- ✓ The Communities in Context research initiative
- ✓ Age Structure
 - Children (0-14)
 - Seniors (65 years and over)
- ✓ Mobility and socio-cultural characteristics
 - Immigrants
 - Born outside the province of residence
 - Recent international immigrants (previous 5 years)
 - In-Migrants interprovincial and international (previous 5 years)
 - Visible minorities

"Communities in Context"

- √ The "Communities in Context" Research Initiative
 - Relative indices
 - Key Themes
 - Geographic and linguistic concepts

Communities in Context

✓ Minority-majority Index (mmi)

 Compares OLMC in a given region with the majority group with whom it shares the territory

✓ Relative Geographic Indices (rgi)

- Compared to OLMCs in the province (rgi-prov)
- Compared to OLMCs in the PCH region (rgi-pch)
- Compared to same OLMC across Canada (rgi-same olmc)
- Compared to all OLMCs in Canada (rgi-all olmc)
- Compared to the Canadian national average (rni)

✓ Gender Index (gi)

 Compares the characteristics of the female group in a given population with the male group

√ Temporal Index (ti)

 Compares given community with itself at a previous period in time (ex. 1996-2011, 2001-2011, 2006-2011)

✓ Intergenerational Index (intergen)

 Compares the 25-44 age cohort with the 45-64 age cohort in a population

✓ Reading the Values

- A value of 1.00 for a relative index means that there is no difference in the populations being compared.
- A relative index greater than 1.00 means that the characteristic is more common in the featured minority population than in the base population with whom it is being compared. (Values greater than 1.20 indicate that the characteristic is much more likely to be observed in the minority.)
- A relative index less than 1.00 means that the characteristic is less common in the featured minority population than in the base population with whom it is being compared. (Values less than 0.80 indicate that the characteristic is much less likely to be observed in the minority.)
- Values between 0.95 and 1.05 are considered to be similar.

- ✓ **Demolinguistic** (language concepts, linguistic continuity, language used in the home, language of work, bilingualism)
- ✓ **Demographic** (size, proportion, growth, urbanization, youth/seniors cohorts)
- ✓ **Sociocultural** (immigrants, interprovincial migrants, place of birth, visible minorities)
- ✓ **Socio-economic** (education, labour force status, income)

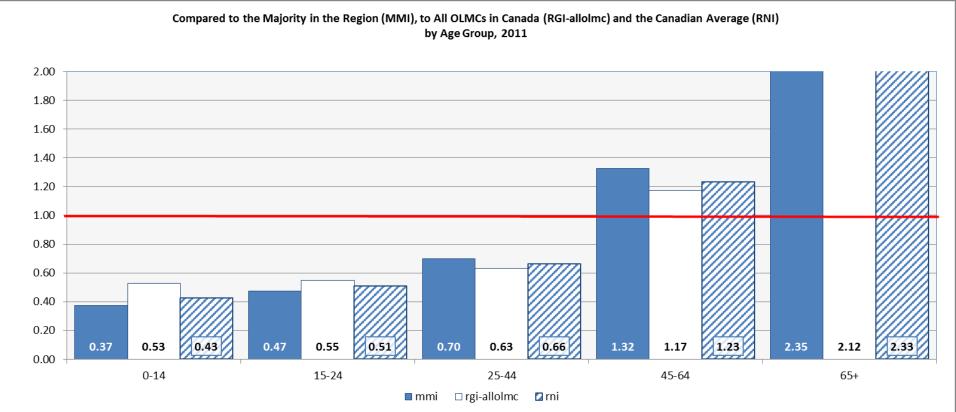

- ✓ Data sources: Canada Census 1996, 2001, 2006, 2011, National Household Survey, 2011, Statistics Canada
- ✓ the linguistic definition used, unless otherwise stated, is the First Official Language Spoken (FOLS) with multiple responses distributed equally.
- ✓ Geographic Levels
 - National (Canada, Canada less Quebec, Quebec)
 - PCH Region (5)
 - 1. Atlantic PCH Region
 - 2. Quebec PCH Region
 - 3. Ontario PCH Region
 - 4. Prairies and Northern PCH Region
 - 5. Western PCH Region
 - Provinces/territories (13)
 - Economic Regions (76)
 - Census Divisions (293)

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 1996, 2001 and 2006 Census of Canada, Statistics Canada, 20% sample and the 2011 National Household Survey, Statistics Canada.

Age Structure of the OLMC Population Compared to the Majority, to all OLMCS in Canada and to the Canadian Average, 2011

- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.
- The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

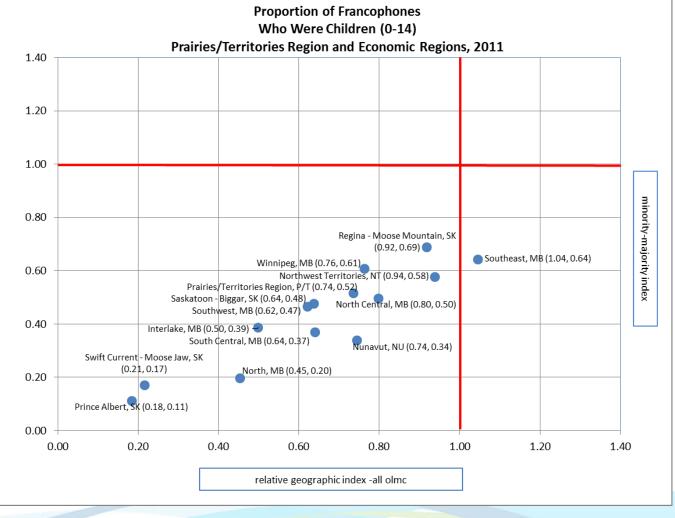

Children (0-14) in the OLMC Population Minority-Majority Index by Economic Regions, 2011

- ✓ The Francophone communities in Prince Albert (0.11), Swift Current Moose Jaw (0.17), and North (0.20) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the proportion of children (0-14 years).
- ✓ The regions of Regina Moose Mountain (0.69), Southeast (0.64), and Winnipeg (0.61) showed the highest levels for the minoritymajority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the proportion of children (0-14 years).

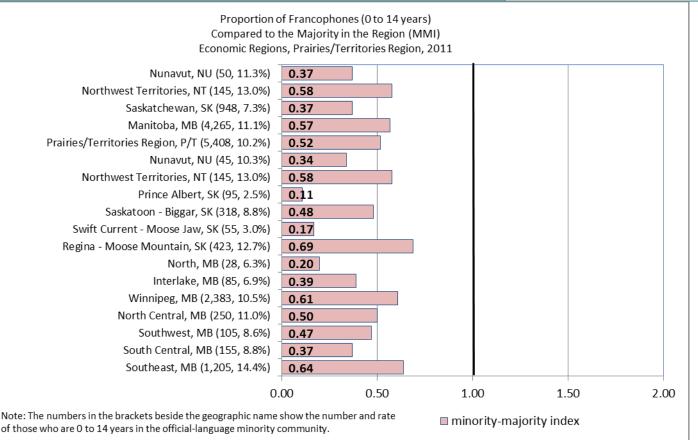

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

Proportion of Children (0-14) in the OLMC Population
Compared to the Majority
and to all OLMCs Across Canada, 2011

- ✓ The regions located in the top right quadrant displayed a higher proportion of children (0-14 years) in the OLM population than in both their neighbouring majority and the total OLMC population of Canada.
- ✓ The regions located in the top left quadrant displayed a higher proportion of children (0-14 years) in the OLM population than in their neighbouring majority and a lower OLMC proportion of children (0-14 years) than in the total OLMC population of Canada.
- ✓ The regions located in the bottom right quadrant displayed a lower proportion of children (0-14 years) in the OLM population than in their neighbouring majority and a higher OLMC proportion of children (0-14 years) than in the total OLMC population of Canada.
- ✓ The regions located in the bottom left quadrant reported a lower proportion of children (0-14 years) in the OLM population than in both their neighbouring majority and in the total OLMC population of Canada.
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

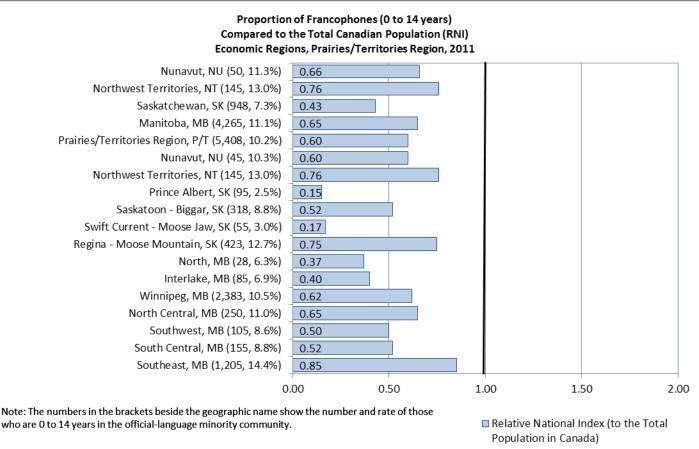

Children (0-14) in the OLMC Population Minority-Majority Index by Economic Regions, 2011

- ✓ The Francophone
 communities in Prince Albert
 (0.11), Swift Current Moose
 Jaw (0.17), and North (0.20)
 displayed the lowest levels for
 the minority-majority index
 (MMI) in the
 Prairies/Territories Region
 when we consider the
 proportion of children (0-14
 years).
- ✓ The regions of Regina Moose Mountain (0.69), Southeast (0.64), and Winnipeg (0.61) showed the highest levels for the minority-majority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the proportion of children (0-14 years).

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

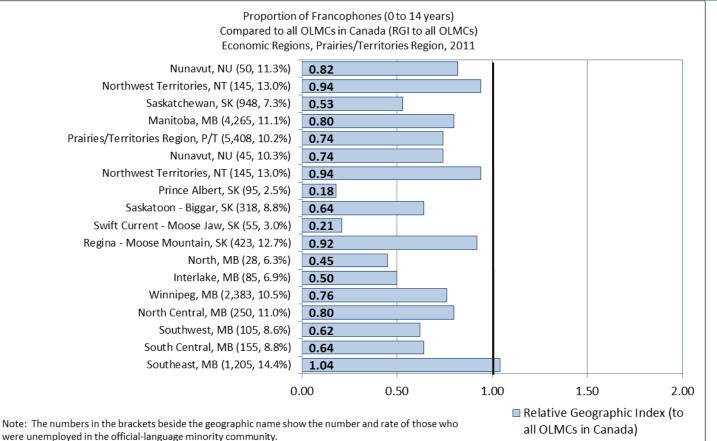

Children (0-14) in the OLMC Population Relative National Index by Economic Regions, 2011

- The Francophone communities in Prince Albert (0.15), Swift Current Moose Jaw (0.17), and North (0.37) displayed the lowest levels for the Relative National Index for Francophones in the Prairies/Territories Region.
- ✓ The regions of Southeast (0.85), Northwest Territories (0.76), and Regina Moose Mountain (0.75) showed the highest levels for the Relative National Index among Francophone communities across the Prairies/Territories Region.

The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

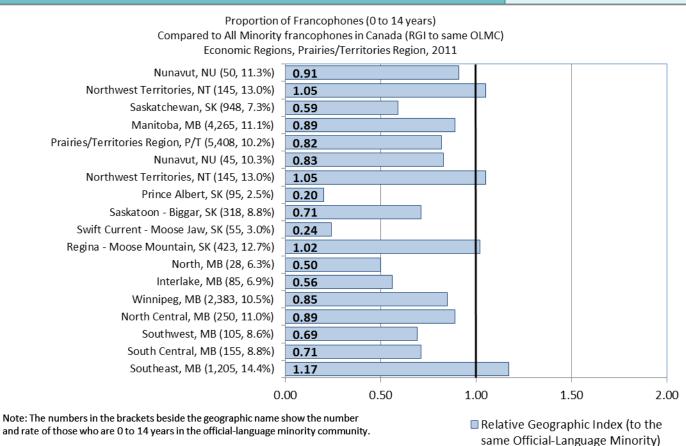

Children (0-14) in the OLMC Population Relative Geographic Index to all OLMCs by Economic Regions, 2011

- ✓ The Francophone
 communities in Prince Albert
 (0.18), Swift Current Moose
 Jaw (0.21), and North (0.45)
 displayed the lowest levels for
 the Relative Geographic Index
 to all OLMCs (rgi-all olmc) for
 proportion of children (0-14
 years) in the
 Prairies/Territories Region.
- ✓ The regions of Southeast
 (1.04), Northwest Territories
 (0.94), and Regina Moose
 Mountain (0.92) showed the
 highest levels for the Relative
 Geographic Index to all
 OLMCs (rgi-all olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

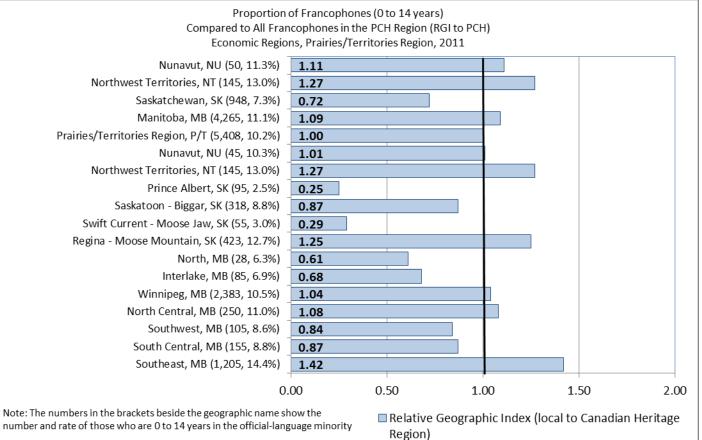

Children (0-14) in the OLMC Population Relative Geographic Index to the Same OLMC by Economic Regions, 2011

- ✓ The Francophone communities in Prince Albert (0.20), Swift Current Moose Jaw (0.24), and North (0.50) displayed the lowest levels for the Relative Geographic Index to the Same OLMC (rgi-same olmc) in the Prairies/Territories Region.
- ✓ The regions of Southeast
 (1.17), Northwest Territories
 (1.05), and Regina Moose
 Mountain (1.02) showed the
 highest levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

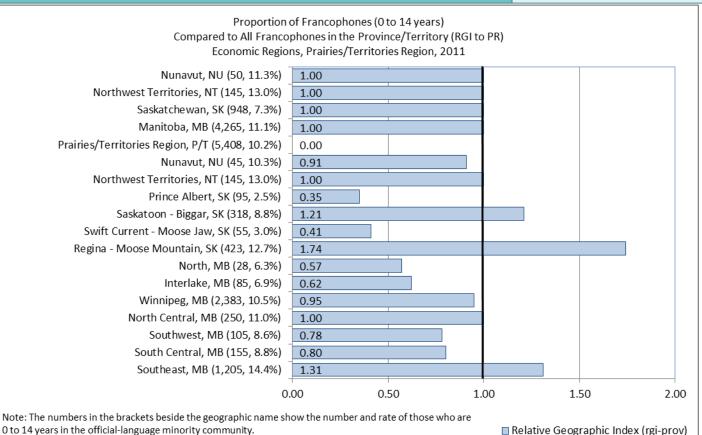

The Relative Geographic Index to the Same OLMC (rgi-same olmc) compares the value for a local OL minority population with the total OL minority population with a given language, that is, Francophone minority populations are compared with all Francophones in a minority situation across Canada and Quebec Anglophone regional communities are compared with the total Anglophone population of Quebec.

Children (0-14) in the OLMC Population Relative Geographic Index to the PCH Region by Economic Regions, 2011

- ✓ The Francophone communities in Prince Albert (0.25), Swift Current Moose Jaw (0.29), and North (0.61) displayed the lowest levels for the Relative Geographic Index to Canadian Heritage region (rgi-pch) in the Prairies/Territories Region.
- ✓ The regions of Southeast
 (1.42), Northwest Territories
 (1.27), and Regina Moose
 Mountain (1.25) showed the
 highest levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch)
 among Francophone
 communities across the
 Prairies/Territories Region.

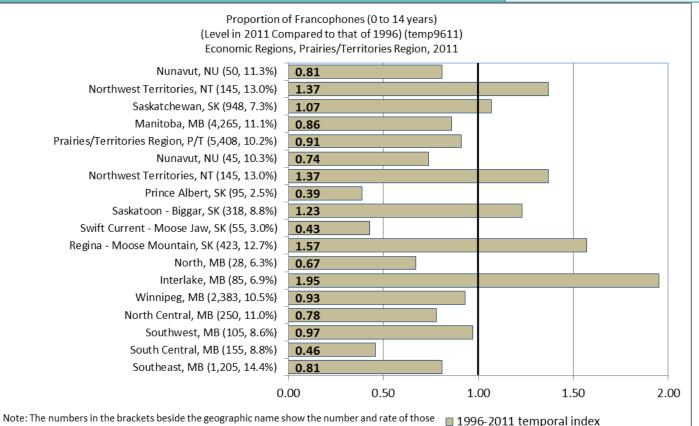

Children (0-14) in the OLMC Population Relative Geographic Index to the Province by Economic Regions, 2011

- ✓ The Francophone communities in Prince Albert (0.35), Swift Current Moose Jaw (0.41), and North (0.57) displayed the lowest levels for the Relative Geographic Index to Province (rgi-prov) in the Prairies/Territories Region.
- ✓ The regions of Regina Moose Mountain (1.74), Southeast (1.31), and Saskatoon - Biggar (1.21) showed the highest levels for the Relative Geographic Index to Province (rgi-prov) among Francophone communities across the Prairies/Territories Region.

who are 0 to 14 years in the official-language minority community.

Children (0-14) in the OLMC Population Temporal Index by Economic Regions, 1996-2011

- ✓ The Francophone communities in Prince Albert (0.39), Swift Current Moose Jaw (0.43), and South Central (0.46) displayed the lowest levels for the 1996-2011 temporal index (temp9611) in the Prairies/Territories Region.
- ✓ The regions of Interlake (1.95),
 Regina Moose Mountain
 (1.57), and Northwest
 Territories (1.37) showed the
 highest levels for the 19962011 temporal index
 (temp9611) among
 Francophone communities
 across the Prairies/Territories
 Region.

