Canada

**Health Canada is the federal department responsible for helping the people of Canada maintain and improve their health.** We assess the safety of drugs and many consumer products, help improve the safety of food, and provide information to Canadians to help them make healthy decisions. We provide health services to First Nations people and to Inuit communities. We work with the provinces to ensure our health care system serves the needs of Canadians.

# BIOMONITORING CONTENT SUMMARY FOR THE CANADIAN HEALTH MEASURES SURVEY: CYCLES 1–4 (2007–2015)

These chemicals have been measured or are planned for measurement in blood and/or urine samples collected as part of the Canadian Health Measures Survey (CHMS) from 2007 to 2015. The chemicals were selected based on known or suspected health effects resulting from exposure, level of public concern, evidence of exposure in the Canadian population, and technical feasibility and cost of measurement. In addition, factors such as

emerging Health Canada priorities are considered while selecting chemicals for inclusion in the CHMS. Summary data for these chemicals have been published in Health Canada's reports on human biomonitoring of environmental chemicals in Canada and scientific articles. The primary source of summary data for each chemical, when available, is provided in the table below.
