time amalgamation between the staffs of the Department and the Board of Pension Commissioners was brought about.

If there is any further information I can give you in this connection, I would be glad if you would advise me.

Yours sincerely,

(Sgd.) N. F. PARKINSON,  
*Deputy Minister.*

Col. J. L. RALSTON,  
Chairman, Royal Commission on Pensions and Re-establishment,  
Ottawa, Ont.

## SESSIONAL PAPER No. 203a

The only interest of the Commission in the matters discussed in the foregoing memorandum is to see whether there is anything which calls for suggestions in respect of the procedure affecting applications for Pensions and Treatment.

The ramifications of the Pensions and Treatment Organizations, their respective jurisdiction, and the agencies through which they have to operate, are matters for representation to the Government and Parliament and are entirely outside the scope of the Commission except in so far as they affect the applicant. On this aspect the following deductions from the evidence and memoranda sum up the situation:—

1. Both the D.S.C.R. and the Pensions Board concur in the statement that the principles under which the right to Pensions and the right to Treatment with pay and allowances are decided are identical.

2. Even if, in practice, the Pensions Board and the D.S.C.R., may arrive at similar conclusions concerning the man's right to Pension and his right to Treatment with pay and allowances, this does not meet the objection that in order to secure these decisions the man has had to undergo a completely separate investigation by each tribunal and that both are entirely independent of and uninfluenced by the decision of the other.

3. This dual system could be obviated by having one authority decide both claims or by having the decision of either body accepted by or binding on the other.

4. The amounts payable to a patient during treatment are more logically based on 100 per cent Pension than on service pay and allowance.

5. Treatment on compassionate grounds could still be extended by a separate body under appropriate special regulations.

*Suggestion by Ex-Service Men*

After two years pensions not to be cancelled as having been granted in error.

That in all cases where pension has been granted for any disability and has been continued for a period of two years from the date of the award there shall be a conclusive presumption that such disability is attributable to, or, incurred or aggravated during, service. (Winnipeg 107).

The reasons advanced in support of this suggestion were that once pension is granted the recipient is entitled to conclude that it will be continued as long as the disability remains and if the disability be permanent he has a perfect right to feel that his income from this source is secure for life. With this assurance he may enter into commitments which if he is unable to carry out may spell ruin to him.

Two cases were instanced in which pensions granted, one nearly six years previously, were cancelled on the ground that the disability was not related to service and hence pension had been granted in error. This may have been true, but it was argued that as no new fact had been produced the error could have been corrected within a month or two quite as readily as years after and that the Pensions Board having paid the pension for such a long period was thereby stopped from refusing to continue payment.

It was distinctly stated that there was no thought of applying the rule to cases of malingerers or others who might have obtained pension by fraudulent means.

The rush and haste with which pensions were put through during demobilization and shortly after perhaps offered justification for subsequent correction of errors which might never have been made had there been time for orderly consideration of applications even although a considerable time had elapsed between the grant and cancellation of the pension. A long time was necessary

in order to review and properly consider such pensions. Pensions, therefore, already cancelled should not be revived, but as there was no reason for hasty decision and plenty of opportunity for revision during the past two years this cause of possible error no longer obtains, and corrected within a reasonable time should not be invoked to cancel a pension which the pensioner had every reason to believe finally decided as regards entitlement.

### *Recommendation of Commission*

That if entitlement to pension has been admitted and pension paid for a period of two years, pension should not be cancelled on the ground that the service connection of the disability was conceded in error. This recommendation does not apply to pensions heretofore cancelled, or to cases of fraud.

## PART SIX

### CANADIANS AND IMPERIALS IN THE UNITED STATES

#### GENERAL STATEMENT

The following figures give an idea of the extent of the work done by the Canadian authorities among ex-service men living in the United States:—

Number of Canadian Pensioners in the United States on February 29, 1924—

- (a) Disability, 3,767.
- (b) Dependents, 1,287.

As to the distribution of these men, the information which the Commission has, places the largest concentration in New York City and the surrounding territory, the second largest in Massachusetts and the third in California. In the Detroit-Windsor district there are 1,059.

Number of medical examinations conducted by the U.S. Veterans Bureau for D.S.C.R. on Canadian ex-soldiers from April, 1923, to March 31, 1924, 3,420.

Amount of money paid annually for pensions to Canadians residing in the United States, \$2,153,004.

Amount of money paid annually for treatment, etc. of Canadian ex-service men residing in the United States from April 1, 1923, to March 13, 1924, \$121,890.92.

Number of Imperial Pensioners in the United States on December 31, 1923—

- (a) Disability, 3,876.
- (b) Dependents, 1,799.

Number of medical examination conducted by the U.S. Veterans Bureau for D.S.C.R. on Imperials from April 1, 1923 to March 31, 1924, \$3,122.

Amount of money paid annually for pensions to Imperials residing in the United States, £267,833; (Canadian supplement) \$169,867.

Amount of money paid annually for treatment, etc., of Imperial ex-service men residing in the United States from April 1, 1923 to March 31, 1924, \$45,077.57.

Number of Canadian ex-service men residing now or lately residing in the United States (estimated), 45,000.

All members of the Empire forces who reside in the United States are looked after by the D.S.C.R. through the U.S. Veterans Bureau, which is the corresponding Department of Government in the United States. The D.S.C.R. reciprocates by affording similar services to United States soldiers living in Canada.

SESSIONAL PAPER No. 203a

No reliable information could be obtained as to the approximate number of Canadian ex-service men living in the United States while it was estimated on the Hearing that there were between 50,000 and 60,000 residents of the United States who enlisted in the Canadian and British forces. A later estimate furnished the Commission makes the more probable number between 40,000 and 50,000.

The evidence on this subject was presented at the Toronto Hearing by the President of No. 1 Post of the Detroit Command of the British Great War Veterans Association of America. This organization is composed, and for the benefit of Canadian and Imperial ex-service men living in the United States. There are 33 branches, called Commands.

This Association, in anticipation of the Commission's Hearing, circulated a special questionnaire through the various Commands in the United States and also, by advertisement, mass-meetings, and personal interview, called for suggestions from ex-service men as to the subjects of the Commission's enquiry. The answers which were returned to about 3,000 of these questionnaires were then gone through by the National Council of the Association, sitting at New York and the proposals for presentation to the Commission were the result.

### *Suggestion by Ex-Service Men*

Facilitating readmission to the United States of Canadian ex-service men who return to Canada temporarily

That arrangements be made so that Canadian Ex-Service men residing in the United States, and coming temporarily to Canada for purposes connected with pension or treatment, should be promptly readmitted, without difficulty, on return.

The cases referred to particularly were Canadians near the border, who had crossed to Canada for the purpose of receiving from the post-office, or cashing, their pension cheques, and had, on their return, found some difficulty in being admitted, particularly if they had a partial disablement which was apparent (Toronto 69, 70, 95). Some men had a mistaken notion that if they lived in the United States they were not entitled to Canadian pension. Consequently, they gave a Canadian address, near the border, to which pension cheques were to be sent, and, to procure these they had to cross to Canada.

There are also men who may want to come to Canada for treatment or special examination. Arrangements for their return can always be made in advance by representations from Ottawa to Washington through the regular channels. The drawback to this is the necessary 3 or 4 weeks delay. This regular procedure is followed in cases where the man is officially authorized to come to Canada for any purpose which may involve his remaining for any length of time, but in the ordinary case, of the man coming over independently on some casual mission, formality is generally dispensed with. In these latter cases there is always the possibility that a man, particularly one who is disabled, may encounter difficulty in returning although instances of this are evidently not at all common. It is probable that any absolute remedy would involve some alteration in the immigration regulations of the United States, with reciprocal changes by Canada, to permit the readmission into either Country of ex-soldiers ordinarily resident there who have been temporarily absent in connection with pension or treatment upon presentation of a letter of identification from the U.S. Veterans Bureau or the D.S.C.R. as the case may be, vised by the official to whom the man has reported. It is felt that such a provision applying reciprocally in both Countries could not offend against the spirit of the regulations of either.

*Recommendation of Commission*

That representations be made by the D.S.C.R. to the Department of Immigration with a view to such action as may be considered necessary and advisable to make certain an unmolested return for the man who has a bona fide errand out of either Country into the other in connection with his service disability.

*Suggestion by Ex-Service Men*

That provision be made to insure more promptness in granting treatment in urgent cases to ex-service men residing in the United States (Toronto 65, 66).

The arrangements for emergency treatment are similar to those in Canada, except that the treatment is afforded by the U.S. Veterans Bureau. A somewhat indefinite intimation was given that treatment was not always afforded as quickly as the circumstances of the case warranted. It was not alleged that there had been any general delay (Toronto 81). The statement by the D.S.C.R. representative was that recently there had been a very small number of complaints, and that the service was, generally speaking, working very smoothly. (Toronto 76).

The need for more prompt emergency treatment was made the basis of a recommendation that there be organized some sort of a local Committee, with one official to be paid by the Department, and that this Committee should have the power to determine, regardless of the decision of the U.S. Veterans Bureau, whether the case was sufficiently urgent to require immediate treatment. (Toronto 71 and 80).

Admittedly if a man in need of immediate treatment had to wait until his application was dealt with in the ordinary course of post through Washington to Ottawa and back again there would be need of some drastic change but nothing of this kind was even hinted at and the arrangement in force should prevent any such occurrence.

The practice to be followed when a Canadian ex-service man applies to the U.S. Veterans Bureau for treatment is set out in an agreement between the D.S.C.R. and the Bureau, an extract from which follows:—

“Except in cases covered by paragraph (b) in no case should treatment be undertaken pending receipt of authority from the Bureau. Before issuing such authority it will be necessary for the Bureau to secure authority from the Department.

(b) If it is apparent that emergency treatment is required for what appears to be a war disability the medical representative of the Bureau can give the treatment or order the man to hospital without waiting for specific authority.”

This arrangement gives ample scope for dealing with an urgent case without delay. No doubt there are cases where the Veterans Bureau officials decline to accept the responsibility which paragraph (b) confers and the man is kept waiting until a request to Ottawa for authority is sent through Washington and a reply received thereto. This can in appropriate cases be done by telegraph so that 24 to 36 hours should be the maximum time consumed even if the Bureau official wanted to take the less decisive course.

It would be expected also that there are cases where the ex-soldier gets the benefit of a quick “on the spot” decision by the Veterans Bureau officials taking him on for treatment rather than running the risk of delay when if the case had been referred to the Canadian authorities the application would have been refused.

## SESSIONAL PAPER No. 203a

The regulations seem ample. The difficulty arises from the necessary interjection of the personal factor not only in the official but in the applicant as well. The official may appear active and sympathetic or lethargic and indifferent, the applicant may seem to be trustworthy and civil or unreliable and assertive. Both may be entirely misjudged but the action taken by the official and the contentment of the applicant may be influenced greatly by these appearances. This holds true, however, concerning many besides ex-soldiers and officials, and the Commission cannot find from the evidence that ex-service men in the United States applying for treatment under the present regulations and practice are dealt with less favourably than if they were in Canada.

*Recommendation of Commission.*

None.

*Suggestion by Ex-service Men.*

Facilitating medical examinations and decisions thereon

That provision be made for eliminating delays in connection with medical examinations, and the subsequent decisions thereon. (Toronto, 71, 82, 83).

It was pointed out that the Canadian Pension authorities do not accept the assessment of the Medical Examining Board of the United States Veterans Bureau. All that is asked for from the United States authorities is that they describe the condition. This description goes forward through Washington to Ottawa and on it the Canadian authorities assess the degree of disability (Toronto 70). There is delay necessarily, and it is accentuated where further correspondence is required to amplify the information received: If the assessment itself were made by the Examining Doctor in the United States there would probably be quicker action, but so long as Pension Statutes and Regulations differ in the two Countries, and so long as there are variations in their respective Tables of Disabilities the decision must necessarily be made by the authorities of the State which pays the bill.

In order to meet the difficulty, and still retain the necessary Canadian Supervision, it was suggested that a Canadian Examining Board might visit the border cities and make the examinations of men residing there. The City of Detroit, and the City of Boston were mentioned as two places where there was a very large concentration. This suggestion which seems on its face feasible enough is, on consideration, open to serious objection. Canada and the United States have reciprocally undertaken to look after each others' soldiers in the respective Countries. While, no doubt, the United States officials would welcome being relieved from some of this work there would, in the sending over of Canadian Medical Boards, be a hint of want of confidence which the most absolute assurances to the contrary could hardly be expected to entirely dispel. Unless Canada proposes to undertake her own Medical examinations in the United States it is felt that the system now followed should be adhered to uniformly without making exceptions on account of differences in geographical location.

Involved in the above suggestion there is also an intimation of delays experienced in waiting for Medical examinations. So far as the Commission can learn no distinction whatever is made between United States and Canadian soldiers attending for examination. Obviously so long as the Canadian authorities agree to utilize the machinery of the United States organization, suggestions and methods of improvement, if any such are indicated, cannot properly or effectively be made by way of formal recommendation by a body such as

this Commission. All that can be proposed is the maintenance of close liaison between the two kindred services not only at Headquarters but throughout both Countries.

*Recommendation of Commission.*

None.

*Suggestion by Ex-service Men.*

Canadian Soldier Advisers in the United States

That a Canadian official qualified to afford service to Canadian and Imperial ex-soldiers in respect of pensions, treatment and re-establishment matters be appointed in the larger centres of the United States. (Toronto 71).

There appeared frequently in the evidence given on the Hearing at Toronto a suggestion of a desire for closer contact between the Canadian ex-service man in the United States and the Canadian authorities. This did not indicate complaint of the service afforded by the United States Veterans Bureau but simply expressed the natural preference of these men for their own institutions. The idea as voiced was:—

“The general consensus of opinion in the minds of the men there, is that they would rather be treated by their own countrymen.” (Toronto 73-8-9, 96).

It goes without saying that Canadians living in foreign countries cannot be expected to have the same intimate relations with, and service from, the institutions of their own country as those residing in Canada. Nevertheless it was rather broadly asserted on the Hearing that Canadians residing in the United States should

“enjoy the same privileges as the Veterans resident in Great Britain and the Dominions.” (Toronto 65, 79).

This claim must have been advanced only in a strictly relative sense. No suggestion was offered whereby any such ideal conditions could be brought about. It is also to be remembered that manifestly the geographical situation alone makes even an attempt at such a service futile. Everything possible is done to adapt the existing organization to reach, at least indirectly, all Canadian ex-service men, and direct correspondence between the ex-soldiers and Canadian Headquarters is freely carried on. But Canada's activities in some respects must stop at the Canadian border. The Canadian authorities make no provision for unemployment relief of Canadian ex-service men living in the United States, and also, if vocational training is granted, such training must be taken in Canada. (Toronto 66, 67, 69). The general principle of closer association was made the ground of a suggestion that there should be established at the larger centres, a permanent Canadian office, with at least one paid official in co-operation with a Local Committee to look after Canadian and Imperial ex-service men (Toronto 71).

An illustration of the possible usefulness of such a Local organization was given in 1920 when a very acute employment situation was experienced. In New York, a United British Relief Committee was formed as a result of the initiative of the British Great War Veterans Association and the efforts of the British Consul General.

This Committee passed on over 7,500 cases of application for relief in 22 months, granting relief in nearly 6,000 cases, found permanent employment for over 550, and temporary jobs for a large number.

The only other agency which was brought to the attention of the Commission through which the Canadian ex-service man might be assisted, was the

## SESSIONAL PAPER No. 203a

American Red Cross Order. The arrangement put in evidence (Toronto 89) indicates that a very thorough and interested service is provided for members of the Canadian and Imperial forces by this body. Wide circulation was given to this arrangement, and apparently the information was acted upon, as the evidence showed that complaints direct to the Canadian Authorities decreased very noticeably.

The Commission considers it worth while incorporating herein the text of the arrangement with the American Red Cross. It is as follows:—

(Toronto 89). "The American Red Cross gives service not only to the families of ex-service men, but to the men themselves. The Department of Soldier's Civil Re-establishment has agreed to furnish the Social Service Workers in the Division offices with the names of men who complete treatment in the United States for a War disability. These names will be sent on to the Home Service Workers of the Red Cross Chapters, who will endeavour to make contact with the men and to assist them in various ways.

"In the hospitals, the Red Cross co-operates with the United States Government in providing Social Workers and recreation. The Social Workers in the hospitals in co-operation with others in the men's home town inquire into home conditions and try to make any needed social adjustments. Often family difficulties prevent a man from taking advantage of hospital care or other benefits to which he is entitled, and in such cases it is the rule of the Red Cross Social Service Workers to give advice and, if necessary, assistance. The Workers are not limited to any "Types" of service, but are supposed to answer every need of the disabled man and his family in so far as that is possible. While the general policy of the Red Cross is to render service wherever it is needed, many of the smaller chapters, which were active during the war, have practically ceased to exist, and in some of the larger cities the Red Cross serves only the disabled men and their families, turning over the problem of able-bodied ex-service men to other agencies. On the other hand, about five hundred chapters have extended their Social Service Work to Civilian families on a peace-time basis, and another five hundred will soon be added to this number. The general rule, however, holds that, wherever, in the hospital or outside, the American Red Cross maintains a Social Service staff, these workers will do for the former member of the Canadian or British forces and his family what they would do for the former member of the American Expeditionary Force and his family. If, therefore, any men from Canada or the British Isles as well as from Australia and New Zealand, are in need of friendly advice or assistance, there need be no hesitation in laying the matter before a Red Cross representative.

"If any man is unable to get in touch with the local Red Cross representative he may write to the Division Director of the Red Cross, having jurisdiction over the State in which he is living."

The information, which the Commission has is that the work of the American Red Cross has been most thorough and as might have been expected, has been given for the benefit of Canadian and Imperial ex-service men just as freely as for their own nationals. This excellent organization is, as appears from the above circular, very widely established and is within comparatively easy reach of any soldier needing help or advice.

The question as to whether the appointment of a Canadian in the capacity of a soldier's friend or soldier's adviser is desirable depends, in the Commission's opinion, largely on the area concentration of men whom such an official would

serve. While the United States Veterans' Bureau and the American Red Cross are co-operating in every way, they are, of course, not altogether familiar with Canadian statutes and regulations governing pensions and treatment. The intricacies of both these branches require careful training and experience and the Commission is of the opinion that in one of two of the larger centres of the United States where Canadian ex-service men are congregated the appointment of a soldier's friend or adviser might be tried as an experiment and any future policy in that respect based on the experience thus gained.

#### *Recommendation of Commission.*

That in one or two of the centres in the United States where the largest number of Canadian ex-soldier men are concentrated a soldier's adviser be selected and appointed under conditions and regulations governing the appointment and duties of soldier's advisers in Canada.

## PART VII

### EXISTING RE-ESTABLISHMENT NEEDS

#### GENERAL

Paragraph 2 of clause 2 of the Commission's Reference speaks of a "survey of existing re-establishment needs". While this was intended only to indicate the method and scope of the Commission's inquiry concerning handicapped men, it was apparently regarded by ex-service men as an invitation to submit to the Commission practically anything which could be regarded as in the remotest degree affecting ex-soldiers or their dependents.

The Commission intimated in its Memorandum (see Appendix) its views of the limited effect of this paragraph. The Commission concluded, however, without any undertaking to make recommendations or state conclusions on matters not properly within its scope, that to refuse to hear evidence which had been prepared at considerable trouble, on other soldier problems would not only be unnecessarily strict, but would throw away a favourable opportunity to have on record information which might well be of value in other connections.

The Commission is, therefore, including the following subjects under the above general head, namely, Employment Generally, Housing, Repatriation and Refund of Passage Money, Women and Children, Prisoners Welfare.

There are also three matters which are entirely outside the purview of the investigation. As to those, permission was given to make the representations matters of Record. They are Imperials, R.N.W.M.P. and Burials.

In cases where the Commission has stated any conclusions or made recommendations in connection with any of the foregoing, it has been done simply as the Commission's endeavour to focus the discussion.

#### **Section 1. Employment Generally**

The subject of employment of handicapped men has been gone into at length. Turning to the problem of the employment of the fit ex-service man, its solution must, to a great extent, depend on the same factors as enter into the employment situation generally.

It was claimed, however, that ex-service men had experienced more difficulty in obtaining employment than the men who had not been in the army. All that can be done here is to set out the statements which were made and the statistics which were submitted in support of that contention. It is true that the impression existing that ex-service men were not as readily taken on for work as civilian was one of the reasons for discontinuing, two or three years ago,

SESSIONAL PAPER No. 203a

the practice of differentiating in the Provincial Employment Bureaux between ex-soldiers and others, on the theory that a man labelled as an ex-soldier when sent to an employer, was less likely to be eugaged.

Official statistics which would show, separately, the extent of unemployment of the two classes of ex-service men, namely, disabled and fit, are not procurable and the Commission has not any satisfactory method of arriving at the number or percentage of fit ex-service men unemployed. The Commission has already set out (Part Two) various statistics which were submitted at Vancouver (339) and Toronto (1418, 1422-3, 1425-9, 1423-3) which were claimed to support the contention that the ex-service man was prejudiced in obtaining employment.

The Commission has been unable to verify by official statistics the definite figures submitted to show number of ex-service men unemployed as compared with civilians. On their face they represent local situations. The Commission has incorporated them simply to show the contentions which were made.

While the deduction which is attempted to be drawn from these figures that fit ex-service men are to a substantial extent discriminated against by the average employers cannot be accepted as applying to-day, it is generally known and requires no statistics in proof thereof that, in the earlier days a prejudice grew up in some quarters to the disadvantage of ex-service men. The reason for this very largely disappeared and it must be the very exceptional case to-day where, other things being equal, any distinction is made at least to the prejudice of the ex-soldier.

Based on the condition which it was claimed, statistics showed, a remedy was suggested as an alternative to the generally recognized methods of assisting ex-service men to obtain employment. This alternative was in effect what is commonly known as the "bonus."

It was put forward at two of the Hearings, namely, Vancouver (382) and Toronto (1418, 1432, 1425-9). At the former it was a minority report, and at the latter it was claimed to represent the views of ex-service men who answered a questionnaire which had been locally circulated. The same scheme had been presented verbatim before the 1922 Parliamentary Committee and the arguments advanced then were reiterated in their entirety. (Toronto 1441, Vancouver 361, 1922 Parl. Com. Rep. p. 220). Those frequently referred to in emphasizing the need for this measure were men who had as a result of their service

"suffered physical impairment which has rendered many of them incapable of earning their living and taking their place in civilian life." (Toronto 1422).

and

"who have broken down as a result of war disability." (Toronto 1431).

While the particular needs of the disabled and of those out of work were urged as the group requiring relief, the remedy as outlined had no special reference to them but was for the sick and the well, the needy and comfortable alike. After five years of rehabilitation work along lines of co-operative assistance, a universal grant could hardly be justified as a re-establishment measure to surmount the large commitments already incurred for that purpose. Stripped of the reference to special and emergent cases the proposal is that, considering discrepancy between the pay of the soldier and the civilian, an allowance be granted to all ex-service men, no matter what their circumstances, in addition to the rate fixed on their enlistment. The suggestion, from this angle, proposes a radical departure in general national policy and having regard to the varied

and extensive activities undertaken and the expenditures made towards rehabilitation, it concerns recognition of war service rather than re-establishment, and as such is outside the scope of the Commission.

Unemployment relief on the other hand is a measure which although temporary takes account of acute conditions in individual cases and varies with the necessities presented from time to time. It may not be generally known that the Government has to date expended over eight million dollars in assisting ex-service men in this way. This constitutes probably 85 per cent of all unemployment relief paid by the Federal Authorities. In the winter of 1922-23 there was being paid out in the Toronto Unit alone, about \$12,000 per week to ex-service men. Naturally this mode of assistance is resorted to only when all other means have failed or are inapplicable. Men do not want the dole any more than the authorities are anxious to give it, and as mentioned in Toronto (1,563) relief should not be given without return,

"For every year we give relief we will suffer for ten years."

The Commission has already, in discussing the employment of handicapped men, indicated the special regulations which are in force, whereby fit ex-service men are given a preference over all other applicants for Government positions, excepting their disabled comrades. This preference is contained in the Civil Service Act, previously quoted, and has also been preserved by Order in Council P.C. 1053 which transfers a certain number of positions from the jurisdiction of the Civil Service Commission to the various Departments. The percentage of accepted applicants for civil service positions, who have been employed in the years 1920 to 1924, has also been set out and, as already summarized the statistics show that from 69 per cent to 79 per cent of these are ex-service men, with the percentage increasing perceptibly each successive year. Reference has been made (Part Two) to the lack of statistics showing the percentage of ex-service men appointed to positions under Departmental control.

