THE SYSTEM OF NATIONAL ACCOUNTS

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks, and descriptions of sources and methods) which make up this System will now carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data, (Catalogue Nos. with prefix 67), in their more summary form, are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Indexes of Real Domestic Product by Industry (included with Catalogue Nos. carrying the prefix 61) provide "constant dollar" measures of the contribution of each industry to gross domestic product at factor cost. Inputs and outputs are related in Productivity Studies (Catalogue Nos. with prefix 14).

Both the Input-Output Tables and Indexes of Real Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by

the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics, and the legal entity is the main unit of classification of transactors. Also, provision is made in the System for incorporation of balance sheet (wealth) estimates when such data are sufficiently developed.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, the Dominion Bureau of Statistics is continuing research on enterprise-company-establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in the United Nations publication, "A System of National Accounts" (Studies in Methods, Series F., No. 2, Rev. 3, Statistical Office, Department of Economic and Social Affairs, United Nations, New York, 1968). In the future, a document on the conceptual framework of the Canadian System of National Accounts will be prepared for publication by the Dominion Bureau of Statistics. This document will furnish the broad theoretical outline of the System. The finer conceptual details, the statistical tables, and the descriptions of sources and methods as they pertain to the individual parts of the System, will appear in the various regular and occasional publications relating to those parts.

SYMBOLS

The following standard symbols are used in Dominion Bureau
of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

A COMMENTARY ON FINANCIAL DEVELOPMENTS

Economic Conditions in 1968

The economy advanced with renewed vigour in 1968 following a slower pace of growth in 1967. In real terms the country's output of goods and services increased by almost 5 per cent as against 3 per cent in 1967. Much of the strength stemmed from the demand for Canadian exports, where a 19.5 per cent increase in merchandise exports raised the trade surplus to \$1.3 million from \$0.5 million in the previous year. This rapid increase in external demand was complemented by sizeable advances in domestic demands with substantial growth in personal expenditure and a sharp increase in expenditure on residential construction. For the year as a whole, business outlays on plant and equipment fell short of the 1967 level but movements throughout the year indicated strengthening demand in the area.

Despite higher levels of employment the unemployment rate was higher in 1968 as the continuing growth in the labour force outstripped the capacity of the economy to create new jobs. Part of the rise in output during the year was a result of the much improved productivity performance in the service industries.

The inflationary conditions of 1966 and 1967 persisted in 1968 as both prices and costs continued to rise at undesirable rates.

A number of important factors governed behaviour in financial markets during the year. In the early part of the year, severe disturbances in the international monetary system and concern with the impact of United States restrictions of investment abroad resulted in speculative pressures on the Canadian dollar; although the declining trend was short-lived the effects continued well into the year during which time foreign exchange reserves were being rebuilt and short-term borrowing abroad was repaid. The pressures created by the high level of domestic demand, reinforced by similar conditions in the United States resulted in expectations of continuing inflation. Despite high and rising interest rates the market for long-term bonds was weak and there was evidence of an increasing diversion of funds by financial institutions into equities, mortgages and consumer credit.

Investment in fixed capital and inventories in Canada totalled \$16.3 billion in 1968, an increase of 5 per cent over the preceding year with higher outlays on both residential construction and government capital projects and a higher rate of inventory accumulation. Business outlays on plant and equipment declined during the year, in spite of the aforementioned continuing expectations of inflationary pressures which might be expected to precipitate capital projects and boost corporation spending on plant and equipment. The difficulties facing borrowers in the capital markets were considerable, especially in respect of bonds and mortgages — the traditional long-term instruments used to finance capital formation. Even the historically high rates of interest such instruments could command did not

offset the lenders' hesitation to invest their funds in fixed income corporate securities. These capital market conditions which were largely the results of the developing inflationary psychosis, may in turn have had a dampening effect on corporate investment projects, thus moderating aggregate demand. The use of credit lines established by chartered banks for major Canadian businesses may be an additional indication of the persistent nature of the capital market conditions referred to above. Bank lines are often used for bridge financing, especially when currently prevailing market conditions for long-term commitments are expected to improve. At the end of 1968 credit line approvals of \$1.0 million or more amounted to \$8.3 billion, but only about \$4 billion were outstanding, leaving more than 50 per cent of the authorized amount unused. This represented about the same ratio as in the preceding four years. Thus in spite of tight capital market conditions, no greater use was made of available bank lines than under the retrospectively more relaxed conditions during previous years.

The year 1968 can probably be best summarized as one which, although marred by inflationary pressures, made further strides in economic growth.

Supply and Demand for Funds

Sector summary. — The personal and unincorporated business and the non-financial corporate business sectors continued to generate most of the savings necessary to finance investment during the year — just over 70 per cent. Increases in savings occurred in the business sector, both non-financial and financial and in the government sector. The latter increased its savings by more than \$850 million representing a 30 per cent increase over 1967. Savings made available by the rest of the world declined in 1968. There was little change in savings of persons and unincorporated business.

In 1968 saving was in excess of requirements for investment in all sectors except business. There was, however, a decline of \$800 million from 1967 in the net lending to other sectors by persons and unincorporated business which was only partly offset by the swing of more than \$500 million in provincial and municipal governments from being net borrowers in 1967 to suppliers of funds in 1968. The business sector continued its role as a net borrower from other sectors, but the net amount borrowed in 1968 declined from the previous year. The total of the net transfer of funds between the broad sector groupings declined in 1968. On balance, a greater part of investment undertaken in each sector was financed by savings generated within the sector.