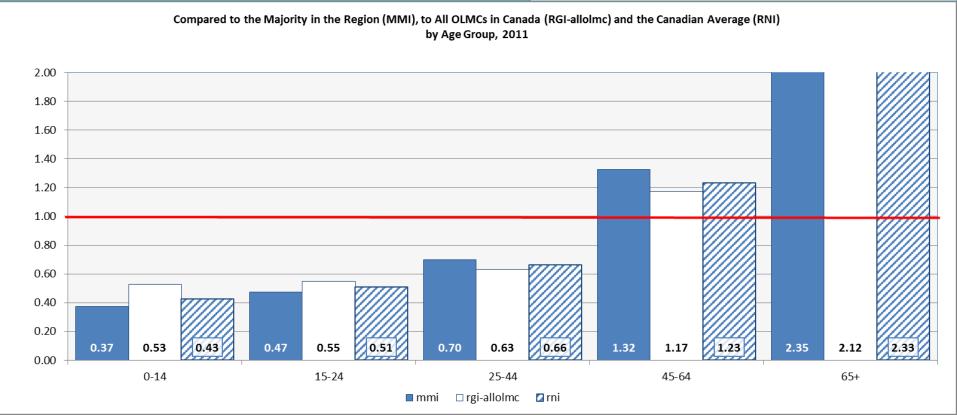

The 1996-2011 temporal index (temp9611) compares the value for the OL minority population in a given region in 2011 with the same population in 1996. A temporal index higher than 1.00 indicates that the value is more present in 2011 than it was in 1996 and a temporal index lower than 1.00 means that the characteristic is less present in 2011 than it was in 1996.

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 1996, 2001 and 2006 Census of Canada, Statistics Canada, 20% sample and the 2011 National Household Survey, Statistics Canada.

Age Structure of the OLMC Population Compared to the Majority, to all OLMCS in Canada and to the Canadian Average, 2011

- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.
- The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

1.5% Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 2011 National Household Survey, Statistics Canada. The relative indices are part of the "Communities in Context" research initiative which compares official-language minority communities with their majority neighbours, with other OLMC communities at various levels of geography and with themselves by gender, across time and inter-generationally. For further information on the methodolgy and concepts used in this research initiative, please refer to

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the

Seniors (65 plus) in the OLMC Population
Minority-Majority Index
by Economic Regions, 2011

- ✓ The Francophone communities in Northwest Territories (1.16), Southeast (1.34), and Southwest (1.34) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the proportion of seniors (65 years and over).
- ✓ The regions of Prince Albert (3.01), Parklands (2.76), and North (2.65) showed the highest levels for the minority-majority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the proportion of seniors (65 years and over).

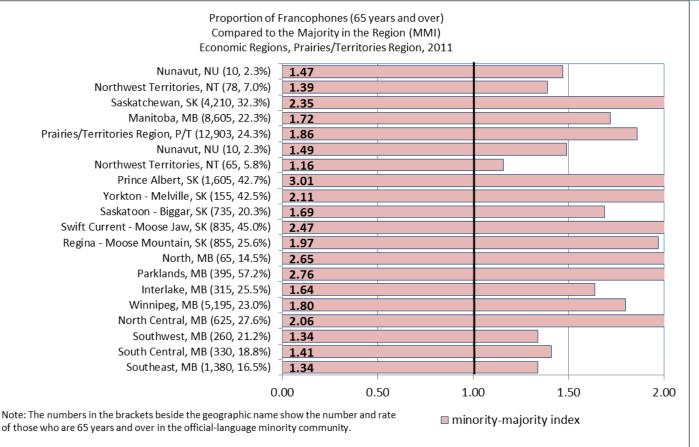

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

Proportion of Seniors (65 plus) in the OLMC Population Compared to their Neighbouring Majority and to all OLMCs Across Canada, 2011

- ✓ The regions located in the top right quadrant displayed a higher proportion of seniors (65 years and over) in the OLM population than in both their neighbouring majority and the total OLMC population of Canada.
- The regions located in the top left quadrant displayed a higher proportion of seniors (65 years and over) in the OLM population than in their neighbouring majority and a lower OLMC proportion of seniors (65 years and over) than in the total OLMC population of Canada.
- The regions located in the bottom right quadrant displayed a lower proportion of seniors (65 years and over) in the OLM population than in their neighbouring majority and a higher OLMC proportion of seniors (65 years and over) than in the total OLMC population of Canada.
- The regions located in the bottom left quadrant reported a lower proportion of seniors (65 years and over) in the OLM population than in both their neighbouring majority and in the total OLMC population of Canada.
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

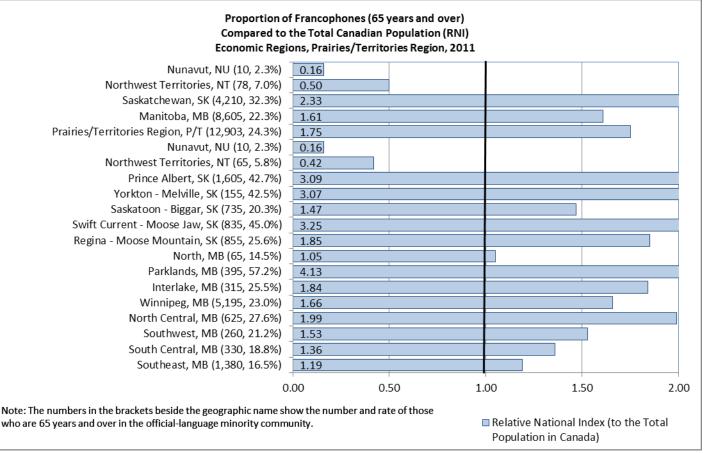

Seniors (65 plus) in the OLMC Population Minority-Majority Index by Economic Regions, 2011

- ✓ The Francophone
 communities in Northwest
 Territories (1.16), Southwest
 (1.34), and Southeast (1.34)
 displayed the lowest levels for
 the minority-majority index
 (MMI) in the
 Prairies/Territories Region
 when we consider the
 proportion of seniors (65
 years and over).
- ✓ The regions of Prince Albert (3.01), Parklands (2.76), and North (2.65) showed the highest levels for the minority-majority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the proportion of seniors (65 years and over).

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

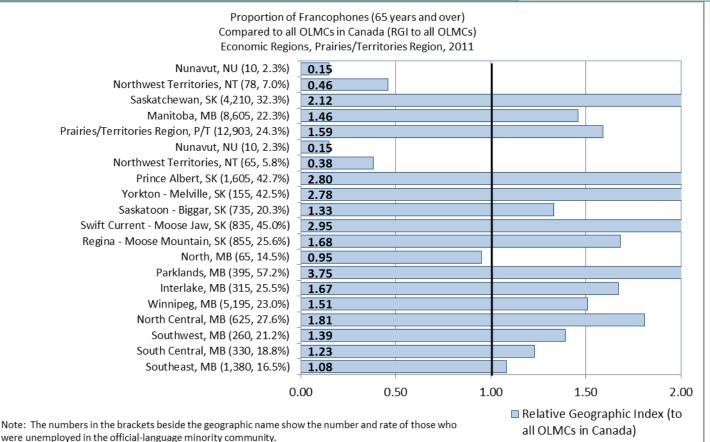

Seniors (65 plus) in the OLMC Population Relative National Index by Economic Regions, 2011

- ✓ The Francophone communities in Nunavut (0.16), Northwest Territories (0.42), and North (1.05) displayed the lowest levels for the Relative National Index for Francophones in the Prairies/Territories Region.
- ✓ The regions of Parklands
 (4.13), Swift Current Moose
 Jaw (3.25), and Prince Albert
 (3.09) showed the highest
 levels for the Relative National
 Index among Francophone
 communities across the
 Prairies/Territories Region.

The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

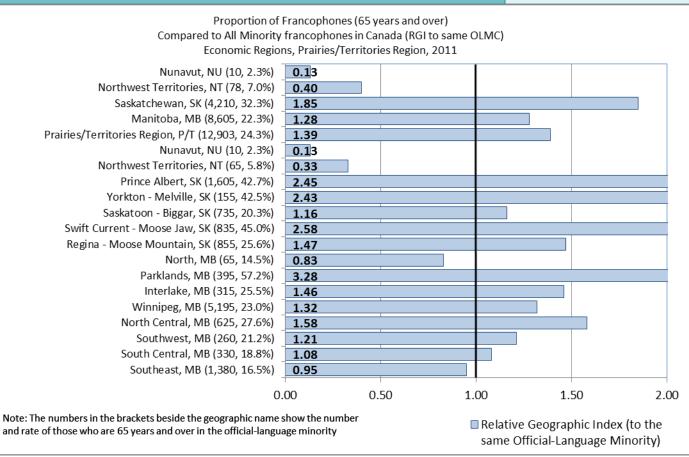

Seniors (65 plus) in the OLMC Population Relative Geographic Index to all OLMCs by Economic Regions, 2011

- ✓ The Francophone communities in Nunavut (0.15), Northwest Territories (0.38), and North (0.95) displayed the lowest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) for proportion of seniors (65 years and over) in the Prairies/Territories Region.
- The regions of Parklands
 (3.75), Swift Current Moose
 Jaw (2.95), and Prince Albert
 (2.80) showed the highest
 levels for the Relative
 Geographic Index to all OLMCs
 (rgi-all olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

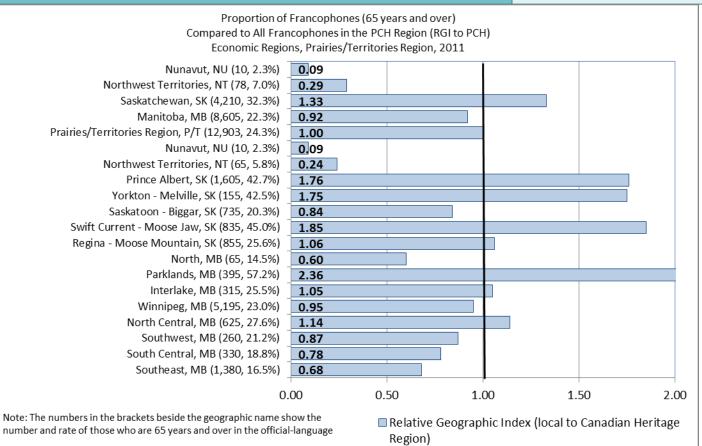

Seniors (65 plus) in the OLMC Population Relative Geographic Index to the Same OLMC by Economic Regions, 2011

- ✓ The Francophone communities in Nunavut (0.13), Northwest Territories (0.33), and North (0.83) displayed the lowest levels for the Relative Geographic Index to the Same OLMC (rgi-same olmc) in the Prairies/Territories Region.
- ✓ The regions of Parklands
 (3.28), Swift Current Moose
 Jaw (2.58), and Prince Albert
 (2.45) showed the highest
 levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

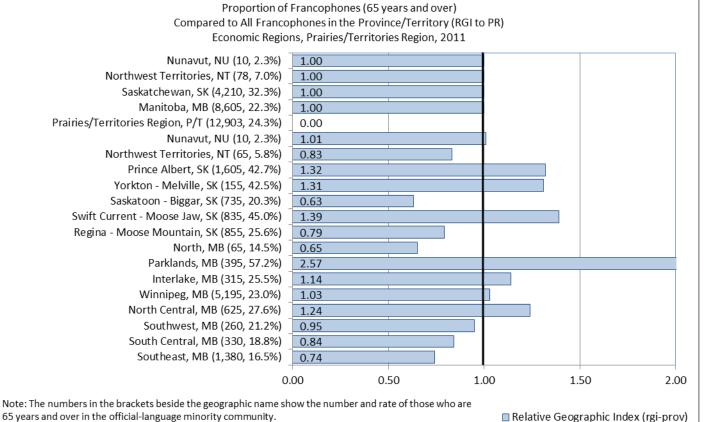

The Relative Geographic Index to the Same OLMC (rgi-same olmc) compares the value for a local OL minority population with the total OL minority population with a given language, that is, Francophone minority populations are compared with all Francophones in a minority situation across Canada and Quebec Anglophone regional communities are compared with the total Anglophone population of Quebec.

Seniors (65 plus) in the OLMC Population Relative Geographic Index to the PCH Region by Economic Regions, 2011

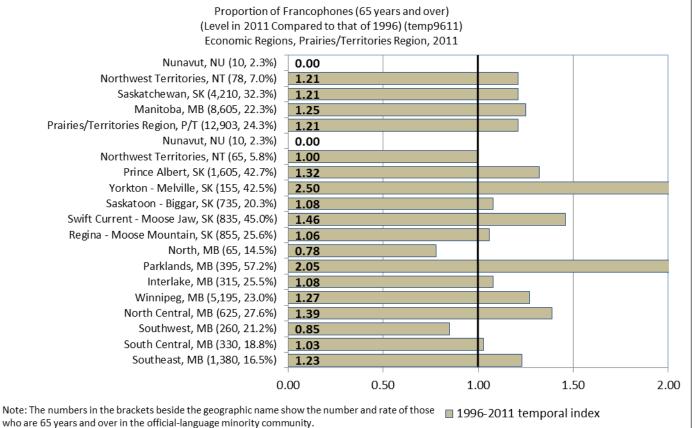

- ✓ The Francophone communities in Nunavut (0.09), Northwest Territories (0.24), and North (0.60) displayed the lowest levels for the Relative Geographic Index to Canadian Heritage region (rgi-pch) in the Prairies/Territories Region.
- ✓ The regions of Parklands
 (2.36), Swift Current Moose
 Jaw (1.85), and Prince Albert
 (1.76) showed the highest
 levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch)
 among Francophone
 communities across the
 Prairies/Territories Region.

Seniors (65 plus) in the OLMC Population Relative Geographic Index to the Province by Economic Regions, 2011

- ✓ The Francophone communities in Saskatoon Biggar (0.63), North (0.65), and Southeast (0.74) displayed the lowest levels for the Relative Geographic Index to Province (rgi-prov) in the Prairies/Territories Region.
- ✓ The regions of Parklands
 (2.57), Swift Current Moose
 Jaw (1.39), and Prince Albert
 (1.32) showed the highest
 levels for the Relative
 Geographic Index to Province
 (rgi-prov) among Francophone
 communities across the
 Prairies/Territories Region.

Seniors (65 plus) in the OLMC Population Temporal Index by Economic Regions, 1996-2011

- ✓ The Francophone communities in North (0.78), Southwest (0.85), and Northwest Territories (1.00) displayed the lowest levels for the 1996-2011 temporal index (temp9611) in the Prairies/Territories Region.
- ✓ The regions of Yorkton Melville (2.50), Parklands
 (2.05), and Swift Current Moose Jaw (1.46) showed the
 highest levels for the 19962011 temporal index
 (temp9611) among
 Francophone communities
 across the Prairies/Territories
 Region.

The 1996-2011 temporal index (temp9611) compares the value for the OL minority population in a given region in 2011 with the same population in 1996. A temporal index higher than 1.00 indicates that the value is more present in 2011 than it was in 1996 and a temporal index lower than 1.00 means that the characteristic is less present in 2011 than it was in 1996.

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 1996, 2001 and 2006 Census of Canada, Statistics Canada, 20% sample and the 2011 National Household Survey, Statistics Canada.

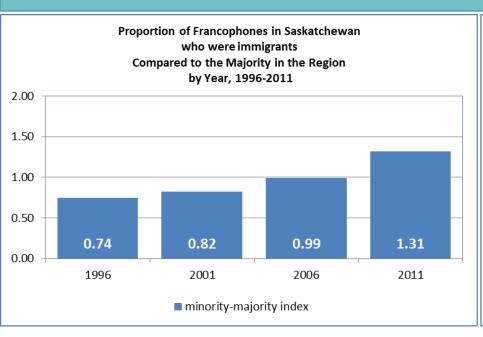

- ✓ In 2011, among Francophones in Saskatchewan, 1,128 (8.7%) were immigrants.
- ✓ This level was much higher than that of the Anglophone population in ✓
 the same region (mmi=1.31) but was much lower than the levels
 reported by all Official-Language Minority Communities across the
 country (rgi-all olmc=0.38).
- ✓ The gender index was 1.05 which means that the proportion for women was similar to that of men in 2011.
 - The intergenerational index was 3.13 which means that the total population who were immigrants in the 25-44 age group was much higher than that of the 45-64 age group in 2011.

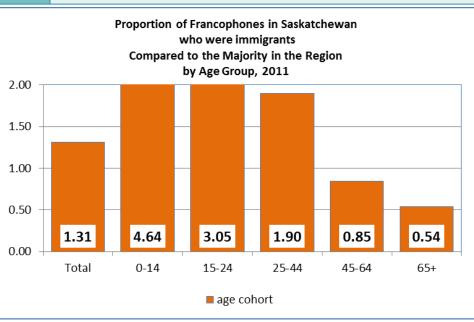

Immigrants in OLMCs Compared to the Majority, to all OLMCS in Canada and to the Canadian Average, by Age Group, 2011

■ mmi □ rgi-allolmc ☑ rni

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who were immigrants was much higher than that of Anglophones in the region (mmi=1.31).
- When we consider the minority-majority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 45-64 age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who were immigrants was much higher than that of the Anglophone population in this age group (mmi=1.90).
- ✓ For the older half of the working age population (those aged 45-64), the level was lower than that of the Anglophones in this age group (mmi=0.85).
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.
- The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who were immigrants was much higher than that of Anglophones in the region (mmi=1.31).
- ✓ The gap between the two linguistic groups grew over the 1996-2011 period.
- ✓ For the 1996-2011 period, the minority-majority index for Francophones in Saskatchewan who were immigrants was highest in 2011 (mmi=1.31) and lowest in 1996 (mmi=0.74).

- ✓ When we consider the minority-majority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 45-64 age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who were immigrants was much higher than that of the Anglophone population in this age group (mmi=1.90).
- ✓ For the older half of the working age population (those aged 45-64), the level was lower than that of the Anglophones in this age group (mmi=0.85).

