

# RURAL MUNICIPALITY OF LAJORD NO-128, SASKATCHEWAN

FIGURE 1

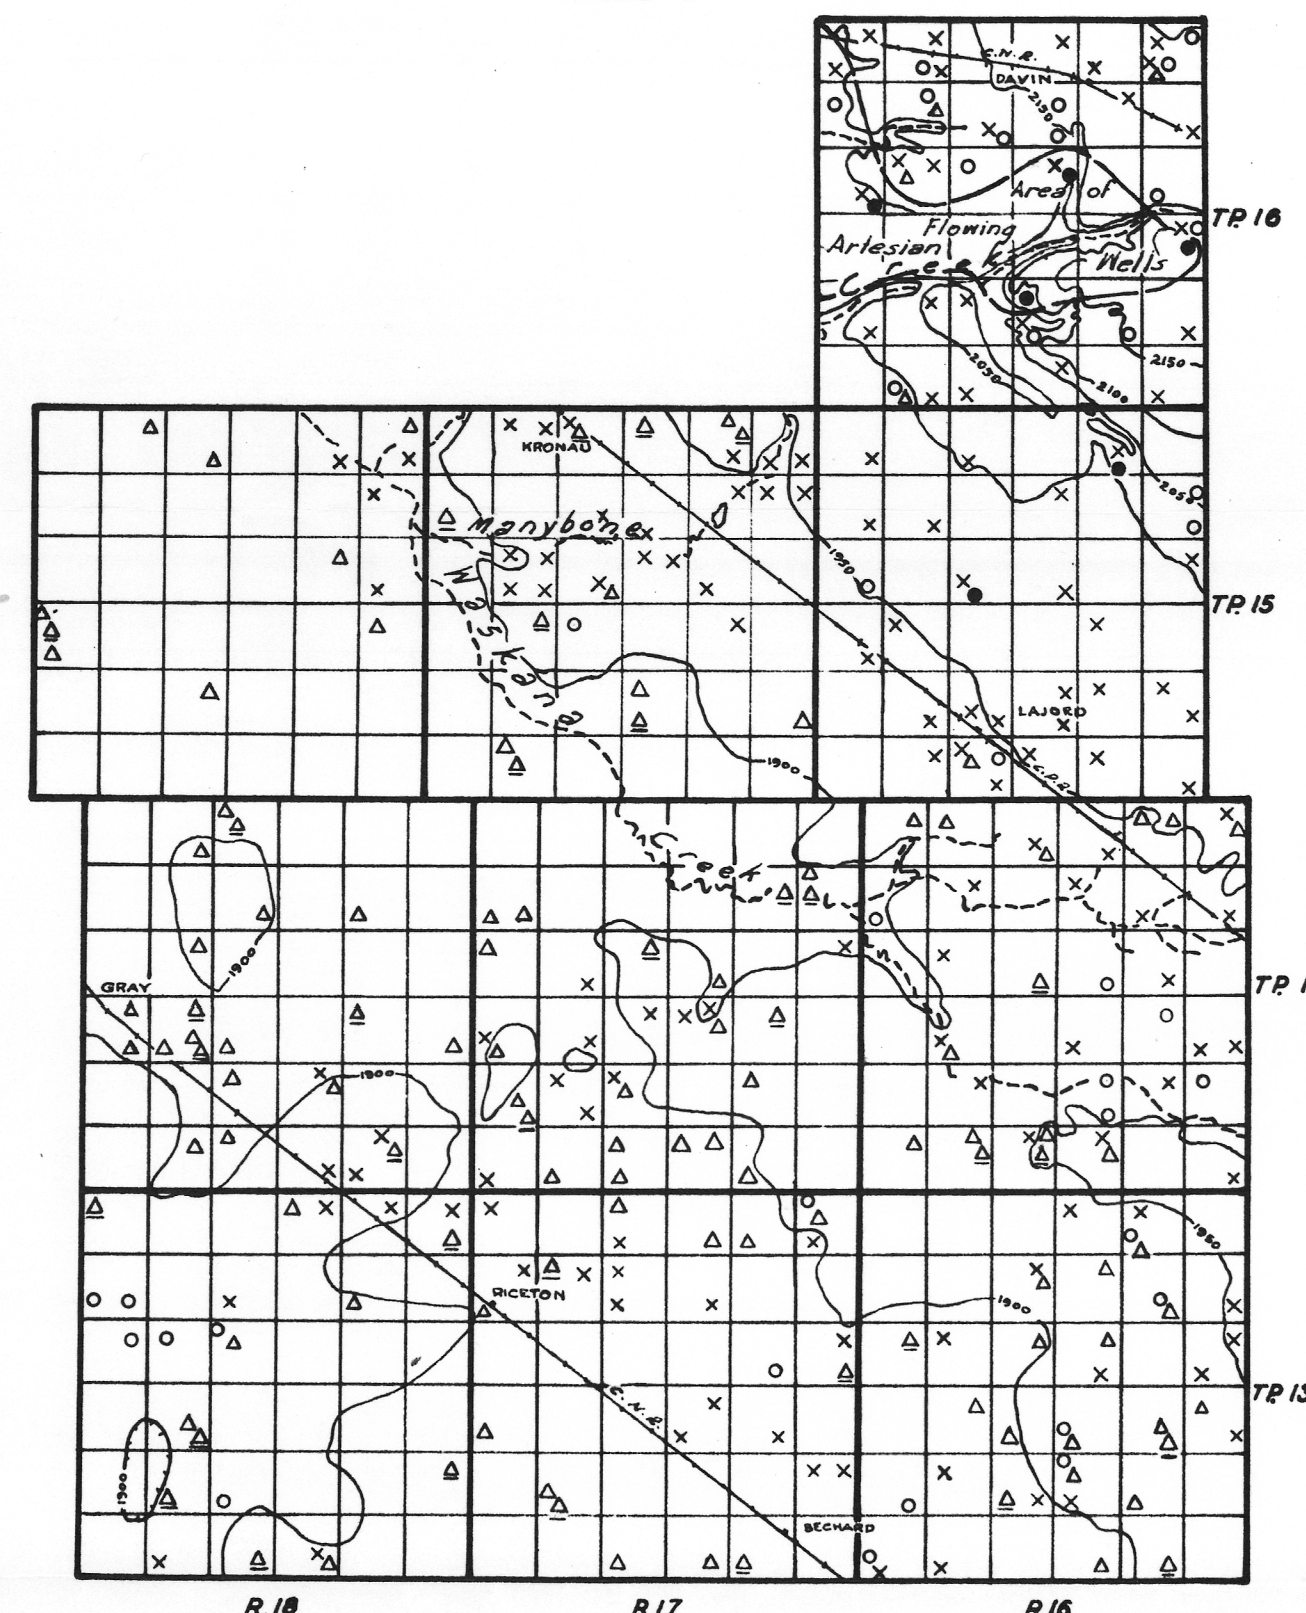

-  Glacial lake sands and gravels in which water is obtained at depths less than 30 feet
-  Glacial lake clay which does not yield water **NOTE:** Water is obtained from deposits of sand and gravel in the underlying boulder clay at depths of 8 to 231 feet
-  Glacial outwash sands and gravels in which water may be obtained at depths less than 20 feet
-  Area of knolls and depressions in glacial drift (moraine) in which water is obtained from pockets of sand and gravel at depths of 10 to 135 feet
-  Boulder clay or glacial till (till plain) in which water is obtained from pockets of sand and gravel at depths of 3 to 106 feet
-  Eastern boundary of an area in which large supplies of water are obtained from beds of sand and gravel in the boulder clay at depths of 72 to 98 feet
-  Boundary of an area in which water is obtained from deposits of sand and gravel in the boulder clay at depths of 12 to 52 feet
-  Eastern boundary of an area in which springs and Flowing Artesian wells occur

**NOTE:**  
The Marine Shale series underlies the glacial drift throughout the municipality

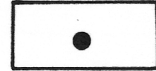

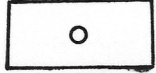

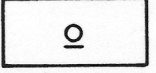

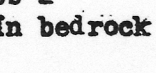

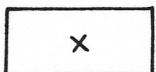

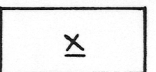

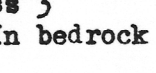

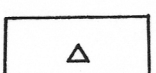

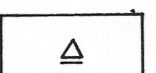

Map showing the surface and bedrock geology as it affects the supply of ground water, and areas in which the ground water occurs

FIGURE 2

Map showing the drainage and relief, and the location and types of wells with source of ground water supply

-  Well class 1  
In drift
-  In bedrock
-  Flowing wells (These are usually designated as Flowing Artesian wells)
-  Well class 2  
In drift
-  In bedrock
-  Wells in which the water is under pressure but does not rise to the surface (These are usually designated as Non-flowing Artesian wells)
-  Well class 3  
In drift
-  In bedrock
-  Wells in which the water does not rise above the water table (These are usually designated as Non-Artesian wells)
-  Dry holes  
In drift
-  In bedrock
-  Contours (interval 50 feet)