With an apparent reduction in savings in 1968 the personal and unincorporated business sector substantially increased their investments in deposits, Canadian stocks, life insurance, short-term debt and other assets. The build-up in deposits and

life insurance, the two largest increases, \$4 billion, and \$1.5 billion respectively, were of similar magnitude the previous year but investments in Canadian stocks and short-term debt amounted to \$1.2 billion, representing a dramatic swing from the previous year when on balance the sector's holdings in these investments was reduced by just over \$200 million. The striking swing to a reduction of three quarters of a billion in holdings of Canadian bonds reflected the difficulties experienced in the bond market in 1968 in contrast with significant investments in bonds in the previous year.

The supply of funds to the sector continued to consist mainly of consumer credit, bank and other loans and mortgages. Through these categories the sector received over \$4.5 billion, a considerable increase over the accommodation of \$3.5 billion received from these sources in 1967.

The financial investment of non-financial private corporations was concentrated in receivables. The \$1.3 billion in trade receivables represents a 30 per cent increase over 1967. A corresponding increase in trade payables in the unincorporated business sector may indicate that the liquidity of the small non-corporate businesses has deteriorated and as a result of the credit squeeze, a greater reliance on trade credit as a means to finance their activities became prevalent. The sector's supply of funds came mostly in the form of equity capital, while bond financing (although on a reduced scale), remained an important source of funds.

The financial sectors reflected in their investments the shifting trends developing in the capital markets. The following sector deals with these in greater detail.

Non-financial government enterprises decreased somewhat their demand for capital although their fixed capital formation remained virtually unchanged. The net reduction is due to changes in inventory accumulation and an increase in income from the sale of existing and non-tangible assets. The needed funds were supplied to the sector mostly by the parent governments, although as for private business, bonds retained their role as an important vehicle for financing their capital formation. On the whole, reliance on external financing increased somewhat in comparison with 1967, in spite of a slightly lower overall demand. This increasing reliance on external resources is dissimilar to the trend which has developed in the private business sector.

Governments continued to invest heavily in their enterprises, with a significant portion of this investment in turn finding its way to the general public in the form of loans and mortgages made by public financial institutions. An increase of government revenues kept financing on approximately the same level as in 1967 despite an increase in capital formation.

The financing of the economic activity and the sources of the funds raised are given in summary form in Statement 1.

¹ Funds invested through investment houses in bonds and other instruments are assumed to have been "directly" invested by the non-financial sectors, if such instruments are held by them. Only securities held by the financial sectors are considered to have gone through financial intermediaries.

² The Statement was based on the assumption that deduction of liabilities of financial sectors from holdings of non-financial sectors will produce amounts representing funds invested "directly" by non-financial sectors in their own securities; while this assumption is not absolutely correct, the resulting error is considered to be of tolerable magnitude.

³ "Other" item includes "non-corporate claims" and serves as the balancing figure.

The statement indicates that in 1968 less than 55 per cent of the funds raised by non-financial sectors was held through intermediaries. This is a drop from over 60 per cent in 1967.

The degree of involvement by intermediaries varies with the type of instrument. Understandably, consumer credit and loans are almost entirely supplied by the financial sectors. Equity and bond financing and to some extent even short-term paper are more extensively provided "directly".

Capital Markets – Financial Intermediaries

A review of the activities carried out by the major financial intermediary sectors reflects the conditions described. The climate, which was not conducive in 1967 to investment in fixed income securities continued to deteriorate further in this respect in 1968. Life insurance companies, for example, invested 20 per cent of their funds or \$210 million in corporation bonds in 1967. In 1968, the ratio declined to 16 per cent or \$114 million. Investment in equities by insurance companies and pension funds however grew from \$469 million in 1967 to \$620 million in 1968 representing an increase from 30 per cent to 37 per cent of their portfolio growth.

In the case of life insurance companies an added reason for their interest in equities is the change in tax legislation. The new tax proposals outlined in October 1968, making among other things investment income taxable in the hands of life insurance companies, appeared to have had an immediate impact on their portfolio management. According to figures published by the Canadian Life Insurance

Association, the portfolios of the sixteen major life insurance companies reacted quickly to the new legislation through the disposition of bonds in favour of equity investments. Figures becoming available for the early months of 1969 indicate that this trend became even more pronounced as portfolio policies were gradually formulated.

One factor of strength in an otherwise weak corporation bond market is the rising volume of sinking fund requirements. It appears that to an increasing degree the size of the new issue market is becoming a function of these requirements.

These trends extend to all the financial sectors. The near banks increased their bond holdings by \$150 million in 1968 compared to \$280 million in 1967. Bond holdings of the chartered banks remained unchanged. Ninety per cent of bond holdings are however in Government of Canada bonds and investment in these are governed by different considerations which are related to monetary policy and liquidity reserve requirements.

Outlets for funds by the insurance companies and pension funds were equities. The banks and near banks on the other hand channeled considerable proportions of their resources into consumer credit. Many analysts and students of economic developments follow closely the growth of consumer credit and relate it to the consumer price index. Ratios useful for the analysis of consumer credit are those of consumer credit to expenditure on durable goods and consumer credit to disposable income. The following statement contains these ratios:

STATEMENT 2. Consumer Credit, 1965-68

	1965	1966	1967	1968
millions of dollars

³ DBS Catalogue No. 62-002.