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 2011 National Household Survey, Statistics Canada. The relative indices are part of the "Communities in Context" research initiative which compares official-language minority communities with their majority neighbours, with other OLMC communities at various levels of geography and with themselves by gender, across time and inter-generationally. For further information on the methodolgy and concepts used in this research initiative, please refer to appendix "A".

- ✓ There was substantial variation in the proportion of individuals who were immigrants in the Francophone communities across the Prairies/Territories Region in 2011.
- ✓ The Francophone communities in Swift Current Moose Jaw (SK) (1.1%), North Central (MB) (1.1%), and Southeast (MB) (2.1%) reported a lower proportion of individuals who were immigrants than the other Francophone communities across the

Prairies/Territories Region.

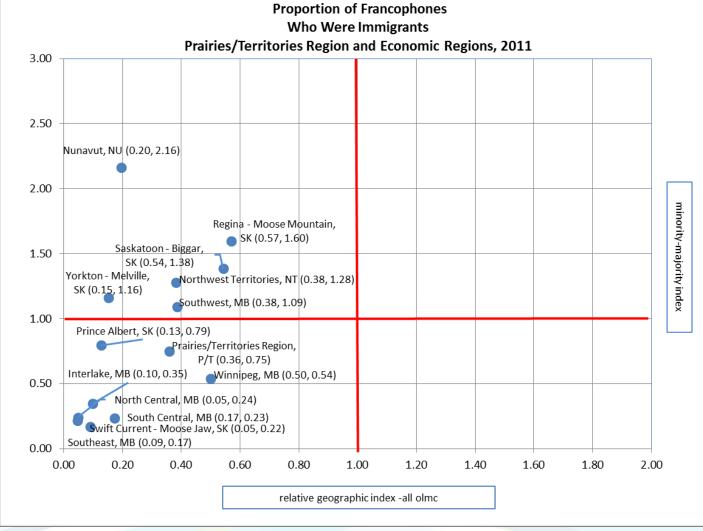

✓ Francophones in the regions of Regina - Moose Mountain (SK) (13.2%), Saskatoon - Biggar (SK) (12.5%), and Winnipeg (MB) (11.5%) displayed a higher proportion of individuals who were immigrants than the other Francophone communities across the Prairies/Territories Region.

- ✓ The Francophone communities in Southeast (0.17), Swift Current Moose Jaw (0.22), and South Central (0.23) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the total population who were immigrants.
- ✓ The regions of North (4.83), Nunavut (2.16), and Regina Moose Mountain (1.60) showed the highest levels for the minority-majority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the total population who were immigrants.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

Proportion of Immigrants in OLMCs Compared to their Neighbouring Majority and to all OLMCs Across Canada, 2011

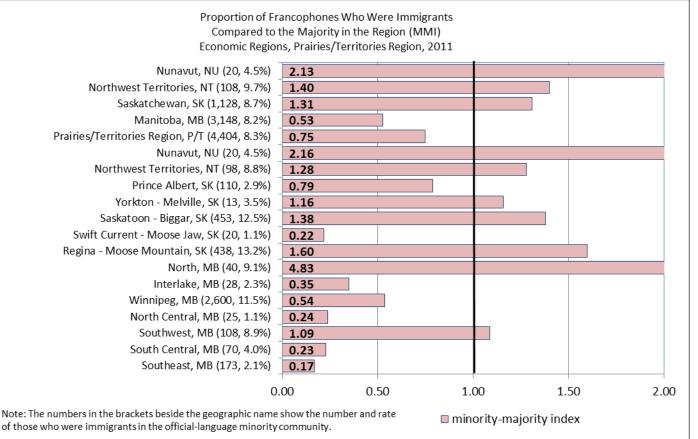

quadrant displayed a higher proportion who were immigrants in the OLM population than in both their neighbouring majority and the total OLMC population of Canada.

✓ The regions located in the top right

- The regions located in the top left quadrant displayed a higher proportion who were immigrants in the OLM population than in their neighbouring majority and a lower OLMC proportion who were immigrants than in the total OLMC population of Canada.
- The regions located in the bottom right quadrant displayed a lower proportion who were immigrants in the OLM population than in their neighbouring majority and a higher OLMC proportion who were immigrants than in the total OLMC population of Canada.
- The regions located in the bottom left quadrant reported a lower proportion who were immigrants in the OLM population than in both their neighbouring majority and in the total OLMC population of Canada.
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

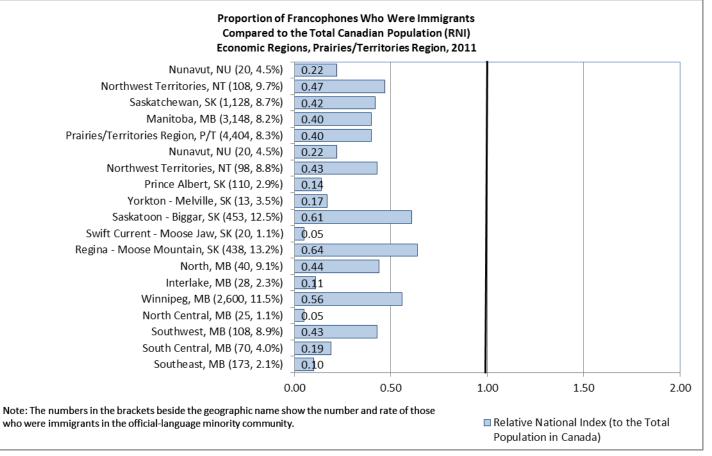

Immigrants in OLMCs
Minority-Majority Index
Economic Regions, 2011

- The Francophone communities in Southeast (0.17), Swift Current Moose Jaw (0.22), and South Central (0.23) displayed the lowest levels for the minoritymajority index (MMI) in the Prairies/Territories Region when we consider the total population who were immigrants.
- ✓ The regions of North (4.83), Nunavut (2.16), and Regina -Moose Mountain (1.60) showed the highest levels for the minority-majority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the total population who were immigrants.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

Immigrants in OLMCs Relative National Index Economic Regions, 2011

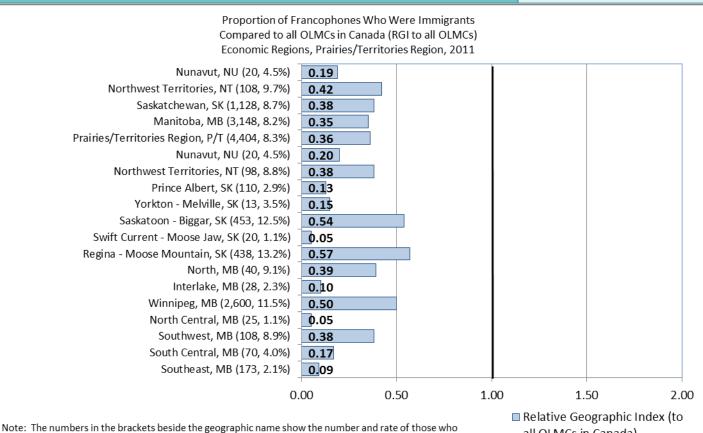

- ✓ The Francophone
 communities in Swift Current Moose Jaw (0.05), North
 Central (0.05), and Southeast
 (0.10) displayed the lowest
 levels for the Relative National
 Index for Francophones in the
 Prairies/Territories Region.
- ✓ The regions of Regina Moose Mountain (0.64), Saskatoon -Biggar (0.61), and Winnipeg (0.56) showed the highest levels for the Relative National Index among Francophone communities across the Prairies/Territories Region.

The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

were unemployed in the official-language minority community.

Immigrants in OLMCs Relative Geographic Index to all OLMCs Economic Regions, 2011

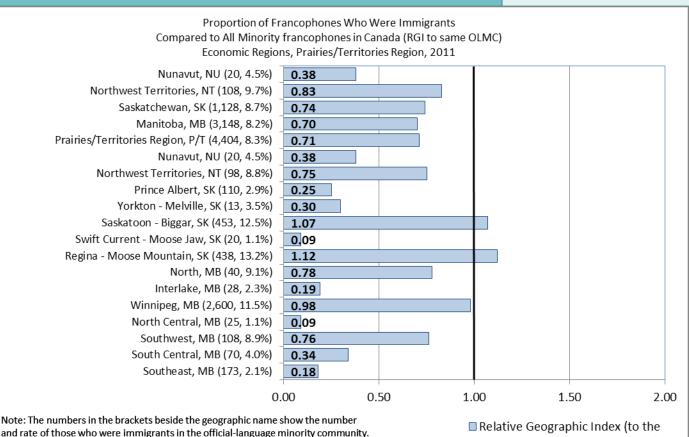

all OLMCs in Canada)

- ✓ The Francophone communities in Swift Current -Moose Jaw (0.05), North Central (0.05), and Southeast (0.09) displayed the lowest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) for total population who were immigrants in the Prairies/Territories Region.
- The regions of Regina Moose Mountain (0.57), Saskatoon -Biggar (0.54), and Winnipeg (0.50) showed the highest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) among Francophone communities across the Prairies/Territories Region.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

Immigrants in OLMCs Relative Geographic Index to the Same OLMC Economic Regions, 2011

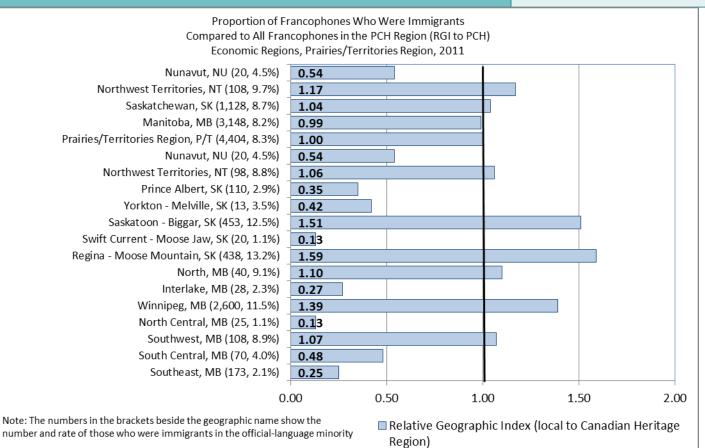

same Official-Language Minority)

- ✓ The Francophone
 communities in Swift Current Moose Jaw (0.09), North
 Central (0.09), and Southeast
 (0.18) displayed the lowest
 levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) in the
 Prairies/Territories Region.
- ✓ The regions of Regina Moose Mountain (1.12), Saskatoon -Biggar (1.07), and Winnipeg (0.98) showed the highest levels for the Relative Geographic Index to the Same OLMC (rgi-same olmc) among Francophone communities across the Prairies/Territories Region.

The Relative Geographic Index to the Same OLMC (rgi-same olmc) compares the value for a local OL minority population with the total OL minority population with a given language, that is, Francophone minority populations are compared with all Francophones in a minority situation across Canada and Quebec Anglophone regional communities are compared with the total Anglophone population of Quebec.

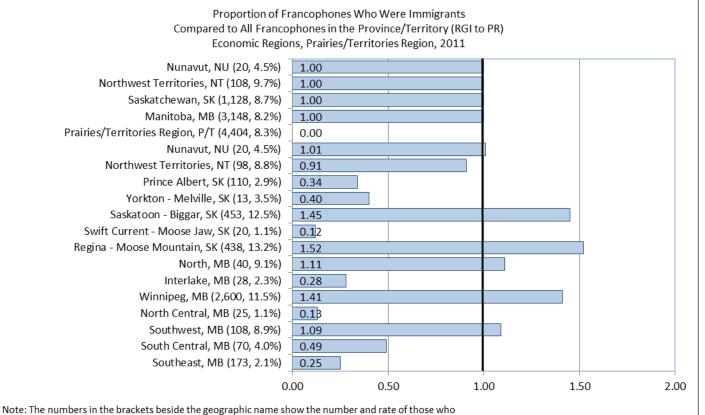

Immigrants in OLMCs Relative Geographic Index to the PCH Region Economic Regions, 2011

- ✓ The Francophone
 communities in Swift Current Moose Jaw (0.13), North
 Central (0.13), and Southeast
 (0.25) displayed the lowest
 levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch) in
 the Prairies/Territories
 Region.
- ✓ The regions of Regina Moose Mountain (1.59), Saskatoon -Biggar (1.51), and Winnipeg (1.39) showed the highest levels for the Relative Geographic Index to Canadian Heritage region (rgi-pch) among Francophone communities across the Prairies/Territories Region.

were immigrants in the official-language minority community.

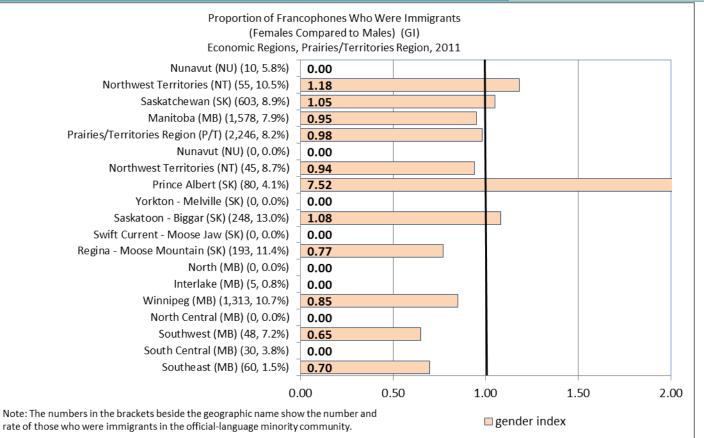

Immigrants in OLMCs Relative Geographic Index to the Province Economic Regions, 2011

- ✓ The Francophone
 communities in Swift Current Moose Jaw (0.12), North
 Central (0.13), and Southeast
 (0.25) displayed the lowest
 levels for the Relative
 Geographic Index to Province
 (rgi-prov) in the
 Prairies/Territories Region.
- ✓ The regions of Regina Moose Mountain (1.52), Saskatoon -Biggar (1.45), and Winnipeg (1.41) showed the highest levels for the Relative Geographic Index to Province (rgi-prov) among Francophone communities across the Prairies/Territories Region.

■ Relative Geographic Index (rgi-prov)

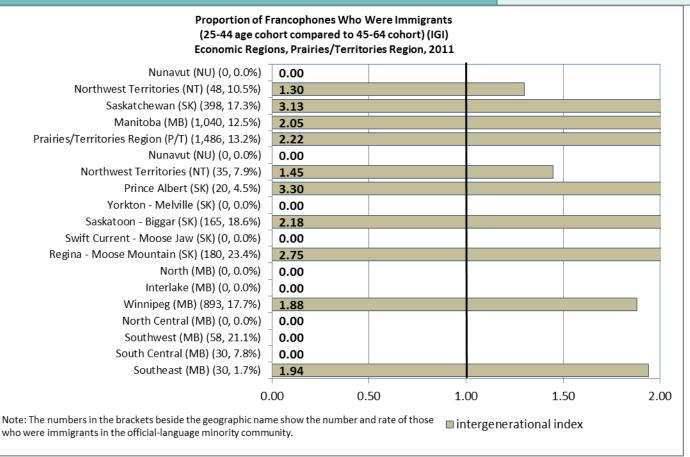

Immigrants in OLMCs
Gender Index
Economic Regions, 2011

- ✓ The women in Francophone communities in Southwest (0.65), Southeast (0.70), and Regina Moose Mountain (0.77) displayed the lowest levels for the Gender Index (gi) in the Prairies/Territories Region.
- ✓ The regions of Prince Albert (7.52), Saskatoon - Biggar (1.08), and Northwest Territories (0.94) showed the highest levels for the Gender Index (gi) among Francophone women in communities across the Prairies/Territories Region.

The Gender Index (gi) compares the characteristics of females in the OL minority population in a given region with the males in the same population. A value greater than 1.00 indicates that the characteristic is more commonly observed in the female group while a value less than 1.00 indicates that is less prevalent among females.

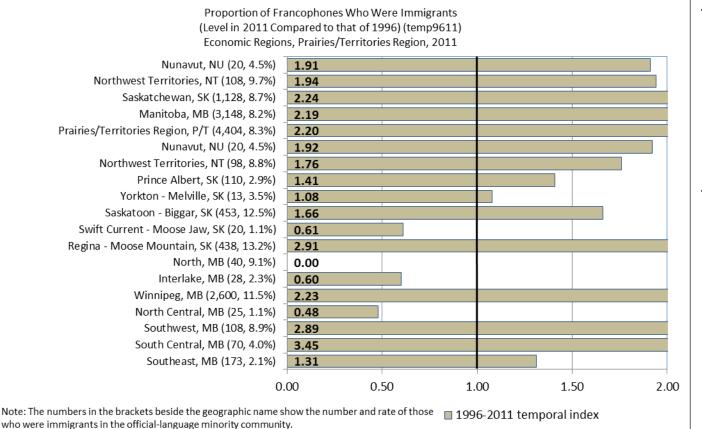

Immigrants in OLMCs
Intergenerational Index (25-44 compared to 45-64)
Economic Regions, 2011

- ✓ The Francophone communities in Northwest Territories (1.45), Winnipeg (1.88), and Southeast (1.94) displayed the lowest levels for the Intergenerational Index (intergen) in the Prairies/Territories Region.
- ✓ The regions of Prince Albert (3.30), Regina Moose Mountain (2.75), and Saskatoon Biggar (2.18) showed the highest levels for the Intergenerational Index (intergen) among Francophone communities across the Prairies/Territories Region.

The Intergenerational Index (intergen) compares the value for the younger adult population (aged 25-44) with the older half of the working age population (aged 45-64) in a given OL minority population. The intergenerational index suggests whether a particular situation is improving or deteriorating across time.

Immigrants in OLMCs
Temporal Index
Economic Regions, 1996-2011

- ✓ The Francophone
 communities in North Central
 (0.48), Interlake (0.60), and
 Swift Current Moose Jaw
 (0.61) displayed the lowest
 levels for the 1996-2011
 temporal index (temp9611) in
 the Prairies/Territories
 Region.
- The regions of South Central (3.45), Regina Moose Mountain (2.91), and Southwest (2.89) showed the highest levels for the 1996-2011 temporal index (temp9611) among Francophone communities across the Prairies/Territories Region.