Unemployment Insurance was proposed at Vancouver (341) with the usual limitation that it be restricted to ex-service men. It would seem that almost the first principle of a feasible scheme of unemployment insurance would be that the risk be spread over as great a number as possible rather than confined to a particular class. Other exceptional features proposed would, the Commission considers, make the serious consideration of this particular scheme impossible. The whole subject of unemployment insurance is another matter of general national policy involving investigations quite outside the special requirements of ex-service men.

## **Section 2. Housing for Ex-Service Men**

### *Suggestion by Ex-Service Men*

That provision be made whereby ex-service men may secure financial assistance in providing and securing suitable homes for themselves and their dependents by means of direct loans from the Federal Authorities, administered by the Soldier Settlement Board. (Halifax 332, 348, St. John 187, Montreal 590, Toronto 1,519-20, 1,840, Winnipeg 361-3-4, Regina, 268, Vancouver 212, 215, 217, 332, Calgary 331).

The general idea expressed in short was that special provisions should be made for providing homes for ex-service men and their dependents and that this should be done by the Federal Authorities dealing directly with the borrower.

The Federal Housing Act made no distinction between ex-soldiers and others. Under the scheme of the Act it depended entirely on the local municipal authorities whether any housing assistance would be available. The plan was that the Federal Government allotted \$25,000,000 for loan to the Provinces on

## SESSIONAL PAPER No. 203a

the security of their Bonds, this amount could be taken up by the respective provincial governments in proportion to the population of the province as shown by the 1911 census (Vancouver 217). The provinces in turn advanced this money to such municipalities as were willing to borrow it and pledge their bonds. The municipality in turn, through its municipal council, or through a local Housing Commission, loaned to individual applicants.

It was represented at Halifax (332), at Vancouver (221) and Winnipeg (368) that there were still a large number of ex-service men who were desirous of taking advantage of the Act if funds were made available.

The matter of providing better housing facilities for ex-service men along the lines generally urged on the Hearings before the Commission was brought to the attention of the 1922 Parliamentary Committee (pro. 1922 Parl. Com. p. 169, 170), but no recommendation was made.

The evidence before the Commission showed in British Columbia over \$1,700,000 was spent and that province took up more than its allotment of the vote, some of the other provinces not taking their full share (Vancouver 212-3). Under the administration in British Columbia it was expressly provided by the local authorities that ex-service men should be given the preference (Vancouver 213-4). Before the provision giving the preference to returned men came into force 488 loans were made to returned men and 85 loans were made to civilians. (Vancouver 213). Thirty municipalities in British Columbia took advantage of the provisions of the Act and, as the representative of ex-service men expressed it:—

“I do not think there is any re-establishment legislation that has been more wholly beneficial than that; it is what I would call 100 per cent effective. There is now a general call throughout the province for a renewal of this scheme.” (Vancouver, 214).

It was stated that there was a waiting list in the City of New Westminster, and also in Nelson (Vancouver 221).

The point was also made that there was a certain percentage of ex-service men who had not been benefited because they were living in unorganized territories which had not the status of municipalities and, therefore, could not borrow from the provincial government. This was one of the reasons advanced for the proposal that the loan be effected direct between the ex-service men and the Federal Government (Vancouver 215-7-9).

The proposal from British Columbia included not only assistance in building houses, but in buying those already built and adapting them to the needs of the applicants, and also the alteration, repair and enlargement of homes already owned by the soldiers.

In Saskatchewan the need was emphasized for facilitating this assistance for ex-service men by direct contact between the proposed borrower and the Federal authorities. The scheme there proposed was referred to as the Federal Housing Loan and provided in some detail for the administration of the fund by the Soldier Settlement Board, the wholesale purchase of building materials, the standardizing of plans and the official supervision of construction. Here also the proposal was that the scheme should include provision for the purchase of houses already built.

In Manitoba it was said that the whole scheme of assistance in housing had been most enthusiastically received, so that the full Federal allotment of nearly \$2,000,000 had been expended and, in addition to that, independent loans were made by the province amounting to about \$1,600,000, and by the City of Winnipeg amounting to \$2,340,000, making in all \$5,915,000 spent on housing in that province (Winnipeg 358, 359). In Manitoba also (as in British Columbia) returned soldiers had been given the preference in granting the loans (Winnipeg 358).

At Toronto, it was stated that the scheme had not been a success either in Toronto or in London, the reason, apparently, being that the houses had been built at too great a cost (1834). It was argued, however, that as costs had now decreased so as to make building commercially sound, special provision should be made for the benefit of many ex-service men still without proper housing accommodation (Toronto 1837, 1839).

It was here also urged that the loans should be made not only for the purpose of building new houses, but to permit of the purchase of existing houses, to pay off present mortgages and permit repayment over a long term on the amortization plan, and to complete dwellings already begun (Toronto 1520, 1840).

As appears from the 1923 Report of the Department of Health (p. 30), the provinces of Manitoba, New Brunswick and British Columbia took their full quota of the Federal Housing loan, but out of the total \$25,000,000 originally appropriated, there had only been advanced to the provinces a little over \$20,000,000 as of March 31, 1923.

It is stated that the consensus of opinion of the Provincial Housing Directors is that, as a rule, the monthly payments have been remitted promptly, but there are no statistics available showing how ex-service men have met their loans in comparison with civilians. The average cost of a house has been \$3,230.

First, as to whether there is a need for further provision for housing ex-service men. The Commission is convinced that a limited requirement in this respect exists. The difficulty is to gauge and state the extent of it. It can be said at once that, according to the evidence, the conditions in both British Columbia and Manitoba warrant further assistance. An endeavour has been made by a questionnaire to ascertain the situation in the various provinces and the results are shown in the Table in the Appendix D. The only reliable source of information as to housing conditions and the supply of and demand for suitable dwellings must be the local authorities. The Commission, therefore, makes its recommendation as to the extent of further assistance to be given, dependent on the representations which these bodies may make.

Secondly, as to the special claim of ex-service men for assistance for better dwellings. It is sometimes suggested that, because the State has provided loans on comparatively small margin for settlers on land it follows that it would be discrimination if similar provisions were not made for housing the ex-soldier in the city. The Commission does not consider that the cases are analogous, for the reason that, in the former case, the country secures a distinct commercial benefit, by way of settlement and colonization. In the latter case the benefit to the country is much more indirect, and consists chiefly in increasing the assessable value of property, and in providing temporary employment. Moreover, the fact that the farm loan is secured in a large proportion by land, rather than buildings, which are subject to rapid deterioration, makes the former more desirable on a long term loan.

As is pointed out below, however, the principle of housing loans for ex-service men was accepted when demobilization was taking place. The original scheme as evidenced by Order in Council, P.C. 2997, of December 3, 1918, indicates very clearly that a strong factor in inducing the Government to grant this very substantial assistance was that it would be for the welfare of returned soldiers. The Order in Council recites that the cessation of building operations during the war has created a great scarcity of house accommodation in cities to-day, and that this condition will become intensified "with the return of our soldiers from overseas, and their re-establishment with their families in civil life and occupation." It is further pointed out that, in view of the importance of the matter to the health and general well-being of the entire community, "its relation to the welfare of returned soldiers and their families," the loan

## SESSIONAL PAPER No. 203a

should be authorized. When the project took more concrete shape, and the Housing Committee of the Privy Council formulated the general principles to be followed, they expressly recognized as one of the principal beneficiaries of the scheme the ex-service man. The objects as stated were: (a) to relieve congestion; (b) to put within reach of working men "particularly returned soldiers," the opportunity to acquire homes at actual cost; (c) to contribute to the general health of the community. (See pamphlet "Housing in Canada," issued by the Department of Health, p. 10). Later this is repeated, and again it is pointed out that it is for the benefit of working men "particularly returned soldiers."

The "ex-soldier" feature of the New Zealand Act was cited, under which it was provided:—

"The minister may set land apart for the purpose of soldiers' dwellings, and may erect suitable buildings thereon. The land and dwellings may then be disposed of to discharged soldiers, in the same manner generally as in the case of workers, by the Workers' Dwelling Act, 1910". (Vancouver 390).

Although it is quite apparent that when this scheme was launched the ex-service man was to be the most prominent beneficiary, that idea was not expressed in the legislation itself and only British Columbia and Manitoba gave the soldier any preference in application over the civilian. Whether the ex-service man has obtained the advantage which the project was intended to afford him is questionable, and the Commission considers that any further extension of the scheme can well be confined to those who afforded the real reason for its promotion.

Thirdly, as to the claim that the Federal authorities should deal direct with the soldier borrower, if a scheme were now being worked out for the first time the experience of the past 5 years would provide a reason for very seriously considering (a) confining the loans to ex-soldiers, or at least giving them a preference and (b) having the Federal authorities deal direct with the borrower.

The scheme as adopted did not expressly contain either of these principles although ostensibly the ex-service man was the one who was to be primarily benefited. The bulk of the work has been done. Provincial and municipal organizations in the shape of Housing Commissions have been built up and are now functioning. The problem now is to provide for a comparatively small proportion of cases confined principally to British Columbia and Manitoba although there will be a few in every province. The Commission does not consider that it is warranted in recommending the setting up of new organizations throughout the country under Federal control to deal with this residue of cases. The suggestion that the Soldier Settlement Board could take on this work is, the Commission considers, more plausible than sound. The Soldier Settlement Board deals with housing only incidentally to the scheme of land settlement. The buildings bears a small proportion of the total loan. If a building fit for a Settler's use is erected there is nothing left out of the \$1,000 loan which could be wasted. Consequently there is not the necessity for constant inspection and attention to see that the loan for building is providently expended. But if the Soldier Settlement Board took on housing as a project its corps of inspectors and advisers would have to be very materially increased and they could not perform their work as they do now by occasional visits to the borrower to note his progress in farming, but they would necessarily have to act as inspecting architects supervising, from day to day, the work and materials supplied.

It has also been suggested that special building loan societies be established in each province, authorized to receive money on deposit and loan it to ex-soldiers for housing purposes at low rates of interest, additional necessary funds to be made available by the Government which would also have to make

up any deficit in administration expenses. The Commission does not consider, however, that the housing requirements still existing are sufficiently widespread to necessitate the inauguration of a scheme so ambitious.

At this late date the obvious and practical thing seems to be to utilize the present organizations which have for a long time specially dealt with Housing. This does not, however, take care of the man in the unorganized territory. (Vancouver 215-7-9). Generally speaking these are Settlement rather than Housing problems but there are instances particularly on the outskirts of municipalities where security for a Housing loan is afforded. The evidence before the Commission does not justify the alteration of the entire scheme for these cases. In British Columbia already the Provincial authorities have made some special exceptions. From the very fact that the locality is unorganized there will be few instances in which the security would justify a loan as a building proposition solely, but since this is a returned soldier project some scheme of co-operation should be worked out whereby the risk, if any, in such eligible cases as are found, is shared by the Dominion with the Province. The Province could easily utilize the nearest Municipal Housing Commission to investigate the loan and, if granted, supervise the construction. The Federal authorities before approving the loan might utilize the Soldier Settlement Board organization to check up the surrounding conditions and the prospects of the borrower. The fact that Provincial authorities are willing to share the risk should assure the Federal authorities that the loan has been properly scrutinized.

Almost everything which can be said concerning the general benefits of a Housing scheme have been fully set out and considered in the various reports of the Ministry of Health, and in the Order in Council authorizing the expenditures for this purpose. There is to be emphasized the advantage of spending public money on reproductive work, such as building, as compared with the expenditure in re-establishment by way of promiscuous subsidizing, and there is the further point that good housing, in which a man has made an investment, is a stabilizing influence and prevents emigration. The whole subject of the operation and advantages of the Housing Scheme is fully dealt with in a Report by Mr. Thomas Adams, submitted to the Parliamentary Committee on Pensions and Re-establishment of 1921. (See Committee Report 577).

The best method of working out housing assistance for ex-service men involves the determination of very important questions of practical detail which would have to be decided by the Housing authorities of the Department of Health in consultation with those of the Provincial and Municipal organizations, all of whom have been closely in touch with the working of the scheme for the past 5 years. It would be unwise for the Commission to go further than to indicate generally the condition which exists and the principles which it considers ought to be observed in any scheme for their improvement.

#### *Recommendation of Commission*

- (1) In the opinion of the Commission a limited need exists for further provision of suitable housing accommodation for eligible ex-service men.
- (2) Such provision should recognize the following principles:—
  - (a) Further funds should be made available under the general conditions of the present Housing Scheme but with such modifications as these recommendations indicate.
  - (b) Such further provision should be earmarked for ex-service men.
  - (c) The extent of such further provision must be regulated by local housing needs among ex-service men as indicated by information procured, from time to time, through the Municipal and Provincial authorities.

SESSIONAL PAPER No. 203a

### Section 3. Transportation of Canadians from England to Canada and Refund of Passage Money

The claim was made (Winnipeg 351-256, Toronto 1783, 1810, 1525-32) that ex-members of the Canadian Forces who enlisted in Canada but who took their discharge in England, should be given transportation back to Canada, when they decided to come. It was also claimed that such of these men as had, after their discharge in England paid their own passage back to Canada, should be reimbursed. The ground for these claims was that Canada having taken these men overseas should relieve them of any expenses in returning. The answer is that at the close of the war Canada did provide these men with the facilities to return with their comrades and to be demobilized in Canada, but that if they preferred for reasons of their own to take their discharge in England there should be no obligation on the Country to carry perpetually the liability to return them. To emphasize this it was required that a soldier who applied for his discharge in England should sign a waiver of any claim for refund in the following terms:—

"I fully understand that if granted my retirement or discharge in the British Isles instead of Canada, I will not be entitled to receive return passage to Canada at the public expense for myself or my dependents by reason of having been a member of the Overseas Military Forces of Canada. (Toronto 1784)."

There was an exception made where the soldier was detained in England on account of domestic affairs, and in these cases the man was given free transportation if he returned within six months or, if he had returned in the meantime at his own expense, refund was made at military rates.

Early in 1920 further consideration was given these cases by assistance furnished through the High Commissioner's Office under P.C. 122 of January 22, 1920. About 770 were returned to Canada but they were required to give an undertaking to repay their transportation. The amount expended was about \$58,000 and practically none of this money has been repaid.

There is also a further means whereby men born in Canada can, if they are in destitute circumstances in England, be brought back as distressed Canadians by the Department of Immigration.

By a series of Orders in Council provision was made for free repatriation from England of dependents of Canadian soldiers all during the war and up to November 1921.

In 1922 special representations were made to the Parliamentary Committee on behalf of a certain number of men who, it was reported, were still in England, having taken their discharge there for special reasons, and who now desired to return to Canada. A claim for refund was also made on behalf of men who had returned to Canada and paid their own way. The Parliamentary Committee recommended an appropriation of \$150,000 to be devoted to the repatriation as quickly as possible of the most deserving of these cases and P.C. 1757 of September 7, 1922, put this recommendation into force with the restriction that the assistance should be given by way of loan and also that advantage must be taken of the provision before April 30, 1923, which date was by Order in Council (P.C. 1056) extended to May 31, 1923.

Up to October 31, 1922, 2,625 applications for repatriation had been received in the office of the High Commissioner for Canada. These included the accumulation of arrears for a considerable period, and involved approximately 6,000 persons, including dependents. After consideration of the individual cases the net result was that only 122 applicants with their dependents (about 390 persons in all) actually returned to Canada, the total expenditure being about \$39,000. About \$2,000 has been refunded on account

of the undertakings given for repayment, but about 50 per cent of this amount is adjustments and not actual repayments by the borrowers. Many more applicants were accepted but for various reasons they failed to avail themselves of the Government's offer of assistance. Only a very few of the applications were refused.

It is argued that some claim to consideration arises because Canada saved about 14 days' pay and allowances for every soldier who took his discharge in England. This does not, however, obligate Canada to, in effect, place to the credit of the man discharged in England the amount thus saved and entitle him to ask that it be applied for his benefit in payment of transportation when he decides to change his residence as a civilian. The obligation to return the soldier to the place where he enlisted ceases when he elects not to return but to re-enter civilian life somewhere else, and when he has signed an express waiver there can be no doubt that his attention has been very definitely drawn to the consequences of his decision to remain in England.

There are a few individual cases where men have been brought home on convincing the authorities by entries on service documents, of the genuineness of their reasons for remaining in England, but in the only two occasions when ex-service men as a class were assisted, namely, in 1920 and 1922, there was the distinct stipulation that it was only by way of loan, so that there has been no recognition of any claim as of right to have free transportation furnished. The need for further assistance by way of transportation to ex-service men discharged in England is not indicated by the evidence. The problem, if any exists at this late date concerns immigration and not soldiers re-establishment. The only ground upon which those who paid their own passage could claim refund is that collection of the loans made to those who were brought out has apparently not been insisted on. (Toronto 1531). The reason for this, and whether the exceptional circumstances surrounding those selected for repatriation were regarded as justifying special consideration, is a matter on which the Commission has no information.

#### **Section 4. Protection of Women and Children**

##### *Suggestion by Ex-service Men.*

That provision be made for the payment of pension to the dependents of pensioners who have deserted their families. (Montreal 463).

This is one of the most difficult problems which is met with. The public know that a man has been on pension for a disability, they know he has later deserted his family and they cannot understand why the pension cannot be continued to the deserted family. The reason is that it is necessary to have the pensioner examined periodically so as to note the increase of the ailment or the progress towards recovery and adjust the pension accordingly, or, the man who has disappeared may have died from other cause, or, he may have completely recovered, in which case the pension would be cut off. The fact that these circumstances cannot be ascertained makes it impossible to decide whether pension would be payable. In cases where the injury is permanent, such as amputations, the doubt as to possible recovery is eliminated, but there still remains the contingency that the absent man may have died from some other cause thereby terminating the right to pension. There are many cases where the Pensions Board could speculate with reasonable certainty that the disability still exists, judging from the nature of the ailment. The Board could also determine satisfactorily that the case was one of bona fide desertion and not simulated abandonment in order to conceal the fact that the disability had disappeared. The only really serious uncertainty is whether the pensioner

## SESSIONAL PAPER No. 203a

is alive. As to this the Pensions Board naturally can expect to get little substantial information. The health and habits of the man, his normal occupation and the circumstances under which he was last seen may be of assistance. The only way to deal with these cases is either to treat them on a strictly pension basis and refuse them entirely, as is done now, on the ground that the applicants have not shown that the deserting husband would be entitled to pension, or to deal with them on a partially compassionate basis by giving the Pensions Board discretion to pay the pension to the dependents under such circumstances as the Pensions Board may consider proper. The latter course would permit inquiry as to whether the disability is likely to still exist and as to the genuineness of the desertion; it will also leave it open to the Pensions Board to adopt such practice as may be thought proper in speculating as to the probability of the pensioner still being alive. The common law rule allows a period of seven years before a missing man is presumed dead. Some rule of thumb might be adopted whereby, a man whose disability was not such as to constitute a menace to life, would be presumed to be alive for some substantial proportion of this common law period.

The payment of Pensions in cases of desertion is already recognized by the Pensions Act Section 2 (p) whereby the Pensions Board may, in its discretion, treat as a widowed mother a woman who is deserted. No indication is given concerning the circumstances which must be present before this concession is made. A further extension of this principle was contained in the Bill amending the Pension Act introduced in 1923 (Bill No. 205, Section 17). This particular amendment did not become law.

The subject received consideration by the 1922 Parliamentary Committee (Com. Report p. XXV-XXVI) and it was there pointed out that the practice now is that when the disability is permanent or fixed the pension is paid, presumably to the family, for so long as it is known that the man is alive.

The Committee recommended that an attempt should be made to continue the pension by making the disability fixed where possible. These recommendations recognize the difficulty but do not cover the case where it is not known whether the husband is alive. It is with a particular view to mitigating the hardship where this information concerning the husband is not available that the Commission makes the recommendation below.

The Commission considers that there may be substantial merit in these cases and that the difficulty in procuring reliable information should not be a bar to the claim for assistance.

*Recommendation of Commission*

That provision be made so that notwithstanding Section 26 (2) the Pensions Board may in its discretion pay such pension as they consider might reasonably have been awarded, if the pensioner had presented himself for examination, to any person who was being, or was entitled to be, supported by the pensioner at the time of his last examination.

Family Welfare Association.

Association for the Protection of Women and Children.

Canadian Prisoner's Welfare Association.

At Montreal (463) memoranda were presented by the Family Welfare Association and by the Association for the protection of Women and Children. The work of these societies as it touches ex-service men's problems, deals particularly with the unfortunate position of deserted wives and children. The situation which is most frequently put forward is that the deserting husband and father has, as a result of his service in the war, changed from a decent steady working

man to an unsettled and irresponsible drifter. Cases were also cited of men who had been severely wounded or who had undergone particularly trying service conditions and who had shown definite evidence of mental instability.

A memorandum was also presented on behalf of the Canadian Prisoners' Welfare Association, which includes in its activities, ex-service men who have been unfortunate enough to run foul of the criminal law. This Association also incidentally keeps in touch with the home conditions and furnishes assistance when necessary to families of men imprisoned.

In all these cases the inference is that war conditions may have been responsible for the altered behaviour. From a pensions viewpoint it is extremely difficult to establish liability both on account of the nebulous character of the evidence and also because the Pension Act deals entirely with physical and mental disabilities and then only as affecting the earning capacity of the individual. Deterioration in character and behaviour are not within its scope, the reason being, quite possibly, that these alleged disabilities are capable of correction by the man's own volition. If, however, the condition goes beyond simply a loss of moral fibre and actually affects the man's earning capacity and is considered incapable of correction by his own effort, then it passes into the class of mental disabilities and should be dealt with as such. There may be "borderland" cases where definite decision is impossible but the exercise of the principle that the benefit of the doubt is given to the applicant should cover these.

The work which is carried on by such organizations as the three above mentioned is designed to supply the desired moral rehabilitation, and to furnish practical assistance to the families affected until this is accomplished. The Commission is impressed with the value of the work of these Associations. They are supported entirely by private subscriptions and are limited in their effectiveness by lack of funds.

Organizations of this kind have the facilities for securing first hand knowledge, and their local situation and interest enable them to sift out the cases which are undeserving. The Commission considers that such Societies should have their efforts supplemented, when necessary for carrying on their work, by substantial aid from the State in order to ensure the relief of cases which in the opinion of these organizations are deserving of help because of circumstances indirectly or remotely connected with the war. The existence and operation of these voluntary bodies affords to the Country an opportunity for co-operation in assisting those whom the public believes are entitled to some consideration, and at the same time of avoiding a direct admission by the State of a liability which cannot fairly or logically be assumed.

## PART EIGHT

### MISCELLANEOUS

#### Section I. Imperials

Representations were made to the Commission on behalf of those ex-members of His Majesty's (Imperial) Forces who are at present residing in Canada. While the Commission's Reference was confined to Canadian ex-soldiers, it was agreed that since these men were ex-soldiers domiciled and resident in Canada (Vancouver 466) their representations would be placed in the Record and the Commission has endeavoured to summarize the considerations affecting the points brought up.

## SESSIONAL PAPER No. 203a

These came under the following headings:—

1. Treatment.
2. Gratuity.
3. Canteen Funds.
4. Special Pension—British Reservists—Instructional Duty.
5. Repatriation of Dependents.
6. Payment of Imperial Pension Cheques at Par.
7. Representation of Ex-Imperials in Unit Offices.
8. Supplementary Pension to Parents.

### 1. *Treatment*

The D.S.C.R. acts as the agent of the British Ministry of Pensions in all matters concerning payment of Pensions, Medical examinations and treatment of Imperials resident in Canada or the United States. The Canadian authorities have no jurisdiction to decide eligibility for pension or treatment.