Borrowing by consumers has been rising rapidly during the strong economic expansion of the sixties. The rise in consumer credit is among the major economic features of this era and the impact of consumer expenditures on the economy as a stimulant has been considerable. The annual increase in consumer credit doubled between the years 1962 and 1967. This growth was in fact part of similar phenomena taking place in many leading countries as the result of a change in attitude towards personal debt, complemented by economic factors. Rising income levels

shifted an increasing number of families to the middle income groups and it is these groups who tend to use consumer credit more extensively. On the whole, however, personal liquid assets of Canadians have risen faster than consumer debt. Consumer debt as a percentage of personal liquidity (defined in a narrow sense to include only deposits and Canada Saving Bonds) did not increase appreciably and fluctuated between 25 per cent and 30 per cent during the years 1965-68.

The housing industry has been one of the areas hit most severely by conditions in the capital markets. Over the past few years housing starts have responded not so much to the demand for accommodation as to the availability and (to some extent) cost of financing. The demand for mortgage funds increased during a period when competition for funds in general was very keen and fixed income securities

had lost much of their attraction in spite of historically high rates. Both the new formula used for determining mortgage interest rates under the National Housing Act and the entry of the chartered banks into this field had some beneficial effects. Statement 3 shows the changing patterns of the years 1967 and 1968.

STATEMENT 3. Mortgage Financing by Conventional Leaders

	1967					1968

Source: Financial Flow Sector Tables: VI 1, VI 2, VII and VIII.

A substantial recovery appears to have taken place in the supply of mortgage funds. The higher returns and also the shortened terms of five years, permitting a periodic updating of interest rates, had a stimulating effect on the mortgage market. It is of interest to speculate to the extent to which this recovery may have been due indirectly to the market shortage in equities.

The term recovery used in the context of the increased supply of mortgage funds may be an overstatement when related to earlier years, especially 1965 when funds supplied by conventional lenders amounted to more than \$1.6 billion. In the years 1964-67 housing starts fluctuated between 134,000 and 167,000 whereas recent estimates by Central Mortgage and Housing Corporation indicate that the demand for housing is around 200,000 dwellings per year. Financing the demand for housing at such a level may require resources other than those supplied by the traditional investors in mortgages. With the rapid growth in pension funds, these could become an important source. Trusteed pension plans have already increased their participation. In 1968 they supplied \$178 million, more than twice their 1967 investment in mortgages.

It is revealing to compare mortgage and bond yields in order to shed some light on the divergent trends developed by these two instruments. In 1967 McLeod, Young, Weir's 40 Bond Averages had a "low" of 6.42 per cent in March of that year, which steadily increased to 7.47 per cent by the end of the year. In 1968 the rates hovered around the 7.90

per cent mark, indicating about a half of one per cent increase during the year. Conventional mortgages reveal a steeper increase. During the year of 1967 they were fairly close to the 8 per cent mark, but increased to 8.5 per cent by December. By the latter half of 1968 conventional rates were raised to 9.25 per cent and 9.50 per cent, an increase exceeding that of bond yields.

Statement 4 indicates that in spite of these developments, funds diverted from bonds were not in fact invested in mortgages. The real gain was made by equities whose share of total funds invested by private financial institutions grew from 13 per cent in 1967 to 18 per cent in 1968. The increase in mortgages was a relatively modest 1 per cent.

As an illustration of the problems involved, attention is drawn to the Federal Reserve Bank of St. Louis' study¹ of the "real" rate of return as compared to the nominal rate of return of AAA corporate bonds from 1962 to date. The nominal rate in the United States has increased from 4.40 per cent to 6.66 per cent, while the "real" rate, adjusted to account for inflation, has varied from 3.25 per cent to 2.50 per cent and at the beginning of 1969 was 2.96 per cent.

A lowering of the annual rate of inflation would increase the "real" rate of return and offer a good potential for price improvement and marketability of fixed income securities.

¹ "Monetary Trend, February 29, 1969", published by Federal Reserve Bank of St. Louis.

The supply of capital in 1968 channeled through intermediaries is summarized in Statement 4 as follows:

STATEMENT 4. Details of Uses of Funds by Financial Intermediaries

Total increase in financial assets	6,012	100	1,338	100	7,756	100	1,027	100

¹ "Loans" include bank and other loans.

² "Equity" includes Canadian and foreign stock, and claims on affiliated companies.

³ "Other" represents sundry assets, which are not normally used as lending instruments.

This statement indicates a shift in portfolio preferences, the major features of which have been already described. To summarize, it appears that interest rate increases did not compensate for the fear of further inflationary pressures and fixed income securities, although with substantially

increased yields, lost attraction for investment funds.

After reviewing the patterns of uses of funds by private intermediaries one may examine in Statement 5 the forms in which these funds were obtained.

STATEMENT 5. Distribution of Sources of Funds — Intermediaries

	Private financial intermediaries			
	1967		1968	
	\$'000,000	%	\$'000,000	%
Deposits	3,622	62.4	4,410	59.6
Loans	90	1.5	— 39	— 0.5
Short-term paper	62	1.2	396	5.4
Bonds	160	2.8	68	0.9
Equity	339	5.8	739	10.0
Life insurance	1,319	22.7	1,498	20.2
Other	211	3.6	328	4.4
Total increase in liabilities	5,803	100.0	7,400	100.0

Note: For definition of "Loans", "Equity" and "Other" see Statement 4.