The 1996-2011 temporal index (temp9611) compares the value for the OL minority population in a given region in 2011 with the same population in 1996. A temporal index higher than 1.00 indicates that the value is more present in 2011 than it was in 1996 and a temporal index lower than 1.00 means that the characteristic is less present in 2011 than it was in 1996.

Population Born outside the Province of Residence

Values

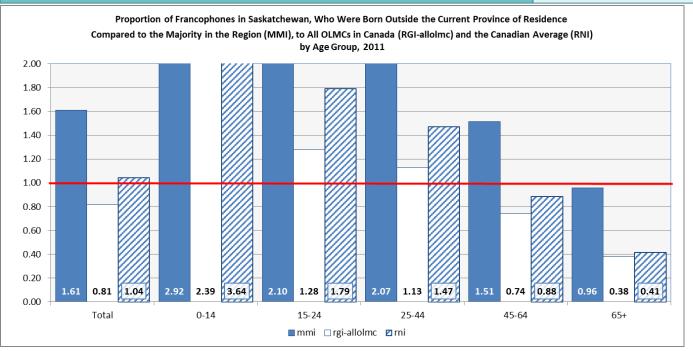

Proportion of Francophones Who Were Born Outside the Current Province of Residence Saskatchewan, 1996-2011

	values	Total	0-14	15-24	25-44	45-64	65+

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 1996, 2001 and 2006 Census of Canada, Statistics Canada, 20% sample and the 2011 National Household Survey, Statistics Canada.

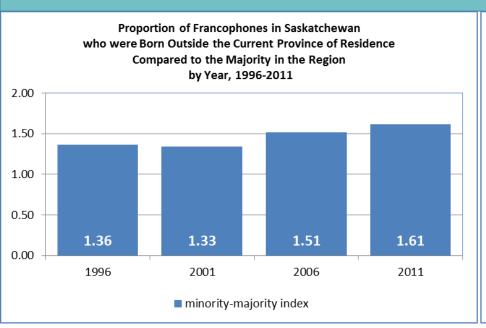

- ✓ In 2011, among Francophones in Saskatchewan, 4,405 (33.8%) who were born outside the current province of residence.
- ✓ This level was much higher than that of the Anglophone population in ✓
 the same region (mmi=1.61) but was lower than the levels reported
 by all Official-Language Minority Communities across the country
 (rgi-all olmc=0.81).
- The gender index was 0.94 which means that the proportion for women was lower than that of men in 2011.
- The intergenerational index was 1.57 which means that the total population who were born outside the current province of residence in the 25-44 age group was much higher than that of the 45-64 age group in 2011.

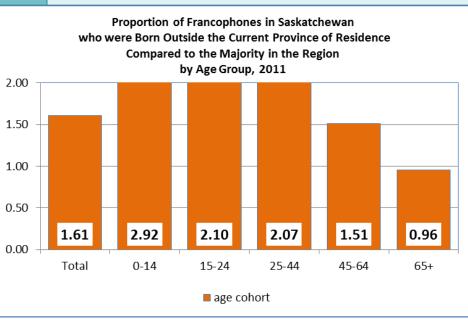

OLMCs Born Outside the Province of Residence Compared to the Majority, to all OLMCS in Canada and to the Canadian Average, by Age Group, 2011

- ✓ In 2011, as illustrated by the minoritymajority index, the proportion of Francophones in Saskatchewan who Were Born Outside the Current Province of Residence was much higher than that of Anglophones in the region (mmi=1.61).
- ✓ When we consider the minority-majority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 65+ age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who Were Born Outside the Current Province of Residence was much higher than that of the Anglophone population in this age group (mmi=2.07).
- For the older half of the working age population (those aged 45-64), the level was much higher than that of the Anglophones in this age group (mmi=1.51).
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.
- The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

OLMCs Born Outside the Province of Residence by Year, 1996-2011 and by Age Group, 2011

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who Were Born Outside the Current Province of Residence was much higher than that of Anglophones in the region (mmi=1.61).
- ✓ The gap between the two linguistic groups grew over the 1996-2011 period.
- ✓ For the 1996-2011 period, the minority-majority index for Francophones in Saskatchewan who were born outside the current province of residence was highest in 2011 (mmi=1.61) and lowest in 2001 (mmi=1.33).

- ✓ When we consider the minority-majority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 65+ age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who Were Born Outside the Current Province of Residence was much higher than that of the Anglophone population in this age group (mmi=2.07).
- ✓ For the older half of the working age population (those aged 45-64), the level was much higher than that of the Anglophones in this age group (mmi=1.51).

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 2011 National Household Survey, Statistics Canada. The relative indices are part of the "Communities in Context" research initiative which compares official-language minority communities with their majority neighbours, with other OLMC communities at various levels of geography and with themselves by gender, across time and intergenerationally. For further information on the methodolgy and concepts used in this research initiative, please refer to appendix "A".

- ✓ There was substantial variation in the proportion of individuals who were born outside the current province of residence in the Francophone communities across the Prairies/Territories Region in 2011.
- ✓ The Francophone communities in Southeast (MB) (8.7%), South Central (MB) (9.9%), and North Central (MB) (11.0%) reported a lower proportion of individuals who were born outside the current
- province of residence than the other Francophone communities across the Prairies/Territories Region.
- Francophones in the regions of Northwest Territories (NT) (88.5%), Nunavut (NU) (87.9%), and Northern (SK) (58.3%) displayed a higher proportion of individuals who were born outside the current province of residence than the other Francophone communities across the Prairies/Territories Region.

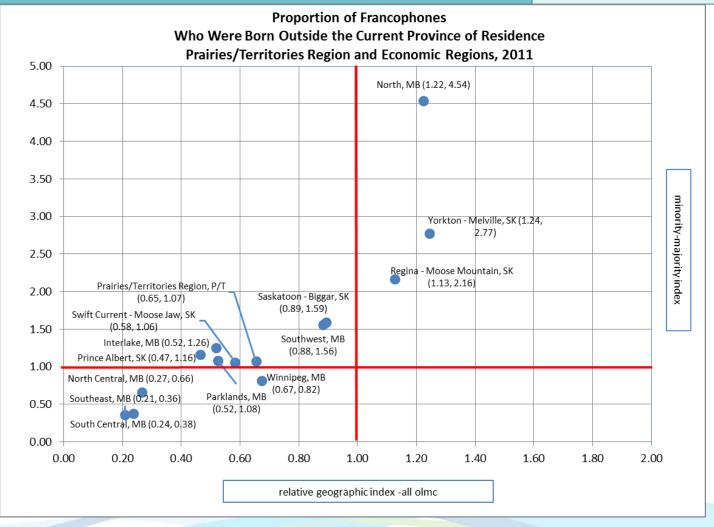

OLMCs Born Outside the Province of Residence
Minority-Majority Index
Economic Regions, 2011

- ✓ The Francophone communities in Southeast (0.36), South Central (0.38), and North Central (0.66) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the total population who were born outside the current province of residence.
- ✓ The regions of North (4.54), Yorkton Melville (2.77), and Regina Moose Mountain (2.16) showed the highest levels for the minority-majority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the total population who were born outside the current province of residence.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

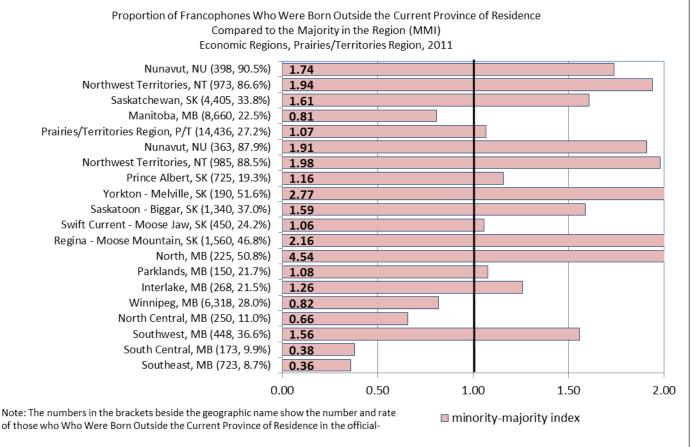

Proportion of OLMCs Born Outside the Province of Residence Compared to their Majority and to all OLMCs Across Canada, 2011

- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

- ✓ The regions located in the top right quadrant displayed a higher proportion who were born outside the province of residence in the OLM population than in both their neighbouring majority and the total OLMC population of Canada.
- ✓ The regions located in the top left quadrant displayed a higher proportion who were born outside the province of residence in the OLM population than in their neighbouring majority and a lower OLMC proportion who were born outside the province of residence than in the total OLMC population of Canada.
- The regions located in the bottom right quadrant displayed a lower proportion who were born outside the province of residence in the OLM population than in their neighbouring majority and a higher OLMC proportion who were born outside the province of residence than in the total OLMC population of Canada.
- ✓ The regions located in the bottom left quadrant reported a lower proportion who were born outside the province of residence in the OLM population than in both their neighbouring majority and in the total OLMC population of Canada.

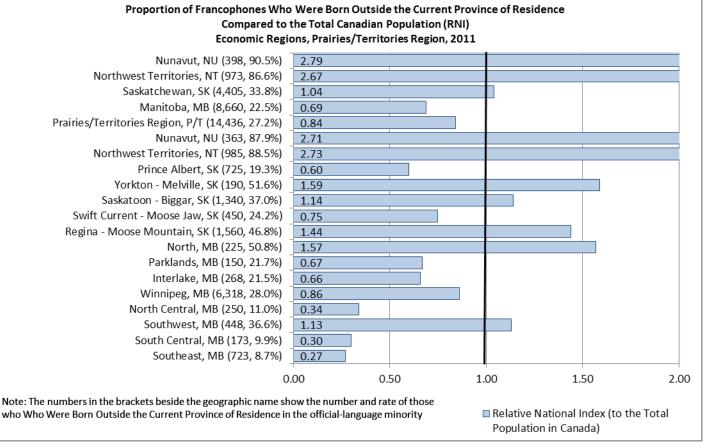

OLMCs Born Outside the Province of Residence
Minority-Majority Index
Economic Regions, 2011

- ✓ The Francophone communities in Southeast (0.36), South Central (0.38), and North Central (0.66) displayed the lowest levels for the minoritymajority index (MMI) in the Prairies/Territories Region when we consider the total population who were born outside the current province of residence.
- ✓ The regions of North (4.54),
 Yorkton Melville (2.77), and
 Regina Moose Mountain
 (2.16) showed the highest
 levels for the minoritymajority index (MMI) among
 Francophone communities
 across the Prairies/Territories
 Region when we consider the
 total population who were
 born outside the current
 province of residence.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

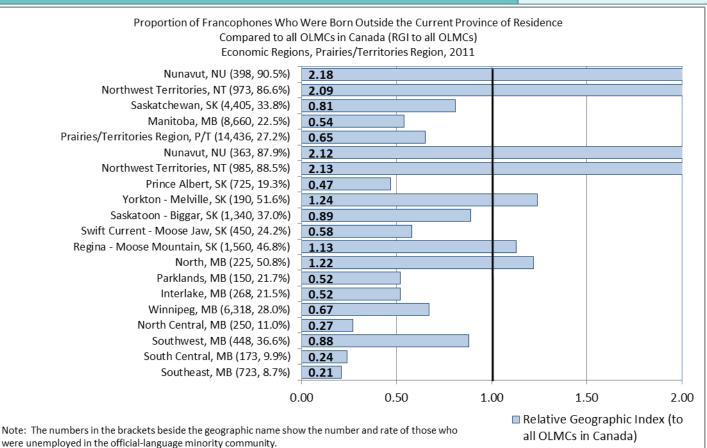

OLMCs Born Outside the Province of Residence Relative National Index Economic Regions, 2011

- ✓ The Francophone
 communities in Southeast
 (0.27), South Central (0.30),
 and North Central (0.34)
 displayed the lowest levels for
 the Relative National Index for
 Francophones in the
 Prairies/Territories Region.
- ✓ The regions of Northwest
 Territories (2.73), Nunavut
 (2.71), and Yorkton Melville
 (1.59) showed the highest
 levels for the Relative National
 Index among Francophone
 communities across the
 Prairies/Territories Region.

The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

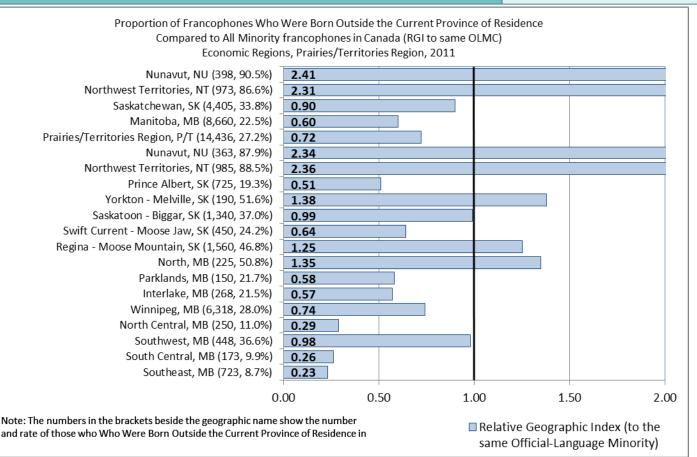

OLMCs Born Outside the Province of Residence Relative Geographic Index to all OLMCs Economic Regions, 2011

- ✓ The Francophone communities in Southeast (0.21), South Central (0.24), and North Central (0.27) displayed the lowest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) for total population who were born outside the current province of residence in the Prairies/Territories Region.
- ✓ The regions of Northwest
 Territories (2.13), Nunavut
 (2.12), and Yorkton Melville
 (1.24) showed the highest
 levels for the Relative
 Geographic Index to all OLMCs
 (rgi-all olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

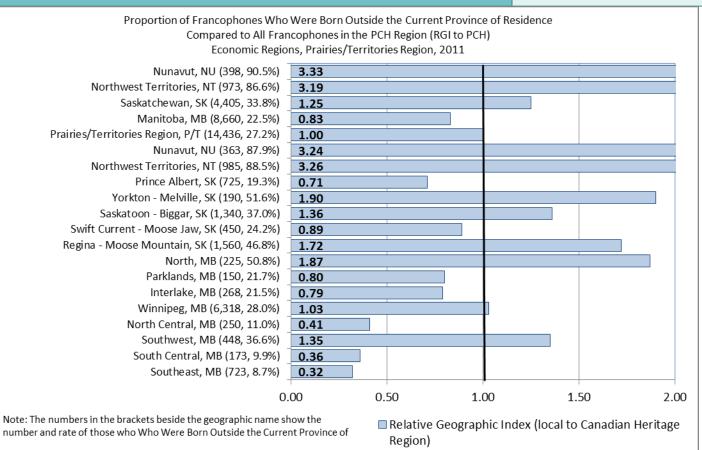

OLMCs Born Outside the Province of Residence Relative Geographic Index to the Same OLMC Economic Regions, 2011

- ✓ The Francophone The
 Francophone communities in
 Southeast (0.23), South
 Central (0.26), and North
 Central (0.29) displayed the
 lowest levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) in the
 Prairies/Territories Region.
- ✓ The regions of Northwest
 Territories (2.36), Nunavut
 (2.34), and Yorkton Melville
 (1.38) showed the highest
 levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

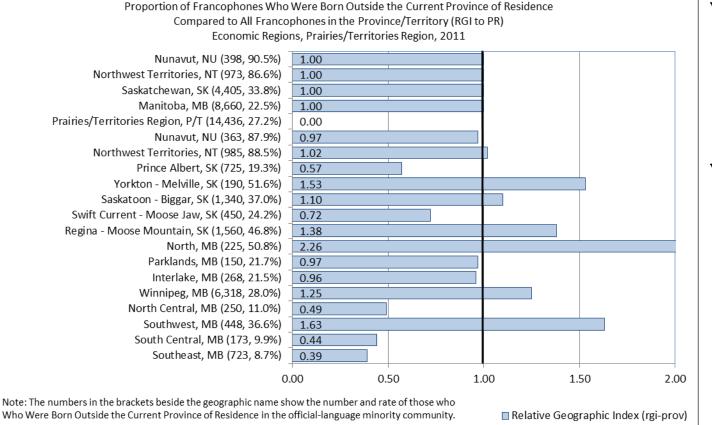

The Relative Geographic Index to the Same OLMC (rgi-same olmc) compares the value for a local OL minority population with the total OL minority population with a given language, that is, Francophone minority populations are compared with all Francophones in a minority situation across Canada and Quebec Anglophone regional communities are compared with the total Anglophone population of Quebec.

OLMCs Born Outside the Province of Residence Relative Geographic Index to the PCH Region Economic Regions, 2011

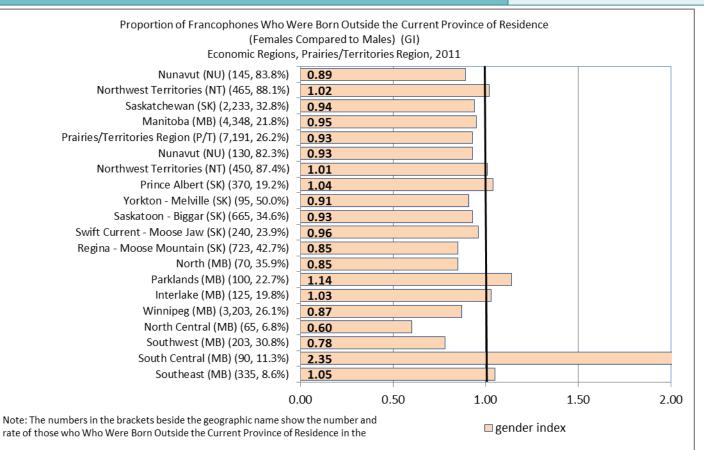

- ✓ The Francophone
 communities in Southeast
 (0.32), South Central (0.36),
 and North Central (0.41)
 displayed the lowest levels for
 the Relative Geographic Index
 to Canadian Heritage region
 (rgi-pch) in the
 Prairies/Territories Region.
- ✓ The regions of Northwest
 Territories (3.26), Nunavut
 (3.24), and Yorkton Melville
 (1.90) showed the highest
 levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch)
 among Francophone
 communities across the
 Prairies/Territories Region.