Under the present procedure when an ex-member of His Majesty's Forces is ill and applies for treatment to the local office of the D.S.C.R., before he can be admitted to hospital he has to wait (unless it is an urgent case) until his application has been sent to England and his eligibility determined there and the decision sent back. It was urged that this caused considerable hardship (Halifax 63). The D.S.C.R. is authorized by an arrangement with the British Ministry of Pensions to give treatment, without awaiting express authority, in case of a disability for which pension has been awarded, and in urgent cases, *i.e.* where the examining medical official certifies that, in his opinion, the disability for which treatment is required is due to service and that the condition of the applicant makes immediate treatment imperative. In all other cases the applications must be submitted to the Ministry and a decision received conceding entitlement. The provision for urgent cases seems fair except for the difficulty which naturally faces an examining doctor in undertaking to even express an intelligent opinion concerning the service connection of the disability when the documents are not at hand. The other disadvantage is that there can be no treatment given to Imperials on compassionate grounds except at Canadian expense. The claim was that the jurisdiction now possessed by the D.S.C.R., be increased to permit this organization to deal with the Imperials under the same regulations as apply to Canadian ex-service men. (Halifax 63). If and insofar as this involves a suggestion that the Canadian authorities should assume a greater liability than is admitted by the Ministry, the Commission cannot make any recommendation. The real remedy lies in some alteration of the terms of the authority conferred on the D.S.C.R. by the British Ministry, to which any representations would properly have to be made.

### 2. *Gratuity*

Strong representations were made on behalf of the following classes of ex-imperials, for War Service Gratuity, from the Canadian Government, at Canadian rates, in respect of their Imperial Service.

(a) *Ex-Officers of the Royal Army Medical Corps.* (Vancouver 491).—Upon enlistment in the R.A.M.C., the Imperial Government made a special agreement to pay officers, irrespective of rank, in addition to the regular Army pay, sixty pounds per year as a gratuity, for satisfactory service. The Canadian Government by P.C. 2389 of December 1, 1919, granted to officers of the Imperial Forces, who resided in Canada before the war and who had returned to Canada thereafter, War Service Gratuity at Canadian rates notwithstanding the fact

that their service was not with the Canadian Forces. In paying this Gratuity the Canadian authorities deducted the Imperial Gratuity of £60 per year. Ex-officers of the R.A.M.C., have protested, claiming that the £60 was not a gratuity but was a part of their regular pay. In the form of contraet which every R.A.M.C., officer signed, this £60 payment was referred to in clause 6 as a "gratnity." It was contended at Vancouver that this gratuity ought fairly to be regarded as pay, for the reason that the pay of an officer of the R.A.M.C. was less than that of an officer of the same rank in C.A.M.C. The figures given showing the comparative yearly salaries in the two services prior to June 1918 were: Canadian Captain \$2,213.75 including Separation Allowance. Imperial Captain (including bonus £60) \$2,423.50, less income tax \$210, \$2,213.50. It was said on the Hearing that the Income Tax was the subject of an adjustment but there was no verification of this. (Vancouver 495). It must be remembered that the R.A.M.C. officer signed on for only one year at a time while the Canadian enlisted for the duration of the war. Making a comparison for a three-year period from October 1, 1915, to September 30, 1918, the R.A.M.C. Officer would receive \$7,276.64, (converted at par) while the same man, serving for the same period with the C.A.M.C. would have received \$6,247.75. Order in Council P.C. 1494 of June 15, 1918, was passed to bring C.A.M.C. pay up to approximately that of the R.A.M.C. The matter was discussed before the 1921 Parliamentary Committee (Com. Rep. p. 296) but no action was taken. So far as appears the payment of the £60 per year by the Imperial Government served purposes identical with those of the Canadian War Service Gratuity.

(b) *Ex-members of Mercantile Marine.* (Vancouver 466.)—From the outbreak of the War until 1916 men of the Mercantile Marine signed an agreement known as Form T. 124. The Admiralty treated this Agreement as a semi-mercantile form of engagement, and therefore, declined to give men serving under it the status of members of His Majesty's Forces. The prerequisite for payment of supplementary gratuity by the Canadian authorities is that the applicant shall have served in His Majesty's Forces (Vancouver 489) and this decision of the Admiralty has led to the refusal of gratuity by the Canadian authorities. The Agreements were signed after war was declared and on their face there is nothing which would indicate that the signatories were to have the status or duties of Naval ratings. Strong representations were made at Vancouver (466 et seq.) to the effect that, notwithstanding the definite refusal of the Admiralty, the Canadian Government should recognize the claim. This contention was supported, first, by answering the points stressed by the Admiralty in refusing the claim. These points were, mainly, that the service had been under Mercantile Agreements. The answer made was that regardless of the form of the Agreement the service performed was belligerent duties in essentially Naval Service, and instances of this service were given such as patrolling, searching for and pursuing the enemy, bombarding a Turkish town and taking possession of the Cameroon Islands. The Agreement is said not to be an Agreement between the men and the ship owner, but with the Admiralty, and that although the term was for one year it was in effect for the duration of the war since their discharge after one year was conditional on the boat being in a British Port for seven days, which never happened. The claim is further that the signed Agreement should not be regarded as barring them, as the Agreement was signed on the spur of the moment on August 3, 1914, when they were asked if they would volunteer for service in the Navy or take free passage back to Vancouver, and they accepted the former, being largely influenced by the Commander of the boat, an R.N.R. man, who said he was going to stay with the ship. The second point made by the Admiralty was that these men received special rates of pay much higher than that of the Royal Navy. The answer made is that

## SESSIONAL PAPER No. 203a

the men of the Royal Navy proper are members of a permanent Force with the privilege of service pensions and that this was temporary Naval Service in time of war and also in tropical countries, and that the rates of pay should be higher. The men were, it is said, given Naval discharges and a medal. It was also stated (Vancouver 488) that some men serving under T. 124 received a gratuity of 28 days' pay (presumably from the Imperial authorities) and it is claimed that if this gratuity is paid by the Admiralty then automatically the Canadian authorities should supplement it. (Vancouver 489). Whether such payments were made or not, the difficulty still remains, as until the Admiralty recognizes these men as having the status of Naval ratings, they do not come within the Canadian War Service Gratuity provision made for members of His Majesty's Forces. Naval officers on these same ships have, of course, received their gratuity. Further effort to secure recognition by the Admiralty seems to have been abandoned (470) and the claim was presented as meritorious from a Canadian point of view.

(c) *Extension of Gratuity.* (Winnipeg 733)—On behalf of ex-members of His Majesty's Forces who were before the war and are now bona-fide domiciled and resident in Canada, it was urged that the period for payment of War Service Gratuity at Canadian rates, which expired 31st, March, 1923, be extended until December 31, 1925. Since the Hearing the time limit was extended to March 31, 1924, as a final date for these applications.

### 3. *Canteen Funds.* (Winnipeg 373, 718)

This matter was brought to the attention of the Commission at Winnipeg, which is the headquarters in Canada of the Imperial Veterans who represent British reservists who were resident in Canada before the war, Canadians who served with the Imperial Forces, and Imperials who settled in Canada subsequent to the Armistice. The request was that these men be included in any disposition of Canteen Funds. The Imperial share of Canteen Funds has been allotted in England and an amount for the Canadian share has been sent to Canada. The latter is dealt with in Part Nine of this Report. The claim was made that when moneys were paid out of this fund to various veteran organizations no payment was made to the organization of Imperial Veterans in Canada. The intention to shut out the Imperials was disclaimed by the representative of the Dominion Veterans' Alliance. (Winnipeg 721). It was pointed out that many of the members of the Imperial Veterans had also served with the Canadian forces. A suggestion made by the officers of the United Services Fund in Great Britain for an arrangement between Canadians and Imperials to reciprocate in furnishing assistance to the ex-members of each others forces out of canteen funds was referred to, and assurance was given that no distinction between Canadians and Imperials was made in extending the benefits of the Fund in England (716). It was equally stated by the representative of the Dominion Veterans' Alliance that the money which had been received by Veteran Organizations out of the Canadian share of the Canteen Fund

"was expended for the benefit of Canadian or Imperials generally independent of and regardless of his affiliation (721)".

Correspondence was read in which application was made by the Imperial Veterans in Canada to the Honourable the Minister of D.S.C.R., asking for a grant of \$50,000 for use in their work and the upshot of the correspondence was that action was deferred pending the Report of this Commission (719).

As intimated elsewhere, the Commission is dealing with the Canteen Fund as it stands and not with the considerations surrounding previous payments nor with the reasons governing the apportionment of any such payments. This is

not a matter as to which it is thought any hard and fast apportionment could be expected. The basis of arrangement can only be co-operative. The circumstances as to the creation of the Canteen Fund which will be referred to at length in Part Nine preclude, in the opinion of the Commission, the allocation suggested.

Since the Hearing at Winnipeg, attention has been called to correspondence between the organizing Secretary of the United Services Fund (the body administering the British share of the Canteen Fund) and His Excellency the Governor General of Canada respecting British provision out of such canteen moneys for ex-Imperial soldiers in Canada. It is stated that, as the Dominion Governments have decided that the money paid over to them by the War Office should be solely utilized for the benefit of the men who served in their own Forces, the Council of Management of the United Services Fund has decided to make an allotment of £5,000 for the benefit of ex-Imperial soldiers and their families who have emigrated. This correspondence has been forwarded to the Commission through the Honourable the Minister of D.S.C.R. who intimates that the Commission might make suggestions as to the administration of such allotment. The letter of the Secretary of the United Service Fund discusses the setting up of Committees, upon which ex-service men should be largely represented, to devise scheme for the best method of spending the money.

The Commission considers that the limitations of the Fund and the scattered location of the men to be benefited make any general system of standardized schemes formulated by local committees as in England unpracticable here. Such Committees might be formed in the few large centres and a portion of the Fund definitely allotted for such areas.

The Commission is of the opinion that the Fund should be vested in a Central Trustee or Trustees with full discretionary power to disburse the money. It is also considered that the Imperial Veteran's Organization in Canada will be found to be an efficient instrument in deciding on the particular forms of assistance to be rendered and in making the distribution of the fund effective. The Commission therefore suggests that any scheme of administration be formulated in consultation with that organization. It would seem that probably the best use to be made of the fund would be the furnishing of special relief in emergent and distressing cases of individual merit, investigated by local committees in centres, and by responsible officials elsewhere.

#### *4. Special Pension—British Reservists—Instructional Duty. (Winnipeg 723-725)*

When war broke out there were 149 British Reservists in the Canadian Permanent Force. It is claimed on behalf of these men that they were prevented from returning to rejoin their regiments because the Canadian Government asked that they be retained here as instructors. As a result the time which they served during the war was not counted for increased pension by the British Authorities as would have been the case had they gone home. Pension is granted by Canada for 10 years' service, but there is no obligation on the part of the Canadian Authorities to retain a man for ten years, and it is asked that if any of these men be discharged from his Canadian unit before his ten years' service is completed, service previously rendered in the British Army should count for pension purposes.

The merit of the claim depends on whether it is established that these men were required to stay in Canada. Admittedly their pay in Canada was much greater and there was the advantage of remaining with their families (1920 Parl. Com. Rep. 665). Whether it was their indispensability as instructors which resulted in their losing the chance to increase their pension is a question which it is thought warrants at least some further investigation. It was

## SESSIONAL PAPER No. 203a

pointed out on the Hearing that it would be unreasonable to expect the Canadian Government to add 9 years Imperial Service, for example, to 1 year Canadian Service and inaugurate a pension.

A middle course was suggested (725) namely that, since these men were precluded by their Canadian Service from increasing their Imperial pension, the Canadian Government should keep them on in the service for 10 years so that their Canadian pension would begin and, if discharged before that time, that the pre-war Imperial Service be allowed to count toward Canadian pension.

5. *Repatriation of Dependents. (Winnipeg 356, 731, 732).*

Formerly, Ex-members of His Majesty's Forces were repatriated by the Overseas Colonization Society and were allowed to claim refund of transportation, in respect of their dependents, from the Federal Government. On November 5, 1921, this privilege was cancelled. The Parliamentary Committee of 1922 recommended that the sum of \$150,000 be voted for repatriation purposes. This applied primarily to members of the Canadian Forces but in P.C. 1757, passed pursuant to this recommendation, dependents of Imperials who resided in Canada were included as one of the classes which might be assisted, provided that the claims for same were actually pending on the date the original Order in Council expired. A small number were brought to Canada under this provision, the money being advanced by way of loan. Ex-members of the Imperial Forces claim that repatriation of dependents should not have been discontinued, and urge that the Order in Council revoking such authority be rescinded, or at least that assisted passage be given to some pre-war residents of Canada who had served with the Imperials and were still in England (Winnipeg 731). The same subject has been considered in connection with the claim of Canadians for repatriation. Similar conclusion seems indicated here, namely, that the matter has now largely lost its character as an ex-soldier problem, and more properly concerns Immigration and Colonization. In fact, the proposal that assisted passage be furnished was put on the ground that these men and their families were much more desirable as settlers than new immigrants.

6. *Payment of Imperial Pension Cheques at Par (Regina 128).*

Representations were made at several centres that Imperials who now receive their pension cheques in pounds, shillings and pence, should have them marked "negotiable at par" in order that they may not lose by the difference in exchange. Until the beginning of 1922 pension cheques were negotiated at the current rate of exchange at the bank, and the pensioner then made a claim on the Canadian authorities for the loss in exchange. This privilege was later discontinued and now no refund of exchange is made. The question is whether this concession which was made by the Canadian Government during the unsettled period after demobilization should be revived and transformed into a permanent obligation.

7. *Representation of Ex-Imperials in Unit Offices (Winnipeg 736-738).*

Suggestions were made that Imperials should have representation on the strength of the D.S.C.R. at the unit offices. The points made were that the Canadian authorities act as agents for the Ministry of Pensions on a percentage basis thus giving them a free hand as to staff, that about one-fifth of the total pensions administered are Imperial, and that this would justify the appointment of an ex-Imperial to take charge of Imperial Pensions in each Province. An opposing consideration is that the staff must be available for all kinds of work and that it would constitute an undesirable precedent to accord this right to any particular group of Pensioners.

### 8. *Supplementary Pension to Parent.* (Toronto 680).

At Toronto, it was urged that the supplementary pension which Canada pays under Section 47 of the Pension Act to certain dependents of Imperial pensioners be made to apply to dependent parents of a deceased member of the Imperial Forces. Under present procedure pension under such circumstances, is only payable to the widow, children or widowed mother. It was suggested that in many cases the pensioner has assumed the responsibility of supporting dependent parents, and that they therefore should receive similar consideration to that given to widowed mothers. As this Section originally stood, it did not even include the widowed mother but by an amendment of 1920 she was brought in. The question of further extending this provision is one of policy. It would not involve any very serious commitment, to amend the Section so as to include a mother who, if the soldier had been in the Canadian Forces, would have been awarded a pension under subsections (1), (2) or (3), of section 34 of the Pension Act.

## Section 2. Royal Northwest Mounted Police

A memorial was presented to the Commission through the Chairman of the Central Committee representing ex-service men of British Columbia urging that the pensions of veterans of the R.N.W.M.P. be increased to the present scale of pensions paid to the recently organized R.C.M.P. It was pointed out to the witness that the scope of the Reference to the Commission only had to do with military service but that at the request of the Committee the memorial would be received and incorporated in the Record. (Vancouver 4). This was done. (554). A letter has been addressed by the Chairman of the Commission to the Honourable, the Minister of Justice, transmitting the memorial and stating the circumstances under which it was received.

A similar course was followed concerning another memorial setting out the claim of certain members of the Royal North West Mounted Police for land and the serip medal issued in recognition of service in the Rebellion of 1885. A letter has been addressed by the Chairman of the Commission to the Honourable, the Minister of the Interior, transmitting this latter memorial and stating the circumstances under which it was received. (Vancouver 4, 556).

## Section 3. Burials

### *Suggestion on behalf of Ex-Service Men*

That the D.S.C.R. should take the responsibility for burial of indigent ex-service men instead of making grants to civilian organizations formed for that purpose. (Winnipeg 344-8).

Indigent soldiers dying in hospitals are buried by the D.S.C.R. If not in hospital but in receipt of pension at the time of death and if indigent the Pension Act (Sec. 32) authorizes the Pensions Board to pay \$100 towards the funeral expenses, even though death may have been caused by something quite apart from the disease for which pension was granted.

For the burial of indigent ex-soldiers not included in either of the above classes, an organization known as "The Last Post Fund" has been formed with headquarters in Montreal. The Association at first was entirely dependent on private contributions, but as the calls upon it increased, it was compelled to appeal to the Dominion Government and in 1922 received a grant of \$10,000, half of which was to be devoted to organization purposes. In 1923 the same amount was granted and a similar amount appears in the 1924 estimates.

SESSIONAL PAPER No. 203a

Strong representations were made at Winnipeg (344) that any unexpended portion of this grant or any future grants should be administered by the D.S.C.R. directly for the reason that (as it was expressed) the Department had already the necessary machinery for investigation and should know better than anyone else whether the deceased soldier was indigent or not. (344). The other objection to the "Last Post Fund" undertaking these burials was the delay which it was thought would be involved on account of the administrative organization being so far away. (Winnipeg 347, Regina 131). The first point was not stressed and the relative facilities of the D.S.C.R. compared with a civilian organization for enquiring as to the circumstances of the family differ so little as to be, in the opinion of the Commission, a negligible factor contrasted with the important principle which is involved.

The commission is convinced that the principle of having these burials arranged for under civilian auspices is both desirable and proper.

As to the objection concerning delay, the "Last Post Fund" when represented by a Provincial Branch can operate as quickly as the D.S.C.R. and such Branches now exist in every Province but Nova Scotia and Prince Edward Island.

The principle which must not be overlooked is that the Federal authorities feel that in providing as they do for the burial of those who die during treatment or while on pension they have gone as far as any principle of State responsibility will permit and that if the burial of other indigent ex-service men is directly looked after by the Department it will be regarded as creating a new obligation where none now exists. The object sought is the respectful and fitting interment of men who have served. This object is fully achieved by the present co-operation of civilians and Government in the "Last Post Fund" and the creation of an additional direct public liability is avoided.

#### *Recommendation of Commission*

None.

#### *Suggestion on behalf of Ex-Service Men*

That the expenses of burial of the widow of an ex-service man who at the time of her death was on pension and was in indigent circumstances should be borne by the state. (Winnipeg 349).

The argument is that since a widow is paid a year's bonus on her marriage, it would only be reasonable if, when the Country's further liability for pension is terminated by her death, an amount sufficient to defray funeral expenses were paid in cases where her means were insufficient for that purpose. The one years' pension bonus was, however, probably not altogether a free gift because it was realized that the attraction of one years' pension in a lump sum would result in the prompt notification of remarriage. There is the possibility that if it were conceded that the Country should provide the burial expenses of the widow, the next claim would be in respect of the widowed mother or the children.

In Australia by a recent amendment provision has been made to the extent of £10. for the funeral expenses of the indigent widow or orphan of the soldier whose death has resulted from war service.

For other quite obvious reasons the considerations underlying the provision for the widow on remarriage are not applicable to the claim for funeral expenses at death. While no argument has been advanced on which to base any claim

as of right, the fact remains that public opinion resents the idea of a widow being buried as a pauper who has, during her lifetime, been recognized as entitled to support on account of her husband's service.

### *Recommendation of Commission*

That provision be made for the payment by the State of the expenses of the last sickness and burial of the pensioned widow of a soldier if she dies in indigent circumstances.

## PART NINE

### CANTEEN FUNDS

Under paragraph 4 of clause 2 of the Commission's Reference authority is given to "Investigate the question of Canteen Funds." To do this literally would involve most extensive inquiries into the correctness of the proportions paid over from time to time as Canada's share, the propriety of the objects for which disbursements were made in England, the objects for which funds have been used since they came to Canada, the fidelity of the administration of all trusts under which the moneys have been held, and a complete examination by competent accountants of all books, documents, accounts, vouchers, and other records connected with the accumulation, custody and administration of these funds.

The Commission has done none of these things. It has considered that if any such elaborate investigation were contemplated, it would have been specifically indicated as a substantive Inquiry rather than as the last item in an investigation which had to do primarily with pensions, treatment and re-establishment of the handicapped and their dependents.

The Commission in its Memorandum as to the Scope of the Inquiry, (See Appendix) interpreted this portion of the Order in Council as meaning

"To hear evidence and suggestions as to disposal of Canteen Funds," and this is the only phase of the subject which has been discussed on the Hearings, with the single exception that at Calgary (276) it was urged that an investigation be held to determine whether Canadians had received their fair share of the funds, and also whether all expenditures made in England from the Fund were authorized.

For the purposes of this Report it is assumed, that, subject to an adjustment for interest, the Statement received from the Department of National Defence which is set out below, together with the more detailed statements contained in the Appendix, show correctly the amounts remaining after proper receipts and expenditures have been accounted for.

#### SUMMARY CANADIAN MILITARY TRUST FUNDS OVERSEAS IN TRUST WITH FINANCE DEPARTMENT FROM MARCH, 1921

CONSOLIDATED ACCOUNT AS AT JUNE 18, 1924

Description of Account	Principal	Interest	Total
	\$ cts.	\$ cts.	\$ cts.
Canteen Main Account (A).....	1,687,928 14	55,554 49	1,743,482 63
Cinematograph Account (B).....	48,666 66	2,603 21	51,269 87
Regimental Funds Account (C).....	289,433 45	58,061 07	*347,494 52
	2,026,028 25	116,218 77	2,142,247 02

\*Total funds in Bonds at Cost and in cash.

NOTE.—No interest has been credited by Finance Department, excepting Interest on Bonds (Regimental Funds Account).

(For further particulars of the above accounts see Appendix E.)

SESSIONAL PAPER No. 203a

These funds are held by the Receiver General for Canada under P.C. 3144 of December 18, 1920, which refers to them as "held in Trust for the general benefit of members of the Canadian Forces or their dependents." Following is a copy of this Order in Council:

" P.C. 3144

54-21-23-71.

" *CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Excellency the Deputy Governor General on the 18th December, 1920.*

"The Committee of the Privy Council have had before them a report, dated 15th December, 1920, from the Minister of Militia and Defence, submitting that, owing to the winding up of the affairs of the Department of the Overseas Military Forces of Canada, it is desirable that provision should be made for the transfer of non-public funds received from various sources, as set out in the annexed memorandum, which are held at present in Trust for the general benefit of members of the Canadian Forces or their dependents."

"The Minister, therefore, recommends, with the concurrence of Sir Edward Kemp, late Minister of the Overseas Military Forces of Canada, that such funds and any further funds of a similar nature hereafter received for the general benefit of members of the Canadian Expeditionary Forces be dealt with in the same manner as is provided by the Order in Council of the 6th September, 1919 (P.C. 1856) for the disposal of the accumulated funds of Units having a shifting personnel, namely, by paying the same to the Receiver General for Canada to be kept in a special account, subject to withdrawal from time to time on the Order of Your Excellency in Council; Provided, however, that any outstanding accounts which would ordinarily be paid out of such funds and which have not yet been so paid may hereafter be paid on the joint cheque of Major-General J. H. MacBrien, C.B., C.M.G., D.S.O., Chief of the General Staff, Department of Militia and Defence, and Colonel J. L. Regan, C.M.G., Director of Pay Services, Department of Militia and Defence, against credits from time to time authorized by Your Excellency in Council to be provided from funds paid to the Receiver General as aforesaid.

"The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) RODOLPHE BOUDREAU,

*Clerk of the Privy Council.*

The Honourable

The Minister of Militia and Defence,

D.M.

Referred

Sgd. H. W. BROWN,

for A.D.M.

22/12/20."

The memorandum referred to in the above Order in Council is prepared by Col. W. R. Ward, Accountant General, and it states briefly the history of the three Funds which are mentioned in the foregoing account, P.C. 1856, to which the above Order in Council refers contained a provision that the special account should be credited half yearly with interest at the usual deposit rate.

As the above account shows there are three separate Funds to be considered; Canteen Funds proper, Regimental Funds and Cinematograph Fund. In describing them in more detail it will be convenient to take them in reverse order as the last two require very brief reference while the first has a history which is more involved.

(a) *Cinematograph Fund.*

This is derived from a payment of £10,000 made by the Imperial Authorities to the Minister of the Overseas Military Forces of Canada for division among such of the Canadian War Charities as the Canadian Government may decide upon. The War Office Cinematograph Committee had been formed in 1917 to take over arrangements previously made by the Government with certain Cinematograph firms taking pictures in the area of active operations. The members of the Committee agreed to act on the understanding that any profits be devoted to war charities to be selected by the Committee in consultation with the Rt. Honourable D. Lloyd George, and the Rt. Honourable A. Bonar Law. As to this £10,000 the privilege of selecting the war charities to be benefited was passed over to Canada. The amount was Canada's allocation in the distribution of a sum of £50,000, the remainder of which was paid as follows:

£20,000 to British War Charities, and £5,000 each, to Australia, New Zealand, South Africa and India.