The changes in the composition of the sources of funds are less dramatic than in the application of funds. Short term sources still dominate the overall structure, although the increase in the flow of equity capital and a decrease in new bonded debt reflects general trends in the economy. The influx of equity capital into the financial sectors is also connected with their growing profitability. The gross domestic saving of the privately owned financial intermediaries amounted to \$500 million in 1968 and \$300 million in 1967. A very significant growth took place in the fire and casualty sector whose gross domestic savings tripled in 1968 over 1967.

During the years 1962 to 1967—a period reviewed in an earlier report (DBS Catalogue No. 13-530).

the growth of financial assets of the economy had been rapid and exceeded that of the GNP. The share of these assets held by the financial sectors did not show substantial changes, but within the financial sectors, certain trends became apparent, one of which was the growth of the chartered banks at the expense of the near banks.

The 1968 data indicate that the growth of financial assets continued. The share of these assets held by intermediaries again remained fairly steady. The banks continued their growth, but at this time the near banks halted their downward drift. Statement 6 gives these details for the current and preceding years.

STATEMENT 6. Financial Asset Holdings

	Total increase in financial assets	Financial assets per cent of total increases held by			
		All intermediaries	VI 1. Banks	VI 2. Other Lending institutions	VII, VIII, IX. Other intermediaries
1967	\$'000,000 19,048	% 100	38.6	14.1	6.9
1968	23,200	100	37.9	15.1	7.2

On the preceding pages some aspects of the supply of capital to ultimate users have been given. The aspects were those peculiar to capital channeled through intermediaries, and do not represent the total supply of capital. The saving sectors sometimes meet the demand directly without the use of intermediation.

As "to whom from whom" flows cannot be clearly determined within the financial flow accounts, it is not possible to clearly distinguish between direct investment flows² and intermediation. Figures which will serve as rough indications may be produced, however, on certain assumptions. Investment in bonds, treasury bills and equity by the personal and rest of the world sectors are assumed to be direct investment, notwithstanding the fact that some of these might be investments in the financial sectors and the funds in fact used for intermediation.

In 1968, the principal savers—persons and the rest of the world—reduced their direct flow of investment. The personal sector alone is largely responsible for this development. In 1967 this sector increased its holding of fixed income securities by about \$500 million, although this was a much smaller increase than in previous years. In 1968, on the other hand they reduced their holdings of such secu-

rities by \$700 million. The figures in the following summary show the trends clearly:

Investment by the Personal Sector and the Rest of the World

	1967	1968
	\$'000,000	
Bonds	1,373	720
Treasury bills	- 34	74
Equity (stocks and claims)	683	1,116
Totals	2,022	1,910

The substantial shift indicating the extent to which the rest of the world increased its role as supplier of long term capital is demonstrated by the composition of the following figures.

	1967	1968
	\$'000,000	
Increase in bonds held by:		
Persons	512	- 705
Rest of the world	861	1,425
Totals	1,373	720

Investment by these two sectors decreased from 28 per cent in 1967 to 10 per cent in 1968 of the total supply of capital.

Variation in the distribution patterns of the various market instruments are shown in Charts 1 and 2 for the years 1962-68.

² Direct investment flows as used here refer to an investment process which avoids intermediation or where the role of intermediation is restricted to a brokerage function. The term is not applied in its conventional sense, i.e. non arms-length parent-subsidiary investment financing.