OLMCs Born Outside the Province of Residence Relative Geographic Index to the Province Economic Regions, 2011

- ✓ The Francophone
 communities in Southeast
 (0.39), South Central (0.44),
 and North Central (0.49)
 displayed the lowest levels for
 the Relative Geographic Index
 to Province (rgi-prov) in the
 Prairies/Territories Region.
- ✓ The regions of North (2.26), Southwest (1.63), and Yorkton - Melville (1.53) showed the highest levels for the Relative Geographic Index to Province (rgi-prov) among Francophone communities across the Prairies/Territories Region.

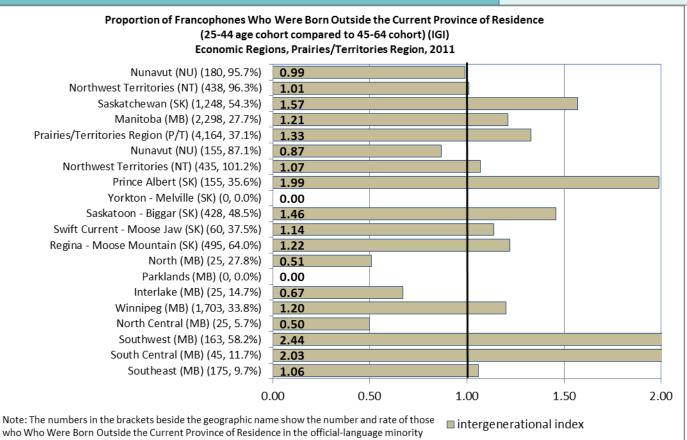

OLMCs Born Outside the Province of Residence
Gender Index
Economic Regions, 2011

- ✓ The women in Francophone communities in North Central (0.60), Southwest (0.78), and North (0.85) displayed the lowest levels for the Gender Index (gi) in the Prairies/Territories Region.
- ✓ The regions of South Central (2.35), Parklands (1.14), and Southeast (1.05) showed the highest levels for the Gender Index (gi) among Francophone women in communities across the Prairies/Territories Region.

The Gender Index (gi) compares the characteristics of females in the OL minority population in a given region with the males in the same population. A value greater than 1.00 indicates that the characteristic is more commonly observed in the female group while a value less than 1.00 indicates that is less prevalent among females.

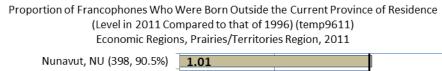

OLMCs Born Outside the Province of Residence Intergenerational Index (25-44 compared to 45-64) Economic Regions, 2011

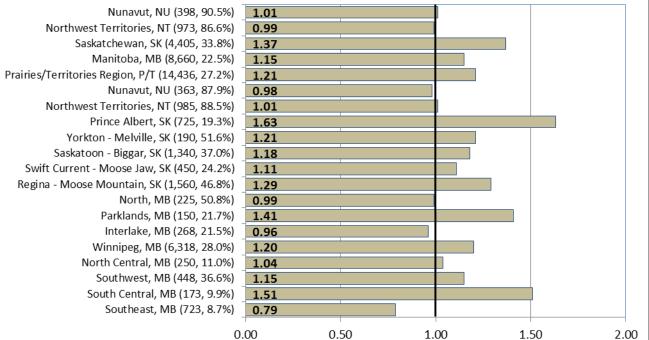

- ✓ The Francophone
 communities in North Central
 (0.50), North (0.51), and
 Interlake (0.67) displayed the
 lowest levels for the
 Intergenerational Index
 (intergen) in the
 Prairies/Territories Region.
- ✓ The regions of Southwest
 (2.44), South Central (2.03),
 and Prince Albert (1.99)
 showed the highest levels for
 the Intergenerational Index
 (intergen) among
 Francophone communities
 across the Prairies/Territories
 Region.

The Intergenerational Index (intergen) compares the value for the younger adult population (aged 25-44) with the older half of the working age population (aged 45-64) in a given OL minority population. The intergenerational index suggests whether a particular situation is improving or deteriorating across time.

OLMCs Born Outside the Province of Residence
Temporal Index
Economic Regions, 1996-2011

Note: The numbers in the brackets beside the geographic name show the number and rate of those who Who Were Born Outside the Current Province of Residence in the official-language minority

- ✓ The Francophone
 communities in Southeast
 (0.79), Interlake (0.96), and
 Nunavut (0.98) displayed the
 lowest levels for the 19962011 temporal index
 (temp9611) in the
 Prairies/Territories Region.
- ✓ The regions of Prince Albert (1.63), South Central (1.51), and Parklands (1.41) showed the highest levels for the 1996-2011 temporal index (temp9611) among Francophone communities across the Prairies/Territories Region.

The 1996-2011 temporal index (temp9611) compares the value for the OL minority population in a given region in 2011 with the same population in 1996. A temporal index higher than 1.00 indicates that the value is more present in 2011 than it was in 1996 and a temporal index lower than 1.00 means that the characteristic is less present in 2011 than it was in 1996.

Recent international immigrants (previous 5 years)

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 1996, 2001 and 2006 Census of Canada, Statistics Canada, 20% sample and the 2011 National Household Survey, Statistics Canada.

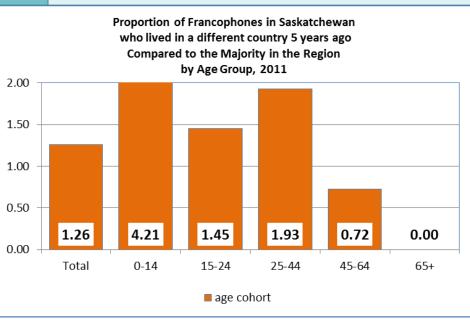

- ✓ In 2011, among Francophones in Saskatchewan, 493 (3.9%) lived in a ✓ different country 5 years ago.
- ✓ This level was much higher than that of the Anglophone population in ✓
 the same region (mmi=1.26) but was much lower than the levels
 reported by all Official-Language Minority Communities across the
 country (rgi-all olmc=0.77).
- The gender index was 1.01 which means that the proportion for women was similar to that of men in 2011.
- The intergenerational index was 13.44 which means that the individuals 5 years and over (5 years and over) who lived in a different country five years previously in the 25-44 age group was much higher than that of the 45-64 age group in 2011.

Recent international immigrants (previous 5 years) in OLMCs Compared to the Majority, to all OLMCS in Canada and to the Canadian Average, by Age Group, 2011

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who lived in a different country 5 years ago was much higher than that of Anglophones in the region (mmi=1.26).
- ✓ When we consider the minoritymajority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 45-64 age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who lived in a different country 5 years ago was much higher than that of the Anglophone population in this age group (mmi=1.93).
- ✓ For the older half of the working age population (those aged 45-64), the level was much lower than that of the Anglophones in this age group (mmi=0.72).
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.
- The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who lived in a different country 5 years ago was much higher than that of Anglophones in the region (mmi=1.26).
- ✓ The gap between the two linguistic groups grew over the 1996-2011 period.
- ✓ For the 1996-2011 period, the minority-majority index for Francophones in Saskatchewan (5 years and over) who lived in a different country five years previously was highest in 2011 (mmi=1.26) and lowest in 2001 (mmi=0.86).
- ✓ When we consider the minority-majority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 45-64 age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who lived in a different country 5 years ago was much higher than that of the Anglophone population in this age group (mmi=1.93).
- ✓ For the older half of the working age population (those aged 45-64), the level was much lower than that of the Anglophones in this age group (mmi=0.72).

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 2011 National Household Survey, Statistics Canada. The relative indices are part of the "Communities in Context" research initiative which compares official-language minority communities with their majority neighbours, with other OLMC communities at various levels of geography and with themselves by gender, across time and intergenerationally. For further information on the methodolgy and concepts used in this research initiative, please refer to appendix "A".

1.9%

✓ There was substantial variation in the proportion of individuals (5 years and over) who lived in a different country five years previously in the Francophone communities across the Prairies/Territories Region in 2011.

Northwest Territories (NT)

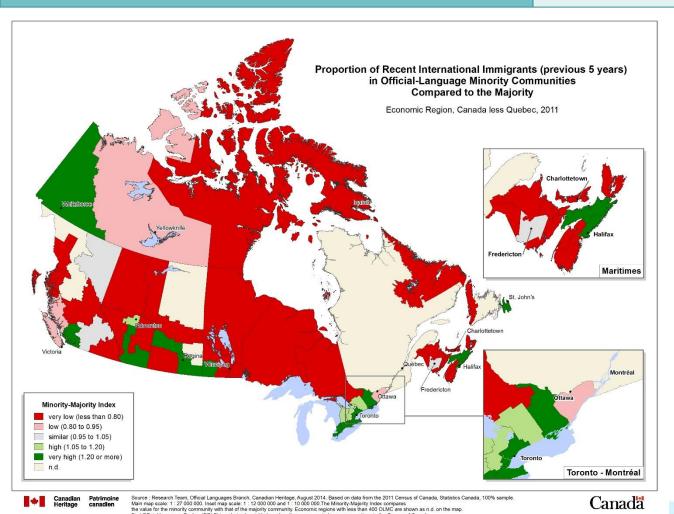

1.053

- ✓ The Francophone communities in Southeast (MB) (0.6%), Prince Albert (SK) (0.9%), and Northwest Territories (NT) (1.4%) reported a lower proportion of individuals (5 years and over) who lived in a
- different country five years previously than the other Francophone communities across the Prairies/Territories Region.

01.00 71.09

♣ 0.38 **♣** 0.60 **♣** 0.57

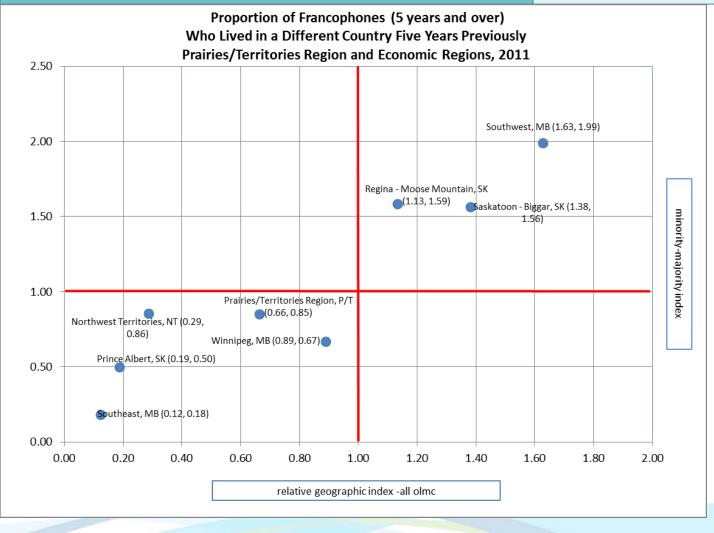

Francophones in the regions of Southwest (MB) (8.2%), Saskatoon - Biggar (SK) (6.9%), and Regina - Moose Mountain (SK) (5.7%) displayed a higher proportion of individuals (5 years and over) who lived in a different country five years previously than the other Francophone communities across the Prairies/Territories Region.

- ✓ The Francophone communities in Southeast (0.18), Prince Albert (0.50), and Winnipeg (0.67) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the individuals 5 years and over (5 years and over) who lived in a different country five years previously.
- ✓ The regions of Southwest (1.99),
 Regina Moose Mountain (1.59), and
 Saskatoon Biggar (1.56) showed the
 highest levels for the minoritymajority index (MMI) among
 Francophone communities across the
 Prairies/Territories Region when we
 consider the individuals 5 years and
 over (5 years and over) who lived in a
 different country five years previously.

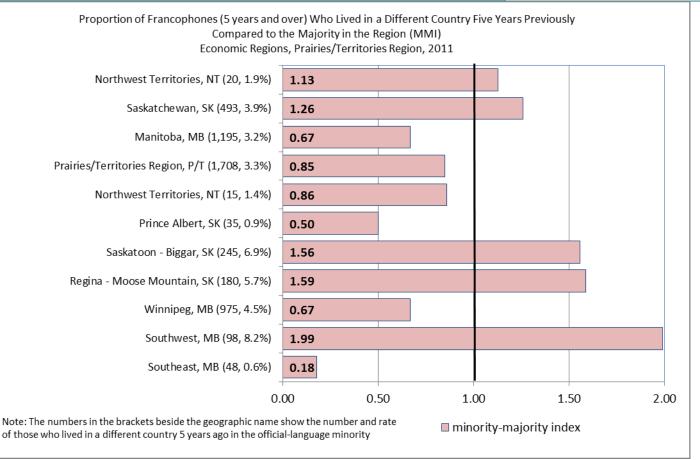

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

Proportion of Recent international immigrants (previous 5 years) in OLMCs Compared to their Neighbouring Majority and to all OLMCs Across Canada, 2011

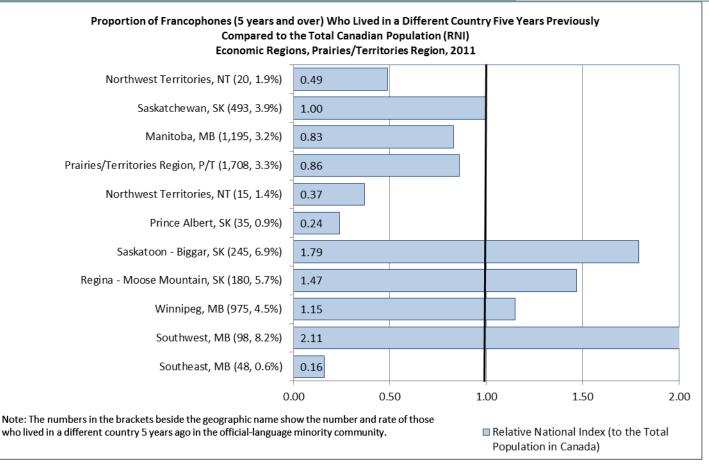

- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

- ✓ The regions located in the top right quadrant displayed a higher proportion who lived in a different country 5 years ago in the OLM population than in both their neighbouring majority and the total OLMC population of Canada.
- ✓ The regions located in the top left quadrant displayed a higher proportion who lived in a different country 5 years ago in the OLM population than in their neighbouring majority and a lower OLMC proportion who lived in a different country 5 years ago than in the total OLMC population of Canada.
- The regions located in the bottom right quadrant displayed a lower proportion who lived in a different country 5 years ago in the OLM population than in their neighbouring majority and a higher OLMC proportion who lived in a different country 5 years ago than in the total OLMC population of Canada.
- ✓ The regions located in the bottom left quadrant reported a lower proportion who lived in a different country 5 years ago in the OLM population than in both their neighbouring majority and in the total OLMC population of Canada.

- ✓ The Francophone communities in Southeast (0.18), Prince Albert (0.50), and Winnipeg (0.67) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the individuals 5 years and over (5 years and over) who lived in a different country five years previously.
- ✓ The regions of Southwest
 (1.99), Regina Moose
 Mountain (1.59), and
 Saskatoon Biggar (1.56)
 showed the highest levels for
 the minority-majority index
 (MMI) among Francophone
 communities across the
 Prairies/Territories Region
 when we consider the
 individuals 5 years and over (5
 years and over) who lived in a
 different country five years
 previously.

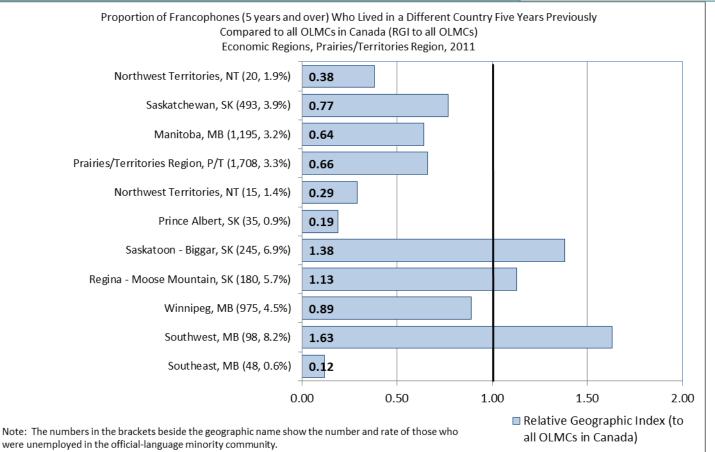

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

- ✓ The Francophone
 communities in Southeast
 (0.16), Prince Albert (0.24),
 and Northwest Territories
 (0.37) displayed the lowest
 levels for the Relative National
 Index for Francophones in the
 Prairies/Territories Region.
- ✓ The regions of Southwest (2.11), Saskatoon - Biggar (1.79), and Regina - Moose Mountain (1.47) showed the highest levels for the Relative National Index among Francophone communities across the Prairies/Territories Region.