(b) *Regimental Fund.*

This item is made up of moneys of units, the members of most of which were scattered, having had no local territorial affiliation in Canada. This made it impracticable to appoint Local Trustees to take charge of the Funds (under P.C. 1445 of May 29, 1917), and the Commanding Officer was, therefore, permitted to divest himself by paying the moneys in to the Receiver General. There are Funds of about 375 different units consisting of various Training Schools in England and France, Hospitals, Units with Specialist Personnel, and some line units of Artillery and Infantry.

(c) *Canteen Funds Proper.*

The units of the C.E.F., for a certain time, after mobilization, conducted Unit Canteens as one of their Regimental Institutes, as they are known in army parlance. Para. 1131A of K.R. & O. provided for the maintenance of Dry Canteens for each unit of the C.E.F., and that same were

"to be maintained solely for the use and benefit of the unit".

and that

"any profits arising from these Canteens are to be applied for the use and benefit of the non-commissioned officers and men of such unit".

These Canteens were to be organized, administered and carried on

"under the supervision and direction of the officer commanding the unit, or a committee appointed by him".

It was also provided in Paragraph 3 of the Rules for the management of Garrison and Regimental Dry Canteens in Canada, published in 1916, that

"...any profits arising from operating the Canteen are to be applied for the direct benefit of the N.C.O's. and men of such unit. The disposition of profits will be determined by the Committee of Management, subject to confirmation of commanding officer,"

SESSIONAL PAPER No. 203a

and paragraph 1121 had indicated one of the objects of a Regimental Institute to be

"to organize and maintain the means available for their (the troops') recreation and amusement".

When the units reached England the separate Canteens were still maintained but they were operated by letting them to contractors who paid the unit a fixed rebate on the takings. Even under supervision there were drawbacks to the contractor system and the Army Council in 1916 decided to take over these Regimental Institutes under its organization as from January 1st, 1917. There was accordingly formed the Army Canteen Committee, afterwards known as the Navy and Army Canteen Board, to operate canteens in England and at some permanent stations overseas. Arrangements were made by the Canadian Authorities with this Committee early in 1917 whereby the Army Canteen Committee took over and conducted all

"Regimental Institutes occupied by the Canadian Forces at home", on the terms that the Committee would "pay rebate monthly" at a percentage on the total takings and, after provision for administrative expenses and the support of a central regimental institute fund, would pay to the "headquarters of the Canadian Forces" a proportion of the trading profits which might, from time to time, be determined by the Army Council as available for distribution. This arrangement appears from letters passing between the Secretary Army Canteen Committee and the then High Commissioner for Canada, between January 24th and February 21st, 1917. The monthly rebate was paid direct to each unit to be used for unit purposes. It is the accumulation of trading profits made by the Committee over and above the monthly rebate which helps to make up the Fund which is for distribution now.

Concerning canteens in France, the Expeditionary Force Canteen Committee was formed in January, 1915, by the co-operation of the two largest canteen contractors to conduct canteens in Overseas Theatres of War. It was definitely agreed that

"any profits earned were to be devoted to the general welfare of the soldier under the orders of the Army Council, and in such manner as they, in their absolute discretion, should think fit."

(See Report dated May 14, 1921, of Special Committee, British House of Commons, on Canteen Profits). On March 8, 1918, an arrangement with the Expeditionary Force Canteen Committee was made to which the Canadian authorities in England were parties, and under which the Overseas Forces were to receive profits (on terms laid down) as full partners in the Expeditionary Force Canteens the same to be retroactive. This arrangement appears from a Memorandum of points agreed on between Military representatives of the Overseas Forces and the Expeditionary Force Canteen Committee, at a meeting of the latter held January 29, 1918. There was apparently some formal approval by letter from the Secretary of the Expeditionary Force Canteen Committee dated March 8, 1918.

Evidently this was only the formal consummation of an arrangement which had all along been in effect as an understanding. The High Commissioner for Canada had, by a Document dated previously, November 20, 1917, appointed Trustees to receive all sums of money which might become payable by

"the Navy and Army Canteen Committee and the Expeditionary Force Canteens."

and the destination of the funds is indicated by the statement in this Document that these moneys are to be

"distributed and used in the discretion of the Trustees for any purposes or objects which they consider will benefit the Canadian Military Forces on their dependents."

Later (in 1920) a basis of apportionment of the Expeditionary Force Canteen profits between the various Overseas Contingents was arrived at. As appears from the Minutes of their proceedings, these Trustees received and administered the moneys paid over from time to time by the Navy and Army Canteen Board and the Expeditionary Force Canteen Committee.

The difficulties in finally settling the respective shares in such a ramified partnership were very great, particularly since actual liquidation could not be completed within any reasonable time. During 1920, 1921 and 1922 there were most extended negotiations by conference and correspondence. Various contentious points arose. Finally in October, 1921, failing a settlement by agreement, it was arranged to refer the question of the basis on which accounts were to be closed to the President of the Institute of Chartered Accountants of Great Britain as arbitrator. He entered on this work, but in March, 1921 a special Committee of the British Parliament was appointed to investigate the whole subject of Canteen Profits and pending the Report of this Committee the arbitrator suspended operations.

The Committee reported May 14, 1921, and laid down certain principles to govern the distribution. The Committee's finding was favourable to the Canadian contention on one of the principal points of difference, namely, that the whole of the assets should be taken into account in making up profits instead of withholding a certain amount for financing canteens in the future. The Committee did not however, accept the Canadian view concerning the date up to which the accounts should be made up. It was considered, however, that further representations on that point would be futile and the Canadian authorities decided to acquiesce in the terms laid down by the Committee's Report.

Accounts and balance sheets showing the operations of the Navy and Army Canteen Board and the Expeditionary Force Canteen Committee were prepared in accordance with the Parliamentary Committee's Report and were presented to the Secretary of State for War accompanied by a Report of Sir William Plender, G.B.E., showing balance of profits undistributed. The Law Officers advised that these Canteen Profits were technically public moneys and, therefore, could not be disposed of without the sanction of Parliament. An Act was, therefore, passed by the British Parliament in the summer of 1922, ratifying payments already made and approving of further distributions, including the sum of £363,450 between Canada, Australia, New Zealand, South Africa, Newfoundland and India. A statement was received by the Canadian High Commissioner from the Secretary of the War Office in August 1922 showing £99,741, 14s. 3d., as outstanding to Canada and this amount, with a slight addition, was after further correspondence accepted by the High Commissioner for Canada as the balance due. The exact amount of this payment was £99,748, 14s. 5d., and was made in January, 1922. It is the item of \$485,443.77 shown in the account (See Appendix).

To recapitulate the successive steps were to have these two British Canteen Organizations take the place of the individual unit Committees in holding any profits made over and about the rebate which was paid to the units monthly, then for the Canadian Trustees overseas and, later, the High Commissioner for Canada to take on this management of the moneys, and finally for the balance to be brought back to Canada into the custody of the Receiver General impressed, as set out in P.C. 3144, with a trust similar to the one which would have operated if the Canteens had continued to be administered by the unit.

## SESSIONAL PAPER No. 203a

These three funds, the history and general nature of which have just been outlined, are all trust earmarked, and the next consideration concerns the effect of such Trusts. The question is, who is entitled to specify the actual things for which the money is to be spent in endeavouring to "benefit" the class indicated and whether the Government of Canada, as the present custodian of the Fund, is anything more than a bare Trustee and, as such, subject entirely to the direction of those beneficially interested, or whether there is a discretion vested in the Authorities to make a selection and devote the Fund accordingly.

Views have been expressed indicating an idea that there was some individual property right in the Fund. The variation in the individual contribution and the consequent impossibility of determining the extent of any such interest, if it existed, would render it futile to consider these funds otherwise than as for the benefit of a class. But the very genius of army organization precludes the idea of property right in either the individual or the class, and particularly is this so after the status of member of the unit has been lost by demobilization. The necessity for legislation in the British Parliament to confirm the distribution of canteen profits was because of the opinion that they were public funds and section 134 of the Militia Act (R.S.C. 1906 C41) gives some added importance to that view. It is true that there is no insistence by the Crown or any such technical rights, and the documents quoted uniformly carry through the idea of the trust, but the true legal position of the fund is of importance in determining how active the authorities should be in directing or suggesting objects for the use of the money. The fact that the Army Council reserved by the terms of its Agreement full discretion regarding the disposition of the Fund and the fact also that the High Commissioner for Canada purports by his appointment of Trustees to expressly vest in them a similar right shows that, although the intention was to carry through the trust, there was an equally definite intention to retain some voice in its execution. If it were otherwise the trust would be abortive. There is no way whereby the wishes of the beneficiaries could be expressed in proportion to the degree of their interest nor strictly speaking could it be said that anything short of unanimity could be regarded as an effective expression of the opinion of the class. Some one should have power to finally decide. In the opinion of the Commission the conclusion is clearly indicated that when some practical application of the money has to be determined there must be some substantial measure of discretion to be exercised by the Governor in Council as Trustee and as successor to the Commanding Officer and his Canteen Committee.

While the terms of Paras. 1121 and 1131A of K.R. & O. clearly vest in the Commanding Officer the power to guide the application of the fund, undoubtedly any Commanding Officer would seek to find out the wishes of those for whose benefit the money is expressly earmarked, and only after all reasonable efforts in that respect failed, would a Commanding Officer be likely to make some arbitrary selection of his own. This situation here with regard to the conglomerate Fund is, the Commission ventures to think, very similar. It is impossible to ascertain the individual interests or wishes but the class to be benefited is quite clearly indicated in all the documentary evidence available, and the Government, acting towards all ex-members of the Overseas Forces of Canada in a capacity relative to that of the Commanding Officer towards the N.C.O's and men of the unit, ought to make all reasonable efforts to ascertain the wishes of the beneficiaries, and if any general consensus of opinion is obtained to conform therewith.

In Great Britain the Army Council in 1919, exercising the discretion reserved to dispose of the surplus profits accruing in respect of the Imperial Troops during the war, asked General Lord Byng, now His Excellency the present Governor General of Canada, to be responsible for the distribution of

the money. This he undertook to do on condition of freedom from Government control. A Council of Management was formed of representatives of important ex-service men's organizations and a Royal Charter was granted to this Body under the name of the United Services Fund. The Country was divided into 10 areas each with a Committee constituted on the same lines as the Council of Management. In developing the organization, over 2,500 local Committees were formed. Apparently the method of ascertaining the wishes of ex-service men concerning desirable objects for the fund was merely through members of the Committee. The 1922 Act of the British Parliament (previously referred to) confirmed all expenditures, disbursements and distribution which had been made of Canteen moneys including this payment to the United Services Fund.

The Canadian Government attempted to ascertain the views of ex-service men by a plebiscite taken under P.C. 4122 of November 3rd, 1921. A joint Committee composed of officials of the D.S.C.R. and of veterans' organizations was appointed to take charge of the vote. The Committee was known as the Canteen Funds Disposal Committee and it reported under date March 15, 1922.

Four suggestions were set out on a post card ballot which was distributed through all post offices. A blank was left so that the individual might make any original suggestion of his own. 550,000 ballots were distributed as follows:

1. To all post offices throughout the Dominion of Canada, 231,529.
2. To offices and hospitals of the D.S.C.R., 106,000.
3. To veterans' associations, 100,000.
4. To England, 17,000.
5. To the United States, 22,000.
6. To Pensioners outside of Canada, 8,000.
7. To meet miscellaneous demands, 65,471.

22,974 votes were returned distributed as follows:—

Canada . . . . .	19,299
England . . . . .	1,364
United States . . . . .	1,815
Newfoundland . . . . .	62
21 different countries . . . . .	391

The result of the ballot is given as follows in the Committee's Report (p. 15):—

#### RESULT OF BALLOT

"10. The transferrable vote system was employed, so as to obtain an exact knowledge of the wishes of the ex-members of the forces, based on the indicated order of preference, where votes for more than one suggestion were received.

"The schemes, which the Committee considered worthy of inclusion on the ballot cards as suggestions, evoked considerable interest and received a large number of votes. A heavy vote was polled also for a per capita cash distribution and a lottery while the remainder of the votes were scattered over scores of miscellaneous suggestions of which few are practical enough to demand serious consideration.

## SESSIONAL PAPER No. 203a

"A survey of the returns disclosed that the first choice was as follows:—

"Scheme A—	
"Establishment of memorial workshops for the provision of sheltered employment and home employment for disabled ex-service men, including the tuberculous.....	5,764
"Cash Distribution.....	3,574
"Scheme B—	
"Establishment of a non-competitive industrial enterprise jointly owned and operated by ex-service men.....	2,874
"Scheme C—	
"Provision of scholarships or other educational facilities for the children of ex-members of the Forces in need of such assistance.....	2,298
"Lottery.....	2,297
"Scheme D—	
"Provision of burial facilities for ex-members of the Canadian Forces who die in indigent circumstances.....	689
"Loaning Corporation.....	392
"Miscellaneous Schemes.....	3,598
"Spoiled Ballots.....	1,488
Total.....	22,974

## FINAL RESULT

"11. The final result stands as follows:—	
"Scheme A.....	11,565
"Single Votes not cast for the above and spoiled ballots.....	11,409
Total.....	22,974

The other suggestions received on the plebiscite are shown in the appendix of this report.

The result of the plebiscite was not regarded as sufficiently representative or conclusive. (See 1922 Parl. Com. Report, p. 148-50, 227-8 and p. XV).

The 1922 Parliamentary Committee recommended a Board of Administration composed of officers of the D.S.C.R., representatives of ex-service men and prominent citizens and further recommended that this Board consider the advisability of employing the Canteen Funds:

- (a) For the promotion of Sheltered workshops, and
- (b) in providing further educational facilities for children of ex-members of the forces who would otherwise be unable to enjoy same.

No action was taken on this recommendation and the matter was included in the order of Reference to this Commission.

The expressions of opinion on the Hearings have not indicated any crystallized opinion as to the ultimate object to which this fund should be devoted. There was one principle upon which there was almost universal agreement, namely, that the funds should not be used to relieve the Government of any obligations properly belonging to it. The Commission is convinced that to adopt any scheme that might be construed as a violation of this principle would be a mistake and therefore makes no reference to suggestions put forward for Soldiers' Homes and other similar objects. While many suggestions were offered, the plans most favoured at each particular centre are summarized below:

Halifax (376).—The opinion was expressed by a Convention held previously that the money should be used for the education of orphan children whose fathers served in the war.

St. John (99).—The consensus of opinion in New Brunswick and Prince Edward Island was likewise said to be that the canteen fund should be used to provide for the education of the children, particularly orphans, whose fathers had served.

Montreal (608).—That the Dominion Government appoint a Board of Trustees including at least six ex-service men to administer the Canteen fund and that similar Boards be created in each Province with the object of definitely obtaining the opinion of ex-service men and women as to the most equitable means of distribution.

Vancouver (202).—It was asked that the capital be kept intact for some years until opinion has become crystallized, no conclusion having been reached as yet concerning the method to be adopted.

Calgary (291).—A resolution was presented, adopted by the Alberta Provincial Convention, held on the 7th, 8th and 9th of February, 1923, asking that the fund be divided by provinces on the basis of enlistment and discharges, and that Alberta's share be placed in the hands of trustees appointed by the Provincial Government to be disposed of as decided by the ex-service men of Alberta.

Another proposal presented at Calgary was that the fund be used for Housing loans, Industrial loans and pensions for those otherwise ineligible. This proposal known as the McInnis plan was approved by the Woodstock (N.B.) branch of the G.W.V.A. It was also favoured by 94 of those who answered the Commission's Questionnaire.

Regina (125).—It was proposed that half a million dollars should be placed at the disposal of the D.S.C.R. for providing decent burial for soldiers and the after care of their graves, and that a further one million dollars be allocated to the same Department to be administered for the next ten years for the benefit of men who served in France, if ill and indigent.

Winnipeg (378).—It was recommended that principal and interest in proportion to enlistments be placed in the hands of Provincial Trustees to whom the veterans might communicate their wishes.

Toronto (91-95).—It was asked that the fund be divided by Provinces, basing such division on enlistments and placed in the hands of Provincial Trustees for administration.

To determine from the foregoing the common desire of the ex-service men concerning the ultimate use of the money is impossible, but the two clearest suggestions were, education of children whose fathers served in the War, and relief of distress among ex-service men and dependents.

As to its immediate disposition, the plan most generally favoured was that the fund be divided according to Provinces so that the local conditions might be considered before a definite object was decided on. Alberta, Manitoba, Ontario and Quebec all advocated the division, and the suggestions of Nova Scotia, New Brunswick and Prince Edward Island that the money be devoted to children's education necessarily involves the allocation of a certain amount to each Province. British Columbia is not yet ready for an expression of opinion, and Saskatchewan alone might oppose provincial administration, the main idea there being that the fund should be kept together for the relief of distress among ex-service men and their dependents.

No suggestion which would not necessitate the splitting up of the fund was put forward, such as the construction of a monument or other memorial, although a Vimy Memorial was among the additional suggestions received on the Plebiscite.

Keeping in mind the accepted view that this fund is for the benefit of the class who contributed to it, and that consequently every attention should be paid to a generally expressed and reasonable wish of those concerned regarding its disposition, the Commission considers that, as a first step, the proposal for division of the Funds into provincial allotments should be acceded to. This should assist materially in getting some consensus of opinion among those

## SESSIONAL PAPER No. 203a

interested, both on account of local interest and because agreement is more likely to be reached when the varying conditions of the different Provinces can be eliminated. There is another distinct advantage in the provincial division. The limitations of the fund will make it requisite that, whatever Scheme for its ultimate application is adopted, there shall be a restricted class of beneficiaries, and those coming within this class must be ascertained by some standard of selection. It is thus desirable that those who have the handling of the fund should be in the closest possible touch with the applicants, to be able to estimate their special claim to participate in any Scheme adopted and decide whether, and for how long, their situation justifies continuing its benefits.

In Australia a similar fund is decentralized and administered by military districts. (1921, Parl. Com. Rep. 404). While in Great Britain central administration is feasible, the immense distances and sparse population and the **variety of conditions in different provinces** make a system which is suitable in England unwieldy here, at the same time it would be of distinct advantage to capitalize provincial individuality and interest. What is proposed here is that the Provincial Boards of Trustees have the responsibility for actual decision of the merits of any proposal submitted, while in England the Area Committee only advises. It is not proposed that the Provincial Board of Trustees shall be bound to adopt any suggestion made, simply because it is strongly supported. There is to be in the Provincial Board of Trustees, relatively, the power of the Commanding Officer to confirm or otherwise any proposed use of the money. The Provincial allotment would, in short, increase the facilities for securing an intelligent expression of opinion from ex-service men and make the administration of the money more effective by direct interest.

As to the basis on which the funds should be divided, the ideal would be a distribution based on the number of overseas ex-service men resident in the respective provinces, averaging this over a substantial period of time, say three years. Unfortunately there is no method whereby this can be directly arrived at, and the Commission, after consideration, is of opinion that a fair, although arbitrary, result can be arrived at by using three factors, viz., enlistments, discharges and pensions paid in the respective provinces. Enlistments alone are not enough upon which to base a conclusion, because many men who enlisted did not return to their native province after their discharge and many others were not residents of the province where they joined up. Discharges, on the other hand, may easily give fallacious results because thousands were discharged in England and many others discharged in one Province have been removed to some other. The number of pensions paid should furnish a good criterion but the drawback there is that the proportional number of pensions to ex-soldiers may not be the same in every Province. For instance, it is said that, in British Columbia, the mild climatic conditions have attracted a large number of pensioners from other parts of Canada, and therefore to take pensions alone as a standard would allot British Columbia an undue percentage of the total ex-soldier population.

After a close examination of the proportions which each Province shows, taking these three factors separately, the Commission is quite convinced that as fair a method as can be devised, since no one of these elements by itself can be relied on to correctly represent the proportion of ex-service men in each province, is to combine the three percentages and strike an average.

Even then there is a difficulty. The only figures available to show enlistments from each Province include both those who saw overseas service and those who served only in Canada. These are the figures which will have to be used, and they will be inaccurate for present purposes to whatever extent the proportion of those who went overseas to those who served in

Canada only varies in different provinces. Regarding discharges, the only statistics available, for a provincial calculation, cover the limited period from the Armistice to October 31, 1919, but notwithstanding this, the Commission sees no reason why they should not give a fair cross-section of the Provincial distribution of all Canadians discharged. Concerning both enlistments and discharges, the figures for Nova Scotia and Prince Edward Island are combined and the only way to secure a separate percentage for these provinces is to take the ratio of pensions paid in each of them, and apply that ratio to the enlistments and discharges. The third factor, namely, number of pensions paid in each province, can be accurately stated as of March 31, 1924.

There may have been some important factor which has been overlooked but, based on the figures of enlistments, discharges and pensions shown in the appendix, the Commission has had worked out the following percentages which it considers would afford a fair basis for a provincial allotment of such canteen funds as are available for that purpose. In Great Britain similar difficulties were experienced in arriving at the number of ex-service men in stated localities and lack of active statistics made it necessary to resort to such arbitrary methods as taking the number of pensioners plus the food cards issued, or taking a fixed percentage of total population.

RATIO TABLE FOR PROVINCIAL ALLOTMENT BASED ON THE AVERAGE OF PERCENTAGES OF DISCHARGE, ENLISTMENTS AND PENSIONS

Province	Percentage of Discharges from Nov. 11, 1918, to Oct. 31, 1919	Percentage of Total Enlistments	Percentage of Total Pensions in Canada for Death and Disabilities	Ratio of distribution of Canteen Fund (Average of foregoing percentage)
Ontario.....	42.849	41.600	40.474	41.641
Quebec.....	14.773	14.019	9.362	12.718
New Brunswick.....	4.530	4.379	3.700	4.203
Nova Scotia and Prince Edward Island.....	9.899	5.646	6.343	7.296
Manitoba.....	10.097	11.230	10.780	10.702
Alberta.....	5.597	7.644	8.796	7.346
Saskatchewan.....	4.311	6.378	6.735	5.808
British Columbia and Yukon.....	7.944	9.104	13.810	10.286
	100.000	100.000	100.000	100.000

Ratio between Nova Scotia and Prince Edward Island:—

Nova Scotia.....	88.247 per cent.	6.439 per cent
Prince Edward Island.....	11.753 "	.857 "

Regarding details of administration, if the objects to which the fund was ultimately to be devoted were identical in each province, it would probably be of distinct advantage to have the benefit of a Central Advisory Board to formulate some general plan and to act as a clearing house for ideas from the various provinces but since the uses selected for the fund are not likely to be similar throughout, the Commission does not see the utility of a central governing or advisory body. Any necessary co-ordination of efforts along similar lines in the various provinces could be effected through the good offices of the officials of the D.S.C.R. in conjunction with such prominent citizens as may be agreed upon by the provinces concerned and the Department.

The body authorized to receive the Fund on behalf of the province from the Receiver General should be, in the opinion of the Commission, a Board of Trustees, composed of not more than five citizens of the province, a majority

## SESSIONAL PAPER No. 203a

of whom should have served overseas, such Trustees to be appointed by the Lieutenant-Governor in Council and to serve without remuneration. The Commission's opinion is that the Board should be small, not only to ensure close personal interest but to save the expenses necessarily involved in calling together a large personnel. The suggestion of the Commission is, therefore, a board of five in Ontario and three in the other provinces.

If relief work is taken up it would seem feasible to have the local work done by veteran and social welfare organizations while, if an educational scheme is adopted, the Board of Trustees would formulate the conditions for participation, and the decision as to the qualification of the candidate could be advised on by the local educational authorities.

The duties of the Provincial Board of Trustees would, generally speaking, be to receive and hold the funds and to ascertain by such method as might appear to them most feasible, the wishes of those residing in the province or, in the case of British Columbia, in the province and the Yukon, who are interested in the fund concerning its disposition; following this, to determine the object to which the fund should be devoted, and, as far as necessary, to administer the fund for such object or to provide for such administration through others, and to do such other things as might be indicated in the Order in Council appointing them. All expense in connection with the trusts should of course be a charge on the fund.