CHART - I

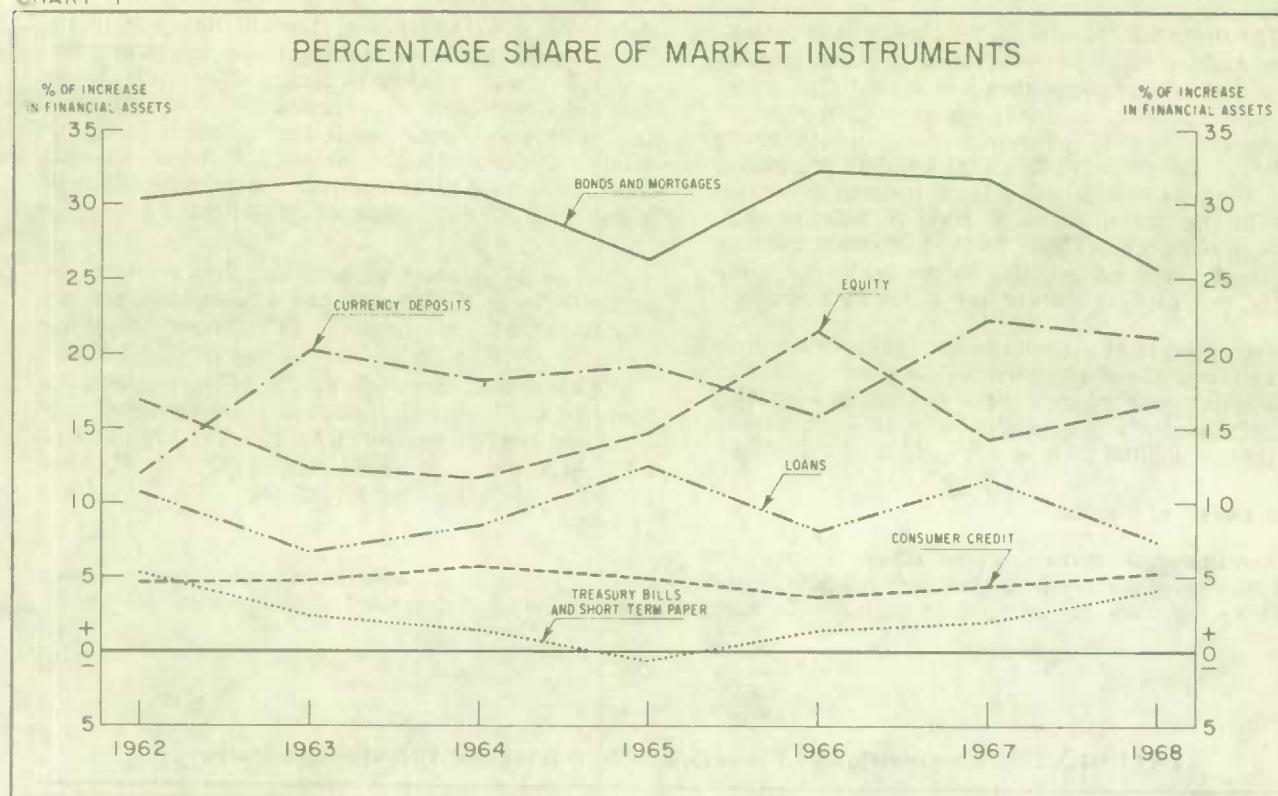

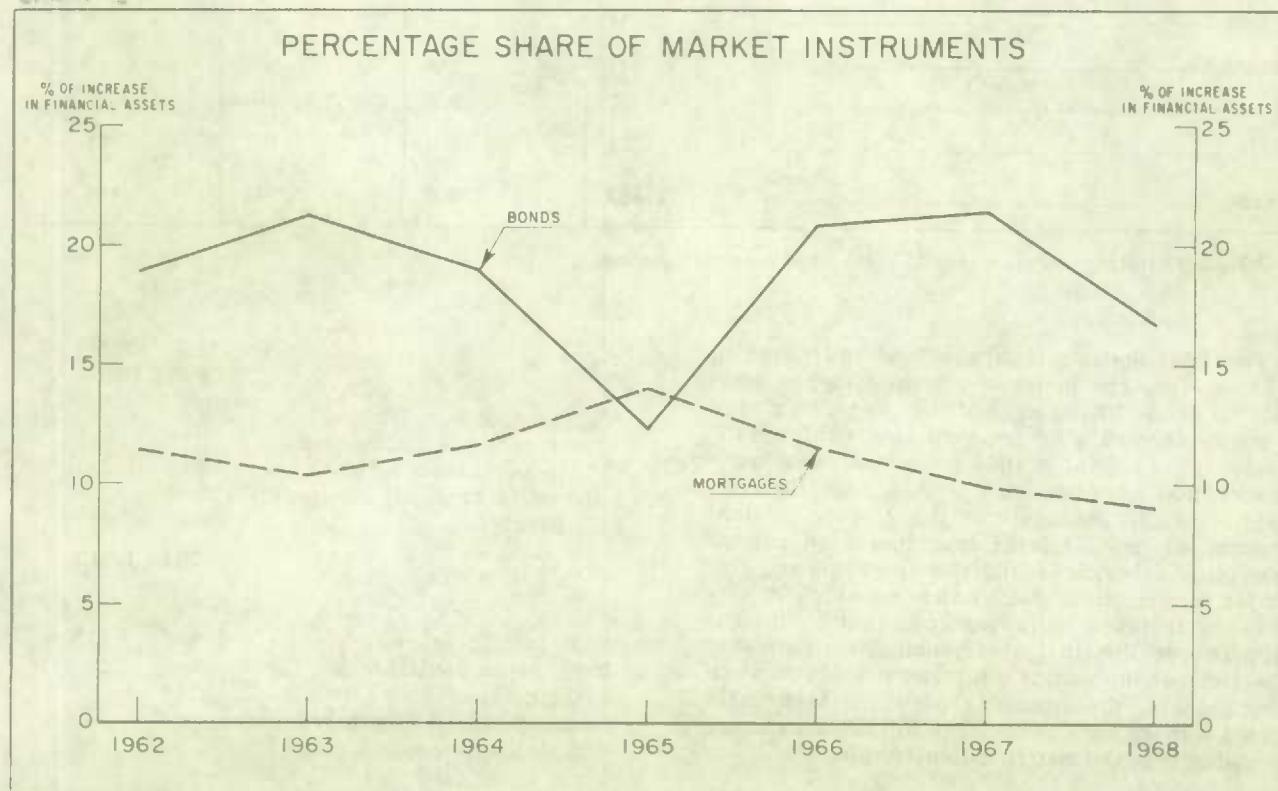

CHART - II

The dominant features is the growth of deposits. These doubled their share of total financial assets and in absolute amounts they are almost five times their size in 1962. An other outstanding feature is the trend in bonds and mortgages of which much has been said already. The real brunt of pressures in the bond market fell on corporation bonds, whose share of the net increase slipped to 2.6 per cent from a peak of 6.5 per cent in 1965. Various government bonds fared much better as the banking system became the largest market for government bonds.

Among other instruments, the equity categories display fairly wide fluctuations. It is however, worthwhile noting that in spite of these extreme swings equity instruments occupy the same ratio of market instruments in 1968 as they did in 1962.

Major Users of Capital

Non-financial private corporations. — Some of the features of the year in the non-financial corporate sector were an increase in the sector's sav-

ings over 1967 and a very modest increase in its fixed capital formation. Inventory accumulation was larger in 1968, following a marked decline in the last quarter of 1967. Concerning the sector's financing, it is noteworthy that the net increase in equity capital (stocks and non-arm's length corporate claims) approached \$1.0 billion which is almost 50 per cent higher than the corresponding 1967 figure.