The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

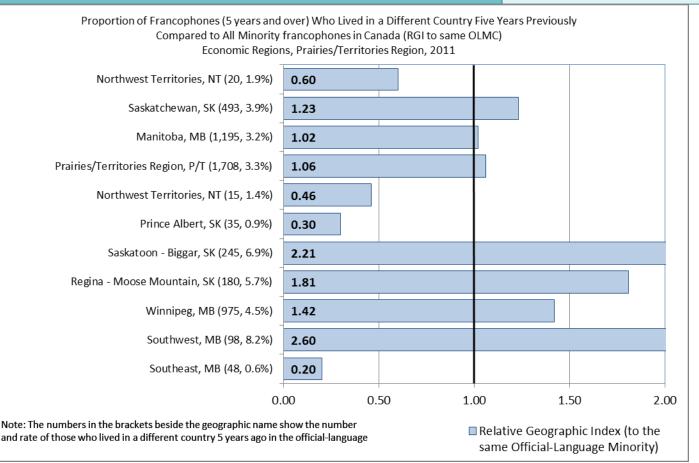

Recent international immigrants (previous 5 years) in OLMCs
Relative Geographic Index to all OLMCs
Economic Regions, 2011

- ✓ The Francophone communities in Southeast (0.12), Prince Albert (0.19), and Northwest Territories (0.29) displayed the lowest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) for individuals 5 years and over (5 years and over) who lived in a different country five years previously in the Prairies/Territories Region.
- ✓ The regions of Southwest (1.63), Saskatoon Biggar (1.38), and Regina Moose Mountain (1.13) showed the highest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) among Francophone communities across the Prairies/Territories Region.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

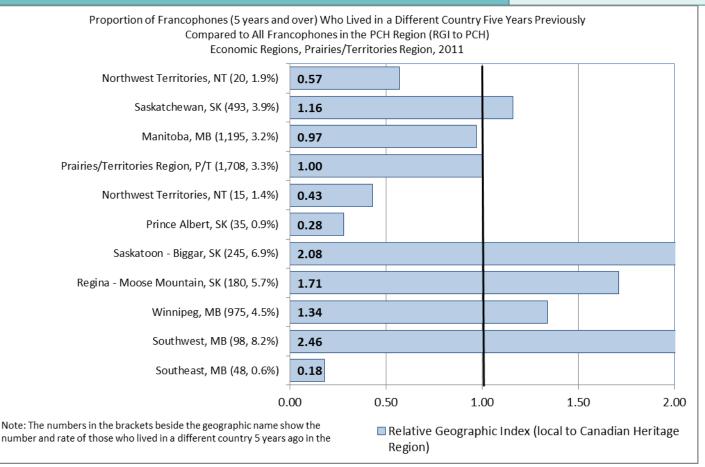

Recent international immigrants (previous 5 years) in OLMCs
Relative Geographic Index to the Same OLMC
Economic Regions, 2011

- ✓ The Francophone
 communities in Southeast
 (0.20), Prince Albert (0.30),
 and Northwest Territories
 (0.46) displayed the lowest
 levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) in the
 Prairies/Territories Region.
- ✓ The regions of Southwest
 (2.60), Saskatoon Biggar
 (2.21), and Regina Moose
 Mountain (1.81) showed the
 highest levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

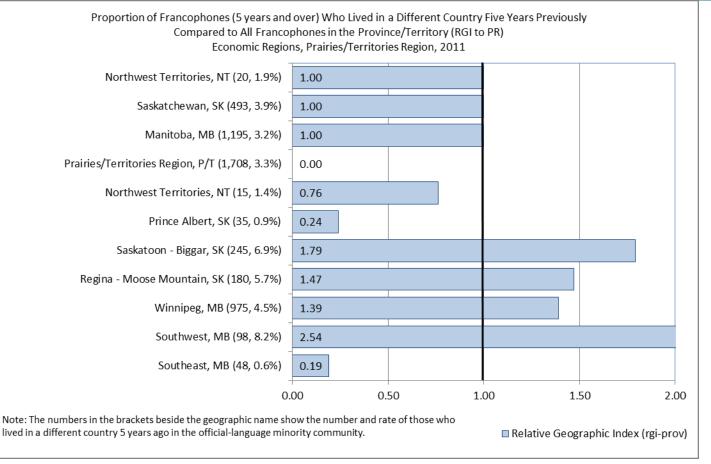

The Relative Geographic Index to the Same OLMC (rgi-same olmc) compares the value for a local OL minority population with the total OL minority population with a given language, that is, Francophone minority populations are compared with all Francophones in a minority situation across Canada and Quebec Anglophone regional communities are compared with the total Anglophone population of Quebec.

Recent international immigrants (previous 5 years) in OLMCs Relative Geographic Index to the PCH Region Economic Regions, 2011

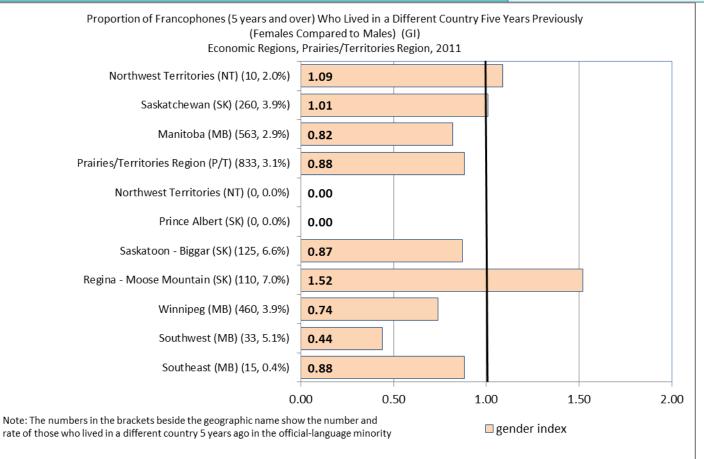

- ✓ The Francophone
 communities in Southeast
 (0.18), Prince Albert (0.28),
 and Northwest Territories
 (0.43) displayed the lowest
 levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch) in
 the Prairies/Territories
 Region.
- ✓ The regions of Southwest
 (2.46), Saskatoon Biggar
 (2.08), and Regina Moose
 Mountain (1.71) showed the
 highest levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch)
 among Francophone
 communities across the
 Prairies/Territories Region.

Recent international immigrants (previous 5 years) in OLMCs Relative Geographic Index to the Province Economic Regions, 2011

- ✓ The Francophone
 communities in Southeast
 (0.19), Prince Albert (0.24),
 and Northwest Territories
 (0.76) displayed the lowest
 levels for the Relative
 Geographic Index to Province
 (rgi-prov) in the
 Prairies/Territories Region.
- ✓ The regions of Southwest (2.54), Saskatoon Biggar (1.79), and Regina Moose Mountain (1.47) showed the highest levels for the Relative Geographic Index to Province (rgi-prov) among Francophone communities across the Prairies/Territories Region.

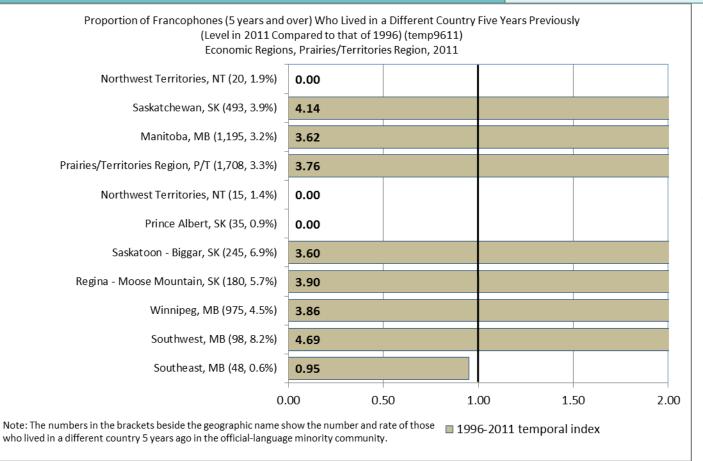

Recent international immigrants (previous 5 years) in OLMCs Gender Index Economic Regions, 2011

- ✓ The women in Francophone communities in Southwest (0.44), Winnipeg (0.74), and Saskatoon Biggar (0.87) displayed the lowest levels for the Gender Index (gi) in the Prairies/Territories Region.
- The regions of Regina Moose Mountain (1.52), Southeast (0.88), and Saskatoon Biggar (0.87) showed the highest levels for the Gender Index (gi) among Francophone women in communities across the Prairies/Territories Region.

The Gender Index (gi) compares the characteristics of females in the OL minority population in a given region with the males in the same population. A value greater than 1.00 indicates that the characteristic is more commonly observed in the female group while a value less than 1.00 indicates that is less prevalent among females.

Recent international immigrants (previous 5 years) in OLMCs
Temporal Index
Economic Regions, 1996-2011

- ✓ The Francophone
 communities in Southeast
 (0.95), Saskatoon Biggar
 (3.60), and Prairies/Territories
 Region (3.76) displayed the
 lowest levels for the 19962011 temporal index
 (temp9611) in the
 Prairies/Territories Region.
- The regions of Southwest (4.69), Regina Moose Mountain (3.90), and Winnipeg (3.86) showed the highest levels for the 1996-2011 temporal index (temp9611) among Francophone communities across the Prairies/Territories Region.

The 1996-2011 temporal index (temp9611) compares the value for the OL minority population in a given region in 2011 with the same population in 1996. A temporal index higher than 1.00 indicates that the value is more present in 2011 than it was in 1996 and a temporal index lower than 1.00 means that the characteristic is less present in 2011 than it was in 1996.

Interprovincial and International In-Migrants (previous 5 years)

Values

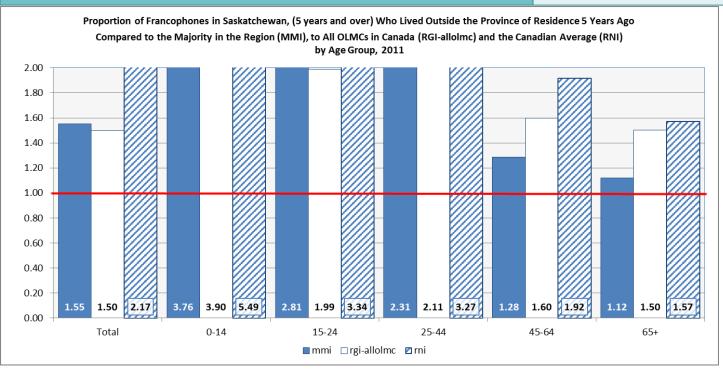

Proportion of Francophones (5 years and over) Who Lived Outside the Province of Residence 5 Years Ago Saskatchewan, 1996-2011

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 1996, 2001 and 2006 Census of Canada, Statistics Canada, 20% sample and the 2011 National Household Survey, Statistics Canada.

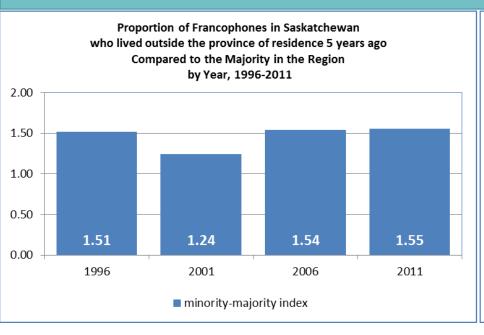

- ✓ In 2011, among Francophones in Saskatchewan, 1,838 (14.4%) lived ✓ outside the province of residence 5 years ago.
- This level was much higher than that of the Anglophone population in
 the same region (mmi=1.55) and was much higher than the levels
 reported by all Official-Language Minority Communities across the country (rgi-all olmc=1.50).
- The gender index was 1.04 which means that the proportion for women was similar to that of men in 2011.
 - The intergenerational index was 5.17 which means that the individuals 5 years and over (5 years and over) who lived outside the province of residence 5 years ago in the 25-44 age group was much higher than that of the 45-64 age group in 2011.

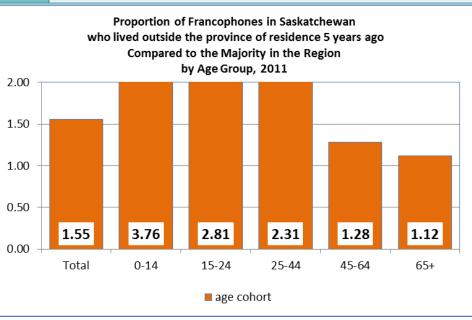

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs Compared to the Majority, to all OLMCS in Canada and to the Canadian Average, by Age Group, 2011

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who lived outside the province of residence 5 years ago was much higher than that of Anglophones in the region (mmi=1.55).
- When we consider the minoritymajority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 65+ age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who lived outside the province of residence 5 years ago was much higher than that of the Anglophone population in this age group (mmi=2.31).
- ✓ For the older half of the working age population (those aged 45-64), the level was much higher than that of the Anglophones in this age group (mmi=1.28).
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.
- The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs by Year, 1996-2011 and by Age Group, 2011

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who lived outside the province of residence 5 years ago was much higher than that of Anglophones in the region (mmi=1.55).
- ✓ The gap between the two linguistic groups grew over the 1996-2011 period.
- ✓ For the 1996-2011 period, the minority-majority index for Francophones in Saskatchewan (5 years and over) who lived outside the province of residence 5 years ago was highest in 2011 (mmi=1.55) and lowest in 2001 (mmi=1.24).

- ✓ When we consider the minority-majority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 65+ age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who lived outside the province of residence 5 years ago was much higher than that of the Anglophone population in this age group (mmi=2.31).
- ✓ For the older half of the working age population (those aged 45-64), the level was much higher than that of the Anglophones in this age group (mmi=1.28).

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 2011 National Household Survey, Statistics Canada. The relative indices are part of the "Communities in Context" research initiative which compares official-language minority communities with their majority neighbours, with other OLMC communities at various levels of geography and with themselves by gender, across time and intergenerationally. For further information on the methodolgy and concepts used in this research initiative, please refer to appendix "A".

- ✓ There was substantial variation in the proportion of individuals (5 years and over) who lived outside the province of residence 5 years ago in the Francophone communities across the Prairies/Territories Region in 2011.
- ✓ The Francophone communities in Interlake (MB) (0.8%), Southeast (MB) (1.8%), and South Central (MB) (2.0%) reported a lower proportion of individuals (5 years and over) who lived outside the province of residence 5 years ago than the other

Francophone communities across the Prairies/Territories Region.

✓ Francophones in the regions of Nunavut (NU) (48.3%), Northwest Territories (NT) (44.0%), and Regina - Moose Mountain (SK) (19.4%) displayed a higher proportion of individuals (5 years and over) who lived outside the province of residence 5 years ago than the other Francophone communities across the Prairies/Territories Region.

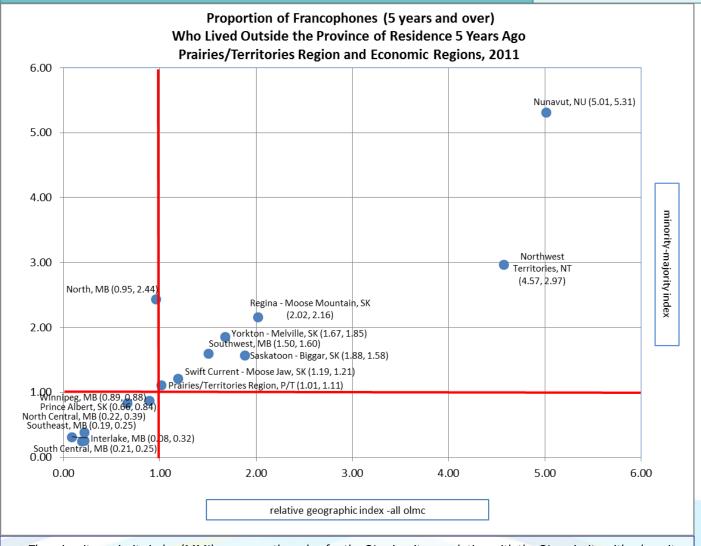

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Minority-Majority Index
Economic Regions, 2011

- ✓ The Francophone communities in Southeast (0.25), South Central (0.25), and Interlake (0.32) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the individuals 5 years and over (5 years and over) who lived outside the province of residence 5 years ago.
- ✓ The regions of Nunavut (5.31),
 Northwest Territories (2.97), and
 North (2.44) showed the highest levels
 for the minority-majority index (MMI)
 among Francophone communities
 across the Prairies/Territories Region
 when we consider the individuals 5
 years and over (5 years and over) who
 lived outside the province of residence
 5 years ago.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

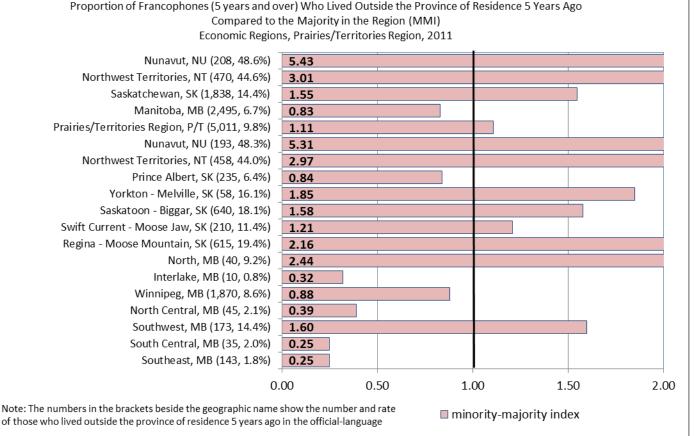

Proportion of International and Interprovincial In-Migrants (previous 5 years) in OLMCs Compared to their Neighbouring Majority and to all OLMCs Across Canada, 2011

- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

- ✓ The regions located in the top right quadrant displayed a higher proportion who lived outside the province of residence 5 years ago in the OLM population than in both their neighbouring majority and the total OLMC population of Canada.
- The regions located in the top left quadrant displayed a higher proportion who lived outside the province of residence 5 years ago in the OLM population than in their neighbouring majority and a lower OLMC proportion who lived outside the province of residence 5 years ago than in the total OLMC population of Canada.
- ✓ The regions located in the bottom right quadrant displayed a lower proportion who lived outside the province of residence 5 years ago in the OLM population than in their neighbouring majority and a higher OLMC proportion who lived outside the province of residence 5 years ago than in the total OLMC population of Canada.
- ✓ The regions located in the bottom left quadrant reported a lower proportion who lived outside the province of residence 5 years ago in the OLM population than in both their neighbouring majority and in the total OLMC population of Canada.