It is realized that this distribution does not specially provide for those not now resident in Canada, but although their removal may not extinguish whatever benefit can be reasonably extended to them, it would seem unfair to impose on those administering the fund the burden and expense of providing special machinery and organization in order to carry to them its advantages. The fact that they are scattered makes impracticable the adoption, for their benefit, of any general scheme which might be applicable to a closely associated group.

The Canadian abroad does not lose the privilege of participation in the Fund of his particular province. It may be said that while he is away, this benefit is of no practical value, but the Commission does not consider that any fair basis of administration of the Fund can be arrived at unless it is considered as essentially Canadian and administered on Canadian soil.

There will, however, be cases of peculiar distress which cannot be foreseen and concerning which it might be felt that an injustice had been done if some portion of the Fund were not as close at hand as possible, and the Commission, while not committing the Fund as a whole to relief purposes, is of the opinion that a sum of \$100,000 should be allotted for the benefit of special cases of distress of Canadians who served in France or England and their dependents resident in Great Britain and the United States, one-half of this amount to be placed at the disposal of the United Services Fund of Great Britain to be used in their discretion for the above purposes, and a similar amount to be sent to the American Red Cross with the same request.

It will be expected that an indication of the views of the Commission be given concerning any objects for which the Fund might be used. Some principles, the adoption of which the Commission recommends, should be noted.

Firstly, that the fund should, in the opinion of the Commission, not be spent immediately but its use should be providently spread over a reasonable number of years so that there would be something available for children now very young who might later be benefited by special assistance in particularly distressing circumstances which might arise at any time until a wage earning period is reached, or who might become eligible for School or University Scholar-

ships if such were created. Neither should the fund be kept perpetually. The Report of the United Services Fund in Great Britain contains the following:—

“It is preferable in a Fund of this nature that the greatest amount of good should be done over a limited period of reasonable length rather than that any sum should be set aside for an indefinite period”.

In England the period decided on was 15 years from 1923. It may be thought that there are those who, even after that time, might require the assistance which such a fund could give, but within that period, the abnormal effect of war conditions should have subsided and most of the children would have grown up. Assuming the total fund to be  $2\frac{1}{2}$  million dollars the yearly value over a period of fifteen years at 5 per cent would be about \$206,000.

Secondly, any use of the fund for relief purposes from time to time should be limited to the class of cases for which no relief is then available from Government sources; in other words, the money should not be used to relieve the State of any responsibility devolving on it.

Thirdly, that only ex-members of the Canadian Expeditionary Forces below commissioned rank who served in France or England, and their dependents, should be eligible to participate in the benefits of the Fund.

With these principles in mind the Commission has two suggestions to make regarding schemes for disposition:—

(a) Assistance to specially meritorious cases where ex-members of the forces and their dependents are in genuine distress. No elaboration is needed here. The experience of the United Services Fund of Great Britain will afford valuable information and guidance. This is the purpose for which a similar fund is used in Australia, and has been frequently put forward as a suggestion.

(b) The provision of scholarships in schools (not necessarily confined to the higher grades) and Universities, for specially promising children of ex-service men.

Some details of such a scheme were presented to the 1922 Parliamentary Committee (Report p. 224 et seq.) and a draft plan designed for the whole of Canada was submitted to the Commission by the Deputy Minister of the D.S.C.R. under date of October 12, 1923. An educational scheme has the advantage that, probably more than any other, it expresses the wishes of those who did not come back. It permits the survivors to unite their portion with that of their fallen comrades for the benefit of a class which the dead would desire to see cared for above all others. It further provides a rare opportunity for ex-service men to develop and inject into Canadian national life a group of bright young men and women with inherited traditions of patriotic service whose talent might otherwise remain undeveloped. It should call for no expensive administration. The co-operation of the Department of Education in any Province in which the Scheme was adopted could be readily enlisted.

In Saskatchewan children of deceased or disabled soldiers receive a special educational grant of \$24 per month until they are 21 (Regina 56). The Pensions Board may, under Section 23 (1) (b) of the Pension Act, continue the pension to the child of a pensioner until the child becomes 21, provided he or she is without resources and is making satisfactory progress. As a rule the Pensions Board in practice only exercises this discretion in favour of a child showing more than ordinary ability (Toronto 1751). These provisions should be kept in mind in preparing any scheme, in order that the principle above referred to, of not relieving the State of its recognized obligations, will be observed.

## SESSIONAL PAPER No. 203a

Representations have been made that before there is any distribution of this fund, care should be taken to see that machinery is maintained for the active presentation and prosecution of claims which may arise from time to time on behalf of ex-service men and their dependents, concerning the various forms of assistance which the State provides in respect of Pensions, Re-establishment, etc.

There are a variety of instances in connection with such questions as government employment, land settlement, training, housing, and rehabilitation activities generally, the considerations affecting which depend on the presentation of the individual case rather than on the terms of a general regulation. There are also Parliamentary matters, not only affecting pensions, but amendments to existing statutes which may directly affect the right and privileges of ex-service men, and in addition there is the desirability of having some agency completely detached from Government organization to supply the necessary personal contact between ex-service men and dependents and those who deal with matters affecting their interests.

The appointment of soldier advisers throughout the units has supplied, it is believed, a genuine want, particularly in regard to pensions and treatment matters and, primarily, concerning appeals. In suggesting the necessity of maintaining such a bureau it is not to be understood as a reflection on officials who are administering soldier matters, any more than the intervention of counsel in a case at law would be regarded as a reflection on the judiciary. The Commission has not hesitated where it considered it was called for to point out defects and shortcomings of existing regulations and practice, but, assuming that the system was working with absolute precision, there would still be a proper place for an agency of this kind.

The Commission considers that it is in the interests of ex-members of the Forces and their dependents to have such a service maintained for some time yet and that this would be a proper object for a small proportion of this fund which should be held and administered by a Central Board of Trustees to be appointed by the Governor-in-Council.

The Commission, therefore, recommends:—

1. That requisite legislative provision be made so that, under direction of the Governor-in-Council, any necessary accounting be had to ascertain and certify the amount, including interest, properly belonging to the funds and held by the Receiver General under P.C. 3144 of December 18th, 1920, and to have said funds (excepting the sum of twenty thousand dollars to be held for payment of any outstanding accounts in respect of the units, the funds of which are included in said amount), hereafter referred to as the "Canteen Fund", distributed as follows:—

(a) The sum of \$100,000 to be paid to a Central Board of three Trustees, at least two of whom have had overseas service, to be appointed by the Governor-in-Council, without remuneration, such sum to be used by such Central Board of Trustees from time to time in such amounts and in such matter as it may deem best for the maintenance and assistance of an adjustment service and bureau for the benefit of ex-service men and their dependents.

(b) The sum of \$50,000, to be said to the United Services Fund of Great Britain and the sum of \$50,000 to be paid to the American Red Cross to be used by them respectively in such manner from time to time as they deem proper for assistance in specially meritorious cases of ex-members of the Canadian Expeditionary Force who have served in France or England, and their dependents, resident in Great Britain or the United States as the case may be, and who are in genuine distress.

14-15 GEORGE V, A. 1924

(c) The residue of the Canteen Fund to be divided into nine provincial allotments in the proportion indicated by the following percentages:—

	Per cent
Alberta.....	7.346
British Columbia and the Yukon.....	10.286
Manitoba.....	10.702
New Brunswick.....	4.203
Nova Scotia.....	6.439
Ontario.....	41.641
Prince Edward Island.....	.857
Quebec.....	12.718
Saskatchewan.....	5.808
	<hr/> 100.000

(d) Upon notification of the appointment by the Lieutenant Governor in Council, of any province, of the Provincial Board of Trustees hereinafter referred to, the provincial allotment, determined as above, in respect of the territory indicated to be paid over to said Provincial Board of Trustees.

2. (a) That the necessary steps be taken to procure the effective appointment and authorization by the Lieutenant Governor in Council of each province of a Provincial Board of Trustees, without remuneration, composed of citizens of the Provinces, five for the Province of Ontario and three for the other provinces, a majority of whom shall have served overseas, to perform the duties specified hereunder and any other duties which may be considered necessary concerning the provincial allotment in respect of such Province determined as set out in paragraph 1 (c) above.

(b) The duties of the Provincial Boards of Trustees to be to receive and hold the Provincial allotment and to ascertain, by such method as may appear to them most feasible, the wishes of those interested and residing in the province or, in the case of British Columbia, in the Province and the Yukon, concerning the disposition of such allotment and, following this, to determine the object to which the allotment should be devoted, and, as far as may be necessary, to administer same for such object or to provide for such administration by others and to do such other things as may be indicated in the Order-in-Council appointing them. The expenses in connection with the trust to be a charge on the allotment.

All the above is respectfully submitted.

J. L. RALSTON

## APPENDIX A

OTTAWA, November 25, 1922.

## ROYAL COMMISSION ON PENSIONS AND CERTAIN PHASES OF RE-ESTABLISHMENT

## MEMORANDUM RE SCOPE OF INQUIRY AND PROCEDURE

## A. SCOPE

The scope of the inquiry is indicated below.

1. To receive suggestions as to:—

- (a) Any improvements in the method of procedure whereby Canadian ex-service men may apply for pensions and treatment.
- (b) Procedure whereby these ex-service men may submit an appeal from decisions as to pensions and treatment.

2. To hear evidence as to the needs of discharged handicapped men of the C.E.F. and as to means of making suitable provision for them, apart from any definite legislative provision which already exists.

Those contemplated by the term handicap men might be considered as including the following classes:—

- (a) Those whom real old age has at the time of discharge, with or without other disability, rendered unfit for employment on the open labour market, and those who are prematurely old from causes either arising out of or entirely unassociated with service. It is needless to say that this group will increase as time goes on.
- (b) Those handicapped by severe disabilities which are the result of deformities, amputations, or arise otherwise from injuries due to service.
- (c) Those with some chronic condition due to service but who are not included in the tuberculous.
- (d) Those who are suffering from some mental or nervous condition in whole or part due to service.
- (e) The tuberculous.
- (f) Those who, owing to various other causes due at least in part to service are unable to give any fixed occupation the same extent of efficiency as is expected from men 100 per cent fit.

Examples of matters which might come under paragraph 2 are:—

Sheltered workshops.  
Home industries.  
Soldier homes.  
T. B. colonies.  
Orphans' education.

3. To hear evidence as to the extent and nature of existing re-establishment needs among Canadian ex-service men and their dependents.

NOTE.—In connection with paragraph 3 it is to be noted that, under the terms of the Order in Council, this has to do particularly with the re-establishment needs of handicapped men. The Commission has decided, however, that while keeping this class particularly in mind, evidence as to the needs of other classes

14-15 GEORGE V, A. 1924

of returned men will be taken, but this should be confined as closely as possible to the nature and extent of actual existing needs, rather than to remedies; the latter being within the purview of Parliament and not of the Commission.

4. To hear evidence and suggestions as to disposal of canteen funds.

#### B. PROCEDURE

1. The endeavour is being made to obtain the views on behalf of Canadian ex-service men in widely separated portions of Canada and to report during the ensuing Session of Parliament, if possible. To do this it is necessary to have the co-operation of all concerned in ensuring that what is presented is concise, well considered, and directed along the lines indicated above—with this in mind the following is a general outline of procedure:—

- (a) Evidence and suggestions on behalf of Canadian ex-service men will be received only from those selected to represent soldier interests generally, rather than as individuals or officers of individual organizations and, for this purpose, it is requested that these organizations and returned men generally will combine in selecting these joint representatives who will come to the hearing duly accredited. This does not in any way preclude the selection of officers of any organizations as joint representatives, nor the presentation by these joint representatives of evidence and suggestions on behalf of any particular class or classes of Canadian ex-service men.
- (b) The number of representatives to be limited as much as possible, but not to exceed six on the hearing in any one place.
- (c) A brief summary of the evidence proposed to be submitted, to be forwarded to the Secretary of the Commission, Room 379, House of Commons, Ottawa, ten days before the hearing.
- (d) Hearings to be held in Halifax, St. John, N.B., Montreal, Toronto, Winnipeg, Calgary, Regina and Vancouver.
- (e) Notice of the date and place of hearings to be given later, but the hearings will not commence before January 15th, 1923, and the first hearing will be held in Halifax.
- (f) Where a selected representative does not reside in the place where the hearing is to be held, his expenses as a witness will be certified by the Commission.

H. D. DEWAR,  
*Secretary, Royal Commission.*

#### NOTICE TO EX-MEMBERS OF THE FORCES

The Royal Commission on Pensions and Re-establishment will hold sittings, beginning about January 15, 1923 (definite dates to be announced later), in Halifax, St. John, Montreal, Vancouver, Calgary, Regina, Winnipeg, and Toronto, in the order named.

To enable a report to be made during the ensuing session of Parliament if possible and to ensure that evidence be concise and well-considered and to prevent repetition, it is proposed that evidence and views on behalf of ex-members of the forces be presented at each of the above places by not more than six duly selected representative witnesses. Ex-members of the forces generally, and veteran organizations are asked to co-operate in calling meetings and instructing and selecting these witnesses.

## SESSIONAL PAPER No. 203a

Further details as to the scope of the Inquiry and procedure may be obtained from Veterans' Organizations or from any office of the Department of Soldiers' Civil Re-establishment.

Individuals who, for any reason, cannot co-operate by being represented by such selected witnesses may present their views by filling out a form of questionnaire which has been prepared and which may be procured from any post office. This form to be returned before February 28, 1923, postage free, addressed to The Secretary of the Post Office Department, Ottawa.

OTTAWA, December 14, 1922.

## APPENDIX C

## ROYAL COMMISSION ON PENSIONS AND RE-ESTABLISHMENT

## QUESTIONNAIRE

Name in full . . . . .  
 Present Address . . . . .  
 Regimental Number . . . . . Rank . . . . . Unit . . . . .  
 Pension Number, if any . . . . .  
 Length of Service . . . . .

France . . . . . months.

England . . . . . months.

Canada . . . . . months.

1. What suggestions, if any, have you to improve the present method of applying for pension or medical treatment?  
 . . . . .

2. What suggestions, if any, have you as to the best method whereby applicants who are not satisfied with a decision as to pension or treatment may appeal therefrom?  
 . . . . .

3. What provisions (further than those already in force) do you suggest should be made for men who are physically or mentally handicapped?  
 . . . . .

4. As to other ex-members of the forces, do you know of any re-establishment needs not already provided for? If so, give information as to their nature and extent.  
 . . . . .

5. How do you suggest the Canteen Funds should be disposed of? (It is understood that there will be available between \$1,500,000 and \$2,000,000).  
 . . . . .

N.B.—If space provided for answers not sufficient add extra sheet.

This Questionnaire, when completed, should be mailed not later than February 28th, 1923, addressed:—

The Secretary, Post Office Department,  
 Ottawa.

(No postage is required).

SESSIONAL PAPER No. 203a

# STATISTICAL SUMMARY OF ANSWERS TO QUESTIONNAIRES DISTRIBUTED BY ROYAL COMMISSION ON PENSIONS AND RE-ESTABLISHMENT TO APRIL 30, 1923

## 1. SUGGESTIONS RE APPLYING FOR PENSION OR MEDICAL TREATMENT

1. That applicants be represented by their own doctors when being boarded.....	85
2. That a more thorough and sympathetic examination be given.....	245
3. That the opinion of local doctor or doctors be accepted that applicant requires a board.. . . . .	246
4. That all expenses under No. 3 be paid by the Department.. . . . .	2
5. That more publicity be given to procedure of method of applying.. . . . .	73
6. That decisions should be speeded up.. . . . .	43
7. That men should be able to receive treatment free at home under the care of their own doctors (especially in distant places).. . . . .	87
8. That a Committee visit the Hospitals.. . . . .	3
9. That all soldiers be entitled to free treatment at any time whether for war disability or not.. . . . .	92
10. That all ex-soldiers be re-boarded, and any findings different to former board be made retroactive.. . . . .	18
11. That report of a country doctor should not be considered sufficient evidence on which to reduce rate of pension.. . . . .	5
12. That soldier representatives be appointed in all centres who will deal with all ex-soldiers' interests and communicate them to the proper authorities..	21
13. That B.P.C. doctors be appointed for six months only.. . . . .	1
14. To extend time limit for applying, from three to six years.. . . . .	11
15. That all men having reasonable service in C.E.F. who may break down within a period of at least five years after discharge, and who upon medical examination are found T.B. be considered as having a disability due to the above mentioned service. Furthermore that these men be entitled to treatment with P. & A. and all existing provisions of the Pensions Act, and in addition, to such after care as may be provided by the Government (Received from patients in Byron San, London, Ont.).. . . . .	161
16. That local representatives of D.S.C.R. be appointed to principal cities in U.S.A.	377
17. That ex-soldiers (British & Canadian) in U.S.A. be allowed to apply through B.G.W.V.A.. . . . .	5
Blanks.. . . . .	1,967
Total.. . . . .	3,442

## 2. SUGGESTIONS RE APPEALING DECISIONS AS TO PENSION OR TREATMENT

1. That applicants be represented by their own doctors when appeal is being heard.	50
2. That the opinion of one, two or more local doctors should be accepted as giving a correct diagnosis of the case.. . . . .	219
3. That Provincial Boards of Appeal be set up.. . . . .	90
4. That a Board of Appeal be held as in England.. . . . .	6
5. That a man be allowed to appeal his case direct to Head Office and that same be dealt with, without consulting local D.S.C.R. opinion.. . . . .	52
6. That the evidence of regimental officers or soldier comrades be given more weight in determining the attributability of disabilities to service.. . . . .	14
7. That a re-examination of an appeal case be heard by a Board unfamiliar with former Board's decision of case.. . . . .	274
8. That the Appeal Board consist of a committee made up from Veteran Organizations.. . . . .	39
9. That pensions be awarded more equitably.. . . . .	39
10. That Civic Boards of Appeal be set up to include doctors, ex-service men, clergymen, lawyers, etc.. . . . .	129
11. That a man be able to appeal to the Royal Commission direct.. . . . .	10

2. SUGGESTIONS RE APPEALING DECISIONS AS TO PENSION OR TREATMENT—*Concluded*

12. That a more sympathetic attitude be taken by Board of Appeal.. . . .	82
13. That a Board of Appeal be appointed to travel and hear appeals in the different municipalities annually.. . . .	44
14. That a soldier be allowed to appeal to an appointed Board composed of medical specialists.. . . .	381
15. That recommendations of supervisors of S.S.B. with respect to those living in rural districts be considered.. . . .	1
16. Appeal by petition.. . . .	2
17. That a Supreme Board be set up in U.S.A.. . . .	9
18. That ex-soldiers (British and Canadian) in U.S.A. be allowed to appeal through Consul General.. . . .	1
Blanks.. . . .	2,000
Total.. . . .	<u>3,442</u>

## 3 SUGGESTIONS AS TO FURTHER PROVISIONS FOR PHYSICALLY OR MENTALLY HANDICAPPED

1. That the Government should find positions.. . . .	168
2. Larger, or Permanent pensions.. . . .	227
3. That all physically or mentally handicapped should be examined or investigated monthly or periodically to establish their claim for pension.. . .	104
4. That special consideration be given in granting relief or loans.. . . .	182
5. That the totally disabled become the sole charge of the Government.. . . .	79
6. Pensioners not having had vocational training, and now unable to find positions, to be granted vocational training.. . . .	48
7. That free treatment be given, no matter what the cause of disability may be, or flat rate of say \$1.50 per day.. . . .	403
8. Sheltered employment.. . . .	130
9. Clothing allowances for amputation cases.. . . .	9
10. In case of death, Government will bear burial expenses of any ex-soldier.. . .	1
11. That the Government makes up the difference in a man's earning power, to his pre-war earnings.. . . .	15
12. That all mentally deficient be placed in Institutions and looked after.. . .	60
13. Larger pensions for Imperials resident in Canada.. . . .	2
14. That rate on Imperial pension cheques be given publicity when cheques are issued.. . . .	4
15. Free Life Insurance.. . . .	2
16. Pension be one dollar per one per cent disability and at no time be less than fifty per cent for T.B. cases. (Received from patients in Byron San., London).. . . .	161
17. T.B. cases be granted extra allowances to provide for special living conditions required. T.B. suspects be accorded same consideration.. . . .	1
18. Same privileges to ex-soldiers (British and Canadian) in U.S.A. as to those in Canada.. . . .	3
Blanks.. . . .	1,843
Total.. . . .	<u>3,442</u>

## 4 SUGGESTIONS AS TO FURTHER RE-ESTABLISHMENT

1. Insurance—	
1. Extend the time limit.. . . .	3
2. For pensioners children.. . . .	2
2. Employment—	
1. To be placed in Industries, the Government to supplement their earnings to a living wage.. . . .	14
2. That all girls and married women (war widows and nurses excepted) be discharged from Government offices and replaced by ex-soldiers.. . . .	5

## SESSIONAL PAPER No. 203a

4. SUGGESTIONS AS TO FURTHER RE-ESTABLISHMENT—*Concluded*

2. Employment— <i>Concluded</i>	
3. That further efforts be made to secure employment for ex-soldiers.. . . .	130
4. That temporarily employed ex-soldiers in C.S. be made permanent at once.	6
5. Unemployed Insurance for T.B. cases. (Received from patients in Byron San., London, Ont.).. . . .	160
6. Recommend legislation to protect T.B. cases from the possible prejudice of employers. (Received from patients in Byron San., London, Ont.).. . . .	....
7. That examinations for entrance to C. S. be waived in the case of ex-soldiers.	2
3. Pensions—	
1. That all men who served in the trenches be given a pension.. . . .	36
2. That all men be given a pension who served in the front line for one year.	5
3. That a pensioner deserted by his wife be given the wife's pension for benefit of children.. . . .	3
4. Increased Pensions to widows and children.. . . .	2
5. Equal pensions to all ranks.. . . .	3
6. Pension cheques to ex-soldiers (British and Canadian) in U.S.A. to be payable at par.. . . .	1
4. Treatment—	
1. That men who contracted a disability indirectly attributable to service and unable to earn their living, should receive the same consideration as men with service disabilities.. . . .	12
2. Immediate financial assistance to soldiers discharged from hospital.. . .	9
5. Dental—	
1. That those not having received dental treatment be allowed to go to their local dentist.. . . .	17
6. Land Settlement—	
1. That the regulations allowing transfer of pre-emptions into soldiers grants be continued indefinitely.. . . .	8
2. That soldier settlers land be re-valued.. . . .	16
3. That the 10 per cent cash payment be waived or lowered in the case of experienced farmers.. . . .	13
4. Grant of Land similar to South African Script to all ex-soldiers.. . . .	11
5. That S.S.B. be transferred to Department of Agriculture.. . . .	5
6. Lower interest, or none at all on S.S.B. Land.. . . .	3
7. That time spent in hospitals be counted as residence on land under S.S.B.	1
7. Training—	
1. For ex-Imperial non pre-war residents.. . . .	1
2. Training for minors who have not already received it.. . . .	6
3. Further vocational training.. . . .	74
4. To British and Canadian soldiers in U.S.A.. . . .	361
8. Bonus—	
1. For those who are wounded.. . . .	11
2. Bonus of \$1,000. to all who served in theatre of war.. . . .	8
3. Bonus for all ex-soldiers.. . . .	39
9. Loans—	
1. Housing.. . . .	92
2. That regulations be extended to include all ex-soldiers requiring loans for re-establishment purposes.. . . .	374
10. Relief—	
1. Relief to all in need.. . . .	66
Blanks.. . . .	1,943
Total.. . . .	3,442

## 5. SUGGESTIONS RE DISPOSAL OF CANTEN FUND\$

1. To provide for Unemployment Insurance.. . . .	7
2. To build workshops or Hospitals.. . . .	95
3. That the Canteen Funds go to augument pensions.. . . .	17
4. That it should provide the necessary funds to cover cost of making application for treatment or pension.. . . .	13
5. Lottery.. . . .	77
6. School for blind.. . . .	7
7. Home for old soldiers or for those out of work.. . . .	208
8. Provide scholarships or endowment for educational purposes.. . . .	104
9. Funds to be kept in trust for future needs of ex-soldiers.. . . .	74
00. That it be divided evenly among all ex-soldiers.. . . .	834
01. To the unfit.. . . .	154
02. To the poor soldiers.. . . .	59
03. To be proportioned according to length of service and unfitness (dependents of those who died to share in the grant).. . . .	268
04. To help to pay for independent medical opinion, the balance of such expenses to be augmented by Pensions for Soldiers' Organizations.. . . .	3
05. That it be divided among those who have not been on pension.. . . .	26
06. That it be divided among those originally with the first and second division.. . . .	4
07. That it be divided among all men on pension or who have been on pension.. . . .	7
08. That it be divided among all soldiers with families (excluding officers and N.C.O's).. . . .	4
09. Among those who voluntarily enlisted and went overseas.. . . .	124
10. To be given to voluntary organizations who served during the war such as Salvation Army, Y.M.C.A., Hospitals, Patriotic Fund, etc.. . . .	232
11. Widows, Orphans, or parents of deceased soldiers.. . . .	150
12. That it should be invested so that it yield a paid up insurance policy to those who served in a theatre of war.. . . .	7
13. That it be used for re-establishment loans.. . . .	27
14. That it form the nucleus of a housing fund to be supplemented.. . . .	37
15. Old Age Pensions.. . . .	45
16. Towards paying of national debt.. . . .	6
17. That it be used for relief for the unemployed.. . . .	32
18. That it be used to purchase land for ex-soldiers.. . . .	12
19. That it be invested in a business enterprise and all soldiers who saw service in a theatre of war be given a share.. . . .	37
20. That it be used for the burial of soldiers in destitute circumstances.. . . .	15
21. McInnis suggestion.. . . .	94
22. That it be used to assist relatives to visit the graves of soldiers buried in France.. . . .	...
23. Committee to be composed of all ranks of ex-soldiers to make decision.. . . .	3
24. Miami Command.. . . .	18
25. As in England.. . . .	9
26. Through Veteran Organizations.. . . .	361

COPIES OF ORDERS IN COUNCIL REFERRING TO PAYMENTS TO  
VETERAN ORGANIZATIONS

## RE GREAT WAR VETERANS' ASSOCIATION

P.C. 2378

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Excellency the Deputy Governor General on the 5th July, 1921*

The Committee of the Privy Council have had before them a Report, dated 30th June, 1921, from the President of the Privy Council, stating that the special Committee, appointed by the House of Commons to consider questions relating to the Pensions, Insurance, and Re-establishment of returned soldiers, the report of which was submitted to and approved by the House of Commons on the 26th May, 1921, gave a large amount of consideration to the disposal of the canteen funds amounting to upwards of Two Million Dollars now in the hands of the Receiver-General for Canada or which may hereafter be paid over by the British authorities. Various suggestions were made to the Committee respecting these funds, and the following recommendation was passed:—

"That this matter be referred to the Government, together with the recommendations of the G.W.V.A., Army and Navy Veterans' Association, and G.A.U.V., and that the Government obtain through these organizations an opinion as to the best method of the disposal of these funds".