(It is of interest to note that the sector's net borrowing was \$1,179 millions almost the same as the \$1,121 millions increase in its equity capital.)

The non-financial corporate business sector's share of total capital formation remains fairly constant. In 1967 it amounted to 41.6 per cent and in 1968 41.4 per cent. The average for the six-year period of 1962-67 was 41 per cent with little fluctuation.

In general, reliance on outside financing was much reduced. Statement 7 shows details.

STATEMENT 7. Composition of Financing — Non-financial Private Corporations

	1967		1968	
	\$'000,000	%	\$'000,000	%
Loans (bank and other loans)	1,184	40.9	123	6.0
Short-term paper	41	1.4	186	9.5
Mortgages	137	4.8	59	2.6
Bonds	857	29.6	553	27.1
Equity ¹	674	23.3	1,121	54.8
Totals	2,893	100.0	2,042	100.0

¹ Equity capital = Net increase in stocks and corporate claims.

The most dramatic changes from 1967 were in two categories. The increase in loans dropped drastically to about 10 per cent of the preceeding year and equity showed a 66 per cent rise. Statement 7 indicates these shifts. In 1968 the role of bank loans in corporation financing was considerably reduced. Possible reasons include both the growing internal generation of funds arising from increased capital consumption allowances and the spreading requirement for compensating bank balances which in certain cases increase borrowing costs quite substantially. The decline in loan financing is remarkable in the light of the sector's increased investment in current assets, the financing of which is usually provided through bank loans. The following summary information from the matrix indicates this:

	1967	1968
	\$'000,000	
Value of physical change in inventories.....	176	451
Increase in trade receivables	974	1,299
Less: Increases in trade payables.....	446	438
	704	1,312
Bank loan increases.....	832	215
Bank loans available for the financing of other activities	128	
Amount financed by other than bank loan resources		1,097

On balance, non-financial businesses exerted a lesser demand pressure on the capital markets and also on the economy as a whole by borrowing less and moderating their capital outlay programmes. Moreover in 1968 the sector raised an increasingly large proportion of its total fund requirements in equity form.

In spite of the substantial changes in financing patterns the debt and capital structure of the sector changed little. Statement 8 shows the impact of changes in flows on year-end levels.

STATEMENT 8. Debt Structure of Non-financial Private Corporations – Year-end Levels

	1967	1968
	%	
Loans	23.0	21.3
Short-term paper	1.0	2.6
Mortgages	10.7	10.0
Bonds	27.0	26.8
Equity ¹	38.3	39.3
Totals	100.0	100.0

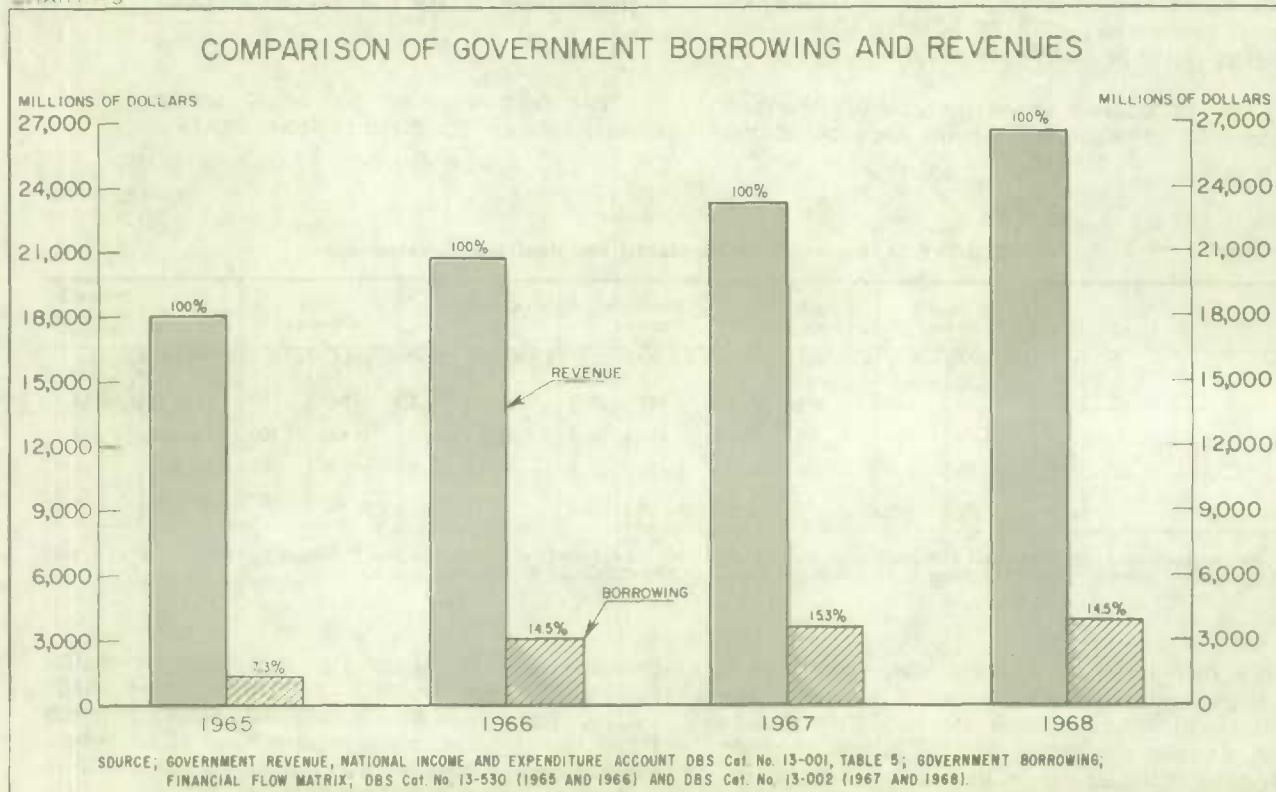

¹ For definition of equity see Statement 7.