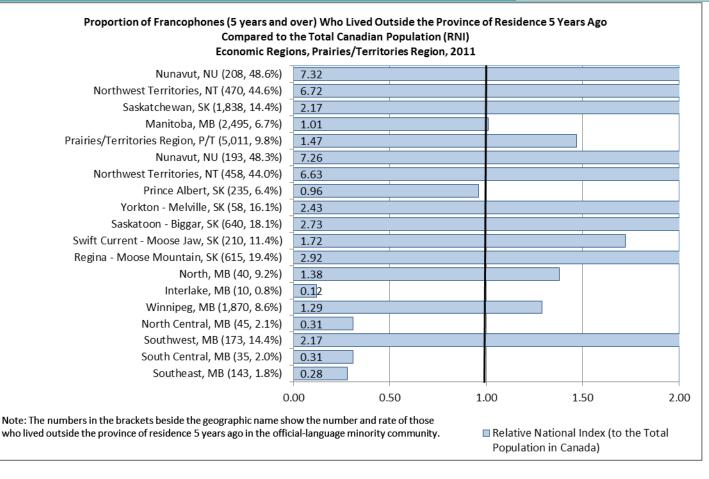

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Minority-Majority Index
Economic Regions, 2011

- The Francophone communities in Southeast (0.25), South Central (0.25), and Interlake (0.32) displayed the lowest levels for the minoritymajority index (MMI) in the Prairies/Territories Region when we consider the individuals 5 years and over (5 years and over) who lived outside the province of residence 5 years ago.
- ✓ The regions of Nunavut (5.31),
 Northwest Territories (2.97),
 and North (2.44) showed the
 highest levels for the minoritymajority index (MMI) among
 Francophone communities
 across the Prairies/Territories
 Region when we consider the
 individuals 5 years and over (5
 years and over) who lived
 outside the province of
 residence 5 years ago.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

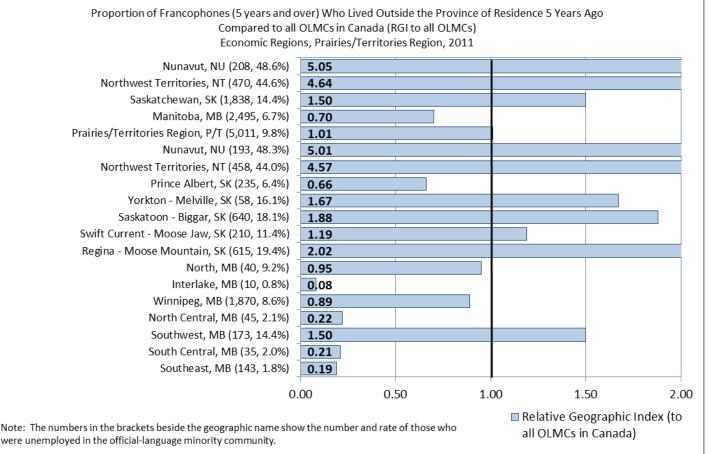

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Relative National Index
Economic Regions, 2011

- ✓ The Francophone
 communities in Interlake
 (0.12), Southeast (0.28), and
 South Central (0.31) displayed
 the lowest levels for the
 Relative National Index for
 Francophones in the
 Prairies/Territories Region.
- ✓ The regions of Nunavut (7.26), Northwest Territories (6.63), and Regina - Moose Mountain (2.92) showed the highest levels for the Relative National Index among Francophone communities across the Prairies/Territories Region.

The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

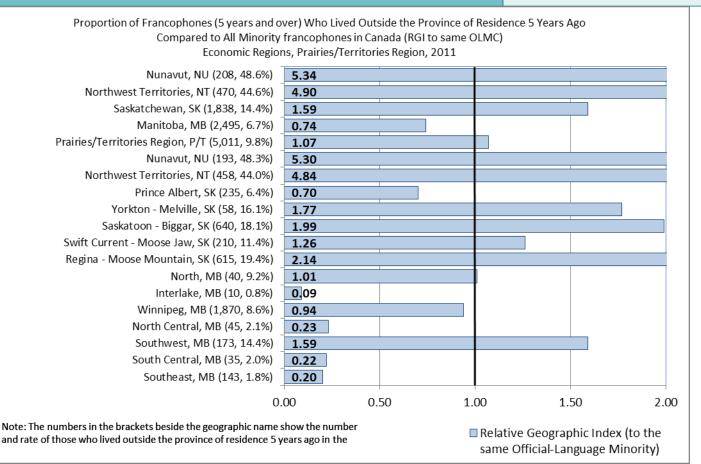

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Relative Geographic Index to all OLMCs
Economic Regions, 2011

- ✓ The Francophone communities in Interlake (0.08), Southeast (0.19), and South Central (0.21) displayed the lowest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) for individuals 5 years and over (5 years and over) who lived outside the province of residence 5 years ago in the Prairies/Territories Region.
- ✓ The regions of Nunavut (5.01), Northwest Territories (4.57), and Regina - Moose Mountain (2.02) showed the highest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) among Francophone communities across the Prairies/Territories Region.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

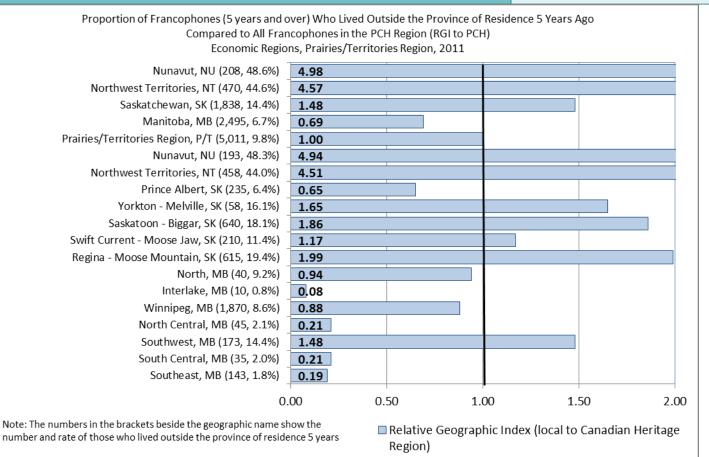

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Relative Geographic Index to the Same OLMC
Economic Regions, 2011

- ✓ The Francophone
 communities in Interlake
 (0.09), Southeast (0.20), and
 South Central (0.22) displayed
 the lowest levels for the
 Relative Geographic Index to
 the Same OLMC (rgi-same
 olmc) in the
 Prairies/Territories Region.
- ✓ The regions of Nunavut
 (5.30), Northwest Territories
 (4.84), and Regina Moose
 Mountain (2.14) showed the
 highest levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

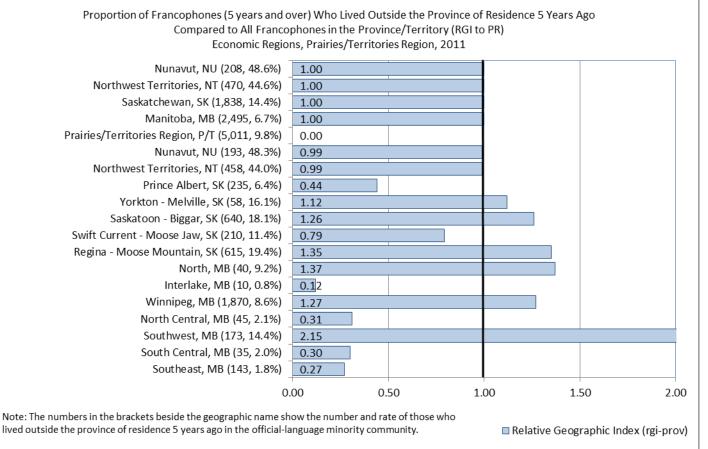

The Relative Geographic Index to the Same OLMC (rgi-same olmc) compares the value for a local OL minority population with the total OL minority population with a given language, that is, Francophone minority populations are compared with all Francophones in a minority situation across Canada and Quebec Anglophone regional communities are compared with the total Anglophone population of Quebec.

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Relative Geographic Index to the PCH Region
Economic Regions, 2011

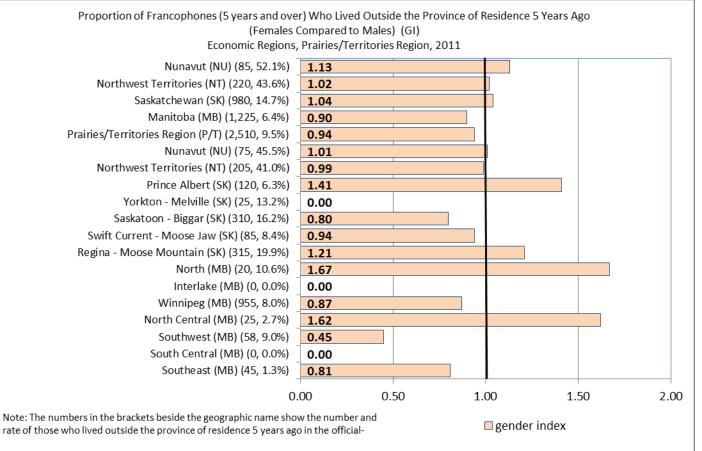

- ✓ The Francophone
 communities in Interlake
 (0.08), Southeast (0.19), and
 South Central (0.21) displayed
 the lowest levels for the
 Relative Geographic Index to
 Canadian Heritage region
 (rgi-pch) in the
 Prairies/Territories Region.
- ✓ The regions of Nunavut
 (4.94), Northwest Territories
 (4.51), and Regina Moose
 Mountain (1.99) showed the
 highest levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch)
 among Francophone
 communities across the
 Prairies/Territories Region.

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Relative Geographic Index to the Province
Economic Regions, 2011

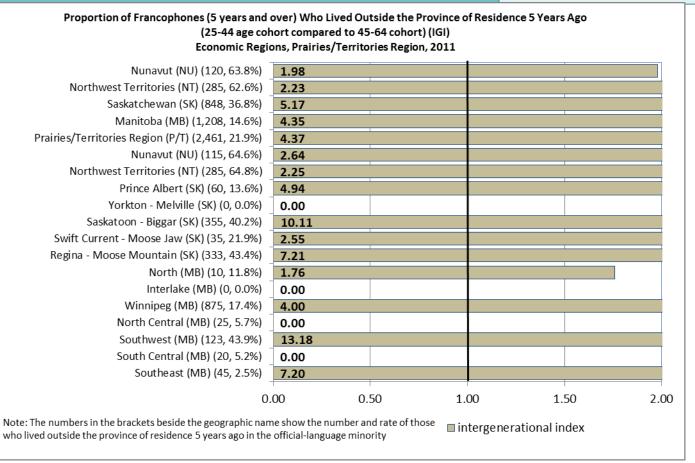

- ✓ The Francophone
 communities in Interlake
 (0.12), Southeast (0.27), and
 South Central (0.30) displayed
 the lowest levels for the
 Relative Geographic Index to
 Province (rgi-prov) in the
 Prairies/Territories Region.
- ✓ The regions of Southwest (2.15), North (1.37), and Regina Moose Mountain (1.35) showed the highest levels for the Relative Geographic Index to Province (rgi-prov) among Francophone communities across the Prairies/Territories Region.

- ✓ The women in Francophone communities in Southwest (0.45), Saskatoon Biggar (0.80), and Southeast (0.81) displayed the lowest levels for the Gender Index (gi) in the Prairies/Territories Region.
- ✓ The regions of North (1.67), North Central (1.62), and Prince Albert (1.41) showed the highest levels for the Gender Index (gi) among Francophone women in communities across the Prairies/Territories Region.

The Gender Index (gi) compares the characteristics of females in the OL minority population in a given region with the males in the same population. A value greater than 1.00 indicates that the characteristic is more commonly observed in the female group while a value less than 1.00 indicates that is less prevalent among females.

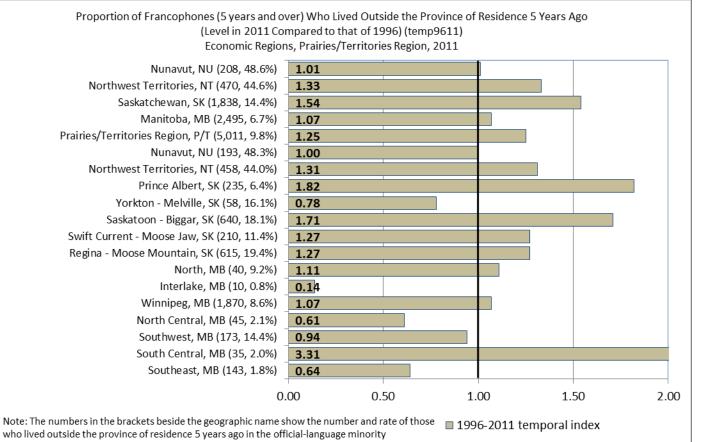

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Intergenerational Index (25-44 compared to 45-64)
Economic Regions, 2011

- ✓ The Francophone communities in North (1.76), Northwest Territories (2.25), and Swift Current Moose Jaw (2.55) displayed the lowest levels for the Intergenerational Index (intergen) in the Prairies/Territories Region.
- ✓ The regions of Southwest
 (13.18), Saskatoon Biggar
 (10.11), and Regina Moose
 Mountain (7.21) showed the
 highest levels for the
 Intergenerational Index
 (intergen) among
 Francophone communities
 across the Prairies/Territories
 Region.

The Intergenerational Index (intergen) compares the value for the younger adult population (aged 25-44) with the older half of the working age population (aged 45-64) in a given OL minority population. The intergenerational index suggests whether a particular situation is improving or deteriorating across time.

In-Migrants Interprov. and Internat. (previous 5 years) in OLMCs
Temporal Index
Economic Regions, 1996-2011

- ✓ The Francophone communities in Interlake (0.14), North Central (0.61), and Southeast (0.64) displayed the lowest levels for the 1996-2011 temporal index (temp9611) in the Prairies/Territories Region.
- ✓ The regions of South Central
 (3.31), Prince Albert (1.82),
 and Saskatoon Biggar (1.71)
 showed the highest levels for
 the 1996-2011 temporal index
 (temp9611) among
 Francophone communities
 across the Prairies/Territories
 Region.

The 1996-2011 temporal index (temp9611) compares the value for the OL minority population in a given region in 2011 with the same population in 1996. A temporal index higher than 1.00 indicates that the value is more present in 2011 than it was in 1996 and a temporal index lower than 1.00 means that the characteristic is less present in 2011 than it was in 1996.

Visible minorities

	Proportion of Francophones Who were Members of Visible Minority Groups												
	Saskatchewan, 2	1996-2011											
	Values	Total	0-14	15-24	25-44	45-64	65+

	Relative geographic index to all OL minority	0.14	n.d.	n.d.	n.d.	n.d.	n.d.						

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 1996, 2001 and 2006 Census of Canada, Statistics Canada, 20% sample and the 2011 National Household Survey, Statistics Canada.

- ✓ In 2011, among Francophones in Saskatchewan, 1,123 (8.6%) were members of a visible minority group.
- This level was much higher than that of the Anglophone population in
 the same region (mmi=1.44) but was much lower than the levels
 reported by all Official-Language Minority Communities across the
 country (rgi-all olmc=0.45).
- The gender index was 0.80 which means that the proportion for women was much lower than that of men in 2011.
- The intergenerational index was 4.89 which means that the total population who were members of visible minority groups in the 25-44 age group was much higher than that of the 45-64 age group in 2011.

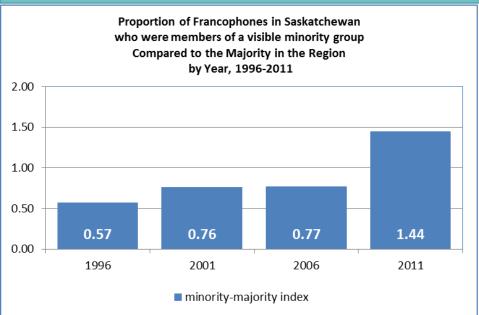

Visible Minorities in OLMCs iority, to all OLMCS in Canada

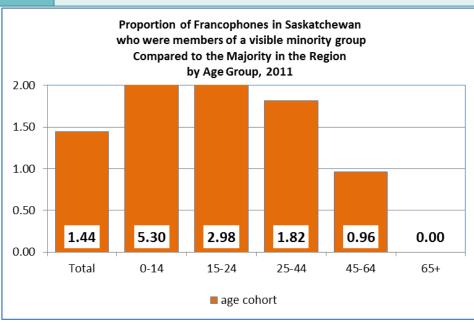

Compared to the Majority, to all OLMCS in Canada and to the Canadian Average, by Age Group, 2011

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who were members of a visible minority group was much higher than that of Anglophones in the region (mmi=1.44).
- ✓ When we consider the minoritymajority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 45-64 age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who were members of a visible minority group was much higher than that of the Anglophone population in this age group (mmi=1.82).
- ✓ For the older half of the working age population (those aged 45-64), the level was similar to that of the Anglophones in this age group (mmi=0.96).
- The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.
- The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.
- The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

Visible Minorities in OLMCs by Year, 1996-2011 and by Age Group, 2011

- ✓ In 2011, as illustrated by the minority-majority index, the proportion of Francophones in Saskatchewan who were members of a visible minority group was much higher than that of Anglophones in the region (mmi=1.44).
- ✓ The gap between the two linguistic groups grew over the 1996-2011 period.
- ✓ For the 1996-2011 period, the minority-majority index for Francophones in Saskatchewan who were members of visible minority groups was highest in 2011 (mmi=1.44) and lowest in 1996 (mmi=0.57).
- ✓ When we consider the minority-majority index for age groups in 2011, the gap between the two linguistic groups was largest in the 0-14 age cohort and smallest in the 45-64 age cohort.
- ✓ For the younger half of the working age population (those aged 25-44), we find that the proportion of those who were members of a visible minority group was much higher than that of the Anglophone population in this age group (mmi=1.82).
- ✓ For the older half of the working age population (those aged 45-64), the level was similar to that of the Anglophones in this age group (mmi=0.96).

Source: Research Team, Official Languages Branch, Canadian Heritage, based on data from the 2011 National Household Survey, Statistics Canada. The relative indices are part of the "Communities in Context" research initiative which compares official-language minority communities with their majority neighbours, with other OLMC communities at various levels of geography and with themselves by gender, across time and intergenerationally. For further information on the methodolgy and concepts used in this research initiative, please refer to appendix "A".