A letter has been received from the Secretary Treasurer of the G.W.V.A., a copy of which is submitted herewith, proposing co-operation with the Government along certain lines of activity conforming to provisions made by the

Government, the receipt and sifting of complaints, and the completing of an organization through the Provincial Commands of the Association for assisting the Federal, Provincial and Municipal authorities, in dealing with the unemployment situation.

While the G.W.V.A. is only one of several ex-soldier organizations operating in Canada, it is the largest and most representative. It maintains a Head Office with branch offices in all Provinces, and with Association Headquarters at upwards of eight hundred centres. The chief executive officers of the Association are in constant touch with the executive officers of the Department of Soldiers' Civil Re-establishment and other Departments, and there has been and is a marked degree of co-operation.

It would appear that a portion of the canteen funds, now in the hands of the Receiver-General, might very properly be allocated to the G.W.V.A., for the purpose of extending the scope and usefulness of that Association, provided that the expenditure of any moneys, which may be allocated to the Association, is properly safeguarded.

The Minister, therefore, recommends as follows:—

1. That the Great War Veterans' Association be authorized to expend such moneys as may be paid to the Association out of the canteen funds, on such activities as may be approved by the Board of Trustees, hereinafter designated.

2. That payment be made to the Great War Veterans' Association of Twenty Thousand Dollars (\$20,000) at once for the month of July, and a further Ten Thousand Dollars (\$10,000) on the first of every succeeding month, during the period this arrangement shall remain in force.

3. That John Barnett, Norman F. Parkinson, Robert B. Maxwell, C. Grant MacNeil, of the City of Ottawa, be appointed Trustees of the moneys payable to The Great War Veterans' Association, with power to supervise the expenditure herein recommended, and to require the production of vouchers and other evidence, as they may consider necessary.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) G. G. KEZAR,

*Assistant Clerk of the Privy Council.*

P.C. 3648

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Excellency the Governor General on the 24th September, 1921.*

The Committee of the Privy Council have had before them a Report, dated 16th September, 1921, from the Minister of Militia and Defence, stating that under the terms of P.C. 2378, dated 5th July, 1921, certain payments were authorized to be made to the Great War Veterans' Association out of the Canteen Funds now in the hands of the Receiver General of Canada subject to the terms and conditions in the said report set out.

It is considered advisable to limit the application of the said grant to the Great War Veterans' Association to relief work among the unemployed returned soldiers in Canada and their dependents, and it is also desirable to appoint an additional trustee for the purposes set out in the said report.

The Minister therefore recommends that Order in Council P.C. 2378, dated 5th July, 1921, be amended as follows:—

SESSIONAL PAPER No. 203a

1. That in respect of all future payments made to the Great War Veterans' Association the said association shall be bound to apply the same for the benefit of the unemployed returned soldiers in Canada and their dependents.

2. That the monthly payments of Ten Thousand Dollars, (\$10,000) per month mentioned in the said Order in Council shall finally cease with the payment to be made on the First of October next.

3. That J. W. Margeson of the City of Ottawa is hereby appointed a further additional Trustee of the said moneys under the term of the said Order in Council as hereby amended.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) ROLDOLPHE BOUDREAU,  
*Clerk of the Privy Council.*

The Honourable The Minister of Militia and Defence.

## RE GRAND ARMY UNITED VETERANS

*P.C. 3519*

*CERTIFIED COPY of a Report of the Committee of the Privy Council approved by His Excellency the Governor General on the 21st September, 1921.*

The Committee of the Privy Council have had before them a Report, dated 15th September, 1921, from the Minister of Militia and Defence, representing that the Special Committee, appointed by the House of Commons to consider questions relating to the Pensions, Insurance and Re-establishment of Returned Soldiers, the report of which was submitted to and approved by the House of Commons on the 26th May, 1921, gave a large amount of consideration to the disposal of the Canteen Funds amounting to upwards of two million dollars now in the hands of the Receiver General for Canada or which may hereafter be paid over by the British authorities. Various suggestions were made to the Committee respecting these funds, and the following recommendation was passed:—

“That this matter be referred to the Government together with the recommendations of the Great War Veterans' Association, Army and Navy Veterans' Association, and Grand Army of United Veterans and that the Government obtain through these organizations an opinion as to the best method of the disposal of these funds.”

A letter has been received from the Grand Army of United Veterans requesting an allocation from the said Canteen Funds for relief purposes during the unemployment crisis; in which application it is stated:—

“It is the intention of this association to use the money granted by your Government for relief purposes during the unemployment crisis, expressly for veterans with overseas service who contributed to the Canteen Fund, also dependents of those who paid the supreme sacrifice.”

While the Grand Army of United Veterans is only one of several ex-soldier organizations operating in Canada, it maintains a Head Office with branches in the various provinces and the chief executive officers of the association are in close touch with the executive officers of the Department of Soldiers' Civil Re-establishment and other departments of the Government.

It would appear that a portion of the Canteen Funds now in the hands of the Receiver General might very properly be allocated to the Grand Army of United Veterans for the purpose of dealing directly with the unemployment situation among returned soldiers, provided that the expenditure of any moneys that may be allocated to the association is properly safe-guarded.

The Minister therefore recommends:—

1. That there be paid from the said Canteen Funds to the trustees hereinafter named for expenditure by the Grand Army of United Veterans in relief work among unemployed returned soldiers residing in Canada and their dependents during the ensuing autumn months the following amounts, namely,—Eight thousand dollars (\$8,000) forthwith, four thousand dollars (\$4,000) on the first day of October next, four thousand dollars (\$4,000) on the first day of November next, and four thousand dollars (\$4,000) on the first day of December next upon which last mentioned date all payments from the said Canteen Funds shall cease.

2. That the Grand Army of United Veterans is hereby authorized to expend such sums of money or so much thereof as may be necessary to meet the unemployment situation among returned soldiers in Canada and their dependents but all such expenditure shall be subject to the approval of the Board of Trustees hereinafter designated.

3. That J. W. Margeson, John Barnett and Norman F. Parkinson of the city of Ottawa, G. R. McNicol of the city of Hamilton and J. F. Marsh of the city of Toronto be appointed Trustees of the said moneys to be paid from the said Canteen Funds.

4. The said trustees shall have full power to supervise all expenditure recommended herein and to require the production of vouchers and other evidence as they may consider necessary.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) RODOLPHE BOUDREAU,  
*Clerk of the Privy Council.*

The Honourable The Minister of Militia and Defence.

*P.C. 3762*

*CERTIFIED COPY of a Report of the Privy Council, approved by His Excellency the Governor General on 3rd October, 1921.*

The Committee of the Privy Council have had before them a report, dated 1st October, 1921, from the Minister of Militia and Defence, submitting that by Order in Council of the 21st September, 1921 (P.C. 3519) authority was granted for the payment of certain sums to The Grand Army of United Veterans out of the canteen funds now in the hands of the Receiver General of Canada.

The amounts so paid to The Grand Army of United Veterans being used for certain purposes specified in the said Order in Council of the 21st September, 1921, it is considered that the purpose for which said funds were to be used by The Grand Army of United Veterans as specified in the said Order in Council are somewhat limited in their scope.

The Minister, therefore, recommends that paragraphs 1 and 2 of his recommendation as approved by Your Excellency in Council on the 21st September, 1921, be repealed and the following substituted therefor:—

SESSIONAL PAPER No. 203a

1. That The Grand Army of United Veterans be authorized to expend such moneys as may be paid to it out of the canteen funds on such services as may be approved by the Board of Trustees appointed by Your Excellency in Council under the said Order in Council of the 21st of September, 1921, P.C. 3519.

2. That payments be made from the said canteen funds to The Grand Army of United Veterans in the following amounts, namely:

Eight thousand dollars (\$8,000) forthwith; four thousand dollars (\$4,000) on the first day of October, 1921 and four thousand dollars (\$4,000) on the first day of each succeeding month during the period this arrangement shall remain in force.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) RUDOLPHE BOUDREAU,  
*Clerk of the Privy Council.*

The Honourable The Minister of Militia and Defence.

*Re* ARMY AND NAVY VETERANS IN CANADA

*P.C. 3647*

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Excellency the Governor General on the 24th September, 1921.*

The Committee of the Privy Council have had before them a Report, dated September 23, 1921, from the Minister of Militia and Defence, stating that the Special Committee, appointed by the House of Commons to consider questions relating to the Pensions, Insurance and Re-establishment of Returned Soldiers, the report of which was submitted to and approved by the House of Commons on the 26th May, 1921, gave a large amount of consideration to the disposal of the Canteen Funds amounting to upwards of Two Million Dollars now in the hands of the Receiver General for Canada or which may hereafter be paid over by the British Authorities. Various suggestions were made to the Committee respecting these Funds, and the following recommendation was passed:—

“That this matter be referred to the Government together with the recommendations of the Great War Veterans Association, Army and Navy Veterans Association, and Grand Army of United Veterans and that the Government obtain through these organizations an opinion as to the best method of the disposal of these Funds.”

A letter has been received from the Army and Navy Veterans in Canada requesting an allocation from the said Canteen Funds for relief purposes during the unemployment crisis.

While the Army and Navy Veterans in Canada is only one of several ex-soldier organizations operating in Canada, it maintains a Head Office with branches in the various provinces and the Chief Executive Officers of the Association are in close touch with the Executive Officers of the Department of Soldiers' Civil Re-establishment and other Departments of the Government.

It would appear that a portion of the Canteen Funds now in the hands of the Receiver General might very properly be allocated to the Army and Navy Veterans in Canada for the purpose of dealing directly with the unemployment situation among returned soldiers, provided that the expenditure of any moneys that may be allocated to the Association is properly safeguarded.

The Minister therefore recommends:—

1. That there be paid from the said Canteen Funds to the Trustees hereinafter named for expenditure by the Army and Navy Veterans in Canada in relief work among unemployed returned soldiers residing in Canada and their dependents during the ensuing autumn months and the following amount, namely, Twelve Thousand Five Hundred Dollars (\$12,500) payable as follows: Six Thousand Five Hundred Dollars (\$6,500) cash and Two Thousand Dollars, (\$2,000) per month for the next three months at which time all payments from the said Canteen Funds shall cease.

2. That the Army and Navy Veterans in Canada is hereby authorized to expend such sums of money or so much thereof as may be necessary to meet the unemployment situation among returned soldiers in Canada and their dependents, but all such expenditure shall be subject to the approval of the Board of Trustees hereinafter designated.

3. That J. W. Margeson, John Barnett, and Norman F. Parkinson, of the city of Ottawa, Sir Hugh John MacDonald, of the city of Winnipeg, and Major Fawcett G. Taylor, of the city of Winnipeg, be appointed Trustees of the said moneys to be paid from the said Canteen Funds.

4. The said Trustees shall have full power to supervise all expenditure recommended herein and to require the production of vouchers and other evidence as they may consider necessary.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.)      RUDOLPHE BOUDREAU,  
Clerk of the Privy Council.

The Honourable The Minister of Militia and Defence.

*P. C. 3761*

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Excellency the Governor General on the 3rd October, 1921.*

The Committee of the Privy Council have had before them a report, dated October 1, 1921, from the Minister of Militia and Defence, submitting that by Order in Council of the 24th September, 1921 (P.C. 3647) authority was granted for the payment of certain sums to the Army and Navy Veterans in Canada out of the canteen funds now in the hands of the Receiver General of Canada.

The amounts so paid to the Army and Navy Veterans in Canada being used for certain purposes specified in the said Order in Council of the 24th September, 1921, it is considered that the purpose for which said funds were to be used by the Army and Navy Veterans in Canada as specified in the said Order in Council are somewhat limited in their scope.

The Minister, therefore, recommends that paragraphs 1 and 2 of his recommendations as approved by Your Excellency in Council on the 24th September, 1921, be repealed and the following substituted therefor:—

1. That the Army and Navy Veterans in Canada be authorized to expend such moneys as may be paid to it out of the canteen funds on such services as may be approved by the Board of Trustees appointed by Your Excellency in Council under the said Order in Council of the 24th of September, 1921. (P.C. 3647).

SESSIONAL PAPER No. 203a

2. That payments be made from the said canteen funds to the Army and Navy Veterans in Canada in the following amounts, namely:—

Six Thousand Five Hundred Dollars (\$6,500) cash, and Two Thousand Dollars (\$2,000) per month on the 1st day of each month for so long as this arrangement shall remain in force.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) RODOLPHE BOUDREAU,  
*Clerk of the Privy Council.*

#### Re VARIOUS ORGANIZATIONS

P. C. 3887

*CERTIFIED COPY of a Report of the Committee of the Privy Council, approved by His Excellency the Governor General on the 12th October, 1921.*

The Committee of the Privy Council have had before them the recommendations of the Special Committee appointed by the House of Commons to consider questions relating to the Pensions, Insurance and Re-establishment of Returned Soldiers, the report of which was submitted to and approved by the House of Commons on the 26th May, 1921; which report gave a large amount of consideration to the disposal of Canteen Funds amounting to upwards of \$1,800,000 in the hands of the Receiver-General for Canada, or which may hereafter be paid over by the British authorities. Various suggestions were made to the Committee respecting these funds, and the following recommendation was passed:—

“That this matter be referred to the Government together with the recommendations of the Great War Veterans' Association, and The Grand Army of United Veterans, and that Government obtain through these organizations an opinion as to the best method of the disposal of these funds.”

The Minister of Militia and Defence has requested the several organizations mentioned to submit the recommendation thus solicited. In response, advice has been given that arrangements are under way to ascertain the consensus of opinion among Canadian ex-service men generally. There is general agreement that the main fund be held intact and its final disposition determined by Act of Parliament, following the reference stipulated.

Urgent requests have been received, however, for further small allocations from the said Canteen Funds for immediate requirements, relating to the welfare of ex-service men, and arising largely from the danger of wide-spread unemployment. In view of the fact that the needs so described demand immediate attention, it would appear that a portion of the interest accruing on the Canteen Funds might very properly be allocated for the purpose of dealing with such problems among ex-service men, provided that the principal sum be kept intact, and further provided that the expenditure of such moneys be properly safeguarded.

In view of such urgent requests and of the unemployment of ex-service men the whole question was referred to a Sub-committee of Council consisting of the Ministers of the Department of the Interior, Labour, Finance and Railways and Canals, and such Committee recommend:—

14-15 GEORGE V, A. 1924

1. That there be paid from the interest accruing on the said Canteen Funds to the Trustees, hereinafter named, the sum of one hundred and twenty thousand dollars.

2. That the said Trustees be authorized to award from the sum so allocated reasonable amounts among organizations of ex-service men capable of demonstrating ability to efficiently conduct the activities, hereinafter set forth.

3. That all awards from the said Trust Fund be devoted expressly for the purpose of General Information and Service Work, Relief Work in Special Cases, Organization enabling effective co-operation with National, Provincial and Municipal interests to cope with unemployment conditions among ex-service men and dependents and such organization development and maintenance, as may be required for the welfare of ex-service men and dependents.

4. That all such expenditures be submitted for the approval of the Board of Trustees, hereinafter designated.

5. That J. W. Margeson, Thomas O. Cox, and W. C. Arnold, of the city of Ottawa, be appointed Trustees of the said moneys to be paid from the said Canteen Funds.

6. The said Trustees shall have full power to supervise all expenditure, recommended herein, and to require the production of vouchers and other receipts as they may consider necessary.

7. That no further payments be made under any prior orders to the Great War Veterans' Association.

The Committee concur in the foregoing recommendations and submit the same for approval.

(Sgd.) RODOLPHE BOUDREAU,  
*Clerk of the Privy Council.*

## PLEBISCITE ON CANTEEN FUNDS DISPOSAL

### ADDITIONAL SUGGESTIONS RECEIVED

The Canteen Funds Disposal Committee (appointed under P.C. 4122 of November 3, 1921), in its Report of March 15, 1922, says:—

#### "ADDITIONAL SUGGESTIONS

" 13. Attached hereto, marked schedule ' B ' is an analysis of the suggestions received, after the issue of the ballot cards, apart from the lottery and cash distribution schemes. There were a number of additional suggestions which could not be taken seriously."

Schedule "B" of the Report is as follows:—

- "1. Add enough to fund to pay \$1 to men for service in France.
- "2. Community land settlement, depot system.
- "3. Distribution amongst widows not receiving pension.
- "4. Provision of suitable permanent employment for every disabled man.
- "5. Publication of war memorial volume to be presented to each veteran.
- "6. Investment, and the interest to be available for loan for building homes for veterans.
- "7. Veterans Trust Company. Featuring housing scheme for returned soldier and special rates of interest on savings deposits.
- "8. Any productive manufacturing or agricultural enterprise.

## SESSIONAL PAPER No. 203a

- "9. Distribute as cash bonus to men at present in receipt of pension.
- "10. To be used to increase present pension.
- "11. Cash distribution to save further argument.
- "12. Old age pensions for veterans.
- "13. For re-establishment of veterans in industry.
- "14. Distribution according to length of service in the line.
- "15. Distribution to 100 per cent disabled cases.
- "16. To open up a gold mine, 1 share of stock for each year's service in France.
- "17. Houses for men incapable of self-support.
- "18. More cash bonuses.
- "19. Provision for veterans still in hospital.
- "20. Officers to be excluded in any case.
- "21. Establishment of home for old soldiers.
- "22. Proportional division by Provinces for home building.
- "23. Out of employment insurance veterans.
- "24. Speculation. Purchase of land to be held for ten years.
- "25. To provide better allowances for widows and dependent mothers.
- "26. Widowed mothers to receive arrears in pension from time son killed until time pension began.
- "27. Scholarships after Rhodes methods.
- "28. Old age pension at 65.
- "29. \$2,000 per man as far as it will go.
- "30. Defray surgical expense in respect of veterans' dependents.
- "31. Establishment of orphans' home.
- "32. Help homesteaders five miles or more from towns.
- "33. Free hospital treatment veterans and dependents.
- "34. Co-operative stores in each city.
- "35. To provide Christian burials for veterans' wives.
- "36. To be distributed amongst men of 1st and 2nd Divisions.
- "37. To build a monument at Vimy.
- "38. To provide facilities for disabled men to learn trades.
- "39. Divide among districts according to enlistments and let local committee in each district deal with it.
- "40. Allotment of proportion to B.G.W.A. to be held in trust for veterans domiciled in U.S.A.
- "41. Establishing old soldiers' homes and homes for disabled throughout Canada.
- "42. Money to be invested and interest drawn for by lottery half yearly.
- "43. For exploration purposes Province of British Columbia.
- "44. Construction and operation of theatre in Montreal.
- "45. Thorp's suggestion to provide work for 500 men and 150 women.
- "46. To provide treatment for men discharged A.I. and who subsequently became tuberculous.
- "47. Funds to be available as loans to veterans to commence business.

Canada(Sgd.) L. H. DAVIES,  
*Deputy Governor General.*

## CANADA

GEORGE THE FIFTH, by the Grace of God of the United Kingdom of Great Britain  
and Ireland and of the British Dominions beyond the Seas KING, Defender  
of the Faith, Emperor of India.

To all whom these presents shall come, or whom the same may in anywise  
concern.

GREETING:

Whereas in and by an Order of our Governor General in Council bearing  
date the twenty-second day of July in the year of our Lord one thousand nine  
hundred and twenty two provision has been made for an investigation with respect  
to certain matters therein mentioned by our Commissioners therein and herein-  
after named as upon reference to the said Order in Council, a copy of which is  
hereto annexed, will more fully and at large appear. The matters to be so investi-  
gated are set out in complaints made by certain officials of the Great War  
Veterans Association as contained in a telegram reported in the press as follows:  
"Following recent disclosures surrounding Parliamentary inquiry we openly  
charge Pensions Board with contemptible and cold-blooded conspiracy to  
deprive ex-service men of rights previously granted by Parliament. There  
has been deliberate concealment, secret regulations pensions and insurance in

## SESSIONAL PAPER No. 203a

direct violation intention of Parliament and deliberate attempt to disguise facts before present Parliamentary Committee. This is culmination unsympathetic policy of increasing severity during recent months. Chairman Committee has consented to re-open question impressed by generally expressed indignation. This plot challenges basic rights ex-service men, nullifies in principle established privileges and frustrates further re-establishment effort required." In addition to the matters alleged in the said telegram the Commissioners are hereby authorized to deal also with the following matters namely:—

1. To consider and make suggestions in respect to the procedure by which disabled ex-members of the Canadian Expeditionary Force are enabled to make application for pensions and medical treatment, or submit an appeal in respect of decisions thereon.

2. To recommend means for ensuring that suitable provision is made for those ex-members of the forces and dependents who are under serious handicaps by reason of war services, in conformity with the recommendations now made, and for whom definite, legislative provision has not yet been made. For the above purposes the commission shall, 1°, Survey existing re-establishment needs among Canadian ex-service men and dependents. 2° Investigate available data in respect of phases of the Parliamentary inquiry as yet incomplete. 3°, Obtain information as regards suitable provision for those classes of ex-service men described in Section 7, Chapter 2 of the Committee's report. 4°, Investigate the question of Canteen funds.

Now know ye, that by and with the advice of Our Privy Council for Canada, We do by these presents nominate constitute and appoint James Layton Ralston, of the City of Halifax in the Province of Nova Scotia, Esquire, one of Our Council learned in the law, Walter McKeown, of the City of Toronto, in the Province of Ontario, Esquire, Doctor of Medicine and Arthur Edouard Dubuc, of the City of Montreal, in the Province of Quebec, Esquire, Engineer, to be Our Commissioners to conduct such enquiry. To have, hold exercise and enjoy the said office, place and trust unto the said James Layton Ralston, Walter McKeown and Arthur Edouard Dubuc, together with the rights, powers, privileges and emoluments unto the said office, place and trust of right and by law appertaining, during pleasure.