It is evident, that substantial changes in flows would have to occur over an extended period of time before the debt and capital structure would be altered significantly.

Developments in the personal and business sectors were divergent. The non-financial business sector, on the whole, restrained its spending programmes and improved productivity in 1968. In the personal sector which accounts for more than 60 per cent of the gross national expenditure, the rate of expenditure on goods and services increased. Personal income has been growing at a successively more moderate rate since 1965, but the rate of growth in personal expenditure continued unabated and indeed advanced slightly in 1968. Persons' acquisition of financial assets increased by about 10 per cent, while their net new borrowing from the banking system tripled and growth in consumer debt increased by 50 per cent over 1967.

Government and government enterprises. — Net borrowing by the various levels of governments declined somewhat in 1968, while capital formation by all three levels of governments changed little. Statement 9 and Chart 3 summarize the relevant figures:

CHART 3

STATEMENT 9. Details of Government Financing, 1968

	Sector IV Non-financial Government enterprises	Sector IX Public financial enterprises	Sectors X, XI, XII Government departments	Total
Gross domestic saving (Category 1100)	355	156	3,725	4,236
Non-financial capital acquisition (Category 1500)....	1,644	28	2,983	4,655
Net lending or borrowing	- 1,289	128	742	- 419
Total borrowing	624	77	3,164	3,865
In bonds	435	92	2,716	3,243
In other forms.....	189	- 15	448	622

Governments remained the largest borrowers in the long term capital markets and issued 84 per cent of all the bonds sold. Their borrowing increased in absolute amounts, but the growth in relation to revenues was checked and, in fact shows a slight decline. Treasury bill financing grew considerably during the year with most of the additional sales absorbed by the banking system. The banking system increased its holdings of treasury bills during the second and third quarters by more than the net new issues of these instruments. This was a short-lived period of relative monetary ease, when money supply grew faster than loan demand and the banks turned to alternative investments. The position was reversed drastically in the fourth quarter when the building up of demand pressure caused the banks to divest themselves of \$176 million of treasury bills accumulated in earlier periods.

The fourth quarter shows traditionally the largest increase in bonds outstanding because of the

issue of Canada Savings Bonds. In 1968, this fourth quarter increase was more than double that of the previous year in spite of the fact that the net increase in outstanding Canada Savings Bonds for the full year was only \$38 million in 1968 compared to \$230 million in 1967. Government of Canada bonds indeed show a net decline over the first three quarters of the year.

Contributing to the difference between the \$0.4 billion of governments' deficit and their total borrowing of \$3.9 billion were the increase of more than \$600 million in official holdings of gold and foreign exchange and lending by parent governments to public financial institutions (Sector IX).

The borrowings of provincial and municipal governments are compared in Statement 10.

STATEMENT 10. Borrowing by Provincial and Municipal Governments

	Provincial bank loan		Municipal bank loan		Provincial bonds		Municipal bonds		Total borrowing ¹		Revenue ²	Borrowing as a % of revenue
	\$'000,000	%	\$'000,000	%	\$'000,000	%	\$'000,000	%	\$'000,000	%		
1965	15	1.6	169	17.9	464	49.2	295	31.3	943	100	8,943	10.5
1966	8	0.5	95	6.4	850	56.9	541	36.2	1,494	100	10,195	9.3
1967	- 25	- 1.4	- 24	- 1.3	1,129	65.0	655	37.7	1,735	100	11,801	14.7
1968	- 56	- 3.3	89	5.3	1,224	73.4	409	24.6	1,666	100	13,709	12.1

¹ Government borrowing, "Financial Flow Matrices" DBS Catalogue No. 13-530 (1965 and 1966) and DBS Catalogue No. 13-002 (1967 and 1968).

² Government revenue, "National Income and Expenditure Accounts" DBS Catalogue No. 13-001, Table 6.

The increase in provincial borrowings stands out. A particularly important factor has been the establishment of the Canada Pension Plan. Funds from this source amounting to \$1.8 billion provided 56 per cent of the supply in the category. Municipal governments rely more on short-term bank accommo-

dation than the provinces. It is difficult to determine the extent to which this is caused by market difficulties. Apart from the Canada and Quebec Pension Plans, the net borrowing requirements of all levels of governments were reduced from almost \$900 million in 1967 to less than \$250 million in 1968.

Interest Rates

The steep rise in interest rates during the year played an important role in the attraction and allocation of funds. The high degree of concentration of personal savings in deposits was to a large extent due to the relatively attractive interest rates offered to depositors by banks and near banks. In the United States where maximum rates on term deposits (subject to regulations) has not been raised heavy losses of deposits occurred towards the end of the year. Large United States banks turned to Europe for funds, thus exerting pressure on Eurodollar rates.

The freedom exercised by financial institutions in adjusting interest rates to comply with the realities of the markets did not in itself make borrowing costs excessive, but contributed towards a more even flow and distribution of funds. High interest rates—as shown by the chart—were not uniquely a Canadian or North American phenomena. Even in Germany which was experiencing large current account balance of payment surpluses interest rates started to rise. Interest rate increases became a fairly universal fact.