- ✓ There was substantial variation in the proportion of individuals who were members of visible minority groups in the Francophone communities across the Prairies/Territories Region in 2011.
- ✓ The Francophone communities in Southeast (MB) (1.0%), South Central (MB) (1.7%), and Nunavut (NU) (2.3%) reported a lower proportion of individuals who were members of visible minority groups than the other Francophone communities across the

Prairies/Territories Region.

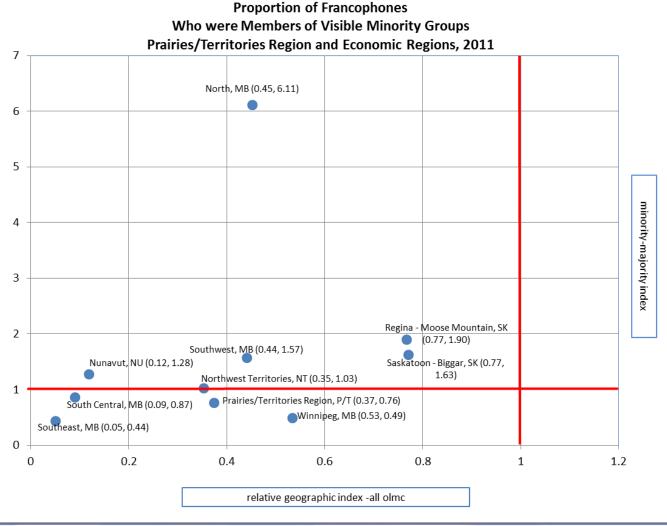

✓ Francophones in the regions of Saskatoon - Biggar (SK) (14.8%), Regina - Moose Mountain (SK) (14.7%), and Winnipeg (MB) (10.2%) displayed a higher proportion of individuals who were members of visible minority groups than the other Francophone communities across the Prairies/Territories Region.

- ✓ The Francophone communities in Southeast (0.44), Winnipeg (0.49), and Prairies/Territories Region (0.76) displayed the lowest levels for the minority-majority index (MMI) in the Prairies/Territories Region when we consider the total population who were members of visible minority groups.
- ✓ The regions of North (6.11), Regina -Moose Mountain (1.90), and Saskatoon - Biggar (1.63) showed the highest levels for the minoritymajority index (MMI) among Francophone communities across the Prairies/Territories Region when we consider the total population who were members of visible minority groups.

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

Proportion of Visible Minorities in OLMCs Compared to their Neighbouring Majority and to all OLMCs Across Canada, 2011

- ✓ The regions located in the top right quadrant displayed a higher proportion who were members of a visible minority group in the OLM population than in both their neighbouring majority and the total OLMC population of Canada.
- ✓ The regions located in the top left quadrant displayed a higher proportion who were members of a visible minority group in the OLM population than in their neighbouring majority and a lower OLMC proportion who were members of a visible minority group than in the total OLMC population of Canada.
- ✓ The regions located in the bottom right quadrant displayed a lower proportion who were members of a visible minority group in the OLM population than in their neighbouring majority and a higher OLMC proportion who were members of a visible minority group than in the total OLMC population of Canada.
- ✓ The regions located in the bottom left quadrant reported a lower proportion who were members of a visible minority group in the OLM population than in both their neighbouring majority and in the total OLMC population of Canada.

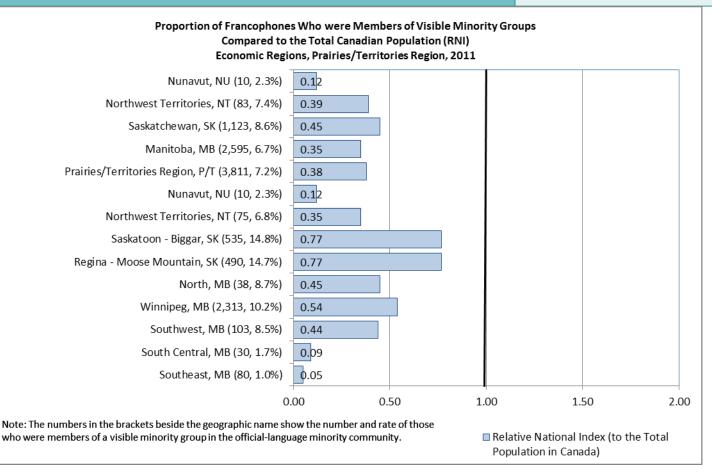

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

- ✓ The Francophone
 communities in Southeast
 (0.44), Winnipeg (0.49), and
 Prairies/Territories Region
 (0.76) displayed the lowest
 levels for the minoritymajority index (MMI) in the
 Prairies/Territories Region
 when we consider the total
 population who were
 members of visible minority
 groups.
- ✓ The regions of North (6.11),
 Regina Moose Mountain
 (1.90), and Saskatoon Biggar
 (1.63) showed the highest
 levels for the minoritymajority index (MMI) among
 Francophone communities
 across the Prairies/Territories
 Region when we consider the
 total population who were
 members of visible minority
 groups.

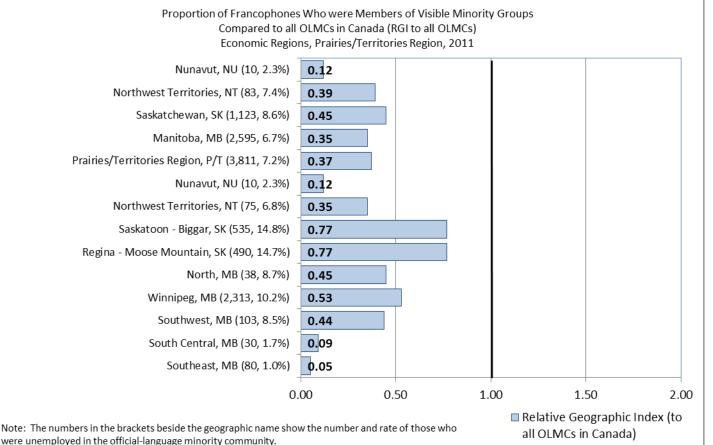

The minority-majority index (MMI) compares the value for the OL minority population with the OL majority with whom it shares a territory. A value greater than 1.00 indicates that the characteristic is more present in the minority than in the majority while a value of less than 1.00 means that the characteristic is less present in the minority group.

- ✓ The Francophone
 communities in Southeast
 (0.05), South Central (0.09),
 and Nunavut (0.12) displayed
 the lowest levels for the
 Relative National Index for
 Francophones in the
 Prairies/Territories Region.
- ✓ The regions of Saskatoon -Biggar (0.77), Regina - Moose Mountain (0.77), and Winnipeg (0.54) showed the highest levels for the Relative National Index among Francophone communities across the Prairies/Territories Region.

The Relative National Index to all OLMCs (rni) compares the value for the OL minority population in a given region with that of the total Canadian population. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

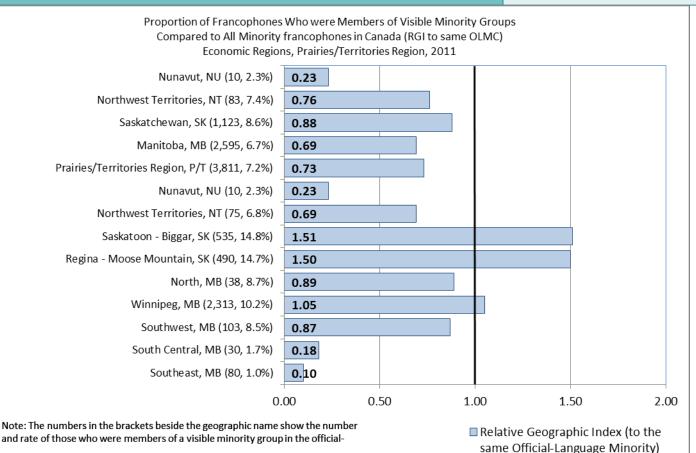

Visible Minorities in OLMCs Relative Geographic Index to all OLMCs Economic Regions, 2011

- ✓ The Francophone communities in Southeast (0.05), South Central (0.09), and Nunavut (0.12) displayed the lowest levels for the Relative Geographic Index to all OLMCs (rgi-all olmc) for total population who were members of visible minority groups in the Prairies/Territories Region.
- ✓ The regions of Saskatoon Biggar (0.77), Regina Moose
 Mountain (0.77), and
 Winnipeg (0.53) showed the
 highest levels for the Relative
 Geographic Index to all OLMCs
 (rgi-all olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

The Relative Geographic Index to all OLMCs (rgi-all olmc) compares the value for the OL minority population in a given region with the OL minority population across Canada. A value greater than 1.00 means that the characteristic is more commonly found in the local population when compared to the total Canadian OLMC population while a value less than 1.00 means that the characteristic is less prevalent in the local population.

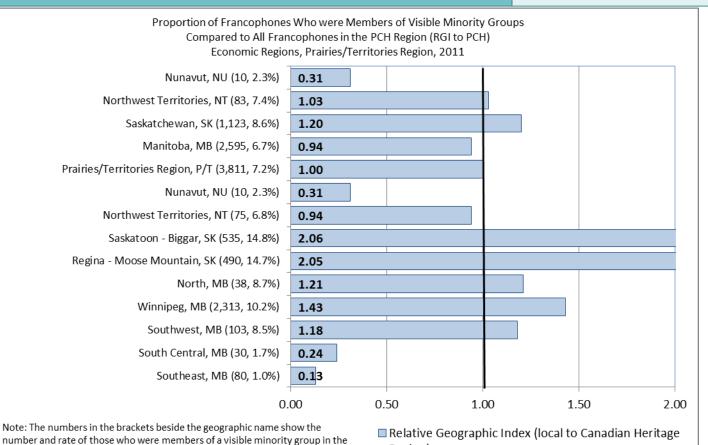

Visible Minorities in OLMCs Relative Geographic Index to the Same OLMC Economic Regions, 2011

- ✓ The Francophone
 communities in Southeast
 (0.10), South Central (0.18),
 and Nunavut (0.23) displayed
 the lowest levels for the
 Relative Geographic Index to
 the Same OLMC (rgi-same
 olmc) in the
 Prairies/Territories Region.
- ✓ The regions of Saskatoon Biggar (1.51), Regina Moose
 Mountain (1.50), and
 Winnipeg (1.05) showed the
 highest levels for the Relative
 Geographic Index to the Same
 OLMC (rgi-same olmc) among
 Francophone communities
 across the Prairies/Territories
 Region.

The Relative Geographic Index to the Same OLMC (rgi-same olmc) compares the value for a local OL minority population with the total OL minority population with a given language, that is, Francophone minority populations are compared with all Francophones in a minority situation across Canada and Quebec Anglophone regional communities are compared with the total Anglophone population of Quebec.

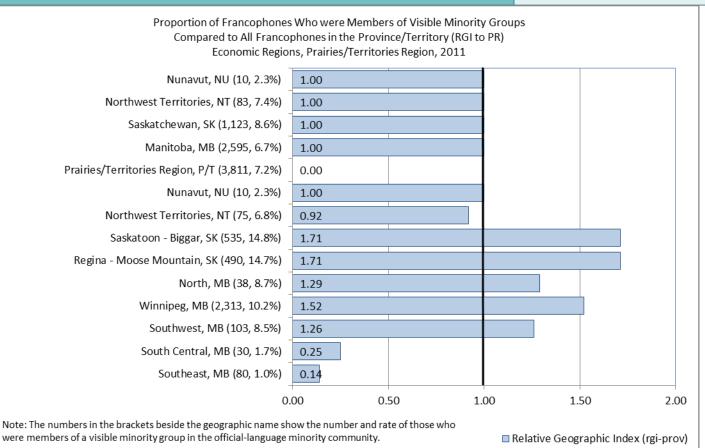

Visible Minorities in OLMCs Relative Geographic Index to the PCH Region Economic Regions, 2011

Region)

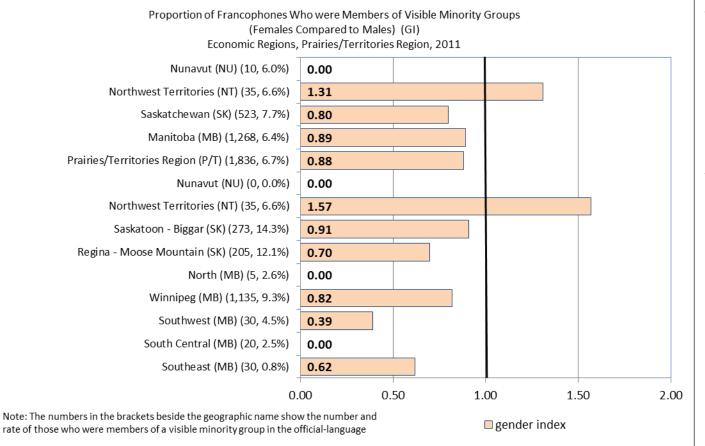

- ✓ The Francophone
 communities in Southeast
 (0.13), South Central (0.24),
 and Nunavut (0.31) displayed
 the lowest levels for the
 Relative Geographic Index to
 Canadian Heritage region
 (rgi-pch) in the
 Prairies/Territories Region.
- ✓ The regions of Saskatoon Biggar (2.06), Regina Moose
 Mountain (2.05), and
 Winnipeg (1.43) showed the
 highest levels for the Relative
 Geographic Index to Canadian
 Heritage region (rgi-pch)
 among Francophone
 communities across the
 Prairies/Territories Region.

Visible Minorities in OLMCs Relative Geographic Index to the Province Economic Regions, 2011

- ✓ The Francophone
 communities in Southeast
 (0.14), South Central (0.25),
 and Northwest Territories
 (0.92) displayed the lowest
 levels for the Relative
 Geographic Index to Province
 (rgi-prov) in the
 Prairies/Territories Region.
- ✓ The regions of Saskatoon -Biggar (1.71), Regina - Moose Mountain (1.71), and Winnipeg (1.52) showed the highest levels for the Relative Geographic Index to Province (rgi-prov) among Francophone communities across the Prairies/Territories Region.

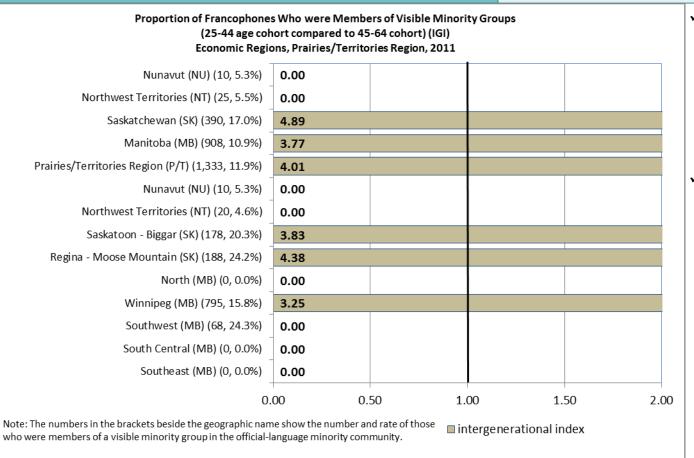

Visible Minorities in OLMCs Gender Index Economic Regions, 2011

- ✓ The women in Francophone communities in Southwest (0.39), Southeast (0.62), and Regina Moose Mountain (0.70) displayed the lowest levels for the Gender Index (gi) in the Prairies/Territories Region.
- ✓ The regions of Northwest
 Territories (1.57), Saskatoon Biggar (0.91), and
 Prairies/Territories Region
 (0.88) showed the highest
 levels for the Gender Index (gi)
 among Francophone women
 in communities across the
 Prairies/Territories Region.

The Gender Index (gi) compares the characteristics of females in the OL minority population in a given region with the males in the same population. A value greater than 1.00 indicates that the characteristic is more commonly observed in the female group while a value less than 1.00 indicates that is less prevalent among females.

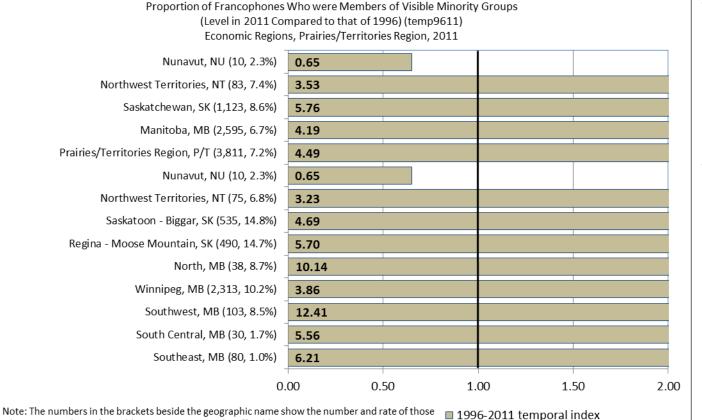

Visible Minorities in OLMCs Intergenerational Index (25-44 compared to 45-64) Economic Regions, 2011

- ✓ The Francophone communities in Winnipeg (3.25), Saskatoon Biggar (3.83), and Regina Moose Mountain (4.38) displayed the lowest levels for the Intergenerational Index (intergen) in the Prairies/Territories Region.
- The regions of Regina Moose Mountain (4.38), Saskatoon Biggar (3.83), and Winnipeg (3.25) showed the highest levels for the Intergenerational Index (intergen) among Francophone communities across the Prairies/Territories Region.

who were members of a visible minority group in the official-language minority community.

Visible Minorities in OLMCs
Temporal Index
Economic Regions, 1996-2011

- ✓ The Francophone communities in Nunavut (0.65), Northwest Territories (3.23), and Winnipeg (3.86) displayed the lowest levels for the 1996-2011 temporal index (temp9611) in the Prairies/Territories Region.
- The regions of Southwest (12.41), North (10.14), and Southeast (6.21) showed the highest levels for the 1996-2011 temporal index (temp9611) among Francophone communities across the Prairies/Territories Region.

The 1996-2011 temporal index (temp9611) compares the value for the OL minority population in a given region in 2011 with the same population in 1996. A temporal index higher than 1.00 indicates that the value is more present in 2011 than it was in 1996 and a temporal index lower than 1.00 means that the characteristic is less present in 2011 than it was in 1996.