And we do hereby appoint the said James Layton Ralston to be Chairman of Our said Commission.

And we do hereby, under the authority of the Revised Statute respecting inquiries concerning public matters, confer upon Our said Commissioners, the power of summoning before them any witnesses and of requiring them to give evidence on oath, or on solemn affirmation if they are persons entitled to affirm in civil matters, and orally or in writing, and to produce such documents and things as Our said Commissioner shall deem requisite to the full investigation of the matters into which they are hereby appointed to examine.

And Our said Commissioners are hereby authorized to engage the services of such accountants, engineers, technical advisers or other experts, clerks, reporters and assistants as they may deem necessary or advisable, and the services of Counsel to aid and assist in either or both of the said inquiries and Our Commissioners are hereby clothed with all the other powers specified in Chapter 28, 2 George V. And We do hereby require and direct Our said Commissioners to report to Our Governor General in Council the result of their investigation together with the evidence taken before them and any opinion they may see fit to express thereon, and any recommendation or recommendations they may think it advisable to make.

In testimony whereof We have caused these Our Letters to be made Patent and the Great Seal of Canada to be hereunto affixed.

*Witness*, Our Right Trusty and Well-beloved Counsellor The Right Honourable Sir Louis Henry Davies, one of Our Most Honourable Privy Council, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George, Chief Justice of Canada and Deputy of Our Right Trusty and Well-beloved Julian Hedworth George Baron Byng of Vimy, General on the Retired List and in the Reserve of Officers of Our Army, Knight Grand Cross of Our Most Honourable Order of the Bath, Knight Grand Cross of Our Most distinguished Order of Saint Michael and Saint George, Member of our Royal Victorian Order, Governor General and Commander-in-Chief of Our Dominion of Canada.

At Our Government House in Our City of Ottawa, this twenty-second day of July, in the year of Our Lord one thousand nine hundred and twenty-two and in the thirteenth year of Our Reign.

By Command,

(Sgd.) P. PELLETIER,  
*Acting Under-Secretary of State*

## LAUSANNE CONFERENCE AND TREATY

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, October 27, 1922.

Following for your Prime Minister. Begins:—

Yesterday invitations were sent by the Governments of Great Britain, France and Italy, to the Japanese, Roumanian, Yougoslav, Greek and Turkish Governments, "both of Constantinople and Angora", to send representatives to Lausanne November 13th to conclude Treaty to end the War in the East which will replace Treaty of Sevres. Russian Soviet Government and Bulgarian Government also being invited to send to Lausanne, at any date to be fixed, representatives to take part in discussion on question of the Straits which the Conference will undertake at a later stage. Enquiry (?) is also being addressed by the three Governments to the United States expressing hope that they will permit United States representative to be present during Lausanne negotiations in a capacity similar to that in which United States representative was present during negotiations at San Remo in 1920, or to take more active part in the negotiations, specially on the question of the Straits. According to arrangements agreed upon with French and Italian Governments each Government would be represented at Lausanne by two plenipotentiaries. Secretary of State for Foreign Affairs will personally act as chief British plenipotentiary and it is proposed he should be accompanied by the British High Commissioner at Constantinople. Dominion Governments will be kept informed from time to time on the general lines of policy on which British plenipotentiaries propose to proceed and of course of negotiations and in case of other Treaties arising out of the peace will of course be invited to sign new Treaty and any separate instrument regulating the status of the Straits. His Majesty's Government trusts that this procedure will be in accordance with the wishes of your Government. Plenipotentiaries are fully acquainted with the Imperial aspect of the problem and with the keen interest taken by the Dominion Governments in its solution. Similar telegram sent to other Prime Ministers. Ends.

DEVONSHIRE.

---

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, October 31, 1922.

Following from Prime Minister for you. Begins:

I have the honour to acknowledge the receipt of Your Grace's despatch of the 27th instant, informing our Government of the invitations to the Lausanne Conference which have been sent to the Governments of other countries by the Governments of Great Britain, France and Italy, and setting forth the procedure in reference thereto.

15 GEORGE V, A. 1924

Our Government has no exception to take to the course pursued by His Majesty's Government with respect to the conclusion of a treaty to end the war in the Near East. As, however, it is proposed to keep our Government informed from time to time of the general lines of policy on which British plenipotentiaries propose to proceed, and of the course of negotiations, and to invite us to sign a new treaty and any separate instrument regulating the status of the Straits, we deem it advisable to avail ourselves of the earliest opportunity to inform His Majesty's Government that in our opinion the extent to which Canada may be held to be bound by the proceedings of the conference or by the provisions of any treaty or other instrument arising out of the same, is necessarily a matter for the Parliament of Canada to decide and that the rights and powers of our Parliament in these particulars must not be held to be affected by implication or otherwise in virtue of the information with which our Government may be supplied. Ends.

BYNG.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, November 16, 1922.

Following from Prime Minister for your Prime Minister. Begins:—

I brought your message of October 31 as to the Lausanne Conference before the Cabinet to-day. We fully understand that it is the desire of the Canadian Government that any Treaty with Turkey, which may result from the Conference, should be submitted to the Canadian Parliament for approval before His Majesty is advised to ratify it. It is our most earnest desire that you should be kept fully informed of the developments of the Conference and we shall endeavour to send you full details. Ends.

DEVONSHIRE.

---

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, November 25, 1922.

Following from Prime Minister for you. Begins:—

Your Grace's message of November sixteenth, referring to mine of October thirty-first, concerning the Lausanne Conference, was carefully considered by our Cabinet to-day. We feel that the purport of my message of October thirty-first has not been correctly interpreted or understood. (Stop) Our Government has not expressed a desire to have any treaty with Turkey, which may result from the Conference, submitted to the Canadian Parliament for approval, before His Majesty is advised to ratify it. nor do we wish to be understood as preferring

SESSIONAL PAPER No. 232

any such request. My message was intended to make clear that we had no exception to take to Canada not being invited to be represented at the Conference, but, inasmuch as we had been informed that we would be invited to sign a new Treaty and any separate instrument regulating the status of the Straits we wished to make it perfectly clear that in our opinion the extent to which Canada may be held to be bound by the proceedings of the Conference or by the provisions of any treaty or other instrument arising out of the same, was necessarily a matter for the Parliament of Canada to decide. (Stop) We deem it of the utmost importance that there should be no misunderstanding as to our position with respect to Canada's obligations in this and kindred matters. (Stop) In our opinion Parliament will desire, as respects the Treaty with Turkey and any other instruments arising out of the Lausanne Conference to reserve to itself the right to decide upon the merits of the case what action on the part of the people of Canada is right and proper. In this connection we shall be pleased to have authority to place before Parliament all the information with which we may from time to time be supplied. Ends.

BYNG.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, December 8, 1922.

Your telegram of November 25. Following for your Prime Minister. Begins:—

Treaty with Turkey. Our message of November 16th was framed on the assumption that the Canadian Government would wish to follow the procedure adopted in the case of treaties with Germany, Austria and Bulgaria. I am sorry if your telegram of October 31 was not fully understood here, as you say it is most important that there should be no misunderstanding on so important a question. Awkwardness therefore sets out the position as it appears to us. It is this. Any Treaty resulting from the Lausanne Conference will of course replace the Treaty of Sevres and until it comes into force, a state of war between the British Empire and Turkey will technically continue. Treaty must therefore be binding on the whole Empire when ratified. It remains to be seen whether there will be a successful issue to the Lausanne Conference, but if there is, we should much prefer that any new Treaty should follow (?) Paris precedent, and include signatures on behalf of all the Dominions. Do I gather from your telegram that the Canadian Government are not adverse to the procedure proposed as regards the signature of the new Treaty and of any separate instrument regarding the Straits but wish to make it clear that should anything in the Treaty or instrument be held to impose any serious international obligation on Canada, as part of the British Empire, it cannot be considered binding on Canada until approved by Parliament? If so, it does not appear to us that the procedure which you propose is essentially different from that which we should

15 GEORGE V, A. 1924

adopt in relation to Parliament here if the contingency contemplated should arise. In any event should legislation be required to give effect to the technical provisions of the Treaty, this would presumably necessitate its submission to the Parliament in Canada as here.

As regards to last sentence of your telegram, would it not be well to wait until it is known whether the Lausanne Conference results in the signature of a Treaty or Treaties and then lay the instruments themselves before Parliament. I do not think that it would be possible to publish any of the telegrams now being sent to you concerning the proceedings at Lausanne seeing that they often contain records of confidential interviews and impressions and other material intended only for private information. Ends.

DEVONSHIRE.

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, December 31, 1922.

Following from Prime Minister for you. Begins:—

Treaty with Turkey. Your Grace's telegram of December 8 begins: Quote. Our message of November 16 was framed on the assumption that the Canadian Government would wish to follow the procedure adopted in the case of treaties with Germany, Austria and Bulgaria. End quote.

The procedure referred to is, we understand, that adopted with respect to the Paris Peace Conference, and followed later with respect to the Washington Conference on the Limitation of Armament. As regards Canada's participation there were in that procedure four separate, distinct and essential stages.

One. Direct representation of Canada at the conferences at which the treaties were drafted, and participation in the proceedings of the conferences by Canada's representatives, each representative holding a Full Power signed by His Majesty the King in the form of letters patent authorizing him to sign (quote) for and in the name of His Majesty the King in respect of the Dominion of Canada (end quote) any treaties, conventions or agreements that might tend to the attainment of the object of the conferences, the Canadian Government having by Order in Council sanctioned the issuance of these Full Powers by His Majesty.

Two. Formal signing of the treaties on behalf of Canada by the plenipotentiaries so named.

Three. Approval by the Parliament of Canada of the treaties thus signed on behalf of Canada.

Four. Assent of the Government of Canada to the final act of ratification by His Majesty the King of the treaty signed on behalf of Canada and approved by the Parliament of Canada.

SESSIONAL PAPER No. 232

Your Grace is quite right in assuming that as regards treaties in which Canada is supposed to have a direct or immediate interest, the procedure here outlined is the one which our Government would wish to follow. In the case of the main political treaties concluded since the War, in general the rule seems to have been followed that, wherever the Dominions could be said to have a direct or immediate interest, the procedure was shaped to include their participation in, and signature of, the proceedings. That in the case of the conference at Lausanne a like procedure has not been followed with respect to representation and participation by Canada, has been regarded by us as evidence that in the opinion of the countries by whom the invitations to the conference at Lausanne were extended, Canada could not have been believed to have the direct and immediate interest which she was supposed to have in the conferences at Versailles and Washington.

To the course pursued with respect to the Lausanne conference, we have, as mentioned in my telegram of October 31, no exception to take. As regards procedure, however, it must be apparent that quite apart from any action or representation on the part of the Government of Canada, a different procedure has been followed in the case of the present conference at Lausanne to that followed at Versailles and Washington. In so far as one stage in procedure is necessarily dependent upon the stage preceding, it is difficult to see how a like procedure can be followed. Canada has not been invited to send representatives to the Lausanne Conference, and has not participated in the proceedings of the conference either directly or indirectly. Under the circumstances, we do not see how, as respects signing on behalf of Canada, we can be expected in the case of a new treaty or of any separate instrument regarding the Straits, to follow the procedure adopted in the case of the treaties with Germany, Austria and Bulgaria. Ends.

BYNG.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, January 27, 1923.

Your telegram dated December 31, Lausanne Conference. Please inform your Prime Minister that in the circumstances His Majesty's Government willing to fall in with his suggestion that any Treaties with Turkey resulting from Conference should be signed only by the British Plenipotentiaries who have negotiated them, if it is generally acceptable. I am ascertaining whether it will be agreeable to the Prime Minister of the Commonwealth of Australia and the Prime Minister of New Zealand.

DEVONSHIRE.

15 GEORGE V, A. 1924

*From the Secretary of State for the Colonies to the Governor General*

LONDON, June 7, 1923.

My telegram dated January 27. I am assuming that if, as is hoped, the Conference at Lausanne results in the completion of a Treaty with Turkey, your Prime Minister would wish the previous arrangements regarding signature by British plenipotentiaries to hold good.

DEVONSHIRE.

---

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, June 15, 1923.

Your telegram June 7.

In the event of Conference at Lausanne resulting in completion of Treaty with Turkey, Canadian Government are agreeable that previous arrangements regarding signature by British Plenipotentiaries should hold good.

GOVERNOR GENERAL.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, February 22, 1924.

My telegram Peace Treaty with Turkey. In order that the necessary action may be taken as soon as possible after the Bill becomes law, hoped that your Ministers will be in position, at very early date, to signify concurrence in ratification of Treaty and Conventions in question, including the Convention relating to Reparations, and also to intimate their wishes as regards declaration in connection with the Convention respecting the conditions of the Business and Commercial Convention, see my predecessor's despatch dated August 20, Dominion Treaty No. 31, paragraph 3.

SECRETARY OF STATE FOR THE COLONIES.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, March 21, 1924.

My telegram dated February 22. Peace Treaty with Turkey. Bill has now been read third time House of Lords and hoped to introduce it into House of Commons March 28th, and to secure passage within very short period thereafter.

SESSIONAL PAPER No. 232

It is considered extremely important that His Majesty's ratification should take place at the earliest possible moment after passage of Bill. In the circumstances hoped that your Ministers may be in a position to reply to my telegram at very early date and if possible by the end of March.

SECRETARY OF STATE FOR THE COLONIES.

---

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, March 24, 1924.

Your telegrams March 21 and February 22—

The Government of Canada not having been invited to send a representative to the Lausanne Conference and not having participated in the proceedings of the Conference either directly or indirectly, and not being for this reason a signatory to the Treaty on behalf of Canada (see my telegram to your predecessor December 31, 1922) my Ministers do not feel that they are in a position to recommend to Parliament the approval of the peace Treaty with Turkey and the Conventions thereto. Without the approval of Parliament they feel they are not warranted in signifying concurrence in ratification of the Treaty and Conventions. With respect to ratification, however, they will not take exception to such course as His Majesty's Government may deem it advisable to recommend. This appears to be in harmony with the resolution of the recent Imperial Conference (cmd. 1987, pages 14 and 15). The provisions thereof with reference to signature 2 (a) on page 14 and ratification (a) on page 15 appear to cover this case, which is not within the provisions of Signature 2 (b) on page 14 and Ratification (b) on page 15.

GOVERNOR GENERAL.

---

# TREATY

For the Suppression of Smuggling Operations along the  
International Boundary between the Dominion  
of Canada and the United States

and

Assisting in the Arrest and Prosecution of Persons  
Violating the Narcotic Laws of either Govern-  
ment and for Kindred Purposes

OTTAWA  
F. A. ACLAND  
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY  
1924

## TREATY

### **For the Suppression of Smuggling Operations along the International Boundary between the Dominion of Canada and the United States and Assisting in the Arrest and Prosecution of Persons Violating the Narcotic Laws of either Government and for Kindred Purposes.**

His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India, in respect of the Dominion of Canada, and the United States of America being desirous of suppressing smuggling operations along the boundary between the Dominion of Canada and the United States of America, and of assisting in the arrest and prosecution of persons violating the narcotic laws of either Government, and of providing as to the omission of penalties and forfeitures in respect to the earriage of alcoholic liquors through Alaska into the Yukon territory, have agreed to conclude a Convention to give effect to these purposes and have named as their Plenipotentiaries:

His Britannic Majesty, in respect of the Dominion of Canada: The Honourable Ernest Lapointe, K.C., a member of His Majesty's Privy Council for Canada and Minister of Justice in the Government of that Dominion; and

The President of the United States of America: Charles Evans Hughes, Secretary of State of the United States;

Who, having communicated to each other their respective full powers, which were found to be in due and proper form, have agreed upon the following articles:

#### ARTICLE I

The High Contracting Parties agree that the appropriate officers of the Governments of Canada and of the United States of America respectively shall be required to furnish upon request to duly authorized officers of the other Government, information concerning clearances of vessels or the transportation of cargoes, shipments or loads of articles across the international boundary when the importation of the cargo carried or of articles transported by land is subject to the payment of duties; also to furnish information respecting clearances of vessels to any ports when there is ground to suspect that the owners or persons in possession of the cargo intend to smuggle it into the territory of Canada or of the United States.

#### ARTICLE II

The High Contracting Parties agree that clearance from Canada or from the United States shall be denied to any vessel carrying cargo consisting of articles the importation of which into the territory of Canada or of the United States, as the case may be, is prohibited, when it is evident from the tonnage, size and general character of the vessel, or the length of the voyage and the perils or conditions of navigation attendant upon it, that the vessel will be unable to carry its cargo to the destination proposed in the application for clearance.

## ARTICLE III

Each of the High Contracting Parties agrees with the other that property of all kinds in its possession which, having been stolen and brought into the territory of Canada or of the United States, is seized by its customs authorities shall, when the owners are nationals of the other country, be returned to such owners, subject to satisfactory proof of such ownership and the absence of any collusion, and subject moreover to payment of the expenses of the seizure and detention and to the abandonment of any claims by the owners against the customs, or the customs officers, warehousemen or agents, for compensation or damages for the seizure, detention, warehousing or keeping of the property.

## ARTICLE IV

The High Contracting Parties reciprocally agree to exchange information concerning the names and activities of all persons known or suspected to be engaged in violations of the narcotic laws of Canada or of the United States respectively.

## ARTICLE V

It is agreed that the customs and other administrative officials of the respective Governments of Canada and of the United States shall upon request be directed to attend as witnesses and to produce such available records and files or certified copies thereof as may be considered essential to the trial of civil or criminal cases, and as may be produced compatibly with the public interest.

The cost of transcripts of records, depositions, certificates and letters rogatory in civil or criminal cases, and the cost of first-class transportation both ways, maintenance and other proper expenses involved in the attendance of such witnesses shall be paid by the nation requesting their attendance at the time of their discharge by the court from further attendance at such trial. Letters rogatory and commissions shall be executed with all possible despatch and copies of official records or documents shall be certified promptly by the appropriate officials in accordance with the provisions of the laws of the respective countries.

## ARTICLE VI

The following offences are added to the list of offences numbered 1 to 3 in Article I of the Treaty concluded between Great Britain and the United States on May 18, 1908, with reference to reciprocal rights for Canada and the United States in the matters of conveyance of prisoners and wrecking and salvage, that is to say:

4. Offences against the narcotic laws of the respective Governments.

## ARTICLE VII

No penalty or forfeiture under the laws of the United States shall be applicable or attached to alcoholic liquors or to vessels, vehicles or persons by reason of the carriage of such liquors when they are in transit under guard by Canadian authorities through the territorial waters of the United States to Skagway, Alaska, and thence by the shortest route, via the White Pass and Yukon Railway, upwards of twenty miles to Canadian territory, and such

SESSIONAL PAPER No. 251

transit shall be as now provided by law with respect to the transit of alcoholic liquors through the Panama Canal or on the Panama Railroad, provided that such liquors shall be kept under seal continuously while the vessel or vehicle on which they are carried remains within the United States, its territories or possessions, and that no part of such liquors shall at any time or place be unladen within the United States, its territories or possessions.

## ARTICLE VIII

This Convention shall be ratified, and the ratifications shall be exchanged at Washington as soon as possible. The Convention shall come into effect at the expiration of ten days from the date of the exchange of ratifications, and it shall remain in force for one year. If upon the expiration of one year after the Convention shall have been in force no notice is given by either party of a desire to terminate the same, it shall continue in force until thirty days after either party shall have given notice to the other of a desire to terminate the Convention.

In witness whereof, the respective Plenipotentiaries have signed the present Convention in duplicate and have thereunto affixed their seals.

Done at the city of Washington this sixth day of June, one thousand nine hundred and twenty-four.

(Sgd.) ERNEST LAPOINTE.

(Sgd.) CHARLES EVANS HUGHES.

# INTER-ALLIED CONFERENCE

---

EXCHANGE OF TELEGRAMS BETWEEN THE BRITISH  
AND CANADIAN GOVERNMENTS REGARDING  
REPRESENTATION OF THE DOMINIONS

---

JUNE - JULY, 1924

---

*PRINTED BY ORDER OF PARLIAMENT*

OTTAWA  
F. A. ACLAND  
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY  
1924

## INTER-ALLIED CONFERENCE

---

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, June 25, 1924.

Mr. Ramsay MacDonald's statement in the House of Commons of June 23rd that he is now in communication with the Dominions regarding proposed Inter-Allied Conference, has been seen by Prime Minister in cable despatches to press here. No message on this subject has been received so far by him from Mr. Ramsay MacDonald or yourself, and before questions are asked him in the House here Prime Minister is anxious to receive same.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, June 25, 1924.

Your Prime Minister will have seen press reports of the Prime Minister's statement in Parliament on June 23rd, as to the result of the conversation with the French Prime Minister at Chequers and the proposed allied Conference in London next month. Prime Minister is away till to-morrow and arrangements for the organization of the Conference must await his return but further telegram will be sent as soon as possible.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, June 26, 1924.

Please let your Prime Minister know that I hope to telegraph again before the end of the week as to the Inter-Allied Conference. Message from him crossed my telegram of yesterday.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, June 28, 1924.

My telegram dated June 25th. Following from Prime Minister for your Prime Minister: Begins:—

I have now had an opportunity of going further into the question of the participation of the Dominion Governments in the Inter-Allied deliberations

next month. Work of the Conference will be to concert the necessary arrangements for putting the Dawes Report into operation. Conference being restricted to this one subject, question of Inter-Allied debts and problem of securities will not be dealt with. Principal task of the Conference seems therefore likely to be, to agree upon the terms of an instrument, to be signed by the Allies and by Germany, formally binding the parties executing the recommendations of the Dawes Report.

In order to avoid any appearance of wishing to amend the Treaty of Versailles, this instrument might take the form of a protocol.

As I had already suggested in conversation with the Belgian Minister, at the beginning of May, we favour the plan of fixing in such protocol (i) a date by which Legislative and other measures to be taken by Germany must be complete, and (ii) a second date, say a fortnight later, when all fiscal and economic sanctions and other arrangements, affecting the economic activities of the German Reich and now in force in German territory, will be withdrawn.

*Note.*—See later developments as set out in Anglo-French note July 9th.

Dawes Report lays down that sanctions shall not be re-imposed, except in the case of flagrant failure to fulfil conditions embodied in the Report itself. A stipulation to this effect will accordingly have to find a place in the protocol, and the question will have to be decided who is to be the authority to declare there has been flagrant failure. That duty cannot properly be entrusted to the Reparation Commission, whose functions are strictly determined by the Treaty of Versailles, since the engagements to be undertaken by Germany under the Dawes scheme go altogether beyond those imposed by the Treaty. A suggestion has been made that the Financial Committee of the League of Nations might be brought in for the purpose, but the matter is still open for discussion.

Lastly, the protocol should contain a clause providing that any dispute as to its proper interpretation shall be referred to an International Court.

You will see from above outline of the task before the Conference, that the procedure, as regards the association of the various Governments of the Empire in its work, should clearly be governed by the principle of the resolution as to the negotiation, etc., of Treaties agreed to by the Imperial Conference 1923. Our suggestion is that a meeting should be held in London of Dominion and Indian representatives, to discuss with His Majesty's Government policy to be adopted at the Conference, and make arrangements for representation.

If you agree, I should be grateful for a reply as soon as possible, and also to learn the name of the representative who will attend the preliminary meeting. As the opening date of Conference likely to be July 16th, we ought hold the preliminary meeting in the previous week. Report of Dawes Committee enclosed in Secretary of State's despatch of April 19th, No. 188. Similar telegram sent to other Dominion Prime Ministers. Ramsay MacDonald. Ends.

---

SESSIONAL PAPER No. 309

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, June 30, 1924.

Following from my Prime Minister for your Prime Minister. Begins:—

Re participation of Dominion Governments in Inter-Allied Conference: Your telegram June 28th was received yesterday (Sunday) and contents considered with colleagues at Cabinet Council to-day. We agree, from outline of the task before the Conference as set forth in your telegram, that the procedure as regards the association of the various Governments of the Empire in its work should be governed by the principle of the resolution as to the negotiation, etc., of treaties agreed to by the Imperial Conference, 1923. In this connection, we assume that the procedure with respect to the proposed protocol will be that set forth in the case of treaties negotiated at International conferences where there is a British Empire delegation, in which, in accordance with the now established practice, the Dominions and India will be separately represented.