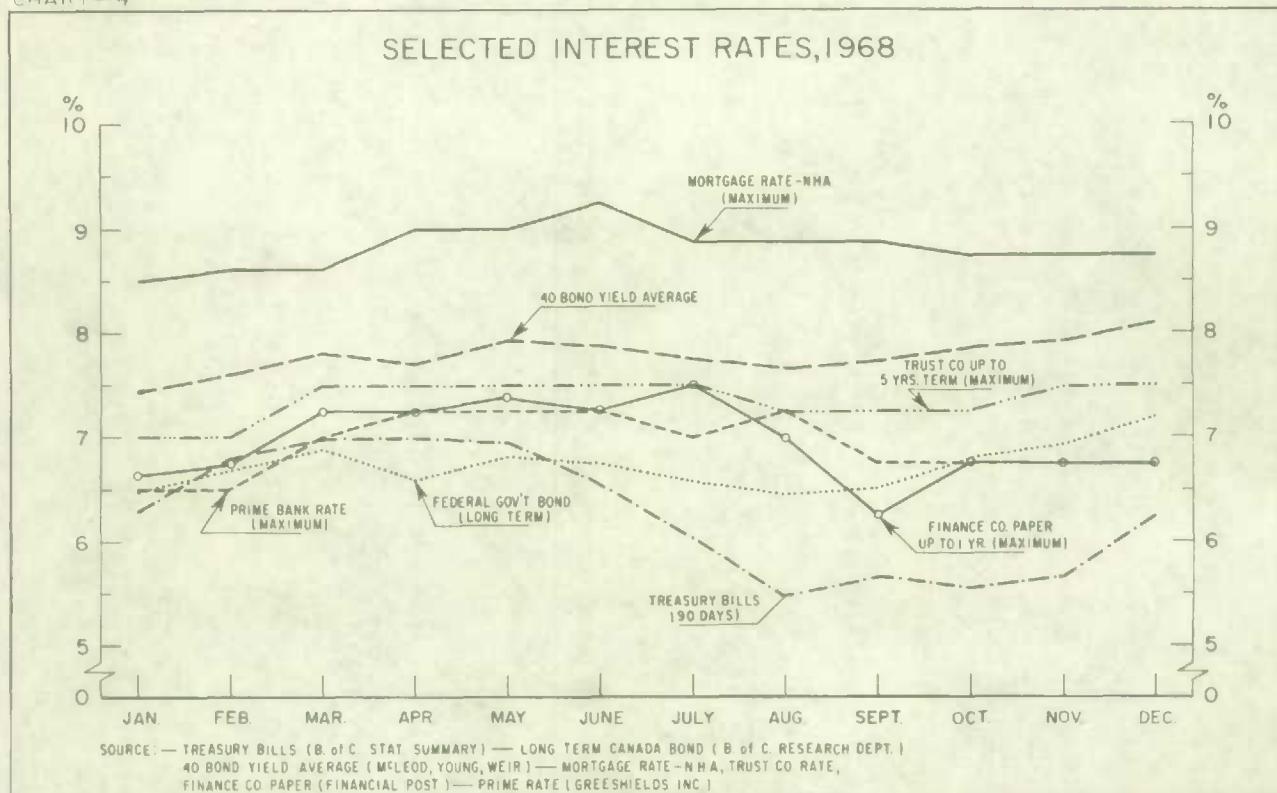

Other Influences on the Financial Market

Apart from pressures of a domestic origin, the financial operations of the economy were subjected to various external pressures and disturbances

during 1968. A strong threat against the Canadian dollar was successfully repelled in the first quarter of the year, as were crises involving the French franc and British pound towards the end of the year. Problems plaguing the United States economy were a strong influence on the Canadian economy. The uncertain impact and time lag of fiscal and monetary measures in the United States contributed to the difficulties the Canadian authorities experienced in their fight against the erosion of the purchasing power of the Canadian dollar. Expansionary forces in the North American economy have retained their vigour, and coupled with regional disparities, have posed special problems.

The Canadian capital markets reacted quickly to the fast changing conditions. Steps were taken to enhance the attraction of savings in order to help the capital requirements of the economy and to channel funds into areas and industries where the needs have been less adequately served. Some of the features which have made fixed income securities unattractive were moderated by a shortening of terms thereby allowing investors to adjust their portfolios more easily. Many new ideas—in gestation for some time—have been introduced during the year. The forth-coming quarterly publications of the Financial Flow Accounts will portray these events as they more fully develop.

CHART - 4

TECHNICAL NOTE

As part of the defences mobilized for support of the Canadian dollar in the international exchange market during January 1968, foreign currency assets to the extent of United States \$250 million were acquired by the Bank of Canada through activation in January 1968 of part of the reciprocal currency facility with the Federal Reserve System. This transaction resulted in a corresponding decline on the Bank's balance sheet and Government of Canada securities.

In the financial flow accounts, however, the convention has been adopted that a Canadian dollar

deposit liability was credited. This was in order to isolate the special character of the transaction from more normal transactions in Government of Canada securities by the Rest of the World sector. The effect was to create within the sector for the monetary authorities, a notional institution holding the Government of Canada securities eliminated from the Bank of Canada balance sheet against a deposit liability to the rest of the world. The transactions were reversed in the second and third quarters of 1968. Use of the reciprocal currency facilities with the Federal Reserve System and with the Bank of England in 1962 was similarly treated.