We are pleased to concur in your suggestion that a meeting of such representatives should be held in London to discuss with His Majesty's Government policy to be adopted at the Conference and make arrangements for representation. We should like to have our Government represented by one of its Ministers at the preliminary meeting, but as you indicate this meeting should be held in the week previous to July 16th, we doubt if it will be possible so to arrange owing to the limited time between now and then.

We hope, however, to be able to arrange to have one of our Ministers represent Canada at the main Conference. To effect this, it will be necessary for us to be immediately advised if we are right in the assumption, that, as respects negotiation, signature and ratification of the proposed protocol, principles governing will be same as those regarding treaties negotiated at international conferences as referred to in Section 1, subsection (c) respecting negotiation, and Section 2, subsection (c) respecting signature, of the procedure as set forth in the resolution of the Imperial Conference, 1923. We should like, if possible, to be informed as to this before deciding on the representative to be named to attend the preliminary meeting, as the selection of the latter will necessarily be governed to some extent by the procedure to be observed with respect to our representation at the Inter-Allied Conference. Ends.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, July 3, 1924.

Your telegram dated June 30th. Following from Prime Minister for your Prime Minister: Begins:—

Your message was considered by the Cabinet July 2nd. As explained in my message of June 28th, work of the Inter-Allied Conference will be of strictly limited scope. There is no question, for example, of changing the percentage

payable to the British Empire on account of sums received by way of reparations (viz: 22 per cent) or of altering the allocation of this percentage, which was agreed at the Imperial Conference of 1921.

Also, not only will the problem of securities not be dealt with, but no military commitments will be entered into. We intend to retain the liberty of action in the event of wilful default by Germany, and not to go further than agreeing, in that event, to consult the Allies as to the nature of the sanctions to be applied.

Generally speaking, it is difficult to see that any special obligations on the Dominions will be entailed.

I thus find it difficult to give a definite answer to that part of your message which deals with the precise application of the principle of the resolution as to the negotiation, etc., of Treaties, passed at the Imperial Conference last year, to the arrangements for representation at the Inter-Allied Conference. We had contemplated that the question of representation should be discussed and settled at the preliminary conference in London, referred to in my message of June 28th. Would you have any objection to this and nominate representative accordingly to attend it? I ought to tell you quite frankly that, in the circumstances, we do see the difficulties in arranging for a separate representative of all the Dominions and India, if this should be desired, since this would result in our total representation largely out-numbering that of Foreign countries.

For this reason we had hoped to consider at the preliminary Conference with the Dominions and India, whether there was any method of arranging to keep our representation down to three.

One method might be the application of the panel system, as arranged at Paris in 1919, but as to this, I should explain that I think my own prerogative will be essential throughout, and probably that of the Chancellor of the Exchequer. Another method might be that the Dominions and India should agree on a single representative, but this would be a departure which, so far as I know, has never been discussed previously, and might very probably be regarded as open to objection.

Whatever system adopted, British Empire Delegation should, we think, remain in session during the Conference, so as to deal with all developments requiring discussion after the Conference has opened. Also our view is that arrangements should be considered as applicable to this Conference only, which as already indicated, is of a very special character. As regards the general question of the application of Conference resolution on the negotiation, etc., of Treaties, see my message of June 23rd.

Our present view is that the proposed protocol should be signed on behalf of all Powers represented at the Conference, and that separate signature(s) for the Dominions and India should be included. I should add, however, that it is intended to be an instrument not requiring ratification.

Prime Minister of the Commonwealth of Australia has nominated the High Commissioner to attend the preliminary meeting. No replies yet received from other Dominions. Duration of Conference estimated at about a week. I am repeating your message and this reply to the Commonwealth of Australia, New Zealand, Union of South Africa, and the Irish Free State. I should like to arrange the preliminary meeting, if possible, Thursday, July 10th. Ends.

---

SESSIONAL PAPER No. 309

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, July 7, 1924.

*Re* participation of Canada in Inter-Allied Conference.

Following from my Prime Minister for your Prime Minister. Begins.

I have submitted to my colleagues in Council your reply of the third instant to my telegram of the thirtieth ultimo. We feel that the representations of your telegram in respect of the negotiation and signature of the proposed protocol present so many features parallel to those of the Lausanne Treaty which have given rise to the recent discussions in your Parliament and our own, that the exact position cannot be too clearly understood or too carefully stated.

In your telegram you say: Quote:

"Our present view is that the proposed protocol should be signed on behalf of all parties represented at the Conference and that separate signatures for the Dominions and India should be included". End quote.

Elsewhere in the same message you say: Quote:

"I thus find it difficult to give a definite answer to that part of your message which deals with the precise application of the principle of the resolution as to the negotiation, etc., of treaties, passed at the Imperial Conference last year, to the arrangements for representation at the Inter-allied Conference". End quote.

And also: Quote:

"I ought to tell you quite frankly that in the circumstances we do see the difficulties in arranging for a separate representative of all the Dominions and India if this should be desired". End quote.

If the proposed protocol is to be regarded as coming within the category of treaties negotiated at international conferences where there is a British Empire delegation, and if, as stated in your telegram of June 28th, the principles of the resolution as to the negotiations, etc., of treaties agreed to by the Imperial Conference, 1923, are to apply, there would in our opinion, from the wording of the resolution, appear to be no escape from the conclusion that the now established practice with respect to negotiation in such a case requires that the Dominions and India should be separately represented, and that the existing practice with respect to signature demands signature by plenipotentiaries on behalf of the Governments of the Empire represented at the Conference, the Full Powers to be in the form employed at Paris and Washington.

At Paris and Washington, Canada's representative held a Full Power signed by His Majesty the King in the form of letters patent authorizing him to sign, (quote) "for, and in the name of His Majesty the King in respect of the Dominion of Canada," (end quote), and treaties, conventions and agreements that might tend to the attainment of the object of the Conference, the Canadian Government having, by Order in Council, sanctioned the issuance of these Full Powers by His Majesty.

If the protocol is to be signed on behalf of Canada and the terms of the resolution of the Imperial Conference are to be followed, it will, we think, be

15 GEORGE V, A. 1924

necessary to have at the Conference a representative of Canada holding a full power signed by His Majesty the King in the form described, and sanctioned by Order in Council of our Government.

We regret that it will not be possible for Canada to be represented at the preliminary meeting by a member of our Cabinet who is wholly familiar with all the considerations of which we think full account should be taken and who might also serve as Canada's representative at the Inter-Allied Conference. As time, however, will not permit of this, I am to-day cabling our High Commissioner in London, the Honourable Peter C. Larkin, to represent our Dominion at the preliminary meeting which it is anticipated will be held on Thursday, and am instructing Mr. Larkin to present the point of view of our Government as herein set forth. I should be deeply obliged if you would have Mr. Larkin immediately supplied with copies of all the correspondence that has been exchanged between our respective Governments upon the subject of Canada's representation at the Inter-Allied Conference, including a copy of this message, in order that he may, in advance of the meeting, be made as familiar as possible therewith. Ends.

---

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, July 9, 1924.

Following from my Prime Minister for your Prime Minister, Begins:—

On the Orders of the Day to-day a question was asked with respect to the Inter-Allied Conference, to which I replied intimating that I would bring its contents to the attention of His Majesty's Government with a view to ascertaining your wishes in the matter. I should be obliged if you would kindly indicate the reply which you wish me to make as from His Majesty's Government. The Question and Answer appear on Hausard as follows:

"Mr. Jos. T. Shaw (West Calgary): Press despatches having indicated that Premier Ramsay MacDonald has issued a memorandum with reference to the proceedings at the proposed Conference regarding the Dawes report, and that the French Press in discussing the memorandum has treated it as a formulation of British policy, I want to ask the Prime Minister the following questions: First, has the Government received such a memorandum? Second, will the Government lay on the table all the correspondence in connection with this matter? And lastly, if for any reason the Government is unable to table all the correspondence, will the memorandum referred to be tabled?"

"Rt. Hon. W. L. Mackenzie King (Prime Minister): The Government has not received a formal memorandum, but has received a communication from the Prime Minister of Great Britain, intimating the matters that would probably come before the Inter-Allied Conference. That communication is very similar in its contents to the memorandum to which I think the honourable member refers, and which I have seen quoted in the press. It was an intimation from the Prime Minister of Great Britain to the Government of Canada of the matters which would

SESSIONAL PAPER No. 309

probably be discussed at the Inter-Allied Conference. There was, however, a further communication, requesting that the Government should name a representative to meet with the representatives of the other British Dominions in conference with His Majesty's Government in London this week. The Conference, I believe, takes place to-morrow, and we have asked our High Commissioner, Mr. Larkin, to represent us at that preliminary conference, at which, I understand, the policy of the British Empire in this matter will be considered. Pending authority from the British Government, I should hesitate to place on the table any of the communications which have thus far been received, but I shall have pleasure in communicating to the British Government the request of the honourable member with a view to ascertaining their wishes in the circumstances." Ends.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, JULY 11, 1924.

Following from Prime Minister for your Prime Minister: Begins:—

I have had full and frank talk at Conference with the High Commissioners for Canada, Commonwealth of Australia, New Zealand, Irish Free State, and the Secretary of State for India, this afternoon Friday, and have explained to them in detail the difficulties which confront us in securing separate representation of the Dominions and India in the same manner as at Versailles and Washington.

It is of most urgent necessity (?) that the Dawes Report should be put into operation without delay, and that the Inter-Allied Conference, which is to deal with nothing but how this can be done, and is therefore not treaty making, should meet as fixed on July 16th.

Under the present arrangements delegations of each of the chief Powers are to consist of three representatives, and even if we were in a position to negotiate an extension now, it could not be fixed up before next Wednesday. In view of the political and economic situation in Europe, that would mean that the Conference would be postponed indefinitely. This would destroy all chances of the Report being put into operation, with disastrous consequences to Europe and indeed the whole world. All that the British Government has striven for would be wrecked and any hope of obtaining financial results from the Treaty of Versailles would be gone. While Australia, if separate representation at the Conference is impossible, and New Zealand are prepared to be represented by a British Minister, instructions of the other High Commissioners present did not enable any definite recommendations to be made. It seemed, however, that the following arrangements were likely to meet the situation best—

(a) British representatives to keep in continuous consultation with the High Commissioner or other representative(s) appointed by the Governments of the Dominions and India, during the course of the sittings of the Conference.

(b) Dominion Governments to be kept fully informed by telegraph of Conference proceedings.

15 GEORGE V, A. 1924

I gave the High Commissioners present and the Secretary of State for India following assurance "Whatever is agreed to now, under exceptional (?) character, this Conference will not be regarded or quoted as a precedent and a statement to that effect will be made by me to the Conference".

I am quite sure you will appreciate our difficulties, and do your best to help us. Please reply urgently.

I am sending this message to the Prime Ministers of Canada, Commonwealth of Australia and New Zealand, and to the President of the Executive Council of the Irish Free State. I am also repeating it to the Prime Minister of the Union of South Africa. Ramsay MacDonald. Ends.

---

*From the Secretary of State for the Colonies to the Governor General*

LONDON, July 12, 1924.

Following is English text of the Anglo-French Note prepared in Paris, July 9th. Begins:—

British and French Governments have agreed to submit to the Allied Governments following and recommend to them acceptance of the conclusions therein set.

1. In the view of the British and French Governments, object of the Conference to be convened in London July 16th, is to settle the method of putting into execution the Experts' Report, so far as concerns questions the solution of which devolves on interested Governments.

2. The two Governments recognize the importance of the economic and financial points of view, and more especially the necessity of establishing a state of confidence, which may give necessary security to eventual lenders, but they do not consider that this necessity is incompatible with respect for the provisions of the Treaty of Versailles, a point which the following considerations will make perfectly clear.

Moreover violation of these provisions would lead to a collapse of both of the permanent foundations on which rests the peace so painfully achieved, and of confidence in solemn national engagements, and would tend not to prevent but to inaugurate new conflicts.

3. Experts were appointed by the Reparation Commission, who invited them on November 30th, 1923, to "consider means of balancing the budget and measures to be taken to stabilize the currency of Germany."

Reparation Commission in this respect acted in view of the powers vested in them by Part VIII of the Treaty of Versailles, and notably by Article 234 (here follows text of Article).

It was in order to obtain enlightenment in the exercise of these powers that the Reparation Commission consulted the Experts Committee appointed under Paragraph 7 of Annex II to Part VIII, which reads as follows (here follows text).

## SESSIONAL PAPER No. 309

4. Experts submitted their reports to the Reparation Commission, which, by a letter of April 17th, communicated them to the interested Governments, stating the Commission had unanimously decided (i) to take note of the reply in which the German Government adhere to the conclusions of the Experts' Reports, (ii) to approve, within the limits of its competency, the conclusions formulated in these reports, and to adopt the methods contained therein, (iii) to transmit officially the reports of the Committee to the Governments concerned, recommending to them the conclusions which fall within their competency, so that the suggested plan may produce their full effect as early as possible, etc."

As the Reparation Commission point out, certain of the measures, which have to be taken in order to put into operation the Experts' plan, are thus solely within the competency of Governments.

This is moreover explicitly stated in the Dawes Report, paragraph 3 of which runs as follows (here follows text).

5. It becomes necessary, therefore, that creditors of the Government should conclude an arrangement in virtue of which they engage to take measures within their competency, in order to ensure effect is given to the Dawes plan.

British and French Governments declare it is of the highest importance that the Experts' Report shall be put into operation without delay, in order to ensure payment of reparations by Germany, and to bring the Allies back to co-operative action.

To this end, the two Governments have agreed on the following points:

(a) A Conference shall meet in London July 16th; two Governments note with satisfaction that the United States of America have decided to be represented.

(b) Governments concerned will first of all confirm acceptance, so far as they are concerned, of the conclusions of the Dawes Report—an acceptance which they have already given individually to the Reparation Commission.

(c) The arrangements to be concluded must not diminish the authority of the Reparation Commission. But in view of the fact that some security must be given to those who provide the 800 million gold marks and take up economic bonds, the two Governments will unite in an effort to secure the presence of an American on the Reparation Commission, in the event of the latter having to consider a default on the part of Germany. If this solution proved impossible, and in the event of members of the Reparation Commission being divided in opinion as to the fact, the two Governments would recommend that the Reparation Commission should call in the Agent General for reparation payments, who is to be of American nationality.

(d) Dawes Report contains provisions to meet minor defaults by means of various supervisory organizations; but an important wilful default would at once raise the question of Germany's good faith. In the event of the Reparation Commission declaring such a default, the Governments concerned will confer at once on how to put into operation such measures as they shall agree to take to protect themselves and investors.

(e) The plan by which German economic and fiscal unity should be restored, so soon as the Reparation Commission has decided that the Dawes Report is in operation, shall be settled at the Inter-Allied Conference. The Reparation Commission will be asked to prepare and present to the Inter-Allied Conference suggestions for such plan.

(f) In event of experience showing the necessity for modifications of the Experts' plan, they should only be introduced subject to all necessary guarantees, and by common agreement between interested Governments, except in so far as the Reparation Commission already has the necessary powers.

(g) In order to take full advantage of reparation payments provided for in the Experts' Report, and secure that they may benefit the Nations interested, Allies shall appoint a special body to advise the Governments interested what organizations should be set up in each country to use the payments made by Germany (in particular concerning transfer and deliveries in kind).

(h) It will also be necessary to settle the question of who shall be the authority to be entrusted with the interpretation of the Dawes Report, as well as of the arrangements to be concluded in London for putting the report into operation.

6. In the event of difficulties of interpretation arising in respect of the present document, the two Governments agree to refer these to their respective legal advisers.

7. The two Governments have had a preliminary exchange of views on the question of Inter-Allied Debts. British Government declare they, in consultation with the Governments concerned, seek an equitable solution of this problem, due regard being had to all factors involved. This question is therefore referred, for a preliminary examination, to the Experts of the Treasury.

8. The two Governments have likewise proceeded to a preliminary exchange of views on the question of securities. They are aware that public opinion requires pacification; they agree to co-operate to devise—through the League of Nations or otherwise—as opportunity presents itself, means of securing this, and to continue consideration of the question until the problem of general securities can be finally solved. Ends.

---

*From the Governor General to the Secretary of State for the Colonies.*

OTTAWA, July 13, 1924.

Following from Prime Minister for your Prime Minister. Begins:—

Inter-Allied Conference—Your telegram July 11th was received yesterday, and contents carefully considered by Cabinet at meeting held during day. We are naturally most anxious to avoid any embarrassment to your Government, and it was with this end in view that when informed by you that Inter-Allied Conference came within scope 1923 Imperial Conference resolution and that in consequence we were being asked to send a representative to a preliminary

## SESSIONAL PAPER No. 309

conference between His Majesty's Government and the self-governing Dominions and India to arrange for representation at Inter-Allied Conference we deemed it advisable to anticipate the possibility of any misunderstanding by stating clearly our position with respect to representation in accordance with the terms of that Resolution. From the statements of your telegram of July 11th it would seem that the preliminary conference was not, as we had been led to believe, so much for the purpose of arranging for representation of the Dominions and India on a British Empire Delegation as for the purpose of informing the Dominions and India of what, in advance of consultation with their representatives, had been decided upon with respect to representation at the Inter-Allied Conference. This is precisely the procedure adopted with respect to representation at the Lausanne Conference to which exception has been taken, concerning which, we have been told, we should have spoken more plainly at the time, and which for many reasons, we had hoped would not be repeated. We regret that we are unable to acquiesce in this method of proceeding, or to depart from the position which we have consistently maintained of having Canada's right to representation at the Inter-allied Conference determined in accordance with the precedents established at Versailles and Washington, and confirmed by the 1923 Conference Resolution which our Government has formally approved. With regard to possible objection by other countries we deem it sufficient to observe that the British Empire has an absolute right to determine its internal organization which in the relevant aspect has already received international recognition. In case the rules of procedure at the Inter-Allied Conference do not permit the entire British Empire Delegation to be present at the Sessions of the Conference, we are quite prepared to agree that the representation at such Sessions shall be determined from time to time by the Delegation, but we regard as essential to our signature to any protocol or other agreement negotiated at an international conference where there is a British Empire Delegation, representation of Canada on such delegation by a delegate holding full powers in the manner set forth in my previous telegram. In thus stating our position we feel that we are adopting the only course which will commend itself to our parliament. Ends.

---

*From the Secretary of State for the Colonies to the Governor General.*

LONDON, July 15, 1924.

Please communicate following very urgent message from me to your Prime Minister. Begins:—

In the unavoidable absence of the Prime Minister I had further meetings this morning with the High Commissioners for Canada, Commonwealth of Australia, New Zealand and Irish Free State. I read to them your message to the Prime Minister of July 13th and replies from the other Dominions which are being repeated to you separately. I am grateful for your suggestion that

15 GEORGE V, A. 1924

representation at the Sessions of the Inter-Allied Conference should be determined from time to time by the British Empire Delegation which I interpret as meaning that you think the panel system (which will enable one Dominion representative to be present at the Sessions each day) offers way out of difficulty. This plan certainly seems the best means of meeting the position and I am prepared to take steps accordingly and to arrange for each Dominion representative to be furnished with the necessary full powers.

Please reply to-day in view of the opening of the Conference to-morrow. Ends.

---

*From the Secretary of State for the Colonies to the Governor General.*

LONDON, July 15, 1924.

Following from Prime Minister for your Prime Minister. Begins:—

Your message of July 9th. There are really two questions involved. First—representation of the Dominions in connection with the Inter-Allied Conference; second—Agenda for the Conference. As to the first, would it not be best to defer the question of publication of papers till correspondence complete. As to the second, it is quite true that the first part of my message of June 28th contained the substance of the memorandum referred to in the question in the Canadian House of Commons, but as you know there have been later developments, which resulted in my visit to Paris and joint Anglo-French Note subsequently issued. This was telegraphed by the Secretary of State for the Colonies, July 12th, and has been published. Ends.

---

*From the Governor General to the Secretary of State for the Colonies*

OTTAWA, July 15, 1924.

Prime Minister desires me to send you following message in reply to your communication of to-day. Begins:—

*Re representation, Inter-Allied Conference.*

My understanding of your telegram just received is that you are agreeable to following, as respects Inter-Allied Conference which opens to-morrow, precedent of Paris Peace Conference with respect to representatives of self governing Dominions on British Empire Delegation, and that procedure to be followed at Inter-Allied Conference as respects British Empire Delegation will be similar to that followed at Paris Peace Conference.

In accordance with this understanding, our Government has to-day passed Order in Council appointing the Honourable N. A. Belcourt as the representative of Canada at the Inter-Allied Conference and requesting issuance to him of the necessary full powers. Ends.

---

SESSIONAL PAPER No. 309

*From the Governor General to the Secretary of State for the Colonies.*

OTTAWA, July 15, 1924.

Minute of Council approved to-day recommending the appointment of the Honourable Napoleon Antoine Belcourt, member of the King's Privy Council for Canada and a Senator, as Commissioner and Plenipotentiary in respect of the Dominion of Canada to the forthcoming Conference at London, on 16th July, 1924, for the purpose of considering Dawes Report on German Reparations, and requesting the grant of full powers to Senator Belcourt.

---

P.C. 1233

*Certified copy of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 15th July, 1924.*

The Committee of the Privy Council have had before them a report, dated 15th July, 1924, from the Right Honourable W. L. Mackenzie King, Prime Minister and Secretary of State for External Affairs, representing that in connection with the forthcoming conference to be held at London on the 16th July, 1924, for the purpose of considering the Dawes Report on German Reparations, it is expedient to invest a fit person with full power to treat on the part of His Majesty the King in respect of the Dominion of Canada with a person or persons similarly empowered on the part of the other participating States.

The Minister therefore recommends that His Majesty the King be humbly moved to issue Letters Patent to the Honourable Napoleon Antoine Belcourt, a Member of the King's Privy Council for Canada and a Senator, naming and appointing him as commissioner and plenipotentiary in respect of the Dominion of Canada with full power and authority to conclude with such plenipotentiary or plenipotentiaries as may be vested with similar power and authority on the part of any powers or states, any treaties, conventions or agreements in connection with the said conference, and to sign for and in the name of His Majesty the King in respect of the Dominion of Canada everything so agreed upon and concluded and to transact all such other matters as may appertain thereto.

All of which is respectfully submitted for Your Excellency's approval.

E. J. LEMAIRE,  
Clerk of the Privy Council.

---

15 GEORGE V, A. 1924

*From the Secretary of State for the Colonies to the Governor General.*

LONDON, July 17, 1924.

Following from your Prime Minister, begins:—

Your two messages of July 15th in regard to my message of the same day, were read at (?) further meeting with the High-Commissioners to-day, at which Senator Belcourt was present.

In order to avoid any possibility of misunderstanding, I want to make it quite clear that the proposal in my message of July 15th was that the Canadian representative should attend the meetings of the Inter-Allied Conference under the panel system in rotation with the representatives of the other Dominions.

This procedure follows that at the Paris Peace Conference in so far as that Conference provided that each Delegation had the right to avail itself of the panel system, but is not in accordance with that part of the rules of the Paris Conference which provided for separate representation of the Dominions and India, in addition to the possibility of their inclusion, if so desired, in the representation of the British Empire by the panel system.

I feel bound to point this out before definite arrangements made for the representation of the Dominions, as I am not sure on reading your telegram whether this position was understood.

I hope very much that my proposal (which has already been accepted on behalf of Australia, New Zealand and India) may be carried out, it being understood of course, that the arrangement is a special one, and governed by the Prime Minister's assurance contained in my telegram dated July 11th.

You will also like to know that it can be arranged for representatives of the Dominion to be present at the meetings of the Inter-Allied Conference on the days when it is not their turn to sit as members of the British Empire Delegation. This will ensure that they are fully acquainted with all that goes on in conference. Ends.

---

*From the Governor General to the Secretary of State for the Colonies.*

OTTAWA, July 17, 1924.

Following from my Prime Minister. Begins:—

In view of representations and assurances contained in your telegram just received, and in order to avoid as far as possible any embarrassment to His Majesty's Government in existing situation and to facilitate as far as may be in our power work of the Inter-Allied Conference, our Government is prepared to accept your proposal of July 15th as interpreted in your telegram of to-day. I am advising our High Commissioner and Senator Belcourt accordingly.
